PREFACE

The purpose of the present volume is to give the student, in a concise and intelligible form, the essential facts concerning those questions that oftenest arise in the study of the life, the literature, the religion, and the art of classical antiquity. Its further purpose is to indicate the sources whence a fuller and more critical knowledge of these subjects can be most readily and most accurately gained.

Until very recently, the study of classical literature was, in all our universities, inseparably linked with the conception of a liberal education. Holding firmly to the dignified traditions of the past, it was accepted as an undisputed fact that the highest type of scholarship, the type best fitted to sustain the supreme test of æsthetic perfection and to be stamped with the final *cachet* that confers distinction, was unattainable if severed from the direct influence and inspiration of the great Hellenic masters whose intellectual activity was imbued with a noble passion for ideal beauty and ideal truth. Of late, the tremendous pressure of material interests from without, and the national eagerness for immediate and tangible results, have bred a new and more utilitarian theory of the academic function; so that the study of ancient life and thought has been deposed from its old supremacy and has been made to take its place beside those subjects of investigation that derive their interest mainly from the appeal which they can make to tastes and motives that are essentially commercial and mechanical.

This revolution in pædagogic theory, with the resulting revolution in the ordering of our university curricula, while it sprang from a false impression of what liberal study really means, and while it is fraught with especial evil to a community such as ours, already far too eager in the pursuit of all material ends, has nevertheless, by way of compensation, not been without a stimulating effect upon the methods and the aims of classical study. It has, to be sure, impaired the value of the university degree that once was everywhere accepted as being the hall-mark of the cultivated gentleman. It has broken down forever the intellectual sympathy that once existed as a powerful bond between all university men—a sympathy based upon absolute identity of training, and one which made them a potent influence in the diffusion of sanity and serenity of thought. It has lowered the whole tone of university life and imported into the academic shades the standards of value, the aims, and the ambitions of the workshop and the counting-room. Yet, nevertheless, the very changes that have narrowed the sphere of classical study and restricted its power for good by releasing from its refining influence the very persons who are most in need of it, have still, within its sphere, compelled it to develop a new and vigorous life, by enabling it to gain in perfection and completeness what it has lost in universality.

The teachers of the classics, under this new system, which takes nothing for granted and ascribes no preëminent value to the study and investigation of the past, have been forced to rouse themselves to a demonstration of that value even from the standpoint of the modern iconoclast. In so doing they have very wisely laid more stress than heretofore upon the intimate relation of the present to the past; they have laboured to bring out the essential modernity of the life of Greece and Rome; and they have dwelt as never before upon the points of resemblance rather than upon the points of difference that exist. Classical teaching has, therefore, gained immensely in vividness and vitality, and its topics of investigation have been at once enlarged and correlated. It is no longer sufficient to dwell upon the linguistic and literary obligations of the modern world to Greece and Rome. It is as necessary as it is entirely possible to show that the religious and the ethical problems of the past are those that still occupy the thought of educated men; that the political and social dangers that confronted the Republics of Hellas and Rome are precisely those that are brooding over the nations of to-day; and that in sociology and economics the student is but a tyro, who has not profoundly studied the *Culturgeschichte* of the two great nations.

Hence it comes about that the study of the classics and of ancient life is to-day far more comprehensive in its scope, far broader in its purpose, far more consciously important in its relation to the whole field of human knowledge, and far more elaborate in its critical apparatus than it ever was before. The classical teacher feels that he must, in studying any side of his subject, avail himself of every possible aid that can be drawn from the investigations of his fellow-specialists in order to give interest and life and richness to his own instruction. If he turn to language, he must draw upon the labours of the epigraphist, the numismatist, the palaeographer; if he deal with art, he must explain its inspiration by the testimony of literature and the history of contemporary life; if he investigate history, he must know the whole intellectual and social environment of the people.

Nor is the appreciation of these things confined to the teacher and the investigator. The younger student of the classics is also becoming more and more alive to the true significance of his work, as with every year more is required of him in the way of special equipment and general information. Even the undergraduate classical courses in our universities and colleges now touch upon many sides of study, and are no longer restricted to the mere reading of ancient authors and the formal study of their language. An early familiarity with the conditions of ancient life is expected and required; some knowledge of art and archæology is a further requisite; and at least a moderate acquaintance with the best and most obvious sources of information is asked of all. It is, therefore, evident that to aid the student in his work, as that work must be pursued under these comparatively new conditions, some manual is needed that shall give him in a simple and intelligible form the most important facts, condensed and summarized and set forth not as isolated bits of information, but in their necessary connection with one another. The present volume is intended as a contribution towards this end.

The information which is given in its articles, arranged under a single alphabet, may be classified under the following general heads:

(1) Biography.—The Dictionary includes articles on all the important personages of classical antiquity in every sphere of effort, whether military, literary,

political, or artistic. The greatest of the Christian Fathers have been added to the list, both because of the general interest of their relation to the history of the Later Empire, and because to the student of language their writings are of marked importance in the study of plebeian Latin and the development of the later dialects of Greek. Among the biographies which the Dictionary contains will be found also those of the great classical scholars and philologists of later times, and extending into our own century, since these represent distinct stages in the development of classical study, and their lives, when taken collectively, give a suggestive outline of the history of Classical Philology. The names of living scholars, for obvious reasons, have been excluded from the list.

(2) Mythology.—All the mythological personages whose names appear and reappear in the pages of the Greek and Roman writers are the subjects of separate articles which carefully distinguish the Hellenic myths from those that are essentially Italic, while the relation between them is indicated and the subsequent blending of the two described. In the case of the most famous of the myths the explanatory speculations of the latest schools of comparative mythologists are given, though with caution; and the use of the myths themselves in literature is touched upon, with especial reference to their appearance in the prose and verse of the English classics. A separate general article on Mythology describes briefly the development of the different schools that have endeavoured to explain the folk-lore and religious tradition of the ancients.

(3) Geography.—The names of all countries, provinces, states, cities, and other localities that are mentioned by the most read of the classical writers will be found as separate titles, with a treatment proportionate to the historical importance of the subject and its interest to the student. Numerous maps and diagrams illustrate the geographical information given in the text. The very interesting ethnic questions that arise in this department of the work—as, for example, in the articles *Aegyptus*, *Etruria*, *Scythia*—are briefly noted, with a statement of the views of recent ethnologists and anthropologists, and with bibliographical references to the original sources of information and discussion.

(4) History.—The principal political events of Greek and Roman history form the subjects of special articles when these topics do not fall under geographical and biographical titles; and even when they do, they are also given as separate captions with cross-references to direct the student to the proper place of treatment.

(5) Literature.—The articles on the great writers of Greek and Roman literature will, it is hoped, be found to be especially complete; and their best-known and most widely read works are noted likewise under distinct titles with cross-references to the leading articles. A very large number of general articles deal also with special phases of literary production, detailing, for example, the history of the Epic, of Lyric Poetry, of Dramatic Literature, of Parody, of the Epigram, of Jokes, of Rhyme, of Satire, of the Anthologies, of the Cento, of the ancient Novel and Romance, of the Alexandrian Canon, of celebrated editions of the classics, of important Codices, of the Renaissance, of Lexicography, of Grammar, and of Rhetoric and Oratory. Everywhere the effect of ancient literature upon the literature of modern times has been noted with particular reference to such of the great modern masterpieces as have derived their suggestion and inspiration directly from the works of Greek and Roman writers. It is believed that this de-

partment of the Dictionary will prove especially attractive to those students who are interested in the study of Comparative Literature; and that it will give to all a fuller sense of the essential unity of man's recorded thought.

(6) Antiquities.—A large portion of the work is devoted to the discussion of subjects relating to the Amusements, Art, Costume, Domestic Life, Law, Music, Numismatics, Philosophy, Religion, and Science of the ancients—a department, in fact, upon which the greatest labour has been expended, as it is the sphere in which the greatest additions to our knowledge of antiquity have been made within the past half-century. It is, indeed, the progress in the field of archæology that has most completely made the older works of reference seem antiquated for the purposes of the modern student. A wealth of new material has of late been presented for scientific investigation. The work of discovery, pursued with increasing intelligence and enthusiasm, has brought to light fresh treasures of ancient art and ornament, and has made plain and in every way intelligible much that before was doubtful and obscure. The investigations of Schliemann, Humann, Dörpfeld, Flinders Petrie, Lanciani, Homolle, and others would alone have made the past three decades a new and brilliant era in the history of classical archæology, even had their discoveries not been supplemented and illustrated by the labours of scholars less known, perhaps, but not less able. Epigraphy, too, in the last fifty years has experienced a marked development. It would be easy to name certain inscriptions whose discovery has given an entirely new meaning to the investigation of ancient life and manners, and especially to the study of Greek and Roman law. Moreover, the literary productiveness of the period in its relation to the study of antiquity has been wonderfully rich in giving a lucid and scientific exposition of these discoveries, and in deducing from them the knowledge which they embody or suggest. It is with these facts in mind that the portion of the work which relates to Archæology proper has been prepared, and it has been the purpose of the Editor to leave no important topic unrecorded, or passed over without at least the most essential information. A number of short general articles take up the subjects that are necessary to an understanding of the collateral sources of information, such as those relating to Epigraphy, Palæography, and Text Criticism; while important bits of special information regarding matters to which reference is frequently made in classical teaching, but for whose explanation the student is too often ignorant where to go, will be found under such titles as Cista Ficoroniana, Choragic Monument, Harpy Monument, Duenos Inscription, Graffiti, Monumentum Adulitanum, Monumentum Ancyranum, Palimpsest, Portland Vase, Tabula Bantina, and very many more.

(7) Language.—It has been thought desirable to provide the student, for purposes of ready reference, with some special information concerning the most important linguistic questions that arise in the study of the classics. Considerations of space have prevented the Editor from elaborating this department of the work and from adding many subjects to an already formidable list. What has been given will, he is assured, be a source of satisfaction to those who use the book. The character of the topics coming under this head can be fairly well indicated by mentioning a few of them, such as Alliteration, the African Latinity, Dialects, Grammar, Grimm's Law, the Indo-European Languages, Onomatopoeia, Philology, the Pronunciation of Greek, the Pronunciation of Latin, Rhotacism, the Sermo Plebeius, and Verner's Law. No work of reference in English that

has to do with classical study has ever included information of this character, and it will be therefore, to American students, a feature that is quite unique.

(8) Bibliography.—At the end of all of the most important articles a selected bibliography has been appended, including those works that are most famous, most valuable, and most readily accessible to the student who desires to acquire a more special knowledge of the subjects treated. Where such works exist in the English language, these have received the preference over those in foreign tongues. Unfortunately, it is only within the last few years that English and American scholars have begun to put forth monographs in any way comparable with the treatises in which the French and German classicists have long been accustomed to embody the results of their special investigations. Hence, a large proportion of the references are to books and pamphlets in the Continental languages, including many important "programmes" and university dissertations. In no case has an exhaustive bibliography been attempted, but such a selection has been given as will be of the greatest practical assistance.

(9) Illustrations.—A word should be said of the illustrations, of which the Dictionary contains some fifteen hundred. Their insertion has necessarily drawn heavily upon the space at the Editor's disposal; yet he feels that the gain in interest and in intelligibility which they secure far more than compensates for the enhanced brevity which they entail upon the printed text. In the case of material objects, a picture is usually far more intelligible than whole paragraphs of verbal description whose place, in truth, they very efficiently supply. Their sources are in most cases indicated; and the fact that the greater number of them reproduce exactly objects that have come down to us from antiquity gives them an especial interest and value. In some cases, for the clearer comprehension of the original form, restorations by archæologists of distinction, such as Dörpfeld, Bühlmann, Brune, Hoffmann, Wagner, Benvenuti, and Lanciani, have been inserted, and now and then the ideal creations of modern sculptors and painters, such as Canova, Thorwaldsen, Alma-Tadema, and Jalabert, have received a place, as giving a more vivid perception of the essential meaning of a theme.

From what has now been said, it will be evident that the work is, in fact, a Classical Encyclopædia. Were the title not too ambitious, it might perhaps be more correctly described as a Dictionary of Classical Philology, using that term in the sense which it conveys in Germany. It does, indeed, aim to give in a single volume the substance of all the information that it has hitherto been necessary to seek among many books and in many places. The massing of all this material in a single volume and under a single alphabetical arrangement would in itself be an immense gain in convenience to the student who has heretofore been obliged to refer to half a dozen dictionaries for the elucidation of the questions that arise in his daily work; but the advantages of such a consolidation extend far beyond any mere question of convenience. It enables all the topics to be treated in a way that shall show their natural relation to one another and that makes impossible a sense of detachment and isolation. Thus, History illustrates Literature, and Literature explains History; while Art, and Language, and Science are shown in their proper relations to the whole study of ancient life and thought. It has everywhere been the purpose of the Editor to make this intimate connection fully apparent, and every important article in each department refers directly and continually to all the others that in any way have any bearing upon the same subject.

The general articles, such as those on Epigraphy, History, Libraries, Museums, Music, Palæography, Philology, Philosophy, Painting, Sculpture, Numismatics, Religion, and Text Criticism, are meant to give the reader in each case a conspectus of the whole field in an outline which the special articles will enable him to fill in with a more elaborate detail. It is this method of treatment that has made possible the inclusion of so many classes of topics in a volume of moderate size; for each article serves to explain many others, and thus to avoid a tedious and unnecessary repetition.

As may be readily understood, the most difficult question confronting the Editor was the question of proportion. It is unlikely that any two scholars could be found to agree upon the relative importance of the topics presented; and it is, therefore, here that the Editor must expect to receive the greatest amount of criticism. Hence, it is proper to set forth the general principles that have guided him in his work, so that, whether or not they meet with general approval, they may, at any rate, be recognized as definite and consistent. Having in mind the daily needs of the student, it has been the purpose of the Editor to give the fullest treatment to those questions that most frequently arise in one's ordinary reading of the classics, and that are of the greatest practical importance. Thus, the largest assignment of space has been given to articles that deal with ancient literature in all its phases, inasmuch as it is from and through literature that our clearest knowledge of Greek and Roman thought and life has been derived, and because literature has itself been to all succeeding ages the magnet that drew men's minds to the investigation of the past. Historical questions are also quite fully dealt with; while in the department of antiquities those topics that are most closely related to the every-day life of the Greeks and Romans are the ones that have received the preference. Thus, much space is given to describing the dress, the food, the houses, the amusements, the conveniences, the arts, and the religious faith and rites of the two great peoples; far less is assigned to their governmental regulations; while with regard to the minuter points of law, the different γραφαι and δίκαι and *leges* that one seldom meets outside of the pages of the legal oratory of the ancients, these have usually been allowed to pass with a concise and simple definition. So in Geography, those places that are linked with some great historical event, or that are to us moderns especially interesting because of their importance in the study of archæology, are described with considerable minuteness; but cities and towns and countries that have no such special associations now, and that are known to us only from some casual mention in the pages of Polybius or Strabo or Pomponius Mela, have been merely touched upon with a note or two upon their situation and their relative importance in antiquity. Hence, while the great city of Rhagae has only some twenty lines assigned to it, the description of the little Campanian town of Pompeii occupies a space of nearly seven pages.

Thus the practical needs and the greater convenience of the learner have been everywhere remembered, and to these ends the Editor has occasionally sacrificed considerations of strict consistency when such consistency would render the use of the work less simple, and would secure nothing more valuable than a pedantic uniformity. For instance, in the matter of arrangement, the names of Romans have been placed under the gentile name or the cognomen, according to the respective familiarity of each in English usage: Marcus Tullius Cicero and Gaius

Iulius Caesar are treated under *Cicero* and *Caesar*, but Publius Terentius Afer and Publius Vergilius Maro under *Terentius* and *Vergilius*. The same considerations have guided the Editor in respect to the forms of words that are Greek. When there exists a corresponding Latin form, and when this form is more familiar to the English and American reader than the Greek, it has been given in the title; while in the case of those words that were never Latinized the original is written. Thus, *Thucydides* and *Menelaüs* and *Epaminondas* have been preferred to *Thoukydides* and *Menelaos* and *Epameinondas*; but *Kakosis* is written instead of *Cacosis*. This discrimination has been carried out according to the best judgment of the Editor, who has always made it a rule to avoid what an English scholar has very cleverly described as "the Scylla of *Thoukydides* and the Charybdis of *Samus*." In the orthography, also, it has seemed preferable to go only so far in the direction of scientific exactness as is exemplified by the best texts used in our schools and universities; and therefore the use of the character J has been discarded in Latin words, while the distinction between V and U has been retained. For the greater convenience of the student, again, the usual *index raisonné* at the end of the volume is omitted, and in its stead the English names of the principal topics treated have been inserted in the body of the work and under the single alphabetical arrangement, so that one who wishes to find an article and does not remember the Greek or the Latin title can turn to it in English in its proper alphabetical place and there find the reference to the proper heading. The abundant cross-references will also greatly facilitate the use of the book, and will prove a valuable guide in turning at once to all the collateral branches of a subject.

In the preparation and development of this elaborate scheme, the Editor has been greatly assisted by the advice and suggestions of many eminent scholars, whose encouragement and counsel have been of the utmost service to him at every stage of the work. Unusual value is given to the Dictionary by a number of articles contributed to it by writers whose names are the highest guarantee of the excellence of their work, as standing in each case for special knowledge based upon original study and investigation. It is proper that these contributors should be here mentioned in detail. Professor Frederic D. Allen, of Harvard University, has written the article *Twelve Tables*; Dr. Robert Arrowsmith, formerly of Racine College, the article *Camerarius*; Professor Sidney G. Ashmore, of Union University, the article *P. Terentius Afer*; Professor Franz Bücheler, of the University of Bonn, the article *Umbria*; Professor Edward B. Clapp, of the University of California, the articles *Aeschines*, *Aeschylus*, *Aristoteles*, *Ilium*, *Pronunciation of Greek*, *Syndicus*, *Synegorus*, and *Synthesis*; Dr. Frederic Taber Cooper, of the University of the City of New York, the article *Sermo Plebeius*; the Reverend Charles T. Crittwell, late of Oxford University, the articles *Quintus Ennius*, *M. Annaeus Seneca*, and *Lucius Annaeus Seneca*; Professor Mortimer Lamson Earle, of Bryn Mawr College, the article *Athenae*; Professor James C. Egbert, Jr., of Columbia University, the articles *Honores* (so much as relates to the *cursus honorum*), *Nomen* (so much as relates to the Roman name), *Papyrus*, *Princeps*, *Principatus*; Professor K. F. Geldner, of the University of Berlin, the article *Persia*; Professor Basil L. Gildersleeve, of the Johns Hopkins University, the article *Pindarus*; Professor Alfred Gudeman, of the University of Pennsylvania, the twenty-one articles on abbreviations given at the beginning of each of the letters of the Greek and Roman alphabets; Dr. Isaac H. Hall, of

the Metropolitan Museum of Art in New York City, the article *Cyprus;* Professor A. V. Williams Jackson, of Columbia University, the articles *Rhagae* and *Zoroaster;* Professor Francis W. Kelsey, of the University of Michigan, the articles *Gaius Iulius Caesar*, *Titus Lucretius Carus*, and *Roma;* Professor Rodolfo Lanciani, of the University of Rome, the article *Pompeii;* Professor Charles R. Lanman, of Harvard University, the article *India;* Dr. Charlton T. Lewis, of New York, the article *Lexicon;* Professor Ernest Mondell Pease, of the Stanford University, the article *Satira;* Professor Edward Delavan Perry, of Columbia University, the article *Franz Bopp;* Professor Thomas D. Seymour, of Yale University, the article *Homerus;* Professor Munroe Smith, of Columbia University, the articles *Actio*, *Ius*, *Legatus*, *Lex*, *Magistratus*, *Maiestas*, *Pignus*, *Provincia*, *Senatus;* Professor F. B. Tarbell, of the University of Chicago, the articles *Boulé*, *Mycenae*, *Propylaea*, and *Tiryns*, and a number of architectural definitions; Professor A. F. West, of Princeton University, the article *Liberales Artes;* Professor Benjamin Ide Wheeler, of Cornell University, the articles *Grimm's Law* and *Verner's Law;* and Dr. Clarence H. Young, of Columbia University, the article *Demus*.

For the rest of the Dictionary the Editor is himself responsible; and in making this statement it is proper to give some account of the sources upon which he has drawn and of the extent to which they have been used in the preparation of the articles.

The greater part of the biographical and geographical material is based upon Smith's *Greek and Roman Classical Dictionary* as revised and enlarged and published in this country in 1852 by Professor Charles Anthon and Professor Henry Drisler. Very extensive changes have, however, been made in adapting this material to the purpose of the present work. Statements that subsequent investigations have shown to be inadequate or unfounded have been carefully corrected; a more lively turn has been given to much of the description and characterization; such further information as is now available has been incorporated in the articles; reference to the *loci classici* have been supplied; and to the more important articles a good working bibliography of recent publications in English, French, and German bearing upon the subject has been appended. In the case of authors, the sources of our texts are indicated, the principal editions (including the *editiones principes*) are noted with their dates, and a selection of monographs on the life, style, and subject-matter is given. In many cases, however, the original articles have been wholly rejected as unsatisfactory, and these have been entirely rewritten.

The archæological portion of the Dictionary is based in part, but only in part, upon the edition of Smith's *Dictionary of Greek and Roman Antiquities* as revised by Professor Anthon. Such of this material as has been drawn upon has been very carefully corrected and amplified in the light of our present knowledge, and has been provided also with references to the latest archæological publications. Very valuable to the Editor has been Daremberg and Saglio's *Dictionnaire des Antiquités Grecques et Romaines* for the early portion, and so far as their great work has yet appeared. Baumeister's *Denkmäler des klassischen Alterthums* has also been continually at hand for reference and consultation; as has Bouché-Leclercq's *Institutions Romaines*, with Gilbert's *Greek Constitutional Antiquities* in the German original, and lately in the excellent English version of Messrs.

Brooks and Nicklin published in 1895. Especial mention should be made of the third edition of Sir William Smith's *Dictionary of Greek and Roman Antiquities* (London, 1891), upon which the Editor has continually drawn and from which several important articles* have been wholly or in part condensed. Some useful material has been found in Rich's *Dictionary of Roman and Greek Antiquities* (5th ed., London and New York, 1890). The Becker-Göll revisions of *Charikles* and *Gallus* are frequently cited or referred to under titles relating to the private life of the Greeks and Romans, as are also Marquardt's *Privatleben der Römer* (2d ed., Leipzig, 1886); Friedländer's *Darstellung aus der Sittengeschichte Roms* (6th ed., Leipzig, 1888–90); and Ménard's *Vie Privée des Anciens* (Paris, 1880). For ancient art, of especial use have been the works of Winckelmann, Stark, Overbeck, Westropp, Reber, Murray, Newton, Michaelis, Perry, Krause, Helbig, Woltmann and Woermann, Mau, Middleton, Brunn and Fergusson. For the technical and scientific knowledge of the ancients, Blümner's *Technologie und Terminologie* (Leipzig, 1875–87) has, of course, been of the greatest aid. Some of the general articles are mainly drawn from Seyffert's *Lexikon der klassischen Alterthumskunde* (Leipzig, 1882), though it has, of course, been necessary to add largely to the material found in this excellent but in some respects too elementary work. Here and there the Editor has availed himself of the supplementary matter supplied to these articles of Seyffert by Dr. J. E. Sandys in the English edition made by himself and the late Professor Nettleship—additions so admirable as to induce regret that these distinguished scholars did not supply them in all the articles which they translated. Many useful suggestions in this and other departments of the work were derived from Reinach's *Manuel de Philologie Classique* (Paris, 1883–84), a marvel of encyclopædic knowledge and judicious condensation that has now for twelve years been the philological pemmican of all classical scholars. It would be superfluous to mention the immensely valuable monographs contained in Iwan Müller's *Handbuch der klassischen Altertumswissenchaft*. The Pauly-Wissowa *Real-Encyclopädie der klassischen Altertumswissenchaft* began to appear too late to be used to any extent.

For those articles that deal with the literature of Greece and Rome and those that embody miscellaneous and collateral information, so many works in so many languages have been continually consulted as to render any separate mention of them utterly impossible. Suffice it to say that, besides the great standard authorities in each department, the special monographs of French and German scholars have been frequently referred to, as well as such papers of value as are continually appearing in the archæological and philological journals of England, France, Germany, Italy, and the United States. In preparing the bibliography, much use was naturally made of Engelmann-Preuss, of Professor Hübner's *Grundriss zu Vorlesungen über die römische Litteraturgeschichte* (4th ed., Berlin, 1878), and the same scholar's *Bibliographie der klassischen Altertumswissenchaft* (2d ed., Berlin, 1889), besides the well-known works of Professor J. E. B. Mayor, and the Teuffel-Schwabe-Warr *History of Roman Literature* (London, 1891). In preparing the short biographies of mediæval and modern classical scholars and their works, much help was derived from Pökel's *Schriftstellerlexikon* (1882) and from Professor Alfred Gudeman's excellent *Outlines of the History of Classical Philology* (2d ed., Boston and New York, 1894).

* Especially *Amphitheatrum, Athletae, Bacchanalia, Balneae, Circus, Eleusinia, Fratres Arvales, Theatrum, Vas.*

In drawing upon these and all his other sources, the Editor has allowed himself the very greatest freedom. Whatever he has taken he has used in the way best adapted to secure the end he had in view. When material was, in its original form, precisely suited to his purpose he incorporated it without a change. When change for any reason was desirable, he enlarged, condensed, modified, transposed, or paraphrased according to his conception of what was most needed in the given case; and as the greater part of his work was compilation rather than original exposition, he wishes here to express his very great indebtedness to the many books that have been drawn upon. No acknowledgment can be too full or too comprehensive; and if the completed work be found of service to the student of the classics, this result must be very largely credited to the original sources whence so great a portion of the Dictionary is derived.

The illustrations also come from many places. The various "atlases" published in Germany, especially that of Schreiber, have yielded many; and so have Baumeister's *Denkmäler*, Overbeck's *Pompeii*, and Falke's *Hellas und Rom*. Many, however, are from photographs, for some of which the Editor is indebted to the kindness of the friends who are mentioned in the following paragraph. A good many drawings of minor objects have been taken from Rich; and several from Daremberg and Saglio, and from Guhl and Koner's *Life of the Greeks and Romans*,—a work that has likewise proved of service in other departments of this Dictionary.

Some especial mention is due to those who have in many ways aided in the preparation of the book. To Professor Henry Drisler, whose name is still first among American lexicographers of the classical languages, sincere thanks are due for assistance, information, and advice, as well as for the loan of books from his well-stored private library. To his lamented colleague, Professor Augustus C. Merriam, the Editor is indebted for having read a number of the articles in proof, and for many very valuable suggestions. For a like service, acknowledgments are hereby made to Professors Perry, Jackson, and Egbert. Dr. Robert Arrowsmith assumed the task of translating into English the articles contributed to this work by foreign scholars. Professor Rodolfo Lanciani, Professor Francis W. Kelsey, Professor F. B. Tarbell, and Mr. Henry R. Taylor have been especially kind in furnishing for the Editor's use various photographs, drawings, and diagrams not readily obtainable elsewhere. The publishing-house of Herr Oldenbourg, of Munich, has furnished some of the electrotypes used in Baumeister's *Denkmäler*, and Messrs. Estes and Lauriat of Boston have kindly permitted the reproduction of some of the illustrations from their edition of Duruy's *History of Rome*. The house of Herr Gustav Fock, of Leipzig, has aided greatly in the preparation of the bibliographical portion of the book by furnishing valuable data under this head. Finally, the Editor would be indeed ungrateful were he to abstain from a warm expression of personal indebtedness to his publishers, whose patience and consideration during many unavoidable delays have been as generous as their liberality in carrying out the Editor's plan has been unstinted. It is, in fact, in the cultivated and broad-minded publisher of to-day that one finds the modern type of the Augustan Maecenas, but with a vastness of opportunity and a far-reaching influence such as no ancient ever exercised, for the effective encouragement of literature and learning.

In sending forth at last this volume, to whose preparation he has now for

nearly five years devoted every hour that could be spared from other and most arduous duties, the Editor appreciates, far more keenly than when the work began, the enormous difficulties of his task. In bringing together a mass of material requiring at every point so much special knowledge and so much mastery of detail, it is inevitable that what he has done should here and there be open to the charge of inadequacy, of inconsistency, and perhaps of error. Yet it is still his earnest hope that as those most competent to criticise are best able also to appreciate the innumerable perplexities inherent in the undertaking, they will judge his labours as a whole; and that when so regarded, these will be found at least to have done something to promote the comprehensive, intelligent, and sympathetic study of classical antiquity.

HARRY THURSTON PECK.

COLUMBIA UNIVERSITY, New York,
August 1*st*, 1896.

PREFATORY NOTE TO THE SECOND EDITION

THE Editor has availed himself of the opportunity afforded by an early demand for a second edition of this Dictionary to make certain alterations and corrections suggested by a careful reading of the printed sheets. Some additions have been made to the bibliography, some very recent discoveries in archæology have been noted, and such other changes have been introduced as appeared to be feasible and at the same time desirable to make. He wishes here to mention his especial obligation to Professor ALFRED GUDEMAN, of the University of Pennsylvania, who undertook a very thorough examination of the work, bringing to the task a singularly accurate and varied scholarship, and very kindly furnishing the Editor with the notes resulting from this reading. The Editor also thanks those scholars who have discussed the book at length in the columns of the leading critical reviews. If it should appear that he has not in all cases availed himself of the suggestions which have been so thoughtfully commended to him, this is attributable wholly to the fact that a careful consideration of the evidence has sometimes failed to convince him of existing error; for in the sphere of classical study there are found so many questions upon which the best opinion still remains divided as to prevent even the pronouncement of an anonymous reviewer from possessing always the stamp of absolute finality. In conclusion, the Editor desires to express his grateful acknowledgments to the entire body of classical students and instructors who have given to the book so immediate and so warm a welcome.

H. T. P.

July 1*st*, 1897.

A DICTIONARY

OF

CLASSICAL LITERATURE AND ANTIQUITIES.

A

A, the first letter in both the Greek and Latin alphabets. The principal uses of the letter in abbreviations found in MSS. and inscriptions, or on coins, are given below.

In Greek.—Abbreviations of one or even of two letters are of extreme rarity on Greek coins and inscriptions of the pre-Euclidean period; after this time a few instances occur, owing doubtless to Roman influence, their use being chiefly confined to a few Roman proper names, e. g. A=Αὐλός, Αὐρήλιος, Ἀντωνῖνος. With the general introduction of alphabetic numerals, about the beginning of the fifth century B.C., the letter A, *á*, is also used as a numeral for 1 and 1000 (*,a*). Cf. S. Reinach, *Traité d'Épigraphie Grecque* (1885), pp. 220 ff. 225 ff.

In Latin.—The Romans made an astonishingly extensive use of abbreviations.* Only a very few out of many thousands recorded in the indexes to the *C. I. L.* (ii. 777, iii. 1185, v. 1201, vii. 342, viii. 1103, ix. 795, x. 1165, xii. 945, xiv. 583) can be given here under each letter. On Roman abbreviations in general, cf. R. Mowat, *Bull. Épigraph.* IV. p. 127 ff. (1884); E. Hübner, in Iwan Müller's *Handbuch*, i. 496 ff., 523 ff.; R. Cagnat, *Cours d'Épigraphie Latine* (1889), p. 351 ff.

A = absolvo, written on voting tablets, "I favor acquittal;" hence called *littera salutaris* (Cic. *pro Mur.* vi. 15).

A = antiquo, designates a nay vote in the Roman comitia, in rejection of a proposed change.

A = auditor, or adulescens in some of the MSS. of Cic. *Tusc. Disp.*, to denote one of the interlocutors as opposed to M = Marcus or magister.

A = Aulus, Augustus, Aurelius, Antoninus, Africa, Aprilis, aedilis.

Ⅴ = Aurelia (inverted letter always used to designate female names).

A = accipiet, actum, aeternus, annus, annona, ara, armatura, argento, auro, as.

A·A = Aquae, Aponi, Auli duo.

AAGG = Augusti duo.

AAAGGG = Augusti tres.

A·A·A·F·F = aere argento auro flando feriundo.

A·B = a balneis (very frequently for *a* or *ab*), amicus bonus.

A·B·M = amico bene merenti.

A·C = aere collato, armorum custos, a colonia, a commentariis.

A·D = ante diem, ager divisus.

A·D·A = agris dandis adsignandis.

A·D·A·I = agris dandis adsignandis iudicandis.

A·E = actum esse.

A·F·P·R = actum fide Publii Rutilii (Cic. *De Orat.* ii. 69, 280).

A·G·T = Augustus.

A·G·IV·C·P = arborum genera quattuor, cetera privata.

A·H·N·P = ad heredem non pertinet.

A·L = actarius legati, [et si qui] alii liberti [erunt], animo libens, Augusti libertus, arca lata.

A·L·F(P) = animo libente fecit (posuit).

A·O·F·C = amico optimo faciundum curavit.

A·P = aedilicia potestate, animo pio, anno provinciae, a populo, arca publica, argentis pondo, ager publicus.

A·P·R = aerarium populi Romani.

A·P·R·C = anno post Romam conditam.

A·Q·ER·PP = aut qui erunt proximi.

A·Q·E·R·P·P·R·L = ad quem ea res pertinet, pertinebit recte licet.

A·Q·P = a quaestionibus praefecti.

A·S = a sacris, a senatu.

A·S·F (F·C) = a solo fecit, faciundum curavit.

A·V = aediles vici, argenti unciae, ave vale.

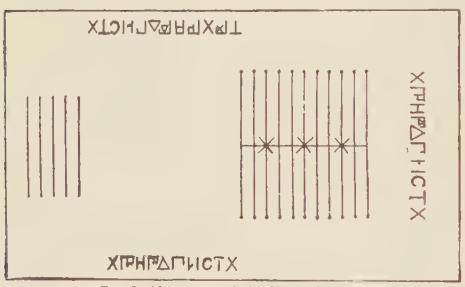
A·V·C = anno urbis conditae.

Abacænum. An ancient town of Sicily, west of Messana and south of Tyndaris. See Diod. Sic. xiv. 78, 90.

Abactōres, Abigeatōres, or **Abigei** are terms used to signify those guilty of cattle-stealing (*abigeatus*), which the Roman practice distinguished from ordinary *furtum* (q. v.), when the theft was of a sufficiently serious kind. The stealing of a single horse or ox was *abigeatus*, but to steal less than ten sheep or four pigs was only *furtum*. It was an aggravation of the offence to steal the animals from a pen or other enclosure, or for the *abactor* to carry weapons. The punishment was at the discretion of the magistrate, and ranged from banishment and degradation from rank to penal servitude and death. Cf. *Dig.* 47

* The original name for these abbreviations seems to have been *litterae singulares* or *singulariae* (cf. Gell. xvii. 9, 1). At a later period *notae* became the more common term (cf. Festus, p. 184: *Nota nunc significat signum ut in pecoribus, tabulis, libris, litterae singulae vel binae*). Valerius Probus wrote an elaborate work *De Notis*, only a part of which has been preserved. In the *Digests* of Justinian *nota* is displaced by the term *sigla*. The word is of doubtful origin. Most scholars regard it as a syncopated form of *sigillum*; others derive it from *singuli*; Mommsen thinks it a mere corruption from *singulares*.

14, *De Abigeis*; *Cod.* ix. 37; and Rein, *Das Criminalrecht der Röm.* pp. 323–325 (Leips. 1844).



Abactus Venter. See ABORTIO

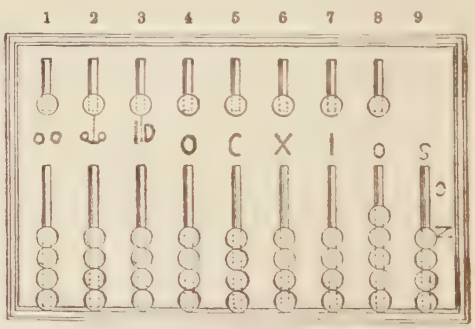
Abacŭlus (Gr. *ἀβακίσκος*), diminutive of *abacus* (q. v.), and denoting a tile of marble, glass, etc., used in making ornamental pavements. See MUSIVUM OPUS.

Abăcus (Gr. *ἄβαξ, ἀβάκιον*). (1) A square plate, especially the stone slab that covers the capital of a column. (2) A dice-board. See DUODECIM SCRIPTA; LATRUNCULI. (3) A mathematician's table strewn with fine sand, on which figures were drawn with a *stilus*. (4) A counting-board, on which sums were worked for private and public accounts. This might be:

(*a*) A tablet with a frame or rim, covered with sand, in which lines or figures could be drawn either with the finger or some pointed instrument; and used in geometry, arithmetic, etc. (Pers. i. 131; *eruditus pulvis*, Cic. *N. D.* ii. 18, 48). The name *arenarius*, applied to the elementary teacher, implies that this sort of abacus was used by school-children.

(*b*) A development of this simple form was the abacus on which *ψῆφοι*, *calculi*, pebbles or counters, were employed in calculations. It was a board marked off by ridges or grooves (along which balls, counters, or buttons could be moved) into compartments, for the several orders of numbers. We have examples of both Greek and Roman abaci. The Greek abacus figured here is from Salamis, and is of marble, about forty inches long by twenty-eight broad. At a distance of ten inches from one of the sides are marked five parallel lines. At twenty inches' distance from the last of these, eleven others are marked and bisected by a cross

Greek Abacus, or Calculating Table.



line, the point of whose intersection with the third, sixth, and ninth lines is marked by a star. Along three of the sides is arranged a series of characters in the same order, and so as to be read with equal ease whichever way the abacus is turned: the series on one side having two more characters than the others. These characters (Ⱶ being known as = drachma) gives the following scale, reckoned from the left of Ⱶ:

Ⱶ	𐅄	Δ	𐅅	H	𐅆	X
1	5	10	50	100	500	1000

These characters are of great antiquity. Ⱶ is a mutilated E, initial of *ἕν*; 𐅄 an old form of Π, i. e. *πέντε*; Δ obviously represents *δέκα*, and X *χίλιοι*; while of the three remaining characters, H is for HEKATON, the old way of writing *ἑκατόν*, 𐅅 is 𐅄 with Δ inscribed, 𐅆 with H. The characters on the right of Ⱶ are I = obol, C = ½ obol, T = ¼ obol, X = *χαλκοῦς*, ⅛ obol. The two additional characters in the left-hand series are 𐅄 = 5000 (𐅄 with X inscribed), and T = talent (of 6000 drachmas); so that the lowest and highest money units are at the two ends of the scale.

To understand the use of this abacus, the calculator must be supposed sitting before one of its long sides, and putting counters into the spaces between the marked lines. Each space represents an order of numerals, the space on the right hand being intended for units, the next space for tens, the next for hundreds, and so on. The numbers belonging to the first four of each series are put on that side of the bisecting line which is nearest the calculator; those over five are put beyond it. As five spaces out of the ten would be enough for these purposes, it is conjectured that after the progression of drachmas going up to 5000, a fresh progression of talents began (T = 6000 drachmas), going up to the seventh place (1,000,000). Thus the Greek abacus, like the Roman, which was no doubt derived from it, reckoned up to a million. The fractions of the drachma were reckoned on the five lines at the other end of the slab. It is to an abacus of this kind that Polybius refers, when he compares the ups and downs of court favorites to the *ψῆφοι* on an *ἀβάκιον*, which, according to the line in which they are placed, may signify either a talent or a chalcus (Polyb. v. 26, § 13). This comparison is elsewhere attributed to Solon (Diog. Laërt. i. 59).

The Roman abacus (figured here from the Kircherian Museum at Rome) was on the same system.

Roman Abacus, or Calculating Table.

It is divided into eight lower and eight higher (somewhat shorter) grooves: there is also a ninth lower groove, without an upper groove to correspond. Four sliding buttons are attached to each lower groove except the eighth, which has five: each upper groove has one button. Between the two sets of grooves the following numbers are marked:

ↀ	CCCIↃↃ	CCIↃↃ	CIↃ	C	X	I
1,000,000	100,000	10,000	1000	100	10	1

The units of any other number when not above 4 are marked by moving a corresponding number of buttons along the lower groove upwards, the button in the upper groove = 5. The eighth row was used by reckoning fractions (*aes recurrens*) on the duodecimal system, by ounces, or twelfth of the *as*, and is accordingly marked ○ or ⊖ = uncia: each of its five lower buttons = 1 ounce, and the upper one = 6. Fractions below an ounce were reckoned on the ninth groove, marked:

S	Ↄ	Z or 2
semuncia.	sicilicus.	duella.
½ oz.	¼ oz.	⅛ oz.

See the article LOGISTICA.

(5) The name is also used of a wooden tray or

platter employed in domestic economy. Cf. Plin. *H. N.* xxxvii. § 18 and § 21; Apul. *Met.* ii. 7. (6) A sideboard for vessels, and for offerings to the gods (Boetticher, *Tektonik der Hellenen*, iii. p. 46).

Abacus, sideboard. (Relief in British Museum.)

Abae (Ἄβαι). A city of Phocis, near and to the right of Elatea, towards Opus. The inhabitants had a tradition that their city was founded by Abas, son of Lynceus and Hypermnestra, grandson of Danaus (Paus. 10, 35). It was most probably of Pelasgic origin. Abae was early celebrated for its oracle of Apollo, of greater antiquity than that at Delphi, and hence Apollo is called Abaeus. During the Persian invasion, the army of Xerxes set fire to the temple, and nearly destroyed it; soon after it again gave oracles, though in this dilapidated state, and was consulted for that purpose by an agent of Mardonius (Herod. viii. 134).

Abalienatio. See Mancipium.

Abantes (Ἄβαντες). The ancient inhabitants of Euboea. They are said to have been of Thracian origin, to have first settled in Phocis, where they built Abae (q. v.), and afterwards to have crossed over to Euboea. The Abantes of Euboea assisted in colonizing several of the Ionic cities of Asia Minor.

Abantiădes. A patronymic applied to Perseus (q. v.), Acrisius, and other descendants of Abas (q. v.).

Abantias. (1) Any female descendant of Abas (q. v.), such as Danaë and Atalanta. (2) An ancient name of Euboea. See Abantes.

Abăris (Ἄβαρις). (1) A Hyperborean priest of Apollo, who came from the country about the Caucasus to Greece, while his native land was visited by a plague. His history is entirely mythical: he is said to have taken no earthly food, and to have ridden on an arrow, the gift of Apollo, through the air. (See Müller, *Dorier*, i. 364.) (2) A city of Egypt, east of the Bubastic mouth of the Nile.

Abas (Ἄβας). (1) Son of Metanira, and changed by Demeter into a lizard, because he mocked the goddess when she had come on her wanderings into the house of his mother, and drank eagerly to quench her thirst. (2) Twelfth king of Argos, son of Lynceus and Hypermnestra, grandson of Danaüs, and father of Acrisius and Proetus. When he informed his father of the death of Danaüs, he was rewarded with the shield of his grandfather, which was sacred to Heré. This shield performed various marvels, and the mere sight of it could subdue a river. (See Serv. *ad* Verg. *Aen.* iii. 286). (3) A Latin chief who assisted Aeneas against Turnus, and was killed by Lausus (Verg. *Aen.* x. 170). (4) A river of Albania emptying into the Caspian Sea. (5) A mountain of Armenia Minor, identified by Mannert with Ararat.

Abbreviations. For abbreviations found in MSS. and inscriptions, and on ancient coins, see the articles on the different letters of the alphabet, and also Numismatics; Palaeography.

Abdēra (τὰ Ἄβδηρα). (1) A town of Thrace, near the mouth of the Nestus, which flowed through the town. It was colonized by Timesius of Clazomenae about B.C. 656, and a second time by the inhabitants of Teos in Ionia, who settled there after their own town had been taken by the Persians, B.C. 544. It was the birthplace of Democritus, Hecataeus, Protagoras, Anaxarchus, and other distinguished men; but its inhabitants, notwithstanding, were accounted stupid, and Abderite was a term of reproach. (See Juv. x. 50; Mart. x. 25.) (2) A Punic town of Hispania Baetica, on the sea-coast.

Abderītes (Ἀβδηρίτης) and **Abderīta.** A name generally applied to the "laughing philosopher" Democritus (q. v.), as being a native of Abdera.

Abdērus (Ἄβδηρος). The armour-bearer of Heracles (q. v.), torn in pieces by the mares of Diomedes. The town Abdera was said to have been founded by Heracles in his honour.

Abdicatio. See Magistratus.

Abecedarii Hymni. Hymns containing as many lines as there are letters in the alphabet, each line beginning with a particular letter. An instance is given by St. Augustine in his *Retractationes*, i. 20. See Acrosticha.

Abella or **Avella.** A town of Campania, not far from Nola, founded by the Chalcidians in Euboea. It was celebrated for its apples, whence Vergil calls it *malifera*.

Abgărus (Ἄβγαρος), **Acbărus** (Ἄκβαρος) or **Augărus.** A name common to many rulers of Edessa, the capital of the district of Osrhoënė in Mesopotamia. Of these rulers one is supposed by Eusebius to have been the author of a letter written to Christ, which he found in a church at Edessa and translated from the Syriac. Eusebius (*Eccles. Hist.* i. 13) gives the text of the letter and also of the alleged reply. A translation of both can be found in McClintock and Strong's *Cyclopaedia of Biblical Literature*, s. v. *Abgarus*.

Abia (Ἀβία). (1) A town of Messenia on the Messenian Gulf, and at one time a member of the Achaean League (q. v.). (2) The nurse of Hyllus, in whose honour Cresphontes changed the name of Iré to Abia.

Abigeatōres. See Abactores.

Abigeātus. See Abactores.

Abigei. See Abactores.

Abīla (τὰ Ἄβιλα). (1) A town of Coele-Syria, afterwards called Claudiopolis, and capital of the tetrarchy of Abilenė. It is mentioned in the N. T., *Luke*, iii. 1. (2) A mountain of Africa, opposite Gibraltar (Calpé).

Abisăres (Ἀβισάρης). An Indian king who sent embassies to Alexander the Great, and was by him allowed to retain his kingdom with considerable additions. His realm lay beyond the Hydaspes. See Quint. Curt. viii. 12–14; ix. 1.

Ablegmĭna (ἀπολεγμοί) were the parts of the victim which were offered to the gods in sacrificing. Other names were *porriciae* and *prosecta*. See Sacrificium; Victima.

Ablecti. See EXTRAORDINARII.

Abnŏba Mons. The range of hills covered by the Black Forest in Germany. See GERMANIA.

Abolla. A rough, thick cloak resembling the Greek *chlamys* (q. v.), and called by Horace (*Ep.* i. 17, 25) *duplex pannus*. It was of foreign origin,

Abolla. (Arch of Septimius Severus.)

and at Rome in imperial times was worn indiscriminately as an outer garment (Juv. iv. 76). With the wealthy it was often of purple (Suet. *Cal.* 35); but it seems to have retained its simple coarseness when adopted by philosophers. It was thus worn by the Cynics, serving alike for day and night clothes (Martial, iv. 53, 5; Hor. *Ep. l. c.*, the same as the *τρίβων διπλοῦς*, Diog. Laërt. vi. 22). The abolla as worn by soldiers is probably to be recognized in the bas-relief from the arch of Septimius Severus.

Abonitīchos (Ἀβώνου *τεῖχος*). A town of Paphlagonia, the birthplace of an impostor who assumed the character of Asclepius. See Lucian, *Pseud.* 58.

Aborigĭnes. A name given by the Roman writers to the primitive race, who were thought to have blended with the Siculi, and founded subsequently the nation of the Latins. The name is equivalent to the Greek *αὐτόχθονες*, as indicating an indigenous race. According to tradition, they dwelt originally around Mount Velino, and Lake Fucinus, extending as far as Carseoli, and towards Reate. This was Cato's account (Dionys. H. ii. 49). The Aborigines are depicted by Sallust and Vergil as savages living in hordes, without manners, law, or agriculture, on the produce of the chase, and on wild fruits. This, however, does not agree with the traces of their towns in the Apennines; but the whole account was, perhaps, little else than an ancient speculation on the progress of mankind from rudeness to civilization. The Aborigines are said to have revered Ianus and Saturn. The latter taught them husbandry, and induced them to choose settled habitations, as the founders of a better way of life. From this ancient race, as has already been remarked, blending with a remnant of the Siculi, the nation of the Latins was said to have sprung; and between Saturn and the time assigned for the Trojan settlement, only three kings of the Aborigines are enumerated — Picus, Faunus, and Latinus. As to the name of this early race, the old and genuine one seems to have been Casci; and the appellation Aborigines was only given them by the later Roman writers. Regarding the historical aborigines of Italy, see ITALIA.

Aborrhas (Ἀβόρρας). A branch of the Euphrates; also written Chaboras, the modern Khabour.

Abortio, Abortus. If we may judge from poets and satirists, it was not an uncommon practice among the Romans to procure abortion (Plaut. *Truc.* 202; Juv. ii. 32; vi. 368). Cicero (*Clu.* 12) relates a case where a testator, leaving his wife pregnant, endeavours to secure the birth of his son by leaving his wife a handsome bequest if his son become heir, and nothing if he does not. Cicero charges Oppianicus with paying the amount contingently bequeathed to the widow, and procuring abortion in order that Oppianicus's son may succeed to the inheritance. A woman at Miletus, who in similar circumstances procured abortion by the use of drugs, was condemned to death in the time of Cicero's proconsulate. It was probably some such dangers that led to the Lex Cornelia, making it a criminal offence to give love-potions or medicines for abortion (Paul. *Sent.* v. 23, 214). All women who procured abortion were, by a rescript of Severus and Caracalla, condemned to exile.

Of the practice and law in Greece still less is known. Lysias in a speech, or declamation, impeached Antigonus for procuring abortion (*κατ' Ἀντιγόνου ἀμβλώσεως*, *Fragm.* 10, ed. Bait. and Sauppe). Plato recommended it in certain circumstances in his ideal Republic (*Rep.* v. 9, p. 461 c), and so also Aristotle (*Polit.* iv. [vii.] 16).

Abradātas (Ἀβραδάτας). A king of Susa, who submitted with his army to Cyrus, when he learned that his wife, Panthea, who had been made prisoner by the latter, was treated by him with great kindness and humanity. He was subsequently slain in fighting for Cyrus (Xen. *Cyrop.* v. 6).

Abrincatui. A nation of Gaul, dwelling, according to the common opinion, on the western coast, north of the Liger, or Loire, and whose capital, Ingena, is supposed to coincide with Avranches (Pliny, *H. N.* iv. 18).

Abro. (1) An Athenian author, whose work on the festivals of the Greeks is lost. (2) A grammarian of Rhodes of the time of Augustus, and a pupil of Tryphon. (3) An Argive of dissolute and luxurious life, whose name is perpetuated in the proverbial expression *Ἄβρωνος βίος* (*Abronis vita*) (Suidas, s. h. v.).

Abrocŏmas (Ἀβροκόμας). (1) A son of Darius who accompanied Xerxes against Greece, and was slain at Thermopylae. (2) A satrap of Artaxerxes Mnemon who was sent with an army of 300,000 men to oppose Cyrus on his march into Upper Asia. He burned some boats to prevent Cyrus from crossing the Euphrates, but did not arrive in time for the battle of Cunaxa (Xen. *Anab.* i. 3, § 20; iv. § 3, 5, 18; vii. § 12).

Abrogatio. See LEX.

Abrotŏnum (Ἀβρότονον). An African coast-town lying between the Syrtes. It was founded by the Phœnicians, and subsequently became a Roman colony. It was also called NEAPŎLIS; and with Oea and Leptis Magna formed the so-called African Tripolis (Pliny, *H. N.* v. 4).

Absinthium (*ἀψίνθιον*). Wormwood.

Absis or **Apsis** (*ἁψίς*). Literally, a fastening

of any kind. It was applied specially to the joining together of the extremities of a piece of wood, so as to give it the shape of a bow; and hence it came to signify anything of that shape, such as a bow, an arch, or a wheel (Hes. *Op.* 424; Herod. iv. 72.) The next transition of meaning is to anything vaulted (for example, *ἡ ὑπουρανία ἀψίς, the vault of heaven*, Plat. *Phaedr.* 247 B); and in this sense it was adopted in architecture, first, for any building or portion of a building of a circular form, or vaulted (Plin. *Epist.* ii. 17, § 18), and more especially for the circular and vaulted end of a basilica (Paul. Nol. *Ep.* 12). In Christian churches the apse came to mean the end of the choir, where the bishop's throne was placed.

Absolutio. See IUDICIUM.

Abstinendi Beneficium. See HERES.

Absyrtĭdes. Islands at the head of the Adriatic, in the Sinus Flanaticus (Gulf of Quarnero); named, as tradition reported, from Absyrtus the brother of Medea, who, according to one account, was killed here. See ABSYRTUS.

Absyrtus or **Apsyrtus** (*Ἄψυρτος*). The son of Aeëtes, king of Colchis, whom Medea took with her when she fled with Iason. Being pursued by her father, she murdered her brother, cut his body in pieces, and threw them into the sea, that her father might be detained by gathering the limbs of his child. Tomi, the place where this horror was committed, was believed to have derived its name from *τέμνω*, "cut." See ARGONAUTAE; MEDEA.

Abus. A river of Britain, now the Humber.

Abūsus. See USUS FRUCTUS.

Abydēnus (*Ἀβυδηνός*). A pupil of Berosus, who flourished B.C. 268. He wrote in Greek an historical account of the Chaldeans, Babylonians, and Assyrians, some fragments of which have been preserved to us by Eusebius, Cyril, and Syncellus. An important fragment, which clears up some difficulties in Assyrian history, has been discovered in the Armenian translation of the *Chronicon* of Eusebius. See the edition of his fragments by Richter (Leipzig, 1825).

Abȳdos (*Ἄβυδος*). (1) A town of the Troad on the Hellespont, and a Milesian colony, nearly opposite to Sestos, but a little lower down the stream. The bridge of boats which Xerxes (q. v.) constructed over the Hellespont, B.C. 480, commenced a little higher up than Abydos, and touched the European shore between Sestos and Madytus. (2) A city of Upper Egypt, near the west bank of the Nile; once second only to Thebes, but in Strabo's time (A.D. 14) a small village. It had a temple of Osiris and a Memnonium, both still standing, and an oracle.

Abȳla or **Abīla.** A mountain in Mauretania forming the eastern extremity of the African coast of the Fretum Gaditanum, or Strait of Gibraltar. This and Mt. Calpé, opposite to it, were called the Columns (or Pillars) of Hercules, from the legend that they were originally a single mountain, and had been torn asunder by Hercules.

Acacius. (1) A disciple of Eusebius, bishop of Caesarea, whom he succeeded in 338 or 340. He was surnamed *Μονόφθαλμος* (*Luscus*), and wrote a *Life of Eusebius*, not extant; 17 volumes of *Commentaries on Ecclesiastes;* and 6 volumes of *Miscellanies.* Acacius was the leader of the sect called Acacians, who denied the Son to be of the same substance as the Father. (2) A patriarch of Constantinople in 471, who established the superiority of his see over the Eastern bishops. He was a favorite with the Emperor Zeno, who protected him against the Pope. Two letters of his are extant, to Petrus Trullo, and Pope Simplicius. (3) A bishop of Melitené, in Armenia Minor, present at the Council of Ephesus in 431, and who left in the Councils (vol. iii.) a *Homily against Nestorius.* (4) A bishop of Amida, distinguished for piety and charity in having sold church-plate, etc., to redeem 7000 Persian prisoners on the Tigris, in Mesopotamia. His death is commemorated in the Latin Church on April 9th.

Academĭa (*Ἀκαδήμεια*). (1) A public garden or grove in the suburbs of Athens, about six stadia from the city, named from Academus or Hecademus, who left it to the citizens for gymnastics (Paus. i. 29). It was surrounded with a wall by Hipparchus, adorned with statues, temples, and sepulchres of illustrious men; planted with olive and plane trees, and watered by the Cephissus. The olive-trees, according to Athenian fables, were reared from layers taken from the sacred olive in the Erechtheum, and afforded the oil given as a prize to victors at the Panathenaean festival. Few retreats could be more favorable to philosophy and the Muses. Within this enclosure Plato possessed, as part of his patrimony, a small garden, in which he opened a school for the reception of those inclined to attend his instructions. Hence arose the Academic sect, and hence the term Academy has descended to our times. The appellation *Academia* is frequently used in philosophical writings, especially in Cicero, as indicative of the Academic sect. See PHILOSOPHIA.

Sextus Empiricus enumerates five divisions of the followers of Plato. He makes Plato founder of the first Academy, Arcesilaüs of the second, Carneades of the third, Philo and Charmides of the fourth, Antiochus of the fifth. Cicero recognizes only two Academies, the OLD and NEW, and makes the latter commence as above with Arcesilaus. In enumerating those of the Old Academy, he begins, not with Plato, but Democritus, and gives them in the following order: Democritus, Anaxagoras, Empedocles, Parmenides, Xenophanes, Socrates, Plato, Speusippus, Xenocrates, Polemo, Crates, and Crantor. In the New, or Younger, he mentions Arcesilaüs, Lacydes, Evander, Hegesinus, Carneades, Clitomachus, and Philo (*Acad. Quaest.* iv. 5). If we follow the distinction laid down by Diogenes, and alluded to above, the Old Academy will consist of those followers of Plato who taught the doctrine of their master without mixture or corruption; the MIDDLE will embrace those who, by certain innovations in the manner of philosophizing, in some measure receded from the Platonic system without entirely deserting it; while the NEW will begin with those who relinquished the more obnoxious tenets of Arcesilaüs, and restored, in some measure, the declining reputation of the Platonic school (see PLATO). (2) A villa of Cicero near Puteoli (Pliny, *H. N.* xxxi. 2).

Academĭca or **Academĭcae Quaestiōnes.** A treatise of Cicero, written B.C. 45, originally in two books, named after Catulus and Lucullus, but subsequently in four books. Of the first edition, the second book (*Lucullus*) has come down to us; of the second (*Academica Posteriora*), the first part of

the first book, and fragments exist. The Lucullus contains an account of the teachings of Antiochus and Philo regarding knowledge; the beginning of the second edition, besides some general observations, gives a sketch of the history of philosophy from Socrates to Arcesilaüs. An excellent edition of the *Academica*, in English, is that of Reid (1885).

Acadēmus (Ἀκάδημος). A hero, often identified with Cadmus. According to others (Plut. *Thes.* 32), he was an Athenian, who disclosed to Castor and Pollux the place where Theseus had secreted their sister Helen, after having carried her off from Sparta; and is said to have been highly honored, on this account, by the Lacedaemonians. From him the garden of the Academia, presented to the people of Athens, is thought to have been named. See ACADEMIA.

Acaina (ἄκαινα). A measure of length, equivalent to ten Greek feet. It was originally a pointed stick that finally came, like our *rod, perch*, or *pole*, and like the German *Stange*, to be used as a measuring-rod. See ACNA.

Acalandrus. A river of Magna Graecia, emptying into the bay of Tarentum.

Acalēphé. A shell-fish, belonging to the genus *urtica*, or sea-nettle.

Acamantis. A name given to Cyprus (q. v.). See ACAMAS.

Acămas (Ἀκάμας). (1) A promontory of Cyprus, northwest of Paphos. It is surmounted by two sugar-loaf summits, and the remarkable appearance which it thus presents to navigators as they approach the island on this side, caused them to give the name of Acamantis to the whole island. (2) A son of Theseus and Phaedra. He was deputed to accompany Diomedé, when the latter was sent to Troy to demand Helen. During his stay at Troy he became the father of Munitus by Laodicea, one of the daughters of Priam. He went to the Trojan War, and was one of the warriors enclosed in the wooden horse. He afterwards led a colony from Athens to Cyprus, where he died.

Acanthis (ἀκανθίς), mentioned by Aristotle, Pliny, and Vergil. The *fringilla spinus* of Linnaeus, called "aberdevine" in England.

Acanthus. (1) In architecture, the name given to the broad leaf used to enrich the capital of the Corinthian column (see COLUMNA). (2) In botany, a name given by the ancients to three different plants, (*a*) in Vergil, a prickly tree, supposed to be holly; (*b*) an Egyptian tree, described by Theophrastus as having pods like those of a bean; and (*c*) an herb, mentioned by Dioscorides, and identical with that which now bears its name.

Acapna, sc. *ligna* (in Greek, ξύλα ἄκαπνα). Firewood specially prepared to burn without smoke, and in great request in antiquity, owing to the defects of the chimneys. It was prepared in three ways: (1) by scorching the wood over a fire, this being known as *ligna cocta;* (2) by soaking in water after removing the bark, and then drying; (3) by smearing with oil-lees (*amurca*), and then exposing to the sun. See Martial, xiii. 15.

Acapnon Mel. Honey taken from the hive without smoking out the bees. Cf. Plin. *H. N.* xi. § 45.

Acarnan and Amphotĕrus. The sons of Alcmaeon and Callirrhoë. Their mother, hearing of her husband's murder by Phegeus and his sons, prayed Zeus, who loved her, to let her sons grow up into men at once, so as to avenge their father. This done, they slew the sons of Phegeus at Tegea and himself at Psophis, offered up at Delphi the jewels of Harmonia, which they thus acquired, and then founded a kingdom called after the elder of them Acarnania. See ALPHESIBOEA.

Acarnania (Ἀκαρνανία). A western division of Greece, bounded on the north by the Ambracian Gulf, on the west and southwest by the Ionian Sea, on the northeast by Amphilochia, which is sometimes included in Acarnania, and on the east by Aetolia, from which, at a later time, it was separated by the Achelous. The name of Acarnania does not occur in Homer. In the most ancient times the land was inhabited by the Taphii, Teleboae, and Leleges, and subsequently by the Curetes. At a later time a colony from Argos, said to have been led by Acarnan, settled in the country. In the seventh century B.C. the Corinthians founded several towns on the coast. The Acarnanians first emerge from obscurity at the beginning of the Peloponnesian War, B.C. 431. They were then a rude people, living by piracy and robbery, and they always remained behind the rest of the Greeks in civilization and refinement. They were good slingers, and are praised for their fidelity and courage. The different towns formed a league, which met at Stratus, and subsequently at Thyrium or Leucas.

Acastus (Ἄκαστος). The son of Pelias, king of Iolcos, who joined the Argonautic expedition, though against his father's will, as a friend of Iason. At his father's death he celebrated funeral games which were the theme of ancient poets and artists, and in which Peleus was represented as participating. He took part in the Calydonian boar-hunt. But his wife Astydamia fell in love with Peleus (q. v.), and this brought ruin on the wedded pair. His daughter was Laodamia, renowned for her tender love of Protesilaüs (q. v.).

Acătus, dimin. **Acation** (ἄκατος, ἀκάτιον). (1) A small boat (see NAVIS). (2) In the rigging of a ship, ἀκάτια were small sails, probably stay-sails. (3) A drinking-vessel, shaped like a modern sauce-boat.

Acbărus. See ABGARUS.

Accad. See AKKAD.

Acca Larentia. According to the common tradition, the wife of the herdsman Faustulus, and nurse to Romulus and Remus. See FRATRES ARVALES; LARES; ROMULUS.

Accensi. Properly "supernumeraries," from *accenseo*. The word is used in five senses. (1) A century added to the fifth class of citizens in the Servian classification, and described by Livy (i. 43, 7) as *cornicines, tubicinesque*. Lange, who is now generally followed, takes the name *accensi* as used of the whole fifth class. See COMITIA; EXERCITUS. (2) As a military term, *accensi* denotes the reserve soldiers who, at the time when each soldier had to find his own arms, could provide themselves with nothing better than sticks and stones. From their lack of defensive armor they were known as *velati;* and when any of the regular troops were killed or disabled, the *accensi* took their places, and used their armour and weapons (Varro, *L. L.* vii. 56). They were also known as *ferentarii*. Although after B.C. 352, when the state

began to pay its soldiers, the accensi generally secured better weapons, the Column of Trajan shows a soldier armed only with stones. (3) The attendants on the cavalry, who held their spare horses; also the orderlies of the centurions (Varro, *L. L.* v. 82, and Fest. s. v. *Optio*). See CENTURIO. (4) Those attendants upon the magistrates who stood ready to relieve the lictors if necessary. So long as the custom lasted that the two colleagues were preceded by the fasces on alternate days, an accensus attended on the one who did not have the fasces. The duties of these accensi were to summon the people to the Comitia, and to proclaim the third, sixth, and ninth hour of the day in the Comitium. (5) On inscriptions of the time of the Empire mention is made of *accensi velati*, who formed a college of 100 members, charged with the superintendence of the public roads.

Acceptilatio is defined to be a release by mutual interrogation between debtor and creditor, by which each party is exonerated from the same contract. In other words, acceptilatio is the form of words by which a creditor releases his debtor from a debt or obligation, and acknowledges he has received that which in fact he has not received. This release of debt by acceptilatio applies only to such debts as have been contracted by *stipulatio* (q. v.), conformably to a rule of Roman law, that only contracts made by words can be put an end to by words. But the astuteness of the Roman lawyers found a mode of complying with the rule, and at the same time extending the acceptilatio to all kinds and to any number of contracts. This was the invention of Gallus Aquilius, who devised a formula for reducing all and every kind of contracts to the *stipulatio*. This being done, the acceptilatio would immediately apply, inasmuch as the matter was by such formula brought within the general rule of law above mentioned. See NOVATIO.

Accessio. A legal term, by which is expressed the produce or increase of anything, and, at the same time, the notion of such produce or increase becoming the property of him to whom the thing itself belongs. The rule of law was expressed thus: *Accessio cedit principali.* Examples of accessio are contained under the heads of CONFUSIO, etc.

Accipenser. A sturgeon.

Accipĭter. A hawk.

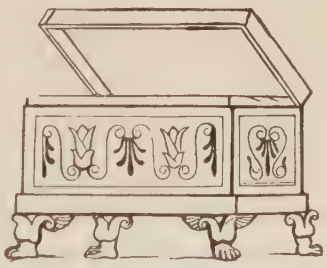
Accius, LUCIUS. See ATTIUS, LUCIUS.

Acclamatio. The public expression of approbation or disapprobation, pleasure or displeasure, by loud acclamations. On many occasions, there appear to have been certain forms of acclamations always used by the Romans; as, for instance, at marriages, *Io Hymen, Hymenaee,* or *Talassio* (explained by Livy); at triumphs, *Io triumphe, Io triumphe;* at the conclusion of plays the last actor called out *Plaudite* to the spectators; orators were usually praised by such expressions as *Bene et praeclare, Belle et festive, Non potest melius,* etc. Other instances of *acclamationes* are given by Ferrarius, in his treatise *De Veterum Acclamationibus et Plausu,* in Graevius *Thesaur. Rom. Antiq.* vol. vi. Cf. also Henzen, *Acta Fratr. Arval.* p. 75. Under the Empire, the manifestation of popular applause in the theatre and circus was reduced to a sort of system. When the emperor entered, the whole audience rose and greeted him in a rhythmic formula. Nero selected a band of 5000 knights and citizens, called *Augustani* or *Augustales,* to be trained in a special form of musical salutation (Suet. *Nero,* 20). The name *acclamationes* was also given to the decrees passed by the Senate in honour of the emperor, as being always carried by acclamation. See the articles FUNUS; MATRIMONIUM; TRIUMPHUS.

Accubatio. The act of reclining at table. See CENA.

Accubitio. See CENA.

Accubĭtum. The name of a couch used for reclining upon at meals, and used at the time of the Empire in place of the *triclinium* (q. v.). It seems to have held any number of guests, and to have been lower and more luxurious than the triclinium. The spreads and pillows were called *accubitalia* (Trebell. Poll. *Claud.* 14).



Accusatio. See CRIMEN; IUDEX; IUDICIUM.

Acé (in Hebrew, *Accho*). A Phœnician seaport town, the modern Acre. The Greeks, having changed the original name into Ἀκή, connected with it the fabulous legend of Heracles having been bitten here by a serpent, and of his having cured (ἀκέομαι) the wound by a certain leaf.

Acerra (λιβανωτίς, λιβανωτρίς). The incense-box used in sacrifices; called by Servius *arca thuralis.*

Horace, enumerating the principal articles necessary in a solemn sacrifice to Iuno, mentions "Flowers and a box full of frankincense." In Vergil, Aeneas worships "with corn and with frankincense from the full acerra" (*Aen.* v. 745).

Pliny, enumerating the principal works of Parrhasius of Ephesus, speaks of a picture representing a priest preparing to sacrifice, with a boy standing beside him, and holding the incense-box and a wreath of flowers. This was, no doubt, a very common and favourite subject for artists of every kind. It frequently occurs in bas-reliefs representing sacrifices, and executed on vases, friezes, and other ancient monuments. It occurs three times on the Columna Traiana at Rome, and once on the Arch of Constantine.

Acerra. (Capitoline Museum.)

The acerra was also, according to Festus, a small altar placed before the dead, on which perfumes were burned: *Acerra, ara quae ante mortuum poni solebat, in qua odores incendebantur.* There was a law in the Twelve Tables which restricted the use of acerrae at funerals (Cic. *De Leg.* ii. 24).

Acesĭnes. The Chenâb, a river of India, emptying into the Indus. See HYDASPES.

Acesta. See SEGESTA.

Acestes. A mythical king of Sicily, the friend of Aeneas (Verg. *Aen.* v. 757).

Acetabŭlum (*ὀξίς, ὀξύβαφον, ἐμβάφιον*). A small shallow vessel originally employed to hold vinegar or sauces into which the food was dipped. It was afterwards employed as a receptacle for salad, wine, honey, and in playing one form of the *cottabus* (q. v.). The accompanying illustration

Dish showing two small Acetabula.

from Daremberg and Saglio s. h. v. shows two acetabula placed one on each side of a sucking pig served up in a lanx. The name is also a Roman measure of capacity in liquid as well as dry measure = *ὀξύβαφον*, and holding one fourth of the hemina and one eighth of the sextarius.

Acētum (*ὄξος*). Vinegar. The kinds most in repute among the ancients were the Ægyptian and Cnidian. Pliny gives a full account of the medical properties of vinegar. Among other applications, it was employed when leeches had been introduced into the stomach, or adhered to the larynx. Vinegar was also given in long-standing coughs, just as modern practitioners give oxymels in chronic catarrhs, and it appears to have been thought useful in affections of the ear. ACETUM ITALĬCUM is the proverbial expression for the rude humor of the old Italian, just as *sal Atticum* is used of Greek wit.

Achaea (*Ἀχαΐα*). (1) The northern coast of the Peloponnesus, originally called Aegialea or Aegialus, i. e. the coast-land, was bounded on the north by the Corinthian Gulf and the Ionian Sea, on the south by Elis and Arcadia, on the west by the Ionian Sea, and on the east by Sicyonia. Respecting its inhabitants, see ACHAEI. (2) A district in Thessaly, which appears to have been the original seat of the Achaei. (3) The Roman province, which included Peloponnesus and northern Greece south of Thessaly. It was formed on the dissolution of the Achaean League (q. v.) in B.C. 146, and hence derived its name.

Achaean League (ACHAĬCUM FOEDUS; *τὸ Ἀχαϊκόν*). The league or confederation of a number of towns on the northwest coast of Peloponnesus. In speaking of it we must distinguish between two periods. The former, though formed for mutual protection, was mainly of a religious character, whereas the latter was a political confederation to protect the towns against the domination of Macedonia.

(1) *The Earlier League.*—When the Heraclidae took possession of Peloponnesus, a portion of the Achaeans, under Tisamenos, turnĕd northwards and took possession of the northern coast of the peninsula, which was called *Αἰγιαλός*: the Ionians, who had hitherto occupied that country, sought refuge in Attica and on the west coast of Asia Minor. The country thus occupied by the Achaeans, from whom it derived its name of Achaia, contained twelve towns which had been leagued together even in the time of their Ionian inhabitants. They were governed by the descendants of Tisamenus, until, after the death of King Ogyges, they abolished the kingly rule and established democratic institutions. The time when this happened is not known. In the time of Herodotus (i. 145) the twelve towns of which the league consisted were: Pellene, Aegeira, Aegae, Bura, Helicé, Aegion, Rhypes, Patrae, Pharae, Olenos, Dymé, and Tritaea. After the time of Herodotus, Rhypes and Aegae disappear from the number of the confederate towns, as they had decayed and become deserted (Paus. vii. 23, 25; Strab. viii. p. 387), and Leontion and Cerynea stepped into their place (Polyb. ii. 41). Helicé appears to have been their common place of meeting; but this town, together with Bura, was swallowed up by the sea during an earthquake in B.C. 373, whereupon Aegion was chosen as the place of meeting for the confederates (Strab. viii. p. 384). Of the constitution of this league very little is known; but it is clear that the bond which united the different towns was very loose, and less a political than a religious one. The looseness of the connection among the towns in a political point of view is evident from the fact that some of them acted occasionally quite independent of the rest (Thuc. ii. 9). The confederation generally kept aloof from the troubles of other parts of Greece, on which accordingly it exercised no particular influence down to the time when the league was broken up by the Macedonians. But they were nevertheless highly respected by the other Greek states on account of their honesty, sincerity, and wise moderation. Hence after the battle of Leuctra they were chosen to arbitrate between the Thebans and Lacedaemonians (Polyb. ii. 39). Demetrius, Cassander, and Antigonus Gonatas placed garrisons in some of their towns, while in others they favoured the rising of tyrants. The towns were thus separated from one another, and the whole confederation was gradually destroyed.

(2) *The Later League.*—The ancient confederacy had thus ceased to exist for some time when events took place which in some towns roused the ancient spirit of independence. When in B.C. 281 Antigonus Gonatas attempted to drive Ptolemaeus Ceraunus from the throne of Macedonia, the Achaeans availed themselves of the opportunity of shaking off the Macedonian yoke, and renewing the old confederation. The object, however, was no longer a common worship, but a real political union among the towns. The places which first shook off the yoke of the oppressors were Dymé and Patrae, and the alliance concluded between them was speedily joined by the towns of Tritaea and Pharae (Polyb. ii. 41). One town after another expelled the Macedonian garrisons and tyrants; and when in B.C. 275, Aegion, the head of the ancient league, followed the example of the other towns, the foundation of the new confederation was complete, and the main principles of its constitution were settled, though afterwards many changes and modifications were introduced. The fundamental laws were that henceforth the confederacy should form one inseparable state; that every town which should join it should have equal rights with the others; and that all members in regard to foreign countries should be regarded as dependent, and be bound in every respect to obey the federal government and those officers who were intrusted with the executive (Polyb. ii. 37 foll.). No town, therefore, was allowed to treat with any foreign power without the sanction of the others. Aegion, for religious reasons, was appointed the seat of the government. At Aegion, therefore, the citizens of the various towns met at stated and regular times

to deliberate upon the common affairs of the confederation, and if necessary upon those of any separate town or even of individuals, and to elect the officers of the league. After having thus established a firm union among themselves, the Achaeans zealously exerted themselves in delivering other towns also from their tyrants and oppressors. The league, however, did not acquire any great strength until B.C. 251, when Aratus united Sicyon, his native place, with it, and some years later also gained Corinth for it. Megara, Troezen, and Epidaurus soon followed their example. Afterwards Aratus prevailed upon all the more important towns of Peloponnesus to join the confederacy, and Megalopolis, Argos, Hermioné, Phlius, and others were added to it. In a short time the league thus reached its highest power, for it embraced Athens, Aegina, Salamis, and the whole of Peloponnesus, with the exception of Sparta, Tegea, Orchomenus, Mantinea, and Elis. Greece seemed to revive, and promised to become stronger and more united than ever, but it soon showed that its new power was employed only in self-destruction and its own ruin. The Achaean League might at one time have become a great power, and might have united at least the whole of Peloponnesus into one State; but the original objects of the league were in the course of time so far forgotten that it sought the protection of those against whom it had been formed; and the perpetual discord among its members, the hostility of Sparta, the intrigues of the Romans, and the folly and rashness of the last strategy brought about not only the dissolution and destruction of the confederacy, but the political annihilation of the whole of Greece in the year B.C. 146. (Cf. Schorn, *Gesch. Griechenlands von der Entstehung des aetol. u. achaeischen Bundes*, p. 49 foll. and p. 60 foll.; Drumann, *Ideen zur Gesch. des Verfalls der griech. Staaten;* Thirlwall, *Hist. of Greece*, vol. viii. p. 86 foll.; Hertzberg, *Gesch. Griechenlands unter den Römern*, vol. i. [Halle, 1875].)

Achaei (Ἀχαιοί). One of the chief Hellenic races, and, according to tradition, descended from Achaeus, who was the son of Xuthus and Creüsa, and grandson of Hellen. The Achaei originally dwelt in Thessaly, and from thence migrated to Peloponnesus, the whole of which became subject to them with the exception of Arcadia, and the country afterwards called Achaea. As they were the ruling nation in Peloponnesus in the heroic times, Homer frequently gives the name of Achaei to the collective Greeks. On the conquest of Peloponnesus by the Heraclidae and the Dorians, eighty years after the Trojan War, many of the Achaei under Tisamenus, the son of Orestes, left their country and took possession of the northern coast of Peloponnesus, then inhabited by Ionians, whom they expelled from the country, which was henceforth called Achaea. The expelled Ionians migrated to Attica and Asia Minor. The Achaei settled in twelve cities: Pellené, Aegira, Aegae, Bura, Helicé, Aegium, Rhypae, Patrae, Pharae, Olenus, Dymé, and Tritaea. These twelve cities formed a league for mutual defence and protection. The Achaei had little influence in the affairs of Greece till the time of the successors of Alexander. In B.C. 281, the Achaei, who were then subject to the Macedonians, resolved to renew their ancient league for the purpose of shaking off the Macedonian yoke. This was the origin of the celebrated Achaean League (q. v.), which did not, however, obtain much importance till B.C. 251, when Aratus united to it his native town, Sicyon. The example of Sicyon was followed by Corinth and many other towns in Greece, and the league soon became the chief political power in Greece. At length the Achaei declared war against the Romans, who destroyed the league, and thus put an end to the independence of Greece. Corinth, then the chief town of the league, was taken by the Roman general Mummius, in B.C. 146, and the whole of southern Greece made a Roman province under the name of Achaea (q. v.).

Achaeměnes. (1) The ancestor of the Persian kings, who founded the family of the Achaemenidae, which was the noblest family of the Pasargadae, the noblest of the Persian tribes. The Roman poets use the adjective Achaemenius in the sense of Persian. (2) Son of Darius I., was governor of Egypt, and commanded the Egyptian fleet in the expedition of Xerxes against Greece, B.C. 480. He was defeated and killed in battle by Inarus the Libyan, 460 (Herod. vii. 97, 236).

Achaemenĭdes, or Achemenĭdes. A companion of Odysseus, who left him behind in Sicily when he fled from the Cyclops (Verg. *Aen.* iii. 614).

Achaeus. (1) See ACHAEI. (2) A Greek tragic poet of Eretria, born about B.C. 484, a contemporary of Sophocles, and especially famous in the line of satyric drama. He wrote about forty plays, of which only small fragments are preserved. These have been edited by Urlichs (Bonn, 1834).

Achănē (ἀχάνη). A Persian measure equivalent to 45 Attic *μέδιμνοι*. According to Hesychius, there was also a Boeotian ἀχάνη equivalent to one Attic *μέδιμνος*. See MEDIMNUS.

Acharistias Dikē (ἀχαριστίας δίκη). See KAKOSIS.

Acharnae (Ἀχαρναί). The principal deme of Attica belonging to the tribe Oeneïs, 60 stadia north of Athens, near the foot of Mt. Parnes. The land was fertile, and the population rough and warlike, furnishing at the commencement of the Peloponnesian War 3000 hoplites, or one-tenth of the whole infantry of the republic. The deme gives the name to one of the plays of Aristophanes (q. v.) (Ἀχαρνεῖς), represented B.C. 425.

Achātes. A companion and friend of Aeneas (q. v.) in his wanderings, and styled by Vergil *fidus Achates*, so that his fidelity has become proverbial (*Aen.* i. 188).

Achātes (ἀχάτης). An agate, a precious stone or gem. Theophrastus describes it as a beautiful and rare stone from the river Achates in Sicily, which sold at a high price; but Pliny tells us that in his time it was no longer in esteem, it being then found in many places, of large size and diversified appearance. The ancients distinguished agates into many species, to each of which they gave a name importing its difference from the common agate, whether it were in colour, figure, or texture. Thus they called the red, *haemachates*, which was sprinkled with spots of jasper, or blood-red chalcedony, and now called "dotted agate." The white they termed *leucachates;* the plain yellowish or wax-coloured, *cerachates.*

Achelŏüs (Ἀχελῷος). The largest river in Greece. It rises in Mt. Pindus, and flows southward, form-

ing the boundary between Acarnania and Aetolia, and falls into the Ionian Sea opposite the islands called Echinades. It is about 130 miles in length. The god of this river is described as the son of Oceanus and Tethys, and as the eldest of his 3000 brothers. He fought with Heracles for Deïanira, but was conquered in the contest. He then took the form of a bull, but was again overcome by Heracles, who deprived him of one of his horns, which, however, he recovered by giving up the horn of Amalthea (q. v.). According to Ovid (*Met.* x. 87), the Naiads changed the horn which Heracles took from Acheloüs into the horn of plenty. Acheloüs was from the earliest times considered to be a great divinity throughout Greece, and was invoked in prayers and sacrifices. Acheloüs was regarded as the representative of all fresh water; hence we find in Vergil *Achelŏïa pocula*, that is, water in general. The Sirens are called Acheloiades, as the daughters of Acheloüs.

Achĕron (Ἀχέρων). The name of several rivers, all of which were, at one time, believed to be connected with the lower world. (1) A river in Thesprotia, in Epirus, which flows through the lake Acherusia into the Ionian Sea. (2) A river in southern Italy, in Bruttii, on which Alexander of Epirus perished. (3) The river of the lower world round which the shades hover, and into which the Pyriphlegethon and Cocytus flow. In late writers the name of Acheron is used to designate the whole of the lower world.

Acherontia. (1) A town in Apulia on the summit of Mt. Vultur. (2) A town on the river Acheron, in Bruttii.

Acherusia. See ACHERON (1).

Achillēis (Ἀχιλληΐς). (1) See HOMERUS. (2) See STATIUS.

Achilles (Ἀχιλλεύς). (1) A son of Earth, to whom Heré fled from the pursuits of Zeus, and who persuaded her to return and marry that deity. (2) The teacher of the centaur Chiron (q. v.). (3) The inventor of the ostracism (q. v). (4) A son of Zeus and Lamia, whose beauty was so great that, in the judgment of Pan, he bore away the prize in every contest. This so offended Aphroditĕ that she inspired Pan with a fruitless passion for the nymph Echo (q. v.), and further gave him a hideous appearance.

(5) The famous son of Peleus, king of Phthiotis in Thessaly, by Thetis, the sea-deity. According to Lycophron, Thetis became the mother of seven male children by Peleus, six of whom she threw into the fire, because they were not of the same nature with herself, and because the treatment she had received was unworthy of her rank as a goddess. The scholiast on Homer, however, states, that Thetis threw her children into the fire in order to ascertain whether they were mortal or not, the goddess supposing that the fire would consume what was mortal in their natures, while she would preserve what was immortal. The scholiast adds that six of her children perished by this harsh experiment, and that she had, in like manner, thrown the seventh, afterwards named Achilles, into the flames, when Peleus, having beheld the deed, rescued his offspring from this perilous situation. Tzetzes assigns a different motive to Thetis in the case of Achilles. He makes her to have been desirous of conferring immortality upon him, and states that with this view she anointed him with ambrosia during the day, and threw him into fire at evening. Peleus, having discovered the goddess in the act of consigning his child to the flames, cried out with alarm, whereupon Thetis, abandoning the object she had in view, left the court of Peleus and rejoined the nymphs of the ocean. Dictys Cretensis makes Peleus to have rescued Achilles from the fire before any part of his body had been injured but the heel. What has thus far been stated in relation to Achilles, with the single exception of the names of his parents, Peleus and Thetis, is directly at variance with the authority of Homer, and must therefore be regarded as a mere post-Homeric fable. Equally at variance with the account given by the bard is the more popular fiction that Thetis plunged her son into the waters of the Styx, and by that immersion rendered the whole of his body invulnerable, except the heel by which she held him. There are several passages in the *Iliad* which plainly show that the poet does not ascribe to Achilles the possession of any peculiar physical defence against danger.

The care of his education and training was intrusted, according to the common authorities, to the centaur Chiron, and to Phoenix, son of Amyntor. Homer specifically mentions Phoenix as his first instructor. Those, however, who pay more regard in this case to the statements of other writers, make Chiron to have had charge of Achilles first, and to have fed him on the marrow of wild animals; according to Libanius, on that of lions. Calchas having predicted, when Achilles had attained the age of nine years, that Troy could not be taken without him, Thetis, well aware that her son, if he joined that expedition, was destined to perish, sent him disguised in female attire to the court of Lycomedes, king of the island of Scyros, for the purpose of being concealed there. At the court of Lycomedes, he received the name of Pyrrha (Πυρρά, Rufa), from his golden locks, and became the father of Neoptolemus by Deïdamia, one of the monarch's daughters. In this state of concealment Achilles remained until discovered by Odysseus, who came to the island in the disguise of a travelling merchant. The chieftain of Ithaca offered, it seems, various articles of female attire for sale, and mingled with them some pieces of armor. On a sudden blast being given with a trumpet, Achilles discovered himself by seizing upon the arms. The young warrior then joined the army against Troy. This account, however, of the concealment of Achilles is contradicted by the express authority of Homer, who represents him as proceeding directly to the Trojan war from the court of his father. (*Il.* ix. 439.) The Greeks, having made good their landing on the shores of Troas, proved so superior to the enemy as to compel them to seek shelter within their walls. No sooner was this done than the Greeks were forced to turn their principal attention to the means of supporting their numerous forces. A part of the army was therefore sent to cultivate the rich vales of the Thracian Chersonesus, then abandoned by their inhabitants on account of the incursions of the barbarians from the interior. But the Grecian army, being weakened by this separation of its force, could no longer deter the Trojans from again taking the field, nor prevent succour and supplies from being sent into the city. Thus the

Priam before Achilles. (Relief by Thorwaldsen, Munich.)

siege was protracted to the length of ten years. During a great part of this time, Achilles was employed in lessening the resources of Priam by the reduction of the tributary cities of Asia Minor. With a fleet he ravaged the coasts of Mysia, made frequent disembarkations of his forces, and succeeded eventually in destroying eleven cities. Among the spoils of one, Achilles obtained the beautiful Briseïs, while, at the taking of Thebé, Chryseïs, the daughter of Chryses, a priest of Apollo at Chrysa, became the prize of Agamemnon. A pestilence shortly after appeared in the Grecian camp, and Calchas, encouraged by the proffered protection of Achilles, ventured to attribute it to Agamemnon's detention of the daughter of Chryses, whom her father had endeavored to ransom, but in vain. The monarch, although deeply offended, was compelled at last to surrender his captive; but, as an act of retaliation, and to testify his resentment, he deprived Achilles of Briseïs. Hence arose "the anger of the son of Peleus," on which is based the action of the *Iliad*. Achilles, on his part, withdrew his forces from the contest, and neither prayers nor entreaties, nor direct offers of reconciliation, couched in the most tempting and flattering terms, could induce him to return to the field. The death of his friend Patroclus, however, by the hand of Hector, roused him at length to action and revenge, and a reconciliation having thereupon taken place between the two Grecian leaders, Briseïs was restored. As the arms of Achilles, having been worn by Patroclus, had become the prize of Hector, Hephaestus, at the request of Thetis, fabricated a suit of impenetrable armour for her son. Arrayed in this, Achilles took the field, and after a great slaughter of the Trojans, and a contest with the god of the Scamander, by whose waters he was nearly overwhelmed, he met Hector, chased him thrice around the walls of Troy, and finally slew him by the aid of Athené. According to Homer, Achilles dragged the corpse of Hector at his chariot-wheels thrice round the tomb of Patroclus, and from the language of the poet he would appear to have done this for several days in succession. Vergil, however, makes Achilles to have dragged the body of Hector twice round the walls of Troy. In this it is probable that the Roman poet followed one of the cyclic or else the tragic writers. The corpse of the Trojan hero was at last yielded up to the tears and supplications of Priam, who had come for that purpose to the tent of Achilles, and a truce was granted the Trojans for the performance of the funeral obsequies. Achilles did not long survive his illustrious opponent. According to the more generally received account, as it is given by the scholiast on Lycophron, and also by Dictys Cretensis and Dares Phrygius, Achilles, having become enamoured of Polyxena, the daughter of Priam, signified to the monarch that he would become his ally on condition of receiving her hand in marriage. Priam consented, and the parties having come for that purpose to the temple of the Thymbraean Apollo, Achilles was treacherously slain by Paris, who had concealed himself there, being wounded by him with an arrow in the heel. The ashes of the hero were mingled in a golden urn with those of his friend Patroclus, and were said to repose at Sigaeum.

(5) Achilles Tatius, a native of Alexandria, commonly assigned to the second or third century A.D., but probably much later. He is author of the novel entitled "The Loves of Leucippé and Clitophon" (*Τὰ κατὰ Λευκίππην καὶ Κλειτοφῶντα*), an interesting and graceful production, though marred by much licentiousness of phrase and allusion. Few works have been so often imitated. A good edition is that by Jacobs (Leipzig, 1821); and the text with a Latin version is given in the *Erotici Scriptores* of the Didot collection edited by Hirschig (Paris, 1856). Eng. trans. by Smith (London, 1855). See Novels and Romances.

Achillēum. A town near the promontory Sigaeum (q. v.) in the Troad, where Achilles was supposed to have been buried.

Achillĭdes. Pyrrhus (q. v.), son of Achilles.

Achīvi. The Latin equivalent of Achaei (*Ἀχαιοί*). See Achaei.

Achradīna or **Acradīna.** See Syracusae.

Acidalia. A name applied to Aphrodité from the fountain Acidalius, near Orchomenus, where she was wont to bathe with the Graces.

Acies. See Exercitus.

Acilia Calpurnia Lex. See Ambitus; Lex.

Acilia Lex. See Lex; Repetundarum.

Acilius Glabrio. See Glabrio.

Acinăces (*ἀκινάκης*). A Persian sword, short, straight, and thus differing from the Roman *sica*, which was curved. It was worn on the right side, whereas the Greeks and Romans wore their swords on the left. A golden acinaces was frequently given to individuals as a mark of honour. The accompanying illustration is from the bas-relief found

Acinaces, or Persian Sword.

at Persepolis. The god Mithras (q. v.) is frequently represented with the acinaces.

Acis (Ἄκις). The son of Faunus and Symaethis, who was beloved by the nymph Galatea, and slain by Polyphemus, who was jealous of his success. His blood, gushing forth from under the rock with which he had been crushed, was changed by Galatea into the river Acis, or Acinius, at the foot of Mt. Aetna—a story perhaps suggested by the fact that the river in question springs out from under a rock. The legend has suggested a number of fine poems in English, among them Gay's *Song of Polypheme* in his *Acis and Galatea;* J. S. Blackie's *Galatea;* Buchanan's *Polypheme's Passion;* and Procter's *Death of Acis.*

Aciscŭlus. See Ascia.

Aclis. A kind of dart mentioned by Vergil (*Aen.* vii. 730) as used by the Osci. It had a leathern thong attached to it, so that it might be drawn back again after being thrown.

Acmonĭdes. A name given by Ovid to one of the three Cyclopes (q. v.), called by Vergil Pyracmon, and by other writers Arges.

Acna. See Actus.

Acoetes (Ἀκοίτης). A sailor saved by Bacchus for having espoused the cause of the god when the rest of the crew desired to sell him as a slave. The legend will be found narrated under the title Dionysus.

Acŏné (*ἀκόνη*). The whetstone, consisting chiefly of silex and alum.

Acontion (*ἀκόντιον*). See Hasta.

Acontius (Ἀκόντιος). See Cydippé.

Acquisitio. A general expression for the acquisition or ownership of property. See In Iure Cessio; Mancipium; Accessio; Dominium.

Acrae or **Acra** (Ἄκραι). A town of Sicily, west of Syracuse.

Acraephia (Ἀκραιφία) or **Acraephiae** (Ἀκραιφίαι). A town in Boeotia at Lake Copaïs, in which the Thebans took refuge after their town had been destroyed by Alexander. It contained a temple of Dionysus.

Acrăgas. See Agrigentum.

Acratisma (*ἀκράτισμα*). The early meal (*πρωϊνὸν ἄριστον*) of the Greeks, taken immediately on rising, like the first breakfast in France and Germany. It consisted of bread dipped in unmixed wine (*ἄκρατος οἶνος*), whence the name *ἀκράτισμα.*

Acratophŏrum (*ἀκρατοφόρον*). A small vessel for holding wine; a wine-cup. The name is derived from *ἄκρᾶτον*, "unmixed wine," and *φέρω*, "to bear." Pollux mentions it in his account of ancient drinking-vessels, and describes it as resting, not on a flat bottom, but on small astragals.

Acrisiōné (Ἀκρισιώνη). Danaë (q. v.), daughter of Acrisius.

Acrisius (Ἀκρίσιος). The son of Abas, king of Argos, by Ocalia, daughter of Mantineus. He was born at the same birth as Proetus, with whom it is said that he quarrelled even in his mother's womb. After many dissensions, Proetus was driven from Argos. Acrisius had Danaë by Eurydicé, daughter of Lacedaemon; and an oracle having declared that he should lose his life by the hand of his grandson, he endeavoured to frustrate the prediction by the imprisonment of his daughter, in order to prevent her becoming a mother. (See Danaë.) His efforts failed of success, and he was eventually killed by Perseus, son of Danaë and Zeus. Acrisius, it seems, had been attracted to Larissa by the reports which had reached him of the prowess of Perseus. At Larissa, Perseus, wishing to show his skill in throwing a quoit, killed an old man who proved to be his grandfather, whom he knew not, and thus the oracle was fulfilled.

Acrītas (Ἀκρεῖτας). A promontory of Messenia in the Peloponnesus, now Cape Gallo.

Acro, Helenius. A Roman grammarian of the end of the second century A.D. He wrote commentaries (now lost) on Terence, Horace, and perhaps Persius. The collection of scholia bearing his name dates from the seventh century. See Gräfenhan, *Geschich. d. class. Philol.* iv. pp. 308–313.

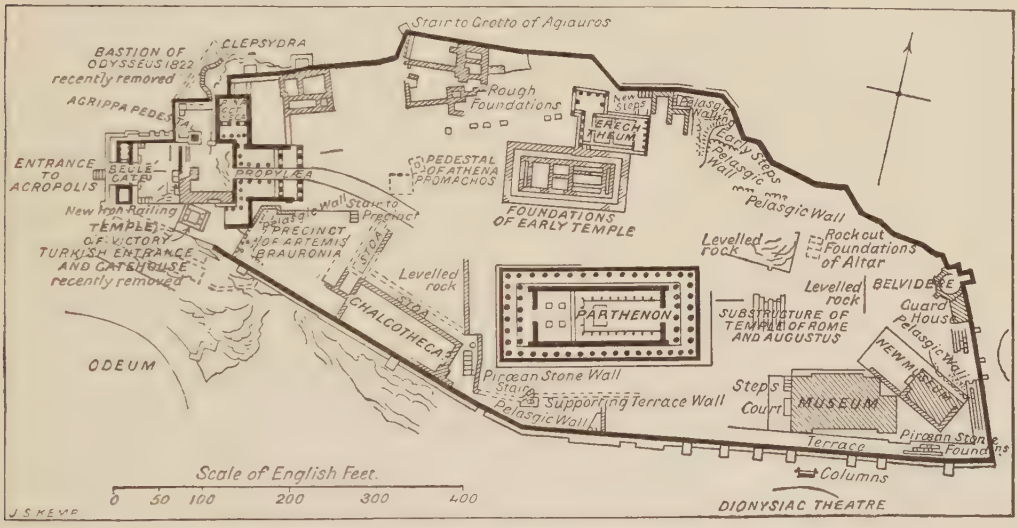
Acroāma (*ἀκρόαμα*). Properly a musical piece, but also a play, dance, or a recitation, such as were common at meals (Suet. *Vesp.* 19; Pliny, *Ep.* vi. 31, 13). The word also denotes the musicians or actors employed to amuse the guests during an entertainment; and is rarely used of an actor on the stage. See Marquardt, *Röm. Altert.* vii. p. 327; and the article Anagnostae.

Acroamata. (Millingen, *Peintures*, pl. viii.)

Acroāsis (*ἀκρόασις*). (1) A literary discourse or lecture. The term (itself of Greek origin) is applied by the Latin writers to a discourse or disputation, by some instructor or professor of an art, to a numerous audience. The corresponding Latin term is *auditio.* (2) It also signifies a place or room where literary men met, a lecture-room.

Acroceraunia. See Ceraunii Montes.

Acrocorinthus (Ἀκροκόρινθος). A high hill overhanging the city of Corinth, on which was erected a citadel, called also by the same name. This situation was so important a one as to be styled by Philip the fetters of Greece. See Corinthus.



Acrolĭthi (*ἀκρόλιθοι*). Statues, of which the extremities only (head, feet, and hands) were of stone, and the remaining part of the body of bronze or gilded wood (Vitruv. ii. 8, 11).

Acropodium (*ἀκροπόδιον*). The base or pedestal of a statue, so called from its supporting the extremities or soles of the feet (*ἄκρος, πούς*).

Acropŏlis (*ἀκρόπολις*). In nearly all the cities of Greece, which were usually built upon a hill or

some natural elevation, there was a kind of tower or citadel, reared upon the highest part, to which the name *ἀκρόπολις* (upper town) was given. At Rome, the Capitolium (q. v.) was analogous in its purposes to the acropolis of Greek cities.

The Acropolis of Athens was situated on a plateau of rock, about 200 feet in height, 1000 in breadth from east to west, and 460 in length from north to south. It was originally called Cecropia, after Cecrops, the ancestor of the Athenians, whose grave and shrine were shown on the spot. On the north side of the Acropolis was the Erechtheum, the common seat of worship of the ancient gods of Athens, Athené Polias, Hephaestus, Poseidon, and Erechtheus himself, who was said to have founded the sanctuary. His house was possibly northeast of the Erechtheum. Pisistratus, like the ancient kings, had his residence on the Acropolis, and may have added the stylobate to the temple of Athené recently identified, south of the Erechtheum. The walls of the fortress proper were destroyed in the Persian wars, 480 and 479 B.C., and restored by Cimon. But the wall surrounding the foot of the hill, called the Pelasgicon or Pelargicon, and supposed to be a relic of the oldest inhabitants, was left in ruins. Cimon also laid the foundation of a new temple of Athené on the south side of the hill. This temple was begun afresh and completed in the most splendid style by Pericles, and called the Parthenon (q. v.). Pericles at the same time adorned the approach to the west side of the Acropolis with the glorious Propylaea, and began to rebuild the Erechtheum in magnificent style. (See ERECHTHEUM; PROPYLAEA.) There were several other sanctuaries on the Acropolis—that, for instance, of Artemis Brauronia, on the southeastern side of the Propylaea; the beautiful little temple of Athené Niké, to the southwest; and the Pandroseum, adjoining the temple of Erechtheus. There were many altars—that of Zeus Hypatos, for example—and countless statues, among them that of Athené Promachos, with votive offerings. Among the numerous grottos in the rock, one on the north side was dedicated to Pan, another to Apollo. See ATHENAE; and Boetticher, *Die Akropolis von Athen*, w. 36 plates (Berlin, 1888).

PLAN OF THE ACROPOLIS IN 1889, INCLUDING RESULTS OF THE EXCAVATIONS BEGUN IN 1885.
(Reduced from plan by Messrs. Penrose and Schultz, *Journal of Hellenic Studies*, 1889, pl. viii.)

Acrostĭcha (*ἀκρόστιχα*). Acrostics, which were popular alike with the Hebrews, Greeks, and Romans. With the Hebrews, in acrostic poetry, the initial letters of the lines or stanzas are made to run over the letters of the alphabet in their order. Twelve Psalms in the Old Testament are so written, the most remarkable being the 119th. One of the most celebrated acrostics in Greek is that contained in the words *Ἰησοῦς Χριστὸς Θεοῦ Υἱὸς Σωτήρ*, the initial letters of which spell *ἰχθύς* (fish), whence to the word *ἰχθύς* a mystical meaning was attached by the early Christians. The Romans borrowed acrostic poetry from the Greeks as early as the time of Ennius, who composed one (Cic. *de Div.* ii. 111). At a later period inscriptional acrostics occur, one of which calls the reader's attention to its character with the line *Inspice, lector, primordia versiculorum* (Wilmanns, 592, 593). The arguments to the Plautine plays are in acrostic lines. When the last letters of the lines spell words, the verse is called *telestic;* when letters in the middle of the lines do so, the verse is *mesostic.* Combinations of acrostic and telestic are found in the *Corp. Inscript. Lat.* v. 1693; of acrostic, mesostic, and telestic, in Flavius Felix (about A.D. 500). See Gerber, *Die Sprache als Kunst*, ii. pp. 262 foll., and the article ABECEDARII HYMNI.

Acroterium (*ἀκρωτήριον*). A word generally used in the plural, and signifying the extremity of anything. (1) In architecture it is the same as *fastigium* (q. v.), the sloping roof of a building, and also for the ornamental front or gable. A more usual meaning is the pedestals placed on the summit of a pediment to receive statues or other ornamental figures. There were three *acroteria*, one over each angle of the pediment. (2) The extremities of the prow of a vessel, which were usually taken from a conquered vessel as a mark of victory. Hence, the act of so doing is expressed by the verb *ἀκρωτηριάζειν*. (3) The extremities of

a statue, such as the head, feet, hands, wings, etc.

Acrothinion (*ἀκροθίνιον*). Properly the top of a heap, and hence applied to those parts of the fruits of the earth or of the spoils of war that were offered to the gods.

Acrothōum. A town on the peninsula of Athos in Macedonia. The inhabitants were supposed to live beyond the usual age of man. See Mela, ii. 3.

Acta. (1) The public acts and orders of a Roman magistrate possessing the *ius agendi cum populo*, which, after the expiration of his office, were submitted to the Senate for approval or rejection (Suet. *Iul.* 19, 23). After the death of Iulius Caesar, the triumvirs swore, and compelled all the other magistrates to swear (Dio, xlvii. 48), to observe and maintain all his acta (*in acta iurare*), and hence it became the custom on the accession of each emperor for the new monarch to swear to observe and respect all the acta of his predecessors from Iulius Caesar downwards, with the exception of those who had been branded with infamy after death, such as Nero and Domitian (Tac. *Ann.* iv. 42; Dio, lvi. 33, etc.). The Senate also swore that it would recognize the validity of the acts of the new emperor. Every year all the magistrates upon entering office on the first of January swore approval of the acts of the reigning emperor (Dio, xlvii. 18; liii. 28; Tac. *Ann.* xvi. 22, with the excursus of Lipsius; Dio, lviii. 17; lx. 25).

(2) Acta Senātus, called also Commentarii Senātus (Tac. *Ann.* xv. 74) and Acta Patrum (*Ann.* v. 4), containing an account of the various matters brought before the Senate, the opinions of the chief speakers, and the decision of the house. We may infer from a passage of Suetonius (*Iul.* 20.) that the proceedings of the Senate were not usually published till the first consulship of Iulius Caesar, B.C. 59; but under the direction of the presiding magistrate, assisted by certain senators appointed for the purpose, the decrees of the Senate had been written down and recorded in the Aerarium long previously, and the debates on the Catilinarian conspiracy had been widely circulated by Cicero (*Sull.* 14, 15) from notes taken by some friends of his among the senators. Iulius Caesar ordered that the proceedings of the Senate, which had been only occasionally published before, should henceforth be published regularly every day (*senatus acta diurna*) under the authority of the government, from the notes of shorthand writers (Sen. *Mort. Claud.* 9). Augustus forbade the publication of the proceedings of the Senate, but they still continued to be preserved; and one of the senators, who received the title *ab actis senatus*, was chosen by the emperor to compile the account (Tac. *Ann.* v. 4; Spart. *Hadr.* 3; Orelli, *Inscr.* No. 2274, 3186). This office was generally held as an annual one, after the quaestorship (Spart. *Hadr.* 3), but before the praetorship or aedileship. The persons intrusted with this office must not be confounded with the various clerks (*actuarii, servi publici, scribae;* also the *censuales*), who were present in the Senate to take notes of its proceedings, and who were only excluded when the Senate passed a *senatusconsultum tacitum;* that is, when they deliberated on a subject of the greatest importance, respecting which secrecy was necessary or advisable (Capit. *Gord.* 12). It was doubtless from notes and papers of these clerks that the acta were compiled by the senator, who was intrusted with this office. The acta were deposited in the imperial archives (*tabularium*) or in particular departments of the public libraries, to which access could only be obtained by the express permission of the *praefectus urbi.* They were consulted and are frequently referred to by the later historians (e. g. Vopisc. *Prob.* 2; Lamprid. *Sever.* 56; Capitol. *Opil. Macr.* 6), and many extracts from them were published in the Acta Diurna.

(3) Acta Diurna. A gazette published daily at Rome by the authority of the government during the later times of the Republic, and under the Empire, corresponding in some measure to our newspapers (Tac. *Ann.* iii. 3; xiii. 31; xvi. 22). In addition to the title *Acta Diurna*, we find them referred to under the names *Diurna*, *Acta Publica*, *Acta Urbana*, *Acta Rerum Urbanarum*, *Acta Populi*, and they are frequently called simply *Acta.* The Greek writers on Roman history call them *τὰ ὑπομνήματα*, *τὰ δημόσια ὑπομνήματα*, *τὰ δημόσια γράμματα*, and *τὰ κοινὰ ὑπομνήματα.* The nature of their contents will be best seen from the following passage of Petronius (cap. 53), where an imitation of them is given by the *actuarius* of Trimalchio: "Actuarius — tanquam acta urbis recitavit: vii. Kal. Sextiles in praedio Cumano, quod est Trimalchionis, nati sunt pueri XXX, puellae XL; sublata in horreum ex area tritici millia modium quingenta; boves domiti quingenti. Eodem die Mithridates servus in crucem actus est, quia Gai nostri genio maledixerat. Eodem die in arcam relatum est, quod collocari non potuit, sestertium centies. Eodem die incendium factum est in hortis Pompeianis, ortum ex aedibus Nastae villici. . . . Iam etiam edicta aedilium recitabantur, et saltuariorum testamenta, quibus Trimalchio cum elogio exheredabatur; iam nomina villicorum et repudiata a circitore liberta in balneatoris contubernio deprehensa; atriensis Baias relegatus; iam reus factus dispensator; et iudicium inter cubicularios actum." From this passage, and from the numerous passages in ancient writers in which the Acta Diurna are quoted (references to which are given by Hübner), it would appear that they usually contained the following matters: (1) The number of births and deaths in the city, an account of the money paid into the treasury from the provinces, and everything relating to the supply of corn. These particulars would be extracted from the *tabulae publicae.* By an ancient regulation, ascribed to Servius Tullius, all births were registered in the Temple of Venus, and all deaths in that of Libitina; and we know that this practice was continued under the Empire, only that at a later time the Temple of Saturn was substituted for that of Venus for the registration of births. (2) Extracts from the Acta Forensia, containing the edicts of magistrates, the testaments of distinguished men, reports of trials, with the names of those who were acquitted and condemned, and likewise a list of the magistrates who were elected. (3) Extracts from the Acta Senatus, especially all the decrees and acclamations (see Acclamatio) in honour of the reigning emperor. (4) A court circular, containing an account of the births, deaths, festivals, and movements of the imperial family. (5) Curious and interesting occurrences, such as prodigies and miracles, the erection of new edifices, the conflagration of buildings, funerals, sacrifices, a list of the various games, and especially amatory tales

and adventures, with the names of the parties. (Cf. Cic. *Ad Fam.* ii. 15.) News of private affairs seems to have been communicated to the official editor by way of advertisement. (Cf. Quint. ix. 3, 17, where a widower speaks of himself as *saucius pectus*.) The fragments of some Acta Diurna have been published by Pighius and Dodwell, but their genuineness is more than doubtful. (Cf. Heinze, *De Spuriis Diurnorum Act. Fragmentis*, Greifswald, 1860.)

It is certain that these acta were published under the authority of the government, but it is not stated under whose superintendence they were drawn up. It is probable, however, that this duty devolved upon the magistrates, who had the care of the *tabulae publicae*, namely, the censors under the Republic (Liv. iv. 8; xliii. 16), and sometimes the quaestors, sometimes the *praefecti aerarii* under the Empire (Tac. *Ann.* xiii. 28). The actual task of compiling them was committed to subordinate officers, called *actuarii* or *actarii*, who were assisted by various clerks, and by reporters (*notarii*), who took down in shorthand the proceedings in the courts, etc. After the acta had been drawn up, they were exposed for a time in some public place in the city *in albo*, where persons could read them and take copies of them. Many scribes, whom Cicero speaks of under the name of *operarii*, made it their business to copy them or make extracts from them for the use of the wealthy in Rome, and especially in the provinces, where they were eagerly sought after and extensively read (Cic. *Ad Fam.* viii. 1; xiii. 8; Tac. *Ann.* xvi. 22). After the acta had been exposed in public for a certain time, they were deposited, like the Acta Senatus, in some of the record offices or the public libraries.

The style of the acta, as appears from the passage in Petronius, was very simple and concise. They contained a bare enumeration of facts, without any attempt at ornament.

Hübner has proved against Becker (*Handbuch*, i. pp. 30 and 32) that these acta were first published in the first consulship of Iulius Caesar. Previous to this time it was common for a MS. chronicle of public events at Rome to be compiled by scribes, and forwarded along with private letters to friends at a distance (Cic. *Ad Fam.* viii. 1, 2, 8, 11; ii. 8; xii. 22; xv. 6. Cf. Hübner, p. 39; Mommsen, *Hist.* iv. 606).

The Acta Diurna are last mentioned by Vopiscus (*Prob.* cap. 2), and probably continued in use to the downfall of the Western Empire. They were never published in Constantinople.

(4) Acta Forensia. These were of two kinds. (*a*) The Romans kept their private accounts with so much accuracy that their books (*accepti et expensi*), bonds (*chirographa*), and contracts (*syngrapha*) were admitted as legal evidence. Frequently witnesses (*pararii*, Sen. *Ben.* ii. 23, § 2) were employed to establish their authenticity. At a later date notaries (*tabelliones*) who had offices (*stationes*) in the public streets drew up these documents, which were ratified by the signature (*subscriptio*) of the parties. A senatus consultum passed under Nero (Suet. *Ner.* 17; Quint. xii. 8, 13; Paul. *Sent. Recept.* v. 25, 6) prescribed the legal form of such documents. See Codex Accepti et Expensi.

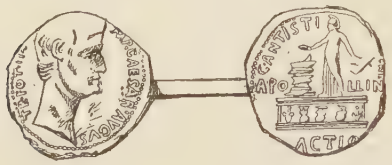
(*b*) *Acta iudiciorum* contained the record of all proceedings of the magistrates, alike in contentious and in non-contentious business. The latter included such matters as adoptions, *cessio in iure*, manumissions, the appointment of guardians, and the like. Such magisterial functions could be discharged anywhere, even in the baths or in the streets (*Instit. Iust.* i. 5, 2). Under the Republic there is no evidence of the method of legal attestation in these cases; but under the Empire it was customary for the parties to have a formal statement drawn up by a public official (*acta* or *gesta*), and confirmed by the magistrate (*Instit. Iust.* i. 11, 2, and 12, 8). In the case of contentious business, so long as the *legis actiones* were in use, there was no need of a written record, for the *litis contestatio* was attested by witnesses. On the other hand, when *formulae* came into use, these were necessarily in writing, though the decision of the *iudex* was given *viva voce*. There was a special form of action (*iudicati actio*) against a defendant who denied the existence of a decision given against him. There is evidence of the existence of a record (*acta*, *Fragm. Vat. Iur.* 112) under the Empire. The *cognitiones extraordinariae* increased the importance of this. But the existence of a written decision was not compulsory before the constitutions of Valentinian, Valens, and Gratian.

(5) Acta Militaria contained an account of the duties, numbers, and expenses of each legion (Veg. ii. 19), and of the amount of property possessed by each soldier (*peculium castrense*). They were probably preserved among the official papers of the several legions. The soldiers who drew up these acta are frequently mentioned in inscriptions and ancient writers under various titles, as *librarius legionis*, *actuarius* or *actarius legionis*, *tabularius castrensis*. (Cf. Renier, *Inscriptions Romaines de l'Algérie*, 343, 551, 799.)

See Lipsius, *Excursus ad* Tac. *Ann.* v. 4; Ernesti, *Excursus ad* Suet. *I. Caes.* 20; Schlosser, *Ueber die Quellen der spätern latein. Geschichtschreiber, besonders über Zeitungen*, etc., in the *Archiv für Geschichte*, 1830, pp. 80–106; Prutz, *De Fontibus, quos in conscribendis rebus inde a Tiberio usque ad mortem Neronis gestis auctores veteres secuti videantur* (Halle, 1840); Zell, *Ueber die Zeitungen der Alten* (Freiburg, 1834); Le Clerc, *Des Journaux chez les Romains* (Paris, 1838); Lieberkühn, *De Diurnis Romanorum Actis* (Weimar, 1840); especially Hübner, *De Senatus Populique Romani Actis* (Lips. 1860); Schmidt, *Zeitschr. für Geschichtswissenschaft*, I. (1844), 303; Reussen, *De Diurnis Aliisque Rom. Actis* (1857); and the article in the Pauly-Wissowa *Realencyclopädie*.

Actaeon (Ἀκταίων). A celebrated hunter, son of Aristaeus and Antonoë. Having on one occasion unwittingly seen Artemis while she was bathing, he was changed by the offended goddess into a stag, and was torn in pieces by his own dogs.

Actaeon. (British Museum.)



Actaeus. The first king of Attica. The poets use the word *Actaeus* as an adjective, in the sense of "Attic."

Acté. (1) An ancient name of Attica, found chiefly in the poets. (2) The peninsula between the Strymonic and Singitic gulfs,

on which Mt. Athos is situated. The name (*ἀκτή*) signifies properly any strip of land projecting into the sea.

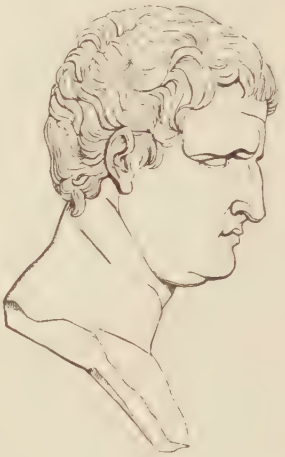
Acté. The favourite concubine of the Roman emperor Nero. She was originally a slave from Asia Minor, but after Nero became infatuated with her he pretended that she was the descendant of King Attalus, and at one time even thought of marrying her (Suet. *Nero*, 28, 50).

Actia (*Ἀκτία*). A festival celebrated every three years at Actium in Epirus, with wrestling, horse-racing, and sea-fights, in honour of Apollo. There was a celebrated temple of Apollo at Actium, which

Coin with Worship of the Actian Apollo. (Cabinet de France.)

is mentioned by Thucydides and Strabo. After the defeat of Antony off Actium, Augustus enlarged the temple, and instituted games to be celebrated every four years in commemoration of his victory. See ACTIUM.

Actiăcus. A name given to Apollo as worshipped at Actium (Ovid, *Met.* xiii. 715). See ACTIA.



Actio. See article in Appendix; and JUDICIAL PROCEDURE. For Greek actions, see DIKÉ.

Actis (*Ἀκτίς*). One of the Heliades (q. v.), or daughters of the Sun.

Actisănes (*Ἀκτισάνης*). A king of Aethiopia, who conquered Egypt. He was remarkable for his moderation towards his new subjects, as well as for his justice and equity. All the robbers and malefactors, too, were collected from every part of the kingdom, and, having had their noses cut off, were established in Rhinocolura, a city which he had founded for the purpose of receiving them. See Diod. Sic. i. 60.

Actium (now La Punta). A promontory in Acarnania at the mouth of the Ambracian Gulf, off which Augustus gained his celebrated naval victory over Antony and Cleopatra, September 2d, B.C. 31. Here was a temple of Apollo Actiacus or Actius, where the festival Actia had been celebrated. Augustus revived the celebration as a quinquennial feast in honour of his victory, and built Nicopolis (q. v.) on the opposite shore.

The battle of Actium is one of the decisive battles of the world's history, since the stake for which it was fought was nothing less than the lordship of the Roman Empire—that is, of the occidental world. The chances of battle were all in favour of Antony. His troops, encamped on one shore of the gulf, were largely superior to his rival's in both numbers and discipline. He had 100,000 infantry, as against the 80,000 of Octavian (Augustus), an equal force of cavalry (12,000); while his ships not only numbered 500—double the number that Octavian's admiral Agrippa commanded, but were much larger, heavier, and better provided with the engines then in use for discharging missiles. It was, perhaps, this great preponderance of naval force which led Cleopatra, who accompanied Antony, to urge upon him the plan of letting the issue of the war rest upon a naval battle. She herself, with her sixty ships, formed a line behind that of the vessels of Antony.

Marcus Vipsanius Agrippa.

For a long time after the battle began, the light galleys of Octavian made little or no impression upon the massive ships that opposed them; but at last, by a skilful manœuvre, Agrippa forced Antony to extend his line of battle. This done, Agrippa's ships succeeded in breaking through it and darting towards the vessels of Cleopatra. Alarmed at this, the Egyptian queen at once gave the signal for flight, and with her ships put hurriedly to sea. Antony, forgetful that the crisis of the battle had now arrived, recklessly sailed in pursuit of her, leaving his fleet to win or lose as best it might in his absence. Deserted by its commander, it still fought on, but with little heart,

Coin of Antony and Cleopatra.

and by nightfall had been completely routed and destroyed. The troops of Antony were still encamped upon the promontory fronting the forces of Octavian; yet they did not at once give battle, but waited in the hope that their general would return. Seven days passed by, and when he failed to appear, after some hesitation, they surrendered to Octavian and accepted him as their commander, thus making him at a stroke the master of the world.

Actius, Lucius. See ATTIUS, LUCIUS.

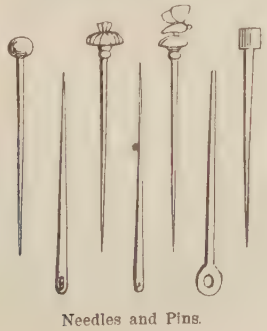
Actor (Ἄκτωρ). (1) Son of Diomedes, father of Menoetius, and grandfather of Patroclus. (2) A companion of Aeneas, of whose conquered lance Turnus made a boast. This story seems to have given rise to the proverb *Actoris spolium* for any poor spoil (Juv. ii. 100).

Actor. In general, a plaintiff. In a civil or private action, the plaintiff was often called *petitor;* in a public action (*causa publica*) he was called *accusator.* The defendant was called *reus,* both in private and public causes: this term, however, according to Cicero, might signify either party, as indeed we might conclude from the word itself. In a private action the defendant was often called *adversarius,* but either party might be called *adversarius* with respect to the other. (See ACTIO.) A *universitas,* or corporate body, sued and was sued by its *actor* or *syndicus.*

Actor has also the sense of an agent or manager of another's business generally. The *actor publicus* was an officer who had the superintendence or care of slaves and property belonging to the State.

Actor on the stage. See HISTRIO.

Actorides. Patroclus (q. v.). See also MOLIONIDAE.



Actuarii. Shorthand-writers, who took down the speeches in the Senate and the public assemblies. In the debate in the Roman Senate upon the punishment of those who had been concerned in the conspiracy of Catiline, we find the first mention of shorthand-writers, who were employed by Cicero to take down the speech of Cato. See ACTA; NOTAE.

Actuarii Militiae. Officers under the Roman emperors, whose duty it was to keep the accounts of the army, to see that the contractors supplied the soldiers with provisions according to agreement, and to perform other similar duties.

Actus. A Roman measure of length. It formed the basis of the whole system of land measurement. The *actus simplex* or *minimus* was 120 (Roman) feet long and four feet wide. The *actus quadratus* was a square of 120 feet each way = 14,400 square feet (Pliny, *H. N.* xviii. § 9). The actus is an example of the combination of the decimal with the duodecimal system, its length being twelve times the standard *decempeda* (q. v.). The actus was half the *iugerum.* In Hispania Baetica, the *actus quadratus* was called *acna* (also written *agna,* and *agnua*). Cf. Varro, *R. R.* i. 10, § 2.

Acus, dim. **Acicŭla** (*βελόνη, βελονίς, ῥαφίς*). A needle, a pin.

We may translate acus *a needle,* when we suppose it to have had at one end a hole or eye for the passage of thread; and *a pin,* when, instead of a hole, we suppose it to have had a knob, a small globe, or any other enlarged or ornamental termination (cf. Pollux, vii. 42; x. 136).

Needles and Pins.

The annexed figures of needles and pins, chiefly taken from originals in bronze, vary in length from an inch and a half to about eight inches.

Pins were made not only of metal, but also of wood, bone, and ivory. Their principal use was to assist in fastening the garments, and more particularly in dressing the hair. The mode of plaiting the hair, and then fastening it with a pin or needle, is shown in the annexed figure of a female head, taken from a marble group which was found at Apt, in the south of France.

Acus.

The hair-pin was called *acus crinalis* or *acus comatoria* (Petron. 21).

Adămas (*ἀδάμας*). A name given by the ancients to several hard substances, and among the rest possibly to the diamond. Psellus describes *adamas* as follows: "Its color resembles crystal, and is splendid," which certainly seems appropriate to the diamond. But Pliny (*H. N.* xxxvii. 15), in his account of *adamas,* has evidently confounded the properties of several different minerals, all of which, by their hardness, received from the Greeks the name *ἀδάμας.* Thus Hesychius applies the name to steel; Pollux to grains of native gold; and Dionysius Periegetes to what was probably fine crystals of quartz. In fact, the ancients knew diamonds, if at all, only in their unpolished state, by which such epithets as "all-resplendent" would scarcely have been suggested. See GEMMA.

Addicti. See NEXI.

Addictio. A legal term meaning the formal award by the praetor or other magistrate of the property in dispute. See Cic. *Verr.* i. 4, 12.

Addix or **Addixis** (*ἄδδιξ, ἀδδιξις*). A Greek measure, which Hesychius gives as equal to four choenices. See CHOENIX.

Addua. The Adda, a river of Gallia Cisalpina.

Adeia (*ἄδεια*). When any one in Athens who had not the full privileges of an Athenian citizen, such as a foreigner, a slave, etc., wished to accuse a person of any offence against the people, he was obliged to obtain first permission to do so, which permission was called *ἄδεια.* An Athenian citizen who had incurred *ἀτιμία* was also obliged to obtain *ἄδεια* before he could lay an information against any one. See ATIMIA.

Adelphoe. A play of Terence modelled on the *Συναποθνήσκοντες* of Diphilus and the *Ἀδελφοί* of Menander. See TERENTIUS.

Ademptio. See LEGATUM.

Adgnāti. See COGNATIO.

Adgnatio. See HERES; TESTAMENTUM.

Adherbal. See IUGURTHA.

Adiabēné. A district of Assyria, east of the Tigris, and comprising the more fertile portion of the country. See ASSYRIA.

Aditio Hereditātis. See HERES.

Adiudicatio. See ACTIO.

Adlecti or **Allecti.** (1) Those chosen to fill a vacancy in an office or collegium, and referring oftenest to those chosen to fill up the proper number of the Senate. Under the Empire, the *adlecti*, admitted to the Senate by the emperor, were admitted to a place among the senators who had held the rank of consul, praetor, tribune, or quaestor, according to the emperor's pleasure. These were known as *adlecti inter consulares, praetorios*, etc. (2) Persons admitted to a seat in the council of a *municipium* or *colonia* by a vote of that body were also known as *adlecti*.

Adlector. A provincial tax-collector under the Roman emperors (Orelli, 369).

Adlocutio or **Allocutio.** A speech or address made to his soldiers by an imperator, and corresponding to the modern "general order" or proclamation. See CONTIO.

Admētus (Ἄδμητος). (1) King of Pherae, who sued for Alcestis, the daughter of Pelias. Pelias promised her on condition that he should come in a chariot drawn by lions and boars. This task Admetus performed by the assistance of Apollo. The god tended the flocks of Admetus for nine years, when he was obliged to serve a mortal for having slain the Cyclops. Apollo prevailed upon the Moerae, or Fates, to grant to Admetus deliverance from death if his father, mother, or wife would die for him. Alcestis died in his stead, but was brought back by Heracles from the lower world. See EURIPIDES. (2) King of the Molossians, to whom Themistocles fled for protection when pursued as a party to the treason of Pausanias. See THEMISTOCLES.

Admissio. Reception or audience at the Roman court. At first all visitors were admitted without distinction to the *atria* of their wealthy friends. According to Seneca, C. Gracchus and Livius Drusus were the first to receive some privately and others in a limited number, doubtless for political reasons. Afterwards these distinctions became the rule, and it was the exception for any one to open his doors to all comers. Under the Empire, friends were distinguished as *amici admissionis primae, secundae*, etc. The first alone could enter without delay, and could pay a separate visit. The rest had to await, and sometimes to purchase, the favour of the porter. At the imperial court there was a body of slaves and freedmen acting as the introducers of visitors (*officium admissionis*, Suet. *Vesp.* 14), who were known as *admissionales*. The head of the *officium admissionis* was the *magister admissionum*, subordinate himself to the *magister officiorum*. The *magister admissionum* himself introduced the most exalted visitors; and, at least in the time of Justinian, none were introduced by the *admissionales* but such as were *illustres*.

Admissionāles. See ADMISSIO.

Adonia (Ἀδώνια). A festival celebrated in honour of Adonis (q. v.), and introduced into Greece from the East probably at the time of the wars with Persia. In general the ceremonies lasted two days, the first being the day on which Adonis disappeared (*ἀφανισμός*), and the second that on which his body was sought (*ζήτησις*) by the women. The first was a day of mourning, and the second, one of rejoicing and amusement, because on it Adonis was conceived of as returning to life to spend six months with Aphrodité.

Adōnis (Ἄδωνις). (1) A beautiful youth, son of Cinyras, by his daughter Smyrna (q. v.). He was beloved by Aphrodité, but died of a wound which he

Death of Adonis. (Pompeii.)

received from a boar during the chase. The flower anemone sprang from his blood. The grief of the goddess at his death was so great that the gods of the lower world allowed him to spend six months with her on earth, and the remaining six in the shades. (2) A river of Phœnicia, which falls into the Mediterranean below Byblus. Its waters were fabled to flow with blood on the anniversary of the death of Adonis.

Adoptio. (1) At ATHENS adoption (*εἰσποίησις* or *θέσις*) took place either in the adopter's lifetime or by will; or again, if a man died childless and intestate, the state interfered to bring into his house the man next entitled by the Attic law of inheritance as heir and adoptive son, so that the race and the religious rites peculiar to it might not die out. None but the independent citizen of respectable character could adopt, and he only while he was as yet without male heirs. If there were daughters, one of them was usually betrothed to the adopted son, and the rest portioned off with dowries. If after that a male heir was born, he and the adopted had equal rights.

(2) At ROME there were two kinds of adoption, both requiring the adopter to be a male and childless: *arrogatio* and adoption proper. The former could only take place where the person to be adopted was independent (*sui iuris*), and his adopter had no prospect of male offspring; at the instance of the pontifex, and after full proof of admissibility, it had to be sanctioned by the Comitia Curiata. (See COMITIA.) Adoption proper applied to those still under paternal rule (*patria potestas*), the father selling his son by formal *mancipatio* (q. v.) to the adopter, who then, the paternal power being thus abolished, claimed the son before the court as his own, and the father allowed him to be adjudged to him. By either transaction the person adopted passed completely over into the family and rank of the adopter, and naturally took his

name in full, but with the addition of a second cognomen formed from his own former *nomen gentile* by the suffix *-anus*, e. g. Publius Cornelius Scipio Aemilianus (son of Lucius Aemilius Paulus). Women, too, could be adopted, but not arrogated; neither could they adopt. At the latter end of the Republic we find a testamentary adoption in existence, which at first likewise produced a change of name, but not of status. See NOMEN.

Adoratio (*προσκύνησις*). (1) A form of worshipping the gods, according to which the worshipper prostrated himself before the statue of the deity, and then kissed his hand and waved it towards the image. While so doing, he moved his whole body around, usually from left to right. Hence, *se convertere* is sometimes used for *adorare* (Livy, v. 21). (2) The *adoratio* paid to the Roman emperors was a form of salutation borrowed from the East, and consisted of prostration on the ground and kissing the feet, knees, or dress of the emperor. Livy speaks of this as *adulatio*. It was not a part of the ordinary etiquette of the court before the time of Diocletian.

Adramyttĭum (*Ἀδραμύττειον*). A small town of Mysia opposite the island of Lesbos, which suffered severely in the war of the Romans with Mithridates. It is mentioned in the New Test. (Acts, xxvii. 2).

Adrăna. The Eder, a river of Germany flowing into the Fulda near Cassel.

Adrastus (*Ἄδραστος*). (1) Son of Talaüs of Argos. Being expelled from Argos by Amphiaraüs, he fled to Polybus, king of Sicyon, whom he succeeded on the throne of Sicyon, and instituted the Nemean games. Afterwards he became reconciled to Amphiaraüs, and returned to his kingdom of Argos. He married his two daughters Deïpylé and Argia, the former to Tydeus of Calydon, and the latter to Polynices of Thebes, both fugitives from their native countries. He then prepared to restore Polynices to Thebes, who had been expelled by his brother Eteocles, although Amphiaraüs (q. v.) foretold that all who should engage in the war would perish, with the exception of Adrastus. Thus arose the celebrated war of the "Seven against Thebes," in which Adrastus was joined by six other heroes, viz., Polynices, Tydeus, Amphiaraüs, Capaneus, Hippomedon, and Parthenopaeus. This war ended as unfortunately as Amphiaraüs had predicted, and Adrastus alone was saved by the swiftness of his horse Arion, the gift of Heracles. Ten years afterwards, Adrastus persuaded the six sons of the heroes who had fallen in the war to make a new attack upon Thebes, and Amphiaraüs now promised success. This war is known as the war of the Epigoni (*ἐπίγονοι*), or descendants. Thebes was taken and razed to the ground. The only Argive hero that fell in this war was Aegialeus, the son of Adrastus: the latter died of grief at Megara on his return to Argos, and was buried in the former city. The legends about Adrastus and the two wars against Thebes furnished ample materials for the epic as well as tragic poets of Greece. (2) Son of the Phrygian king Gordius, having unintentionally killed his brother, fled to Croesus, who received him kindly. While hunting, he accidentally killed Atys, the son of Croesus, and in despair put an end to his own life.

Adria. See HADRIA; MARE SUPERUM.

Adrianopŏlis. See HADRIANOPOLIS.

Adriānus. See HADRIANUS.

Adrogatio or **Arrogatio**. See ADOPTIO.

Adrumētum. See HADRUMETUM.

Adscriptīvi. See ACCENSI (2).

Adsertor. See ASSERTOR.

Adsessor. See ASSESSOR.

Adsignatio or **Assignatio**. See AGER; AGRARIAE LEGES.

Adstipulatio. See OBLIGATIO.

Adstipulātor. See INTERCESSIO.

Aduatŭca or **Aduatŭcum**. A city of Gaul in the territory of the Tungri. See Caes. *B. G.* ii. 29.

Aduatŭci. A people of Gallia Belgica, dwelling between the Scaldis (Scheldt) and the Mosa (Maas).

Adūla Mons. See ALPES.

Adulatio. See ADORATIO.

Adulescens. See INFANS.

Adūlis or **Adūlē** (*Ἀδουλη*). A city of Aethiopia, on a bay of the Red Sea called Adulitanus Sinus. It fell into the power of the Auxumitae, for whose trade it became the great emporium. Here was found the *Monumentum Adulitanum* (q. v.), a Greek inscription recounting the conquests of Ptolemy Euergetes I. in Asia and Thrace.

Adulterium (*μοιχεία*). Adultery. (1) GREEK. Among the Athenians, if a man caught another in the act of criminal intercourse with his wife, he might kill him, and the same law held with respect to a concubine (*παλλακή*). Other punishment was likewise permitted. It appears that at Athens there was no adultery unless a married woman was concerned, and even then there was no adultery if the married woman was a prostitute or one engaged in selling anything in the agora. If the husband chose to bring suit against the adulterer, it was called *μοιχείας γραφή*. If the adultery was proven, the husband could not condone the offence under penalty of *ἀτιμία*. (See ATIMIA.) The adulteress was excluded from the temple, and if found there any one might treat her as he pleased, provided he did not kill or mutilate her. (2) ROMAN. The general usages at Rome appear to have been very similar to the Athenian. The Lex Iulia de Adulteriis, passed under Augustus, about B.C. 17, enacted them. By this law, if a husband kept his wife after an act of adultery was known to him, and let the adulterer off, he was guilty of the offence of *lenocinium*. The husband or father in whose power the adulteress was, had sixty days allowed for commencing proceedings against the wife, after which time any other person might prosecute. A woman convicted of adultery was mulcted in half of her dowry and the third part of her property (*bona*), and banished (*relegata*) to some desolate island, such as Seriphos, for instance. The adulterer was mulcted in half his property, and banished in like manner. This law did not inflict the punishment of death on either party; and in those instances under the emperors in which death was inflicted, it must be considered as an extraordinary punishment, and beyond the provisions of the Julian law.

The Julian law permitted the father (both adoptive and natural) to kill the adulterer and adulteress in certain cases, as to which there were several nice distinctions established by the law. If the father killed only one of the parties, he brought himself within the penalties of the Cornelian law *de sicariis*. The husband might kill persons of a

certain class, described in the law, whom he caught in the act of adultery with his wife; but he could not kill his wife. The husband, by the fifth chapter of the Julian law, could detain for twenty hours the adulterer whom he had caught in the act, for the purpose of calling in witnesses to prove the adultery. If the wife was divorced for adultery, the husband was entitled to retain part of the dowry. The husband might, if he pleased, take a sum of money from the adulterer by way of compensation, and detain him till he found sureties for the payment. If the alleged adulterer had been unjustly detained, he might bring an action against the husband; and if he gained his cause, he and his sureties were released. If he failed, the law required the sureties to deliver up the adulterer to the husband before the court, to do what he pleased with him, except that he was not to use a knife or dagger. See Rein, *Das Criminalrecht der Römer*.

Adultus. See INFANS.

Adventus. The arrival of an emperor in one of the provinces, an event often commemorated on Roman bronze coins.

Adversaria. A note-book in which the Romans entered memoranda of any importance, especially their accounts of money received and spent (*codex accepti et expensi*), which they afterwards transferred to a ledger. See ACTA.

Adversarius. See ACTOR.

Advocātus. At Rome, under the Republic, a competent friend who gave his advice in a lawsuit and came into court in person, not to speak (the *patronus causae* did that), but to support the cause by his presence. Under the Empire the term was applied to the counsel who pleaded in court in the presence of the parties, for doing which he was allowed, after the time of Claudius, to take a fee. See JUDICIAL PROCEDURE; PATRONUS.

Advocātus Fisci. A Roman official, first appointed by Hadrian, to look after the interests of the imperial treasury. See FISCUS.

Adynăti (*ἀδύνατοι*). Persons supported by the Athenian State as being unable to earn a livelihood, owing to physical infirmity. Pisistratus first introduced a law for the support of those persons who had been maimed in battle. (See Lysias *ὑπὲρ τοῦ ἀδυνάτου*.)

Adўtum. See TEMPLUM.

Aea (*Αἶα*). A city supposed by the poets to have been the capital of King Aeëtes, on the river Phasis, in Colchis.

Aeacēa (*Αἰάκεια*). A festival of the Aeginetans in honor of Aeacus (q. v.), the details of which are unknown.

Aeăces. A tyrant of Samos, deposed by Aristagoras, B.C. 500, and restored by the Persians, to whom he had fled, in B.C. 494. See Herod. iv. 138.

Aeacĭdes. A patronymic used of any descendant of Aeacus (q. v.), such as Peleus, Telamon, Phocus, Achilles (q. v.), Pyrrhus, son of Achilles, and Pyrrhus, King of Epirus, who claimed descent from Achilles. See PYRRHUS.

Aeăcus (*Αἰακος*). Son of Zeus and Aegina, a daughter of the river-god Asopus, born in the island of Aegina, which derived its name from his mother. (See AEGINA.) Some traditions relate that at the birth of Aeacus, Aegina was not yet inhabited, and that Zeus changed the ants of the island into men (Myrmidones), over whom Aeacus ruled. Aeacus was renowned in all Greece for his justice and piety, and after his death became one of the three judges in Hades, the others being Minos and Rhadamanthus. See HADES.

Aeaea (*Αἰαίη*). (1) Another name for Circé (q. v.), derived from the name of her birthplace, *Αἶα*. Her son, Telegonus, the reputed founder of Tusculum, is called Aeaeus. (2) A name given to Calypso (q. v.), who was said to live in the island of Aeaea between Italy and Sicily.

Aeantēa (*Αἰάντεια*). A festival solemnized at Salamis in honour of Aiax, of which no particulars are known.

Aeantēum. A settlement on the coast of Troas near the promontory of Rhoeteum, and famous for the tomb of Aiax and a temple to his memory. The statue of the hero was carried away by Antony and restored by Augustus.

Aeas. A river of Epirus falling into the Ionian Sea.

Aebutia Lex. See LEX.

Aeculānum. A town of the Hirpini in Samnium, just south of Beneventum.

Aedepsus. A town of Euboea, famous for its hot baths in ancient as in modern times.

Aedes. See DOMUS; TEMPLUM.

Aedesius (*Αἰδέσιος*). A Cappadocian, a Platonic, or more correctly an Eclectic, philosopher, who lived in the fourth century A.D., and was the friend and most distinguished scholar of Iamblichus (q. v.). After the death of his master, the school of Syria was dispersed, and Aedesius, fearing the real or fancied hostility of the Christian emperor Constantine to philosophy, took refuge in divination. An oracle in hexameter verse represented a pastoral life as his only retreat; but his disciples, perhaps calming his fears by a metaphorical interpretation, compelled him to resume his instructions. He settled at Pergamos, where he numbered among his pupils the Emperor Julian. After the accession of the latter to the imperial purple, he invited Aedesius to continue his instructions, but the philosopher, being unequal to the task through age, sent in his stead Chrysanthes and Eusebius, his disciples. See his life by Eunapius.

Aedes Vitiōsae or Ruīnōsae. See DAMNUM INFECTUM.

Aedicŭla. (1) In the singular, a single room. (2) In the plural, a small house. (3) Oftener a shrine, either attached or unattached to a temple. (4) A niche in the walls of temples or houses containing images of gods or goddesses, like that in the accompanying illustration (Overbeck, *Bildwerke*, pl. xxx. 1).

Aedicula, or Shrine.

Aedīles. At Rome, two sets of magistrates, the Plebeian (*aediles plebis* or *plebeii*) and the Curule (*aediles curules*). (1) The two PLEBEIAN AEDILES were appointed B.C. 494 at the same time with the creation of the tribuneship of the plebs, as servants of the tribunes, and at first probably nominated by them till 471.

when, like them and under their presidency, they began to be elected by the whole body of the plebs. They took their name from the temple (*aedes*) of the plebeian goddess Ceres, in which their official archives were kept. Besides the custody of the *plebiscita*, and afterwards of the *senatus consulta*, it was their duty to make arrests at the bidding of the tribunes; to carry out the death-sentences which they passed, by hurling the criminal down from the Tarpeian Rock; to look after the importation of corn; to watch the traffic in the markets; and to organize and superintend the Plebeian and Roman Games. Like the tribunes, they could only be chosen from the body of the plebs, and wore no badge of office, not so much as the *toga praetexta*, even after they became an authority independent of the tribunes. (2) The CURULE AEDILES, from B.C. 366, were taken at first from the patrician body alone, soon after from patricians and plebeians by turns, and lastly from either. Elected yearly in the Comitia Tributa under the presidency of a consul, they were, from the first, officers of the whole people, though low in rank; they sat in the *sella curulis*, from which they took their name, and wore as insignia the *toga praetexta*. As in rank, so in the extent of their powers, they stood above the plebeian aediles, being entitled to exercise civil jurisdiction in market business, where the latter could only impose a fine. The functions of the two were very much alike, comprising: (*a*) the superintendence of trade in the market, where they had to test weights and measures and the quality of goods; to keep down the price of provisions, both by prohibitive measures especially against regraters of corn, and by the purchase and liberal distribution of food (*cura annonae*); and, as regards the money market, to prosecute those who transgressed the laws of usury; (*b*) the care of the streets and buildings within the city and the circuit of a mile outside, by cleansing, paving, and improving the streets, or stirring up those who were bound to do it; by seeing that the street traffic was unimpeded; by keeping in repair the temples, public buildings, and works, such as sewers and aqueducts, and seeing that these latter and the fire apparatus were in working order; (*c*) a superintendence of health and morals, including the inspection of baths, taverns, and brothels, and the putting-down of all that endangered public order and decency, e. g. games of hazard, breaches of sumptuary laws, introduction of foreign religions, etc.; (*d*) the exhibition of games (of which the Roman and Megalensian devolved on the curule, the Plebeian on the plebeian aediles), the supervision of festivities at the *feriae Latinae*, and at games given by private men. The cost of the games given by themselves they defrayed partly out of a sum set apart by the State, but utterly inadequate to the large demands of later times; partly out of the proceeds of fines which were also spent on public buildings, and partly out of their own resources. Thus the aedileship became an expensive luxury, and its enjoyment less and less accessible to men of moderate means. Ambitious men often spent incredible sums in getting up games to win the people's favour, with a view to higher honours, though the aedileship was not necessary as a stepping-stone to these. In Cicero's time the legal age for the curule aedileship was thirty-seven. From B.C. 366 their number was unchanged, till Caesar, in B.C. 44, added two more, the plebeian *aediles cereales*, to whom alone the *cura annonae* and the management of the Ludi Cereales were intrusted. Under the Empire the office of aedile lost much in importance by some of its functions being handed over to separate officers, especially by the transference of its jurisdiction and its control of games to the praetors; and it fell into such contempt that even Augustus had to make a tenure of it, or the tribuneship, a condition of eligibility to the praetorship; and succeeding emperors often had to fill it by compulsion. In the third century A.D. it seems to have died out altogether.

Aedituus, Aedĭtŭmus (in Gk. *νεώκορος, ζάκορος, ὑποζάκορος*). A person in charge of a temple, who attended to its general order, and acted as a species of sacristan or cicerone to visitors. In many cases they were women. See Gell. xii. 10.

Aēdon (*Ἀηδών*). A daughter of Pandareus, wife of Zethus, king of Thebes, and mother of Itylus. Envious of Niobé, the wife of her brother Amphion, who had six sons and six daughters, she resolved to kill the eldest of Niobé's sons, but by mistake slew her own son Itylus. Zeus relieved her grief by changing her into a nightingale, whose melancholy tunes are represented as Aëdon's lamentations for her child.

Aēdon (*ἀηδών*). One of the names of the nightingale, also known as *φιλομήλα* and *πρόκνη*: in Latin, *luscinia*. For one legend, see above.

Aedui or **Haedui.** A powerful people of Gaul, living between the Liger (Loire) and the Arar (Saône), and the first Gallic tribe to form an alliance with the Romans. Their principal town was Bibracté (Autun). See Caes. *B. G.* i. 31 ff.

Aeētes (*Αἰήτης*). King of Colchis and father of Medea. For the legends connected with his name, see ABSYRTUS; ARGONAUTAE; IASON; MEDEA; PHRIXUS.

Aeētis, Aeetias, Aeētīné. Patronymics applied to Medea (q. v.), as being the daughter of Aeetes.

Aegae (*Αἰγαί*). (1) A town in Achaea, with a celebrated temple of Poseidon, originally one of the twelve Achaean towns; but its inhabitants subsequently removed to Aegira. (2) A town in Emathia, in Macedonia, the ancient capital of Macedonia and the burial-place of the Macedonian kings. It was also called Edessa. (3) A town in Euboea, with a celebrated temple of Poseidon, who was hence called Aegaeus. (4) Also AEGAEAE, one of the twelve cities of Aeolis in Asia Minor, north of Smyrna, on the river Hyllus. (5) A seaport town of Cilicia.

Aegaea. An adjective applied to Aphrodité as being worshipped in the Aegean Sea.

Aegaeon (*Αἰγαίων*). The son of Uranus (Heaven) by Gaea (Earth). Aegaeon and his brothers Gyes or Gyges and Cottus are known under the name of the Uranidae, and are described as huge monsters with 100 arms and 50 heads. Most writers mention the third Uranid under the name of Briareus instead of Aegaeon, which is explained by Homer (*Il.* i. 403), who says that men called him Aegaeon, but the gods Briareus. According to the most ancient tradition, Aegaeon and his brothers conquered the Titans when they made war upon the gods, and secured the victory to Zeus, who thrust the Titans into Tartarus, and placed Aegaeon and his broth-

ers to guard them. Other legends represent Aegaeon as one of the giants who attacked Olympus; and many writers represent him as a marine god living in the Aegaean Sea. See Hesiod, *Theog.* 149, 502, 617, etc.; Apollod. i. i. 1; Hom. *Il.* i. 398 foll.

Aegaeum Mare. The part of the Mediterranean Sea now called the Archipelago. It was bounded on the north by Thrace and Macedonia, on the west by Greece, and on the east by Asia Minor. It contains in its southern part two groups of islands — the Cyclades, which were separated from the coasts of Attica and Peloponnesus by the Myrtoan Sea, and the Sporades, lying off the coasts of Caria and Ionia. The part of the Aegaean which washed the Sporades was called the Icarian Sea, from the island Icaria, one of the Sporades.

Aegaleus (Αἰγάλεως). A mountain in Attica opposite Salamis, from which Xerxes saw the defeat of his fleet, B.C. 480. Cf. Herod. viii. 90.

Aegātes or Aegūsae (*αἱ* Αἰγοῦσσαι). "Goat Islands." The name applied to three islands off the west coast of Sicily, between Drepanum and Lilybaeum, near which the Romans gained a naval victory over the Carthaginians, and thus brought the First Punic War to an end, B.C. 241. The islands were Aegusa or Capraria, Phorbantia, and Hiera.

Agendĭcum. The modern Sens; a town of the Senones, in Gallia Lugdunensis.

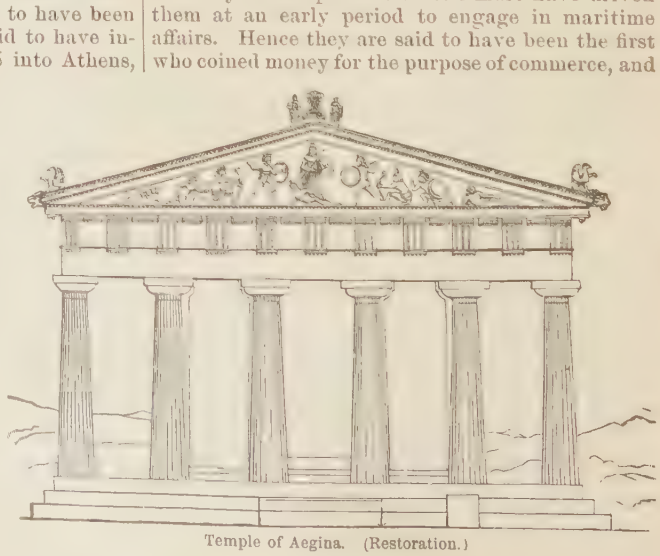
Aegesta. See SEGESTA.

Aegestus. See ACESTES.

Aegeus (Αἰγεύς). The son of Pandion, king of Athens, and father of Theseus, whom he begot by Aethra at Troezen. Theseus afterwards came to Athens and restored Aegeus to the throne, of which he had been deprived by his brother Pallas. Having slain Androgeos, son of Minos (q.v.), he was conquered by that king and compelled to send seven youths and seven maidens to Crete once in nine years as victims to the Minotaur. When Theseus set out to free his country from this cruel tax, he agreed in case of success to exchange the black sail of his ship for a white one; but forgetting to do so, Aegeus saw the black sail on the returning vessel, supposed his son lost, and threw himself into the sea, which is thus supposed to have been named *Aegean* after him. He is said to have introduced the worship of Aphrodité into Athens, where he himself was honoured with a shrine. See MEDEA; THESEUS; MINOTAUR.

Aegialēa (Αἰγιάλεια). (1) The wife of Diomedé, to whom she is said to have been grossly unfaithful during his absence in the Trojan War. (See DIOMEDES.) (2) An island in the Aegean between Cythera and Crete. (3) The earliest name for the country above the north shore of the Peloponnesus.

Aegiăleus (Αἰγιαλεύς). The son of Adrastus, by Amphithea, daughter of Pronax, and a member of the expedition led by the Epigoni against Thebes. He was the only leader slain in this war, as his father was the only one that survived the previous contest. See EPIGONI.



Aegĭdes. A patronymic applied to Theseus, son of Aegeus.

Aegĭla (*τὰ* Αἴγιλα). A town in Laconia, where Demeter had a temple. Aristomenes, the Messenian leader, endeavoured on one occasion to seize a party of Laconian women who were celebrating here the rites of the goddess. The attempt failed, through the courageous resistance of the women, and Aristomenes himself was taken prisoner. He was released, however, the same night, by Archidamea, the priestess of Demeter, who had before this cherished an affection for him.

Aegilia (Αἰγιλία). (1) An island between Crete and Cythera. (2) An island west of Euboea, opposite Attica.

Aegimius (Αἰγίμιος). A king of the Dorians, reigning in Thessaly, near the range of Pindus. He aided Heracles, according to the Doric legend, in his contest with the Lapithae, and received as a reward the territory from which they were driven. Aegimius is a conspicuous name among the founders of the Doric line, and mention is made by the ancient writers of an epic poem, entitled Αἰγίμιος, which is ascribed by some to Hesiod, by others to Cecrops the Milesian. The posterity of Aegimius formed part of the expedition against the Peloponnesus, and the Doric institutions of Aegimius are spoken of by Pindar as forming the rule or model of government for the Doric race. (Cf. Müller, *Dorier*, vol. ii. p. 12.)

Aegīna (Αἴγινα). (1) A daughter of the river Asopus, carried away by Zeus under the form of an eagle, from Phlius to the island of Oenoné. She gave her name to the island. (2) An island in the Sinus Saronicus, near the coast of Argolis. The earliest accounts given by the Greeks make it to have been originally uninhabited, and to have been called, while in this state, by the name of Oenoné; for such is evidently the meaning of the fable, which states that Zeus, in order to gratify Aeacus, who was alone there, changed a swarm of ants into men, and thus peopled the island (Pausan. ii, 29, and Apollod. iii. xii. 7). It afterwards took the name of Aegina, from the daughter of the Asopus. But, whoever may have been the earliest settlers on the island, it is evident that its stony and unproductive soil must have driven them at an early period to engage in maritime affairs. Hence they are said to have been the first who coined money for the purpose of commerce, and

Temple of Aegina. (Restoration.)

used regular measures, a tradition which, though no doubt untrue, still points very clearly to their early commercial habits. (See NUMISMATICS.) It is more than probable that their commercial relations caused the people of Aegina to be increased by colonies from abroad, and Strabo expressly mentions Cretans among the foreign inhabitants who had settled there. After the return of the Heraclidae, this island received a Dorian colony from Epidaurus (Pausan. ii. 29), and from this period the Dorians gradually gained the ascendency in it, until at last it became entirely Doric, both in language and form of government. Aegina, for a time, was the maritime rival of Athens, and the competition eventually terminated in open hostilities, in which the Athenians were only able to obtain advantages by the aid of the Corinthians, and by means of intestine divisions among their opponents (Herod. viii. 46, and v. 83). When Darius sent deputies into Greece to demand earth and water, the people of Aegina, partly from hatred towards the Athenians, and partly from a wish to protect their extensive commerce along the coasts of the Persian monarchy, gave these tokens of submission (Herod. vi. 49). For this conduct they were punished by the Spartans. In the war with Xerxes, therefore, they sided with their countrymen, and acted so brave a part in the battle of Salamis as to be able to contest the prize of valour with the Athenians themselves, and to bear it off, as well by the universal suffrages of the confederate Greeks (Herod. viii. 93) as by the declaration of the Pythian oracle. After the termination of the Persian war, however, the strength of Athens proved too great for them. Their fleet of seventy sail was annihilated in a sea-fight by Pericles, and many of the inhabitants were driven from the island, while the remainder were reduced to the condition of tributaries. The fugitives settled at Thyrea in Cynuria, under the protection of Sparta, and it was not until after the battle of Aegos-Potamos, and the fall of Athens, that they were able to regain possession of their native island (Xen. *Hist. Gr.* ii. 2, 5). They never attained, however, to their former prosperity. The situation of Aegina made it subsequently a prize for each succeeding conqueror, until at last it totally disappeared from history. In modern times the island nearly retains its ancient name, being called Aegina or, with a slight corruption, Engia, and is often visited by travellers, being beautiful, fertile, and well cultivated. As far back as the time of Pausanias, the ancient city would appear to have been in ruins. That writer makes mention of some temples that were standing, and of the large theatre built after the model of that in Epidaurus. The most remarkable remnant of antiquity which this island can boast of at the present day is the Temple of Pallas Athené, situated on a mount of the same name, about four hours' distance from the port, and which is supposed to be one of the most ancient temples in Greece, and one of the oldest specimens of the Doric style of architecture. See AEGINETAN SCULPTURES.

Aeginetan Sculptures. The marble pediments of the temple of Athené at Aegina (q. v.), discovered in 1811, restored by Thorwaldsen, and preserved in the Glyptothek at Munich. They are especially valuable as throwing light on the condition of Greek art in the fifth century B.C. See SCULPTURA.

Aeginetārum Feriae (Αἰγινητῶν ἑορτή). A feast in honour of Poseidon, which lasted sixteen days, during which time every family took its meals alone without the attendance of the slaves. Its origin is described by Plutarch (*Quaest. Graec.* 44).

Aegiŏchus (from *αἰγίς* and *ἔχω*). The "aegis-bearer," an epithet applied to Zeus (q. v.). See AEGIS.

Aegĭpan (Αἰγίπαν). A poetical appellation of Pan (q. v.), as being the guardian of goats.

West Pediment of the Temple of Aegina.

Aegiplanctus Mons. A mountain in Megara.

Aegīra (Αἴγειρα). A city of Achaea near the Corinthian Gulf and northwest of Pellini. See Polyb. iv. 57.

Aegis (*αἰγίς*). The storm-cloud and thunder-cloud of Zeus, imagined in Homer as a shield forged by Hephaestus, blazing brightly and fringed with tassels of gold, and displaying in its centre the awe-inspiring Gorgon's head. When Zeus shakes the aegis, it thunders and lightens, and horror and perdition fall upon those against whom it is lifted. It is borne not only by Zeus "the aegis-bearer," but by his daughter Athené, and occasionally by Apollo. As the same word means a goat-skin, it was explained in later times as the skin of the goat Amalthea (q. v.), which had suckled Zeus in his infancy. At the bidding of the oracle, he drew it over his thunder-shield in the contest with the Giants, and fastened on it the Gorgon's head. When the aegis became a standing attribute of Athené, it was represented as a skin either shaggy or scaly, with a fringe of snakes and the Gorgon's head in the middle, and either serving the goddess as a breast-plate, or hanging behind to screen the back and shoulders, or fastened like a shield on the left arm.

Though the aegis properly belongs to Zeus, it is

seldom found in works of art as his attribute. A cameo engraved by Nisus, however, of which a cut

Zeus with the Aegis. (From a Cameo.)

is here given, shows him with the aegis on his left arm.

The Roman emperors also assumed the aegis, intending thereby to exhibit themselves in the character of Iupiter.

Aegisthus (Αἴγισθος). Son of Thyestes and his daughter Pelopia. At his birth he was exposed by his mother, and brought up by shepherds. His uncle, Atreus, husband to Pelopia, found him and brought him to Mycenae, thinking him to be his own son; but Aegisthus and his real father contrived to kill him and seize the sovereignty of the State. This position Aegisthus lost again by his cousin Agamemnon's return from exile; but during that hero's absence at Troy Aegisthus seduced his wife, Clytaemnestra, and with her help slew him treacherously on his return. In the eighth year after this deed Orestes avenged his father's death by slaying Aegisthus. See AGAMEMNON; ATREUS; CLYTAEMNESTRA; ORESTES; PELOPIDAE.

Aegium (Αἴγιον). One of the twelve towns of Achaea (q. v.).

Aeglé (Αἴγλη). One of the Hesperides (q. v.), and a name given to several of the nymphs.

Aegles. A Samian wrestler who had been born dumb. Seeing some unlawful measures pursued in a contest, which would deprive him of the prize, his indignation gave him on a sudden the powers of utterance, which had hitherto been denied him, and from this time he spoke with ease. See Aul. Gell. v. 9.

Aeglētes (Αἰγλήτης). A surname of Apollo as the god of day and of the lightning, derived from *αἴγλη*, "splendour." See APOLLO.

Aegobolium (*αἰγοβόλιον*). A ceremony of purification in which the candidate was placed in a pit and covered with perforated boards, over which a goat was slain. The blood flowing down into the pit stained its occupant. If a bull was used, the rite was called *taurobolium*; and if a ram, *criobolium*. See TAUROBOLIUM.

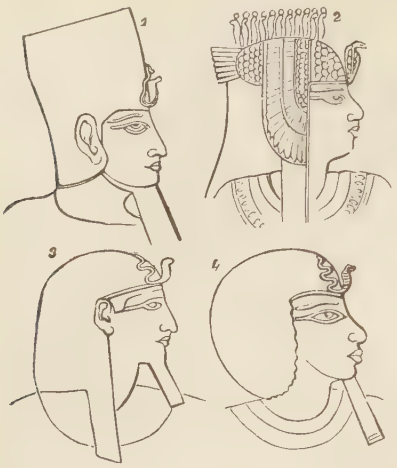
Aegobŏlus (Αἰγοβόλος). A title given to Bacchus at Potniae in Boeotia, because he had substituted a goat (*αἶξ*) in place of a youth, whom it had formerly been the custom to sacrifice there (Pausan. ix. 8). See AEGOBOLIUM.

Aegosăgae. A Gallic tribe who served in the army of Attalus (q. v.). See Polyb. v. 77 foll.

Aegos-Potămos or **Aegos-Potămi** (Αἰγὸς Ποταμός). A small river in the Thracian Chersonesus, on which was a town of the same name. Here the Athenians were totally defeated by the Spartan admiral Lysander in B.C. 405, practically terminating the Peloponnesian War (q. v.), and leading to the capture of Athens.

Aegūsae. See AEGATES.

Aegyptium Mare. That part of the Mediterranean which washes the coast of Egypt.



Aegyptus. A country in the northeastern part of Africa; the modern Egypt. The name, in Greek Αἴγυπτος, is perhaps a corruption of *Hakeptah* (City of Ptah), i. e. Memphis. Others explain it with less probability as formed from the Sanskrit *gup*, "to guard" = *âgupta*, "guarded about." In Coptic, as in hieroglyphs, it is called *Kemi* (Black Land) from the colour of the soil. The Jews styled it *Mazor*, "fortified," or in the dual, to denote both Upper and Lower Egypt, *Mizraim*. This name is preserved in the modern Arabic *Misr*—a word applied by the Arabs both to the country and to its capital, Cairo.

Aegyptus was bounded on the north by the Mediterranean; on the east by Palestine, Arabia Petraea, and the Red Sea; on the south by Aethiopia, the division between the two countries being at the First or Little Cataract of the Nile, close to Syené; and on the west by the Great Libyan Desert. From Syené the Nile flows due north for about 500 miles, through a valley whose average breadth is about seven miles, to a point some few miles below Memphis. Here the river divides into branches (seven in ancient times, but now only two), which flow through a low alluvial land, called, from its shape, the Delta, into the Mediterranean. The whole district thus described is periodically laid under water by the overflowing of the Nile from April to October. The river, in subsiding, leaves behind a rich deposit of fine mud, which forms the soil of Egypt. All beyond the reach of the inundation is rock or sand. Hence Egypt was called the "Gift of the Nile." The outlying portions of ancient Egypt consisted of three cultivable valleys (called oases), in the midst of the Western or Libyan Desert.

ETHNOLOGY AND CIVILIZATION.—At the earliest period of which any record has been preserved, Egypt possessed a very high degree of civilization, and one which presupposes many centuries of development. It was the home, too, of a very large population, since during the Fourth Dynasty (about 3600 B.C.) some 100,000 men were employed in constructing the Great Pyramid. At the time of Nero (A.D. 54) the Egyptians numbered 7,800,000; and the population is estimated to have been not much less under the Pharaohs, at which time the towns numbered 1800 as against 3000 under the Ptolemies. The population of modern Egypt Proper in 1882 was 6,806,000. The ancient Egyptians appear to have been of mixed origin, partly Asiatic and partly Nigritic, superimposed upon an aboriginal type, copper-coloured, with high cheek-bones, large lips, thin legs, and large feet. Both these types appear upon the monuments. It is not true, as

much spirit and vigour of execution. The architectural details of the temples were always coloured.

Ancient Profiles (from the Monuments): 1. Egypto-Ethiopian (the Tirhake of Scripture); 2, 4. Ethiopian; 3. Egyptian.

In architecture the vault or arch was known at least 800 years before it can be shown to have been used by the Romans. To transport the huge blocks of stone found in Egyptian structures involved an advanced knowledge of engineering. The mechanical arts also flourished, and many inventions, often regarded as modern, had been made as early as the Fifth Dynasty. The blow-pipe, bellows, and siphons, the saw, chisel, press, balance, harpoon, lever, plough, and adze, were all employed. Razors appear during the Twelfth Dynasty. An opaque kind of glass was made about 3500 B.C., and dated specimens of the reign of Thothmes III. exist. At the same period the potter's wheel and the kiln were known, as well as applications of metallurgy and the use of tin.

Music was cultivated, for the harp and flute were known in the Fourth Dynasty; and later are found the heptachord, pentachord, lyres, drums, trumpets, guitars, and the national instrument, the sistrum (q. v.). Many of these instruments were of considerable size.

Painting was almost as conventional as architecture and sculpture, the colours generally being the primary ones on a white background. The papyri containing rituals often exhibit illuminations like those of the mediæval missals. Frescoes were not unknown; encaustic is found to date back to only a comparatively late period.

In warfare, the Egyptians used shields, cuirasses of leather, helmets, bows, spears, clubs, swords, and axes. In conducting sieges, they employed the *testudo* (q. v.) and scaling-ladders, and appear to have had a knowledge of the principles of mining and counter-mining. Under the Eighteenth Dynasty, war-chariots were introduced, prior to which time the army was composed entirely of infantry. Sea-going vessels were not earlier than B.C. 2500, though galleys and small sailing craft plied on the Nile at a very early period.

Coined money was first introduced by the Persians, previous to which time it is possible that gold circulated in rings or in portions of definite weight. Popular amusements were fencing, juggling, dancing, dice, and bull-fighting.

RELIGION.—The religion of the ancient Egyptians was a pantheistic system, each god, as with the Romans, standing for some special attribute. Each principal divinity is accompanied by a *put*,

Siphons used by the Egyptians.

or retinue of associated gods. As with the Assyrians, the pantheon is grouped in triads, or family groups, each consisting of the parent deity, his wife and sister, and a son. Thus the god Ptah forms a triad with Sekhet or Bast and Imhotep. These triads are often associated with inferior deities to complete the *put*. The worship of many triads was restricted to particular localities; but other triads, such as those of Osiris, Isis, and Horus (all of which see), were adored all over Egypt. The dual conception that embodies the antagonism of good and evil is seen in the opposition of the sun gods to the Great Serpent, Apap, the type of darkness; while Osiris is pitted against Set. On the monuments the gods are generally represented with human bodies but the heads of animals, animals being their living emblems. At the close

Egyptian Buffoons.

of the eighteenth dynasty, some foreign deities were admitted into the religious system of Egypt. Among these were Bar (Baal), Ashtarata (Ashtaroth), Ken (Kuin), and Reshpu (Reseph). As with the Greeks and Romans, so with the Egyptians, the gods were conceived as possessed of all the human passions and emotions.

The chief of the Egyptian deities is Ptah, the Opener, the creator of all things, the same as the Phœnician Pataikos. To him belong Sekhet, the Lioness, Bast, Bubastis, the goddess of fire, identified with Artemis. Ptah is depicted as a bow-legged dwarf. His son, Nefer-Tum, wears the lotus on his head. Other gods are Khnum, the ram-headed god of water; Heka, the Frog; Sati, the Sunbeam; Nit, the Shuttle; Khons (Force), the Heracles of Egyptian mythology; Ra, the Sun; Amenra, the hidden power of the Sun; Seb, Time; and Nut, the Firmament. Seb and Nut (Cronos and Rhea) gave birth to Osiris, Isis, Nephthys, Set, and the elder Horus. The myth of Osiris (q. v.) was the Egyptian type of the judgment and future destiny of man; and all the dead are called by his name. Each deity had its sacred animal, which was regarded as the second life of the deity whom it represented. The most famous of these animals was the Apis, or sacred bull, at Memphis, whose worship was national. See APIS.

Another point of the Egyptian religion was a belief in the transmigration of souls. All who were too impure to be admitted to the Courts of the Sun, or whose bodies when embalmed perished before the end of 3000 years, passed from body to body, having first descended to the lower world. The Sacred Bark in which the mummy was carried over the Nile to its tomb was a type of the Sun-boat which would at last bear the purified spirit to Paradise.

The chief remains of Egyptian architecture are religious—tombs, temples, and pyramids—the last-named being royal tombs reared to mark the burial-places of the kings. They are the most ancient of the Egyptian monuments, the next in point of antiquity being the rock-tombs of the Eleventh and Twelfth Dynasties, with their mummy-pits. Later still come the hill-tombs, with a temple before them.

GOVERNMENT. — Ecclesiastical government was in the hands of the high-priests, in conjunction with an inferior hierarchy, overseers, and superintendents of revenues, domains, and gifts. The civil government was carried on by the royal secretaries

Bronze Figure of Apis.

of justice, finance, foreign affairs, and internal administration. The army — at one time numbering some 400,000 men—was officered by nomarchs, colonels, and captains. In the time of Rameses II. there were territorial regiments. Circuit judges administered law.

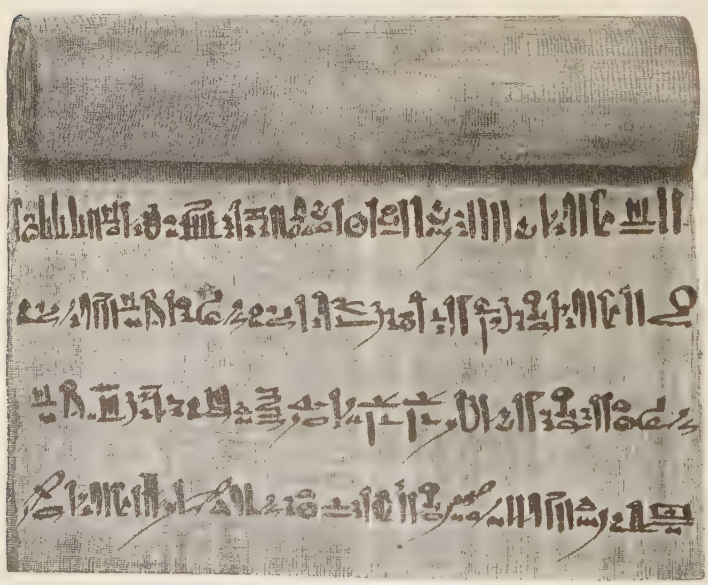
HISTORY. — In the third century B.C., Manetho (q. v.), a priest of Heliopolis, prepared, at the request of King Ptolemy Philadelphus, a history of Egypt from Menes (B.C. 4455) to the conquest of Egypt by Alexander, B.C. 332, a period which he divided into thirty dynasties. The work of Manetho is preserved in the form of epitomes by Julius Africanus (A.D. 300), Eusebius (q. v.), and Georgius Syncellus (A.D. 800). Much weight is now given to the statements of Manetho, since he undoubtedly had access to the most authentic records of Egypt; and the study of the monumental inscriptions in modern times has served to justify this confidence.

Myth declares Egypt to have been originally governed by a dynasty of divinities — Ptah, Ra, Shu, Seb, Hesiri (Osiris), Set, and Har (Horus) — reigning 13,900 years, and succeeded by demigods who ruled for a further

Temple of Thothmes III. at Karnak.

period of 4000 years. The first purely human monarch of Egypt is said to have been Menes, whose epoch is variously dated by different Egyptologists. Brugsch fixes it at B.C. 4455, and Lepsius at B.C. 3892. No monuments of Menes exist. The seat of his power is said to have been This, near Abydos, and he is believed to have founded Memphis. His dynasty reigned some 250 years, being succeeded by the Second Dynasty, which held sway for 300 years. Under it the worship of sacred animals is asserted to have begun. With the succeeding dynasty (B.C. 3966 according to Brugsch) the monumental history of Egypt commences. The king Senoferu conquered the Sinaitic peninsula and opened the copper-mines of Wady-Maghâra, where his name and portrait may still be seen. The seated figures of Rahotep and his wife Nefert, the oldest statues in the world, date from this reign.

Thoth, the God of Writing.



The Fourth Dynasty lasted 167 years (B.C. 3733–3566). Under it Khufu (Cheops) built the Great Pyramid at Gîzeh; his successor Khafra (Chephrenes) built the second pyramid; and Menkaura (Mycerinus) the third. From this period dates also the famous ritual known as the Book of the Dead, and various works of art.

The Fifth Dynasty comprised nine kings, and lasted some 200 years. The last of the line, Unas, built the truncated pyramid near Sakkara, now called Pharaoh's Seat. See PYRAMIS.

The Sixth Dynasty contains the name of King Pepi, whose general, Una, undertook various wars and expeditions, among them one to Palestine, in which he used negro troops from Nubia. A number of texts belonging to this reign were found in pyramids opened in 1880. It is doubtful whether Queen Nitocris (q. v.), whom Manetho assigns to this dynasty, is an historical personage. Of her, Herodotus relates various interesting stories, and the Arabs believe that she still haunts the third pyramid of Gîzeh, where she is said to have been buried.

From the Seventh to the Twelfth Dynasty, Egyptian history is obscure. One reason, perhaps, is to be found in the fact that the nomarchs or local governors became more and more independent, to the detriment of the importance of the kings. The inscriptions at Siat, recently published by Griffith, show that in the Ninth and Tenth Dynasties, the kings of Egypt waged war against these rebellious nomarchs, especially those of Thebes. These last, under the Tenth Dynasty, began to claim the title of royalty, and did in fact succeed in establishing their claim. More than that, they overran and conquered the whole country after a protracted struggle, so that the Eleventh Dynasty is Theban. Thebes, from being an insignificant provincial town, became the royal capital; and from the time of the Twelfth Dynasty (about B.C. 2500) begins a new period of political unity and intellectual achievement, so that in later times it was regarded as Egypt's Golden Age. Literature flourished, and great material prosperity prevailed. Nubia was conquered as far as the Second Cataract. Besides Thebes, other cities, such as On (Heliopolis), Tanis, and Bubastis, were embellished and enlarged; while the province of Fayûm was gained for agriculture. The excavations of Petrie prove that Amenemhat III. was the Moiris of Herodotus who constructed a great basin for a branch of the Nile flowing into that oasis and losing itself in swamps. In the middle of the basin were found two pyramids with colossal statues surmounting them; and near by, the largest of all the temples of Egypt, the so-called Labyrinth, of which, however, only the foundation stones have been preserved. See LABYRINTHUS.

Between the Thirteenth and the Eighteenth Dynasties there exists a blank. About B.C. 2000, the progress of the kings of Chaldea in Asia, or some other disturbance, sent the Hyksos or "Shepherd Kings" into Lower Egypt. These invaders appear to have been of Tartar race. They carried Memphis by storm, expelled the Theban dynasty, and made the city of Avaris (the later Tanis) their seat. Of these kings, Joseph was probably prime-minister to Apepi at Tanis. His granaries are still visible at Pithom. The Hyksos made some religious changes and tried to replace the worship of Ra by that of Set. They were finally overthrown by the Egyptians of Upper Egypt under Aahmes I. (Amosis), who took Avaris by assault and restored the old religion. The succeeding kings, Amenhotep I., Thothmes I., Thothmes II., and Thothmes III., carried the arms of Egypt far into Ethiopia, Nubia, and Asia, subduing the whole of Syria and part of Mesopotamia. The reign of Thothmes III. is the most brilliant period of Egyp-

Hieratic Papyrus. (Twentieth Dynasty.)

tian history. To him, Kush and the southern tribes of Ethiopia, the islands, as well as Assyria, Babylonia, Phœnicia, and a good part of Central Asia, paid tribute. Under Amenhotep IV., the capital was removed to Alabastron (Tel-el-Amârina), and the monotheistic worship of the sun was allowed to diminish the regard paid to the other deities. The true religion was restored by Haremhebi (Horus) after a period of some thirty-five years. He was succeeded by Rameses I., who heads a long dynasty. His successor, Seti I. (Sethos), by his victories in Asia, introduced the worship of Baal and Ashtaroth into Egypt. His troops garrisoned Tyre, and Aradus, and Bethanath in Canaan. Rameses II., son of Seti, defeated the Hittites and took Shaluma, the ancient site of Jerusalem, in a war which lasted four years. A tablet of this monarch has been found near Beyrût in Syria. Rameses II. also reconquered Ethiopia, which had revolted, and established a fleet on the Mediterranean. He it is whose exploits form a basis for the myths woven around the legendary Sesostris (q. v.). His date is about B.C. 1322. His son Meneptah transferred the seat of government to Memphis, and is probably the Pharaoh of the Jewish Exodus.

Rameses III., of the Twentieth Dynasty, waged war with the Philistines, and with some of the maritime tribes of Greece, gaining naval victories in the Mediterranean. His favourite temple and palace were at Medinet Habu. The Ramessids who followed were ended by the high-priests of Thebes, who deposed the last king. A new dynasty from Tanis succeeded, and reigned with little power. Under them, the police ceased trying to protect the tombs of the kings from plunderers, who, in consequence, stole many of the mummies and hid them in an excavation, where they were found in 1881.

King Amenembat I., of the Twelfth Dynasty. (Head in Red Granite from the Great Temple of Tanis. Photographed by Mr. W. M. F. Petrie.)

Egyptian of the time of the Fifth Dynasty, circa B.C. 3300. (Limestone Statue in the Museum of Ghizeh.)

The Twenty-second Dynasty (B.C. 950) was of Libyan origin, probably established by the powerful Libyan body-guard which had become extremely influential. Shoshank I. (the Biblical Shishak) plundered cities in India, and made war upon the Jewish kings Jeroboam and Rehoboam. Under the Twenty-third Dynasty (of Tanis), the unity of the Empire was lost. The different provinces fell away from the central power, and in the Twenty-fourth Dynasty King Bocchoris ruled over Saïs and Memphis alone. Under the Twenty-fifth Dynasty (B.C. 728), the whole of Egypt became an Ethiopian province, and its vice-king suffered defeat at the hands of the Assyrians, who, in B.C. 671, under Assar-haddon, conquered Egypt and divided it among tributary princes. (See ASSYRIA.) Many of the Assyrian garrisons were driven out in B.C. 668, and when the Assyrian empire began to decline, Psametik (Psammetichus) of Saïs, descended from the kings of the Twenty-fourth Dynasty, founded a new line with the aid of Greek mercenaries from Ionia and Caria. Under him and his successors, art and learning revived. His successor, Nekao II., began a canal to connect the Red Sea with the Mediterranean, but desisted at the warning of an oracle, having also lost a large number of workmen in the attempt. He it was

who defeated Josiah, king of Judah, and conquered Palestine, but was himself defeated by Nebuchadnezzar. In the time of his reign, navigators from Phœnicia first sailed south of the equator. Psammetichus II. warred with the Ethiopians, and was followed by Apries, who was deposed and strangled by Amasis (q. v.), who reigned after him and fostered intercourse with Greece, marrying a Greek wife. He conquered Cyprus, but incurred the enmity of Cambyses (q. v.), second king of the Medes and Persians, who invaded Egypt, and overthrew the son of Amasis at the battle of Pelusium (B.C. 527), thus insuring the conquest of Egypt, which now became a Persian province. Becoming insane, Cambyses committed many barbarous acts, stabbed the sacred bull Apis, and gave himself up to gross debauchery. He was succeeded by Darius I., Xerxes I., and Artaxerxes I., who governed with comparative mildness, but against whom the Egyptians rose in unsuccessful revolt, being aided by the Athenians. The Twenty-eighth (Saïte) Dynasty struggled with varying success against the Persians; the Twenty-ninth maintained a Greek alliance with the same object; but with the Thirtieth, the Persians finally prevailed, and Egypt remained subject to them until the time of Alexander the Great (B.C. 332), who in that year founded Alexandria (q. v.), after having conquered Persia. In B.C. 306, Alexander's general, Ptolemaeus, assumed the title of King of Egypt. His successors transformed Egypt into a Greek kingdom, both the language of the government and of scholarship being Greek. (See ALEXANDRIAN SCHOOL.) The court of the Ptolemies became a centre of learning; and Ptolemy Philadelphus built the famous Museum, founded the great Library, and procured the Septuagint translations of the Hebrew Scriptures. From this time the list of his successors is as follows: Euergetes (246–221 B.C.); Philopator (221–204 B.C.), who persecuted the Jews and warred with Antiochus; Epiphanes (204–180 B.C.); Philometor (180–145 B.C.); Euergetes II. (145–116 B.C.); Ptolemy Soter II. and his mother Cleopatra (116–81 B.C.); Alexander II., Cleopatra Berenicé (81–80 B.C.); Neos Dionysus (80–51 B.C.). Last came the famous Cleopatra (q. v.), the mistress of Antony. After her defeat at the battle of Actium (31 B.C.), Egypt was made a Roman province by Augustus Caesar, under a governor of equestrian rank. See PTOLEMAEUS.

Egypt remained peaceful under Roman rule, except for the conquest of Zenobia (270 A.D.) and the revolt of Firmus (272 A.D.). (See ZENOBIA; FIRMUS.) The most interesting events of this period are, besides the two just mentioned, the visits of Vespasian, Hadrian, and Caracalla to Alexandria; the persecutions of Diocletian (q. v.); the rise of the Gnostics, Manichaeans, and Arians; and the final supremacy of the Christian faith in 379 A.D.

When the Roman Empire was divided in 395 A.D., Egypt went with the Eastern division, and later became one of the great patriarchates of the Church. In 616 A.D., owing to bitter religious feuds, it became a Persian province for twelve years. In the year 639, when the Arabs invaded the country, a native (Coptic) governor was over Egypt, administering it in the name of the Emperor Heraclius. Seeing in the invasion a means for throwing off the rule of the Greeks, he made only a pretended resistance to the Arab chief, 'Amr Ibn el-Asi, who in the year 641 took Alexandria, and made the whole of Egypt a province of the calif Omar.

(1892); Goodyear, *A Grammar of the Lotus* (1892).

Aegyptus (Αἴγυπτος). Son of Belus and twin-brother of Danaüs (q. v.), who subdued the land of the Melampodes, and named it after himself. Ignorant of the fate of his fifty sons, he came to Argos and there died of grief at their death; another account represents his only surviving son as reconciling him to his brother.

Aeinautae (*ἀεὶ ναῦται*). Magistrates at Miletus whose custom it was to embark on board ship whenever they had occasion to discuss important business, returning only when the business was completed (Plut. *Quaest. Graec.* 32).

Aeiphygia (*ἀειφυγία*). See EXSILIUM.

Aeisĭti (*ἀείσιτοι*). See PRYTANEUM.

Aelāna. The *Elath* of the Jews, a town on the northern arm of the Red Sea, which was in consequence called by the Greeks Αἰλανίτης.

Aelia. A name given to Jerusalem after its restoration by the Roman emperor, Aelius Hadrianus. See HIEROSOLYMA.

Aelia Sentia Lex. See DEDITICII.

Aeliānum Ius. See IURISPRUDENTIA.

Aeliānus. (1) THE TACTICIAN, a Greek writer on war, about 100 A.D., composed a work dedicated to Trajan on the Greek order of battle, with special reference to Macedonian tactics (*Τακτικὴ Θεωρία*), which is extant both in its original and in an enlarged form. The original used falsely to be attributed to Arrian. See Köchly, *De Libris Tacticis* (1852).

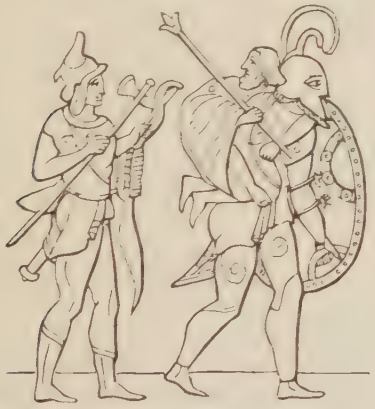
(2) CLAUDIUS AELIANUS, called THE SOPHIST, a Roman of Praenesté, who wrote in Greek, lived at Rome in the second century A.D. as a teacher of rhetoric. His surviving works are: (*a*) Twenty insignificant *Peasants' Letters* (Ἀγροικικαὶ Ἐπιστολαί), so called because attributed to Attic peasants; (*b*) *Variae Historiae* (Ποικίλη Ἱστορία) or miscellanies, in fourteen books, some preserved only in extracts; and (*c*) *De Natura Animalium* (Περὶ Ζῴων Ἰδιότητος). The two last-mentioned are copious and valuable collections of all kinds of curiosities in human and animal life. See Lübbe, *De Aeliani Varia Hist.* (1888); and the ed. of the last by Jacobs (1832).

Aelius. A plebeian gens at Rome, divided into the families of Gallus, Lamia, Paetus, and Tubero.

Aëllo (Ἀελλώ). One of the Harpies. See HARPYIAE.

Aemilia. The third daughter of L. Aemilius Paulus (q. v.), wife of Scipio Africanus, and mother of Cornelia, who bore the Gracchi.

Aemilia Via. A Roman road made by M. Aemilius Lepidus, consul in B.C. 187. It continued the Via Flaminia from Ariminum through Bononia, Mutina, and Placentia, to Mediolanum (Milan). See VIAE.



Aemiliānus. The cognomen of P. Cornelius Scipio Africanus Minor, who was the son of L. Aemilius Paulus. See SCIPIO.

Aemilius. The name of a celebrated patrician gens at Rome, for the chief members of which see the articles LEPIDUS; PAULUS; SCAURUS.

Aenaria (also called PITHECŪSA and INARĪMÉ). A volcanic island at the entrance to the Bay of Naples; under it the Roman poets represent Typhoeus (q. v.) as lying. It is the modern Ischia.

Aeneădes. A patronymic applied specifically to Ascanius or Iulus, the son of Aeneas, and generally to those who claimed descent from him, such as Augustus Caesar and the Romans as a race.

Aenēas (*Αἰνείας*). A Trojan hero, the son of Anchises and Aphrodité, and born on Mount Ida. He was brought up at Dardania, in the house of Alcathoüs, the husband of his sister. At first he took no part in the Trojan war; and it was not till Achilles attacked him on Mount Ida, and drove away his flocks, that he led his Dardanians against the Greeks. Henceforth Aeneas and Hector appear as the great bulwarks of the Trojans against the Greeks. On more than one occasion Aeneas was

Aeneas, followed by Ascanius, and carrying Anchises from burning Troy.

saved in battle by the gods; Aphrodité carried him off when he was wounded by Diomedes, and Poseidon saved him when he was on the point of perishing by the hands of Achilles. Homer makes no allusion to the emigration of Aeneas after the capture of Troy, but, on the contrary, he evidently conceives Aeneas and his descendants as reigning at Troy after the extinction of the house of Priam; but later narratives relate that after the capture of Troy Aeneas withdrew to Mount Ida with his friends and the images of the gods, especially that of Pallas (*Palladium*); and that from thence he crossed over to Europe, and finally settled at Latium in Italy where he became the ancestral hero of the Romans. A description of the wanderings of Aeneas before he reached Latium is given by Vergil in his *Aeneid* (bks. ii.–vi.). After visiting Epirus and Sicily, he was driven by a storm on the coast of Africa, where he met with Dido (q. v.). He then sailed to Latium, where he was hospitably received by Latinus, king of the Aborigines. Here Aeneas founded the town of Lavinium, called after Lavinia, the daughter of Latinus, whom he married. Turnus, to whom Lavinia had been betrothed, made war against Latinus and Aeneas. Latinus fell in the first battle, and Turnus was subsequently slain by Aeneas; whereupon, after the death of Latinus, Aeneas became sole ruler of the Aborigines and Trojans, and both nations were united into one. Soon after this Aeneas fell in battle against the Rutulians, who were assisted by Mezentius, king of the Etruscans. As his body was not found after the battle, it was believed that it had been carried up to heaven, or that he had perished in the river Numicius. The Latins erected a monument to him, with the inscription *To the Father and Native God*. Vergil represents Aeneas as landing in Italy seven years after the fall of Troy, and compresses all the events in Italy, from the landing to the death of Turnus, within the space of twenty days. The story of the descent of the Romans from the Trojans through Aeneas was believed at an early period, but rests on no historical foundation. See TROJAN WAR; VERGILIUS.

Aenēas Silvius. The grandson of Ascanius and great-grandson of Aeneas. His name stands third in the list of the mythical kings of Alba in Latium.

Aeneatōres or **Ahenatōres**. Performers upon wind-instruments in the Roman army, and divided into *bucinatores*, *cornicines*, *tubicines*, *liticines*, and called from the bronze (*aes*) of their instruments.

Aenēid (AENĒIS). The chief Roman epic. See VERGILIUS; EPOS.

Aenesidēmus (*Αἰνησίδημος*). A skeptic, born at Cnossus, in Crete, who lived a little later than the time of Cicero. He wrote eight books on the doctrines of Pyrrho (q. v.), of which extracts may be found in Photius, *Cod.* 212.

Aeniānes. A Thessalian tribe noted for its frequent migrations, and frequently alluded to by Plutarch in his *Quaestiones Graecae*.

Aenigma (*αἴνιγμα*). A riddle. The Greeks were especially fond of riddles, the propounding of which even formed a part of some of their semi-religious festivals (see AGRIONIA); and certain persons, such as Theodectes of Phaselis and Aristonymus, owed their celebrity to their cleverness at propounding *aenigmata*. At the symposia especially, the asking and answering of riddles formed a favourite amusement, and those who successfully solved them received a prize in the form of cakes, sweetmeats, wreaths, etc., while the unsuccessful were condemned to swallow a draught of wine sometimes mixed with salt water. Riddles were often written in hexameter verse, and the tragic as well as the comic writers have introduced them into their plays. The most famous riddle of antiquity is perhaps the celebrated one propounded by the Sphinx to Oedipus (q. v.).

The Romans cared little for riddles, though Apuleius wrote a work on the subject (*Liber Ludicrorum et Griphorum*), and mentions several collections of riddles that had been made. (See Athenaeus, x. 457.) A late writer, Symphosius, in the fourth century A.D., wrote a work entitled

Aenigmata Symphosi Scholastici, containing a hundred riddles. The best list of these is in Riese's *Anthologia Lat.*, pp. 187–207; trans. into French by Corpet (Paris, 1868).

Aenobarbus. See AHENOBARBUS.

Aēnum or **Ahēnum**, sc. *vas*. A bronze vessel hung over the fire and used in boiling. The word also designates a dyer's copper; and the boilers that supplied hot water to a bath were also called *aëna*. See BALNEAE.

Aenus. (1) A town in Thrace, near the mouth of the Hebrus, said by Vergil to have been founded by Aeneas. (2) A river in Rhaetia, now the Inn.

Aeŏles or **Aeolii.** One of the chief branches of the Hellenic race, and supposed to be descended from Aeolus, son of Hellen. (See AEOLUS.) They originally lived in Thessaly, subsequently spread over various parts of Greece, and also settled in Aeolis in Asia Minor, and in Lesbos (q. v.).

Aeoliae Insŭlae. A group of islands northeast of Sicily, where Aeolus, the god of the winds, reigned. These islands were also called Hephaestiades or Vulcaniae, because Hephaestus or Vulcan was believed to have his workshop in one of them called Hiera. They were also named Liparenses, from Lipara, the largest of them.

Aeolic Dialect. See DIALECTS.

Aeolĭdes (Αἰολίδης). A patronymic applied to various individuals, of whom the most important are Sisyphus, son of Aeolus; Odysseus, to whom it is given because his mother, Anticlea, was pregnant by Aeolus when she married Laërtes; and Misenus, the follower of Aeneas, who was called so figuratively, from his skill in blowing the trumpet. The feminine form is Aeolis.

Aeŏlis (Αἰολίς) or **Aeolia.** A district in Mysia in Asia Minor, and peopled by Aeolian Greeks. In early times, their twelve most important cities were independent, and formed a league—Cymé, Larissae, Neontichos, Temnus, Cilla, Notium, Aegirusa, Pitane, Aegaeae, Myrina, Grynea, and Smyrna. Those cities were subsequently overcome by Croesus and incorporated in the Persian Empire under Cyrus. See LESBOS.

Aeŏlus (Αἰόλος). (1) The ruler of the winds, son of Hippotas and Melanippé, daughter of Chiron. He reigned over the Aeolian Islands, and made his residence at Strongylé, the modern Stromboli. The island was entirely surrounded by a wall of brass, and by smooth, precipitous rocks; and here he dwelt in continual joy and festivity, with his wife and his six sons and as many daughters. The island had no other tenants. The sons and daughters were married to each other, after the fashion set by Zeus and Heré. Odysseus came in the course of his wanderings to the island of Aeolus, and was hospitably entertained there for an entire month. On his departure, he received from Aeolus all the winds but Zephyrus, tied up in a bag of ox-hide. Zephyrus was favourable for his passage homeward. During nine days and nights the ships ran merrily before the wind; on the tenth they were within sight of Ithaca, when Odysseus, who had hitherto held the helm himself, fell asleep. His comrades, who fancied that Aeolus had given him treasure in the bag, opened it: the winds rushed out, and hurried them back to Aeolia. Judging, from what had befallen them, that they were hated by the gods, the ruler of the winds drove them with reproaches from his isle. The name Aeolus has been derived from αἰόλος, "varying," "unsteady," as a descriptive epithet of the winds. (2) A son of Hellen, father of Sisyphus, Cretheus, and Athamas, and the mythic progenitor of the great Aeolic race.

Aeon (αἰών). A term occurring frequently in the philosophical speculations of the Gnostics, who conceived the emanations from Deity to be divided into two classes: the one comprehending all those substantial powers which are contained within the Divine Essence, and which completes the infinite plenitude of the Divine Nature; the other, existing externally with respect to the Divine Essence, and including all finite and imperfect natures. Within the Divine Essence, they, with wonderful ingenuity, imagined a long series of emanative principles, to which they ascribed a real and substantial existence, connected with the first substance as a branch with its root, or a solar ray with the sun. When they began to unfold the mysteries of this system in the Greek language, these Substantial Powers, which they conceived to be comprehended within the πλήρωμα, or Divine Plenitude, they called αἰωνες, aeons. See GNOSTICI.

Aeōra or **Eōra** (αἰώρα, ἐώρα). (1) A festival at Athens accompanied with sacrifices and banquets in commemoration of Erigoné (q. v.). (2) A swing, which was a favourite amusement in Greece, as in

Aeora, or Swing. (Panofka.)

modern times. The illustration shows a group engaged in swinging one another.

Aepoliānus. An engraver of precious stones, of the second century A.D.

Aepўtus (Αἴπυτος). (1) A mythical king of Arcadia, from whom a part of the country was called Aepytis. (2) The younger son of Cresphontes, king of Messenia, and of Meropé, daughter of the Arcadian king Cypselus. When his father and brothers were murdered during an insurrection, Aepytus, who was with his grandfather Cypselus, alone escaped. The throne of Cresphontes was meantime occupied by Polyphontes, who forced Meropé to become his wife. When Aepytus had grown to manhood he returned to his kingdom, and put Polyphontes to death. From him the kings of Messenia were called Aepytidae.

Aequi, Aequicŏli, Aequicŏlae, Aequiculāni. A people of Italy, dwelling in the upper valley of the Anio, in the mountains forming the eastern boundary of Latium, and between the Latini, Sabini, Hernici, and Marsi. In conjunction with the Volsci, who were of the same race, they carried on constant hostilities with Rome, but were finally

subdued in B.C. 302. One of their chief seats was Mount Algidus.

Aequi Falisci. See FALERII.

Aequipondium. See LIBRA; TRUTINA.

Aera. See CHRONOLOGY.

Aerarii. By the constitution of Servius Tullius (see CENTURIA), aerarii were citizens who were not settled on land of their own, and therefore not included in any one of the property classes founded on land-ownership. The term was also applied to those standing outside of the tribal union, who were excluded from the right of voting and from military service, and who were bound to pay a poll-tax in proportion to their means. Citizens in the classes and tribes could be expelled from their tribe by the censors in punishment for any fault, and placed among the aerarii. But when the latter were likewise admitted into the tribes (B.C. 308), being enrolled in the city tribes (B.C. 304), which were on that account less esteemed than the country ones, a penal transfer to the aerarii consisted in expulsion from one's proper tribe and removal to one of the city tribes till at least the next census.

Aerarii Tribūni. See AES EQUESTRE; TRIBUNI.

Aerarium (*τὸ δημόσιον*). The state treasury of Rome, into which flowed the revenues ordinary and extraordinary, and out of which the needful expenses were defrayed. It was kept in the basement of the Temple of Saturn, under the charge of the quaestors. A special reserve fund was the *aerarium sanctius*, in which the proceeds of receipts from the manumission-tax (one twentieth of the freed slave's value) were deposited in gold ingots. When Augustus divided the provinces into senatorial and imperatorial, there were two chief treasuries. (See FISCUS.) The senatorial treasury, which was still kept in the Temple of Saturn, was left under the control of the Senate, but only as a matter of formal right. Practically it passed into the hands of the emperors, who also brought the management of the treasuries under their own eye by appointing, instead of the quaestors, two *praefecti aerarii* taken from those who had served as praetors. Besides this, they diverted into their own *fiscus* all the larger revenues, even those that legally belonged to the aerarium. (See FISCUS.) When in course of time the returns from all the provinces flowed into the imperial treasury, the senatorial aerarium continued to exist as the city treasury. The *aerarium militare* was a pension-fund founded by Augustus in A.D. 6, for disabled soldiers. Its management was intrusted to three *praefecti aerarii militaris*. It was maintained out of the interest on a considerable fund, and the proceeds of the heritage and sale duties. See Marquardt, *Staatsverwaltung*, ii. pp. 293–305.

Aero. A basket of osiers, rushes, or sedge, and used to carry wheat, sand, or earth. See BASCAUDA.

Aërŏpé (*Αερόπη*). The daughter of Catreus, king of Crete, and wife of Plisthenes, the son of Atreus, by whom she became the mother of Agamemnon and Menelaüs. After the death of Plisthenes, Aëropé married Atreus; and her two sons, who were educated by Atreus, were generally believed to be his sons. Aëropé was faithless to Atreus, being seduced by Thyestes. See PELOPIDAE.

Aerūgo. Verdigris. The word is used figuratively of envy. Hor. *S.* i. 4. 101.

Aeruscatōres. Vagrants who made a living by fortune-telling and begging. The Greeks called them *ἀγύρται* (Gell. xiv. 1). See AGYRTAE.

Aes (*χαλκός*). Much confusion has arisen from the fact that both Greeks and Romans use only one term for copper and for that mixture of copper and tin which we call bronze. Excepting perhaps gold, copper is the easiest of metals to find and fashion, being found in lumps, and not, like iron, hidden in ore. Hesiod and Lucretius, and ancient writers generally, made the Age of Bronze precede that of Iron, and that they were right is abundantly proved by the excavations of modern times. There seems to have been a time immediately succeeding the Stone Age when implements were beaten out of pure copper, but it did not last long: the custom of adding tin to copper was introduced, and from that time until the close of ancient history, copper unmixed was seldom used for any purpose, various metals being added to it to increase its hardness. Bronze, containing about 12 to 14 per cent. of tin and 88 to 86 per cent. of copper, was made at a very early period in Egypt and Asia. The use of it was introduced into Greece in prehistoric times, probably by the Phœnicians. Tin is not found in Greece, and, in fact, exists in but few parts of Europe: the Phœnicians are supposed to have travelled in search of it as far as Cornwall and India. The likeness of the Greek word for tin (*κασσίτερος*) to the Sanskrit *kastira* seems to indicate that the original supply of Greek tin came from India. To account, however, for the enormous quantity of tin which in the Bronze Age must have circulated through Europe is not easy.

In Homer's time bronze is the usual material for tripods, vessels, armour of defence, and even spears, though iron was beginning to be used for offensive weapons. It is probable that soon after the Homeric age weapons of bronze fell out of use. This compound, however, continued to be largely employed for utensils of all kinds, for works of art and other purposes. The interior of the treasuries of Mycenae and Orchomenus were lined with bronze; bronze was used in historical times for vessels, candelabra, chariots, for the inscribing of treaties and laws, for personal ornament, and in places for coin. Also all instruments used for religious purposes were made of bronze from motives of religious conservatism. The abundance of copper sufficiently accounts for its general use among the ancients. We have a remarkable result of this fact in the use of *χαλκεύς* and *χαλκεύειν*, where working in iron is meant (Hom. *Od.* ix. 391; Aristot. *Poët.* 25). One of the chief sources of copper in antiquity was Cyprus; from the name of that island is derived the Low Latin *cuprum*, and our word copper. The metal was also procured in Euboea, near the town of Chalcis, and in other parts of Greece; also in Campania in Italy, in Germany, and elsewhere. But the most celebrated bronze did not come from those regions, but was an object of special manufacture elsewhere. Two of the most celebrated mixtures were the Delian (Plin. xxxiv. § 9) and the Aeginetan (*l. c.* § 10), which were much used in art. We learn that Myron used the former mixture, Polyclitus the latter. The Delian was reckoned the more precious of these, but still more valuable was the *hepatizon* or liver-coloured bronze, and most valuable of all the Corinthian. With regard to the last-mentioned, a silly story was told that it was produced by a for-

tuitous mixture of melted metals on the occasion of the burning of Corinth by Mummius. Pliny (xxxiv. § 7) sensibly remarks that this story is absurd, because most of the authors of the highly valued works in Corinthian bronze lived at a much earlier period. A large number of varieties of bronze of various colours were known to the ancients, and it seems that they tinted their statues by making them of a judicious mixture of sorts. Thus we find mention of a bronze Iocasté that was pale, of an Athamas that blushed, and of a Pallas with ruddy cheeks made by Phidias. The ancients also understood the art of hardening the metal by dipping it in water and exposing it to the air. Even in Homer there is one passage (*Od.* ix. 391) which is supposed to allude to this process which recent experiments have proved possible. The mixture of copper and zinc which we call brass was known to the later Greeks and Romans, and by them called *orichalcum* (see Plin. xxxiv. 4). The chief authority as regards the kinds and working of bronze is Pliny (*H. N.* xxxiv.). He distinguishes copper ore into two kinds: *cadmea*, found in Italy and Germany, and *chalcitis* in Cyprus and elsewhere. Of Corinthian bronze (§ 8) he distinguishes three kinds: in the first silver predominates, in the second gold, in the third the metals are balanced and harmonized. Of Cyprian bronze (§ 94) the chief classes are *coronarium*, which is of golden hue when divided into thin layers, and *regulare*, which can be hammered and drawn out into bars and wires. A commoner kind of copper (not Cyprian), called *caldarium*, does not give to the hammer, and is only fit for melting. At Capua they added to copper to make bronze, 10 per cent. of Spanish *plumbum argentarium*, which was made of tin and lead in equal proportions. Pliny states that copper was largely used in medicine (§ 100 foll.), being either mixed with milk or sulphur for external application to wounds, or taken internally, mixed with honey, in order to cause vomiting. For a mass of details of this character we must refer the reader to Pliny himself.

In the early bronze-work of Greece and Etruria, the manufacturing processes were simple. The usual process for utensils and ornaments was to work plates with the hammer into the required shape, fastening them with nails or solder, and beating up a pattern on them in *repoussé* work, the whole being finished with a graving-tool. Small figures were sometimes cast in the lump. When we are told that the Greeks, Rhoecus and Theodorus, first cast in bronze (Pausan. ix. 41, § 1), we must perhaps understand by this that these artists introduced the method of casting statues hollow, not solid, as their predecessors had done. These artists may have lived about the 60th Olympiad, and certainly soon after that time bronze statuary spread with great rapidity over Greece; and indeed bronze continued a favourite material with sculptors until the decay of art. Of the formative process we have a vivid picture on a Greek vase of good period, engraved as the frontispiece to Mr. Murray's *History of Greek Sculpture*. The extraordinary abundance of works of art in bronze, found on almost all ancient sites, especially at Herculaneum and Pompeii, is a notable fact.

Copper as Coin.—In the coinage of the Greeks and Romans copper is seldom unalloyed. A number of analyses made of late years of Greek coins show a proportion of tin of from 10 to 16 per cent., and an occasional 2 to 5 per cent. of lead. Roman *aes signatum* in republican times shows a proportion of 5 to 8 per cent. of tin and 16 to 29 of lead. After the time of Augustus a change was introduced in the composition of Roman coin. Thenceforward sestertii and dupondii were made of brass, that is to say, of a mixture containing 20 per cent. of zinc and 80 of copper; while the asses were made entirely of copper. Money of copper and bronze stood on a very different footing in Italy to that on which it stood in Hellas and Asia. For in western countries, copper was the usual medium of exchange and measure of value; the chief currency consisted in early times of huge ingots of copper stamped with an official type; and when gold and silver came into use, they at first passed merely as the equivalents and representatives of so much copper. In the East, on the other hand, where gold and silver were the true media of exchange, and copper was used only for very small values, it was seldom minted save as money of account. (See NUMISMATICS.) The Ptolemies of Egypt minted copper pieces of full value; and Brandes (*Gewichtswesen*, p. 292) is disposed to think that the early Athenian and other copper money was minted up to full weight for a time. But this was exceptional; and in almost all Hellenic settlements, copper money was a currency of tokens; and the weight of it is consequently most irregular. Copper money was first minted in Greece towards the end of the fifth century, at which period the cities of South Italy, Sicily, and Hellas alike began to strike copper pieces in place of the minute silver coins which had hitherto passed as small change. Conservatives objected to the innovation, as we know from Aristophanes (*Ran.* 725).

Since the most ancient coins in Rome and the old Italian states were made of *aes*, this name was given to money in general, so that Ulpian (Dig. 50, tit. 16, s. 158) says, *Etiam aureos nummos aes dicimus.* (Cf. Hor. *Ars Poët.* 345; *Ep.* i. 7, 23.) For the same reason we have *aes alienum*, meaning debt, and *aera* in the plural, pay to the soldiers (Liv. v. 4; Plin. *H. N.* xxxiv. § 1). The Romans had no other coinage except copper, till B.C. 269, five years before the First Punic War. See As.

Aesăcus (Αἴσακος). The son of Priam and Alexirrhoë, who fell in love with Hesperia, the daughter of Cebren. While he was pursuing her, she was stung by a viper and died. Aesacus in his grief threw himself into the sea, and was changed by Thetis into an aquatic bird (Ovid, *Met.* xi. 750).

Aesar. (1) An Etruscan word equivalent to the Latin *deus* (Suet. *Octav.* 97). Casaubon connects it with the Gr. *αἶσα*, "fate." (2) A river of Bruttii, near Crotona, in Southern Italy.

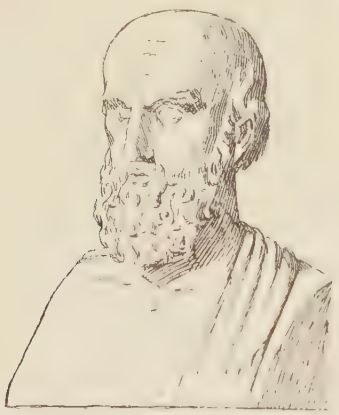
Aeschĭnes (Αἰσχίνης). (1) A great Athenian orator, born in B.C. 389, the son of Atrometus, a schoolmaster, and Leucothea. The statements of Demosthenes in regard to the disreputable character of his parents are probably groundless. After some experience as a soldier he entered upon the profession of a public clerk, which, however, he soon left to become an actor of indifferent success. But his real talents, aided by his experience of public life gained as a clerk, soon made him prominent when he turned his attention to a political career. In B.C. 348, after the fall of Olynthus, he attracted attention by advocating a general council of the Greek States to concert measures

against King Philip. But the failure of the embassy to Arcadia, which he undertook in pursuance of this plan, seems to have so discouraged him that he immediately changed sides, and was thenceforth an adherent of the peace party. In this capacity he played a conspicuous part as a member of the famous embassy to Philip in B. C. 346, preliminary to the peace of Philocrates. The complicated details of these negotiations need not be given here. (See DEMOSTHENES; PHILIP II.) It is sufficient to say that Aeschines was won over by Philip's flattery (there is no proof that he was actually bribed, beyond the partisan statement of Demosthenes), and became convinced that a close alliance with the Macedonian king was the safest

Aeschines the Orator. (National Museum, Naples.)

course for Athens. Almost immediately after the conclusion of the peace, he was indicted by Timarchus, an adherent of Demosthenes, for treasonable conduct, but was triumphantly acquitted. A second accusation, brought by Demosthenes himself in B. C. 343, was more nearly successful, and Aeschines narrowly escaped conviction, after an able defence, in which he was aided by the intercession of Eubulus and Phocion. Aeschines next appears as one of the representatives of Athens at the Amphictyonic Council at Delphi in B. C. 339. Here, as he tells us, he was so enraged by an unjust complaint which the delegates from Amphissa brought against Athens, that he in turn made a vehement counter-attack on the Amphissians for their occupation of the sacred plain of Cirrha. So infuriated were the Amphictyons by his invective that, after burning the buildings of the offending Amphissian settlers, they voted to hold a special meeting of the council to consider what further punishment should be inflicted. Athens and Thebes refused to send delegates to this assembly, and thus became involved in war with Philip and the rest of the Amphictyons—a war which resulted in the fatal battle of Chaeronea and the downfall of Athenian independence.

In stirring up this new conflict, Aeschines certainly played into the hands of Philip, who was awaiting an opportunity for armed interference in the affairs of Central Greece; but here, too, the charge of bribery rests on the unsupported testimony of his bitterest enemy. After the battle of Chaeronea, the party of Aeschines naturally fell into disfavour. He does not figure prominently in public affairs again till B.C. 330, when he made a final effort to defeat his hated rival. An obscure politician named Ctesiphon had in B. C. 336 brought in a bill proposing to confer a golden crown upon Demosthenes for his services to the State. Aeschines raised objection to this on the score of illegality. The case did not come to trial till six years had elapsed, and then each of the orators exhausted every effort to crush his opponent. But Aeschines was the weaker, both in genius and in merit, and, not receiving the fifth part of the votes of the court, he was fined one thousand drachmas, and lost the right of appearing before the people in a similar capacity again. He left Athens and went first to Ephesus and afterwards to Rhodes, where he is said to have opened a school of oratory. He outlived his great opponent and died at Samos at the age of seventy-five.



Only three orations of Aeschines have been preserved, and all of these bear, directly or indirectly, on his quarrel with Demosthenes. Their titles are: (*a*) *Against Timarchus*, (*b*) *On the Dishonest Embassy*, (*c*) *Against Ctesiphon*. The occasion and subject of each have been noticed above. The second of them is generally considered to be the best. In natural gifts of oratory Aeschines was inferior to Demosthenes alone among his contemporaries. He excelled particularly in brilliant narrative, and was also one of the first to win a reputation for extemporaneous speech. He was less careful in his composition than Demosthenes, and was inferior to him in vigour and moral earnestness.

The editions of Schultz (Leipzig, 1865) and Weidner (Berlin, 1872) are among the most important. Richardson's edition of Weidner's *Against Ctesiphon* may be recommended to American readers.

(2) A philosopher of Athens, a pupil of Socrates, after whose death he became a perfumer, but, meeting with little success, went to Sicily and stayed at the court of the tyrant Dionysius until that ruler was expelled. Returning to Athens, he taught philosophy in private for a fee. Besides orations and epistles, he wrote Socratic dialogues on temperance and the other virtues. None of these dialogues remains. Three others that exist and that are ascribed to Aeschines are spurious. They treat (*a*) of Virtue, (*b*) of Riches, (*c*) of Death. Aeschines pretended to have received his dialogues from Xanthippé, the wife of Socrates.

Aeschylus (*Αἰσχύλος*). The son of Euphorion, born in the Attic deme of Eleusis in the year B.C.

525. The period of his youth and early manhood coincides with the great national struggle which both Asiatic and European Hellas were forced to wage against the barbarians in the first twenty years of the fifth century. In this conflict he played the part of a brave soldier at the battles of Marathon, Salamis, and Plataea, and his works abound in traces of the warlike and patriotic feeling of those stirring days. His brother Cynegirus met an heroic death at Marathon, and another distinguished soldier of Salamis, Aminias, is said to have been of the same family, but this is probably an error. We know little of the youth and education of Aeschylus, but it is certain that he began his career as a tragic poet before the age of thirty years, though his first victory was not gained till 485. About the year 470 he went to Sicily at the invitation of King Hiero of Syracuse. Here he composed his *Aetnaean Women* (Αἰτναῖαι), in honour of the newly founded city of Aetna. His departure from Athens has been ascribed to an indictment by the Athenians for profanation of the mysteries. But it was the policy of Hiero to attract literary men to his brilliant court, and the presence of Aeschylus there needs no more explanation than that of Simonides and Pindar during the same period. Later in his life he visited Sicily a second time, where he met his death in 456. Among the many mythical details with which tradition has surrounded the life of Aeschylus, it is said that he was killed by an eagle letting fall a tortoise upon his bald head, supposing it to be a stone. The high honour in which he was held by the Athenians after his death is shown by the fact that in later times it was made lawful to reproduce his plays in competition for the prize against new tragedies.

Aeschylus. (Capitoline Museum.)

Aeschylus is said to have produced seventy-two, or even ninety dramas, and to have gained the first prize thirteen times. As each poet competed with four plays (three tragedies and a satyric drama), it appears that Aeschylus was successful in more than half of all his contests. Only seven of his tragedies have come down to us. They will be described in what seems to have been their chronological order.

(1) The *Suppliants* (Ἱκέτιδες) takes its name from the chorus representing the fifty daughters of Danaüs fleeing to Argos for protection from the sons of Aegyptus. The prominence of the chorus, the small number of characters, and the absence of a prologue mark this play as the earliest of those of Aeschylus which we have, and consequently the oldest Greek drama extant. Its undeniable merits are much obscured by the very corrupt state of the text.

(2) The *Persians* (Πέρσαι) is unique among the Greek tragedies which we possess in drawing its theme from history rather than from myth. The central point of interest is found in a splendid narrative of the battle of Salamis, but by an artifice of the poet the scene of the play is laid in Susa, and the laments of Atossa and the Persian nobles supply the tragic elements. The *Persians* was produced in B.C. 472, as part of a tetralogy consisting of the *Phineus*, *Persians*, *Glaucus* ποντιεύς, and *Prometheus the Fire-kindler* (πυρκαεύς).

(3) The *Seven against Thebes* (Ἑπτὰ ἐπὶ Θήβας) was produced in B.C. 467, as the third play in a tetralogy of which the remaining pieces were the *Laïus*, *Oedipus*, and the satyric drama called *The Sphinx*. It includes a magnificent description of the seven Argive champions and their Theban opponents, with the final victory of Thebes, and a hint, at the close, of the Antigoné-motive, afterwards so finely worked out by Sophocles. In this play, as in the *Persians*, the martial spirit of Aeschylus finds ample room for manifestation. Both dramas are "full of war," to quote the words of Aristophanes (*Frogs*, 1021).

(4) The *Prometheus Bound* (Προμηθεὺς δεσμώτης), with its companion pieces the *Prometheus Loosed* (λυόμενος) and the *Prometheus the Fire-bearer* (πυρφόρος), treated the history of the rebellious Titan who steadfastly suffered the wrath of Zeus for his benefactions to mankind. The *Prometheus Bound*, the only play of the trilogy which has come down to us, depicts the hero, fettered to a rock in Scythia, and threatened by Hermes with a penalty still more severe. But he proudly refuses to submit to the will of the new ruler of Olympus, and at the close of the play he is struck by the thunderbolt, and, with the rock to which he is fastened, sinks out of sight. The second play described the final reconciliation and the liberation of Prometheus; while the third (see Westphal's *Proleg. to Aeschylus*, p. 207 foll.) probably celebrated the establishment of Prometheus in Attica as a benignant deity. No Greek tragedy has been more admired than the *Prometheus Bound*. In the grandeur of its action and the sublimity of character displayed, as well as in the exquisite pathos of some of its scenes, it stands almost unequalled. The Prometheus trilogy was probably produced either in B.C. 468 or 466 (Christ), or about ten years earlier (Wecklein).

(5) The trilogy composed of the *Agamemnon* (Ἀγαμέμνων), *Choephori* (Χοηφόροι), and *Eumenides* (Εὐμενίδες), comes last in the list, and is of special interest from the fact that it is the only complete trilogy which is extant from any of the Greek tragedians. In the *Agamemnon* the poet describes the return of the victorious king from Troy, and his murder by Clytaemnestra and her paramour Aegisthus. In the *Choephori*, Orestes, son of Agamemnon, now grown to manhood, returns, and with the help of his friend Pylades avenges the murder of his father by putting to death the guilty pair, and is himself, in turn, driven frantic by the Erinyes. In the *Eumenides* he flees to Athens, where he is tried, and by the advocacy of Apollo and the casting vote of Athenê he is acquitted, and the family curse comes to an end. This great trilogy shows the genius of Aeschylus in its loftiest form. Each play is complete in itself, and yet each is but a single act in the

mighty drama of crime, vengeance, and expiation. The *Agamemnon* is the most powerful of the three plays, and probably the greatest work of Aeschylus, if indeed it is not the most impressive tragedy in existence. The trilogy is usually known as the *Oresteia* (*Ὀρέστεια*), and, with the satyric play *Proteus* (*Πρωτεύς*), was produced in B.C. 458.

The extant works of Aeschylus show a constant progress in dramatic art. He is said to have added a second actor to the one employed by his predecessors, and in his later plays he adopts, and uses with full mastery, the third actor first introduced by his younger rival, Sophocles. The choral parts, at first the most prominent feature both in extent and importance, gradually give way before the growth of the dialogue. In the scenic effects, too, Aeschylus made many improvements, using extraordinary means to excite wonder or awe. Like Wagner, he was both poet and musician, and, besides training his own choruses, he is said to have taken part as actor in the performances themselves.

The most characteristic feature of his poetry is its grandeur, both of thought and style, though he is none the less master of lyric beauty and tender pathos. His theology is stern and lofty, and pervaded by the idea of a destiny which controls all things, human and divine. But the hereditary curse that brooded over the families of Labdacus and Pelops was always aided in its destructive work by the folly and wickedness of the victims themselves. No poet, in fact, has stated more impressively than Aeschylus the inevitable connection between guilt and punishment. His style, it must be confessed, is sometimes so elevated as to seem almost bombastic, but this apparent fault is the natural result of the poet's mighty current of thought, which could not find vent in the ordinary channels of expression.

All the existing MSS. of Aeschylus are said by W. Dindorf to be derived from the Codex Mediceus (Laurentianus), which dates back to the eleventh century, and contains many valuable scholia taken from the ancient grammarians. It is the chief authority for the *Choephori*, of which, however, the text is in a bad condition. The *Prometheus*, *Seven against Thebes*, and *Persians* are more fully represented by MSS. than the other plays. Two codices of the fourteenth century (Florentinus and Farnesianus) supply that portion of the *Agamemnon* (lines 295–1026) which is missing from the Codex Mediceus.

The Aldine *editio princeps* (1518) and the edition of Stanley (London, 1663) are worthy of note among the older editions. To these may be added among later works the editions of Hermann (Leipzig, 1852), Kirchhoff (Berlin, 1880), Weil (Leipzig, 1885), and the valuable critical edition of Wecklein-Vitelli (Berlin, 1885). Paley's (London, 1879) is the most convenient English edition of all the plays with notes. Annotated editions of single plays are numerous. Among the more recent are Wecklein's *Oresteia* (Leipzig, 1888), Schneidewin-Heuse's *Agamemnon* (Berlin, 1883), Allen's Wecklein's *Prometheus* (Boston, 1891), Teuffel-Wecklein's *Persians* (Leipzig, 1886), Tucker's *Suppliants* (London, 1889), and Flagg's *Seven against Thebes* (Boston, 1886). Dindorf's *Lexicon Aeschyleum* (Leipzig, 1873) is an indispensable work to the student. The best complete English translation is that of Plumptre; but for the *Agamemnon* and the *Prometheus* we are fortunate in having versions of great excellence by Robert Browning and Mrs. Browning respectively.

Aes circumforaneum. Money borrowed from the *argentarii* (q. v.) who had shops around the Forum.

Aesculapius or **Asclēpius** (*Ἀσκληπιός*). The god of the medical art. In Homer he is not a divinity, but simply the "blameless physician" whose sons, Machaon and Podalirius, were the physicians in the Greek army. The common story relates that Aesculapius was a son of Apollo and Coronis, and that when Coronis was with child by Apollo she became enamoured of Ischys, an Arcadian. Apollo, informed of this by a raven, killed Coronis and Ischys. When the body of Coronis was to be burnt, the child Aesculapius was saved from the flames, and was brought up by the centaur Chiron, who instructed him in the art of healing and in hunting. There are other tales respecting his birth, according to some of which he was a native of Epidaurus, and this was a common opinion in later times. After he had grown up, he not only cured the sick, but recalled the dead to life. Zeus, fearing lest men might contrive to escape death altogether, killed Aesculapius with his thunderbolt; but, on the request of Apollo, Zeus placed him among the stars. He was married to Epioné, by whom he had the two sons spoken of by Homer, and also other children. The chief seat of the worship of Aesculapius was Epidaurus, where he had a temple surrounded with an extensive grove. Serpents were sacred to him, because they were a symbol of renovation, and were believed to have the power of discovering healing herbs. The cock was sacrificed to him. At Rome the worship of Aesculapius was introduced from Epidaurus in B.C. 293, for the purpose of averting a pestilence. The supposed descendants of Aesculapius were called by the patronymic name of Asclepiadae, and their principal seats were Cos and Cnidus. They were an order or caste of priests, among whom the knowledge of medicine was regarded as a sacred secret, and was transmitted from father to son in these families.

Aesculapius. (Berlin.)

Aesculus. A species of trees, commonly ranked in the family of oaks.

Aesēpus. A river rising near Mount Ida, and flowing into the Propontis.

Aes equestré, aes hordearium, aes militaré. Ancient terms for the pay of the Roman soldiers before the regular *stipendium* was introduced. The first denoted the sum given for the purchase of a horse for the eques; the second, the sum paid for the keep of the horse; and the third, the pay of a foot-soldier. See EQUES.

Aesernia. A town of Samnium, made a Roman colony in the First Punic War.

Aes gravé. A term applied to the early Italian bronze or copper coins. See AS.

Aesis. A river forming the boundary between Picenum and Umbria.

Aes manuarium. The money won in throwing dice (*manibus collectum*, in which phrase *manus* means a throw). See ALEA; TALI; TESSERAE; PAR IMPAR.

Aes militāré. See AES EQUESTRE.

Aeson (Αἴσων). The son of Cretheus and Tyro, and father of Iason. He was excluded from the throne by his half-brother Pelias. During the absence of Iason on the Argonautic expedition, Pelias attempted to murder Aeson, but the latter put an end to his own life. According to Ovid, Aeson survived the return of the Argonauts, and was made young again by Medea. See ARGONAUTAE; IASON; MEDEA.

Aesōpus (Αἴσωπος). A famous writer of fables, the first author who created an independent class of stories about animals, so that in a few generations his name and person had become typical of that entire class of literature. In course of time, thanks to his plain, popular manner, the story of his own life was enveloped in an almost inextricable tissue of tales and traditions, which represent him as an ugly hunchback and buffoon. In the Middle Ages these were woven into a kind of romance. A Phrygian by birth, and living in the time of the Seven Sages, about B.C. 600, he is said to have been at first a slave to several masters, till Iadmon of Samos set him free. That he next lived at the court of Croesus, and being sent by him on an embassy to Delphi, was murdered by the priests there, is pure fiction. Under his name were propagated in all parts of Greece, at first only by tradition in the mouth of the people, a multitude of prose tales teaching the lessons of life under the guise of fables about animals. We know how Socrates, during his last days in prison, was engaged in turning the fables of Aesop into verse. The first written collection appears to have been made by Demetrius of Phalerum, B.C. 300. The collections of *Aesop's Fables* that have come down to us are, in part, late prose renderings of the version in choliambics by Babrius (q. v.), which still retain here and there a scrap of verse; partly products of the rhetorical schools, and therefore of very different periods and degrees of merit. A good text of the version by Babrius is that of Schneidewin (1865), and of Hartung with German notes and a translation (1858). See also Rutherford's edition of Babrius (London, 1883).

Aesōpus, CLODIUS. A great tragic actor at Rome, a contemporary of Quintus Roscius (q. v.), and, like him, on intimate terms with Cicero. Aesopus appeared upon the stage for the last time at the dedication of Pompey's theatre in B.C. 55. He left a large fortune to his son, who wasted it in luxury and dissipation, on one occasion dissolving a pearl worth $40,000, and swallowing it, in order to outdo the famous exploit of Cleopatra.

Aes rudé. See AS; NUMISMATICS.

Aestii or **Aestui.** A Slavonic people living on the sea-coast in northeastern Germany (Kurland), and noted for collecting and selling amber, which they called *glaesum* (Tac. *Germ.* 45).

Aestimatio litis. See IUDEX.

Aesŭla. A town of the Aequi, between Praeneste and Tibur.

Aes uxorium. A tax paid by men who reached old age without marrying, and first imposed by the censors in B.C. 403. See LEX IULIA ET PAPIA POPPAEA, p. 942.

Aesymnētes (*αἰσυμνήτης*, from *αἶσα*, a just portion). Originally a judge at the games, but later a person whom his fellow-citizens had voluntarily invested with absolute power, so that Dionysius compares the office with the Roman dictatorship. There is but one express instance known of the bestowal of this office, namely, upon Pittacus, in Mitylené (Dionys. v. 73; Strabo, xiii. 617; Plut. *Solon*, 4; Diog. Laërt. i. 75. See Tittmann, *Griech. Staatsv.* p. 76).

Aetas. See IMPUBES.

Aethalia, Aethălis, or **Ilva.** An island in the Tuscan Sea, the modern Elba.

Aethalĭdes (Αἰθαλίδης). The son of Hermes and Eupolemia, the herald of the Argonauts. His soul, after many migrations, at length took possession of the body of Pythagoras, in which it still recollected its former migrations. (Apoll. Rh. i. 54.)

Aethiŏpes. A name said to be from *αἴθω* and *ὤψ*, but perhaps really a foreign name corrupted, was applied (1) most generally to all black or dark races of men; (2) to all the inhabitants of Inner Africa, south of Mauretania, the Great Desert, and Egypt, from the Atlantic to the Red Sea and Indian Ocean, and to some of the dark races of Asia; and (3) most specifically to the inhabitants of the land south of Egypt, which was called Aethiopia (q. v.).

Aethiopia (Αἰθιοπία). Nubia, Kordofan, Sennaar, Abyssinia. A country of Africa, south of Egypt, the boundary of the countries being at Syené and the Smaller Cataract of the Nile, and extending on the east to the Red Sea, and to the south and southwest indefinitely, as far apparently as the knowledge of the ancients extended. The people of Aethiopia seem to have been of the Caucasian race, and to have spoken a language allied to the Arabic. Monuments are found in the country closely resembling those of Egypt, but of an inferior style. It was the seat of a powerful monarchy, of which Meroë was the capital. Some traditions made Meroë the parent of Egyptian civilization, while others ascribed the civilization of Aethiopia to Egyptian colonization. So great was the power of the Aethiopians that more than once in its history Egypt was governed by Aethiopian kings. Under the Ptolemies, Graeco-Egyptian colonies established themselves in Aethiopia; but the country was never subdued. The Romans failed to extend their empire over Aethiopia, though they made expeditions into the country, in one of which C. Petronius, prefect of Egypt under Augustus, advanced as far as Napata, and defeated the warrior queen Candacé (B.C. 22). Christianity very early extended to Aethiopia, probably in consequence of the conversion of the treasurer of Queen Candacé. Cf. Acts, viii. 27; and see CANDACÉ.

Aethiŏpis (Αἰθιοπίς). An epic in five books by Arctinus of Miletus, one of the Cyclic poets, said to have been a pupil of Homer. The poem covers the portion of the Trojan War from the death of Hector to the death of Achilles. The heroine is Penthesilea (q. v.). This poem was by some added to the *Iliad* by a modification of the last line. See CYCLIC POETS; EPOS; TROJAN WAR.

Aethra (Αἴθρη). (1) Daughter of Pittheus, king

of Troezen, mother of Theseus by Aegeus or, according to another account, by Poseidon. While Homer merely mentions her as a servant of Helen at Troy, later legend adds that when the Dioscuri took Aphidnae and set free their sister, whom Theseus had carried off, they conveyed Aethra to Sparta as a slave, whence she accompanied Helen to Troy; and that on the fall of that city they brought her grandsons, Acamas and Demophoön, back to Athens. (2) A daughter of Oceanus, by whom Atlas begot the twelve Hyades (q. v.) and a son, Hyas.

Aëtion (Ἀετίων). A Greek painter in the latter half of the fourth century B.C., especially famed for his picture of Alexander the Great's wedding with the beautiful Roxana, B.C. 328. See PICTURA.

Aëtius (Ἀέτιος). (1) Of Amida in Mesopotamia, a Greek physician of the sixth century A.D., who lived at Constantinople as imperial physician in ordinary. He was the author of a great miscellany on pathology and diagnosis in sixteen books. (2) An heresiarch of the fourth century A.D., called by his adversaries "the Atheist." Epiphanius has preserved forty-seven heretical propositions from the work of Aëtius, among them the rejection of the authority of the prophets and apostles; the assertion that the Son of God was not like the Father; the doctrine that faith without works is sufficient; and the claim that the most culpable acts are the necessities of nature. He died A.D. 366. (3) A Roman general born in Moesia towards the end of the fourth century A.D. He led an army of Huns to suppress the usurpation of the emperor John. In A.D. 433 he became consul and general-in-chief, and as such kept back the Western barbarians for twenty years, defeating the Goths, Burgundians, Gauls, and Franks; and at Châlons routed the famous Attila (q. v.) in the year 451. In 454, the emperor Valentinian, jealous of his fame, slew him with his own hand.

Aetna (Αἴτνη). (1) A volcanic mountain in the northeast of Sicily between Tauromenium and Catana. It is said to have derived its name from Aetna, a Sicilian nymph, a daughter of Heaven and Earth. Zeus buried under it Typhon or Enceladus; and in its interior Hephaestus and the Cyclops forged the thunderbolts for Zeus. There were several eruptions of Mount Aetna in antiquity. One occurred in B.C. 475, to which Aeschylus and Pindar probably allude, and another in B.C. 425, which Thucydides says was the third on record since the Greeks had settled in Sicily. (2) A town at the foot of Mount Aetna, on the road to Catana, formerly called Inessa or Innesa. It was founded in B.C. 461 by the inhabitants of Catana, who had been expelled from their own town by the Siculi. They gave the name of Aetna to Inessa, because their own town Catana had been called Aetna by Hiero I.

Aetna. The title of a didactic poem generally ascribed to Lucilius Iunior, the friend of Seneca, though once printed with the minor works of Vergil. It consists of 646 hexameter lines, and describes the mountain, with an account of a former eruption. The poem has been revised, emended, and annotated by H. A. J. Munro (Camb. 1867).

Aetnaea (τὰ Αἴτναια). A festival celebrated in honour of Zeus Aetnaeus, so called from his statue at Mount Aetna. Nothing is known of the details.

Aetolia (Αἰτωλία). A division of Greece, bounded on the west by Acarnania, from which it was separated by the river Acheloüs; on the north by Epirus and Thessaly; on the east by the Ozolian Locrians; and on the south by the entrance to the Corinthian Gulf. It was divided into two parts—Old Aetolia, from the Acheloüs to the Evenus and Calydon; and New Aetolia, or the Acquired, from the Evenus and Calydon to the Ozolian Locrians. On the coast the country is level and fruitful, but in the interior mountainous and unproductive. The mountains contained many wild beasts, and were celebrated in mythology for the hunt of the Calydonian boar. The country was originally inhabited by Curetes and Leleges, but was at an early period colonized by Greeks from Elis, led by the mythical Aetolus (q. v.). The Aetolians took part in the Trojan War, under their king Thoas. They continued for a long time a rude and uncivilized people, living to a great extent by robbery; and even in the time of Thucydides (B.C. 410) many of their tribes spoke a language which was not Greek, and were in the habit of eating raw flesh. They appear to have been early united by a kind of league, but this league first acquired political importance about the middle of the third century B.C., and became a formidable rival to the Macedonian monarchs and the Achaean League. The Aetolians took the side of Antiochus III. against the Romans, and on the defeat of that monarch, B.C. 189, they became virtually the subjects of Rome. On the conquest of the Achaeans, B.C. 146, Aetolia was included in the Roman province of Achaea.

Aetolĭcum Foedus (τὸ κοινὸν τῶν Αἰτωλῶν). A confederation of the Aetolian towns, afterwards joined by other towns and cantons of Greece, and formed in B.C. 338, after the battle of Chaeronea, to counteract the influence of Macedonia in the affairs of Greece. (See ACHAEAN LEAGUE.) Its political existence was destroyed in B.C. 189 by the treaty with Rome by which the Aetolians became Roman subjects.

Aetōlus (Αἰτωλός). The son of Endymion, who founded Elis and Iphianassa. Having accidentally killed Apis, son of Phoroneus, he fled with a band of followers into the country which afterwards was called, in his honour, Aetolia (q. v.). See Apollod. i. 7, 6.

Aëtōma (ἀέτωμα). See FASTIGIUM.

Aëtos (ἀετός). See AQUILA.

Aex. (1) A rocky island between Tenos and Chios, so called from its having the shape of a goat (αἴξ). (2) The goat Amalthea (q. v.) that suckled Zeus, and became a constellation under the name of Aex.

Afer, GNAEUS DOMITIUS. The preceptor of Quintilian, and an orator of ability, who was born at Nemausus (Nîmes), and died of drunkenness, A.D. 59. He is best remembered as having been an informer under Tiberius, betraying to death Claudia Pulchra and Q. Varus, her son. See Tac. *Ann.* iv. 52; xiv. 19; Quint. v. 7.

Affines, Affinĭtas, or **Adfines, Adfinĭtas.** Affines are the *cognati* of husband and wife; and the relationship called affinitas can only be the result of a lawful marriage. There are no degrees of affinitas corresponding to those of *cognatio*, though there are terms to express the various kinds of affinitas. The father of a husband is the *socer* of the husband's wife, and the father of a wife is the

socer of the wife's husband; the term *socrus* expresses the same affinity with respect to the husband's and wife's mothers. A son's wife is *nurus* or daughter-in-law to the son's parents; a wife's husband is *gener* or son-in-law to the wife's parents. See COGNATI.

Thus the *avus, avia—pater, mater*—of the wife become by the marriage, respectively, the *socer magnus, prosocrus*, or *socrus magna—socer, socrus*—of the husband, who becomes with respect to them severally *progener* and *gener*. In like manner, the corresponding ancestors of the husband respectively assume the same names with respect to the son's wife, who becomes with respect to them *pronurus* and *nurus*. The son and daughter of a husband or wife born of a prior marriage are called *privignus* and *privigna* with respect to their step-father or step-mother; and, with respect to such children, the step-father and step-mother are severally called *vitricus* and *noverca*. The husband's brother becomes *levir* with respect to the wife, and his sister becomes *glos* (the Greek γάλως). Marriage was unlawful among persons who had become such affines as above mentioned. A person who had sustained such a *capitis diminutio* as to lose both his freedom and the civitas, lost also all his affines.

Afranius, LUCIUS. The chief master of the *fabula togata*, who flourished about B.C. 100. Taking Menander for his model, he achieved great success in depicting Roman life; and Cicero speaks of him as witty and a master of language. The titles of more than forty of his comedies are known to us; and lines of them have been preserved for us, and can be found in O. Ribbeck's collection. His plays kept possession of the stage until after the time of Nero. (See COMOEDIA.) For criticism, see Ribbeck, *Röm. Dichtung*, i. 204.

Africa (from the Punic *Frigi*, a district on the north coast). A name used by the ancients in two senses, (1) for the whole continent of Africa, and (2) for the portion of North Africa which the Romans erected into a province. (1) In the more general sense, the name was not used by the Greek writers; and its use by the Romans arose from the extension to the whole continent of the name of a part of it. The proper Greek name for the continent is Libya (Λιβύη).

Considerably before the historical period of Greece begins, the Phœnicians extended their commerce over the Mediterranean, and founded several colonies on the north coast of Africa, of which Carthage was the chief. The Greeks knew very little of the country until the foundation of the Dorian colony of Cyrené (B.C. 620), and the intercourse of Greek travellers with Egypt in the sixth and fifth centuries; and even then their knowledge of all but the part near Cyrené was derived from the Egyptians and Phœnicians, who sent out some remarkable expeditions to explore the country. A Phœnician fleet sent by the Egyptian Pharaoh Necho (about B.C. 600) was said to have sailed from the Red Sea, around Africa, and so into the Mediterranean: the authenticity of which story is still a matter of dispute. We still possess an authentic account of another expedition, which the Carthaginians despatched under Hanno (q. v.) (about B.C. 510), and which reached a point on the west coast nearly, if not quite, as far as latitude 10° north. In the interior, the Great Desert (Sahara) interposed a formidable obstacle to discovery; but, even before the time of Herodotus, the people on the northern coast told of individuals who had crossed the desert, and had reached a great river flowing towards the east, with crocodiles in it, and black men living on its banks, which, if the story be true, was probably the Niger in its upper course, near Timbuctoo. There were great differences of opinion as to the boundaries of the continent. Some divided the whole world into only two parts, Europe and Asia, but were not agreed to which of these two Libya (i. e. Africa) belonged; and those who recognized three divisions differed again in placing the boundary between Libya and Asia either on the west of Egypt or along the Nile, or at the isthmus of Suez and the Red Sea: the last opinion gradually prevailed. Herodotus divides the inhabitants of Africa into four races: two native, namely, the Libyans and the Ethiopians; and two foreign, namely, the Phœnicians and the Greeks. The Libyans, however, were a Caucasian race; the Ethiopians of Herodotus correspond to our Negro races. The whole of the north of Africa fell successively under the power of Rome, and was finally divided into provinces as follows: (1) AEGYPTUS; (2) LIBYA, including (*a*) Libyae Nomos or Libya Exterior, (*b*) Marmarica, (*c*) Cyrenaïca; (3) AFRICA PROPRIA, the former empire of Carthage; (4) NUMIDIA; (5) MAURETANIA, divided into (*a*) Sitifensis, (*b*) Caesariensis, (*c*) Tingitana: these, with (6) AETHIOPIA, make up the whole of Africa, according to the divisions recognized by the latest of the ancient geographers. The northern district was better known to the Romans than it is to us, and was extremely populous and flourishing. Africa Propria or Provincia, or simply Africa, was the name under which the Romans, after the Third Punic War, B.C. 146, erected into a province the whole of the former territory of Carthage. It extended from the river Musca, on the west, which divided it from Numidia, to the bottom of the Syrtis Minor, on the southeast. It was divided into two districts (*regiones*), namely, (1) Zeugis or Zeugitana, the district round Carthage; (2) Byzacium or Byzacena, south of Zeugitana, as far as the bottom of the Syrtis Minor. It corresponds to the modern regency of Tunis. The province was full of flourishing towns, and was extremely fertile; it furnished Rome with its chief supplies of corn.

In the days of Strabo, the earlier knowledge possessed by the ancients of Africa was little, if at all, improved. The Mediterranean coast and the banks of the Nile were the only ports frequented by the Greeks. Their opinion respecting the continent itself was that it formed a trapezium, or else that the coast from the Columns of Hercules to Pelusium might be considered as the base of a right-angled triangle of which the Nile formed the perpendicular side, extending to Aethiopia and the ocean, while the hypothenuse was the coast comprehended between the extremity of this line and the straits. The apex of the triangle reached beyond the limits of the habitable world, and was consequently regarded as inaccessible. The knowledge of the day respecting the eastern and western coast of Africa appears to have extended no farther than 12° north latitude, or perhaps 12° 30′. The two sides were supposed to approximate, and between the Hesperii Aethiopes to the west and the *cinnamomifera regio* to the east, the distance was supposed to be comparatively small. This in-

tervening space was exposed to excessive heats, according to the common belief, which forbade the traveller's penetrating within its precincts; while, at a little distance beyond, the Atlantic and Indian oceans were brought to unite. The hypothesis which we have here stated made Africa terminate at about one half of its true length, and represented this continent as much smaller than Europe. On the other hand, the opinion of Hipparchus, which united eastern Africa to India, remained for a long period contemned, until Marinus of Tyre and Ptolemy had adopted it. This adoption, however, did not prevent the previous hypothesis from keeping its ground in some measure in the west of Europe, where it contributed to the discovery of the route by the Cape of Good Hope. Africa, according to Pliny (vi. § 33), was three thousand six hundred and forty-eight Roman miles from east to west. The length of the inhabited part of Africa was supposed nowhere to exceed two hundred and fifty Roman miles. Whatever may be the discussions to which the very corrupt state of the Roman numerals in the pages of Pliny are calculated to give rise, one thing is sufficiently evident, that the Romans knew only a third part of Africa. See the article GEOGRAPHIA, with the maps there given.

African Period of Latinity. The period in the history of Latin literature from about 115–180 A.D. was so called because of the fact that many of the prominent writers of this period were natives of Africa, e. g. M. CORNELIUS FRONTO, SEX. IULIUS AFRICANUS, L. APULEIUS, and the Christian writer Q. SEPTIMIUS FLORENS TERTULLIANUS. See SERMO PLEBEIUS.

Africānus. (1) A name given to several of the Scipios for their victories over the Carthaginians. See SCIPIO. (2) See SEXTUS IULIUS.

Africus. The Roman name for the southwest wind, which the Greeks called λίψ, and given to it because it blew off the coast of Africa.

Agalma (*ἄγαλμα*). See STATUARIA.

Agamēdes (Ἀγαμήδης). Son of Erginus of Orchomenos, and a famous builder, with his brother Trophonius (q. v.).

Agamemnon (Ἀγαμέμνων). The son of Atreus and brother of Menelaüs. Driven from Mycenae after the murder of Atreus (q. v.) by Thyestes, the two young princes fled to Sparta, where King Tyndareos gave them his daughters in marriage—Clytaemnestra to Agamemnon, and Helen to Menelaüs. While the latter inherited his father-in-law's kingdom, Agamemnon not only drove his uncle out of Mycenae, but so extended his dominions that in the war against Troy for the recovery of Helen the chief command was intrusted to him, as the mightiest prince in Greece. He contributed one hundred ships manned with warriors, besides lending sixty to the Arcadians. (On the immolation of his daughter Iphigenia at Aulis, see IPHIGENIA.) In Homer he is one of the bravest fighters before Troy; yet, by arrogantly refusing to let Chryses, priest of Apollo, ransom his daughter Chryseïs, who had fallen to Agamemnon as the prize of war, he brought a plague on the Grecian host, which he afterwards almost ruined by ruthlessly carrying off Briseïs, the prize of Achilles, who henceforth sulked in his tents and refused to fight. After the fall of Troy, Agamemnon came home with his captive, the princess Cassandra; but at supper he and his comrades were murdered by his wife's lover, Aegisthus, while the queen herself killed Cassandra. Such is Homer's account; the tragic poets make Clytaemnestra, in revenge for her daughter's immolation, throw a net over Agamemnon while bathing, and kill him with the help of Aegisthus. In Homer his children are Iphianassa, Chrysothemis, Laodicé, and Orestes; the later legend puts Iphigenia and Electra in the place of Iphianassa and Laodicé. Agamemnon was worshipped as a hero. His name is the title of a play by Aeschylus (q. v.). See the articles ACHILLES; ORESTES; PELOPIDAE; TROJAN WAR.

Agamemnonĭdes (Ἀγαμεμνονίδης). A patronymic applied to Orestes (q. v.), the son of Agamemnon.

Agamiou Graphé (*ἀγαμίου γραφή*). An indictment among the Spartans brought against those who married too late or unsuitably; and also against those who did not marry at all. The penalty was *ἀτιμία*. See ATIMIA; MATRIMONIUM.

Aganippé (Ἀγανίππη). A spring on Mount Helicon, near Thespiae in Boeotia, sacred to the Muses, who were called from it Aganippides. Its water was believed to impart poetic inspiration.

Agasias (Ἀγασίας). A Greek artist of Ephesus, who flourished probably in the first century B.C. The Borghese Gladiator in the Louvre is from his hand. See GLADIATORES.

Agāso. A groom, generally a slave, whose business it was to take care of horses, to drive cattle, or to perform the lowest menial offices.

Agatharchĭdes (Ἀγαθαρχίδης). A Greek grammarian of Cnidos, who lived at Alexandria in the second century B.C. He composed among other historical works one on the successors of Alexander the Great, and a description of the Red Sea in five books. Of both of these, some fragments remain.

Agatharchus (Ἀγάθαρχος). (1) A Greek, the inventor of scene-painting. See Vitruv. vii. *Praef.* and the articles PICTURA; THEATRUM. (2) A Samian painter, the contemporary of Zeuxis, who prided himself on the rapidity of his work, receiving from Zeuxis the famous retort that if Agatharcus painted his works in a short time, he (Zeuxis) painted "for a long time," i. e. for posterity.

Agathias (Ἀγαθίας). A Greek poet and historian of Myrina, in Asia Minor, who was born about A.D. 530, and died about 582. By profession he was a jurist, but in his Κύκλος, a collection of his own and other contemporary poems in eight books, he made a beginning of the Greek Anthology, which still preserves 101 of his epigrams. He also wrote a history of Justinian in five books, in continuation of the work of Procopius (q. v.). See ANTHOLOGY.

Agathŏcles (Ἀγαθοκλῆς). A Sicilian adventurer, born at Thermae, and brought up as a potter at Syracuse. His strength and personal beauty recommended him to Damas, a noble Syracusan, who drew him from obscurity, and on whose death he married his rich widow, and so became one of the wealthiest citizens in Syracuse. His ambitious schemes then developed themselves, and he was driven into exile. After several changes of fortune he collected an army, and was declared sovereign of Syracuse, B.C. 317. In the course of a few years the whole of Sicily which was not under the dominion of Carthage submitted to him. In 310 he was defeated at Himera by the Carthaginians, under Hamilcar, who straightway laid siege to Syracuse, whereupon he formed the bold design of

averting the ruin which threatened him by carrying the war into Africa. His successes were most brilliant and rapid. He constantly defeated the troops of Carthage, but was at length summoned from Africa by the affairs of Sicily, where many cities had revolted from him, B.C. 307. These he reduced, after making a treaty with the Carthaginians. He had previously assumed the title of King of Sicily. He afterwards plundered the Lipari Isles, and also carried his arms into Italy, in order to attack the Bruttii. But his last days were embittered by family misfortunes. His grandson Archagathus murdered his son Agathocles, for the sake of succeeding to the crown, and the old king feared that the rest of his family would share his fate. He accordingly sent his wife and her two children to Egypt; and his own death followed almost immediately, in 289, after a reign of twenty-eight years, and in the seventy-second year of his age. Some authors relate an incredible story of his being poisoned by Maeno, an associate of Archagathus. The poison, we are told, was concealed in the quill with which he cleaned his teeth, and reduced him to so frightful a condition that he was placed on the funeral pile and burned while yet living, being unable to give any signs that he was not dead.

Agathodaemon (*ἀγαθοδαίμων*). A friendly disposed spirit of the cornfields and vineyards, to whom libations of unmixed wine were made at meals. See DAEMON; EVENTUS.

Agathoërgi (*ἀγαθοεργοί*). The five hundred knights who composed the body-guard of the Spartan kings in time of war (Herod. i. 67).

Agăthon (*Ἀγάθων*). An Athenian tragic poet, the friend of Euripides and Plato. He died about B.C. 400.

Agathyrsi (*Ἀγάθυρσοι*). A people in European Sarmatia, on the river Maria (Marosch), in Transylvania, noted for their practice of tattooing their skins.

Agāve (*Ἀγαυή*). Daughter of Cadmus and wife of Echion. She, with other women, in a bacchanalian frenzy, tore to pieces her own son Pentheus (q. v.).

Agdistis (*Ἄγδιστις*). See RHEA.

Agĕla (*ἀγέλη*). An assembly of young men in Crete, who lived together from their eighteenth year till the time of their marriage. An *ἀγέλη* consisted of the sons of the most noble citizens, who were usually under the jurisdiction of the father of the youth who had been the means of collecting the *ἀγέλη*. It was the duty of this person, called *ἀγελάτης*, to superintend the military and gymnastic exercises of the youths (who were called *ἀγελάστοι*), to accompany them to the chase, and to punish them when disobedient. He was accountable, however, to the State, which supported the *ἀγέλαι* at the public expense. All the members of an *ἀγέλη* were obliged to marry at the same time. In Sparta the youths entered the *ἀγέλαι*, usually called *βοῦαι*, at the end of their seventh year. See EDUCATION.

Agelādas (*Ἀγηλάδας*). A Greek artist of the first half of the fifth century B.C., famed for his images of gods and Olympian victors, wrought in metal. His reputation was much enhanced by the fact that Phidias, Myron, and Polyclitus were his pupils. See STATUARIA.

Agēma (*ἄγημα*, from *ἄγω*). The name of a chosen body of troops in the Macedonian army, which generally consisted of horsemen. The agema seems to have varied in number: sometimes it consisted of 150 men, at other times of 300, and in later times it contained as many as 1000 or 2000 men.

Agēnor (*Ἀγήνωρ*). (1) Son of Poseidon and Libyé, king of Phoenicia, brother to Belus, and father of Cadmus and Europa (q. v.).

(2) Son of Antenor by Theano, a priestess of Athené, and one of the bravest heroes of Troy. In Homer he leads the Trojans in storming the Greek intrenchments, rescues Hector when thrown down by Aiax, and even enters the lists with Achilles, but is saved from imminent danger by Apollo. In the post-Homeric legend he dies by the hand of Neoptolemus.

Agenorĭdes (*Ἀγηνορίδης*). A descendant of an Agenor, such as Cadmus, Phineus, and Perseus.

Ageorgiou Diké (*ἀγεωργίου δίκη*). An action which might be brought in the Athenian courts by a landlord against the farmer who had injured his land by neglect or an improper mode of cultivation.

Ager; Ager Publicus. See AGRARIAE LEGES; AGRIMENSORES.

Ager Arcifinius. See AGRIMENSORES.

Ager Decumānus. See AGRIMENSORES.

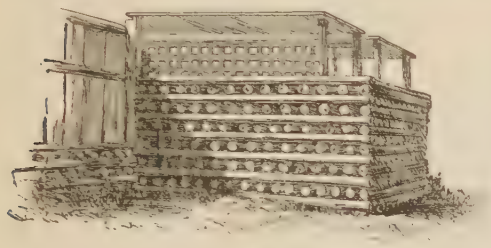
Ager Limitātus. See AGRIMENSORES.

Ager Quaestorius. See AGRARIAE LEGES.

Ager Religiōsus. See AGRIMENSORES.

Ager Vectigālis. See AGRARIAE LEGES.

Agesander (*Ἀγήσανδρος*). A Greek artist of the school of Rhodes. The celebrated group of the Laocoön is the joint work of Agesander, Athenodorus, and Polydorus. See LAOCOÖN.



Agesilāus (*Ἀγησίλαος*). The name of several kings of Sparta. (1) Agesilaüs who reigned about B.C. 886, and was contemporary with the legislation of Lycurgus. (2) Son of Archidamus II., and succeeded his half-brother Agis II. in B.C. 398, excluding, on the ground of spurious birth, and by the interest of Lysander, his nephew Leotychides. From B.C. 396 to 394 he carried on the war in Asia Minor with great success, but, in the midst of his conquests, was summoned home to defend his country against Thebes, Corinth, and Argos, which had been induced by Artaxerxes to take up arms against Sparta. In the year 394 he met and defeated, at Coronea in Boeotia, the allied forces. During the next four years he regained for his country much of its former supremacy, till at length the fatal battle of Leuctra, B.C. 371, overthrew forever the power of Sparta, and gave the supremacy for a time to Thebes. In 361 he crossed, with a body of Lacedaemonian mercenaries, into Egypt, where he died in the winter of 361–360, after a life of above eighty years and a reign of thirty-eight. In person Agesilaüs was small, mean-looking, and lame, on which last ground objection had been made to his accession, an oracle, curiously fulfilled, having warned Sparta of evils awaiting her under a "lame sovereignty." In his reign, indeed, her fall took place, but not through him, for he was one of the best citizens and generals that Sparta ever had.

Agesipŏlis (*Ἀγησίπολις*). The name of several kings of Sparta. (1) Agesipolis who succeeded his father, Pausanias, while yet a minor, in B.C. 394, and reigned fourteen years. (2) Son of Cleombrotus, reigned one year, B.C. 371. (3) Succeeded Cleomenes

in B.C. 220, but was soon deposed by his colleague Lycurgus.

Agetoria. Another name for the CARNEA (q. v.).

Agger (χῶμα), from *ad* and *gero*. A term used in general for a heap or mound of any kind. It was more particularly applied to a mound, usually composed of earth, which was raised around a besieged town, and was gradually increased in breadth and height till it equalled or overtopped the walls. At the siege of Avaricum, Caesar raised

Agger. (From Column of Trajan.)

in twenty-five days an agger 330 feet broad and 80 feet high. The agger was sometimes made not only of earth, but of wood, hurdles, etc., as in the accompanying illustration, whence we read of its being set on fire. The name agger was also applied to the earthen wall surrounding a Roman encampment, composed of the earth dug from the ditch (*fossa*), which was usually nine feet broad and seven feet deep; but if any attack was apprehended, the depth was increased to twelve feet and the breadth to thirteen feet. Sharp stakes were usually fixed upon the agger, which was then called *vallum*. When both words are used (as in Caesar, *agger ac vallum*), the agger means the mound of earth, and the vallum, the sharp stakes which were fixed upon the agger.

Agias (Ἀγίας). See CYCLIC POETS.

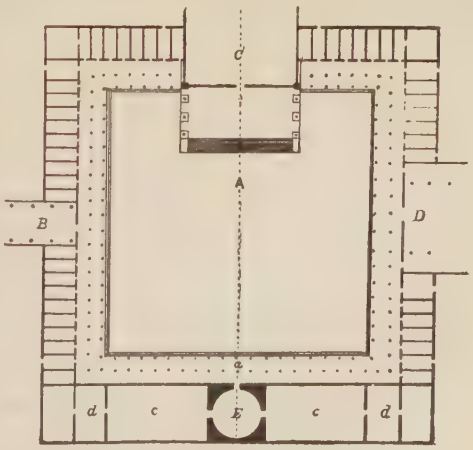
Agis (Ἄγις). The name of several kings of Sparta. (1) The son of Eurysthenes, the founder of the family of the Agidae. (2) Son of Archidamus II., reigned B.C. 427–398. He took an active part in the Peloponnesian War, and invaded Attica several times. While Alcibiades was at Sparta he was the guest of Agis, and is said to have seduced his wife Timaea (in consequence of which Leotychides, the son of Agis, was excluded from the throne as illegitimate). (3) Son of Archidamus III., reigned B.C. 338–330. He attempted to overthrow the Macedonian power in Europe while Alexander the Great was in Asia, but was defeated and killed in battle by Antipater in the year 330. (4) Son of Eudamidas II., reigned B.C. 244–240. He attempted to reestablish the institutions of Lycurgus, and to effect a thorough reform in the Spartan state; but he was resisted by his colleague Leonidas II. and the wealthy, was thrown into prison, and there put to death by command of the ephors, along with his mother and grandmother.

Agitatōres. See CIRCUS.

Aglaïa. One of the Graces. See CHARITES.

Agmen. The Roman army on the march. See EXERCITUS.

Agnāti. See COGNATIO.



Agnōmen. See NOMEN.

Agonalia, Agonia, or Agonāles. A name derived from the old Latin *agonia*, a victim, and given to four festivals in the Roman calendar. (1) A sacrifice to Ianus, on the 9th of January. (2) A sacrifice by the Salii (q. v.) to Mars or Quirinus, on the 17th of March. (3) A sacrifice to Veiovis (q. v.), on the 21st of May. (4) A feast called Septimontium, held on the 11th of December, when a victim was offered on each of the seven hills of Rome. See Huschke, *Das alte röm. Jahr* (1869).

Agōnes (ἀγῶνες). (1) A general term used by the Greeks of the contests at the great national festivals. See OLYMPIA; PYTHIA; NEMEA; ISTHMIA. (2) As a legal term it is used of lawsuits. See TIMEMA.

Agonothĕtae (ἀγωνοθέται). The persons who in the Grecian games decided the disputes and awarded the prizes. See OLYMPIA; PYTHIA; NEMEA; ISTHMIA.

Agŏra (ἀγορά). (1) A word that properly means an assembly of any nature, and is usually employed by Homer for the general assembly of the people. The ἀγορά seems to have been considered an essential part in the constitution of the early Grecian states, since the barbarity and uncivilized condition of the Cyclopes is characterized by their wanting such an assembly. The ἀγορά, though usually convoked by the king—as, for instance, by Telemachus in the absence of his father—appears to have been also summoned at times by some distinguished chieftain, as, for example, by Achilles before Troy. The king occupied the most important seat in these assemblies, and near him sat the nobles, while the people sat or stood in a circle around them. The power and rights of the people in these assemblies have been the subject of much dispute. Platner, Tittmann, and Nitzsch maintain that the people were allowed to speak and vote; while Heeren and Müller think "that the nobles were the only persons who proposed measures, deliberated, and voted, and that the people were only present to hear the debate, and to express their feeling as a body, which expressions might then be noticed by a prince of a mild disposition." The latter view of the question is confirmed by the fact that in no passage in the *Odyssey* is any one of the people represented as taking part in the discussion; while, in the *Iliad*, Odysseus inflicts personal chastisement upon Thersites for presuming

Plan of a Greek Agora, according to Vitruvius.

A, the open court, surrounded by double colonnades and shops; B, the curiae; C, the chief temple, also used as a treasury; D, the basilica, or court of justice; E, the tholus, in connection with the other rooms of the prytaneum, *c*, *d*.

to attack the nobles in the *ἀγορά*. The people appear to have been only called together to hear what had been already agreed upon in the council of the nobles, which is called *βουλή* and *θόωκος*, and sometimes even *ἀγορά*.

Among the Athenians, the proper name for the assembly of the people was *ἐκκλησία*, and among the Dorians *ἁλία*. The term *ἀγορά* was confined at Athens to the assemblies of the phylae and demi. In Crete the original name *ἀγορά* continued to be applied to the popular assemblies till a late period.

(2) The name *ἀγορά* was early transferred from the assembly itself to the place in which the assembly was held; and thus it came to be used for the market-place, where goods of all descriptions were bought and sold. The expression *ἀγορὰ πλήθουσα*, "full market," was used to signify the time from morning to noon, that is, from about nine to twelve o'clock.

The agora in Greek cities corresponds to the Roman forum (q. v.). The chief authorities on the subject are Pausanias and Vitruvius. The accompanying plan (after Vitruvius), taken from Hirt's *Geschichte der Baukunst* (xxi., fig. 1), represents the later form of the agora.

See Boeckh, *Econ. of Athens;* Leake, *Topography of Athens;* Krause, *Hellas*, vol. ii.; Hirt, *Lehre d. Gebäude d. Griechen und Römer*, chap. v.; Wachsmuth, *Hellenische Alterthumskunde;* and Becker-Göll, *Charikles*, 4th scene, ii. pp. 177–212.

Agoranŏmi (*ἀγορανόμοι*). Market-masters. In many Greek towns magistrates somewhat resembling the Roman aediles (q. v.). At Athens ten *agoranomi* were chosen by lot every year, five for the city, and five for the port of Piraeus. They looked especially after the retail trade, gave strangers leave to engage in it, tested weights and measures as well as the quality of goods, confiscating and destroying what was spoiled; they settled disputes between buyers and sellers on the spot, or, if a suit at law was necessary, presided over it. See Boeckh, *Public Econ. of Athens*, pp. 48, 333.

Agrania (*ἀγρανία*). A festival celebrated at Argos, in memory of one of the daughters of Proetus, who had been afflicted with madness.

Agraphiou Graphé (*ἀγραφίου γραφή*). The names of all persons at Athens who owed any sum of money to the state were registered by the practores (*πράκτορες*) upon tablets kept for that purpose in the Temple of Athené on the Acropolis; and hence the expression of being registered on the Acropolis always means indebted to the state. If the name of an individual was improperly erased, he was subject to the action for non-registration (*ἀγραφίου γραφή*), which was under the jurisdiction of the thesmothetae; but if an individual was not registered, he could only be proceeded against by *ἔνδειξις* (q. v.), and was not liable to the *ἀγραφίου γραφή*.

Agrăphou Metallou Graphé (*ἀγράφου μετάλλου γραφή*). An action brought before the thesmothetae at Athens, against an individual who worked a mine without having previously registered it. The state required that all mines should be registered, because the twenty-fourth part of their produce was payable to the public treasury.

Agrariae Leges (AGRARIAN LAWS). Laws dealing with the distribution of the Roman public land (*ager publicus*), and in general to be described as laws providing for the allotment to the poorer citizens of land belonging to the state, or regulating the tenure on which these lands should be held. Such assignments of land are said to have been made as early as Romulus (Varro, *R. R.* i. 10, 2), but the first agrarian law was that proposed by Sp. Cassius in B.C. 486. The public lands were the result of conquest in war. It was not till towards the end of the Republic that we hear of the state's acquiring territory by the gift of a foreign prince. War in the ancient world made the bodies and belongings of the vanquished the absolute property of the victors. No doubt either policy or pity generally interfered to prevent the full exercise of the power. In Italy especially, the persons were not usually made slaves; but though the conquered community was allowed to exist, it was deprived of part, often of a third part, of its lands. These confiscated lands had sometimes been utterly wasted in war, sometimes were still unhurt and in a state of cultivation, sometimes consisted of moorland and wood. Each kind requires separate treatment.

1. The cultivated lands were dealt with in one, or it may be in all, of four ways.

(*a*) Part was sold by the quaestors, and hence called *agri quaestorii*. According to the Gromatici, the land for this purpose was measured and divided by balks (*limites*) into square plots (*laterculi*), measuring ten *actus* each side, and containing fifty *iugera*, i.e. thirty-one acres, each. As containing one hundred square *actus*, it was sometimes called *centuria*. The earliest instance recorded of a sale was in the case of Pometia, where, although the city was surrendered when about to be stormed, some of the chiefs were slain, some of the husbandmen were sold as slaves, the town was destroyed, and the land sold (Liv. ii. 17). The sale under the spear (*sub hasta*) gave full rights of ownership (Gai. iv. 16). Conquest had extinguished all previous title or claims to the land, and the state would of course give legal effect to its own acts of transfer.

(*b*) Part was given and assigned in full ownership to Roman citizens. This land was duly surveyed, measured, divided by balks into centuries, each containing two hundred *iugera* (one hundred and twenty-five acres), and assigned by lot to Roman citizens. Such land was called *agri dati adsignati*. The oldest assignments were two *iugera* to each man; this formed an hereditament (*heredium*), i.e. he had not the mere use or life interest of the plot, but it passed to his heirs after him. The lots of one hundred men thus formed one century (*cent-uir-ia*). Later on, seven *iugera* were regarded as the normal size of a lot (Plin. *H. N.* xviii. § 18); but, in fact, there was great variety, the amount naturally depending upon the extent of land open to distribution and the number of citizens to share in it. The survey and distribution were effected by a special commission of three, five, or ten men (Cic. *Agr.* ii. 7), called *IIIviri A. D. A.*, i.e. *agris dandis adsignandis*.

(*c*) Part of the confiscated lands were given back to their former owners, and no rent was imposed on these plots.

(*d*) Part was neither sold nor assigned nor restored to the former owners, but let for a rent (*vectigal*), often for long periods to state contractors (*mancipes*), who sublet to the nearest occupiers. Hyginus mentions as long a lease as one hundred years.

2. Besides the cultivated lands still in condition to be sold or let, there were the mountain pastures

and woods. The mountain pastures and woods were often granted (*concessa*) to the old proprietors, or to the municipality, or to the new Roman colony, or reserved to the state; and other tracts of land were often useful as pastures where there were not sufficient farmers to require them as arable land. Sometimes a small rent was required, and then they came under the head of *agri vectigales* (*Grom.* pp. 203, 205). Sometimes strips of wood on the mountain were annexed by the original assignment to the different estates (*fundi*) of private persons. Pastures, in like manner, were sometimes appropriated to individuals, but held *pro indiviso;* or sometimes made common to the whole of the community (*Grom.* p. 48). Appian (*Bell. Civ.* i. 7) says that taxes were laid for the use of the common pastures, both for larger and smaller animals, i. e. horned cattle and sheep. The last was collected by the publicans.

3. Appian says that "the larger part of the lands taken from the conquered had been wasted by war, and uncultivated. As the Romans had no time to distribute it, they gave notice that any one who liked might temporarily work it, paying a tax of a yearly tenth of the seed crops, and a fifth of the plantations" (i. e. fruits; for instance, olives and grapes). There is no other authority for this definite historical statement of a notice and a tax. The Gromatici speak frequently of *agri occupatorii*, i. e. lands belonging to squatters, and explain that it was conquered land occupied by individuals. The word most frequently used to denote this occupation is *possidere;* the occupiers are *possessores;* the lands, *possessiones*—terms which do not, however, imply anything as to the legality of the title by which it is held. But that this sort of occupation was recognized by law is clear from the fact that interference with it by the state was the subject, not of judicial proceedings, but of legislative enactment.

It does not seem probable that any definite arrangement was made in early times for the occupation of public land which was not assigned, or sold, or leased; and the legal claim of the state to deal with it was as incontestable in theory as it was difficult to enforce without the destruction of those reasonable expectations, arising from long use, which are the foundation of the statesman's view of property. It is disputed whether the patricians alone (to the exclusion of the plebeians) had, before the Licinian laws, the right to hold the public land: as a fact, it was probably the case. They were originally, and continued for long to be, the holders of the government, and they were, as a rule, the richest. Now the occupation of tracts of land wasted in war was not a poor Roman's business; it was at a distance; it required capital; and it was insecure, partly from the enemy on the border, and partly from the state's not having assigned it as private property. Neither the peasant nor the small capitalist would find the occupation of such land at a distance from Rome attractive; moreover, he was liable to be called off to serve in war. The rich man could risk something, could employ slave labour, could judge of the political prospects, and have a potential voice in the actions of the state. Such possessions had a natural tendency to accumulate in the hands of the few. The holders added field to field (*continuare agros*), partly by purchase from their poorer neighbours, partly by violence, partly by taking in any vacant land adjoining. Thus were formed the large estates (*latifundia, lati fundi*) which, worked by slaves, drove out, or gave no opening for, free peasants, and, portending the ruin of Italy, roused the Gracchi to their famous legislation.

For some account of the specific agrarian laws, see the articles ROGATIONES LICINIAE; SEMPRONIAE LEGES; THORIA LEX; GRACCHUS.

Agraulia (Ἀγραυλία). An Athenian festival in honour of Agraulos (q. v.), daughter of Cecrops.

Agraulos (Ἄγραυλος). (1) Daughter of Actaeus, first king of Athens, and wife of Cecrops. (2) Daughter of Cecrops and Agraulos, of whom various stories are told. Athené is said to have given Erichthonius in a chest to Agraulos and her sister Hersé, with strict injunctions not to open it; but they disobeyed the command. (See ERICHTHONIUS.) Agraulos was subsequently punished by being changed into a stone by Hermes, because she attempted to prevent the god from entering the house of Hersé, with whom he had fallen in love. Another legend relates that Agraulos threw herself down from the Acropolis because an oracle had declared that the Athenians would conquer if some one would sacrifice himself for his country. The Athenians in gratitude built her a temple on the Acropolis, in which the young Athenians, on receiving their first suit of armour, took an oath that they would always defend their country to the last.

Agrĕtae (ἀγρέται). The name of nine maidens chosen every year in the island of Cos, as priestesses of Athené.

Agriania (ἀγριανία). Probably the same festival as the *agrania* (q. v.), and celebrated in Argos and Thebes.

Agricŏla, GNAEUS IULIUS. A Roman general, who was born June 13th, A.D. 37, at Forum Iulii (Fréjus, in Provence), the son of Iulius Graecinus, who was executed by Caligula, and of Iulia Procilla. He received a careful education; he first served in Britain, A.D. 60, under Suetonius Paulinus; was quaestor in Asia in 63; was governor of Aquitania from 74 to 76; and was consul in 77, when he betrothed his daughter to the historian Tacitus, and in the following year gave her to him in marriage. In 78 he received the government of Britain, which he held for seven years, during which time he subdued the whole of the country with the exception of the highlands of Caledonia, and by his wise administration introduced among the inhabitants the language and civilization of Rome. He was recalled in 85 through the jealousy of Domitian, and on his return lived in retirement till his death, in 93, which, according to some, was occasioned by poison administered by order of Domitian. His character is drawn in the brightest colours by his son-in-law Tacitus, whose life of Agricola has come down to us. See TACITUS.

Agricultūra. (1) IN GREECE. Agriculture was a leading industry, at least as early as Homer. The soil was stubborn, fertile plains being comparatively few, and mountains and rocky ground preponderating. But, favoured by a genial climate, agriculture was carried on almost everywhere with a zeal to which the wants of a dense population added their stimulus. That it was regarded as the very groundwork of social life is shown by the fact that its guardian goddess Demeter presided also over wedlock and law. It

was looked upon as the most legitimate way of earning a livelihood. It was carried to the highest pitch in the Peloponnesus, where every scrap of cultivable soil was made to yield its crop, as may be seen to this day by the artificial terraces that scarp every mountain-slope. Much care was bestowed on irrigation. Scarcity of water was supplemented by artificial means; provision was made against irregular bursts of mountain torrents by embanking and regulating the natural outlets, while moist lands were channelled and stagnant waters drained. Water was distributed everywhere by ditches and canals, under the supervision of state officials; and laws of ancient date guarded against the unfair use of a watercourse to a neighbour's damage. See EMISSARIUM.

The land was mainly cultivated by slaves and serfs, though field labour was not deemed dishonourable to the freeman, except where law and custom forbade his engaging in any sort of handicraft, as at Sparta. In some countries, especially Arcadia, the old-world plan of every man tilling his field with his own hand remained in force to the latest times; and even eminent statesmen like Philopoemen (q. v.) would not give it up. Four kinds of grain were chiefly grown—wheat, barley, and two kinds of spelt, to all of which the climate allowed two sowings in the year—besides millet, sesame, various leguminous plants, and several sorts of herbage for fodder. With no less diligence was Greek husbandry applied to gardening, especially to the cultivation of the vine. This, while steadily pursued on the mainland, was developed to an extraordinary extent in the islands, most of which, owing to their mountainous character, did not afford their inhabitants sufficient arable soil. In olive-culture no part of Greece competed with Attica, which also produced the best figs, the fruit most widely cultivated. Kitchen-gardening was practised on the largest scale in Boeotia. Considering the enormous consumption of flowers in wreaths, the rearing of them, especially of the rose, lily, narcissus, and violet, must have been a lucrative business, at least in the neighbourhood of great towns. Meadow-farming was of next to no importance, few districts having a soil adapted for it, and such meadows as there were being used for pasture rather than haymaking.

(2) IN ITALY. In Italy also, the existence of the community was regarded as based upon agriculture. This is proved by the practice of marking the site of the future walls of a new town by a furrow drawn with the plough. At Rome especially, the body of irremovable peasantry long formed the core of the commonwealth. In political life the free peasant was the only factor held in account, and accordingly in war the object was to increase the number of free peasants by planting them out on as much of borderland as could be wrested from the enemy. In early times agriculture was thought the only respectable calling in which a Roman citizen could engage; and manual labour was held in high esteem and brought no discredit upon persons of rank and station, even Cato the Censor working in the fields side by side with his slaves.

Husbandry was mainly directed to the raising of grain, the ordinary cereal being at first spelt, till, in the fifth century B.C., wheat began to take a place beside it. They also cultivated barley, millet, and leguminous plants, as well as turnips, greens, and herbs for fodder. On irrigation and drainage the Italians bestowed much pains. They had no lack of grass-lands, either for pasture or haymaking; and from an early time these were artificially watered. The cultivation of the vine and olive extended as that of grains declined; so did the growth of orchard fruit, which, under the late Republic and the early Empire, received a vast expansion both from the improvement of native kinds and the introduction and naturalization of many foreign fruits. In earlier times the prime favourite among fruit trees had been, as in Greece, the nutritious fig. Agriculture proper was ruined by the acquisition of the first extra-Italian possessions, Sicily and Sardinia; for the corn supplied by the provincials as tribute in kind began to be used, not only in provisioning the armies, but in feeding the urban population. (See ANNONA.) As the state, to humour the rabble of Rome, sold this corn at the lowest possible prices, sometimes even below its value, the growth of cereals ceased to be profitable; farmers kept it down to a minimum, and took to cattle-breeding or to raising wine and oil. These branches of industry not only flourished in the face of competition, but, with judicious management, were highly remunerative. The death-blow was given to the Italian peasantry by the increasing employment of slaves and the absorption of small farms in large estates. (See LATIFUNDIUM.) On these, besides the growth of wine, oil, and fruit, the breeding of birds, game, and cattle was carried on, as well as woodcraft and special industries such as pottery, charcoal-burning, and others.

Farming implements, in addition to the plough, or *aratrum* (q. v.), usually drawn by oxen, which was much the same among Greeks and Romans, and always very imperfect, included a great variety of spades, hoes, and mattocks, and among Romans the harrow (*irpex*, *rastrum*), the use of which among the Greeks is doubted. The season for sowing all cereals was usually autumn. At harvest the stalks were cut with the sickle about half-way down, and the rest left standing as stubble, to be either burned or utilized for manure. The process of threshing was very defective.

See Dickson, *Husbandry of the Ancients* (1788); De la Malle, *Économie Politique des Romains* (1840); Hoskyns, *Hist. of Agriculture* (1849); and the article GEOPONICI.

Agri Decumātes. "Tithe-lands." The name given by the Romans to a part of Germany, east of the Rhine and north of the Danube, which they took possession of when the Germans retired eastward, and which they gave to the Gauls, and subsequently to their own veterans, on the payment of a tenth of the produce (*decuma*). Towards the beginning of the second century A.D. these lands were incorporated in the Roman Empire.

Agrigentum (Ἀκράγας). The modern Girgenti. A city on the south coast of Sicily, about two miles from the sea. It was celebrated for its wealth and populousness, and was one of the most splendid cities of the ancient world. It was founded by a Doric colony from Gela, about B. C. 579; was under the government of the cruel tyrant Phalaris (about 560), and subsequently under that of Theron (488-472). It was destroyed by the Carthaginians (405), and, though rebuilt by Timoleon, never regained its former greatness. It came into the power of

the Romans in 210. It was the birthplace of Empedocles. There are still gigantic remains of the ancient city, notably of its temple of Zeus.

Agrimensōres. Land-surveyors; also called *gromatici*, from *groma*, the instrument used in measuring. Under the Roman emperors they formed a collegium. Like the jurisconsults, they had regular schools, and received handsome salaries from the state. Their business was to measure unassigned lands for the state, and ordinary lands for the proprietors, and to fix and maintain boundaries. Their writings on the subject of their art were very numerous; and we have still scientific treatises on the law of boundaries, such as those by Frontinus and Hyginus. They were sometimes vested with judicial power, and were called *spectabiles* and *clarissimi* in the time of Theodosius and Valentinian. As partitioners of land, the agrimensores were the successors of the augurs, and the mode of their *limitatio* was derived from the old augurial method of forming the *templum*. The word *templum*, like the Greek *τέμενος*, simply means a division; its application to signify the vault of the heavens was due to the fact that the directions were always ascertained according to the true cardinal points. At the inauguration of a king or consul, the augur looked towards the east and the person to be inaugurated towards the south. Now, in a case like this, the person to be inaugurated was considered the chief, and the direction in which he looked was the main direction. Thus we find that in the case of land-surveying the augur looked to the south; for the gods were supposed to be in the north, and the augur was considered as looking in the same manner in which the gods looked upon the earth. Hence the main line in land-surveying was drawn from north to south, and was called *cardo*, as corresponding to the axis of the world; the line which cut it was termed *decumanus*, because it made the figure of a cross, like the numeral X. These two lines were produced to the extremity of the ground which was to be laid out, and parallel to these were drawn other lines, according to the size of the quadrangle required. The limits of these divisions were indicated by balks, called *limites*, which were left as high-roads, the ground for them being deducted from the land to be divided. As every sixth was wider than the others, the square bordering upon this would lose *pro tanto*. When land was undivided it was called *arcifinius* or *arcifinalis*, to which class belonged the *ager publicus*. See AGRARIAE LEGES.

Military surveyors were known as *metatores*. In later times the *agrimensor* was called simply *mensor*. Other terms are *finitor*, *decempedator*. *Gromaticus* is properly a professor of the art, and *geometres* a teacher of it.

The writings of the Gromatici which are extant contain short treatises of about the second century after Christ, by Frontinus (embedded in a commentary of a later writer called Agennius Urbicus), by Siculus Flaccus, and by apparently two writers bearing the name of Hyginus; several short mathematical treatises of uncertain date by Balbus, Nipsus, a so-called Boëthius, and others; extracts from official registers, probably of the fifth century, of the colonial and other surveys of lands, chiefly in Italy; lists and descriptions of different kinds of boundary stones; extracts from the Theodosian Code, and one title (x. 1) of Justinian's *Digest*; an obscure and barbarous tract (*casae litterarum*) by one Innocentius, supposed to be school exercises in land-surveying, and some other short pieces. The origin and date of the collection are unknown. Niebuhr awakened modern interest in these writers, and in 1848 Lachmann's critical edition appeared, and superseded all earlier editions. In 1852, a second volume was published, containing essays on the MSS. by Blume, on the text by Lachmann, and on the list of colonies by Mommsen, and an elaborate essay on the whole subject by Rudorff.

Agrimetatio. See AGRIMENSORES.

Agrionia (*Ἀγριώνια*). A festival celebrated chiefly at Orchomenus, in Boeotia, in honour of Dionysus, surnamed *Ἀγριώνιος*, i. e. the wild. This festival was solemnized only by women and priests of Dionysus. It consisted of a kind of game, in which the women for a long time acted as if seeking Dionysus, and at last called out to one another that he had escaped to the Muses, and had concealed himself with them. After this they prepared a repast, and, having enjoyed it, amused themselves with solving riddles. This festival was remarkable for a feature which proves its great antiquity. Some virgins, who were descended from the Minyans, and who probably used to assemble around the temple on the occasion, fled, and were followed by the priest armed with a sword, who was allowed to kill the one whom he first caught. This sacrifice of a human being, though originally it must have formed a regular part of the festival, seems to have been avoided in later times. One instance, however, occurred in the days of Plutarch (*Quaest. Graec.* 38). See Müller, *Die Minyer*, p. 166.

Agrippa, MARCUS VIPSANIUS. A Roman general, who was born in B.C. 63, of an obscure family; studied with young Octavius (afterwards the emperor Augustus) at Apollonia, in Illyria, and upon the murder of Caesar, in B.C. 44, was one of the friends of Augustus who advised him to proceed immediately to Rome. In the civil wars which followed, and which terminated in giving Augustus the sovereignty of the Roman world, Agrippa took an active part; and his military abilities contributed greatly to that result. He commanded the fleet of Augustus at the battle of Actium in B.C. 31. He was thrice consul, and in his third consulship, in B.C. 27, he built the Pantheon. In the year 21 he married Iulia, daughter of Augustus. He continued to be employed in various military commands till his death in B.C. 12. By his first wife, Pomponia, Agrippa had Vipsania, married to Tiberius, the successor of Augustus; and by Iulia he had two daughters, Iulia and Agrippina, and three sons, Gaius Caesar, Lucius Caesar, and Agrippa Postumus. The last was banished by Augustus to the island of Planasia, and was put to death by Tiberius, A.D. 14. See portrait on p. 16.

Agrippīna. (1) The daughter of M. Vipsanius Agrippa (q. v.) and of Iulia, the infamous daughter of the emperor Augustus, and married to Germanicus (q. v.), by whom she had nine children, among whom were the emperor Caligula, and Agrippina, the mother of Nero. She was distinguished for her virtues and heroism, and shared all the dangers of her husband's campaigns. On his death, in A.D. 17, she returned to Italy; but the favour with which she was received by the people increased the hatred which Tiberius and his mother, Livia, had long entertained towards her. At

length, in A.D. 30, Tiberius banished her to the island of Pandataria, where she died three years afterwards. See the portrait on p. 729. (2) Daughter of Germanicus and Agrippina (supra), and mother of the emperor Nero, was born at Oppidum Ubiorum, afterwards called, in honour of her, Colonia Agrippina, now Cologne. She was beautiful and intelligent, but licentious, cruel, and ambitious. She was first married to Cn. Domitius Ahenobarbus (A.D. 28), by whom she had a son, afterwards the emperor Nero; next to Crispus Passienus; and thirdly to the emperor Claudius (A.D. 49), although she was his nicce. In A.D. 50 she prevailed upon Claudius to adopt her son, to the prejudice of his own son Britannicus; and, in order to secure the succession for Nero, she poisoned the emperor in A.D. 54. The young emperor soon became tired of the ascendency of his mother, and, after making several attempts to shake off her authority, he caused her to be assassinated in A.D. 59.

Agronŏmi (*ἀγρονόμοι*). The country police, whose duties corresponded in most respects to those of the *astynomi* in the city. They appear to have performed nearly the same duties as the *hylori* (*ὑλωροί*). Aristotle does not inform us in which one of the Greek states they existed. See HYLORI.

Agrotĕras Thysia (*Ἀγροτέρας θυσία*). A festival celebrated at Athens in honour of Artemis Agrotera (from *ἄγρα*, chase), in consequence of a vow made during the First Persian War to sacrifice to Artemis as many goats as there should be Persians slain at Marathon. But as the number of Persians slain was so great as to exceed that of the available goats, the Athenians decreed that five hundred goats should be offered every year. This is the account given by Xenophon, but other writers give different legends.

Agrypnis (*Ἀγρυπνίς*). A nocturnal festival celebrated at Arbela, in Sicily, in honour of Dionysus.

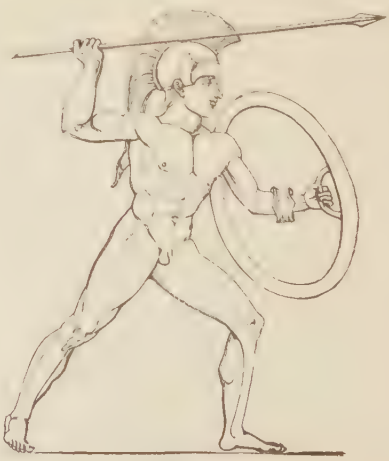
Agyieus (*Ἀγυιεύς*). See APOLLO.

Agylla. See CAERÉ.

Agyrium (*Ἀγύριον*). A Sicilian town, the birthplace of the historian Diodorus (q. v.).

Agyrmus (*ἀγυρμός*). See ELEUSINIA.

Agyrtae (*ἀγύρται*). Wandering beggars, often claiming the priestly rank, and making their living by fortune-telling and similar arts. They appear to have originated in the East, and finally made their way to Italy, where they received the name of *aeruscatores* (q. v.).



Ahāla, GAIUS SERVILIUS. A Roman who, acting as *magister equitum*, in B.C. 439, slew Spurius Maelius in the Forum, because he refused to appear before the dictator, L. Cincinnatus. For this act, Ahala was tried, but escaped condemnation by a voluntary exile. See MAELIUS.

Ahenobarbus. "Brazen-bearded." A name applied to the members of a noted Roman family, because the Dioscuri (Castor and Pollux) were said to have announced to one of their ancestors, L. Domitius, the victory of the Romans over the Latins at Lake Regillus (B.C. 496), and, in confirmation of the truth of what they told, to have stroked his black hair and beard, which immediately became red. (1) CN. DOMITIUS AHENOBARBUS, consul B.C. 122, conquered the Allobroges in Gaul, at the confluence of the Sulga and Rhodanus. (2) CN. DOMITIUS AHENOBARBUS, tribune of the plebs, B.C. 104, brought forward the law (*Lex Domitia*) by which the election of the priests was transferred from the collegia to the people. The people afterwards elected him Pontifex Maximus out of gratitude. He was consul in 96, and censor in 92, with Licinius Crassus, the orator. (3) L. DOMITIUS AHENOBARBUS, married Porcia, the sister of M. Cato, and was a staunch and courageous supporter of the aristocratical party. He was aedile in B.C. 61, praetor in 58, and consul in 54. On the breaking-out of the civil war in 49 he threw himself into Corfinium, but was compelled by his own troops to surrender to Caesar. He next went to Massilia, and after the surrender of that town repaired to Pompey in Greece. He fell in the battle of Pharsalia (48), where he commanded the left wing, and, according to Cicero's assertion in the second Philippic, by the hand of Antony. (4) CN. DOMITIUS AHENOBARBUS, son of no. 3, was taken with his father at Corfinium (49), was present at the battle of Pharsalia (48), and returned to Italy in 46, when he was pardoned by Caesar. He accompanied Antony in his campaign against the Parthians in 36. He was consul in 32, and deserted to Augustus shortly before the battle of Actium. (5) CN. DOMITIUS AHENOBARBUS, consul A.D. 32, married Agrippina (q. v.), daughter of Germanicus, and was father of the emperor Nero.

Ahēnum. See AENUM.

Ahrens, HEINRICH LUDOLF, philologist, was born June 6th, 1809, at Helmstadt, Germany, and was educated at Göttingen, where he became a privat-docent in 1830. From 1831 to 1845 he was a teacher in the Paedagogium at Ilfeld, leaving it to become head of the Lyceum in Hanover, an office which he filled until 1879. He died at Hanover, Sept. 24th, 1881. His principal works are the treatises, *De Graecae Linguae Dialectis* (Lib. i. *De Dialectis Aeolicis et Pseudo-aeolicis*, 1839; Lib. ii. *De Dialecto Dorico*, 1843); *Griech. Formenlehre des homerischen und attischen Dialekts* (1852); and *Bucolicorum Graecorum Theocriti, Bionis, Moschi Reliquiae*, 2 vols. (1855–59). See DIALECTS.

Aiax (*Αἴας*). (1) Son of Telamon, king of Salamis, and grandson of Aeacus. Homer calls him Aiax the Telamonian, Aiax the Great, or simply Aiax, whereas the other Aiax, son of Oïleus, is always distinguished from the former by some epithet. He sailed against Troy in twelve ships, and

Aiax. (Aeginetan Marbles.)

is represented in the *Iliad* as second only to Achilles in bravery. In the contest for the armour of Achilles he was conquered by Odysseus, and this, says Homer, was the cause of his death. Later poets relate that his defeat by Odysseus threw him into a state of madness; that he rushed from his tent and slaughtered the sheep of the Greek army, fancying they were his enemies; and that at length he put an end to his own life. From his blood there sprang up a purple flower bearing the letters *Ai* (Αἰ) on its leaves, which were at once the initials of his name and expressive of a sigh. Homer does not mention his mistress Tecmessa. (2) Son of Oïleus, king of the Locrians, also called the lesser Aiax, sailed against Troy in forty ships. He is described as small of stature, but skilled in throwing the spear, and, next to Achilles, the most swift-footed among the Greeks. On his return from Troy his vessel was wrecked; he himself safely reached a rock through the assistance of Poseidon; but, as he boasted that he would escape in defiance of the immortals, Poseidon split the rock with his trident, and Aiax was swallowed up by the sea. This is the account of Homer. Others tell us that the anger of Athené was excited against him because on the night of the capture of Troy he violated Cassandra in the temple of the goddess (Lycophron, 360 with schol.).

Aikias Dikē (*αἰκίας δίκη*). An action brought at Athens before the Court of the Forty (*οἱ τετταράκοντα*), against any individual who had struck a citizen of the State. Any citizen who had been thus insulted might proceed in two ways against the offending party—either by the *αἰκίας δίκη*, which was a private action, or by the *ὕβρεως γραφή*, which was looked upon in the light of a public prosecution, since the State was considered to be wronged in an injury done to any citizen. It appears to have been a principle of the Athenian law to give an individual who had been injured more than one mode of obtaining redress.

It was necessary to prove (1) that the defendant had struck the plaintiff otherwise than accidentally or in jest; and (2) that the defendant struck the plaintiff first.

In this action, the sum of money to be paid by the defendant as damages was not fixed by the laws; but the plaintiff assessed the amount according to the injury which he thought he had received, and the judges determined on the justice of the claim.

Aïdes (Ἀΐδης). See HADES.

Aïklon (*ἄϊκλον*, *αἶκλον*, or *ἄϊκνον*, *αἶκνον*). (1) A meal in general. Thus Alcman uses *συναίκλιαι* for *συνδείπνια*. (2) The chief dish or course in a meal. The dessert, or after-course, was called *ἐπάϊκλον*.

Aiōra (*αἰώρα*). See AEORA.

Aithousa (*αἴθουσα*). The open portico or veranda of the Homeric house. See DOMUS.

Aitia (*Αἴτια*). A treatise on Roman manners and customs, written by M. Terentius Varro (q. v.).

Aius Locutius or **Loquens**. A Roman divinity, "the Announcer." A short time before the Gauls took Rome (B.C. 388) a voice was heard at Rome during the silence of night announcing that the Gauls were approaching. The Romans afterwards erected on the spot where the voice had been heard an altar, with a sacred enclosure around it, to Aius Locutius. See Livy, v. 50; Plut. *Camill.* 30.

Akkad or **Accad**. The southeastern division of ancient Babylonia as distinguished from the northwestern division, which was called Sumir. The Akkadians, who appear to have come originally from Elam, were the dominant race in Babylonia at the time of its earliest history, and to them the Assyrians ascribed the civilization of Babylonia, and the invention of the cuneiform writing. There was also a city, Akkad, in the "land of Shinar." See ASSYRIA; BABYLONIA; CUNEIFORM INSCRIPTIONS.

Akoèn Martyrein (*ἀκοὴν μαρτυρεῖν*). Hearsay evidence, which in Athenian law was generally inadmissible. The one general exception to this rule was the attested declaration of a dying person. See EKMARTYRIA.

Ala in a Roman house. See DOMUS, p. 545.

Ala in military language. See ALARII; EXERCITUS.

Alabarches. A Roman official stationed at Alexandria under the Empire. The title is also found in Lycia. See ARABARCHES.

Alabastrothēca (*ἀλαβαστροθήκη*). A holder for bottles, which, having round bottoms, could not stand unsupported (Pollux, x. 121).

Alabastrum or **Alabaster** (*ἀλάβαστρον*, *ἀλάβαστος*). A small tapering or pear-shaped vessel, having no feet, used for holding perfumes and ointments. Such vessels were originally made of alabaster, of which the variety called onyx-alabaster was usually employed for this purpose. It is doubtful, however, whether the vessels were named from the material, or *vice versa*. They are also found of stone and terra-cotta, with a white or cream-coloured ground and black figures. The right-hand illustration shows an alabastrum from Chiusi, carved into female faces above, and having a hole in the crown for pouring out the ointment

Alabastrum. (British Museum.)

Alabastrum. (Dennis, *Etruria*, i. p. cxxv.)

or perfume (Dennis, *Etruria*, i. p. cxxv.). Other materials were in use—as glass, and even gold (*χρύσεια ἀλάβαστρα*, Theocr. xv. 114). The alabastra usually had no handles, though we sometimes find specimens with them. They are first mentioned by Herodotus (iii. 20). Some of these vessels had a long narrow neck, which was sealed; so that when the woman in the Gospels is said to break the alabaster box of ointment, it appears probable

that she only broke the extremity of the neck which was thus closed. (Cf. Becker-Göll, *Gallus*, ii. p. 378).

Alaea (*τὰ ἀλαῖα*). Games annually celebrated at Tegea in honour of Athenè Alea.

Alāni (*Ἀλανοί*). See SCYTHIA.

Alarīcus (Old German *Al-ric*, i. e. *allrich*). A king of the Visigoths, remarkable as being the first of the barbarian chiefs who entered and sacked the city of Rome, and the first enemy who had appeared before its walls since the time of Hannibal. His first appearance in history is in A.D. 394, when he was invested by Theodosius with the command of the Gothic auxiliaries in his war with Eugenius. In 396, partly from anger at being refused the command of the armies of the Eastern Empire, and partly at the instigation of the minister Rufinus, he invaded and devastated Greece, till by the arrival of Stilicho, in 397, he was compelled to escape to Epirus. He was elected king by his countrymen in 398, having been previously, by the weakness of Arcadius, appointed prefect of Eastern Illyricum. The rest of his life was spent in the two invasions of Italy. The first (400–403), apparently unprovoked, brought him only to Ravenna, and, after a bloody defeat at Pollentia, in which his wife and treasures were taken, and a masterly retreat to Verona, was ended by the treaty with Stilicho, which transferred his services from Arcadius to Honorius, and made him prefect of Western instead of Eastern Illyricum. The second invasion (408–410) was occasioned by delay in fulfilling his demands for pay and for a western province as the future home of his nation, as also by the massacre of the Gothic families in Italy on Stilicho's death. It is marked by the three sieges of Rome, in 408, 409, and 410. The first of these was raised by a promised ransom. The second ended in the unconditional surrender of the city, and in the disposal of the Empire by Alaric to Attalus, till, on discovery of his incapacity, he restored it to Honorius. The third was ended by the treacherous opening of the Salarian Gate, on August 24th, and the sack of the city for six days. It was immediately followed by the occupation of the south of Italy, and the design of invading Sicily and Africa. This intention, however, was frustrated by his death, after a short illness, at Consentia, where he was buried in the bed of the adjacent river Busentinus, and the place of his interment was concealed by the massacre of all the workmen employed on the occasion. The few personal traits that are recorded of him show the true savage humour of a barbarian conqueror. But the impression left upon us by his general character is of a higher order. The real military skill displayed in his escape from Greece and in his retreat to Verona; the wish at Athens to show that he had adopted the use of the bath and the other external forms of civilized life; the moderation and justice which he observed towards the Romans in time of peace; and the humanity which distinguished him during the sack of Rome, all indicate something superior to the mere craft and lawless ambition which he seems to have possessed. See Hodgkin, *Italy and her Invaders* (Oxford, 1880–85).

Alarii were the troops of the allies in the Roman army, and were so called because they were usually stationed in the wings (*alae*). The alarii consisted of both horse and foot soldiers, and were commanded by praefects, in the same manner as the legions were commanded by tribunes. The cavalry of the allies were called *equites alarii*, to distinguish them from the cavalry of the legions (*equites legionarii*); and the infantry-soldiers were called *cohortes alariae*, to distinguish them from the *cohortes legionariae*.

Alastor (*Ἀλάστωρ*). In Greek mythology, an avenging daemon who dogs the footsteps of the guilty, and avenges upon children the sins of their fathers (Aesch. *Pers.* 354).

Alauda (*κόρυδος*). The lark. The Fifth Legion from the time of Iulius Caesar down to the third century was known as Alauda from the device of a lark (*alauda*) worn upon the helmets of the soldiers composing it. See Suet. *Iul.* 24.

Alba. (1) ALBA FUCENTIA or FUCENTIS, a town of the Marsi, and subsequently a Roman colony, situated on a lofty rock near the Lake Fucinus, and used by the Romans as a state prison. (2) ALBA LONGA, the most ancient town in Latium, is said to have been built by Ascanius, and to have colonized Rome. It was called Longa from its stretching in a long line down the Alban Mount towards the Alban Lake. It was destroyed by Tullus Hostilius, and was never rebuilt; its inhabitants were removed to Rome. At a later time the surrounding country was studded with the splendid villas of the Roman aristocracy and emperors (e. g. Pompey's and Domitian's), each of which was called Albanum. (3) ALBA POMPEIA, a town in Liguria, colonized by Pompeius Magnus, the birthplace of the emperor Pertinax.

Albania (*Ἀλβανία*). The southeastern part of what is now Georgia, in Asia, on the west side of the Caspian, extending from the rivers Cyrus and Araxes on the south to Mt. Ceraunius (the east part of the Caucasus) on the north, and bounded on the west by Iberia. It was a fertile plain, abounding in pasture and vineyards; but the inhabitants were fierce and warlike. They were a Scythian tribe, identical with the Alani. The Romans first became acquainted with them at the time of the Mithridatic war, when they encountered Pompey with a large army. Modern geography comprises ancient Albania under two divisions—Daghestan and Leghistan. The name in our own times is applied to the territory which in ancient times was included in Illyria and Epirus.

Albānus Lacus. A small lake, about five miles in circumference, west of the Mons Albanus, between Bovillae and Alba Longa. It is the crater of an extinct volcano, and is many hundred feet deep. The *emissarium* which the Romans bored through the solid rock during the siege of Veii, in order to carry off the superfluous water of the lake, is extant at the present day. See EMISSARIUM.

Albānus Mons was, in its narrower signification, the mountain in Latium on whose declivity the town of Alba Longa was situated. It was the sacred mountain of the Latins, on which the religious festivals of the Latin League were celebrated (*Feriae Latinae*), and on its highest summit was the temple of Iupiter Latiaris, to which the Roman generals ascended in triumph when this honour was denied them in Rome. The Mons Albanus in its wider signification included the Mons Algidus and the mountains about Tusculum.

Albinovānus, C. PEDO. An epic writer of the Au-

gustan Age, the friend of the younger Seneca, who calls him *fabulator elegantissimus*, and quotes him to show his ability as a raconteur. He is also mentioned by Ovid, Martial, and Quintilian. He wrote a *Thebaïs*, and an epic on contemporary history. The elder Seneca (*Suas.* 14) cites twenty-three hexameters of his, describing a storm in the North Sea. See Haube, *Zur Kenntn. des Alb. Ped.* (Fraustadt, 1880).

Albīnus or **Albus Postumius**. The name of a patrician family at Rome, many of the members of which held the highest offices of the State, from the commencement of the Republic to its downfall. The founder of the family was dictator B.C. 498, when he conquered the Latins in the great battle near Lake Regillus (q. v.).

Albinus, Clodius. A governor of Britain at the death of the emperor Commodus (q. v.) in A.D. 192. In order to secure his neutrality, Septimius Severus made him Caesar; but, after Severus had defeated his rivals, he turned his arms against Albinus. A great battle was fought between them at Lugdunum (Lyons), in Gaul, A.D. 197, in which Albinus was defeated and killed.

Albion (Ἀλουΐων). Another name of Britannia (q. v.), and signifying "the white land," from its white cliffs opposite the coast of Gaul. Albion or Albany (the Gaelic form) is now generally believed to have been the early Keltic name of the whole island. The etymology of the word is the same as that of *Alps*. See Britannia.

Albis. The modern Elbe; the most easterly river of Germany with which the Romans were acquainted; nor did they reach its banks until the expedition of Drusus in B.C. 9. The last Roman army that penetrated so far was that commanded by Tiberius in A.D. 5.

Albogalērus. See Apex.

Albŭla. An ancient name of the river Tiber (q. v.). Albula is probably the pure Latin name, and Tiberis the Etruscan. Cf. Verg. *Aen.* viii. 332.

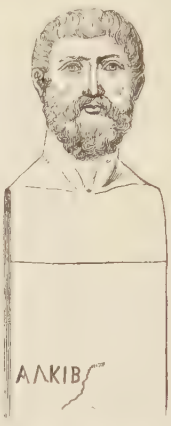
Albŭla Aqua or **Albŭlae Aquae**. Cold sulphurous springs issuing from a small lake about sixteen miles from Rome, and flowing into the Anio. The largest of these springs was known as Albunea. The Romans esteemed the water for its medicinal properties, and used it for both drinking and bathing. Cf. Suet. *Aug.* 82.

Album. (1) A tablet or bulletin-board on which the praetor's edict was inscribed. (See Edictum.) It was put up in a public place at Rome, so that all might read it. Some think it to have been a white board with black letters and red titles (*rubricae*); while others hold the board to have been black and the letters white. (2) A list of the members of any public body, as *album senatorium* (Tac. *Ann.* iv. 42). Dio Cassius calls it λεύκωμα.

Albunĕa. See Albula Aqua.

Alburnus Mons. A wooded mountain in Lucania behind Paestum.

Alcaeus (Ἀλκαῖος). A famous lyric poet of Mitylené, in Lesbos, an elder contemporary of Sappho. Towards the end of the seventh century B.C., as the scion of a noble house, he headed the aristocratic party in their contests with the tyrants of his native town, Myrsilus, Melanchrus, and others. Banished from home, he went on romantic expeditions as far as Egypt. When the tyrants were put down, and his former comrade, the wise Pittacus, was called by the people to rule the State, he took up arms against him also as a tyrant in disguise; but, attempting to force his return home, he fell into the power of his opponent, who generously forgave him. Of his further life nothing is known. His poems in the Aeolic dialect, arranged in ten books by the Alexandrians, consisted of hymns, political songs (which formed the bulk of the collection), drinking songs, and love songs, of which we have but a few unsatisfactory fragments. In the opinion of the ancients, his poems were well constructed, while their tone was in harmony with the lofty passion and manly vigour of his character. The alcaic strophe, so much used by his admirer and not unworthy imitator, Horace, is named after him. See Bergk's *Poetae Lyrici* (4th ed. 1878) for the fragments; and Kock, *Alkaeus und Sappho* (1862).



Alcamĕnes (Ἀλκαμένης). A Greek artist of Athens or Lemnos, and a pupil of Phidias, who flourished towards the end of the fifth century B.C. Following his master's ideal tendency, he devoted himself mainly to religious subjects, working like him in various materials, gold and ivory, bronze and marble. His statue of the winner in the Pentathlon was stamped as classic by the epithet of ἐγκρινόμενος, as the *Doryphoros* of Polyclitus was by that of κανών. About B.C. 436 he was employed with Phidias in decorating the temple of Zeus at Olympia. The marble groups of the battle of Centaurs and Lapithae in its western pediment are his work. Of these considerable remains have been brought to light by recent German excavations.

Alcathoüs (Ἀλκάθοος). The son of Pelops and Hippodamia, who obtained as his wife Evaechmé, the daughter of Megareus, by slaying the Cithaeronian lion, and succeeded his father-in-law as king of Megara. He restored the walls of Megara, which is therefore sometimes called Alcathoé by the poets. In this work he was assisted by Apollo. The stone upon which the god used to place his lyre while he was at work was believed, even in late times, to give forth a sound, when struck, similar to that of a lyre.

Alcestis (Ἄλκηστις). See Admetus.

Alcibiădes (Ἀλκιβιάδης). The son of Clinias and Dinomaché, born at Athens about B.C. 450, and on the death of his father, in 447, brought up by his relation Pericles. He possessed a beautiful person, transcendent abilities, and great wealth. His youth was disgraced by his amours and debaucheries, and Socrates, who saw his vast capabilities, attempted to win him to the paths of virtue, but in vain. Their intimacy, however, was strengthened by mutual services. At the battle of Potidaea (432) his life was saved by Socrates, and at that of Delium (424) he saved the life of Socrates. After the death of Cleon (422) he became one of the leading politicians, and the head of the war party in opposition to Nicias. In 415 he was appointed, along with Nicias and Lamachus, as commander of the expedition to Sicily. While the preparations for the expedition were going on, there occurred a mysterious mutilation of the busts of the Hermae, which the popular fears connected with an attempt to overthrow the Athenian constitution. Alcibiades was charged with being the ringleader in this attempt. He demand-

ed an investigation before he set sail, but this his enemies would not grant; but he had not been long in Sicily before he was recalled to stand his trial. On his return homeward he managed to escape at Thurii, and thence proceeded to Sparta, where he acted as the avowed enemy of his country. The machinations of his enemy, Agis II., induced him to abandon the Spartans and take refuge with Tissaphernes (412), whose favour he soon gained. Through his influence Tissaphernes deserted the Spartans and professed his willingness to assist the Athenians, who accordingly recalled Alcibiades from banishment in 411. He did not immediately return to Athens, but remained abroad for the next four years, during which the Athenians under his command gained the victories of Cynossema, Abydos, and Cyzicus, and got possession of Chalcedon and Byzantium. In 407 he returned to Athens, where he was received with great enthusiasm, and was appointed commander-in-chief of all the land and sea forces. But the defeat at Notium, occasioned during his absence by the imprudence of his lieutenant, Antiochus, furnished his enemies with a handle against him, and he was superseded in his command (406). He now went into voluntary exile to his fortified domain at Bisanthé, in the Thracian Chersonesus. After the fall of Athens (404) he took refuge with Pharnabazus. He was about to proceed to the court of Artaxerxes, when one night his house was surrounded by a band of armed men and set on fire. He rushed out, sword in hand, but fell, pierced with arrows (404). The assassins were probably either employed by the Spartans or by the brothers of a lady whom Alcibiades had seduced. He left a son by his wife Hippareté named Alcibiades, who never distinguished himself. See Houssaye, *Histoire d'Alcibiade*, 2 vols. (Paris, 1873).

Bust of Alcibiades.

Alcīdes (Ἀλκείδης). A name applied to Heracles (q. v.) as being the grandson of Alceus (or Alcaeus).

Alcimĕdé (Ἀλκιμέδη). The wife of Aeson and mother of Iason (q. v.).

Alcinŏüs (Ἀλκίνοος). The son of Nausithoüs and grandson of Poseidon, celebrated in the *Odyssey* as the ruler of the Phaeacians in the island of Scheria. See Phaeacia.

Alcĭphron (Ἀλκίφρων). A Greek rhetorician of the second century A.D., author of a collection of 118 fictitious *Letters* in three books. These, written in tolerably pure style and tasteful form, profess to be from sailors, peasants, parasites, and *hetaerae*. They are sketches of character, ingeniously conceived and carried out, which give us a vivid picture of the existing state of culture, especially at Athens. The letters from *hetaerae* are particularly interesting, as their plots are taken from the New Attic Comedy, especially the lost plays of Menander. The text, with a Latin version, is edited by Westermann and Hercher in the Didot collection (Paris, 1856). See Novels and Romances.

Alcithŏé (Ἀλκιθόη). Daughter of Minyas, changed with her sisters into bats, for refusing to join other women of Boeotia in the worship of Dionysus.

Alcmaeon (Ἀλκμαίων). A native of Argos and son of Amphiaraüs (q. v.) and Eriphylé. As his father, in departing on the expedition of the Seven against Thebes, had bound him and his brother Amphilochus, then mere boys, to avenge him on their faithless mother, Alcmaeon refused to take part in the second expedition, that of the Epigoni (q. v.), till he had first fulfilled that filial duty; nevertheless his mother, bribed by Thersander with the garment of Harmonia, persuaded him to go. The real leader at the siege of Thebes, he slew the Theban king, Laodamas, and was the first to enter the conquered city. On returning home, he, at the bidding of the Delphian Apollo, avenged his father by slaying his mother, with, or according to some accounts, without, his brother's help; but immediately, like Orestes, he was set upon by the Furies, and wandered distracted, seeking purification and a new home. Phegeus, of the Arcadian Psophis, half purified him of his guilt, and gave him his daughter Arsinoë or Alphesiboea to wife, to whom he presented the jewels of Harmonia, which he had brought from Argos. But soon the crops failed in the land, and he fell into his distemper again, till, after many wanderings, he arrived at the mouth of the Acheloüs, and there, in an island that had floated up, he found the country promised by the god, which had not existed at the time of his dying mother's curse, and so he was completely cured. He married Acheloüs's daughter, Callirrhoë, by whom he had two sons, Acarnan and Amphoterus (q. v.). Unable to withstand his wife's entreaties that she might have Harmonia's necklace and robe, he went to Phegeus in Arcadia, and begged those treasures of him, pretending that he would dedicate them at Delphi for the perfect healing of his madness. He obtained them; but Phegeus, on learning the truth, set his son to waylay him on the road, and rob him of his treasure and his life. Alcmaeon's sons then avenged their father's death on his murderers. Alcmaeon received divine honours after death, and had a sanctuary at Thebes and a consecrated tomb at Psophis.

Alcmaeonĭdae (Ἀλκμαιωνίδαι). A noble family at Athens, a branch of the family of the Nelidae, who were driven out of Pylus, in Messenia, by the Dorians, and settled at Athens. In consequence of the way in which Megacles, one of the family, treated the insurgents under Cylon (B.C. 612), they brought upon themselves the guilt of sacrilege, and were in consequence banished from Athens about 595 About B.C. 560 they returned from exile, but were again expelled by Pisistratus. In the year 548 they contracted with the Amphictyonic Council to rebuild the temple of Delphi, and obtained great popularity throughout Greece by executing the work in a style of magnificence which much exceeded their engagement. On the expulsion of Hippias in 510, they were again restored to Athens. They now joined the popular party, and Clisthenes, who was at that time the head of the family, gave a new constitution to Athens. See Clisthenes.

Alcman (Ἀλκμάν, the Doric form of Ἀλκμαίων). The chief lyric poet of Sparta, though by birth a Lydian of Sardis. He was brought to Laconia as a slave when very young, and was emancipated by his master, who discovered his genius. He probably flourished about B.C. 631. He is said to have died, like Sulla, of the *morbus pedicularis*. Alcman is believed by some to have been the inventor of

erotic poetry, to which class of verse belong his *Parthenia*, songs sung by choruses of virgins, bridal hymns, and lines in praise of love and wine. The scanty fragments of his poems that remain can be found in Bergk's *Poetae Lyrici Graeci* (4th ed. 1878). The most important fragment is one discovered on an Egyptian papyrus in Paris in 1855.

Alcman was the inventor of the Cretic hexameter. He also used the dactylic, anapaestic, trochaic, and iambic metres. His poems were usually written in strophes. In the Alexandrian Canon his name headed the list of lyric poets. See CANON ALEXANDRINUS.

Alcmēné (Ἀλκμήνη). The daughter of Electryon, king of Mycenae, who promised to marry Amphitryon, provided he avenged the death of her brothers, who had been slain by the sons of Pterelaüs. Amphitryon undertook the task; but, during his absence, Zeus, in the disguise of Amphitryon, visited Alcmené, and, pretending to be her husband, related in what way he had avenged the death of her brothers. Amphitryon himself returned the next day. Alcmené became the mother of Heracles by Zeus, and of Iphicles by Amphitryon.

Alcyŏné (Ἀλκυόνη). (1) The daughter of Aeolus (q. v.) and wife of Ceÿx (q. v.) (2) One of the Pleiades (q. v.).

Alcyonium Mare. The eastern part of the Corinthian Gulf.

Aldobrandini Marriage. See PICTURA.

Alea. Gaming, or playing at a game of chance of any kind. Gaming was looked down upon at Rome, and hence *aleator* was used as a term of reproach (Cic. *in Cat.* ii. 10, 23; *ad Att.* xiv. 5). It was also forbidden by special laws during the times of the Republic and under the emperors (*retita legibus alea*, Hor. *Carm.* iii. 24, 58; Cic. *Phil.* ii. 23, 56; Ov. *Trist.* ii. 470 foll.; *Dig.* 11, tit. 5). Three such laws occur in the Digest (*l. c.*)—the Leges Titia, Publicia, and Cornelia—and likewise a *senatus consultum* and the praetor's edict; the latter enacting severe penalties on persons compelling others to gamble, and disabling the keepers of gambling-houses from bringing any action for damage or loss against their customers. At what time the two former laws were passed is quite uncertain; but the Lex Cornelia was probably one of the laws of the dictator Sulla, who, we know, made several enactments to check the extravagance and expense of private persons. (See SUMPTUS.) It has been inferred from the *Miles Gloriosus* (ii. 2, 9) that gaming must have been forbidden by law in Plautus's time; but the *lex talaria* (*alearia*, Ritschl) in this passage seems rather to refer to the laws of the game than to any public enactment. Those who were convicted of gaming were condemned to pay four times the sum they had staked (Pseudo-Ascon. *in* Cic. *Div.* § 24, p. 110, ed. Orelli), and became *infames* in consequence. We know that *infamia* (q. v.) was frequently a consequence of a judicial decision; and we may infer that it was so in this case from the expression of Cicero ("Hominem lege, quae est de alea, condemnatum, *in integrum restituit*," Cic. *Phil.* l. c.). Games of chance were, however, tolerated in the month of December at the Saturnalia, a period of general relaxation (Suet. *Aug.* 71); and public opinion allowed old men to amuse themselves in this manner (Cic. *De Sen.* 16, 58). Under the Empire gambling was carried to a great height, and the laws were probably little more than nominal. Many of the early emperors—Augustus, Caligula, Claudius, Vitellius, and Domitian—were very fond of gaming, and set an evil example to their subjects in this matter (Suet. *Aug.* 70, 71; Dio Cass. lix. 22; Suet. *Cal.* 41, *Claud.* 33; Dio Cass. lx. 2; Suet. *Dom.* 21). Professed gamesters made a regular study of their art, and there were treatises on the subject, among which was a book written by the emperor Claudius (Suet. *Claud.* l. c.). All gaming was forbidden finally by Justinian (Cod. 3, tit. 43). See Walter, *Geschichte d. röm. Rechts*, § 763; Rein, *Criminalrecht der Römer*, p. 833; and for an account of the games of chance, the articles PAR IMPAR; TALI; TESSERAE.

Alea (Ἀλέα). A town in Arcadia, south of the Stymphalian Lake, where Athené was worshipped under the name of Alea.

Aleaea or **Alaea** (Ἀλέαια). A festival held near Tegea in honour of Athené Alea. See HALOTIA.

Alecto (Ἀληκτώ). One of the Furies. See EUMENIDES.

Alectryomantīa (*ἀλεκτρυομαντεία*). A mode of divination practised by the Greeks. The letters of the alphabet were written in a circle; a grain of wheat or barley was laid upon each letter; and a cock, consecrated or provided for the occasion, was placed within the circle. The required information was obtained by putting together those letters off which the cock picked the grains of corn. To obtain a fuller answer, they laid grains of corn upon the letters a second time, and repeated the process.

Alectryonomachia (*ἀλεκτρυονομαχία*). The public cock-fight, which was held every year in one of the theatres of Athens. Cock-fights, in general, were exceedingly common among the Greeks and Romans; but the origin of this one in particular, which was sanctioned by the laws of the state, is not known, though Aelian says that when Themistocles marched with his Athenians against the Persians, he saw two cocks fighting against each other, and took the opportunity of addressing his soldiers, reminding them that these cocks were neither fighting for their country nor for the gods, but only for victory. This speech is said to have greatly animated the courage of the Athenians; and, after the war, they commemorated the event which had proved so useful to them by the annual festival in the theatre. (Aelian, *V. H.* ii. 28.)

Aleipterion. See ALIPTAE; BALNEAE, p. 186.

Alemanni, Alamanni, or **Almanni** (German *alle Männer*, "all men"). A confederacy of Germans, consisting of the tribes between the Danube, the Rhine, and the Main. They first came into contact with the Romans in the reign of Caracalla, who assumed the surname of Alemannicus on account of a pretended victory over them (A.D. 214). After this time they continually invaded the Roman dominions, and in the fifth century were in possession of Alsace and of German Switzerland. See GERMANIA.

Aleria or **Alalia.** One of the chief towns of Corsica, on the east of the island, founded by the Phocaeans in B.C. 564, and made a Roman colony by Sulla.

Alēsa. See HALESA.

Alesia. A town of the Mandubii, in Gallia Lugdunensis, and situated on a high hill (now Auxois),

which was washed by the two rivers Lutosa (Oze) and Osera (Ozerain). It was taken and destroyed by Caesar in B.C. 52, after a memorable siege.

Aleuădae. See ALEUAS.

Aleuas (Ἀλεύας). A Thessalian, descended from Heracles, who ruled at Larissa. He was the reputed founder of the Aleuadae, a distinguished family of which two branches are mentioned: the Aleuadae and the Scopadae—the former remaining at Larissa, the latter inhabiting Crannon. In the Second Persian War the Aleuadae espoused the Persian cause, and gave aid to Xerxes (B.C. 480) (Herod. vii. 6). After the war, when Leotychides was sent to Thessaly to punish those who had proved disloyal to Greece, the Aleuadae bribed him to a mild course. At a later period, Philip of Macedon found the Aleuadae useful allies.

Alexander (Ἀλέξανδρος). (1) Another name for PARIS (q. v.).

(2) ALEXANDER AETŌLUS, of Pleuron in Aetolia, who flourished about B.C. 280 at Alexandria, where he was employed by Ptolemy in arranging the tragedies and satyric dramas in the great library. He also wrote tragedies, short epics, elegies, and epigrams, of which fragments have been preserved. See Couat, *La Poésie Alexandrine* (Paris, 1882).

(3) ALEXANDER OF APHRODISIAS, in Caria, who flourished about A.D. 200, and is known as Exegetes, or "the expounder," for his exposition of the commentaries of Aristotle. He wrote also original works on Fate, Free Will, and the Soul, which, translated into Latin, were much read and studied in the Middle Ages. See ARISTOTELES.

(4) ALEXANDER OF TRALLES, in Lydia, a Greek physician living at Rome in the sixth century A.D. He made a careful collection of excerpts from the older writers on therapeutics, in twelve books. See MEDICINA.

(5) ALEXANDER OF COTYAEUM, in Phrygia, or, according to Suidas, of Miletus, who flourished in the second century A.D. He took the name of Cornelius Alexander, from his having been a slave of Cornelius Lentulus, who gave him his freedom and made him the instructor to his children. He was surnamed Polyhistor, from the variety and multiplicity of his knowledge. The ancient writers cite one of his works in forty books, each one of which appears to have contained the description of some particular country, and to have had a separate title, such as Αἰγυπτιακά, Καριακά, etc. Pliny often refers to him. It is probable that he was the author of a work entitled Θαυμασίων συναγωγή, "A collection of wonderful things," of which Photi us speaks.

Alexander. The name of several kings of Macedonia. See MACEDONIA.

Alexander, known as THE GREAT, son of Philip II., king of Macedon, was born at Pella, B.C. 356. He was educated by Aristotle, who acquired a great influence over his mind and character. He first distinguished himself at the battle of Chaeronea (338), where the victory was mainly owing to his impetuosity and courage. On the murder of Philip (336), he ascended the throne, at the age of twenty, to find himself surrounded by enemies on every side. He first put down rebellion in his own kingdom, and then rapidly marched into Greece. His unexpected activity overawed all opposition; Thebes, which had been most active against him, submitted when he appeared at its gates; and the assembled Greeks at the Isthmus of Corinth elected him to the command against Persia. He now directed his arms against the barbarians of the North, and crossed the Danube (335). A report of his death having reached Greece, the Thebans once more took up arms; but a terrible punishment awaited them. Alexander took Thebes by assault, destroyed all the buildings, with the exception of the house of Pindar, killed most of the inhabitants, and sold the rest as slaves. He now prepared for his great expedition against Persia. In the spring of 334 he crossed the Hellespont with some 35,000 men. Of these 30,000 were foot and 5000 horse, and of the former only 12,000 were Macedonians. Alexander's first engagement with the Persians was on the river Granicus in Mysia (May, 334), where they were entirely defeated by him. In the following year (333) he collected his army at Gordium (q. v.) in Phrygia, where he cut or untied the celebrated Gordian knot, which, it was said, was to be loosened only by the conqueror of Asia. From thence he marched to Issus, on the confines of Syria, where he gained a great victory over Darius, the Persian king. Darius himself escaped, but his mother, wife, and children fell into the hands of Alexander, who treated them with the utmost delicacy and respect. Alexander now directed his arms against the cities of Phoenicia, most of which

Coin representing Alexander the Great as Zeus Ammon.

submitted; but Tyre was not taken till the middle of 332, after an obstinate defence of seven months. He next marched into Egypt, which unresistingly yielded to him. At the beginning of 331 he founded near the mouth of the Nile the city of Alexandria, and about the same time visited the temple of Zeus Ammon, in the desert of Libya, where he was saluted by the priests as the son of Zeus. In the spring of the same year (331) he set out against Darius, who had collected another army. He crossed the Euphrates and the Tigris, and at length met with the immense hosts of Darius, said to have amounted to more than a million of men, in the plains of Gaugamela. The battle was fought in the month of October, 331, and ended in the complete defeat of the Persians. Alexander was now the conqueror of Asia, and began to adopt Persian habits and customs, by which he conciliated the affections of his new subjects. From Arbela he marched to Babylon, Susa, and Persepolis, all of which surrendered to him. He is said to have set fire to the palace of Persepolis, and, according to some accounts, in the revelry of a banquet, at the instigation of Thaïs, an Athenian courtesan. At the beginning of 330, Alexander marched from Persepolis into Media, in pursuit of Darius, whom he followed into Parthia, where the unfortunate king was murdered by Bessus (q. v.), satrap of Bactria. In 329 Alexander crossed the mountains of the Paropamisus (the Hindu Kush),

and marched into Bactria against Bessus, who was betrayed to him and put to death. During the next two years he was chiefly engaged in the conquest of Sogdiana. He also crossed the Iaxartes (the Sir), and defeated several Scythian tribes north of that river. By the conquest of a mountain fortress he obtained possession of Roxana, the daughter of the Bactrian chief Oxyartes, whom he made his wife. It was about this time that he killed his friend Clitus in a drunken brawl. He had previously put to death his faithful servant Parmenion, on the charge of treason. In 327 he invaded India, and crossed the Indus, probably near the modern Attock. He met with no resistance till he reached the Hydaspes, where he was opposed by Porus, an Indian king, whom he defeated after a gallant resistance, and took prisoner, subsequently restoring to him his kingdom, and treating him with distinguished honour. He founded a town on the Hydaspes, called Bucephala, in honour of his horse Bucephalus, who died here, after carrying him through many victories. From thence he penetrated as far as the Hyphasis (Garra). This was the farthest point which he reached, for the Macedonians, worn out by long service, and tired

Statue of Alexander the Great. (Naples.)

of the war, refused to advance farther; and Alexander, notwithstanding his entreaties and prayers, was obliged to lead them back. He returned to the Hydaspes, and then sailed down the river with a portion of his troops, while the remainder marched along the banks in two divisions. He finally reached the Indian Ocean about the middle of 326. Nearchus was sent with the fleet to sail along the coast to the Persian Gulf (see NEARCHUS); and Alexander marched with the rest of his forces through Gedrosia, in which country his army suffered greatly from want of water and provisions. He reached Susa at the beginning of 325. Here he allowed himself and his troops some rest from their labours; and anxious to form his European and Asiatic subjects into one people, he assigned Asiatic wives to about eighty of his generals. He himself took a second wife, Barsiné, the eldest daughter of Darius. Towards the close of the year 325 he went to Ecbatana, where he lost his great favourite, Hephaestion. From Ecbatana he marched to Babylon, which he intended to make the capital of his empire, as the best point of communication between his eastern and western dominions. His schemes were numerous and gigantic, but he was cut off in the midst of them, being attacked by a fever, which was probably aggravated by the quantity of wine he had drunk at a banquet given to his principal officers, so that he died, after an illness of eleven days, in the month of May or June, B.C. 323, at the age of thirty-two, after a reign of twelve years and eight months. He appointed no one as his successor, but just before his death gave his ring to Perdiccas. Roxana was with child at the time of his death, and afterwards bore a son who is known by the name of Alexander Aegus (q. v.).

The body of Alexander was interred by Ptolemy in Alexandria, in a golden coffin, and divine honours were paid to him, not only in Egypt, but also in other countries. The sarcophagus in which the coffin was enclosed has been in the British Museum since 1802.

No character in history has afforded matter for more discussion than that of Alexander; and the exact quality of his ambition is to this day a subject of dispute. By some he is regarded as little more than an heroic madman, actuated by the mere desire of personal glory; others give him the honour of vast and enlightened views of policy, embracing the consolidation and establishment of an empire, in which commerce, learning, and the arts should flourish in common with energy and enterprise of every description. Each class of reasoners find facts to countenance their opinion of the mixed character and actions of Alexander. The former quote the wildness of his personal daring, the barren nature of much of his transient mastery, and his remorseless and unnecessary cruelty to the vanquished on some occasions, and capricious magnanimity and lenity on others. The latter advert to facts like the foundation of Alexandria, and other acts indicative of large and prospective views of true policy; and regard his expeditions rather as schemes of discovery and exploration than mere enterprises for fruitless conquest. The truth appears to embrace a portion of both these opinions. Alexander was too much smitten with military glory, and the common self-engrossment of the mere conqueror, to be a great and consistent statesman; while such was the strength of his intellect, and the light opened to him by success, that a glimpse of the genuine sources of lasting greatness could not but break in upon him. The history of Napoleon shows the nature of this mixture of lofty intellect and personal ambition, which has seldom effected much permanent good for mankind in any age.

In person this extraordinary individual was of the middle size, with a neck somewhat awry, but possessed of a fierce and majestic countenance. See Plut. *Alexander;* Arrian, *Exped. Alex.;* Droysen, *Geschichte Alexanders des Grossen* (1877); Freeman's *Historical Essays*, 2d series (1873); and Mahaffy, *Alexander's Empire* (1887).

After many dissensions and bloody wars among themselves, the generals of Alexander laid the foundations of several great empires in the three quarters of the globe. Ptolemy seized Egypt, where he firmly established himself, and where his successors were called Ptolemies, in honour of the founder of their kingdom, which subsisted till the time of Augustus. Seleucus and his posterity reigned in Babylon and Syria. Antigonus at first established himself in Asia Minor, and Antipater

Coin of Alexander the Great.

in Macedonia. The descendants of Antipater were conquered by the successors of Antigonus, who reigned in Macedonia till it was reduced by the Romans in the time of King Perseus. Lysimachus made himself master of Thrace; and Leonatus, who had taken possession of Phrygia, meditated for a while to drive Antipater from Macedonia. Eumenes established himself in Cappadocia, but was soon overpowered by his rival Antigonus, and starved to death. During his lifetime, Eumenes appeared so formidable to the successors of Alexander that none of them dared to assume the title of king.

The element of the wonderful in the campaigns of Alexander, and his tragic death at the height of his power, threw an intensely romantic interest around his figure, so that Alexander soon became the hero of romantic story, scarcely more wonderful than the actual, but growing from age to age with the myth-making spirit which can work as freely in fact as in fiction. The earliest form of the story which we know is the great romance connected with the name of Callisthenes (q. v.), which, under the influence of the popular tradition, arose in Egypt about A.D. 200, and was carried through Latin translations to the West, and through Armenian and Syriac versions to the East. It became widely popular during the Middle Ages, and was worked into poetic form by many writers in French and German. Alberich of Besançon wrote in Middle High German an epic on the subject in the first half of the twelfth century, which was the basis of the German Lamprecht's *Alexanderbuch* (ed. by Hinzel, Halle, 1884), also of the twelfth century. The French poets Lambert li Court and Alexandre de Bernay composed, between 1180 and 1190, a romance of Alexander, the twelve-syllable metre of which gave rise to the name *Alexandrines*. The German poem of Rudolf of Ems was based on the Latin epic of Walter of Châtillon, about 1200, which became henceforward the prevailing form of the story. In contrast with it is the thirteenth-century Old English epic of Alexander (in vol. i. of Weber's *Metrical Romances*, 1810), based on the version of Callisthenes. The story appears also in the East, worked up in conjunction with myths of other nationalities, especially the Persian. It appears in Firdusi, and, among later writers, in Nizami. From the Persians both the substance of the story and its form in poetical treatment have extended to Turks and other Mohammedans, who have interpreted Alexander as the *Dsulkarnein* ("two-horned") of the Korân, and to the Hindus, which last had preserved no independent traditions of Alexander. See Spiegel, *Die Alexandersage bei den Orientalen* (Leip. 1851), and Paul Meyer, *Alexandre le Grand dans la Littérature Française au Moyen-âge* (2 vols. 1886).

Alexander. The name of several kings of Egypt. See PTOLEMAEUS.

Alexander. The name of several kings of Epirus. (1) Surnamed MOLOSSUS, the brother of Olympias, and successor to Arybas. He came into Italy to aid the Tarentines against the Romans, and used to say that while his nephew, Alexander the Great, was warring against women (meaning the effeminate nations of the East), he was fighting against men (Just. xvii. 3; Liv. viii. 17 and 27). He was slain by a Lucanian while crossing the river Acheron in Bruttium (Just. xii. 2). (2) The son of the celebrated Pyrrhus. To avenge the death of his father, who had been slain at Argos, fighting against Antigonus, he seized upon Macedonia, of which the latter was king. He was soon, however, driven out, not only from Macedonia, but also from his own dominions, by Demetrius, son of Antigonus. Taking refuge, on this, among the Acarnanians, he succeeded, by their aid, in regaining the throne of Epirus (Just. xxvi. 3; id. xxviii. 1; Plut. *Pyrr.* 34).

Alexander. The name of several princes of Judaea. (1) IANNAEUS, monarch of Judaea, son of Hyrcanus, and brother of Aristobulus, to whom he succeeded, B.C. 106. He was a warlike prince, and displayed great ability in the different wars in which he was engaged during his reign. Driven from his kingdom by his subjects, who detested him, he took up arms against them, and waged a cruel warfare for the space of six years, slaying upwards of fifty thousand of his foes. Having at last re-entered Jerusalem, he crucified, for the amusement of his concubines, eight hundred of his revolted subjects, and at the same time caused their wives and children to be massacred before their eyes. Being re-established on the throne, he made various conquests in Syria, Arabia, and Idumea, and finally died of intemperance at Jerusalem, B.C. 76, after a reign of twenty-seven years (Josephus, *Ant. Iud.* xvii. 22, etc.).

(2) The son of Aristobulus II., was made prisoner, together with his father, by Pompey, but managed to escape while being conducted to Rome, raised an army, and made some conquests. Hyrcanus, son of Alexander Iannaeus, being then on the throne, solicited the aid of the Romans, and Mark Antony, being sent by Gabinius, defeated Alexander near Jerusalem. After standing a siege for some time in the fortress Alexandreion, he obtained terms of peace; but not long after, having taken up arms for Caesar, who had released his father, he fell into the hands of Metellus Scipio, and was beheaded at Antioch (Josephus, *Ant. Iud.* xiv. 13).

(3) The son of Herod the Great, put to death by his father, along with Aristobulus his brother, on false charges brought against them by Pheroras their uncle, and Salomé their aunt (Josephus, *Ant. Iud.* xvi. 17).

Alexander. The name of several kings of Syria. (1) Surnamed BALAS, a person of low origin, who pretended to be the son of Antiochus IV. Epiphanes, and reigned in Syria B.C. 150–146. He was defeated and dethroned by Demetrius II. Nicator. (2) Surnamed ZEBĪNA or ZABĪNAS, son of a merchant, was set up by Ptolemy Physcon as a pretender to the throne of Syria, B.C. 128. He was defeated by Antiochus Grypus, by whom he was put to death, 122.

Alexander Aegus. The son of Alexander the Great and Roxana, born shortly after the death of his father, in B.C. 323, and acknowledged as

the partner of Philip Arrhidaeus in the Empire, under the guardianship of Perdiccas, Antipater, and Polysperchon, in succession. Alexander and his mother, Roxana, were imprisoned by Cassander when he obtained possession of Macedonia in 316, and remained in prison till 311, when they were put to death by Cassander.

Alexander Sevērus. See SEVERUS.

Alexandra (Ἀλεξάνδρα). See CASSANDRA.

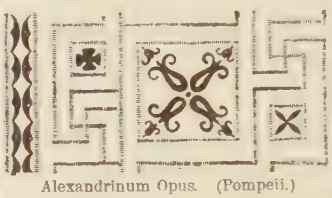
Alexandrĭa (Ἀλεξάνδρεια, and in Cicero's time written ALEXANDRĒA). The name of several cities founded by Alexander the Great, and named after him. Of these, the most important are: (1) The capital of Aegyptus (q. v.) under the Ptolemies, ordered by Alexander to be founded in B.C. 332. It was built on the narrow neck of land between the lake Mareotis and the Mediterranean, opposite to the island of Pharos, which was joined to the city by an artificial dike. On this island a great light-house was built in the reign of Ptolemy Philadelphus (283). Under the care of the Ptolemies, as the capital of a great kingdom, and commanding by its position all the commerce of Europe with the East, Alexandria soon became the most wealthy and splendid city of the known world. It was celebrated for its magnificent library, founded by the first two Ptolemies. The library suffered severely by fire when Iulius Caesar was besieged in Alexandria, and was finally destroyed by Amrou, the lieutenant of the calif Omar, in A.D. 651. Under the Romans, Alexandria retained its commercial and literary importance, and became also a chief seat of Christianity and theological learning. Its site is now covered by a mass of ruins. Outside the walls, to the south, the column of Diocletian ("Pompey's Pillar") still remains; but the two obelisks known as "Cleopatra's Needles," which once adorned the gate-way of the royal palace, have been removed — one to London in 1878, and one to New York in 1881. The modern city stands on the dike uniting the island of Pharos to the mainland. (2) ALEXANDRIA TROAS, also TROAS simply, on the sea-coast south-west of Troy, was enlarged by Antigonus, hence called Antigonia, but afterwards it resumed its first name. It flourished greatly, both under the Greeks and the Romans; and both Iulius Caesar and Constantine thought of establishing the seat of the Empire in it. (3) ALEXANDRIA AD ISSUM, a seaport at the entrance of Syria, a little south of Issus. (4) In Susiana, afterwards ANTIOCHIA, afterwards CHARAX SPASINI, at the mouth of the Tigris, built by Alexander; destroyed by a flood; restored by Antiochus Epiphanes. It was the birthplace of Dionysius Periegetes and Isidorus Characenus.

Alexandrian Canon. See CANON ALEXANDRINUS.

Alexandrian Library. See BIBLIOTHECA.

Alexandrian Museum. See MUSEUM.

Alexandrian Period. The period of Greek literature, from B.C. 300 to 30, during which Alexandria was the intellectual capital of the Hellenic world. See ALEXANDRIAN SCHOOL.



Alexandrian School. After the decline of liberty and intellectual cultivation in Greece, Alexandria, in Egypt, became the home and centre of science and literature. The time in which it held this position may be divided into two periods—the first including the reigns of the Ptolemies, from B.C. 323 to 30; the second, from B.C. 30 to A.D. 640, or from the fall of the Ptolemaean dynasty to the irruption of the Arabs. During the first period the intellectual activity at Alexandria was mainly of a purely literary or scientific kind; but during the second, partly from Jewish and Christian influences, it developed into the speculative philosophy of the Neo-Platonists (q. v.) and the

religious philosophy of the Gnostics. See GNOSTICI.

Ptolemy Soter, the first ruler who introduced and patronized Greek science and literature in Alexandria, was followed by a still more munificent patron, Ptolemy Philadelphus, who regularly established the celebrated Alexandrian Library and Museum, which had been begun by his father. This Museum was somewhat like a modern university, and within its walls learned scholars both lived and taught. (See MUSEUM.) The loss of Greek freedom soon took from Greek thought much of its boldness and originality, but thinkers found substitutes for these in learned research and criticism. They studied grammar, prosody, mythology, astronomy, and medicine, and unfolded their information in long didactic poems in epic form, full of learning, and marked by perfect mastery of verse, but often dull to a degree, and marred by numerous obscure and recondite allusions. Examples of these are the *Argonautica* of Apollonius Rhodius, and the *Alexandra* or *Cassandra* of Lycophron. Other writers of epics were Euphorion, Nicander of Colophon, Dionysius Periegetes, Rhianus, and Oppianus. Many poets employed lyric and elegiac forms for subjects completely unsuited for poetic treatment, which are yet happily expressed in verse. The earliest of the elegiac poets was Philetas of Cos; the greatest, perhaps, Callimachus (q. v.). Among the lyric poets were Phanocles, Hermesianax, Alexander of Aetolia, and Lycophron. Epigrams and dramas were also written, but of the latter scarcely anything has survived beyond the names of the seven tragedians called the Alexandrian Pleiades. Out of the Amoebean verse or bucolic mime—a rudimentary kind of drama—grew the best product of Alexandrian poetry, the idyls of Theocritus (q. v.). Still more active than the poets were the grammarians, to whom it is mainly due that we now possess the masterpieces of Greek literature at all. They were both philologists and littérateurs, who explained things as well as words, and were thus a kind of encyclopædists. Among these the greatest were Zenodotus of Ephesus, Aristophanes of Byzantium, and Aristarchus of Samothrace; only less eminent critics were Alexander of Aetolia, Lycophron, Callimachus, and Eratosthenes. Their chief service consists in having collected the writings then existing, prepared corrected texts, and preserved them for future generations. See TEXTUAL CRITICISM.

The Alexandrian School had a spirit and character altogether different from the previous intellectual life of Greece. From the attention paid to the study of language, it was natural that correctness, purity, and elegance of expression should be especially cultivated; and in these respects many of its writers are distinguished. But what no study and no effort could give—the spirit that animated the earlier Greek poetry—was in most of these works wanting. In place of it, there was displayed greater art in composition; what had formerly been done by genius was now to be done by the rules furnished by criticism. Where imitation and rule thus took the place of inspiration, each generation of disciples became more artificial and lifeless than their masters, until ultimately criticism degenerated into frivolous fault-finding, and both prose and poetry became laboured affectation. Still, for about four centuries, the Alexandrian School was the centre of learning and science in the ancient world. Counting from its origin to its complete extinction, it lasted a thousand years; and its lasting influence upon Latin literature in the Augustan age must not be forgotten. We find it in all the contemporary poets, and notably in Vergil, the greatest poet of the group. See Matter, *Histoire de l'École d'Alexandrie*, 2 vols. (2d ed. Paris, 1840–44); St.-Hilaire, *De l'École d'Alexandrie* (Paris, 1845); Simon, *Histoire de l'École d'Alexandrie*, 2 vols. (Paris, 1844–45); and especially Vacherot, *Histoire Critique de l'École d'Alexandrie*, 3 vols. (Paris, 1846–51).

Alexandrīnum Opus. A kind of mosaic work used for the flooring of rooms, its distinctive character lying in the fact that the pattern was composed of only two colours, e. g. red and black on a white ground, as in the accompanying specimen found at Pompeii in a house. See the article MUSIVUM OPUS.

Alexandrinum Opus. (Pompeii.)

Alexis (Ἀλεξις). One of the most prolific and important writers of the Middle Attic Comedy, and uncle to Menander (q. v.). He was born at Thurii, B.C. 392, and is said to have lived to the age of one hundred and six years, and to have died on the stage with the crown of victory on his head. Some two hundred and forty-five plays are attributed to him, of which numerous extracts are still extant and display both wit and elegance. They are edited by Hirschig (1840). See COMOEDIA.

Alfēnus Varus. A Roman jurist, originally a shoemaker or barber at Cremona. Cf. Horace, *Sat.* i. 3, 130.

Alga. A general name used by the Roman writers of all aquatic plants that, living in the water, are thrown up on the shores or river-banks. See FUCUS.

Algĭdus Mons. A range of mountains in Latium, extending south from Praeneste to Mt. Albanus, cold, but covered with wood, and containing good pasturage. On it was situated the town of Algidum. It was an ancient seat of the worship of Diana. From it the Aequi usually made their incursions into the Roman territory.

Alĭca. A kind of grain resembling spelt, and also known as *zea*. The name is given likewise to a soup or porridge made of this grain, and much relished by the Romans.

Alicŭla. A short cloak coming down to the elbows, worn by boys, and spoken of as worn by boys and huntsmen. Rich derives the name from the resemblance of the garment to wings (*alae*).

Aliēnus Caecĭna. See CAECINA.

Alimentarii Puĕri et Puellae. In the Roman Republic the poorer citizens were assisted by public distributions of corn, oil, and money, which were called *congiaria*. (See CONGIARIUM.) These distributions were not made at stated periods, nor to any but grown-up inhabitants of Rome. The emperor Nero first conceived the notion of extending them, not only to other Italian towns, but also to children (Aurel. Vict. *Epit.* xii. 4); and Trajan appointed them to be made every month, both to orphans and to the children of poor parents. The children who received them were called *pueri et*

puellae alimentarii, and also (from the emperor) *pueri puellaeque Ulpiani;* and the officers who administered the institution were called *quaestores pecuniae alimentariae, quaestores alimentorum, procuratores alimentorum*, or *praefecti alimentorum*.

A decree of Hadrian (*Dig.* 34, tit. 1, 5, 14) says that boys enjoyed the benefits of this institution up to their eighteenth and girls up to their fourteenth year; and we learn from an inscription (Fabretti, 235, 619) that a boy four years and seven months old had received nine times the ordinary monthly distribution of corn. See Desjardins, *Disp. Hist. de Tabulis Alimentariis.*

Alimentus, L. Cincius. A Roman annalist, antiquary, and jurist, who was praetor in Sicily B.C. 209, and wrote, in Greek, several works, of which the best known was his *Annales*, which contained an account of the Second Punic War. See the monograph by Plüss (Bonn, 1865).

Aliphēra (Ἀλίφηρα). A town in Arcadia, on the borders of Elis, south of the river Alpheus. (Polyb. iv. 77.)

Alipĭlus (παρατίλτριος). A slave who attended on bathers to remove the superfluous hair from their bodies. Tweezers (*volsillae*) were used, or depilatory ointment. See Mayor's note on Juv. xi. 157, and the article Psilothrum.

Aliptae (ἀλείπται). Persons who anointed the bodies of the athletes. The chief object of this anointing was to close the pores of the body, in order to prevent much perspiration and the weakness consequent thereon. To effect this object, the oil was not simply spread over the surface of the body, but also well rubbed into the skin. The oil was mixed with fine African sand, several jars full of which were found in the baths of Titus. One of these is now in the British Museum. This preparatory anointing was called ἡ παρασκευαστικὴ τρίψις. The athlete was again anointed after the contest, in order to restore the tone of the strained muscles: this anointing was called ἡ ἀποθεραπειά. He then bathed, and had the dust, sweat, and oil scraped off his body by means of an instrument similar to the *strigil* of the Romans, and called στλεγγίς, and afterwards ξύστρα. They were thus a kind of medical trainers, ἰατραλείπται. See Athletae.

Among the Romans, the aliptae were slaves. They, too, like the Greek ἀλείπται, appear to have attended to their masters' constitution and mode of life. They were also called *unctores*. They used in their operations a kind of scraper called *strigil*, towels (*lintea*), a cruse of oil (*guttus*), which was usually of horn, a bottle (see Ampulla), and a small vessel called *lenticula*. See Balneae.

Alīso. The modern Elsen; the site of a fortress built by Drusus in B.C. 11, at the junction of the Luppia (Lippe) and the Eliso (Alme). (Dio. Cass. iv. 33.)

Allia, or, less correctly, **Alia**. A small river flowing into the Tiber about eleven miles from Rome. It is memorable for the defeat of the Romans by the Gauls on its banks, July 16th, B.C. 390, or, according to Mommsen, 388. Hence the *dies Alliensis* was an unlucky day in the Roman calendar. See Dies; Fasti; Celtae.

Allīfae or **Alĭfae**. A town of the Samnites on the Vulturnus, celebrated for its manufacture of wine flagons; hence called *pocula Allifana*.

Alliteration. Alliteration is the repetition of the same letter or sound, either intentionally or unconsciously introduced to please the ear or to give additional emphasis to the words by making the sound more forceful. When used to any great extent, it is generally characteristic of a primitive literary taste, and is found in verse and prose that have not yet received their final polish. In Anglo-Saxon poetry it is one of the chief means of marking the metrical character of the lines, the important words being distinguished by likeness of sound, as in the following from the *Phoenix:*

> "Ne **F**orestes **F**naest, ne **F**yres blaest,
> Ne **H**aegles **H**ryre, ne **H**rymes dryre,
> Ne **S**unnan haetu, ne **S**incald," etc.

In Greek, alliteration, like assonance and rhyme, plays no important part, because the earliest Greek verse that we possess represents a stage of development in the art of poetry when such crude devices had already been discarded. Only in some few striking passages does alliteration still appear to be a conscious device of the poet, as in the famous line of Sophocles (*Oed. Tyr.* 371), when Oedipus taunts Tiresias with his blindness:

> τυφλος τά τ' ὦτα τόν τε νοῦν τά τ' ὄμματ' εἶ.

But in Latin of all periods it is an important element of composition and style, less, however, in the Augustan writers than in their predecessors and successors. Ennius has some extraordinary alliterations, the most absurd being his

> "O Tite tute Tati, tibi tanta tyranne tulisti!"

found among the fragments of his *Annales*. Plautus uses alliteration with comic effect. Lucretius has a definite system, using *p* and *m* to denote effort, as

> "—— magnos manibus divellere montis" (i. 201);

while *v* denotes pity or sorrow, as in the famous line, with its wailing sound,

> "Viva videns vivo sepeliri viscera busto" (v 993).

See the articles Onomatopoeia; Rhyme; and on the general subject, Buchhold, *De Paromoeoseos apud Veterum Romanorum Poett. Usu* (Leipzig, 1883); Ebrard, *Allit. in d. Lat. Sprache* (Bayreuth, 1882); Boetticher, *De Allitterationis apud Romanos Vi et Usu* (Berlin, 1884); Raebel, *De Usu Adnominationis apud Rom. Poett. Com.* (Halle, 1887); Munro, *Introduct. to Lucretius* (Camb. 1886); Cruttwell, *Hist. of Roman Literature* (1886), pp. 238–239.

Allium. Garlic, said by Horace (*Epod.* iii. 4) to be fit only for reapers. It was a favourite food with Roman soldiers and sailors, and with the Egyptians.

Allobrŏges. A powerful people of Gaul, dwelling between the Rhodanus (Rhone) and the Isara (Isère), as far as the Lacus Lemannus (Lake of Geneva), consequently in the modern Dauphiné and Savoy. Their chief town was Vienna on the Rhone. They were conquered in B.C. 121 by Q. Fabius Maximus Allobrogicus.

Almanac. See Fasti.

Almo. A small river flowing into the Tiber just south of Rome, in whose waters the statues of Cybelé (q. v.) were annually washed. (Ovid, *Fasti*, iv. 337).

Alōa (τὰ ἀλῶα). An Athenian festival celebrated at Eleusis in honour of Dionysus and Demeter, the inventors of the plough and protectors of the fruits of the earth. See A. Mommsen, *Heortologie*, p. 320 foll.

Aloădae (Ἀλωάδαι) or **Aloīdae** (Ἀλωεῖδαι)

Sons of Poseidon by Iphimedia, the wife of Aloeus, son of Canacé and Poseidon; their names were Ephialtes and Otus. They grew every year an ell in breadth and a fathom in length, so that in nine years' time they were thirty-six feet broad and fifty-four feet high. Their strength was such that they chained up the god Ares and kept him in a brazen cask for thirteen months, till their stepmother Eriboea betrayed his whereabouts to Hermes, who came by stealth and dragged his disabled brother out of durance. They threatened to storm heaven itself by piling Ossa on Olympus and Pelion on Ossa, and would have done it, says Homer, had not Apollo slain them with his arrows ere their beards were grown. The later legend represents Ephialtes as in love with Heré, and Otus with Artemis. Another myth represents Artemis as slaying them by craft in the island of Naxos. She runs between them in the form of a hind; they hurl their spears, and wound each other fatally. In the later legend they expiate their sins in the lower world by being bound with snakes to a pillar, back to back, while they are incessantly tormented by the screeching of an owl. On the other hand, they were worshipped as heroes in Naxos, and in the Boeotian Ascra were regarded as the founders of the city and of the worship of the Muses on Mount Helicon.

Aloïdae. See ALOADAE.

Alōeus (Ἀλωεύς). The son of Poseidon and Canacé, who married Iphimedia, the daughter of Tripos. His wife was beloved by Poseidon, by whom she had two sons, Otus and Ephialtes, who are usually called the *Aloadae*, from their reputed father Aloeus. See ALOADAE.

Alogiou graphé (*ἀλογίου γραφή*). An action which might be brought at Athens before the *logistae* against all ambassadors who failed to pass their accounts when their term of office expired.

Alŏpé (Ἀλόπη). (1) A town of the Opuntian Locris, opposite Euboea. (2) The daughter of Cercyon of Eleusis, and, by Poseidon, mother of Hippothoön (q. v.); after whose birth her father was going to kill her, but the god changed her into a fountain.

Alopĕcé (Ἀλωπεκή). A deme of Attica belonging to the tribe Antiochis.

Alpēnus (Ἀλπηνός). A town of the Epicnemidian Locri, at the entrance of the Pass of Thermopylae.

Alpes (Ἄλπεις). A name derived probably from the Keltic *alb* or *alp*, "a height." The mountains forming the boundary of northern Italy, which were distinguished by the following names. We enumerate them in order from west to east. (1) Alpes Maritimae, the Maritime or Ligurian Alps, from Genua (Genoa), where the Apennines begin, run west as far as the river Varus (Var), and then north to Mt. Vesulus (Monte Viso), one of the highest points of the Alps. (2) Alpes Cottiae or Cottianae, the Cottian Alps (so called from a King Cottius in the time of Augustus), from Monte Viso to Mont Cenis, contained Mt. Matrona, afterwards called Mt. Ianus or Ianua (Mont Genèvre), across which Cottius constructed a road, which became the chief means of communication between Italy and Gaul. (3) Alpes Graiae, also Saltus Graius (the name is probably Keltic, and has nothing to do with Greece), the Graian Alps, from Mont Cenis to the Little St. Bernard inclusive, contained the Ingum Cremonis (le Cramont) and the Centronicae Alpes, apparently the Little St. Bernard and the surrounding mountains. The Little St. Bernard, which is sometimes called Alpis Graia, is probably the pass by which Hannibal crossed the Alps; the road over it, which was improved by Augustus, led to Augusta (Aosta) in the territory of the Salassi. (4) Alpes Penninae, the Pennine Alps, from the Great St. Bernard to the Simplon inclusive, the highest portion of the chain, including Mont Blanc, Monte Rosa, and Mont Cervin. The Great St. Bernard was called Mons Penninus, and on its summit the inhabitants worshipped a deity whom the Romans called Iupiter Penninus. The name is probably derived from the Keltic *pen*, "a height." (5) Alpes Lepontiorum or Lepontiae, the Lepontian or Helvetian Alps, from the Simplon to the St. Gothard. (6) Alpes Rhaeticae, the Rhaetian Alps, from the St. Gothard to the Orteler by the pass of the Stelvio. Mt. Adula is usually supposed to be the St. Gothard. (7) Alpes Tridentinae, the mountains of southern Tyrol, in which the Athesis (Adige) rises, with the pass of the Brenner. (8) Alpes Noricae, the Noric Alps, northeast of the Tridentine Alps, comprising the mountains in the neighbourhood of Salzburg. (9) Alpes Carnicae, the Carnic Alps, east of the Tridentine, and south of the Noric, to Mt. Terglu. (10) Alpes Iuliae, the Julian Alps, from Mt. Terglu to the commencement of the Illyrian or Dalmatian mountains, which are known by the name of the Alpes Pannonicae. The Alpes Iuliae were so called because Iulius Caesar or Augustus constructed roads across them. They are also called Alpes Venetae.

Alphabet (*ἄλφα-βῆτα, alphabētum*). A name given to any collection of graphic representations of sounds, and derived from the names of the first two letters of the Greek alphabet. The word *alphabetum* is not found in early writers. It occurs in Tertullian, *Haeret.* 50, and from his time on. The classical writers used the word *litteratura*, or *litteratura prima* (Tac. *Ann.* xi. 13). Quintilian (i. 1, 24) uses the circumlocution *litterarum nomina et contextum*. (Cf. Juv. xiv. 209.)

The alphabet is the oldest existing monument of civilization. In all, some two hundred varieties have existed, of which only fifty are now in use. They are all modifications of the primitive Phœnician alphabet, itself probably derived from the ideographic signs of the Egyptians. Thus it is seen that all writing in its origin is due to the use of pictures or symbols standing for either things or abstractions. These ultimately became phonographic, representing (1) syllables and (2) elementary sounds. The Greek and Latin alphabets are, of course, of the second class.

I. THE GREEK ALPHABET.—Many Greek alphabets are known from inscriptions on stone or pottery, varying according to the district or the date; but the letters in which Greek literature, properly so called, has descended to us belong to the Ionic alphabet, which, being formally adopted at Athens in B.C. 403, became that generally used by all Hellenes. Like the other Greek alphabets, it is in general identical, in the names, forms, and number of the letters, with the Phœnician or old Semitic alphabet. The Greeks must have obtained their knowledge of it from the trading settlements of the Phœnicians in the Aegean not later than the tenth century B.C. This belief was, indeed, held by the Greeks themselves; for though their legends

ascribe the perfection of letters to various individuals, such as Palamedes, and Simonides of Ceos, the actual introduction of the alphabet was almost universally credited to Cadmus (q. v.), a Phœnician settled in Boeotia (Herod. v. 58, 59)—the name Cadmus being undoubtedly the same as the Hebrew *Kadmi*, "an Eastern." Further proof is found in the fact that the names of most of the Greek letters are pure Semitic words. (See the table above.)

Scholars are nearly all agreed that writing was known to the Greeks in the Homeric Age (see *Iliad*, vi. 168), and it is positively stated that lists of victors were kept at Olympia from the year B.C. 776, while we actually possess inscriptions of the seventh century. In the sixth century we hear of geographers, chroniclers, genealogists, legislators, and of schools for teaching the alphabet (Herod. vi. 27), showing that by this period a knowledge of writing must have been very generally diffused. As all Greek alphabets differ from the Phœnician in having characters for the vowels (a striking fact), it is necessary to assume that a knowledge of writing was diffused over Greece from a common centre, and that this diffusion occupied a considerable time. (See Mahaffy, *Greek Literature*, ii. 2, and the same writer in the *Journal of Hellenic Studies*, ii. 162.)

At the date of the oldest Greek inscriptions, the vowels *a*, *ε*, *o* had been developed out of the Phœnician breath-signs *aleph*, *hé*, and *áyin*; and *ι* and *υ* out of the Phœnician semi-consonants *yod* and *vau*. At this period the writing was still retrograde, i. e. from right to left, after the Semitic fashion. A little later the direction is zigzag, or *boustrophedon* (*βουστροφηδόν*), "plough-wise," as an ox turns when ploughing, the lines proceeding alternately from right to left and from left to right. In both these styles the writer often began at the bottom of the roll, and wrote each succeeding line above the last. In the sixth century the practice of writing all the lines from left to right was generally adopted. At about the same time two more vowels were evolved—*η* out of the Semitic *cheth*, and *ω* from *o*. The character *φ* had been differentiated out of *θ*, *χ* out of *κ*, and *ψ* (probably) out of *φ*. The sounds of *F* (*vau*) and Q (Semitic *kōph*) began to disappear, and the characters as alphabetic symbols dropped out of use. Up to the third century B.C. only the ordinary capitals were employed, but after this time the more rounded forms known as "uncials" were introduced, together with cursive forms in correspondence. The so-called "minuscules," or small letters, familiar to us in our modern books, were not evolved until the seventh or eighth century A.D. from a combination of uncials and cursives. From a very early date the Greek alphabet showed a tendency to separate into two types—the Eastern, or Ionic, and the Western, or Chalcidian. The final difference between the two will be seen by the following comparison:

Ionic (*Eastern*) *Alphabet.*—Α Β Γ Δ Ε Ζ Η Θ Ι Κ Λ Μ Ν Ξ Ο Π Ρ Σ Τ Υ Φ Χ Ψ Ω.

Chalcidian (*Western*) *Alphabet.*—Α Β Γ Δ Ε F Ζ Η (=h) Θ Ι Κ L Μ Ν Ο Π Q Ρ Σ Τ Υ Χ (=x) Φ Ψ (=kh).

II. The Latin Alphabet.—The Chalcidian or Western Greek alphabet was carried by the Chalcidians to Italy as early as the ninth century B.C. From it in Italy sprang five local Italic alphabets—the Oscan, Umbrian, Etruscan, Faliscan, and Latin. (See Dialects.) As the Latins ultimately attained to the intellectual and political leadership

of Italy, the last-named alphabet at last supplanted the other four, and became the only one in general use throughout the Roman Empire, and later of Christendom, thus becoming the prevailing alphabet of the world.

The Latin alphabet, received originally from the Chalcidian Greeks of Cumae in Campania, has adhered more closely than any of the others to the original Phœnician type, discarding only two letters and adding only three. Its archaic character as compared with that of the Ionic Greek alphabet is seen (1) by its retention of the older signs for L and S; (2) by retaining the older value of H; (3) by retaining Ϝ (*vau*) and Q (*kōph*).

At about the year B.C. 100 the letters Y and Z were reintroduced into the Latin alphabet, but are only used in words borrowed from the Greek, in which they express the non-Latin sounds of Υ and Ζ. Originally the Latin C had the power of G, but later, when K was disused, C took its place and sound, and the new character G was invented (about B.C. 312) to express the sound formerly denoted by C. In abbreviations, however, such as C., Cn., for Gaius, Gnaeus, the character C has its old power and =G. The emperor Claudius (about A.D. 44) tried to introduce three new symbols into the alphabet, as follows: (1) the inverted digamma Ⅎ, to make the consonantal sound of V (i. e. the *w* sound); (2) the character known as anti-sigma Ↄ, to express the sound of the Greek Ψ (*ps* or *bs*); and (3) the sign Ⱶ, to express the sound of the Greek *υ*, i. e. of French *u*, or German *ü*. These characters never secured any general adoption. The character V was not developed until the tenth century A.D. as distinct from U; and J, as distinct from I, is no older than the fifteenth century. Previously, I and U had been employed as medial and J and V as initial characters to denote the same letters.

As in Greek, so in Latin, cursive forms arose to replace in part the angular forms of the old capital letters. These cursive characters were used chiefly in correspondence and in business, and are best known to us from the *graffiti* found on the walls of Pompeian houses. From the Roman cursive hand our own minuscules were developed.

For further information, see the articles ABBREVIATIONS; BOUSTROPHEDON; EPIGRAPHY; GRAFFITI; LOGISTICA; PALÆOGRAPHY; PRONUNCIATION; TEXTUAL CRITICISM; and the following works: Kirchhoff, *Geschichte des griechischen Alphabets* (Berlin, 1877); Faulmann, *Geschichte der Schrift* (Vienna, 1880); Humphreys, *Origin of the Art of Writing* (London, 1855); and Isaac Taylor, *The Alphabet*, 2 vols. (London, 1883).

Alphesiboea (Ἀλφεσίβοια) or **Arsinoë** (Ἀρσινόη). Daughter of Phegeus and first wife of Alcmaeon, whom, though unfaithful, she continued to love, and was angry with her brothers for killing him. Her brothers shut her up in a box, and brought her to Agapenor, king of Tegea, pretending that she had killed her husband. Here she came by her end, having compassed her brothers' death by the hand of Alcmaeon's sons.

Alphēus (Ἀλφειός). The chief river of the Peloponnesus, rising in the southeastern part of Arcadia, flowing through Arcadia and Elis, not far from Olympia, and falling into the Ionian Sea. In some parts of its course the river flows underground; and this subterranean descent gave rise to the story about the river-god Alpheus and the nymph Arethusa. The latter, pursued by Alpheus, was changed by Artemis into the fountain of Arethusa in the island of Ortygia at Syracuse; but the god continued to pursue her under the sea, and attempted to mingle his stream with the fountain in Ortygia.

Alpīnus. A name given by Horace to a contemporary poet, supposed to have been M. Furius Bibaculus (q. v.).

Alsium. An ancient Etrurian town near Caeré.

Altāre. See ARA.

Althaea (Ἀλθαία). The daughter of Thestius, wife of Oeneus, king of Calydon, mother of Tydeus, Meleager (q. v.), and Deïanira.

Altīnum. A rich trading town of the Veneti, in the north of Italy, at the mouth of the river Silis.

Altis (Ἄλτις). The sacred grove near Olympia (q. v.) in which the Olympic Games were celebrated.

Aluntium (Ἀλόντιον) or **Haluntium.** A town in northern Sicily celebrated for its wines.

Alus (Ἄλος) or **Halus** (Ἅλος). A town in Phthiotis in Thessaly.

Alūta. See CALCEUS.

Alūtae (ἀλῦται). Persons charged with keeping order at the public games of Greece, but mentioned only in connection with the Olympic Games. Elsewhere the officers are called *μαστιγοφόροι*.

Alyattes (Ἀλυάττης). A king of Lydia, who, in B.C. 617, succeeded his father Sadyattes, and was himself succeeded by his son Croesus (Herod. i. 16). The tomb of Alyattes, north of Sardis, near the lake Gygaea, which consisted of a large mound of earth raised upon a foundation of great stones, still exists. It is nearly a mile in circumference.

Alyzia (Ἀλυζία). A town in Acarnania, near the sea, opposite Leucas, containing a temple sacred to Heracles. (Thucyd. vii. 31.)

Amalthēa (Ἀμάλθεια). A figure in Greek mythology. The name was sometimes applied to a goat which suckled the new-born Zeus in Crete, while bees brought him honey, and which was therefore set among the stars by her nursling; sometimes to a nymph who was supposed to possess a miraculous horn, a symbol of plenty, and whose descent was variously given. According to another legend she is the daughter of the Cretan king Melisseus, and brings up the infant god on the milk of a goat, while her sister Melissa (a bee) offers him honey. The horn of the goat is given to her by Zeus, with the promise that she shall always find in it whatever she wishes. From her the cornucopia passed into the possession of the river-god Acheloüs, who exchanged it for his own horn, which Heracles had broken off. It is also assigned to Dionysus, to Plutus, and to other gods of earthly felicity. See CORNU COPIAE; ZEUS.

Amalthēum or **Amalthēa.** A villa of Atticus in Epirus, perhaps originally a shrine of the nymph Amalthea, which Atticus converted into a beautiful summer retreat. Cicero, in imitation, constructed a similar retreat on his estate at Arpinum. Cf. Cic. *Ad Att.* ii.

Amanuensis (*a manu servus*, ὑπογραφεύς). A slave or freedman employed in writing at his master's dictation. The *amanuensis* is not to be

confounded with another sort of slave, *ad manum servus*, who was a general factotum, kept ready at hand for any kind of business. Suet. *Nero*, 44.

Amarăcus (*ἀμάρακος*). A plant, probably the common marjoram.

Amaranthus (*ἀμάραντος*). The amaranth, or "never-fading," as its name implies. The modern Italians call it *fior di velluto*, or "velvet-flower."

Amarynthia (*Ἀμαρύνθια*). A festival of Artemis Amarynthia or Amarysia, celebrated originally at Amarynthus, in Euboea, and afterwards at several places in Attica, such as Athmoné. See Strabo, x. p. 448; Pausan. i. 31, § 3.

Amarynthus (*Ἀμάρυνθος*). A town in Euboea, seven stadia distant from Eretria, and noted for its splendid temple of Artemis, who is hence called Amarynthia or Amarysia.

Amasēnus. A small river in Latium, which, after uniting with the Ufens, falls into the sea between Circeii and Terracina, though the greater part of its waters are lost in the Pontine Marshes.

Amasīa (*Ἀμάσεια*). The capital of the kings of Pontus, a strongly fortified city on both banks of the river Iris. It was the birthplace of Mithridates the Great and of the geographer Strabo.

Amāsis (*Ἄμασις*). A king of Egypt, B.C. 570–526, succeeding Apries, whom he dethroned. During his long reign Egypt was in a very prosperous condition, and the Greeks were brought into much closer intercourse with the Egyptians than had existed previously. Both Pythagoras and Solon are said to have visited him. For his alliance with Polycrates, see the article POLYCRATES.

Amastris (*Ἄμαστρις*). (1) The wife of Xerxes, and mother of Artaxerxes I. She was of a cruel and vindictive character. (Herod. vii. 61.) (2) Also called Amastriné, niece of Darius, the last king of Persia. She married first Craterus; then Dionysius, tyrant of Heraclea in Bithynia, B.C. 322; and last Lysimachus, B.C. 302. She was drowned by her two sons about B.C. 288. (3) A city on the coast of Paphlagonia, built by Amastris after her separation from Lysimachus.

Amāta. The wife of King Latinus, and mother of Lavinia. She opposed the marriage of Lavinia to Aeneas, because she had already promised her to Turnus. When she heard that Turnus had fallen in battle, she hanged herself. (Verg. *Aen.* xii. 603). See AENEAS; TURNUS.

Amăthus (*Ἀμαθοῦς*). A town on the southern coast of Cyprus, with a celebrated temple of Aphrodité, who was hence called Amathusia. There were copper-mines in the neighbourhood of the town.

Amazŏnes (*Ἀμαζόνες*) or **Amazonĭdes** (*Ἀμαζονίδες*). "Breastless." A mythical race of warlike women, who are said to have come from the Caucasus, and to have settled in Asia Minor, about the river Thermodon, where they founded the city Themiscyra. They were governed by a queen, and the female children are said to have had their right breasts cut off that they might use the bow with more ease. They constantly occur in Greek mythology. One of the labours imposed upon Heracles was to take from Hippolyté, the queen of the Amazons, her girdle. (See HERACLES.) In the reign of Theseus they invaded Attica. Towards the end of the Trojan War, they came, under their queen, Penthesilea, to the assistance of Priam; but she was killed by Achilles. In works of art, the Amazons are always represented with two breasts, often on horseback, and in Scythian or Grecian dress, armed with shield, axe, spear, bow, quiver, etc. Phidias, Polyclitus, and Cresilas are among the famous artists in antiquity who made statues of them. The traditional derivation of the word, from *ἀ* priv. and *μαζός*, is doubtless fanciful, and is not even supported by ancient works of art, which usually show the breasts unmutilated.

Amazon.

Ambacti. According to Festus, the Gallic name for slaves. They are mentioned by Caesar (*B. G.* vi. 15).

Ambarri. A people of Gaul, dwelling east of the Aedui (q. v.), on the river Arar (Saône).

Ambarvalia. A rural festival among the Romans for the purification (*lustratio*) of the country, and for invoking the blessing of Ceres upon the fruits of the earth. The name is explained by Servius (*ad* Verg. *Ecl.* iii. 77) as given because the victim *ambit arva*.

There were two kinds of Ambarvalia, private and public. The private Ambarvalia are those described by Vergil in detail, and with singular beauty, *Georg.* i. 338 foll. The victims (Cato, *R. R.* 141) were led three times round the cornfields, before the sickle was put in, accompanied by a crowd of merry-makers (*chorus et socii*), the reapers and servants dancing and singing the praises of Ceres, while they offered her libations of milk, honey, and wine. The public Ambarvalia are certainly to be distinguished from the Amburbium (q. v.), but have been identified by several writers (Mommsen, Henzen, Jordan) with the sacrifice of the Fratres Arvales to the Dea Dia. (See FRATRES ARVALES.) Marquardt, who on the whole decides against the identity of the two festivals, observes that the correspondence of time and place is in favour of it, as well as the fact that the *suovetaurilia* were offered at both; but, as he also points out, there is no mention of the Fratres Arvales beating the bounds (*circumire* or *lustrare*). The Ambarvalia at Rome were fixed for May 29; in other parts of Italy the day varied in different districts, but was an immovable feast (*feriae stativae*) in each district. The feast of the Dea Dia, on the other hand, was proclaimed every year; and May 29 might, or might not, coincide with one of the days on which it was held. As regards the locality, the Roman Ambarvalia were performed, according to Strabo, at a spot called Festi, between five and six miles from the city on the way to Alba (Strab. v. p. 230). This spot is identified beyond doubt with the Fossa Cluilia of Livy (i. 23), Dionysius, and Plutarch; the Campus Sacer Horatiorum, where the legendary encounter took place; and the ruins now called Roma Vecchia, on the left-hand side of the Appian Way at the fifth mile-stone (Burn, *Rome and the*

Campagna, p. 416). The Lucus Deae Diae was at about the same distance from Rome, but on a different road, the Via Portuensis, in a southerly, not an easterly, direction. Both were doubtless on the boundary of the Ager Romanus, or original Roman territory; and in this last circumstance we may trace a connection between the festival of the Arvales and the Ambarvalia without assuming that they were identical.

The Ambarvalia furnish one of several instances —the Saturnalia at Christmas being another—of heathen festivals taken up by the Church and adapted to Christian uses. There is a close resemblance to these rites in the ceremonies of the three Rogation Days which precede Ascension Day, occurring nearly at the same time of year. "They were anciently in England called 'Gang-days,' because processions went out on those days; hymns and canticles being sung, and prayers offered at various halting-spots or stations for a blessing on the fruits of the earth." The English custom of "beating the bounds" at Whitsuntide is a relic of a similar rite. See Henzen, *Acta Fratr. Arval.*

Amber. See ELECTRUM.

Ambiāni. A Belgic tribe subdued by Caesar in B.C. 57. Their chief town was Samarobriva or Ambiani (Amiens).

Ambigātus. A king of the Celtae, in the time of Tarquinius Priscus. According to the account given by Livy (v. 34), he sent his two nephews, Sigovesus and Bellovesus, in quest of new settlements, with the view of diminishing the overflowing numbers at home. The two chieftains drew lots respecting their course, and Sigovesus obtained the route that led towards the Hercynian forest, Bellovesus the road to Italy. What is here stated, however, appears to be a mere legend, owing its origin to the simultaneous emigrations of two hordes of Gallic warriors. See Thierry, *Histoire des Gaulois*, i. 39.

Ambilustrium. See LUSTRATIO.

Ambiŏrix. A Gallic chief of the Eburones, who cut to pieces the Roman troops under Sabinus and Cotta, in B.C. 54. See Caesar, *B. G.* v. 24 and 26.

Ambĭtus. Literally "a going about," and cannot, perhaps, be more nearly expressed than by our word *canvassing*. After the plebs had formed a distinct class at Rome, and when the whole body of the citizens had become very greatly increased, we frequently read, in the Roman writers, of the great efforts which it was necessary for candidates to make in order to secure the votes of the citizens. At Rome, as in every community into which the element of popular election enters, solicitation of votes, and open or secret influence and bribery, were among the means by which a candidate secured his election to the offices of state.

Whatever may be the authority of the piece entitled *Q. Ciceronis de Petitione Consulatus ad M. Tullium Fratrem*, it seems to present a pretty fair picture of those arts and means by which a candidate might lawfully endeavour to secure the votes of the electors, and also some intimation of those means which were not lawful, and which it was the object of various enactments to repress.

A candidate was called *petitor*, and his opponent, with reference to him, *competitor*. A candidate (*candidatus*) was so called from his appearing in the public places, such as the fora and Campus Martius, before his fellow-citizens, in a whitened toga. On such occasions, the candidate was attended by his friends (*deductores*), or followed by the poorer citizens (*sectatores*), who could in no other manner show their good-will or give their assistance. The word *assiduitas* expressed both the continual presence of the candidate at Rome and his continual solicitations. The candidate, in going his rounds or taking his walk, was accompanied by a *nomenclator*, who gave him the names of such persons as he might meet: the candidate was thus enabled to address them by their names—an indirect compliment which could not fail to be generally gratifying to the electors. The candidate accompanied his address with a shake of the hand (*prensatio*). The term *benignitas* comprehended generally any kind of treating, as shows, feasts, etc.

That ambitus, which was the object of several penal enactments, taken as a generic term, comprehended the two species, *ambitus* and *largitiones* (bribery). *Liberalitas* and *benignitas* are opposed by Cicero, as things allowable, to *ambitus* and *largitio*, as things illegal. Money was paid for votes; and in order to insure secrecy and secure the elector, persons called *interpretes* were employed to make the bargain, *sequestres* to hold the money till it was to be paid, and *divisores* to distribute it. The offence of ambitus was a matter which belonged to the *iudicia publica*, and the enactments against it were numerous. Of these the best known are the Lex Aemilia Balbia (B.C. 182); the Lex Cornelia Fulvia (B.C. 159); the Lex Acilia Calpurnia (B.C. 67); the Lex Tullia (B.C. 63); the Lex Aufidia (B.C. 61); the Lex Licinia (B.C. 58); and the Lex Iulia de ambitu under Augustus. The penalties prescribed by these laws varied from exile, and exclusion from the Senate, to money fines. The Lex Licinia made *sodalicium*, or "treating," an offence. By the time of Augustus, ambitus in its proper sense had disappeared, in consequence of the transfer of the elections from the Comitia to the Senate. A list of trials for ambitus under the Republic is given by Rein in his *Criminalrecht der Römer*.

Ambivarīti. A Gallic people dwelling west of the Mosa (Meuse), near Namur. (Caes. *B. G.* iv. 9.)

Ambivius Turpio, LUCIUS. A popular Roman actor of the time of Terence, in five of whose plays he appeared. See the Didascaliae to the *Andria*, *Eunuchus*, *Heauton Timorumenos*, *Hecyra*, and *Phormio*; also Cic. *De Senect.* 14; and Varro, *L. L.* vii. 30.

Ambracia (Ἀμβρακία). The modern Arta; a town on the left bank of the Arachthus, north of the Ambracian Gulf, and originally included in Acarnania, but afterwards in Epirus. It was colonized by the Corinthians about B.C. 660. Pyrrhus made it the capital of his kingdom, and adorned it with public buildings and statues. At a later time it joined the Aetolian League, was taken by the Romans in B.C. 189, and stripped of its works of art. Its inhabitants were transplanted to the new city of Nicopolis, founded by Augustus after the battle of Actium, B.C. 31.

Ambracius Sinus (Gulf of Arta). A gulf of the Ionian Sea between Epirus and Acarnania, twenty-five miles long and ten wide.

Ambrōnes. A Keltic people defeated by Marius near Aquae Sextiae (Aix) in B.C. 102.

Ambrosia (ἀμβροσία). A name given to anything that confers immortality. (1) The food of

the gods, whose drink was nectar (q. v.). Doves are said by Homer to bring ambrosia to Zeus from the far West. (2) The ointment of the gods, which preserved even the dead from decay. (3) The food of the gods' horses.

Ambrosia (*τὰ ἀμβρόσια*). Festivals observed in Greece in honour of Dionysus. They were held during the month Lenaeon, at the time of the vintage.

Ambrosius. Bishop of Milan in the fourth century, and one of the latest and most distinguished of what are denominated the Fathers of the Christian Church. He was born at Arelaté (Arles), then the metropolis of Gallia Narbonensis, according to some authorities in A.D. 333, according to others, 340. His father was the emperor's lieutenant in that district, and, after his death, Ambrose, who was the youngest of three children, returned with the widow and family to Rome. Here, under the instructions of his mother and his sister Marcellina, who had vowed virginity, he received a highly religious education, and that bias in favour of Catholic orthodoxy by which he was subsequently so much distinguished. Having studied law, he pleaded causes in the court of the praetorian prefect, and was in due time appointed proconsul of Liguria. He thereupon took up his residence at Milan, where a circumstance occurred which produced a sudden change in his fortunes, and transformed him from a civil governor into a bishop. Auxentius, bishop of Milan, the Arian leader in the West, died, and left that see vacant, when a warm contest for the succession ensued between the Arians and Catholics. In the midst of a tumultuous dispute Ambrose appeared in the midst of the assembly, and exhorted them to conduct the election peaceably. At the conclusion of his address a child in the crowd exclaimed, "Ambrose is bishop!" and, whether accidentally or by management, the result throws a curious light upon the nature of the times; for the superstitious multitude, regarding the exclamation as a providential and miraculous suggestion, by general acclamation declared Ambrose to be elected. After various attempts to decline the episcopal office, Ambrose at length entered upon the discharge of its duties, and rendered himself conspicuous by his decided and unremitting opposition to the tenets of Arianism. To his zealous endeavours also was owing the failure of the attempt made by the remains of a pagan party to re-establish the worship of paganism. The strength and ability of Ambrose were such that, although opposed to him on ecclesiastical points, Valentinian and his mother respected his talents, and in moments of political exigency required his assistance. The most conspicuous act on the part of Ambrose was his treatment of Theodosius for the massacre at Thessalonica. The emperor was consigned to a retirement of eight months, and not absolved even then until he had signed an edict, which ordained that an interval of thirty days should pass before any sentence of death, or even of confiscation, should be executed. After having paid the funeral honours to Theodosius, who died soon after obtaining peaceable possession of the entire Roman Empire, the bishop departed from this world, with a composure worthy of his firm character, in the year 397. It is evident that Ambrose was one of those men of great energy of mind and temperament who, in the adoption of a theory or a party, hold no middle course, but act with determination towards the fulfilment of their purposes. Ambrose effected much to advance the Roman Catholic Church to the power to which it afterwards attained.

The writings of this Father are numerous, and the great object of almost all of them was to maintain the faith and discipline of the Catholic Church, while some of them are written to recommend celibacy as the summit of Christian perfection. His best work is the treatise *De Officiis*, on the duties of a Christian priest. His hymns are also very famous, but only four can be proved to be his—"Deus creator omnium," "Aeterne rerum conditor," "Veni redemptor gentium," and "Iam surgit hora tertia." The noble "Te Deum laudamus" was long ascribed to him. He introduced the practice of singing choral hymns arranged antiphonally (*cantus Ambrosianus*). He is probably the author of a Latin version of the *History of the Jewish War* by Josephus, long ascribed to one Hegesippus. The best text of St. Ambrosius is that in Migne's *Patrologia Latina* (4 vols.).

Ambubaiae. Syrian women who gained a living at Rome by singing and dancing in public, often in the Circus. The word comes from the Syrian *ambub*, a flute.

Amburbium or **Amburbiālé.** A sacrifice performed at Rome for the purification of the city, as the Ambarvalia (q. v.) was intended for the purification of the country. See Preller, *Röm. Myth.* p. 372; and SUOVETAURILIA.

Ambustus, FABIUS. (1) MARCUS, pontifex maximus in B.C. 388. His three sons, while acting as ambassadors to the Gauls at Clusium, took part against them in the military operations. The Gauls then demanded them of the Senate, as having violated the law of nations; and on receiving a refusal, marched on Rome. (2) MARCUS, a Roman who was thrice consul (B.C. 360, 356, 354) and dictator (B.C. 351). He conquered the Hernici, Falisci, Tarquinians, and Tiburtes in his consulships. His son was the famous Q. Fabius Maximus Rullianus. See FABIUS.

Ameipsias (*Ἀμειψίας*). A Greek poet of the Old Comedy, contemporary with Aristophanes, whom he twice overcame. Of his plays only slight fragments remain (Aristoph. *Ran.* 14).

Amentum. See HASTA.

Ameria. An Umbrian town, the birthplace of Sextus Roscius, who was defended by Cicero in his famous oration *Pro Sex. Roscio Amerino.*

Amestrătus. A town of Sicily, near the Halesus. The Romans besieged it for seven months when in the hands of the Carthaginians, but without success. It was taken, however, after a third siege, and razed to the ground, the surviving inhabitants being sold as slaves. Steph. Byz. calls the place *Amestratus;* Diodorus Siculus, *Mystratum;* and Polybius, *Myttistratum.* (Diod. Sic. xxiii. ecl. 9; Polyb. i. 24.)

Amethystus (*ἀμέθυστον* or *-os*). The amethyst, a precious stone of a purple or violet colour, in different degrees of deepness. In modern mineralogy, the name has been applied to two precious stones of essentially different natures: (1) the Oriental amethyst, which is a rare variety of adamantine spar or corundum; and (2) the Occidental or common amethyst. The ancients, on the other hand, reckoned five species, differing in degrees of

colour. Their Indian amethyst, to which Pliny assigns the first rank among purple or violet-coloured gems, appears to have been our Oriental species, which is nothing more than a violet-coloured sapphire. We see our amethyst, indeed, plainly indicated in one of the reasons assigned by Pliny for its name, that it does not reach the colour of wine (*ἀ*, priv., and *μέθυ*, *wine*), but first fades into violet. He afterwards suggests another, which was the more common derivation, saying that the Magi falsely asserted that these gems were preservative against intoxication (*ἀ*, priv., and *μεθύω*, *to intoxicate*). See GEMMA.

Amĭda. A city in Sophené (Armenia Maior), on the upper Tigris.

Amilcar. See HAMILCAR.

Amisia. The Ems, a river of Northern Germany flowing into the North Sea. (Tac. *Ann.* ii. 8.)

Amīsus (Ἀμισός). A large city on the coast of Pontus, called after it Amisenus Sinus, and a favourite residence of Mithridates.

Amiternum. An ancient town of the Sabines, and notable as the birthplace of the historian Sallust.

Amictorium. A linen covering for the breasts of women. See STROPHIUM.

Amictus (*ἐπίβλημα*). A general term for the outer clothing, as *indutus* for the under clothing. See TUNICA; PALLIUM.

Amma (*ἄμμα*). A measure of length = forty cubits (*πήχεις*) or sixty feet (*πόδες*).

Ammiānus Marcellīnus. The last Roman historian of any importance, born at Antioch, in Syria, about A.D. 330, of noble Grecian descent. After receiving a careful education, he early entered military service, and fought under Julian against the Alemanni and Persians. In the evening of his days he retired to Rome, and about A.D. 390 began his Latin history of the emperors (*Rerum Gestarum Libri*), from Nerva, A.D. 96, to the death of Valens, in thirty-one books. Of these there only remain books xiv.–xxxi., including the period from A.D. 353 to 378, which he relates for the most part as an eye-witness. A heathen himself, he is, nevertheless, fair to the Christians. As his work may be regarded as a continuation of Tacitus, he seems, on the whole, to have taken that writer for his model. He resembles Tacitus in judgment, political acuteness, and love of truth. But he is far inferior in literary culture, though he loves to display his knowledge, especially in describing nations and countries. Latin was a foreign language to him; hence a crudeness and clumsiness of expression, which is made even more repellent by affectation, bombast, and bewildering ornamental imagery. The best edition is by Gardthausen (1875).

Ammon or **Hammon** (Egyptian *Amun*, the hidden or veiled one). A god native to Libya and Upper Egypt. He was represented sometimes in the shape of a ram with enormous curving horns, sometimes in that of a ram-headed man, sometimes as a perfect man standing up or sitting on a throne. On his head were the royal emblems, with two high feathers standing up, the symbols of sovereignty over the upper and under worlds; in his hands were the sceptre and the sign of life. In works of art his figure is coloured blue. Beside him is usually placed Muth (the "mother," the "queen of darkness," as the inscriptions call her), wearing the crown of Upper Egypt or the vulture-skin. His chief temple, with a far-famed oracle, stood in an oasis of the Libyan desert, twelve days' journey from Memphis. Between this oracle and that of Zeus at Dodona a connection is said to have existed from very ancient times, so that the Greeks early identified the Egyptian god with their own Zeus, as the Romans did afterwards with their Iupiter; and his worship found an entrance at several places in Greece—at Sparta, Thebes, and also Athens—whence festal embassies were regularly sent to the Libyan sanctuary. (See THEORIA.) When the oracle was consulted by visitors, the god's symbol, made of emerald and other stones, was carried round by women and girls, to the sound of hymns, on a golden ship hung round with votive cups of silver. His replies were given in tremulous shocks communicated to the bearers, which were interpreted by a priest.

Ammon and Muth.

Ammonĭi (Ἀμμώνιοι). A people of Africa, occupying what is now the Oasis of Siwah. According to Herodotus (ii. 42), the Ammonians were a colony of Egyptians and Ethiopians, speaking a language composed of words taken from both those nations.

Ammonius (Ἀμμώνιος). (1) The preceptor of Plutarch. He taught philosophy and mathematics at Delphi, and lived during the first century of the Christian era, in the reign of Nero, to whom he acted as interpreter when that monarch visited the temple at Delphi. Plutarch makes frequent mention of him in his writings, and particularly in his treatise on the inscription of the Delphic temple. (2) SACCAS or SACCOPHŌRUS (so called because in early life he had been a porter), a celebrated philosopher, who flourished about the beginning of the third century. He was born at Alexandria, of Christian parents, and was early instructed in the catechetical schools established in that city. Here, under the Christian preceptors, Athenagoras, Pantoenus, and Clemens Alexandrinus, he acquired a strong propensity towards philosophical studies, and became exceedingly desirous of reconciling the different opinions which at that time subsisted among philosophers. Porphyry (*ap.* Euseb. *Hist. Ecc.* vi. 19) relates that Ammonius passed over to the legal establishment—that is, apostatized to the pagan religion. Eusebius (l. c.) and Jerome (*De S. E.* c. 55), on the contrary, assert that Ammonius continued in the Christian faith until the end of his life. But it is probable that those Christian fathers refer to another Ammonius, who, in the third century, wrote a *Harmony of the Gospels*, or to some other person of this name, for they refer to the sacred books of Ammonius; whereas Ammonius Saccas, as his pupil Longinus attests, wrote nothing. It is not easy, indeed, to account for the particulars related of this philosopher, but upon the supposition of his having renounced the Christian faith. According to Hierocles (*De Fato*, ap. Phot. *Bibl.* ii. 461, ed. Bekker), Ammonius was induced to adopt the plan of a distinct eclectic school, by a desire of putting an end to those contentions which had so long dis-

tracted the philosophical world. Ammonius had many eminent followers and hearers, both pagan and Christian, who all, doubtless, promised themselves much illumination from a preceptor who undertook to collect into a focus all the rays of ancient wisdom. He taught his select disciples certain sublime doctrines and mystical practices, and was called *θεοδίδακτος*, "the heaven-taught philosopher." These mysteries were communicated to them under a solemn injunction of secrecy. Porphyry relates that Plotinus, with the rest of the disciples of Ammonius, promised not to divulge certain dogmas which they learned in his school, but to lodge them safely in their purified minds. This circumstance accounts for the fact mentioned on the authority of Longinus that he left nothing in writing. Ammonius probably died about the year 243. (3) A Christian writer, a native of Alexandria, who lived about A.D. 250. He wrote a *Harmony of the Gospels*, which Jerome cites with commendation. (4) The son of Hermias, so called for distinction's sake from other individuals of the name, was a native of Alexandria, and a disciple of Proclus. He taught philosophy at Alexandria about the beginning of the sixth century. His system was an eclectic one, embracing principles derived from both Aristotle and Plato. He cannot be regarded as an original thinker: he was very strong, however, in mathematics, and in the study of the exact sciences, which rectified his judgment, and preserved him, no doubt, from the extravagances of the New Platonism. Ammonius has left commentaries on the *Introduction* of Porphyry; on the *Categories* of Aristotle, together with a life of that philosopher; on his treatise *Of Interpretation;* and scholia on the first seven books of the *Metaphysics*. The scholia on the *Metaphysics* have never been edited. (5) A priest of one of the Egyptian temples. He was one of the literary men who fled from Alexandria to Constantinople after the destruction of the pagan temples. There he became, together with Helladius, one of the masters of Socrates, the ecclesiastical writer: this is a fact which appears firmly established, and the reasons alleged by Valckenaer for placing him in the first or second century have been generally considered insufficient. Ammonius has left us a work on Greek synonyms, etc., under the title *Περὶ ὁμοίων καὶ διαφόρων λέξεων*. It is a production of very inferior merit. Valckenaer's edition (1739) has been reprinted entire, but in a more portable form, at Leipzig (1822), under the care of Schæffer, who has added the unedited notes of Kulencamp, and the critical letter of Segaar, addressed to Valckenaer, and published at Utrecht (1776). We have also a treatise of Ammonius, *Περὶ ἀκυρολογίας*, "On the improper use of words," which has never been printed. (6) A physician of Alexandria, famous from his skill in cutting for the stone—an operation which, according to some, he first introduced. He invented an instrument for crushing the larger calculi while in the bladder. He was accustomed also to make use of caustic applications, especially red arsenic in hemorrhages. See CHIRURGIA.

Amnestia (*ἀμνηστία*). A word used to describe the arrangement by which offences were *forgotten*. The word is chiefly found used of real or alleged breaches of the laws committed during the conflicts of opposing factions in the Greek republics. A notable amnesty was that arranged at Athens by the mediation of the Spartan king Pausanias, by which the overthrow of the Thirty was brought about, in B.C. 403. See Grote, chap. lxv.; and ADEIA.

Amnīsus (*Ἀμνισός*). A town in the north of Crete on a river of the same name; the harbour of Cnossus (q. v.). See Apollon. Rhod. iii. 877.

Amnium (*ἀμνίον*). A basin or vessel in which at the sacrifices the blood of the victims was caught as it fell. (*Odyss.* iii. 444.)

Amnium.

Amoebaea. Verses that answer one another alternately in strophe and antistrophe, as in some of Vergil's *Eclogues*, e. g. the Seventh, Eighth, and Ninth. The amoebaean form prevails also in some of the earlier specimens of Roman verse, as the songs of the Fratres Arvales (q. v.). It is only one of the many manifestations of the Italian liking for dialogue, on which see Teuffel, *Hist. of Rom. Lit.* 3, § 3 (Engl. transl. by Warr [London, 1891]); and Patin, *Études sur la Poésie Latine* (Paris, 1875).

Amor. The god of love. See EROS.

Amōres. A collection of poems by P. Ovidius Naso (q. v.), originally in five books, afterwards reduced to three. They were published in B.C. 13, and are in elegiac verse. They are elegant in form and expression, but extremely licentious in tone.

Amorgĭna (*τὰ ἀμόργινα*). Fine muslin textures made of a flax named from the island Amorgus. See BYSSUS; CARBASUS.

Amorgus (*Ἀμοργός*). An island, one of the Sporades (q. v.), and the birthplace of the poet Simonides. The Roman emperors used it as a place of banishment.

Ampechŏné (*ἀμπεχόνη*). A shawl or scarf worn by Greek women over the *chiton*, or inner garment. See PALLIUM; TUNICA.

Ampelius, LUCIUS. A Roman writer who flourished not earlier than the second century A.D., and wrote a note-book, *Liber Memorialis*, which contains a scanty collection of astronomical, geographical, and historical jottings. Trivial as the book is, a statement in its chapter on the wonders of the world has mainly led to the discovery (in 1878) of the magnificent sculptures of Pergamum, now at Berlin. Ampelius has been edited with notes by Beck (Leipzig, 1826). The best text is that of Wölfflin (Leipzig, 1854).

Amphiarāia (*ἀμφιαράϊα*). Games celebrated near Oropus in honour of Amphiaraüs (q. v.).

Amphiarāüs (*Ἀμφιάραος*). An Argive, the son of Oïcles and Hypermnestra, great-grandson of the seer Melampus. In Homer he is a favourite of Zeus and Apollo, alike distinguished as a seer and a hero, who takes part in the Calydonian boar-hunt, in the voyage of the Argonauts, and in the expedition of the Seven against Thebes. Reconciled to Adrastus (q. v.) after a quarrel, and wedded to his sister Eriphylé, he agreed that any future differences between them should be settled by her. She, bribed by Polynices with the fatal necklace of his ancestress Harmonia, insisted on her husband joining

the war against Thebes, though he foresaw that it would end fatally for him, and in departing charged his youthful sons Alcmaeon and Amphilochus (q. v.) to avenge his coming death. His wise warnings were unheeded by the other princes; his justice and prudence even brought him into open strife with the savage Tydeus; yet in the fatal closing contest he loyally avenged his death on the Theban Melanippus. In the flight, just as the spear of Periclymenus was descending on him, Zeus interposed to save the pious prophet and make him immortal by cleaving the earth open with his thunderbolt and bidding it swallow up Amphiaraüs, together with his trusty charioteer Baton, like himself a descendant of Melampus. From that time forth, Amphiaraüs was worshipped in various places as an oracular god, especially at Oropus on the frontier of Attica and Boeotia, where he had a temple and a famous oracle for the interpretation of dreams, and where games were celebrated in honour of him.

Amphiclēa (Ἀμφίκλεια). A town of northern Phocis, with a shrine of Dionysus.

Amphicrătes (Ἀμφικράτης). (1) A biographer, who, according to Diogenes Laërtius (*Vit. Aristip.*), was condemned to die by poison. See Athenaeus, xiii. 5. (2) An Athenian orator, who, being banished from his country, retired to Seleucia on the Tigris, and took up his residence there under the protection of Cleopatra, daughter of Mithridates. He starved himself to death, because suspected by this princess of treason.

Amphictyon (Ἀμφικτύων). The son of Deucalion (q. v.) and Pyrrha, and the reputed founder of the Amphictyonic Council. (Herod. vii. 200).

Amphictyŏnes (Ἀμφικτύονες). Literally "those dwelling around," but in a special sense applied to populations which at stated times met at the same sanctuary to keep a festival in common, and to transact common business. The most famous and extensive union of the kind was that called, *par excellence*, the Amphictyonic League, whose common sanctuaries were the temple of Pythian Apollo at Delphi, and the temple of Demeter at Anthela, near Pylae or Thermopylae. After Pylae the assembly was named the Pylaean, even when it met at Delphi, and the deputies of the league Pylagorae. The league was supposed to be very ancient, as old even as the name of Hellenes; for its founder was said to be Amphictyon, the son of Deucalion and brother of Hellen, the common ancestor of all Hellenes. (Herod. vii. 200.) It included twelve populations: Malians, Phthians, Aenianes or Oetoeans, Dolopes, Magnetians, Perrhoebians, Thessalians, Locrians, Dorians, Phocians, Boeotians, and Ionians, together with the colonies of each. Though in later times their extent and power were very unequal, yet in point of law they all had equal rights. Besides protecting and preserving those two sanctuaries, and celebrating from the year B.C. 586 onwards the Pythian Games, the league was bound to maintain certain principles of international right, which forbade them, for instance, ever to destroy utterly any city of the league, or to cut off its water, even in time of war. To the assemblies, which met every spring and autumn, each nation sent two ἱερομνήμονες (= wardens of holy things) and several pylagorae. The latter took part in the debates, but only the former had the right of voting. When a nation included several States, these took by turns the privilege of sending deputies. But the stronger states, such as the Ionian Athens or the Dorian Sparta, were probably allowed to take their turn oftener than the rest, or even to send to every assembly. When violations of the sanctuaries or of popular right took place the assembly could inflict fines, or even expulsion; and a State that would not submit to the punishment had a "holy war" declared against it. By such a war the Phocians were expelled B.C. 346, and their two votes given to the Macedonians; but the expulsion of the former was withdrawn because of the glorious part they took in defending the Delphian temple when threatened by the Gauls in B.C. 279, and at the same time the Aetolian community, which had already made itself master of the sanctuary, was acknowledged as a new member of the league. In B.C. 191 the number of members amounted to seventeen, who nevertheless had only twenty-four votes, seven having two votes each, the rest only one. Under the Roman rule the league continued to exist, but its action was now limited to the care of the Delphian temple. It was reorganized by Augustus, who incorporated the Malians, Magnetians, Aenianes, and Pythians with the Thessalians, and substituted for the extinct Dolopes the city of Nicopolis in Acarnania, which he had founded after the battle of Actium. The last notice we find of the league is in the second century A.D. See Freeman, *Hist. of Federal Government* (2d ed. 1893); Tittmann, *Ueber den Bund der Amphictyonen;* Müller, *Dorians;* and Grote, vol. ii. chap. ii.

Amphidromia (ἀμφιδρόμια). At Athens, a family festival at which a new-born infant received religious consecration and its name. The carrying of the child by its nurse around the hearth was the principal part of the ceremony, and from this it is called. (Isaeus, *De Pyrrhi Hered.* § 30.)

Amphilochia (Ἀμφιλοχία). The country of the Amphilochi, an Epirot race, at the east end of the Ambracian Gulf, usually included in Acarnania. Their chief town was Argos Amphilochicum. See Amphilochus.

Amphilŏchus (Ἀμφίλοχος). The son of Amphiaraüs and Eriphylé, and brother of Alcmaeon (q. v.). He took part in the expedition of the Epigoni against Thebes, assisted his brother in the murder of their mother, and afterwards fought against Troy. Like his father, he was a celebrated seer. He was killed in single combat by Mopsus, who was also a seer, at Mallos, in Cilicia. According to some, he founded Argos Amphilochicum on the Ambracian Gulf.

Amphimallum. See Tapes.

Amphīon (Ἀμφίων). The son of Zeus and Antiopé, and twin-brother of Zethus. They were born on Mt. Cithaeron, and grew up among the shepherds. Having become acquainted with their origin, they marched against Thebes, where Lycus reigned, the husband of their mother, Antiopé, who had married Dircé in her stead. They took the city, and killed Lycus and Dircé because they had treated Antiopé with great cruelty. They put Dircé to death by tying her to a bull, who dragged her about till she perished; and finally threw her body into a fountain, which was from this time called the fountain of Dircé. After they had obtained possession of Thebes, they fortified it by a wall. Amphion had received a lyre from Hermes, on which he

played with such magic skill that the stones moved of their own accord and formed the wall. Amphion afterwards married Niobé, who bore him many sons and daughters, all of whom were killed by Apollo and Artemis, whereupon he put an end to his own life. See NIOBÉ.

Amphiorkia or **Amphomosia** (*ἀμφιορκία* or *ἀμφωμοσία*). The oath which was taken, both by the plaintiff and the defendant, before the trial of a cause in the Athenian courts, that they would speak the truth. In the *ἀνάκρισις*, or preliminary investigation, it was called *διωμοσία*.

Amphipŏlis (Ἀμφίπολις). A town in Macedonia, on the eastern bank of the Strymon, about three miles from the sea. The Strymon flowed almost round the town, nearly forming a circle, whence its name Amphi-polis. It was originally called Ennea Hodoi, the "Nine Ways," and belonged to the Edonians, a Thracian people. It was colonized by the Athenians in B.C. 437, who drove the Edonians out of the place. It was one of the most important of the Athenian possessions in the north of the Aegaean Sea. Hence their indignation when it fell into the hands of Brasidas (B.C. 424), and of Philip (B.C. 358). The port of Amphipolis was Eion. See PHILIPPUS.

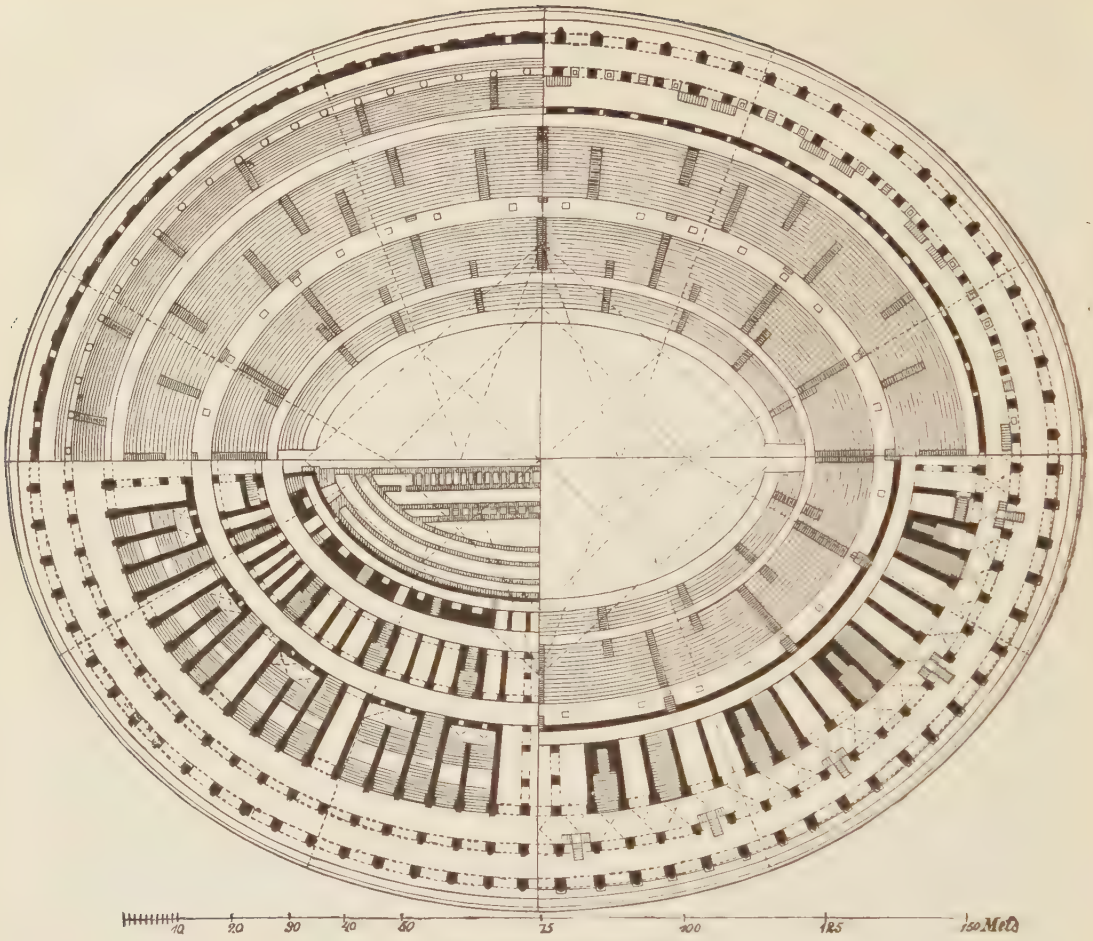
Amphippoi (*ἄμφιπποι*). See DESULTORES.

Amphiprostўlos (*ἀμφιπρόστυλος*). See TEMPLUM.

Amphis (Ἄμφις). A Greek comic poet of Athens, contemporary with Plato. His works are lost (Ath. i. 403 foll., Mein.).

Amphissa (Ἄμφισσα). An important town of the Locri Ozolae near Delphi. See SACRED WAR.

Amphithalămus (*ἀμφιθάλαμος*). A room in the women's quarters of a Greek house, opposite the *θάλαμος*, and serving probably as a sleeping-room for the grown-up daughters. See DOMUS.



Amphitheātrum (*ἀμφιθέατρον*). A circular or elliptical building, arranged for the exhibition of combats of gladiators, wild beasts, and for sham sea-fights, all of which constituted the *ludi amphitheatrales*. See LUDI.

The first amphitheatre was probably that of C. Scribonius Curio, which was literally a double theatre, being composed of two wooden theatres placed on pivots, so that they could be turned around, spectators and all, and placed back to back, forming two separate theatres for dramatic exhibits; or face to face, forming an amphitheatre in the ordinary sense of the word. This structure was erected in B.C. 50, and is described by Pliny (*H. N.* xxxvi. § 116). The next was built by Iulius Caesar in B.C. 46, and was also of wood. These edifices were exposed to the danger of destruction by fire, and sometimes, too, proved inadequate to support the weight of the enormous crowds of spectators—often as many as 30,000 to 50,000. It was not until the fourth consulate of Augustus (B.C. 30) that an amphitheatre of stone was erected by Statilius Taurus in the Campus Martius (Suet. *Octav.* 29). This building was the only one of its kind until the erection of the great Flavian amphitheatre. This was carried out in the reigns of Vespasian and Titus, when the *Amphitheatrum Flavium*, which, since the time of Bede, has been known as the Colosseum or Coliseum, arose. An ecclesiastical tradition makes the architect to have been a Christian, one Gaudentius, afterwards a martyr. See Burn, *Rome and the Campagna*, p. 235; Middleton, *Ancient Rome in* 1885, pp. 303 foll.

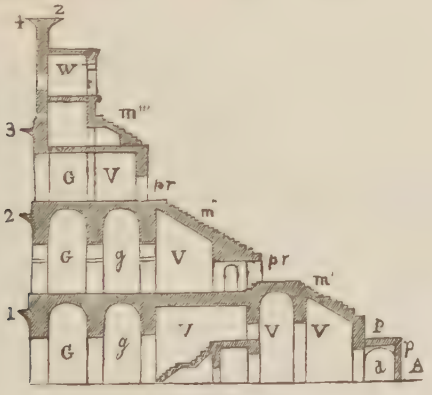
This marvellous building was commenced by Vespasian (Suet. *Vesp.* 9) early in his reign, and completed by Titus, who dedicated it in the year A.D. 80, on which occasion 5000 animals of various kinds were slaughtered (Suet. *Tit.* 7). He seems not to have added the last story, however, which was done by Domitian, who also caused the ornamental work to be executed. As built by the Flavian emperors, the highest tiers of seats inside, and probably the fourth story, were of wood. Further additions date from a period not earlier than the time of Alexander Severus. (See Burn, p. 235). The name Colosseum was probably given it from the colossus of Nero. No subsequent public amphitheatre was erected in the city of Rome, the little *amphitheatrum castrense*, near the church of S. Croce, being probably intended only for the soldiers of the Guard. See COLOSSUS.

The Colosseum became the spot where prince and people met together to witness those sanguinary exhibitions, the degrading effects of which on the Roman character can hardly be overestimated. It was partially repaired by Antoninus Pius (Capit. *Ant. Pi.* 8). In the reign of Macrinus, on the day of the Vulcanalia, it was struck by lightning, by which the upper rows of benches were consumed, and so much damage was done to other parts of the structure that the games were for some years celebrated in the Stadium (Dio Cass. lxxviii. 25). Its restoration was commenced by Elagabalus, and completed by Alexander Severus. A medal of Gordian III. represents the Colosseum with the legend *Munificentia Gordiani Aug.*, showing that fresh works were undertaken within a few years. It was again struck by lightning in the reign of Decius (Hieron. p. 475), but was soon restored, and the games continued to be celebrated in it down to the sixth century. It is usually stated that, in consequence of the self-devotion of Telemachus, an Asiatic monk, who rushed into the arena to separate the gladiators, and was overwhelmed under a shower of stones, Honorius abolished forever the sacrifices of the gladiators (Theodoret. v. 26); but there is evidence that they were continued even at a later period (Augustin. *Confess.* vi. 8). In later times the amphitheatre has been used sometimes in war as a fortress, and in peace as a quarry; whole palaces, such as the Cancelleria and the Palazzo Farnese, having been built out of its spoils. At length the popes made efforts to preserve it: Sixtus V. attempted to use it as a woollen factory, and to convert the arcades into shops; Clement XI. enclosed the lower arcades; and in 1750 Benedict XIV. consecrated it to the Christians who had been martyred in it. Notwithstanding the damages of time, war, and spoliation, the Flavian Amphitheatre still remains complete enough to give us a fair idea, excepting in some minor details, of the structure and arrangements of this description of building.

The very site of the Flavian Amphitheatre, as of most others, furnishes an example of the prodigal contempt of labour and expense which the Roman emperors displayed in their great works of architecture. The Greeks, in choosing the sites of their theatres, almost always availed themselves of some natural hollow on the side of a hill; but the Roman amphitheatres, with few exceptions, stand upon a plain. The site of the Colosseum was in the

Ground Plan of the Flavian Amphitheatre.

middle of the city, in the valley between the Caelian, the Esquiline, and the Velia, on the marshy ground which was previously the lake of Nero's palace, *stagnum Neronis*.



> "Hic ubi conspicui venerabilis amphitheatri
> Erigitur moles, stagna Neronis erant."
> (Mart. *de Spect.* ii. 5.)

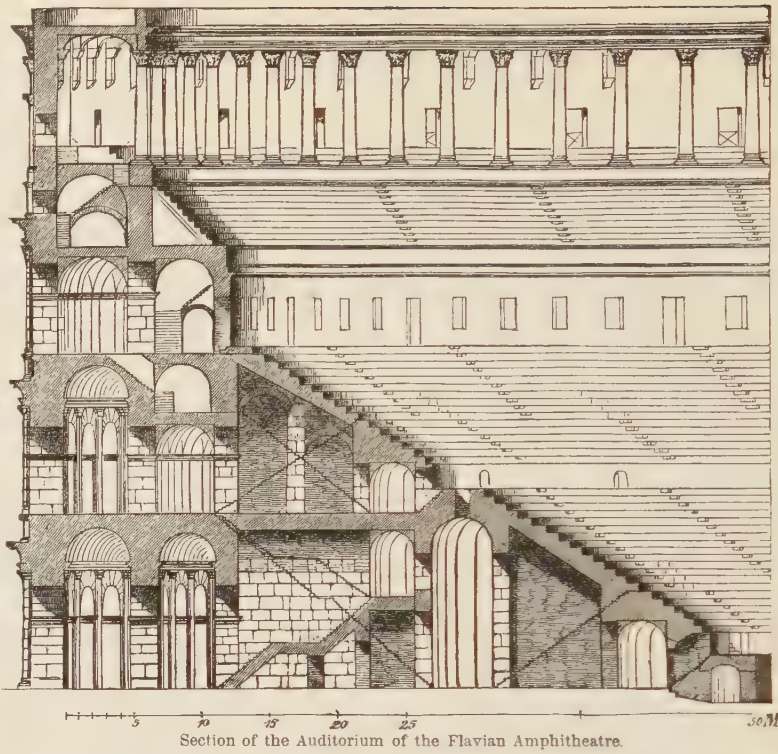
No mere measures can give an adequate conception of this vast structure, the dimensions and arrangements of which were such as to furnish seats for 87,000 spectators, around an arena large enough to afford space for the combats of several hundred animals at once, for the evolutions of mimic sea-fights, and for the exhibition of artificial forests; with passages and staircases to give ingress and egress, without confusion, to the immense mass of spectators, and others for the attendants on the arena; dens for the thousands of victims devoted to destruction; channels for the rapid influx and outlet of water when the arena was used for a *naumachia*; and the means for the removal of the carcases, and the other abominations of the arena. Admirable pictures of the magnitude and magnificence of the amphitheatre and its spectacles are drawn in the *Essays* of Montaigne (iii. 6), and in the latter part of Gibbon's twelfth chapter.

As a general description of the building, the following passage of Gibbon is perfect: "It was a building of an elliptic figure, founded on fourscore arches, and rising, with four successive orders of architecture, to the height of 140 [157] feet. The outside of the edifice was incrusted with marble, and decorated with statues. The slopes of the vast concave which formed the inside were filled and surrounded with sixty or eighty rows of seats, of marble likewise, covered with cushions, and capable of receiving with ease about 80,000 spectators. Sixty-four *vomitories* (for by that name the doors were very aptly distinguished) poured forth the immense multitude; and the entrances, passages, and staircases were contrived with such exquisite skill that each person, whether of the senatorial, the equestrian, or the plebeian order, arrived at his destined place without trouble or confusion. Nothing was omitted which, in any respect, could be subservient to the convenience and pleasure of the spectators. They were protected from the sun and rain by an ample canopy, occasionally drawn over their heads. The air was continually refreshed by the playing of fountains, and profusely impregnated by the grateful scent of aromatics. In the centre of the edifice, the *arena*, or stage, was strewed with the finest sand, and successively assumed the most different forms. At one moment it seemed to rise out of the earth, like the garden of the Hesperides, and was after-

wards broken into the rocks and caverns of Thrace. The subterraneous pipes conveyed an inexhaustible supply of water; and what had just before appeared a level plain might be suddenly converted into a wide lake, covered with armed vessels, and replenished with the monsters of the deep. In the decoration of these scenes, the Roman emperors displayed their wealth and liberality; and we read on various occasions that the whole furniture of the amphitheatre consisted either of silver, or of gold, or of amber. The poet who describes the games of Carinus, in the character of a shepherd attracted to the capital by the fame of their magnificence, affirms that the nets designed as a defence against the wild beasts were of gold wire; that the porticos were gilded; and that the *belt* or circle which divided the several ranks of spectators from each other was studded with a precious mosaic of beautiful stones" (really, of glass tesserae in imitation of jewels; cf. ABACULUS).

The annexed woodcut, representing a section, not of an entire amphitheatre, but merely of the exterior wall, and the seats included between that and the arena, will serve to convey an idea of the arrangement of such structures in general. It is that of the Colosseum, and is given upon the authority of Hirt; but it is in some respects conjectural, particularly in the upper part, since no traces of the upper gallery are now remaining. The extreme minuteness of the scale renders it impossible to point out more than the leading form and general disposition of the interior; therefore, as regards the profile of the exterior, merely the heights of the cornices of the different orders are shown, with the figures 1, 2, 3, 4 placed against them respectively.

EXPLANATIONS.



A, The arena.
p, The wall or podium enclosing it.
P, The podium itself, on which were chairs or seats for the senators, etc.
m', The first maenianum, or slope of benches, for the equestrian order.
m'', The second maenianum.
m''', The third maenianum, elevated considerably above the preceding one, and appropriated to the pullati.
W, The colonnade, or gallery, which contained seats for women.
Z, The narrow gallery round the summit of the interior, for the attendants who worked the velarium.
pr, *pr*, The praecinctiones, or landings, at the top of the first and second maenianum, in the pavement of which were grated apertures, at intervals, to admit light into the vomitoria beneath them.
V V V V V, Vomitoria.
G G G, The three external galleries throught the circumference of the building, open to the arcades of the first three orders of the exterior.
g g, Inner galleries.

Owing to the smallness of the cut, the situation and arrangement of staircases, etc., are not expressed, as such parts could hardly be rendered intelligible except upon a greatly increased scale, and then not in a single section, nor without plans at various levels of the building.

The Colosseum covers altogether about five acres of ground; the transverse, or longer diameter of the external ellipse, is 615 feet, and the conjugate, or shorter one, 510; while those of the interior ellipse, or arena, are 281 and 176 feet respectively. Where it is perfect, the exterior is 157 feet high, and consists of four orders—viz., Doric, Ionic, and Corinthian — in attached three-quarter columns (that is, columns one fourth of whose circumference appears to be buried in the wall behind them), and an upper order of Corinthian pilasters. With the exception of the last, each of these tiers consists of eighty columns, and as many arches between them, forming open galleries throughout the whole circumference of the building; but the fourth has windows instead of large arches, and those are placed only in the alternate inter-columns—consequently, are only forty in number; and this upper portion of the elevation has, both on that account and owing to the comparative smallness of the apertures themselves, an expression of greater solidity than that below. The arches formed open external galleries, with others behind them; besides which there were several other galleries and passages, extending beneath the seats for the spectators, and, together with staircases, affording access to the latter. At present, the seats do not rise higher than the level of the third order of the exterior, or about half its entire height; therefore, the upper part of the edifice appears to have contributed very little, if at all, to its actual capacity for accommodating spectators. Still, though it has never been explained, except by conjecturing that there were upper tiers of seats and galleries (although no remains of them now exist), we must suppose that there existed some very sufficient reason for incurring such enormous expense, and such prodigal waste of material and labour beyond what utility seems to have demanded. This excess of height, so much greater than was necessary, was perhaps, in some measure, with the view that, when the building was covered in with a temporary roofing or awning (*velarium*), as a defence against the sun or rain, it should seem well proportioned as to height; and also, perhaps, in order to allow those who worked the ropes and other mechanism by which the velarium was unrolled or drawn back again, to perform those operations without incommoding the spectators on the highest seats.

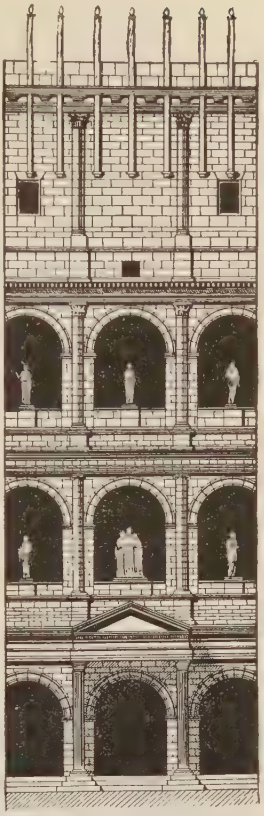
With regard to the velarium (q. v.) itself, nothing at all conclusive and satisfactory can now be gathered; and it has occasioned considerable dispute among archæologists how any temporary covering could be extended over the whole of the building. Some have imagined that the velarium extended only over part of the building; but, independent of other objections, it is difficult to conceive how such an extensive surface could have been supported along the extent of its inner edge or circumference. The only thing which affords any evidence as to the mode in which the velarium was fixed is a series of projecting brackets, or corbels, in the uppermost story of the exterior, containing holes or sockets to receive the ends of poles passing through holes in the projection of the cornice, and to which ropes from the velarium were fixed; but the whole of the upper part

of the interior is now so dismantled as to render it impossible to decide with certainty in what manner the velarium was fastened. The velarium appears usually to have been made of wool, but more costly materials were sometimes employed. When the weather did not permit the velarium to be spread, the Romans used broad-brimmed hats or caps (*petasi*), or a sort of parasol, which was called *umbraculum*, from *umbra*, shade.

Section of the Auditorium of the Flavian Amphitheatre.

The interior of the amphitheatre was divided into three parts — the *arena*, *podium*, and *gradus*. The clear open space in the centre of the amphitheatre was called the arena, because it was covered with sand or sawdust, to prevent the gladiators from slipping and to absorb the blood. The size of the arena was not always the same in proportion to the size of the amphitheatre, but its average proportion was one third of the shorter diameter of the building.

It is now quite clear, since the excavations of 1874–75, that the arena had an actual flooring of boards, covered with sand, and movable. There must have been a souterrain, or vaults, at intervals at least, if not throughout, beneath the arena, as sometimes the animals suddenly issued apparently from beneath the ground (see the annexed illustration), and machinery of different kinds was raised up from below, and afterwards disappeared in the same manner. That there was also some substruction beneath the arena, in some amphitheatres at least, is evident, because the whole arena was, upon particular occasions,



Method of Raising Wild Beasts in the Amphitheatre.

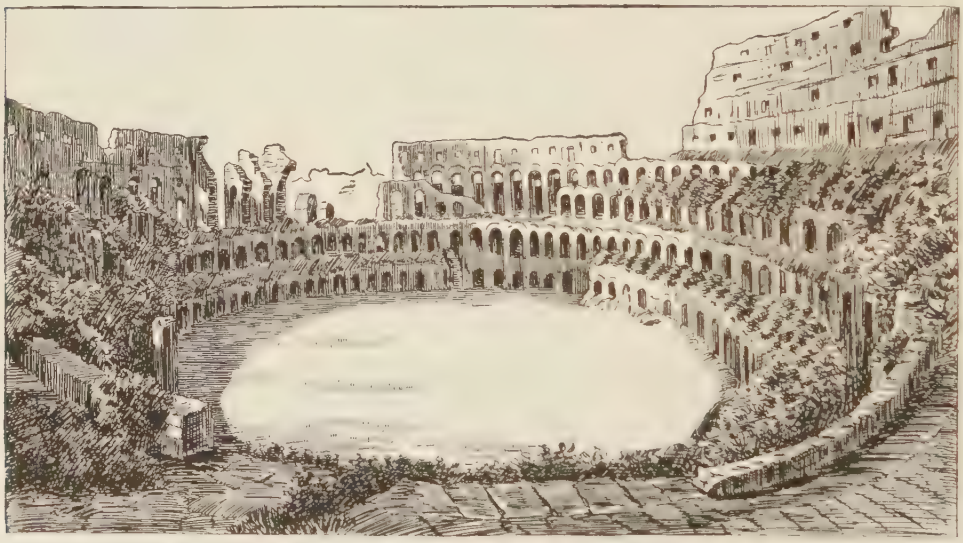
filled with water, and converted into a *naumachia*, where vessels engaged in mimic sea-fights, or else crocodiles and other amphibious animals, were made to attack each other. Nero is said to have frequently entertained the Romans with spectacles and diversions of this kind, which took place immediately after the customary games, and were again succeeded by them; consequently, there must have been not only an abundant supply of water, but mechanical apparatus capable of pouring it in and draining it off again very expeditiously. See NAUMACHIA.

The arena was surrounded by a wall, distinguished by the name of *podium*, although such appellation, perhaps, rather belongs to merely the upper part of it, forming the parapet or balcony before the first or lowermost seats, nearest to the arena. The latter, therefore, was no more than an open oval court, surrounded by a wall about eighteen feet high, measuring from the ground to the top of the parapet; a height considered necessary in order to render the spectators perfectly secure from the attacks of the wild beasts. There were four principal entrances leading into the arena, two at the ends of each axis or diameter of it, to which as many passages led directly from the exterior of the building; besides secondary ones intervening between them, and communicating with the corridors beneath the seats on the podium.

The wall or enclosure of the arena is supposed to have been faced with marble of more or less costliness; besides which there appears to have been, in some instances at least, a sort of network affixed to the top of the podium, consisting of railing, or, rather, open trellis-work of metal. From the mention made of this network by ancient writers, little more can now be gathered respecting it than that, in the time of Nero, such netting, or whatever it might have been, was adorned with gilding and amber—a circumstance that favours the idea of its having been gilt metal-work, with bosses and ornaments of the other material. As a further defence, ditches, called *euripi*, sometimes surrounded the arena.

The term *podium* was also applied to the terrace, or gallery itself, immediately above the lower enclosure, and which was only wide enough to contain two, or at the most three, ranges of movable seats or chairs. This, as being by far the best situation for distinctly viewing the sports in the arena, and also more commodiously accessible than the seats higher up, was the place set apart for senators and other persons of distinction, such as the ambassadors of foreign parts; and it was here, also, that the emperor himself used to sit, in an elevated place called *suggestus* or *cubiculum*; and likewise the person who exhibited the games, on a place elevated like a pulpit or tribunal (*editoris tribunal*). The Vestal Virgins also appear to have had a place allotted to them in the podium, as has been assumed from a passage in Suetonius (*Aug.* 44), though this is only inferential, as the passage relates to an earlier regulation respecting the theatre. Some of these marble seats were carried away in the Middle Ages to be used as episcopal thrones.

Elevation of the Flavian Amphitheatre restored. (Daremberg and Saglio.)



Above the podium were the *gradus*, or seats of the other spectators, which were divided into *maeniana*, or stories. The first *maenianum*, consisting

The Colosseum. (Drawn by Boudier, after Photographs.)

of fourteen rows of stone or marble seats, was appropriated to the equestrian order. The seats appropriated to the senators and equites were covered with cushions (*pulvilli*), which were first used in the time of Caligula. Then, after an interval or space, termed a *praecinctio*, and forming a continued landing-place from the several staircases in it, succeeded the second maenianum, where were the seats called *popularia*, for the third class of spectators, or the *populus*. Behind this was the second praecinctio, bounded by a rather high wall, above which was the third maenianum, where there were only wooden benches for the *pullati*, or common people. The next and last division—namely, that in the highest part of the building—consisted of a colonnade or gallery, where women were allowed to witness the spectacles of the amphitheatre. Some parts of this were also occupied by the pullati. At the very summit was the narrow platform for the men who had to attend to the velarium, and to expand or withdraw the awnings, as there might be

Interior of the Colosseum.

occasion. Each maenianum was not only divided from the other by the praecinctio, but was intersected at intervals by spaces for passages left between the seats, called *scalae* or *scalaria;* and the portion between two such passages was called a *cuneus*, because this space gradually widened, like a wedge, from the podium to the top of the building. The entrances to the seats from the outer porticos were called *vomitoria*, because, says Macrobius, *Homines glomeratim ingredientes in sedilia se fundunt.*

There were in the amphitheatre concealed tubes, from which scented liquids were scattered over the audience, and which sometimes issued from statues placed in different parts of the building. (Lucan, ix. 808; Mart. *Spect.* 3.)

The provincial amphitheatres were probably, as a rule, built of wood; but in several of the large cities of the Empire there are important ruins of large amphitheatres of stone, of which the best known are at Verona, Paestum, Pompeii, and Capua, in Italy; at Nîmes, Arles, and Fréjus, in France; at Pola, in Istria; and at Syracuse and Catania, in Sicily.

For an account of the games, combats, etc., held in the amphitheatre, see the articles GLADIATORES; NAUMACHIA; VENATIONES.

On the general subject of amphitheatres, the reader is referred to the following standard works: Lipsius, *De Amphitheatro;* Nibby, *Dell' Anfiteatro Flavio*, a supplement to Nardini, vol. i. p. 233; Fea, *Notizie degli Scavi nell' Anfiteatro Flavio;* Bunsen, *Beschreibung der Stadt Rom*, vol. iii.; Cressy and Taylor, *Architectural Antiquities of Rome;* Stieglitz, *Archäologie der Baukunst;* Hirt, *Geschichte d. Baukunst bei den Alten;* Burn, *Rome and the Campagna;* J. H. Parker, *Archaeology of Rome*, part vii.; Middleton, *Ancient Rome in 1885;* id., *Remains of Ancient Rome* (1892).

Amphitrīté (Ἀμφιτρίτη). A Nereid, wife of Poseidon (q. v.), and mother of Triton (q. v.).

Amphitruo. The title of a comedy of T. Maccius Plautus (q. v.), and differing from the others of his that we possess in being in spirit a burlesque. It is based on the story of Iupiter and Alcmené, and has been imitated by Molière in French, and Dryden in English. See SATYRIC DRAMA.

Amphitryon or **Amphitruo** (Ἀμφιτρύων). Son of Alcaeus and Hipponomé, husband of Alcmené, and nominally father of Heracles, who is hence called Amphitryoniades. (See ALCMENÉ.) Amphitryon was slain in a war against Erginus, king of the Minyans.

Amphomosia (*ἀμφομοσία*). See AMPHIORKIA.

Amphŏra (*ἀμφορεύς*). A two-handled, big-bellied vessel, usually of clay, with a longish or shortish neck, and a mouth proportioned to the size, sometimes resting firmly on a foot, but often ending in a blunt point, so that in the store-room it had to lean against the wall or be sunk in sand, and, when brought out for use, to be put in a basket, wine-cooler, or hollow stand.

It served to keep oil, honey, and more especially

the wine drawn off from the big fermenting vats. It was fastened with a clay stopper, plastered over with pitch, loam, or gypsum, and had a ticket stating the kind, the year, and the quantity of the wine it contained. The Greek *ἀμφορεύς* was a

Amphorae

large liquid measure holding nearly nine gallons (see METRETES); the Roman measure called *amphora* held six gallons and seven pints. See VINUM.

Amphrȳsus (*Ἀμφρυσός*). A small stream in Thessaly flowing into the Pagasaeus Sinus. On its banks Apollo fed the herds of Admetus (q. v.).

Ampsāga. A river of North Africa flowing past the town of Cirta, and dividing Numidia from Mauritania Sitifensis. (Ptol. iv. 3, § 20.)

Ampsanctus (or **Amsanctus**) **Lacus**. A small lake in Samnium, near Aeculanum, which, by reason of its mephitic vapours, was reputed to be the entrance to the lower world. (Cic. *De Div.* i. 36.)

Lekythos. (British Museum.)

Ampulla (*λήκυθος, βομβύλιος*). A tall, slender, narrow-necked vessel, with a handle, used for perfumes, unguents, vinegar, water, and wine (*ampulla potoria*). Lekythi were of constant use at the toilets of Greek ladies. They also held the oil used in anointing the bodies of the dead. The ampulla was used in the Christian Church as a receptacle for the wine and water of the sacrament, and also for holding the consecrated oil or chrism.

Amputatio. See IUDICIUM.

Ampyx (*Ἄμπυξ*). Son of Pelias, husband of Chloris, and father of Mopsus (q. v.), who was hence known as Ampycides.

Ampyx (*ἄμπυξ*). (1) A frontlet or band worn by Greek ladies to confine the hair; passing around the front of the head and fastened behind. It was often of gold or silver, and adorned with precious stones. Hesychius supposes men

Forms of the Ampyx.

to have worn frontlets in Lydia; and they appear to have been worn also by the Jews. (2) A frontlet worn by horses, and sometimes by elephants, often highly ornamented.

Ampliatio. The Latin term for a delay of verdict pending the production of further evidence in a case not clear to the judges. See COMPERENDINATIO.

Amulētum (*περίαπτον, περίαμμα, φυλακτήριον*). A charm worn by a human being, or even by an animal, to avert evil or secure good fortune. The word is from the Arabic *hamâlet*, meaning "that which is suspended." Amulets are as old as the Homeric *μῶλυ* (*Od.* x. 305); but appear to have been introduced into Rome from the East under the early Empire. The word is first used in Pliny (*H. N.* xxxvii. § 124). They consist of gems or stones, metals (e. g. copper, iron, gold); plants (e. g. laurel, hellebore, fig); animals and parts of animals (e. g. the spider, the bat, the dog's gall, the ass's testicles, wolf's fat); parts and secretions of the human body (e. g. the blood of gladiators, the eye-tooth of a corpse); and artificial shapes often obscene. These were attached to a chain or belt passed over one shoulder and under the other. See Pliny, *H. N.* Bk. xxxvii.; O. Jahn, *Ueber den bösen Blick* in *Berichte der sächsischen Gesellschaft* (1855); C. W. King, *Precious Stones and Metals;* Marquardt, *Röm. Altert.* vi. p. 104; Labatut in Daremberg and Saglio, s. h. v.; and the articles BULLA; FASCINUM; PHALERAE; MALUS OCULUS.

Amulius. See ROMULUS.

Amussis. A level used in testing the evenness of a surface. See LIBELLA; NORMA; REGULA.

Amȳclae (*Ἀμύκλαι*). (1) An ancient town of Laconia, on the Eurotas, twenty miles southeast of Sparta. It is said to have been the abode of Tyndarus, and of Castor and Pollux, who are hence called Amyclaei Fratres. After the conquest of Peloponnesus by the Dorians, the Achaeans maintained themselves in Amyclae for a long time; but it was at length taken and destroyed by the Lacedaemonians under Teleclus. Amyclae still continued memorable by the festival of the Hyacinthia celebrated at the place annually, and by the colossal statue of Apollo, who was hence called Amyclaeus. (2) An ancient town of Latium, east of Terracina, on the Sinus Amyclanus, claimed to be an Achaean colony from Laconia. The inhabitants were said to have deserted it on account of its being infested by serpents; whence Vergil speaks of *tacitae Amyclae* (*Aen.* x. 564.)

Amyclīdes. Hyacinthus (q. v.).

Amȳcus (*Ἄμυκος*). A son of Poseidon; a gigan-

tic king of the Bebrycians on the Bithynian coast, who forced every stranger that landed there to box with him. When the Argonauts wished to draw water from a spring in his country, he forbade them, but was conquered and killed in a match with Polydeuces (Pollux).

Amymōné (Ἀμυμώνη). The daughter of Danaüs (q. v.), and mother of Nauplius by Poseidon.

Amyntas (Ἀμύντας). (1) A king of Macedonia, who reigned from about B.C. 540 to 500, and was succeeded by his son Alexander I. (2) King of Macedonia, son of Philip, the brother of Perdiccas II., reigned B.C. 393–369, and obtained the crown by the murder of the usurper Pausanias. He carefully cultivated the friendship of Athens. He left by his wife Eurydicé three sons, Alexander, Perdiccas, and the famous Philip, hence called by Ovid, Amyntiades.

Amyntor (Ἀμύντωρ). A king of the Dolopes, and father of Phoenix (q. v.).

Amystis (*ἀμυστὶ πίνειν, ἀμυστὶν πίνειν, ἀμυστίζειν*), from *ἀ* and *μύω*, a draught taken without drawing breath. It was a favourite amusement with the Greeks to try how much they could swallow in this way, and very large quantities are said to have been drunk. Plato (*Symp.* 214 A) represents Socrates and Alcibiades as draining off the contents of a wine-cooler holding eight *κοτύλαι*, or nearly two quarts; while Alexander the Great is said to have greatly exceeded this amount. Ephippus relates that he succeeded in emptying a vessel containing two *χόες*, or more than two gallons and a half, and afterwards attempted to drink a second in the same way. This, however, affected him so much as to bring on the illness which resulted in his death. The name was also applied to a kind of vessel adapted for this kind of drinking. (Athen. x. 60, p. 442 foll.; 67, p. 447.)

Amythāon (Ἀμυθάων). A son of Cretheus and Tyro, and father of Bias and Melampus. (*Od.* xi. 235.) See OLYMPIA.

Anabăsis (*ἀνάβασις*). (1) The title of Xenophon's narrative of the 10,000 Greek troops in the expedition under Cyrus the Younger against his brother Artaxerxes. It is in seven books, of which the first alone deals with the *ἀνάβασις*, or march up from the coast, the rest relating to the *κατάβασις*, or retreat and subsequent adventures of the Ten Thousand. (2) The *Anabasis of Alexander*, by Arrianus (q. v.), contains an account of the campaigns of Alexander the Great, written in the second century A.D. Like the *Anabasis* of Xenophon, it is in seven books.

Anăces. See DIOSCURI.

Anacharsis (Ἀνάχαρσις). A Scythian prince, who came to Athens about B.C. 594 to pursue a course of study. He was a friend of Solon and a man of ability. On his return to his native land, he was killed by his brother Saulius. A number of aphorisms were ascribed to him, and he was said to have invented the bellows, the anchor, and the potter's wheel. A number of epistles of later date are falsely attributed to him. See Seneca, *Epist.* XC.

Anacreon (Ἀνακρέων). A famous Greek lyric poet, born about B.C. 550, at Teos, an Ionian town of Asia, whose inhabitants, to escape the threatened yoke of Persia, migrated to Abdera in Thrace, B.C. 540. From Abdera, Anacreon went to the tyrant Polycrates of Samos, after whose death (B.C. 522) he removed to Athens on the invitation of Hipparchus, and lived there, till the fall of the Peisistratidae, on friendly terms with his fellow-poet Simonides, and Xanthippus, the father of Pericles. He is said to have died at Abdera in his eighty-sixth year, choked by the stone of a dried grape. A statue of him stood in the Acropolis at Athens in the guise of an aged minstrel inspired by the wine-god; for Anacreon was regarded as the type of a poet who, in spite of age, paid perpetual homage to wine and love. Love and wine and merry company formed the favourite subjects of his light, sweet, and graceful songs, which were cast in the metres of the Aeolic poets, but composed in the Ionic dialect. Besides fragments of such songs and of elegies, we have also a number of epigrams that bear his name. His songs were largely imitated, and of such imitations we have under his name a collection of about sixty love-songs and drinking-songs of very various (partly much later) dates, and of different degrees of merit. Of these, the renderings by Thomas Moore are unsurpassed in grace and melody. The genuine fragments are contained in Bergk's *Poetae Lyrici Graeci* (4th ed. 1878). Translation edited by Bullen (N. Y. 1893).

Anacrĭsis (*ἀνάκρισις*). The pleadings preparatory to a trial at Athens, the object of which was to determine, generally, if the action would lie (*ἐξετάζουσι δὲ καὶ εἰ ὅλως εἰσάγειν χρή*). The magistrates were said *ἀνακρίνειν τὴν δίκην*, or *τοὺς ἀντιδίκους*, and the parties *ἀνακρίνεσθαι*. The process consisted in the production of proofs, of which there were five kinds: (1) the laws; (2) written documents, the production of which by the opposite party might be compelled by a *δίκη εἰς ἐμφανῶν κατάστασιν*; (3) testimonies of witnesses present (*μαρτυρίαι*), or affidavits of absent witnesses (*ἐκμαρτυρίαι*); (4) depositions of slaves extorted by the rack; (5) the oath of the parties. All these proofs were committed to writing, and placed in a box secured by a seal (*ἐχῖνος*) till they were produced at the trial. The name *ἀνάκρισις* is given to the pleadings, considered expressly as a written document, in Isaeus. If the evidence produced at the anacrisis was so clear and convincing that there could not remain any doubt, the magistrate could decide the question without sending the cause to be tried before the dicasts: this was called *διαμαρτυρία*. In this case, the only remedy for the person against whom the decision was given was to bring an action of perjury against the witnesses (*ψευδομαρτυρῶν δίκη*). These pleadings, like our own, were liable to vexatious delays on the part of the litigants, except in the case of actions concerning merchandise, benefit societies, mines, and dowries, which were necessarily tried within a month from the commencement of the suit, and were therefore called *ἔμμηνοι δίκαι*. The word *ἀνάκρισις* is sometimes used of a trial in general (*μηδ' εἰς ἄγκρισιν ἐλθεῖν*). The archons were the proper officers for the *ἀνάκρισις*. See Meier and Schömann, *Attische Process*; Platner, *Process und Klagen*; and the articles ARCHON; ANTIGRAPHÉ; ANTOMOSIA.

Anactorium (Ἀνακτόριον). A town of Acarnania, on the Ambracian Gulf.

Anadēma (*ἀνάδημα*). See MITRA.

Anadesmé (*ἀναδέσμη*). See MITRA.

Anadikia (*ἀναδικία*). See EPHESIS.

Anadyoménē. An epithet of Aphrodité (q. v.).

Anaglypta (*ἀνάγλυπτα*). See CAELATURA; TORREUTICÉ.

Anagnia. The chief town of the Hernici, in Latium, near which Cicero had a fine estate.

Anagnostae (*ἀναγνῶσται*). See LECTORES.

Anagōges Dikē (*ἀναγωγῆς δίκη*). If an individual sold a slave who had some secret disease—such, for instance, as epilepsy—without informing the purchaser of the circumstance, it was in the power of the latter to bring an action against the vendor within a certain time, which was fixed by the laws. In order to do this, he had to report (*ἀνάγειν*) to the proper authorities the nature of the disease; whence the action was called *ἀναγωγῆς δίκη*. See SERVUS.

Anagogia (*ἀναγώγια*). A festival celebrated at Eryx in Sicily in honour of Aphrodité. Nine days later, a second festival, the *καταγώγια*, was celebrated.

Anaïtis (*Ἀναΐτις*). An Armenian goddess, probably to be identified with Aphrodité. Her temple stood in the district of Acilisené, in the territory between the northern and southern branches of the Euphrates. This temple had set apart for it a large tract of land, which was cultivated by male and female slaves (*ἱερόδουλοι*). It was famous for its riches, and from it Antony in his Parthian expedition carried away an image of the goddess made of solid gold (Pliny, *H. N.* xxxiii. 4). Anaïtis was worshipped also at Zela in Pontus, and in Comana.—Among the Lydians, the name Anaïtis was given to Artemis (Pausan. iii. 16, 8).

Anakeia (*ἀνάκεια*). A festival of the Dioscuri (q. v.), or *Ἄνακες*, held at Athens.

Anākes (*Ἄνακες*). See DIOSCURI.

Anakleteria (*ἀνακλητήρια*). The name of a solemnity at which the minority of a young prince was declared at an end, and he assumed the reins of government. The name was chiefly applied to the coming of age of the Ptolemaic kings of Egypt (Polyb. xviii. 38; xxviii. 10).

Anakomĭdé (*ἀνακομιδή*). The ceremony of returning to his native land the body or ashes of one who had died abroad.

Analemma (*ἀνάλημμα*). (1) In the plural, walls built on strong foundations. (2) An instrument used to show the different altitudes of the sun at the different periods of the year (Vitruv. ix. 7, 8, § 6, 7). See GNOMON.

Analogists and Anomalists. See PHILOLOGIA.

Anancaeum (*ἀναγκαῖον*). A large drinking-vessel, whose etymology suggests that the drinker was compelled to empty it at a draught (Plaut. *Rud.* ii. 3, 33). See AMYSTIS.

Anaphlystos (*Ἀνάφλυστος*). A deme of Attica, on the southwestern coast. It belonged to the tribe Antiochis.

Anāpus (*Ἄναπος*). (1) A river in Sicily flowing into the sea south of Syracuse. (2) A river in Acarnania emptying into the Acheloüs.

Anas. The modern Guadiana; one of the chief rivers of Spain emptying into the ocean. It formed the boundary between Baetica and Lusitania.

Anatokismus (*ἀνατοκισμός*). See FENUS.

Anaumachiou Graphé (*ἀναυμαχίου γραφή*). An impeachment of the trierarch who had kept aloof from action while the rest of the fleet was engaged. In a cause of this kind, as in the kindred actions *ἀστρατείας*, *δειλίας*, *λιποναυτίου*, *γιποταξίου*, the strategi were naturally the presiding judges. The penalty was *ἀτιμία*, without confiscation of goods, if we may trust Andocides; whereas on conviction *δειλίας* or *λιποταξίου*, the property of the offender was confiscated (Lys. *c. Alcib.* i. § 9).

Anaxagŏras (*Ἀναξαγόρας*). A Greek philosopher, of Clazomenae in Asia Minor, born about B.C. 500. Sprung from a noble family, but wishing to devote himself entirely to science, he gave up his property to his kinsmen, and removed to Athens, where he lived in intimacy with the most distinguished men—above all with Pericles. Shortly before the outbreak of the Peloponnesian War he was charged by the political opponents of Pericles with impiety, i.e. with denying the gods recognized by the State; and, though acquitted through his friend's influence, he felt compelled to emigrate to Lampsacus, where he died soon after, aged seventy-two. He not only had the honour of giving philosophy a home at Athens, where it went on flourishing for quite a thousand years, but he was the first philosopher who, by the side of the material principle, introduced a spiritual, which gives the other life and form. He laid down his doctrine in a work "On Nature" in the Ionic dialect, of which only fragments are preserved. Like Parmenides, he denied the existence of birth or death; the two processes were rather to be described as a mingling and unmingling. The ultimate elements of combination are indivisible, imperishable *primordia* of infinite number, and differing in shape, colour, and taste, called by himself "seeds of things," and by later writers (from an expression of Aristotle) *ὁμοιομέρεια*, i. e. particles of like kind with each other and with the whole that is made up of them. At first these lay mingled without order; but the divine spirit—*νοῦς*, pure, passionless reason—set the unarranged matter into motion, and thereby created out of chaos an orderly world. This movement, proceeding from the centre, works on forever, penetrating farther and farther the infinite mass. But the application of the spiritual principle was rather indicated than fully carried out by Anaxagoras: he himself commonly explains phenomena by physical causes, and only when he cannot find these, falls back on the action of divine reason. The fragments of his most important work were edited by Schaubach (1827), and by Schorn (1829). See also Beckel, *Anaxagorae Doctrina de Rebus Animatis* (Münster, 1868), and Ueberweg, *Hist. of Philosophy*, vol. i. pp. 63–67 (Eng. trans., N. Y. 1872). For criticism of Anaxagoras by Lucretius, see the *De Rerum Natura*, i. 830–920.

Anaxagoreia (*ἀναξαγόρεια*). A day of recreation for the youths at Lampsacus, which took place once every year, in compliance with a wish expressed by Anaxagoras, who, after being expelled from Athens, spent the remainder of his life there.

Anaxandrĭdes (*Ἀναξανδρίδης*). (1) A king of Sparta, who reigned from about B.C. 560 to 520. Having a barren wife whom he would not divorce, the ephors made him take with her a second. By her he had Cleomenes; and after this, by his first wife, Dorieus, Leonidas, and Cleombrotus. (2) A Rhodian Greek poet of the Middle Comedy, who flourished in B.C. 376. He is said to have been the first to make love affairs the theme of comedy. His plays are said to have been characterized by sprightliness and humour, but only fragments of them are now in existence.

Anaxarchus (Ἀναξάρχος). A philosopher of Abdera, of the school of Democritus, who accompanied Alexander into Asia (B.C. 334). After the death of Alexander (B.C. 323), Anaxarchus was thrown by shipwreck into the power of Nicocreon, king of Cyprus, to whom he had given offence, and who had him pounded to death in a stone mortar.

Anaxarĕté (Ἀναξαρετή). A maiden of Cyprus, treated her lover Iphis with such haughtiness that he hanged himself at her door. She looked with such indifference at the funeral of the youth that Aphrodité changed her into a stone statue.

Anaximander (Ἀναξίμανδρος). A Greek philosopher of Miletus, born B.C. 611, and hence a younger contemporary of Thales and Pherecydes. He lived at the court of Polycrates of Samos, and died B.C. 547. In his philosophy the primal essence, which he was the first to call ἀρχή, was the immortal, imperishable, all-including infinite, a kind of chaos (ἄπειρον), out of which all things proceed, and into which they return. He composed, in the Ionic dialect, a brief and somewhat poetical treatise on his doctrine, which may be regarded as the earliest prose work on philosophy; but only a few sentences out of it are preserved. The advances he had made in physics and astronomy are evidenced by his invention of the sundial, his construction of a celestial globe, and his first attempt at a geographical map. See IONIAN SCHOOL; PHILOSOPHIA.

Anaximĕnes (Ἀναξιμένης). (1) A Greek philosopher of Miletus, a younger contemporary and pupil of Anaximander, who died about B.C. 502. He supposed air to be the fundamental principle, out of which everything arose by rarefaction and condensation. This doctrine he expounded in a work, now lost, written in the Ionic dialect. (2) A Greek sophist of Lampsacus, a favourite of Philip of Macedon and Alexander the Great. He composed orations and historical works, some treating of the actions of those two princes. Of these but little remains. On the other hand, he is the author of the *Rhetoric* dedicated to Alexander, the earliest extant work of this kind, which was once included among the works of Aristotle.

Anaxyrĭdes (ἀναξυρίδες). See BRACAE.

Ancaeus (Ἄγκαιος). (1) Son of the Arcadian Lycurgus, and father of Agapenor. He was one of the Argonauts, and was killed by the Calydonian boar. (2) Son of Poseidon and Astypalaea, also one of the Argonauts, and the helmsman of the ship Argo after the death of Tiphys.

Anchiălé (Ἀγχιάλη). (1) A town of Thrace, on the Black Sea, near the border of Mysia. (2) A city of Cilicia, near the coast, said to have been founded by Sardanapalus.

Anchīses (Ἀγχίσης). The son of Capys, of the royal house of Troy by both parents, ruler of Dardanus, on Mount Ida. Aphrodité loved him for his beauty, and bore him a son, Aeneas; but having, in spite of her warnings, boasted of her favour, he was (according to various versions of the story) paralyzed, killed, or struck blind by the lightning of Zeus. Vergil represents the disabled chief as borne out of burning Troy on his son's shoulders, and as sharing his wanderings over the sea, and aiding him with his counsel, till they reach Drepanum, in Sicily, where he dies, and is buried on Mount Eryx.

Anchisteia (ἀγχιστεία). See HERES.

Ancīlé. See SALII.

Ancilla. See SERVUS.

Ancōna or **Ancon** (Ἄγκων). A town in Picenum, on the Adriatic Sea, lying in a bend of the coast between two promontories, and hence called *Ancon*, or an "elbow." It was built by the Syracusans in the time of the elder Dionysius, B.C. 392. The Romans made it a colony. It possessed an excellent harbour, completed by Trajan, and was one of the most important seaports of the Adriatic.

Ancŏra (ἄγκυρα). See NAVIS.

Ancus Marcius. The fourth king of Rome. He reigned twenty-four years (B.C. 640–616), and is said to have been the son of Numa's daughter. He took many Latin towns, transported the inhabitants to Rome, and gave them the Aventine to dwell on. These conquered Latins formed the original Plebs. He was succeeded by Tarquinius Priscus. (Livy, i. 32 foll.)

Ancȳra (Ἄγκυρα). (1) A city of Galatia, in Asia Minor, originally the chief city of a Gallic tribe named the Tectosages, who came from the south of France. (See ANCYRANUM MONUMENTUM.) (2) A town in Phrygia Epictetus, on the borders of Mysia.

Ancyrānum Monumentum. The monument at Ancyra (now Angora), a marble wall, of which the greater part is preserved. It belonged to the temple of Augustus at Ancyra, and contained the Latin text of a Greek translation of the report drawn up by that emperor himself on the actions of his reign (*index rerum a se gestarum*). By the terms of his will this report, engraved in bronze, was set up in front of his mausoleum at Rome, and copies were made of it for other temples of Augustus in the provinces. See Perrot, *Exploration Archéologique de la Galatie*, etc.; the fac-simile of the inscription with commentary by Mommsen (Berlin, 1883); and AUGUSTUS, p. 171.

Andabătae. See GLADIATORES.

Andecāvi, Andegāvi, or **Andes.** A Gallic people dwelling north of the Liger (Loire), whose chief town was Andes (Angers).

Andes. A village near Mantua, famous as being the birthplace of Vergil.

Andocĭdes (Ἀνδοκίδης). The second in order of time in the roll of great Attic orators. He was born B.C. 439, and belonged by birth to the aristocratic party, but fell out with it in B.C. 415, when he was involved in the famous trial for mutilating the statues of Hermes, and, to save his own and his kinsmen's lives, betrayed his aristocratic accomplices. Having, in spite of the immunity promised him, fallen into partial loss of civic rights, he left Athens, and carried on a profitable trade in Cyprus. After two fruitless attempts to recover his status at home, he was allowed at last, upon the fall of the Thirty Tyrants and the amnesty of B.C. 403, to return to Athens, where he succeeded in repelling renewed attacks, and gaining an honourable position. Sent to Sparta in B.C. 390, during the Corinthian War, to negotiate peace, he brought back the draft of a treaty, for the ratification of which he vainly pleaded in a speech that is still extant. He is said to have been banished in consequence, and to have died in exile. Besides the above-mentioned oration, we have two delivered on his own behalf, one pleading for his recall from banishment, B.C. 410; another against the charge of un-

lawful participation in the mysteries, B.C. 399; a fourth, against Alcibiades, is spurious. His oratory is plain and artless, and its expressions those of the popular language of the day. A good text is that of Blass (Leipzig, 1880); and C. Müller's, with index (1868). See Blass, *Die attische Beredsamkeit*, 3 vols. (1880).

Andrapodismou Graphé (*ἀνδραποδισμοῦ* or *ἀνδραποδίσεως γραφή*). An action brought before the court of the Eleven (*οἱ ἕνδεκα*), against all persons who carried off slaves from their masters, or reduced free men to a state of slavery. The grammarians mention an oration of Antiphon on this subject, which has not come down to us.

Andrapŏdōn Diké (*ἀνδραπόδων δίκη*). The title of the *διαδικασία* when a property in slaves was the subject of contending claims. The cause belonged to the class of *δίκαι πρός τινα*, and was one of the private suits that came under the jurisdiction of the thesmothetae.

Andreia (*ἀνδρεῖα*). See Syssitia.

Andria. A play of Terence, the earliest of his comedies, produced in B.C. 166, when the author was only nineteen years of age. For the story connected with its production, see Terentius.

Andrias (*ἀνδριάς*). See Statuaria.

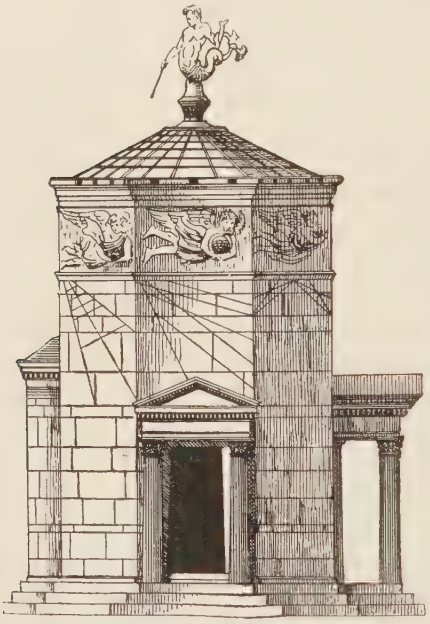
Andrŏclus or **Andrŏcles**. The slave of a Roman consul, and sentenced to be exposed to the wild beasts in the circus; but a lion which had been let loose upon him exhibited signs of recognition, and began licking him. Upon inquiry, it appeared that Androclus had run away from his master in Africa; and that, having taken refuge in a cave, a lion entered, went up to him, and held out his paw. Androclus extracted a large thorn which had entered it. Henceforth they lived together for some time, the lion catering for his benefactor. But at last, tired of this savage life, Androclus left the cave, was apprehended by some soldiers, brought to Rome, and condemned to the wild beasts. He was pardoned, and presented with the lion, which he used to lead about the city. (Sen. *Ben.* ii. 19; Gell. v. 14.)

Androgeonia (*Ἀνδρογεώνια*). A festival with games, held every year in the Ceramicus at Athens, in honour of the hero Androgeos, son of Minos, who had overcome all his adversaries in the festive games of the Panathenaea, and was afterwards killed by order of Aegeus (q. v.).

Androgeos (*Ἀνδρόγεως*). A son of Minos, king of Crete, by Pasiphaë. Visiting Athens at the first celebration of the Panathenaea, he won victories over all the champions, when King Aegeus, out of jealousy, sent him to fight the bull of Marathon, which killed him. According to another account he was slain in an ambush. Minos avenged his son by making the Athenians send seven youths and seven maidens every nine years as victims of the Minotaur (q. v.). See Theseus.

Androlepsia or **Androlepsion** (*ἀνδροληψία* or *ἀνδρολήψιον*). The right of reprisals, a custom recognized by the international law of the Greeks; so that when a citizen of one State had killed a citizen of another, and the countrymen of the former would not surrender him to the relatives of the deceased, it was held lawful to seize upon three, and not more, of the countrymen of the offender, and keep them as hostages till satisfaction was afforded or the homicide given up. The trierarchs and the commanders of the ships of war were the persons intrusted with this office. The property which the hostages had with them at the time of seizure was confiscated, under the name of *σῦλα* or *σῦλαι*.

Andromăché (*Ἀνδρομάχη*). The daughter of Eëtion, king of the Cilician Thebes, and wife of Hector, by whom she had a son, Scamandrius (Astyanax). On the taking of Troy, her son was hurled from the walls of the city, and she herself fell to the share of Neoptolemus (Pyrrhus), the son of Achilles, who took her to Epirus. She afterwards married Helenus, a brother of Hector, who ruled over Chaonia.



Andromăchus (*Ἀνδρόμαχος*). (1) An opulent Sicilian, father of the historian Timaeus. He collected together the inhabitants of the city of Naxos, which Dionysius the tyrant had destroyed, and founded with them Tauromenium. Andromachus, as prefect of the new city, subsequently aided Timoleon in restoring liberty to Syracuse. (Diod. Sic. xvi. 7, 68.) (2) A general of Alexander, to whom Parmenio gave the government of Syria. He was burned alive by the Samaritans, but his death was avenged by Alexander. (Quint. Curt. iv. 5.) (3) A brother-in-law of Seleucus Callinicus. (4) A traitor, who discovered to the Parthians all the measures of Crassus, and, on being chosen guide, led the Roman army into a situation whence there was no mode of escape. (5) A physician of Crete in the age of Nero. He was physician to the emperor, and inventor of the famous medicine, called after him, *theriaca Andromachi*. It was intended at first as an antidote against poisons, but became afterwards a kind of panacea. This medicine enjoyed so high a reputation among the Romans that the emperor Antoninus, at a later period, took some of it every day, and had it prepared every year in his palace. It consisted of sixty-one ingredients, the principal of which were squills, opium, pepper, and dried vipers.

Andromĕda (*Ἀνδρομέδη*). The daughter of Cepheus, king of Aethiopia, and Cassiopea. In consequence of her mother boasting that the beauty of her daughter surpassed that of the Nereids, Poseidon sent a sea-monster to lay waste the country. The oracle of Ammon promised deliverance if Andromeda was given up to the monster, and Cepheus was obliged to chain his daughter to a rock. Here she was found and saved by Perseus, who slew the monster and obtained her as his wife. She had been previously promised to Phineus, and this gave rise to the famous fight of Phineus and Perseus at the wedding, in which the former and all his associates were slain. After her death she was placed among the stars.

Andrōn (*ἀνδρών*). See Domus (Greek).

Andronīcus (*Ἀνδρόνικος*). (1) A peripatetic philosopher, a native of Rhodes, who flourished about B.C. 80. He arranged and published the writings of Aristotle, which had been brought to Rome with the library of Apellicon. He commented on many parts of these writings; but no portion of his works has reached us, for the treatise *Περὶ Παθῶν*, and the Paraphrase of the Nicomachean ethics, which have been published under his name, are the productions of another. The treatise *Περὶ Παθῶν* was published by Hösschel in 1593, and was afterwards printed conjointly with the Paraphrase in 1617, 1679, and 1809. The Paraphrase

was published by Heinsius in 1607, at Leyden, as an anonymous work (*Incerti Auctoris Paraphrasis*, etc.), and afterwards under the name of *Andronicus of Rhodes*, by the same scholar, in 1617, with the treatise Περὶ Παθῶν added to it. See the dissertations by Littig, *Andronikos von Rhodos* (1891) and by Rösener (1893). (2) Cyrrhestes, an astronomer of Athens, who erected, B.C. 159, an octagonal marble tower in that city to the eight winds, now known as the "Tower of the Winds." On every side of the octagon he caused to be wrought a figure in *relievo*, representing the wind which blew

Tower of the Winds.

against that side. The top of the tower was finished with a conical marble, on which he placed a brazen Triton, holding a wand in his right hand. This Triton was so contrived that he turned round with the wind, and always stopped when he directly faced it, pointing with his wand over the figure of the wind at that time blowing. Within the structure was a water-clock, supplied from the fountain in a turret. Beneath the eight figures of the winds lines were traced on the walls of the tower, which, by the shadows cast upon them by styles fixed above, indicated the hour of the day, as the Triton's wand did the quarter of the wind. When the sun did not shine recourse was had to the water-clock within the tower, which building thus supplied both a vane and a chronometer. The structure still stands, though in a damaged state. To the correctness of the sundials Delambre bears testimony, and he describes the series as "the most curious existing monument of the practical gnomonics of antiquity." There are two entrances, facing respectively to the northeast and northwest; each of these openings has a portico supported by two columns. (See Vitruv. i. 6, 4.)

Andronīcus, Livius. See Livius.

Andronītis (*ἀνδρωνῖτις*). The men's apartments in a Greek house. See Domus (Greek).

Andrŏs (*Ἄνδρος*). The most northerly and one of the largest islands of the Cyclades, southeast of Euboea, twenty-one miles long and eight broad, early attained importance, and colonized Acanthus and Stagira about B.C. 654. It was celebrated for its wine, whence the whole island was regarded as sacred to Dionysus.

Androtion (*Ἀνδροτίων*). A Greek historian, an Athenian, and a pupil of Isocrates, who was accused of making an illegal proposal, and went into banishment at Megara. We still have the speech composed by Demosthenes for one of the accusers. At Megara he wrote a history of Attica (see Atthis) in at least twelve books, one of the best of that class of writings; but only fragments of it have survived.

Anemōné (*ἀνεμώνη*). The anemone or windflower.

Angări. See Angaria.

Angarīa (*ἀγγαρεία*). A word borrowed from the Persians, signifying a system of posting which was used among that people, and which, according to Xenophon, was established by Cyrus. Horses were provided at certain distances along the principal roads of the empire; so that couriers (*ἄγγαροι*), who also of course relieved one another at certain distances, could proceed without interruption both night and day (Herod. viii. 98; iii. 126; Xen. *Cyrop.* viii. 6, § 17). Among the Romans, the word was used to denote compulsory service in forwarding imperial messages. See *Digest*, l. tit. 4, s. 18, §§ 4, 29; and the article Cursus Publicus.

Angdistis. See Rhea.

Angiportus or **Angiportum**. A narrow lane between two rows of houses, sometimes ending in a *cul-de-sac*. The number of such places seems to have been considerable in ancient Rome, and they were apt to be disreputable (Catull. 58, 4). The form *angiportum* is archaic.

Angli or **Anglii**. A German people on the left bank of the Elbe, who passed over with the Saxons into Britain, which was called after them England — *Engla-land*. Some of them appear to have settled in Angeln, in Schleswig. See Saxones.

Angothēké (*ἀγγοθήκη*). See Incitega.

Anguilla. See Flagrum.

Anguis. The snake. Among the Romans the snake was the conventional representation of the *genius loci*. (See Genius.) Hence figures of serpents were often painted against a wall, as the cross is in modern Italy, and answered the purpose of our sign "Commit no nuisance" (Pers. i. 113). As the emblem of Aesculapius (q. v.), the snake was the sign that hung before the Roman pharmacies, answering to our pestle and mortar. It was also the military ensign of a cohort, being then commonly termed *draco*. See Aspis; Draco; Genius.

Angustus Clavus. See Clavus.

Anicētus. A freedman of Nero, employed by him in many acts of cruelty.

Anigrus. A small river in the Triphylian Elis, the Minyeius of Homer, flowing into the Ionian Sea, near Samicum. Its waters had a disagreeable smell, in consequence, it is said, of the centaurs having washed in them after they had been wounded by Hercules.

Anio or, anciently, **Anien**. A river rising in the mountains of the Hernici, near Treba, which, af-

ter receiving the brook Digentia, forms at Tibur beautiful water-falls, and flows into the Tiber three miles above Rome. The water of the Anio was conveyed to Rome by two aqueducts — the *Anio vetus* and *Anio novus*.

Anius (Ἄνιος). Son of Apollo by Rhoeo or Creüsa, whose father, Staphylus of Naxos, a son of Dionysus and Ariadné, committed her to the sea in a box. She was carried to Delos, and there gave birth to her son Anius. Apollo taught him divination, and made him his priest and king of Delos. His son Thasus, like Linus and Actaeon, was torn to pieces by dogs, after which no dogs were allowed in the island. His daughters by the nymph Dorippé, being descendants of Dionysus, had the gift of turning anything they pleased into wine, corn, or oil; but when Agamemnon, on his way to Troy, wished to take them from their father by force, Dionysus changed them into doves.

Ankȳlé (*ἀγκύλη*). See HASTA.

Anna Comnéna. See COMNENA.

Anna Perenna. An ancient Italian goddess, about whose exact attributes the ancients themselves were not clear. She is probably the moon-goddess of the current year, who every month renews her youth, and was therefore regarded as a goddess who bestowed long life, and all that contributes to it. About full moon on the Ides (15th) of March (then the first month of the year), in a grove of fruit trees at the first milestone on the Flaminian Way, the Romans held a feast under the open sky, wishing each other as many years of life as they drank cups of wine. (See Ovid, *Fasti*, iii. 523 foll.) The learned men of the Augustan Age identified Anna with Dido's sister, who, on the death of that queen, had fled from Carthage to Aeneas in Italy; but, having excited Lavinia's jealousy, threw herself into the Numicius.

Annāles. (1) The title of an epic poem by Quintus Ennius (q. v.), in which he aspired to treat the entire history of the Roman people in heroic style. The poem was in eighteen books, arranged as follows: Bk. i., Introduction, Early Traditions, Founding of Rome, Deification of Romulus; bks. ii. and iii., The Regal Period; bk. iv., The Republic down to the burning of Rome by the Gauls; bk. v., The Samnite Wars; bk. vi., The War with Pyrrhus; bk. vii., The First Punic War; bks. viii. and ix., The Second Punic War; bks. x. and xi., The War with Macedonia; bks. xii., xiii. and xiv., The War with Syria; bk. xv., The Campaign of Fulvius Nobilior in Aetolia; bks. xvi., xvii., and xviii., From the Death of Scipio to B.C. 172. (See EPOS.) There remain to us of this great poem only fragments, of which the best edition is that of Vahlen (1854). See also Wordsworth, *Fragments and Specimens of Early Latin* (1874); and Merry (1892). (2) A history by Cornelius Tacitus (q. v.), treating in sixteen books of the Roman Empire from the death of Augustus Caesar to the death of Nero.

Annāles Leges. See LEGES ANNALES.

Annāles Maxĭmi. See PONTIFEX.

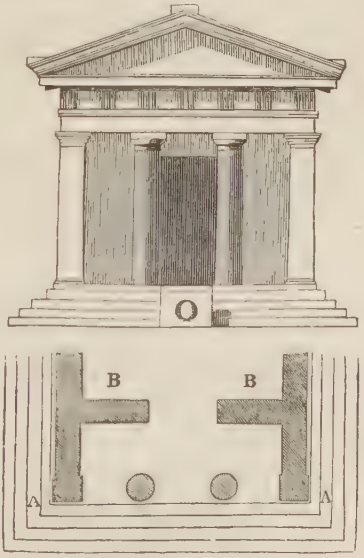
Annōna (from *annus*, like *pomona* from *pomum*). A name used (1) for the produce of the year, and hence (2) for provisions in general, especially for the corn which in the latter years of the Republic was collected in the storehouses of the State, and sold to the poor at a cheap rate in times of scarcity; and which under the emperors was distributed to the people gratuitously or given as pay and rewards. (See FRUMENTARIAE LEGES.) (3) For the price of provisions. (4) For a soldier's allowance of provisions for a certain time. It is used also in the plural for yearly or monthly distributions of pay in corn, etc. Similar distributions in money were called *annonae aerariae*. In the plural it also signifies provisions given as the wages of labour.

(5) Annona was anciently worshipped as the goddess who prospered the year's increase. She was represented on an altar in the Capitol as a female with the right arm and shoulder bare, and the rest of the body clothed, holding ears of corn in her right hand, and the cornucopia in her left.

Annŭlus. See ANULUS.

Annus. See CALENDARIUM.

Anquīna (*ἀγκοίνα*). A collar or ring by which the yard-arm was fastened to the mast of a ship, and called by our sailors a "truss." (Isid. *Orig.* xix. 4, 7.)



Anquisitio. See IUDEX.

Ansa. See HASTA.

Anser. A poet of the Augustan Age, and long considered one of the enemies of Vergil; but of this there is no good evidence, for the line in Verg. *Ecl.* ix. 35 is only traditionally referred to him. He was a writer of erotic poetry. See Unger, *De Anser Poeta* (Neubrandenb. 1858), and Teuffel, vol. i. p. 453 (Eng. trans. 1891).

Ansibarii. A people of Germany.

Antae (*παραστάδες*). Square pillars (*quadrae columnae*). They were commonly joined to the side walls of a building, being placed on each side of the door, so as to assist in forming the portico. These terms are seldom found except in the plural, because the purpose served by antae required that, in general, two should be erected corresponding to each other, and supporting the extremities of the same roof. Their position, form, and use will be best understood from the following woodcut, representing a restoration of the front of the

A A, the antae; B B, the cella or *ναός*: O, the altar

temple of Artemis Propylaea at Eleusis, with a plan of the pronaos, in which A A are the antae.

Antaeopŏlis (*Ἀνταίου πόλις*). A city of Egypt (Thebaïs) on the eastern bank of the Nile, and one of the chief seats of the worship of Osiris (q. v.). See Diod. Sic. i. 7.

Antaeus (*Ἀνταῖος*). A giant, the son of Poseidon and Gé (earth). He dwelt in Libya, and his strength was invincible so long as he remained in contact with his mother, Earth. Heracles discovered the source of his strength, lifted him from the earth, and crushed him in the air. On the connection of Antaeus with the Pygmies, see PYGMAEI. The story of Antaeus is given in Apollod. ii. 5.

Antalcĭdas (*Ἀνταλκίδας*). A Spartan, the son of Leon, and chiefly known by the celebrated treaty concluded with Persia in B.C. 387, usually called the Peace of Antalcidas, since it was the fruit of his diplomacy. According to this treaty all the Greek cities in Asia Minor were to belong to the Persian king. The Athenians were allowed to retain only Lemnos, Imbros, and Scyros; and all the other Greek cities were to be independent. (Xen. *Hist. Graec.* v. 1, § 6.)

Antandrus (*Ἄνταν̓δρος*). An Aeolian colony on the Adramyttian Gulf, at the foot of Mount Ida.

Anteambulōnes. (1) Slaves who went before their masters to make way for them in a crowd, crying *Date locum domino meo.* See Suet. *Vesp.* 2. (2) Clients who walked before their patrons when the latter appeared in public. See CLIENTES.

Antecenium. See CENA, p. 312.

Antecessōres, called also **Antecursōres.** Roman horse-soldiers, who were accustomed to precede an army on march in order to choose a suitable place for the camp, and to make the necessary provisions for the army. They do not appear to have been merely scouts, like the *speculatores.* This name was also given to the teachers of the Roman law. (*Cod. Iust.* i. 17, 2.)

Antefixa. Terra-cottas exhibiting various ornamental designs, and used in architecture to cover the frieze (*zophorus*) of the entablature.

Antefixa. (British Museum.)

They were probably Etruscan in their origin, and were used by the Greeks. The specimen here given represents Athenè superintending the construction of the ship Argo.

Anteia (*Ἄντεια*). See BELLEROPHON.

Antemnae. A Sabine town, said to have been older than Rome, at the junction of the Anio and the Tiber. It was destroyed by the Romans at an early period. (Verg. *Aen.* vii. 631.)

Antenna (*κέρας, κεραία*). The yard of a ship. See NAVIS.

Antēnor (*Ἀντήνωρ*). (1) A Trojan prince related to Priam. He was the husband of Theano, daughter of Cisseus, king of Thrace, and father of nineteen sons, of whom the most known were Polybus, Acamas, Agenor, Polydamas, Helicaon, Archilochus, and Laodocus. He is accused by some of having betrayed his country, not only because he gave a favourable reception to Diomedes, Odysseus, and Menelaüs, when they came to Troy, as ambassadors from the Greeks, to demand the restitution of Helen, but also because he withheld the fact of his recognizing Odysseus, at the time that hero visited the city under the guise of a mendicant (*Od.* iv. 335). After the conclusion of the war Antenor, according to some, migrated with a party of followers into Italy, and built Patavium. According to others, he went with a colony of the Heneti, or Veneti, from Paphlagonia to the shores of the Hadriatic, where the new settlers established themselves in the district called by them Venetia (Liv. i. 1; Plin. iii. 13; Verg. *Aen.* i. 242; Tac. xvi. 21). (2) A statuary, known only as the maker of the original statues of Harmodius and Aristogiton, which were carried off by Xerxes, and restored by Alexander. (Pausan. i. 8.)

Antenorĭdes (*Ἀντηνορίδης*). A patronymic given to the sons of Antenor.

Antepagmenta. The door-posts, or jambs of a door. See IANUA.

Antepilāni. See PILANI.

Antĕros (*Ἀντέρως*). The god of requited love, and brother of Eros (q. v.).

Antesignāni. See SIGNUM.

Antestāri. See ACTIO.

Antevorta. See CARMENTA.

Anthēdon (*Ἀνθηδών*). A city of Boeotia on the shore of the Euripus, celebrated for its wine. Here the Cabiri were worshipped. (Ath. i. p. 31; Pausan. ix. 22.)

Anthēlē (*Ἀνθήλη*). A small town of Thessaly, in the interval between the river Phoenix and the Straits of Thermopylae, and near the spot where the Asopus flows into the sea. In the immediate vicinity were the temples of Demeter Amphictyonia, that of Amphictyon, and the seats of the Amphictyons. It was one of the two places where the Amphictyonic Council used to meet, the other being Delphi. The place for holding the assembly here was the temple of Demeter. See AMPHICTYONES.

Anthĕmus (*Ἀνθεμοῦς*) or **Anthemusia.** A city of Mesopotamia, southwest of Edessa, and a little east of the Euphrates. The surrounding district was called by the same name, but was generally included under the name of Osrhoënè.

Anthesphoria (*τὰ ἀνθεσφόρια*). A flower-festival, principally celebrated in Sicily, in honour of Demeter and Persephonè, in commemoration of the return of Persephonè to her mother in the beginning of spring. It consisted in gathering flowers and twining garlands, because Persephonè had been carried off by Pluto while engaged in this

occupation. The women themselves gathered the flowers for the garlands which they wore on the occasion, and it would have been a disgrace to buy the flowers for that purpose. Anthesphoria were also solemnized in honour of other deities, especially in honour of Heré, surnamed Ἀνθεία, at Argos. Aphrodité, too, was worshipped at Cnossus, under the name Ἀνθεία, and has therefore been compared with Flora (q. v.), the Roman deity, as the anthesphoria have been with the Roman festival of the *florifertum*.

Anthesteria. See CALENDARIUM; DIONYSIA.

Anthesterion (Ἀνθεστηριών). The name of the eighth Attic month, answering to the end of February and the beginning of March. See CALENDARIUM.

Anthology (*ἀνθολογία, anthologia*). "Garland of flowers." A title now generally given to collections of short poems. Both the Greek and the Latin anthologies are famous.

(1) THE GREEK ANTHOLOGY.—The earliest anthology in Greek was compiled by Meleager of Gadara, about B.C. 60, under the title Στέφανος, or "Garland." It contained poems by the compiler himself and forty six other poets, including Archilochus, Alcaeus, Anacreon, Sappho, and Simonides. Continual additions were made to this collection, and in the tenth century A.D. Constantine Cephalas made a new compilation, as did Maximus Planudes in the fourteenth century. The latter was lacking in literary taste; but his anthology was the only one known to Western Europe until the seventeenth century, when Salmasius, in 1606, found in the library at Heidelberg the much finer collection of Cephalas. The copy made by Salmasius was not, however, published until 1776, when Brunck included it in his *Analecta*. The first critical edition was that of F. Jacobs (13 vols. 1794–1803; revised 1813–17). A good recent edition is that in Didot's *Bibliotheca* (1872), while excellent selections have been made by Weichert and Meineke. See also Thackeray's *Anthologia Graeca*, with notes in English (1877). Translations of parts of the anthology have been made in English by Wrangham, John Sterling, Merivale, and Garnett; but no translations can give any true idea of the terseness, elegance, and sparkle of the original. See Symonds, *Studies of the Greek Poets* (1873); Butler, *Amaranth and Asphodel* (1881); Mackail, *Select Epigrams* (1891); and Finsler, *Gesch. der griech. Anthologie* (1876).

(2) THE LATIN ANTHOLOGY.—Unlike the Greek Anthology, the collection known as the Latin Anthology was wholly made in modern times. The first was the compilation of Scaliger (q. v.), published at Leyden in 1573, entitled *Catalecta Veterum Poetarum*. A second collection was published by Pitthoüs at Paris in 1590; and a still larger one by Peter Burmann (q. v.) in 1759 and 1773. Of this a rearrangement was made by Meyer in 1835. The first critical text of a Latin anthology is that of Riese (1869–70). It contains 942 poems of very unequal merit, but all of interest. See the selections, with notes in English, by Thackeray, *Anthologia Latina* (1878); and the collection by Baehrens, in 5 vols. (1883). See EPIGRAMMA.

Anthrakion (*ἀνθράκιον*). (1) A species of carbuncle found in the island of Chios. (2) A small portable stove or brazier filled with hot coals.

Anthrax (*ἄνθραξ*). (1) Coal or charcoal, generally used in the plural *ἄνθρακες*, like the English "coals" (Aristoph. *Ach.* 34). (2) A precious stone, the carbuncle. (3) Cinnabar.

Anthrēné (*ἀνθρήνη*). The hornet, or *vespa crabro*; but also used of the bee (Aristoph. *Nub.* 947).

Anthropophăgi (Ἀνθροποφάγοι). A people of Scythia who fed on human flesh. Herodotus (iv. 106) calls them the Androphagi, and states that they lived in a more savage manner than any other nation, having no public distribution of justice nor established laws. He informs us also that they applied themselves to the breeding of cattle, clothed themselves like the Scythians, and spoke a peculiar language.

Anthylla (Ἄνθυλλα). A considerable city of Lower Egypt, near the mouth of the Canopic branch of the Nile, below Naucratis. (Herod. ii. 97.)

Antia Lex. See LEX.

Antias, QUINTUS VALERIUS. A Roman historian who flourished about B.C. 80, and wrote the history of Rome from the earliest times down to those of Sulla. His work was full of exaggerations, but is still, in a way, the most important immediate predecessor of Livy. His history was in at least seventy-five books, for book lxxv. is quoted by Gellius (vi. 9, 17). Livy appears to have drawn upon him largely, for he mentions him by name thirty-five times in the existing books; and in the first decades of his work follows him unhesitatingly. The fragments of the *Annales* may be found in Peter's *Historicorum Reliquiae*, i. 305. See also Nitzsch, *Röm. Annalistik* (1873); and Teuffel, *Hist. of Rom. Lit.* (Eng. trans. 1891).

Anticatōnes. Two pamphlets written by Iulius Caesar in disparagement of Cato the Younger, intended as a reply to the eulogistic utterance of Cicero. Juvenal implies that they were lengthy (vi. 334); Cicero calls them *vituperationes* (*ad Att.* xii. 41); and Pliny (*Epist.* iii. 12) states that in them Caesar accuses Cato of being drunk in the streets. No fragments of them remain, though a MS. of them is said to have been extant in Liège in the sixteenth century. See Roulez, *Revue de l'Instruction Publique en Belgique*, xix. 2.

Anticlēa (Ἀντίκλεια). The daughter of Autolycus, wife of Laërtes, and mother of Odysseus. She died of grief at the long absence of her son. (*Odyss.* xi. 85.) It is said that before marrying Laërtes she lived on intimate terms with Sisyphus; whence Odysseus is sometimes called a son of Sisyphus.

Anticrătes (Ἀντικράτης). A Spartan who was said to have slain Epaminondas (q. v.) at the battle of Mantinea, and who, in consequence, was richly rewarded by his fellow-countrymen (Plut. *Ages.* 35).

Anticўra (Ἀντίκυρα). (1) A town in Phocis, on a bay of the Crissaean Gulf. (2) A town in Thessaly, on the Spercheus, not far from its mouth. Both towns were celebrated for their hellebore, the chief remedy in antiquity for madness: hence the proverb *naviget Anticyram* when a person acted senselessly (Hor. *Sat.* ii. 3. 166).

Antidŏsis (*ἀντίδοσις*). Literally "an exchange." A term in the language of the Attic courts, peculiarly applied to proceedings under a law which is said to have originated with Solon (Dem. *c. Phaenipp.* init.). It is natural, however, to refer the law to more democratic times; and the orators were in the habit of ascribing to Solon all laws,

especially those which they happened to be quoting in a favourable sense. By this law, a citizen nominated to perform a liturgia, such as a trierarchy or choregia, or to rank among the property-tax payers in a class disproportioned to his means, was empowered to call upon any qualified person not so charged to take the office in his stead, or submit to a complete exchange of property—the charge in question, of course, attaching to the first party, if the exchange were finally effected. For these proceedings the courts were opened at a stated time every year by the magistrates that had official cognizance of the particular subject; such as the strategi in cases of trierarchy and rating to the property-taxes, and the archon in those of choregia (Dem. *c. Phaenipp.* p. 1040; Meier, *Att. Process*, p. 471; *προσκαλεῖσθαι τινα εἰς ἀντίδοσιν*, Lysias, *Or.* 24, *pro Inval.* § 10). If the person challenged could prove that he had already discharged the liturgia, or was otherwise lawfully exempted, the magistrates might dismiss the case; otherwise the parties proceeded to a *διαδικασία* or legal award of their respective claims. An oath was taken by both parties that each would deliver to the other, within three days, a correct inventory (*ἀπόφασις*) of their respective properties (Dem. *c. Phaenipp.* p. 1042, § 11); but in practice the time might be extended by consent of the challenger. All immovable and movable property was transferred in the exchange, with the exception of mines, which were exempted from the extraordinary taxes and liturgiae, as being already taxed; and all claims and obligations attached to it, and particularly all debts, were included in the transfer, as may be seen from the speech against Phaenippus.

Professor Mahaffy's remarks on the injustice of this law are by no means too strong: "It seems simply the legislation of the Athenian mob about property which they had never possessed, and did not understand; for the other alternative—that Athenian properties were small or of a simple nature, like our rentals of estates—is refuted by the many descriptions of property in the orators. It is, in fact, inexplicable that any intelligent people should have tolerated such a law, and it is conclusive against the business capacity of the men who tolerated it." See Mahaffy, *Social Life in Greece*, p. 409, 3d ed., and Jebb, *Attic Or.* ii. 135.

Antigĕnes (Ἀντιγένης). A general of Alexander the Great, on whose death he received the satrapy of Susiana and supported Eumenes. On the defeat of the latter, Antigenes was seized and burned alive by his enemy Antigonus, B.C. 316 (Plut. *Alex.* 70).

Antigŏné (Ἀντιγόνη). (1) A daughter of Oedipus by his mother Iocasté, and sister of Ismené and of Eteocles and Polynices. In the tragic story of Oedipus, Antigoné appears as a noble maiden, with a truly heroic attachment to her father and her brothers. When Oedipus had put out his eyes, and was obliged to quit Thebes, he was accompanied by Antigoné, who remained with him till he died at Colonus, and then returned to Thebes. After her two brothers had killed each other in battle, and Creon, the king of Thebes, would not allow Polynices to be buried, Antigoné alone defied the tyrant, and buried the body of her brother. Creon thereupon ordered her to be immured in a subterranean cave, where she killed herself. Her lover, Haemon, the son of Creon, killed himself by her side. A play of Sophocles gets its title from her name. (2) The wife of Peleus (q. v.), who hanged herself from grief at the supposed infidelity of her husband. See PELOPIDAE.

Antigŏnēa (Ἀντιγόνεια). (1) A town in Epirus at the junction of a tributary with the Aous, and near a narrow pass of the Acroceraunian Mountains. (2) A town on the Orontes in Syria, founded by Antigonus as the capital of his empire (B.C. 306); but most of its inhabitants were transferred by Seleucus to Antiochia, which was built in its neighbourhood.

Antigŏnus (Ἀντίγονος). (1) King of Asia, surnamed the ONE-EYED (*Μονόφθαλμος* or *Κύκλωψ*), son of Philip of Elymiotis, and father of Demetrius Poliorcetes by Stratonicé. He was one of the generals of Alexander the Great, and in the division of the empire after the death of the latter (B.C. 323) he received the provinces of the Greater Phrygia, Lycia, and Pamphylia. On the death of the regent Antipater, in 319, he aspired to the sovereignty of Asia. In 316 he defeated and put Eumenes to death, after a struggle of nearly three years. He afterwards carried on war, with varying success, against Seleucus, Ptolemy, Cassander, and Lysimachus. After the defeat of Ptolemy's fleet in 306, Antigonus assumed the title of king, and his example was followed by Ptolemy, Lysimachus, and Seleucus. Antigonus and his son Demetrius were at length defeated by Lysimachus at the decisive battle of Ipsus, in Phrygia, in 301. Antigonus fell in the battle, in the eighty-first year of his age. (2) GONATAS, son of Demetrius Poliorcetes, and grandson of the preceding. He assumed the title of king of Macedonia after his father's death in Asia in 283, but he did not obtain possession of the throne till 277. He was driven out of his kingdom by Pyrrhus of Epirus in 273, but recovered it in the following year. He died in 239. He was succeeded by Demetrius II. (3) DOSON (so called because he was always about to give but never did), son of Demetrius of Cyrené, and grandson of Demetrius Poliorcetes. On the death of Demetrius II., in 229, he was left guardian of his son Philip, but married the widow of Demetrius, and became king of Macedonia himself. He supported the Achaean League against Cleomenes, king of Sparta, whom he defeated at Sellasia in 221, and took Sparta. He died 220. (4) A Greek of Carystus, who wrote (about B.C. 240) a summary of curious and interesting facts and fictions regarding natural history. The work is extant in an abbreviated form, and is valuable because of its numerous quotations from lost writings. Ed. by Westermann (Brunswick, 1839). See Köpke, *De Antig. Carystio* (1862).

Antigrăphé (*ἀντιγραφή*). A term originally signifying the writing put in by the defendant in any cause, whether public or private, in answer to the indictment or bill of the prosecutor. But we find the term employed not only for the answer of the defendant, but also for the statement of the plaintiff (Harpocrat. s. v. *ἀντιγραφή*: Plato, *Apol. Socr.* p. 27 C; Schömann, *Antiquities*, p. 484). Thus the word "plea," though by no means a coincident term, may be allowed to be a tolerably proximate rendering of *ἀντιγραφή*. See DIKÉ.

Antigrăpheis (*ἀντιγραφεῖς*). Checking-clerks, *contrarotulatores*. Efficient checks on the handling of public funds, whether municipal or national, were even more necessary among the Greeks than in modern civilized countries; and the Athenians,

with their distrust of official honesty, sought refuge in multiplying such checks. Hence it was the rule in Athenian finance that wherever there was a public officer intrusted with the payment of money, there was by his side an *ἀντιγραφεύς*, who watched over him and kept duplicate accounts. Thus, it is proved by inscriptions that there was an *ἀντιγραφεύς* to each deme (*C. I. G.* 100); and a general in the field disposed of his military chest subject to a like control (Dem. *De Chers.* p. 101, § 47). The administrators of sacred funds, such as the treasurers of Delos, were similarly controlled (*Inscr.* 139, 141, 150, 158).

Antilibānus (*Ἀντιλίβανος*). See LIBANUS.

Antilŏchus (*Ἀντίλοχος*). The son of Nestor, who accompanied his father to the Trojan War, and was distinguished among the younger heroes for beauty and bravery. Homer calls him a favourite of Zeus and Poseidon. The dearest friend of Achilles next to Patroclus, he was chosen by the Greeks to break the news to him of his beloved companion's fall. When Memnon attacked the aged Nestor, Antilochus threw himself in his way, and bought his father's safety with his life. He, like Patroclus, was avenged by Achilles, in whose grave-mound the ashes of both friends were laid; even in the lower world Odysseus beheld the three pacing the asphodel meadow, and in after-times the inhabitants of Ilium offered to them jointly the sacrifices due to the dead on the foreland of Sigeum.

Antimăchus (*Ἀντίμαχος*). A Greek poet and critic of Colophon, an elder contemporary of Plato, about B.C. 400. By his two principal works—the long mythical epic called *Thebaïs* (Quint. x. 1) and a cycle of elegies named after his loved and lost Lydé, and telling of famous lovers parted by death—he became the founder of learned poetry, precursor and prototype of the Alexandrians, who, on account of his learning, assigned him the next place to Homer among epic poets. (See CANON ALEXANDRINUS.) In striving to impart strength and dignity to language by avoiding all that was common, his style became rigid and artificial, and naturally ran into bombast. But we possess only fragments of his works. As a scholar, he is remarkable for having set on foot a critical revision of the Homeric poems. See HOMERUS.

Antinoēa (*τὰ Ἀντινόεια*). Annual festivals and quinquennial games instituted by the emperor Hadrian in honour of Antinoüs (q. v.).

Antinomian, THE. A name often given to the sophist Hippias of Elis because of his argument against the observance of law (*νόμος*), which was as follows: Whatever is contrary to nature is an evil: Law forces men to many things that are contrary to their inclinations, and hence to their nature: Law, therefore, is an evil and should not be respected. See HIPPIAS.

Antinoöpŏlis. See ANTINOÜS.

Antinoüs. (1) Son of Eupithes of Ithaca, and one of the suitors of Penelopé, was slain by Odysseus. (2) A youth of extraordinary beauty, born at Claudiopolis in Bithynia, was the favourite of the emperor Hadrian, and his companion in all his journeys (Pausan. viii. 9, 7). He was drowned in the Nile, A.D. 122. The grief of the emperor knew no bounds. He enrolled Antinoüs among the gods, caused a temple to be erected to him at Mantinea, and founded the city of Antinoöpolis in honour of him. Beautiful statues and busts of him still exist.

Antiochīa (*Ἀντιόχεια*). (1) The capital of the Greek kingdom of Syria, and long the chief city of Asia. It stood on the left bank of the Orontes, about twenty miles from the sea, in a beautiful valley. It was built by Seleucus Nicator, about B.C. 300, who called it Antiochia in honour of his father, Antiochus, and peopled it chiefly from the neighbouring city of Antigonia. It was one of the earliest strongholds of the Christian faith; the first place where the Christian name was used (*Acts* xi. 26); and the see of one of the four chief bishops, who were called patriarchs. (2) ANTIOCHIA AD MAEANDRUM, a city of Caria, on the Maeander, built by Antiochus I. (Soter) on the site of the old city of Pythopolis. (3) A city on the borders of Phrygia and Pisidia; built by colonists from Magnesia; made a colony under Augustus, and called Caesarea.

Antiŏchus (*Ἀντίοχος*). I.—The name of several kings of Syria. (1) SOTER (reigned B.C. 280–261), the son of Seleucus I., the founder of the Syrian kingdom of the Seleucidae. He married his stepmother Stratonicé, with whom he had fallen violently in love, and whom his father surrendered to him. He fell in battle against the Gauls in 261. (2) THEOS (B.C. 261–246), son and successor of the preceding. The Milesians gave him his surname of *Θεός* because he delivered them from their tyrant, Timarchus. He carried on war with Ptolemy Philadelphus, king of Egypt, which was brought to a close by his putting away his wife Laodicé, and marrying Berenicé, the daughter of Ptolemy. After the death of Ptolemy he recalled Laodicé, but, in revenge for the insult she had received, she caused Antiochus and Berenicé to be murdered. He was succeeded by his son Seleucus Callinicus. His younger son, Antiochus Hierax, also assumed the crown, and carried on war some years with his brother. (See BERENICÉ.) (3) The GREAT (B.C. 223–187), son and successor of Seleucus Callinicus. He carried on war against Ptolemy Philopator, king of Egypt, in order to obtain Coele-Syria, Phoenicia, and Palestine, but was obliged to cede these provinces to Ptolemy, in consequence of his defeat at the battle of Raphia, near Gaza, in 217. He was afterwards engaged for seven years (212–205) in an attempt to regain the eastern provinces of Asia, which had revolted during the reign of Antiochus II.; but, though he met with great success, he found it hopeless to effect the subjugation of the Parthian and Bactrian kingdoms, and accordingly concluded a peace with them. In 198 he conquered Palestine and Coele-Syria, which he afterwards gave as a dowry with his daughter Cleopatra upon her marriage with Ptolemy Epiphanes. He afterwards became involved in hostilities with the Romans, and was urged by Hannibal,

Coin of Antiochus the Great.

who arrived at his court, to invade Italy without loss of time; but Antiochus did not follow his advice. In 192 he crossed over into Greece; and in 191 he was defeated by the Romans at Thermopylae, and compelled to return to Asia. In 190 he was again defeated by the Romans under L. Scipio, at Mount Sipylus, near Magnesia, and compelled to sue for peace, which was granted in 188, on condition of his ceding all his dominions east of Mount Taurus, and paying 15,000 Euboic talents. In order to raise the money to pay the Romans, he attacked a wealthy temple in Elymais, but was killed by the people of the place (187). He was succeeded by his son Seleucus Philopator. (4) Epiphănes (B.C. 175–164), son of Antiochus III., succeeded his brother Seleucus Philopator in 175. He carried on war against Egypt (171–168) with great success; and he was preparing to lay siege to Alexandria in 168, when the Romans compelled him to retire. He endeavoured to root out the Jewish religion and to introduce the worship of the Greek divinities; but this attempt led to a rising of the Jewish people under Mattathias and his heroic sons, the Maccabees, which Antiochus was unable to put down. He attempted to plunder a temple in Elymais in 164, but was repulsed, and died shortly afterwards in a state of raving madness, which the Jews and the Greeks equally attributed to his sacrilegious crimes. His subjects gave him the name of *Epimanes* ("the madman"), in parody of *Epiphanes*. (5) Eupator (B.C. 164–162), son and successor of Epiphanes, was nine years old at his father's death. He was dethroned and put to death by Demetrius Soter, the son of Seleucus Philopator. (6) Theos, son of Alexander Balas. He was brought forward as a claimant to the crown in 144, against Demetrius Nicator, by Tryphon, but he was murdered by the latter, who ascended the throne himself in 142. (7) Sidētes (B.C. 137–128), so called from Sidé in Pamphylia, where he was brought up, younger son of Demetrius Soter, succeeded Tryphon. He was defeated and slain in battle by the Parthians in 128. (8) Grypus, or Hook-nosed (B.C. 125–96), second son of Demetrius Nicator and Cleopatra. He carried on war for some years with his half-brother, Antiochus Cyzicenus. At length, in 112, the two brothers agreed to share the kingdom between them,—Antiochus Cyzicenus having Coele-Syria and Phœnicia, and Antiochus Grypus the remainder of the provinces. Grypus was assassinated in 96. (9) Cyzicenus, from Cyzicus, where he was brought up, brother of Grypus, reigned over Coele-Syria and Phœnicia from 112 to 96, but fell in battle in 95 against Seleucus Epiphanes, son of Grypus. (10) Eusĕbes, son of Cyzicenus, defeated Seleucus Epiphanes, and maintained the throne against the brothers of Seleucus. He succeeded his father in 95. (11) Epiphănes, son of Grypus and brother of Seleucus Epiphanes. He carried on war against Eusebes, but was defeated by the latter, and drowned in the river Orontes. (12) Dionysus, brother of the preceding, held the crown for a short time, but fell in battle against Aretas, king of the Arabians. The Syrians, worn out with the civil broils of the Seleucidae, offered the kingdom to Tigranes, king of Armenia, who united Syria to his own dominions in 83, and held it till his defeat by the Romans in 69. (13) Asiatĭcus, son of Eusebes, became king of Syria on the defeat of Tigranes by Lucullus in 69; but he was deprived of it in 65 by Pompey, who reduced Syria to a Roman province. In this year the Seleucidae ceased to reign.

II.—Kings of Commagené. (1) A king who made an alliance with the Romans, about B.C. 64. He assisted Pompey with troops in 49, and was attacked by Antony in 38. He was succeeded by Mithridates I. about 31. (2) Succeeded Mithridates I., and was put to death at Rome by Augustus in 29. (3) Succeeded Mithridates II., and died in A.D. 17. Upon his death Commagené became a Roman province, and remained so till A.D. 38. (4) Surnamed Epiphanes, received his paternal dominion from Caligula in A.D. 38. He assisted the Romans in their wars against the Parthians under Nero, and against the Jews under Vespasian. In 72 he was accused of conspiring with the Parthians against the Romans, was deprived of his kingdom, and retired to Rome, where he passed the remainder of his life.

III.—Literary. Of Ascalon, the founder of the Fifth Academy, was a friend of Lucullus and the teacher of Cicero during his studies at Athens (B.C. 79). See Hoyer, *De Antiocho Ascal.* (1883).

Antiŏpé (Ἀντιόπη). (1) In Homer (*Odyss.* xi. 260) a daughter of the Boeotian river-god Asopus, mother by Zeus of Amphion and Zethus. In later legend her father is Nycteus of Hyria or Hysiae. As he threatened to punish her for yielding to the approaches of Zeus under the form of a satyr, she fled to Epopeus of Sicyon. This king her uncle Lycus killed by order of his brother Nycteus, now dead, and led her back in chains. Arrived on Mount Cithaeron, she gave birth to twins—Amphion by Zeus, Zethus by Epopeus—whom Lycus left exposed upon the mountain. After being long imprisoned and ill-treated by Dircé, the wife of Lycus, she escaped to Cithaeron, and made acquaintance with her sons, whom a shepherd had brought up.

The Farnese Bull. (Naples.)

She made them take a frightful vengeance upon Dircé by tying her to a furious bull, for doing which Dionysus drove her mad, and she wandered through Greece until Phocus, king of Phocis, healed her and made her his wife. (2) An Amazon, sister of Hippolyté the wife of Theseus and mother of Hippolytus (q. v.).

Antipăros (Ἀντίπαρος). A small island opposite Paros, and famous for a grotto of great depth.

Antipăter (Ἀντίπατρος). (1) The son of Iolaüs, a Macedonian. He was first an officer under Philip, and afterwards was raised to the rank of a general under Alexander the Great. When the latter invaded Asia Antipater was appointed governor of Macedonia, and in this station he served his prince with the greatest fidelity. He reduced the Spartans, who had formed a confederacy against the Macedonians; and, having thus secured the tranquillity of Greece, he marched into Asia with a powerful reinforcement for Alexander. After that monarch's death the government of Macedonia and of the other European provinces was allotted to Antipater. He was soon involved in a severe contest with the Grecian states; was defeated by the Athenians, who came against him with an army of 30,000 men and a fleet of 200 ships; and was closely besieged in Lamia, a town of Thessaly. But Leosthenes, the Athenian commander, having been mortally wounded under the walls of the city, and Antipater having received assistance from Craterus, his son-in-law, the fortune of the war was completely changed. The Athenians were routed at Cranon, and compelled to submit at discretion. They were allowed to retain their rights and privileges, but were obliged to deliver up the orators Demosthenes and Hyperides, who had instigated the war, and to receive a Macedonian garrison into the Munychia. Antipater was equally successful in subduing the other States of Greece, who were making a noble struggle for their freedom; but he settled their respective governments with much moderation. In conjunction with Craterus he was the first who attempted to control the growing power of Perdiccas, and after the death of that commander he was invested with all his authority. He exercised this jurisdiction over the other governors with unusual fidelity, integrity, and impartiality, and died in the eightieth year of his age, B.C. 319. At his death he left his son Cassander in a subordinate station; appointed Polysperchon his own immediate successor, and recommended him to the other generals as the fittest person to preside in their councils. Antipater received a learned education, and was the friend and disciple of Aristotle. He appears to have possessed very eminent abilities, and was peculiarly distinguished for his vigilance and fidelity in every trust. It was a saying of Philip, father of Alexander, "I have slept soundly, for Antipater has been awake" (Justin, xi. 12, 13, etc.; Diod. xvii. 18, etc.). (2) The Idumaean, was the father of Herod the Great, and second son of Antipas, governor of Idumaea. He embraced the party of Hyrcanus against Aristobulus, and took a very active part in the contest between the two brothers respecting the office of high-priest in Iudaea. Aristobulus at first, however, succeeded; but when Pompey had deposed him and restored Hyrcanus to the pontifical dignity, Antipater soon became the chief director of affairs in Iudaea, ingratiated himself with the Romans, and used every effort to aggrandize his own family. He gave very effectual aid to Caesar in the Alexandrian War, and the latter in return made him a Roman citizen and procurator of Iudaea. In this latter capacity he exerted himself to restore the ancient Jewish form of government, but was cut off by a conspiracy, the brother of the high-priest having been bribed to give him a cup of poisoned wine. Iosephus makes him to have been distinguished for piety, justice, and love of country (*Ant. Iud.* xiv. 3). (3) A son of Cassander, ascended the throne of Macedonia B.C. 298. He disputed the crown with his brother, Philip IV., and caused his mother, Thessalonica, to be put to death for favouring Philip's side. The two brothers, however, reigned conjointly, notwithstanding this, for three years, when they were dethroned by Demetrius Poliorcetes. Antipater thereupon retired to the court of Lysimachus, his father-in-law, where he ended his days (Justin, xxvi. 1). (4) A native of Tarsus, the disciple and successor of Diogenes the Babylonian, in the Stoic School. He flourished about B.C. 144, and is praised by both Cicero and Seneca as an able supporter of that sect. His chief opponent was Carneades (Cic. *De Off.* iii. 12; Sen. *Ep.* 92). (5) A native of Cyrené, and one of the Cyrenaic school. He was a disciple of the first Aristippus and the preceptor of Epitimides. (6) A philosopher of Tyre, who wrote a work on duty. He is supposed to have been of the Stoic school. Cicero (*De Orat.* iii. 50) speaks of him as an improvisator. Crassus, into whose mouth the Roman orator puts this remark, might have known the poet when he was quaestor in Macedonia, the same year in which Cicero was born (B.C. 106). Pliny relates (*H. N.* vii. 51) that he had every year a fever on the day of his birth, and that, without ever experiencing any other complaint, he attained to a very advanced age. Some of his epigrams remain, the greater part of which fall under the class of epitaphs (ἐπιτύμβια). (7) A poet of Thessalonica, who flourished towards the end of the last century preceding the Christian era. We have thirty-six of his epigrams remaining. (8) A native of Hierapolis. He was the secretary of Septimius Severus and praefect of Bithynia. He was the preceptor also of Caracalla and Geta, and reproached the former with the murder of his brother.

Antipăter, Lucius Caelius. A Roman historian, and contemporary of C. Gracchus, who wrote *Annales*, containing an account of the Second Punic War, in a highly rhetorical style, but valuable in their substance. The work was in seven books, and dedicated to L. Aelius Stilo. Livy uses it liberally in his third decade; and it appears also to have been drawn upon by Plutarch and Valerius Maximus. See Kranz, *Beitr. z. Quellenkrit. des Val. Max.* (Posen, 1876).

Antiphănes (Ἀντιφάνης). (1) A comic poet of Rhodes, Smyrna, or Carystus, born B.C. 408, of parents in the low condition of slaves. This most prolific writer (he is said to have composed upwards of three hundred dramas), notwithstanding the meanness of his origin, was so popular in Athens that on his decease a decree was passed to remove his remains from Chios to that city, where they were interred with public honours (Suidas, s. v.). (2) A statuary of Argos, the pupil of Pericletus, one of those who had studied under Polycletus.

He flourished about B.C. 400. Several works of this artist are mentioned by Pausanias (x. 9). He formed statues of the Dioscuri and other heroes; and he made also a brazen horse, in imitation of the horse said to have been constructed by the Greeks before Troy. The inhabitants of Argos sent it as a present to Delphi. (3) A poet of Macedonia, nine of whose epigrams are preserved in the Anthology. He flourished between B.C. 100 and the reign of Augustus.

Antiphătes (Ἀντιφάτης). The king of the mythical Laestrygones (q. v.) in Sicily (*Odyss.* x. 106).

Antiphellus (Ἀντίφελλος). See PHELLUS.

Antiphĭlus (Ἀντίφιλος). A Greek painter born in Egypt in the latter half of the fourth century B.C., a contemporary and rival of Apelles; he probably spent the last part of his life at the court of the first Ptolemy. The ancients praise the lightness and dexterity with which he handled subjects of high art, as well as scenes in daily life. Two of his pictures in the latter kind were especially famous, one of a boy blowing a fire, and another of women dressing wool. From his having painted a man named Gryllus (pig) with playful allusions to the sitter's name, caricatures in general came to be called *grylli* (Pliny, *H. N.* xxxv. 114, 138).

Antĭphon (Ἀντιφῶν). The earliest of the ten great Attic orators, born B.C. 480 in Attica, son of the sophist Sophilus, to whom he owed his training. He was the founder of political eloquence as an art, which he taught with great applause in his own school of rhetoric; and he was the first who wrote out speeches for others to deliver in court, though he afterwards published them under his own name. He also played an active part in the politics of his time as a leading member of the oligarchical party, and the real author of the death-blow which was dealt to democracy in B.C. 411 by the establishment of the Council of Four Hundred. He then went as ambassador to Sparta, to purchase peace at any price in the interest of the oligarchy. On the fall of the Four Hundred he was accused of high treason, and, in spite of a masterly defence —the first speech he had ever made in public— was condemned to death B.C. 411. Of the sixty orations attributed to him, only fifteen are preserved—all on trials for murder; but only three of them are about real cases. The rest (named *tetralogies* because every four are the first and second speeches of both plaintiff and defendant on the same subject) are mere exercises. Antiphon's speeches exhibit the art of oratory in its rudimentary stage as regards both substance and form. The best edition is that of Blass (Leipzig, 1881).

Antipŏlis (Ἀντίπολις). The modern Antibes; a town in Gallia Narbonensis on the coast.

Antiquitātum Libri. A work of Varro (q. v.), properly styled *Antiquitates Rerum Humanarum et Divinarum*, in forty-one books—a great monument of Roman learning and a mine for all succeeding writers, being quoted by Pliny, Gellius, and Priscian, and, above all, by St. Augustine in the fifth and seventh books of his treatise *De Civitate Dei.* Of the forty-one books, twenty-five related to profane, and sixteen to sacred, antiquities. See Cruttwell, *Roman Literature*, p. 147 (1886).

Antirrhium (Ἀντίρριον). See RHIUM.

Antisigma (*ἀντίσιγμα*). An inverted sigma, thus Ↄ. As a symbol it was used by Aristarchus (q. v.) in his criticism of the Homeric text to denote repetitions of the same idea; and by Aristophanes of Byzantium to mark passages that he regarded as spurious. (See Mahaffy, *Hist. of Class. Greek Literature*, vol. i. p. 37.) The same character was added by the emperor Claudius to the Roman alphabet, about A.D. 44, to denote the sound of the Greek ψ (*bs* or *ps*). See Peck, *Latin Pronunciation*, pp. 12, 13 (N. Y. 1890); and the article ALPHABET.

Antissa (Ἄντισσα). A town on the west coast of Lesbos, though formerly on a small island opposite Lesbos, with which it afterwards united.

Antisthĕnes (Ἀντισθένης). A Greek philosopher of Athens, born about B.C. 440, but only a half-citizen, because his mother was a Thracian. He was in his youth a pupil of Gorgias, and himself taught for a time as a sophist, till, towards middle life, he attached himself to Socrates, and became his bosom friend. After the death of Socrates, in B.C. 399, he established a school in the gymnasium Κυνόσαργες, the only one open to persons of half-Athenian descent, whence his followers bore the name of Cynici (Κυνικοί). He lived to the age of seventy. Like Socrates, he regarded virtue as necessary— indeed, alone sufficient—for happiness, and to be a branch of knowledge that could be taught, and that once acquired could not be lost, its essence consisting in freedom from wants by the avoidance of evil (by evil meaning pleasure and desire). Its acquisition needs no dialectic argumentation, only Socratic strength. His pupils, especially the famous Diogenes of Sinopé, degraded his doctrine to cynicism by depreciating all knowledge and despising the current morality of the time. His philosophical and rhetorical works are lost, all but two slight declamations on the contest for the arms of Achilles, the *Aias* and *Odysseus;* and even their genuineness is disputed. They have been edited by A. W. Winckelmann (Zürich, 1842). See also A. Müller, *De Antisthenis Cynici Vita et Scriptis* (Dresden, 1860), and the life by Susemihl (1884).

Antistius Labeo. See LABEO.

Antitaurus (Ἀντίταυρος). Now Ali-dagh; a chain of mountains extending northeast from the range of the Taurus on the southern border of Cappadocia, in the centre of which district it turns and runs east to the Euphrates.

Antium. An ancient town of Latium on a rocky promontory running into the Tuscan Sea. It was founded by the Tyrrhenians and Pelasgians, and was noted for its piracy. It was taken by the Romans in B.C. 468, and a colony was sent thither; but it revolted, was taken a second time by the Romans in 338, was deprived of all its ships, the beaks of which (*rostra*) served to ornament the platform of the speakers in the Roman Forum, and received another Roman colony. In the latter times of the Republic, and under the Empire, it was a favourite residence of many of the Roman nobles and emperors. The emperor Nero was born here, and in the remains of his palace was found the famous statue of the Apollo Belvedere. See APOLLO.

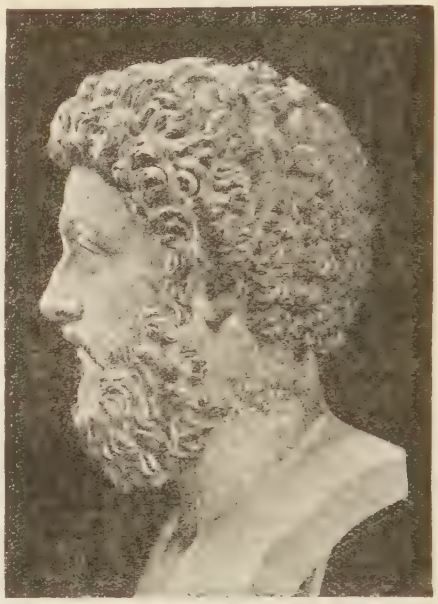
Antlia (*ἄντλια*). Any contrivance for raising water. Five such machines are mentioned by Vitruvius, x. ch. 4–7; and Lucretius (v. 516) speaks of one like this, in the annexed illustration, which represents a machine still used in the Tyrol. The

Antlia.

antlia with which Martial watered his garden (ix. 19) was nothing more than the pole and bucket still used in Greece, Italy, Egypt, and in some parts of New England.

Antomosia (*ἀντωμοσία*). A part of the *ἀνάκρισις*, or preliminary pleadings in an Athenian lawsuit. The term was used of an oath taken by both parties: by the plaintiff, that his complaint was well-founded, and that he was actuated by no improper motives; and by the defendant, that his defence was true. It was also called *διωμοσία*. The oath might contain either the direct affirmative or negative, in which case it was called *εὐθυδικία*; or amount to a demurrer or *παραγραφή*. See ANTIGRAPHÉ; ANACRISIS; DIKÉ; PARAGRAPHÉ; JUDICIAL PROCEDURE.

Antonia. (1) ANTONIA MAIOR, the daughter of M. Antonius and Octavia, wife of L. Domitius Ahenobarbus, and mother of Cn. Domitius, the father of the emperor Nero. (2) MINOR, younger sister of the preceding, wife of Drusus, the brother of the emperor Tiberius, and mother of Germanicus, the father of the emperor Caligula, of Livia or Livilla, and of the emperor Claudius. She died A.D. 38, soon after the accession of her grandson Caligula. She was celebrated for her beauty, virtue, and chastity. (3) The daughter of the emperor Claudius, put to death by Nero, A.D. 66, because she refused to marry him.



Antonia Minor. (Louvre.)

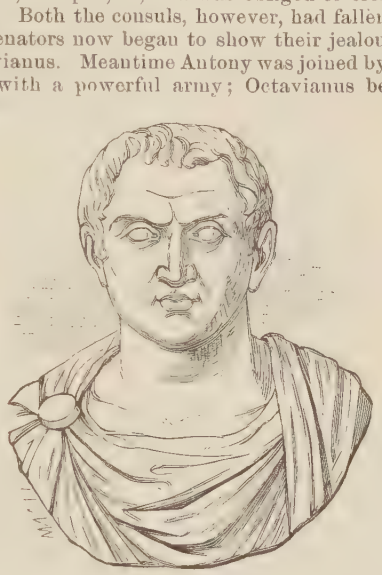
Antonia Lex. See LEX.

Antonia Turris. A castle on a rock at the northwest corner of the Temple at Jerusalem, originally called Baris, but renamed by Herod the Great in honour of M. Antonius. In it resided the procurator of Iudaea. See Ioseph. *Bell. Iud.* v. 15; and the article HIEROSOLYMA.

Antonīnus. (1) PIUS, or TITUS AURELIUS FULVIUS BOIONIUS ANTONĪNUS, a Roman emperor, A.D. 138–161, born near Lanuvium, A.D. 86, adopted by Hadrian in 138, and succeeded the latter in the same year. The Senate conferred upon him the title of *Pius*, or "the dutifully affectionate," because he persuaded them to grant to his father Hadrian the apotheosis and other honours usually paid to deceased emperors. The reign of Antoninus is almost a blank in history—a blank caused by the suspension for a time of war, violence, and crime. He was one of the best princes that ever mounted a throne, and all his thoughts and energies were dedicated to the happiness of his people. He died in A.D. 161, in his seventy-fifth year. He was succeeded by M. Aurelius, whom he had adopted, when he himself was adopted by Hadrian, and to whom he gave his daughter Faustina in marriage. (2) MARCUS ANNIUS (VERUS) AURELIUS, was born at Rome in the year A.D. 121. Upon the death of Ceionius Commodus, the emperor Hadrian turned his attention towards Marcus Aurelius; but he being then too young for an early assumption of the cares of empire, Hadrian adopted Antoninus Pius, on condition that he in his turn should adopt Marcus Aurelius. His father dying early, the care of his education devolved on his paternal grandfather, Annius Verus, who caused him to receive a general education; but philosophy so early became the object of his ambition that he assumed the philosophic mantle when only twelve years old. The species of philosophy to which he attached himself was the Stoic, as being most connected with morals and the conduct of life; and such was the natural sweetness of his temper that he exhibited none of the pride which sometimes attended the artificial elevation of the Stoic character. This was the more remarkable, as all the honour and power that Antoninus could bestow upon him became his own at an early period, since he was practically associated with him in the administration of the Empire for many years. On his formal accession to the sovereignty his first act was of a kind which at once proved his great disinterestedness; for he immediately took Lucius Verus as his colleague, who had indeed been associated with him by adoption, but who, owing to his defects and vices, had been excluded by Antoninus from the succession, which, at his instigation, the Senate had confined to Marcus Aurelius alone. Notwithstanding their dissimilarity of character, the two emperors reigned conjointly without any disagreement. Verus took the nominal

guidance of the war against the Parthians, which was successfully carried on by the lieutenants under him, and during the campaign married Lucilla, the daughter of his colleague. The reign of Marcus Aurelius was more eventful than that of Antoninus. Before the termination of the Parthian War, the Marcomanni and other German tribes began those disturbances which more or less annoyed him for the rest of his life. Against these foes, after the termination of hostilities with Parthia, the two emperors marched; but what was effected during three years' war and negotiation, until the death of Verus, is little known. The sudden decease of that unsuitable colleague by an apoplexy restored to Marcus Aurelius the sole dominion; and for the next five years he carried on the Pannonian War in person, without ever returning to Rome. During these fatiguing campaigns he endured all the hardships incident to a rigorous climate and a military life with a patience and serenity which did the highest honour to his philosophy. Few of the particular actions of this tedious warfare have been fully described; although, owing to conflicting religious zeal, one of them has been exceedingly celebrated. This was the deliverance of the emperor and his army from imminent danger by a victory over the Quadi, in consequence of an extraordinary storm of rain, hail, and lightning, which disconcerted the barbarians, and was, by the conquerors, regarded as miraculous. The emperor and the Romans attributed the timely event to Iupiter Tonans; but the Christians affirmed that God granted this favour on the supplications of the Christian soldiers in the Roman army, who are said to have composed the Twelfth, or Meletine, Legion; and, as a mark of distinction, we are informed by Eusebius that they received from an emperor who persecuted Christianity the title of the "Thundering Legion." The date of this event is fixed by Tillemont as A.D. 174. The general issue of the war was that the barbarians were repressed, but admitted to settle in the territories of the Empire as colonists; and a complete subjugation of the Marcomanni might have followed had not the emperor been recalled by the conspiracy of Avidius Cassius, who assumed the purple in Syria. This usurper was quickly destroyed by a conspiracy among his own officers, and the clemency shown by the emperor to his family was most exemplary. After the suppression of this revolt he made a progress through the East, in which journey he lost his wife Faustina, daughter of Antoninus Pius, a woman as dissolute as she was beautiful, but whose irregularities he never seems to have noticed—a blindness or insensibility that has made him the theme of frequent ridicule. While on this tour he visited Athens, and, like Hadrian, was initiated in the Eleusinian Mysteries. His return to Rome did not take place until after an absence of eight years, and his reception was in the highest degree popular and splendid. After remaining in the capital for nearly two years, and effecting several popular reforms, he was once more called away by the necessity of checking the Marcomanni, and was again successful, but fell ill, at the expiration of two years, at Vindobona, now Vienna. His illness arose from a pestilential disease which prevailed in the army; and it cut him off in the fifty-ninth year of his age and nineteenth of his reign. His death occasioned universal mourning throughout the Empire. Without waiting for the usual decree on the occasion the Roman Senate and people voted him a god by acclamation, and his image was long afterwards regarded with peculiar veneration.

Marcus Aurelius. (Louvre.)



Marcus Aurelius was no friend to the Christians, who were persecuted during the greater part of his reign—an anomaly in a character so universally merciful and clement that may be attributed to an excess of pagan devotion on his part, and still more to the influence of the persons by whom he was surrounded. In all other points of policy and conduct he was one of the most excellent princes on record, both in respect to the salutary regulations he adopted and the temper with which he carried them into practice. Compared with Trajan or Antoninus Pius, he possibly fell short of the manly sense of the one and the simple and unostentatious virtue of the other—philosophy or scholarship on a throne always more or less assuming the appearance of pedantry. The emperor was also himself a writer, and his *Meditations* (Τὰ εἰς ἑαυτόν), in Greek in twelve books, have descended to posterity. They are a collection of maxims and thoughts in the spirit of the Stoic philosophy, which, without much connection or skill in composition, breathe the purest sentiments of piety and benevolence. They were jotted down from time to time in his leisure moments, and largely while he was in camp along the Danube during his campaign against the Marcomanni. His theology, in general, seems pantheistic, the key-note being the doctrine of a "natural unity," including God, nature, and all mankind.

Marcus Aurelius left one son, the brutal Commodus, and three daughters. Among the weaknesses of this good emperor, his too great consideration for his son is deemed one of the most striking; for, although he was unremitting in his endeavours to reclaim him, they were accompanied by much erroneous indulgence, and especially by an early and ill-judged elevation to titles and honours.

Good texts of the *Meditations* are those of Gataker (London, 1697) and Stich (1882). See also the trans-

lation, with notes, by Long (1869); the French version by Pierron (1878); Renan's *Marc-Aurèle* (1882); and Watson's *Marcus Aurelius Antoninus* (N. Y., 1884). (3) Bassiānus Caracalla. (See Caracalla.) (4) Liberālis. A mythological writer supposed to have lived in the age of the Antonines, and to have been a freedman of one of them. He wrote a work entitled *A Collection of Metamorphoses* (Μεταμορφωσέων Συναγωγή), in forty-one chapters. Edition by Westermann (Brunswick, 1839). See Oder, *De Antonino Liberali* (1886).

Antonius. (1) Marcus, the orator, was born B.C. 143; was quaestor in 113; praetor in 104, when he fought against the pirates in Cilicia; consul in 99; and censor in 97. He belonged to Sulla's party, and was put to death by Marius and Cinna, when they entered Rome, in 87; his head was cut off and placed on the Rostra. Cicero mentions him and L. Crassus as the most distinguished orators of their age, and he is introduced as one of the speakers in Cicero's *De Oratore*. (2) Marcus, surnamed Creticus, elder son of the orator, and father of the triumvir, was praetor in B.C. 75, and received the command of the fleet and all the coasts of the Mediterranean, in order to clear the sea of pirates; but he did not succeed in his object, and used his power to plunder the provinces. He died shortly afterwards in Crete, and was called *Creticus* in derision. (3) Gaius, younger son of the orator and uncle of the triumvir, was expelled from the Senate in B.C. 70, and was the colleague of Cicero in the praetorship (65) and consulship (63). He was one of Catiline's conspirators, but deserted the latter on Cicero's promising him the province of Macedonia. He had to lead an army against Catiline, but, unwilling to fight against his former friend, he gave the command on the day of battle to his legate, M. Petreius. At the conclusion of the war Antony went into his province, which he plundered shamefully; and on his return to Rome in 59 was accused both of taking part in Catiline's conspiracy and of extortion in his province. He was defended by Cicero, but was condemned, and retired to the island of Cephallenia. He was subsequently recalled, probably by Caesar, and was in Rome at the beginning of the year 44. (4) Marcus, the Triumvir, was the son of Antonius Creticus and Iulia, the sister of Iulius Caesar. He was born about B.C. 83. His father died while he was still young, and he was brought up by Lentulus, who married his mother Iulia, and who was put to death by Cicero in 63 as one of Catiline's conspirators: hence Antony became a personal enemy of Cicero. Antony indulged in his earliest youth in every kind of dissipation, and his affairs soon became deeply involved. In 58, he went to Syria, where he served with distinction under A. Gabinius. In 54, he went to Caesar in Gaul, and by the influence of the latter was elected quaestor (B.C. 52). He now became one of the most active partisans of Caesar. He was tribune of the plebs in 49, and in January fled to Caesar's camp in Cisalpine Gaul, after putting his veto upon the decree of the Senate which deprived Caesar of his command. In 48, Antony was present at the battle of Pharsalia, where he commanded the left wing. In 44, he was consul with Caesar, when he offered him the kingly diadem at the festival of the Lupercalia. After Caesar's murder, on the 15th of March, Antony endeavoured to succeed to his power. He pronounced the speech over Caesar's body, and read his will to the people; and he also obtained the papers and private property of Caesar. But he found a new and unexpected rival in young Octavianus, the adopted son and great-nephew of the dictator, who at first joined the Senate in order to crush Antony. (See Augustus.) Towards the end of the year Antony proceeded to Cisalpine Gaul, which had been previously granted him by the Senate; but Dec. Brutus refused to surrender the province to Antony, and threw himself into Mutina, where he was besieged by Antony. The Senate approved of the conduct of Brutus, declared Antony a public enemy, and intrusted the conduct of the war against him to Octavianus. Antony was defeated at the battle of Mutina, in April, 43, and was obliged to cross the Alps. Both the consuls, however, had fallen, and the senators now began to show their jealousy of Octavianus. Meantime Antony was joined by Lepidus with a powerful army; Octavianus became

Marcus Antonius.

reconciled to him; and it was agreed that the government of the state should be vested in Antony, Octavianus, and Lepidus, under the title of *Triumviri Republicae Constituendae*, for the next five years. The mutual enemies of each were proscribed, and, in the numerous executions that followed, Cicero, who had attacked Antony in his Philippic Orations, fell a victim to his malice. In 42, Antony and Octavianus crushed the republican party by the battle of Philippi, in which Brutus and Cassius fell. Antony then went to Asia, which he had received as his share of the Roman world. In Cilicia he met with Cleopatra, and followed her to Egypt, a captive to her charms. In 41, Fulvia, the wife of Antony, and his brother, L. Antonius, made war upon Octavianus in Italy. Antony prepared to support his relatives, but the war was brought to a close at the beginning of 40, before Antony could reach Italy. The opportune death of Fulvia facilitated the reconciliation of Antony and Octavianus, which was cemented by the marriage of Antony to Octavia, the sister of Octavianus. Antony remained in Italy till 39, when the triumvirs concluded a peace with Sext. Pompey, and he afterwards went to his provinces in the East. In this year and the following, Ventidius, the lieutenant of Antony, defeated the Parthians. In 37, Antony crossed over to Italy, when

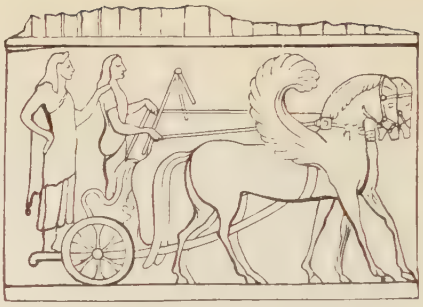
the triumvirate was renewed for five years. He then returned to the East, and shortly afterwards sent Octavia back to her brother and surrendered himself entirely to the charms of Cleopatra. In 36, he invaded Parthia, but lost a great number of his troops, and was obliged to retreat. He was more successful in his invasion of Armenia in 34, for he obtained possession of the person of Artavasdes, the Armenian king, and carried him to Alexandria. Antony now laid aside entirely the character of a Roman citizen, and assumed the pomp and ceremony of an Eastern despot. His conduct, and the unbounded influence which Cleopatra had acquired over him, alienated many of his friends and supporters; and Octavianus saw that the time had now come for crushing his rival.

Coin of Antony, struck at Antioch.

Coin of Antony, with Worship of Bacchus and Venus.

The contest was decided by the memorable sea-fight off Actium, September 2d, B.C. 31, in which Antony's fleet was completely defeated. Accompanied by Cleopatra, he fled to Alexandria, where he put an end to his own life in the following year (30), when Octavianus appeared before the city. (5) Gaius, brother of the triumvir, was praetor in Macedonia in B.C. 44, fell into the hands of M. Brutus in 43, and was put to death by Brutus in 42, to revenge the murder of Cicero. (6) Lucius, youngest brother of the triumvir, was consul in B.C. 41, when he engaged in war against Octavianus at the instigation of Fulvia, his brother's wife. He threw himself into the town of Perusia, which he was obliged to surrender in the following year. His life was spared, and he was afterwards appointed by Octavianus to the command of Iberia. (7) Marcus, elder son of the triumvir by Fulvia, was executed by order of Octavianus, after the death of his father in B.C. 30. (8) Iulus, younger son of the triumvir by Fulvia, was brought up by his step-mother Octavia at Rome, and received great marks of favour from Augustus. He was consul in B.C. 10, but was put to death in the year 2, in consequence of his adulterous intercourse with Iulia, the daughter of Augustus.

Antonius Felix. See Felix.



Antonius Gnipho. See Gnipho.

Antonius Musa. See Musa.

Antonius Primus. See Primus.

Antron (Ἀντρών). A town of Phthiotis in Thessaly, at the entrance to the Sinus Maliacus.

Antyx (ἄντυξ). The rim or border of anything, especially of a shield or chariot. On Greek and

Antyx. (From an Etruscan Tomb.)

Etruscan vases we often see the chariot painted with the antyx much elevated, as in the accompanying illustration. By the figure synecdoche, the word ἄντυξ is sometimes used to denote the whole chariot.

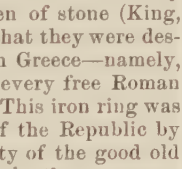
Anūbis (Ἄνουβις). An Egyptian divinity, worshipped in the form of a human being with a jackal's head. The Greeks identified him with their own Hermes, and thus speak of Hermanuphis in the same manner as of Zeus Ammon. His worship was introduced at Rome during the last years of the Republic (Luc. *Tox.* 32).

Image of Anubis.

Anŭli Ius. See Ius Anulorum.

Anŭlus or **Annŭlus** (δακτύλιος). A word derived from the same root as ἀμφί, meaning something which goes round (cf. *annus*), and used for a ring of any kind, especially a finger ring. The old Latin name was *ungulus*. In the earliest times the ring was used, not as an ornament, but as a seal (Macrob. *Sat.* vii. 13, § 12). How ancient the custom of wearing rings among the Greeks was can not be ascertained, though it is certain that in the Homeric poems there are no traces of it. In works of fiction, however, and in those legends in which the customs of later ages are mixed up with those of the earliest times, we find the most ancient heroes described as wearing rings. But it is highly probable that the custom of wearing rings was introduced into Greece from Asia, where it appears to have been almost universal (Herod. i. 195). From Asia Minor to Greece proper the transition of fashion was expeditious, and the signet, now for the first time worn mounted as a finger-ring, came into universal favour among all the Hellenic population. This was a new method for securing the engraved stone; for the original inventors of seal-engraving had worn, and continued to wear down to the very close of their history (even to the date of the Arabian conquest), the cylinder or the conical seal as the ornament of the bracelet or the necklace, etc. We have the express statement of Pliny (*H. N.* xxxiii. 4) that the use of the finger-ring was introduced among the Romans from Greece. (See King, *Handbook of Engraved Gems* [1885], pp. 12, 13.) In the time of Solon seal-rings (σφραγίδες), as well as the practice of counterfeiting them, seem to have been rather common, for Diogenes Laërtius (i. 57) speaks of a law of Solon which forbade the artist to keep the form of a seal (σφραγίς) which he had sold. There are allusions to counterfeit seals in Aristoph. *Thesm.* 432; and Thuc. i. 132. Rings without pre-

cious stones were called *ἀπείρονες, ἄπειροι, ἄλιθοι, ἄψηφοι*, the name of the gem being *ψῆφος* or *σφραγίς*, which was set in a bezel (*σφενδόνη, πυελίς, μάνδρα, funda, pala*). In later times rings were worn more as an ornament, and Suidas says (s. v. *σφραγίς*) that some regularly loaded their hands with rings. Greek women likewise used to wear rings (Aristoph. *Thesm.* frag. 320, 12, Kock), but not so frequently as men. The rings of women appear to have been less costly than those of men, for some are mentioned which were made of amber, ivory, etc. Rings were mostly worn on the left hand and third finger (Gell. x. 10), but also on the little finger (Lucian, *Dial. Merer.* 9, 2). Indeed, Pliny says (*H. N.* xxxiii. 24) that they were worn first on the third, then on the first, and finally on the little finger; and Macrobius (*Sat.* vii. 13, § 15), quoting Ateius Capito, says that originally they were worn on any finger of either hand. But they do not seem to have been ever worn on the middle finger (*digitus infamis*). An Etruscan tomb exhibits rings on the upper joints of the fingers. (See illustration.)



Hand from an Etruscan Tomb, wearing Rings.

The Lacedaemonians are said to have used iron rings at all times (Plin. *H. N.* xxxiii. 9). The law does not appear to have ever attempted in any Greek state to counteract the great partiality for this luxury; and nowhere in Greece does the right of wearing a gold ring appear to have been confined to a particular order or class of citizens.

The custom of wearing rings was believed to have been introduced into Rome by the Sabines, who are described in the early legends as wearing gold rings with precious stones of great beauty (Liv. i. 11). Florus (i. 5) states that it was introduced from Etruria in the reign of Tarquinius Priscus, and Pliny derives it from Greece. At whatever time rings may have become customary at Rome, thus much is certain, that at first they were generally of iron, but often of stone (King, *Antique Gems*, p. 176, ed. 1860); that they were destined for the same purpose as in Greece—namely, to be used as seals; and that every free Roman had a right to use such a ring. This iron ring was used down to the last period of the Republic by such men as loved the simplicity of the good old times, and it retained its place in the ceremony of betrothal. Marius wore an iron ring in his triumph over Iugurtha, and several noble families adhered to the ancient custom, and never wore gold ones (Plin. *H. N.* xxxiii. §§ 12, 21).

Rings with us are mainly associated with marriage, an association borrowed from the Romans. As already mentioned, the *anulus pronubus* was originally of iron, without a stone, and continued to be so even to a late period (Plin. *H. N.* xxxiii. 12); though Tertullian (*Apol.* 6) says the marriage-ring was the one gold ornament that women wore in the olden times. Wedding-rings with precious stones have been found on ancient figures.

Snake-ring. (British Museum.)

The ring of the Roman emperor was a kind of state seal, whose use was sometimes allowed to persons acting as his representatives. The keeping of the imperial seal-ring (*cura anuli*) was intrusted to a special officer.

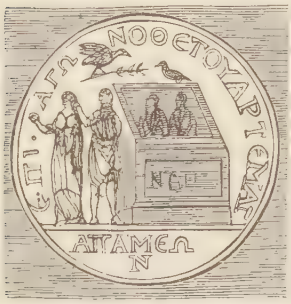
Different families appear to have had distinct seals like our crests—e. g. Galba's family seal represented a dog leaping from a ship; Pompey's ring bore the device of three trophies; Augustus sealed with a Sphinx, afterwards with a head of Alexander the Great, and finally with his own portrait, as did Hadrian. The Empire, in fact, is the grand era of portraits on gems. In the art of engraving figures upon gems, the ancients far surpass the best work of modern artists. See GEMMA.

Originally, among the Romans, the men only wore one ring and the women none, except that a married woman wore that received at marriage. Later, the love of luxury led both men and women to cover their fingers with rings. In one of the graves at Kertsch, a woman was found with eight rings. Lucian (*Gall.* chap. xii.), ridiculing the rich, speaks of sixteen rings. Martial (xi. 59) tells of a man who wore six on each finger. Some even used different rings for summer and winter, those for the latter season being too heavy for hot weather (Iuv. i. 28, with Schol.). The materials used for rings, as seen by European collections, were iron, lead, zinc, bronze, amber, ivory, silver, and gold. Rings were kept in a box called *dactyliotheca*—a name also applied to a collector of rings. For ear-rings, see INAURES.

Anxur. See TARRACINA.

Anȳté (Ἀνύτη). A poetess of Tegea, who versified the oracles of Asclepius at Epidaurus about B.C. 300. Some twenty epigrams are all that remain of her works.

Anȳtus (Ἄνυτος). A wealthy Athenian, the most influential and formidable of the accusers of Socrates, B.C. 399. He was a leading man of the democratical party, and took an active part, along with Thrasybulus, in the overthrow of the Thirty Tyrants. After the death of Socrates, Anytus went into exile to escape the vengeance of the fickle populace, who had repented of what had been done. See Aelian, *V. H.* ii. 13; and the article SOCRATES.



Aŏnes (Ἄονες). An ancient Boeotian race, said to have been so called from Aon, son of Poseidon. Hence the poets frequently use Aonia as equivalent to Boeotia. As Mount Helicon and the fountain Aganippé were in Aonia, the Muses are called Aonides or Aoniae.

Aornis or Aornos. A lofty rock in India, taken by Alexander the Great. The Macedonians named it Ἄορνος, as being so high as to be inaccessible even to birds (*ἀ+ὄρνις*).

Aōüs (Ἄῳος). The chief river of the Greek part of Illyricum rising in Mount Lacmon, and flowing into the Ionian Sea near Apollonia.

Apagōgé (*ἀπαγωγή*). A technical term of Athenian law, meaning the production of a criminal taken in the act, before the proper magistrate, who then took him into custody, or made him find bail. The name was also given to the document in which the accuser stated the charge. But if the officer was conducted to the spot where the accused was staying the process was called *ἐφήγησις*.

Apamēa (Ἀπάμεια). The name of several cities. (1) APAMEA AD ORONTEM, a city of Syria built by Seleucus Nicator on the site of the older city Pella on the river Orontes, and named in honour of his wife Apama. (2) A city in Mesopotamia, of uncertain site. (3) APAMEA CIBŌTUS (Κιβωτός), or AD MAEANDRUM, a great city of Phrygia on the Maeander, just above its union with the Marsyae. It was built by Antiochus Soter in honour of his mother Apama. The name Κιβωτός ("chest," "coffer"), which appears on some coins of Apamea, is explained generally with reference to the wealth of the city; but certain curious coincidences have been found which some scholars have used in connection with the traditions of the Deluge. The Septuagint and the New Testament speak of the Ark as κιβωτός; and the coins and medals of Apamea show the figure of an ark with two birds above it, one holding a twig. A man and woman stand beside it, and above it is the inscription NOO (ΝΩ). On this, see Mayor's note to Juvenal, i. 82; and the article DEUCALION. (4) APAMEA MYRLĒON in Bithynia. See MYRLEA. (5) A town in Osrhoëné on the left bank of the Euphrates, connected by a pontoon bridge with Zeugma on the opposite bank.

Medal of Apamea Cibotus.

Apateseos tou Demou Graphé (*ἀπατήσεως τοῦ δήμου γραφή*). A public prosecution at Athens against any one who had misled the people by false statements of fact, quoting imaginary laws, etc. The Senate and the law-courts, as well as the sovereign people, were included in its operation (Dem. *c. Aristocr.* p. 653, § 97). It would seem that it might also be directed against generals who, like Miltiades at Paros, failed in an expedition which they had themselves suggested (Dem. *c. Timoth.* p. 1204, § 67).

Apaturia (*ἀπατούρια*). The general feast of the phratries (q. v.), held chiefly by Greeks of the Ionian race. At Athens it lasted three days in the month of Pyanepsion (Oct.–Nov.), and was celebrated with sacrificial banquets. On the third day the fathers brought their children born since the last celebration before the members (phrators) assembled at the headquarters of each *φρατρία*, and, after declaring on oath their legitimate birth, had their names inscribed on the roll of *φράτορες*. For every child enrolled a sheep or goat was sacrificed, which went to furnish the common feast. On the same day the fathers made their children who were at school give proofs of their progress, especially by reciting passages from poets, and those who distinguished themselves were rewarded with prizes.

Apaulia. See MATRIMONIUM.

Apeleuthĕros (*ἀπελεύθερος*). See LIBERTUS.

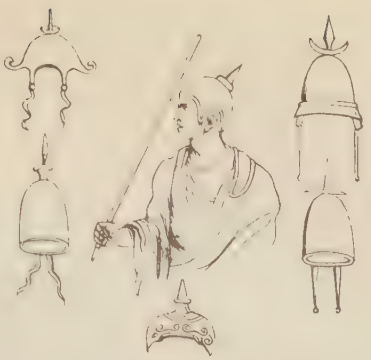
Apelles (Ἀπελλῆς). The most celebrated of Grecian painters, born, most probably, at Colophon in Ionia, though some ancient writers call him a Coan and others an Ephesian. He was the contemporary of Alexander the Great (B.C. 336–323), who entertained so high an opinion of him that he was the only person whom Alexander would permit to paint his portrait. We are not told when or where he died. Throughout his life Apelles laboured to improve himself, especially in drawing, which he never spent a day without practising. Hence the proverb, *Nulla dies sine linea* (*τήμερον οὐδεμίαν γραμμὴν ἤγαγον*). Of his portraits, the most celebrated was that of Alexander wielding a thunderbolt; but the most admired of all his pictures was the "Aphrodité Anadyomené," or Aphrodité rising out of the sea. The goddess was wringing her hair, and the falling drops of water formed a transparent silver veil around her form. The original was Campaspé, a mistress of Alexander. For the painting of Alexander a sum of twenty talents (about $21,600) was paid, and the painting itself was hung in the temple of Diana of Ephesus. He painted also a horse; and, finding that his rivals in the art, who contested the palm with him on this occasion, were about to prevail through unfair means, he caused his own piece and those of the rest to be shown to some horses, and these animals, fairer critics in this case than men had proved to be, neighed at his painting alone. Apelles used to say of his contemporaries that they possessed, as artists, all the requisite qualities except one—namely, grace, and that this was his alone. On one occasion, when contemplating a picture by Protogenes, a work of immense labour, and in which exactness of detail had been carried to excess, he remarked, "Protogenes equals or surpasses me in all things but one—the knowing when to remove his hand from a painting." Apelles was also, as is supposed, the inventor of what artists call glazing. Such, at least, was the opinion of Sir Joshua Reynolds and others. The ingredients probably employed by him for this purpose are given by Jahn, in his *Malerei der Alten*, p. 150. Apelles was accustomed, when he had completed any one of his pieces, to expose it to the view of passengers, and to hide himself behind it in order to hear the remarks of the spectators. On one of these occasions a shoemaker censured the painter for having given one of the slippers of a figure a less number of ties by one than it ought to have had. The next day the shoemaker, emboldened by the success of his previous criticism, began to find fault with a leg, when Apelles indignantly put forth his head, and desired him to confine his decisions to the slipper, "ne supra crepidam iudicaret." Hence arose another common saying, *Ne sutor ultra crepidam* (Pliny, *H. N.* xxxv. 10).

Apellĭcon (Ἀπελλικῶν). A Peripatetic philosopher, born at Teos in Asia Minor, and one of those to whom we owe the preservation of many of the works of Aristotle. The latter, on his deathbed, confided his works to Theophrastus, his favourite pupil and Theophrastus, by his will, left them to Neleus, who had them conveyed to Scepsis, in Troas, his native city. After the death of Neleus, his heirs, illiterate persons, fearing lest they might fall into the hands of the king of Pergamus, who was enriching in every way his newly-established library, concealed the writings of Aristotle in a cave, where they remained for more than 130 years, and suffered greatly from worms and dampness. At the end of this period Apellicon purchased them for a high price. His wish was to arrange them in proper order, and to fill up the lacunae that were now

of frequent occurrence in the manuscripts, in consequence of their neglected state. Being, however, but little versed in philosophy, and possessing still less judgment, he acquitted himself ill in this difficult task, and published the works of the Stagirite full of faults. Subsequently the library of Apellicon fell, among the spoils of Athens, into the hands of Sulla, and was carried to Rome, where the grammarian Tyrannion had access to them. From him copies were obtained by Andronicus of Rhodes, which served for the basis of his arrangement of the works of Aristotle.

Ritter thinks that too much has been made of this story. On its authority it has even been pretended that the works of Aristotle have reached us in a more broken and ill-arranged shape than any other productions of antiquity. He thinks that the story arose out of some laudatory commendations of the edition of Aristotle by Andronicus, and that it is probable, not to say certain, that there were other editions, of the respective merits of which it was possible to make a comparison. At any rate, according to him, the acroamatic works of Aristotle have not reached us solely from the library of Neleus, and consequently it was not necessary to have recourse merely to the restoration by Apellicon, either to complete or retain the lacunae resulting from the deterioration of the manuscripts. See ARISTOTELES.

Apēné (*ἀπήνη*). A carriage with four wheels, generally drawn by mules. See CURRUS.



Apeniautismos (*ἀπενιαυτισμός*). See PHONOU DIKÉ.

Apennīnus. A great chain of mountains in Italy, branching off from the Maritime Alps, in the neighbourhood of Genoa, running diagonally from the Ligurian Gulf to the Adriatic, in the vicinity of Ancona; from thence continuing nearly parallel with the latter gulf, as far as the promontory of Garganus, and again inclining to the Maré Inferum, until it finally terminates in the promontory of Leucopetra near Rhegium. The length is about 700 miles (Polyb. ii. 16).

Aper. (1) MARCUS. A Roman orator of the first century A.D. He was a native of Gaul, but spent most of his life at Rome. He is one of the speakers in the *Dialogus* of Tacitus. He died A.D. 85. (2) ARRIUS. A prefect of the Praetorian Guards under the emperor Carus, whom, while ill, he assassinated, pretending that the death had been caused by lightning. The motive of this deed was a desire to secure an election as emperor at the hands of the Guards, and the same ambition also led him to poison Numerianus, the successor of Carus. Falling under suspicion, after successfully accomplishing this crime, Aper was executed by order of Diocletian, whom the soldiery had made emperor. See Aurel. Vict. 38; Vopisc. *Carus*, 8; id. *Numer.* 12 foll.

Aperta Navis. See APHRACTUS.

Apex. A cap of conical form worn by the flamens (see FLAMEN), having a spike of olive-wood at the top, which the word *apex*, in fact, originally denoted. Without it the flamens were not allowed to go into the open air (Gell. x. 15). The Salii likewise wore the apex. The accompanying illustration shows one of the Salii wearing the apex and with a rod in his hand. (See SALII.) The *albogalerus*, or *albus galerus*, was a white cap worn by the *flamen dialis*, made of the skin of a white victim sacrificed to Iupiter, and having the apex fastened to it by an olive twig.

Apices, or Caps worn by the Flamines and Salii.

Aphăca (*ἀφάκη*). A kind of lentil.

Aphĕtae (*ἀφέται*). See HELOTAE.

Aphidna (*Ἀφιδνα*). An Attic deme near Decelea.

Aphlaston (*ἄφλαστον*). See NAVIS.

Aphormes Diké (*ἀφορμῆς δίκη*). An action brought against a banker or money-lender to recover funds advanced for the purpose of being employed as banking capital. See PARAKATATHEKÉ.

Aphractus (*ἄφρακτος ναῦς*), called also *navis aperta*. A ship which had no deck, but was merely covered with planks in the fore and after part, as is represented in the following cut, taken from a coin of Corcyra.

Aphractus.

The ships which had decks were called *κατάφρακτοι*, and *tectae* or *stratae*. See NAVIS.

Aphrodisia (*τὰ Ἀφροδίσια*). Festivals celebrated in many towns of Greece in honour of Aphrodité (q. v.). The especial seat of her worship was at Cyprus. No bloody sacrifices were permitted to be offered, but only pure fire, flowers, and incense. The initiated also offered a piece of money to the goddess as a harlot; and received a measure of salt symbolizing the origin of Aphrodité in the sea, and a phallus as expressive of the sexual function.

Aphrodisias (*Ἀφροδισιάς*). A town of Caria sacred to Aphrodité. See Tac. *Ann.* iii. 62.

Aphrodītē (*Ἀφροδίτη*; Lat. *Venus*). The Greek goddess of love. Her attributes combine, with Hellenic conceptions, a great many features of Eastern, especially Phœnician, origin, which the Greeks must have grafted upon their native notions in very old times. This double nature appears immediately in the contradictory tales of her origin. To the oldest Greeks she was the daughter of Zeus and Dioné (and is sometimes called by that name herself); yet from a very early time she appears as Aphrogenia, the "foam-born" (see URANUS), as Anadyomené, "she who rises" out of the sea, and steps ashore on Cyprus, which had been colonized by Phœnicians time out of mind; even as far back as Homer she is Cypris, the Cyprian. (See CY-

PRUS.) The same transmarine and Eastern origin of her worship is evidenced by the legend of the island of Cythera, on which she was supposed to have first landed from a sea-shell. Other names applied to her are Pelagia (from Πέλαγος), Anadyomené (as having risen from the water), Erycina (from Mount Eryx in Sicily), Paphia, and Cypris, besides those mentioned below.

Again, the common conception of her as goddess of love limited her agency to the sphere of human life. But she was, at the same time, a power of nature, living and working in the three elements of air, earth, and water. As goddess of the shifting gale and changeful sky, she was Aphrodité Urania (Οὐρανία), the "heavenly," and at many places in Greece and Asia her temples crowned the heights and headlands; for instance, the citadels of Thebes and Corinth, and Mount Eryx in Sicily. As goddess of storm and lightning, she was represented armed, as at Sparta and Cythera; and this, perhaps, explains why she was associated with Ares both in worship and in legend, and worshipped as a goddess of victory.

The moral conception of Aphrodité Urania as goddess of the higher and purer love, especially wedded love and fruitfulness, as opposed to mere sensual lust, was but slowly developed in the course of ages.

As goddess of the sea and maritime traffic, especially of calm seas and prosperous voyages, she was widely worshipped by sailors and fishermen at ports and on sea-coasts, often as the goddess of calm, while Poseidon was the god of disturbance. Next, as regards the life of the earth, she was the goddess of gardens and groves, of spring and its bounties, especially tender plants and flowers, as the rose and myrtle; hence, as the fruitful and bountiful, she was worshipped most of all at that season of the year in which her birth from the sea was celebrated at Paphos in Cyprus. But to this, her time of joyful action, was opposed a season of sorrow, when her creations wither and die—a sentiment expressed in her inconsolable grief for her beloved Adonis (q. v.), the symbol of vegetation perishing in its prime, a myth derived by the Greeks from the Babylonian worship of Adon or Thammuz, and akin to those of Linus, Hyacinthus, and Narcissus. (See Mannhardt Wald- und Feldkulte, 274 [Berlin, 1886].) In the life of gods and men, she showed her power as the golden, sweetly smiling goddess of beauty and love, which she knew how to kindle or to keep away. She outshone all the goddesses in grace and loveliness; in her girdle she wore united all the magic charms that could bewitch the wisest man and subdue the very gods. (See CESTUS.) Her retinue consisted of Eros (Cupid), the Hours, the Graces, Peitho (Persuasion), Pothos and Himeros (personifications of longing and yearning). By uniting the generations in the bond of love, she became a goddess of marriage and family life, and the consequent kinship of the whole community. As such she had formerly been worshipped at Athens under the name of Pandemos (=all the people's), as being a goddess of the whole country. By a regulation of Solon, the name acquired a very different sense, branding her as goddess of prostitution; and then it was that the new and higher meaning was imported into the word Urania. See MERETRIX.

In later times, the worship of Aphrodité as the goddess of mere sensual love made rapid strides, and in particular districts assumed forms more and more immoral, in imitation of the services performed to love-goddesses in the East, especially at Corinth, where large bands of girls were consecrated as slaves to the service of the gods and the practice of prostitution. And later still, the worship of Astarté ("Star"), the Syrian Aphrodité, performed by eunuchs, spread all over Greece. See APHRODISIA; MERETRIX.

In the Greek myths Aphrodité appears occasionally as the wife of Hephaestus. Her love adventures with Ares are notorious. From these sprang Eros and Anteros, Harmonia, the wife of Cadmus, and Deinos and Phobos (Fear and Alarm), attendants on their father. By Anchises she was the mother of Aeneas. The chief seats of her worship were Paphos, Amathus, and Idalion (all in Cyprus), Cnidus in Dorian Asia Minor, Corinth, the island of Cythera, and Eryx in Sicily. As mother of Harmonia, she was a guardian deity of Thebes. Among plants, the myrtle, the rose, and the apple were specially sacred to her as goddess of love; among animals, the ram, he-goat, hare, dove, sparrow, and other creatures of amorous nature (the ram and dove being widely current symbols of great antiquity); as sea-goddess, the swan, mussel, and dolphin; as Urania, the tortoise.

The various myths connected with the name of Aphrodité have inspired many exquisite poems in modern literature. In recent English verse reference may be made to the magnificent Chorus to Aphrodité in Swinburne's *Atalanta in Calydon;* Hake's *Birth of Venus;* Morris's Aphrodité in his *Epic of Hades;* and Rossetti's *Venus Verticordia* and *Venus Victrix.*

Aphrodité of Melos. (Louvre.)

In ancient art, in which Aphrodité is one of the favourite subjects, she is represented in a higher or lower aspect, according as the artist's aim was to exhibit Urania or the popular goddess of love. In the earlier works of art she usually appears clothed, but in later ones more or less undraped—either as rising from the sea or leaving the bath, or (as in still later times) merely as an ideal of female beauty. In the course of time the divine element disappeared, and the presentation became more and more ordinary. While the older sculptures show the sturdier forms, the taste of later times leans more and more to softer, weaker outlines. Most renowned in ancient times

were the statue at Cnidus by Praxiteles (a copy of which is now at Munich), and the painting of Aphrodité Anadyomené by Apelles. Of original statues preserved to us, the most famous are the Aphrodité of Melos (see illustration), now at Paris, and that of Capua at Naples, both of which bring out the loftier aspect of the goddess; and the Medicean Venus at Florence, the work of a late Attic sculptor, Cleomenes, in the delicate forms of face and body that pleased a younger age. On the identification of Aphrodité with the Roman goddess of love, see VENUS.

Aphrogeneia (Ἀφρογένεια). "Foam-sprung." An epithet of Aphrodité (q. v.).

Aphthonius (Ἀφθόνιος). A Greek rhetorician of Antioch, about A.D. 400, a pupil of Libanius, who wrote a school-book on the elements of rhetoric, the *Progymnasmata*, much used in schools down to the seventeenth century. This book is really an adaptation of the chapter so named in Hermogenes's *Rhetoric*. A collection of forty fables by Aesop also bears his name.

Aphȳtis (Ἀφυτίς). A town in Macedonia containing a celebrated temple and oratory of Zeus Ammon (Pausan. iii. 18.)

Apia. See APIS.

Apicius, MARCUS GAVIUS. A *bon-vivant* of the time of Augustus and Tiberius. He borrowed the name Apicius from an epicure of the republican period, and was himself the author of a cook-book. Though worth a fortune of some $375,000, he became haunted by the fear of starving to death, and so poisoned himself to escape such a fate. The well-known collection of recipes for cooking, in ten books, entitled *De Re Coquinaria*, is of later date, and written by one Apicius Caelius in the third century A.D. The best edition is that of C. Th. Schuch (Heidelberg, 1867), who has added some recipes from a Paris MS. of the seventh century.

Apidănus (Ἀπιδανός). A river in Thessaly flowing into Enipeus, near Pharsalus (Herod. vii. 129).

Apĭna and **Apĭnae**. A small city of Apulia near Trica. *Apina* and *Trica* (*Tricae*) are terms used in Latin of trifles. Cf. Mart. xiv. 1; Plin. *H. N.* iii. 11.

Apiŏla. A town of Italy from whose spoils, taken by Tarquinius Superbus, the Capitolium at Rome was begun (Pliny, *H. N.* iii. 5).

Apion (Ἀπίων). (1) A Greek grammarian of the first century A.D., a pupil of Didymus, and president of the philological school at Alexandria. He also worked for a time at Rome under Tiberius and Claudius. A vain, boastful man, he travelled about the Greek cities, giving popular lectures on Homer. Of his many writings we have only fragments left. The glosses on Homer that bear his name are of later origin; on the other hand, the Homeric lexicon of the sophist Apollonius is based on his genuine Homeric glosses. His bitter complaint, *Against the Jews*, addressed to Caligula at the instance of the Alexandrians, is best known from Iosephus's noble reply to it. See Aul. Gell. v. 14; Sen. *Epist.* 38. (2) See PTOLEMAEUS.

Apis (Ἆπις). (1) Son of Phoroneus and Laodicé, king of Argos, from whom Peloponnesus, and more especially Argos, was called Apia (Pausan. ii. 5). (2) The sacred bull of Memphis, worshipped as a god among the Egyptians. There were certain signs by which he was recognized to be the god. Thus, the body must be black; there must be a square white spot upon the forehead, the figure of an eagle upon the back, a beetle-shaped knot under

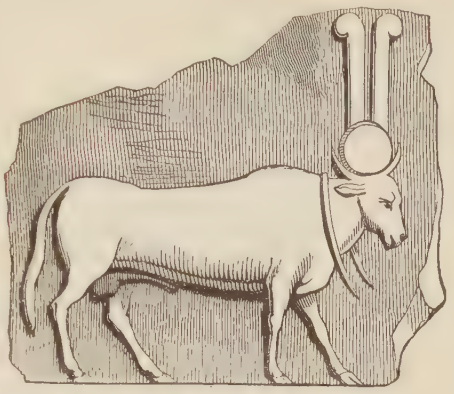


Figure of Apis. (From the Egyptian Monuments.)

the tongue, and a white crescent upon the right side. At Memphis he had a splendid residence, containing extensive walks and courts for his amusement. His birthday, which was celebrated every year, was a day of rejoicing for all Egypt. His death was a season of public mourning, which continued till another sacred bull was discovered by the priests. See OSIRIS.

Apisāon (Ἀπισάων). A Paeonian, the son of Hippasus, who aided Priam at Troy with an army, but was killed by Lycomedes (*Il.* xvii. 348).

Apium (*σέλινον*). Parsley.

Aplustré (*ἄφλαστον*). A wooden ornament on the poop of a ship. See NAVIS.

Apobătes (*ἀποβάτης*). See DESULTORES.

Apocolocyntōsis (*ἀποκολοκύντωσις*). "Pumpkinification." A satire on the deification of the emperor Claudius, written after the death of that prince by the younger Seneca. It is the only good example remaining to us of the Satira Menippea (q. v.). Ed. by F. Bücheler (Berlin, 1882).

Apodectae (*ἀποδέκται*). "Receivers." Public officers at Athens, ten in number, whose principal duty it was to collect the ordinary taxes and distribute them to the separate branches of the administration which were entitled to them (Arist. *Pol.* vi. 8, 1).

Apodidraskinda (*ἀποδιδρασκίνδα*). The game of hide-and-seek, a favourite among the Greek children. It is represented in a painting found at Herculaneum. See Bekker, *Anecd.* p. 1353.

Apodyterium (*ἀποδυτήριον*). A room in the Roman bath-houses used for undressing. See BALNEAE.

Apogrăphé (*ἀπογραφή*). Literally, a "list or register;" but, in the language of the Attic courts, the terms *ἀπογράφειν* and *ἀπογράφεσθαι* had three separate applications. (1) Ἀπογραφή was used in reference to an accusation in public matters, more particularly when there were several defendants; the denunciation, the bill of indictment, and enumeration of the accused would in this case be termed apographe, and differ but little, if at all, from the ordinary *γραφή*. (2) It implied the making of a solemn protest or assertion before

a magistrate, to the intent that it might be preserved by him till it was required to be given in evidence. (3) It was a specification of property, said to belong to the state, but actually in the possession of a private person; which specification was made with a view to the confiscation of such property to the state.

Apoikia (*ἀποικία*). See COLONIA.

Apokeryxis (*ἀποκήρυξις*). The formal act of disinheriting a son at Athens. See Demos. *c. Boeot. de Nom.* p. 1006, § 39.

Apoleipsis (*ἀπόλειψις*). See DIVORTIUM.

Apollinares Ludi. See LUDI.

Apollinaris, SIDONIUS. See SIDONIUS.

Apollinaris, SULPICIUS. See SULPICIUS.

Apollĭnis Promontorium. A promontory in North Africa, forming the west point of the Gulf of Carthage.

Apollo (*Ἀπόλλων*). Son of Zeus by Leto (Latona), who, according to the legend most widely current, bore him and his twin-sister Artemis at the foot of Mt. Cynthus, in the island of Delos. Apollo appears originally as a god of light, both in its beneficent and its destructive effects; and of light in general, not of the sun only, for to the early Greeks the deity that brought daylight was Helios, with whom it was not till afterwards that Apollo was identified. While the meaning of his name Apollo is uncertain, his epithets of *Phoebus* and *Lycius* clearly mark him as the bright, the life-giving, the former also meaning the pure, the holy; for, as the god of pure light, he is the enemy of darkness, with all its unclean, unhallowed brood. Again, not only the seventh day of the month, his birthday, but the first day of the month, i. e. of each new-born moon, was sacred to him, as it was to Ianus, the Roman god of light; and according to the view that prevailed in many seats of his worship, he withdrew in winter time either to Lycia, or to the Hyperboreans who dwell in perpetual light in the utmost north, and returned in spring to dispel the powers of winter with his beams. When the fable relates that immediately after his birth, with the first shot from his bow he slew the dragon Python (or Delphyné), a hideous offspring of Gaea and guardian of the Delphic oracle, what seems to be denoted must be the spring-god's victory over winter, that filled the land with marsh and mist. As the god of light, his festivals are all in spring or summer, and many of them still plainly reveal in certain features his original attributes. Thus the Delphinia, held at Athens in April, commemorated the calming of the wintry sea after the equinoctial gales, and the consequent reopening of navigation. As this feast was in honour of the god of spring, so was the Thargelia, held at Athens the next month, in honour of the god of summer. That the crops might ripen, he received first-fruits of them, and at the same time propitiatory gifts to induce him to avert the parching heat, so hurtful to fruits and men. About the time of the sun's greatest altitude (July and August), when the god displays his power, both for good and for harm, the Athenians offered him hecatombs, whence the first month of their year was named Hecatomboeon, and the Spartans held their Hyacinthia. (See HYACINTHUS.) In autumn, when the god was ripening the fruit of their gardens and plantations, and preparing for departure, they celebrated the Pyanepsia (q. v.), when they presented him with the first-fruits of harvest.

Apollo gives the crops prosperity, and protection not only against summer heat, but against blight, mildew, and the vermin that prey upon them, such as field-mice and grasshoppers. Hence he was known by special titles in some parts of Asia. He was also a patron of flocks and pastures, and was worshipped in many districts under a variety of names referring to the breeding of cattle. In the story of Hermes (q. v.) stealing his oxen, Apollo is himself the owner of a herd, which he gives up to his brother in exchange for the lyre invented by him. Other ancient legends speak of him as tending the flocks of Laomedon and Admetus, an act afterwards represented as a penalty for a fault. As a god of shepherds he makes love to the nymphs, to Daphné (q. v.), to Coronis (see AESCULAPIUS), and to Cyrené, the mother of Aristaeus, likewise a god of herds. Some forms of his worship and some versions of his story imply that Apollo, like his sister Artemis, was regarded as a protector of tender game and a slayer of rapacious beasts, especially of the wolf, the enemy of flocks, and himself a symbol of the god's power, that now sends mischief, and now averts it. Apollo promotes the health and well-being of man himself. As a god of prolific power, he was invoked at weddings; and as a nurse of tender manhood and trainer of manly youth, to him (as well as the fountain-nymphs) were consecrated the first offerings of the hair of the head. In gymnasia and palaestrae he was worshipped equally with Hermes and Heracles; for he gave power of endurance in boxing, with adroitness and fleetness of foot. As a warlike god and one helpful in fight, the Spartans paid him peculiar honours in their Carneia (q. v.), and in a measure the Athenians in their Boëdromia. Another Athenian festival, the Metageitnia, glorified him as the author of neighbourly union. In many places, but above all at Athens, he was worshipped as Agyieus, the god of streets and highways, whose rude symbol, a conical post with a pointed ending, stood by street-doors and in court-yards, to watch men's exit and entrance, to let in good and keep out evil, and was loaded by the inmates with gifts of honour, such as ribbons, wreaths of myrtle or bay, and the like.

At sea, as well as on land, Apollo was a guide and guardian, and there especially under the name Delphinius, taken from his friend and ally the dolphin, the symbol of the navigable sea. Under this character he was widely worshipped, for the most part with peculiar propitiatory rites, in seaports and on promontories, as that of Actium, and particularly at Athens, being also regarded as a leader of colonies. While he was *Ἀλεξίκακος* (averter of ills) in the widest sense, he proved his power most especially in times of sickness; for, being god of the hot season, and himself the sender of most epidemics and the dreaded plague, sweeping man swiftly away with his unerring shafts, he could also lend the most effectual aid; so that he and his son Asclepius were revered as the chief gods of healing. As a saviour from epidemics mainly, but also from other evils, the paean (q. v.) was sung in his honour.

In a higher sense also, Apollo was a healer and preserver. From an early time an ethical tinge was given to his purely physical attributes, and

the god of light became a god of mental and moral purity, and therefore of order, justice, and legality in human life. As such, he, on the one hand, smote and spared not the insolent offender, Tityus, for instance, the Aloïdae, the presumptuous Niobé, and the Greeks before Troy; but, on the other hand, to the guilt-laden soul, turning to him in penitence and supplication, he granted purification from the stain of crime (which was regarded as a disease clouding the mind and crushing the heart), and so he healed the spirit, and readmitted the outcast into civic life and religious fellowship. Of this he had himself set the pattern, when, after slaying the Delphian dragon, he fled from the land, did seven years' menial service to Admetus in atonement for the murder, and, when the time of penance was past, had himself purified in the sacred grove of bay-trees by the Thessalian temple; and not until then did he return to Delphi and enter on his office as prophet of Zeus. Therefore he exacts from all a recognition of the atoning power of penance, in the teeth of the old law of vengeance for blood, which only bred new murders and new guilt. The atoning rites propagated by Apollo's worship, particularly from Delphi, contributed largely to the spread of milder maxims of law, affecting not only individuals, but whole towns and countries. Even without special prompting, the people felt from time to time the need of purification and expiation; and hence certain expiatory rites had from of old been connected with his festivals.

The Pythian Apollo. (Audran. *Proportion du Corps Humain*, pl. 18.)

As the god of light who pierces through all darkness, Apollo is the god of divination, which, however, has in his case a purely ethical significance; for he, as prophet and minister of his father Zeus, makes known his will to men, and helps to further his government in the world. He always declares the truth; but the limited mind of man cannot always grasp the meaning of his sayings. He is the patron of every kind of prophecy, but most especially of that which he imparts through human instruments, chiefly women, while in a state of ecstasy. Great as was the number of his oracles in Greece and Asia, all were eclipsed in fame and importance by that of Delphi (q. v.).

Apollo exercises an elevating and inspiring influence on the mind as god of music, which, though not belonging to him alone any more than atonement and prophecy, was yet pre-eminently his province. In Homer he is represented only as a player on the lyre, while song is the province of the Muses; but in course of time he grows to be the god, as they are the goddesses, of song and poetry, and is therefore Μουσαγέτης (leader of the Muses) as well as master of the choral dance, which goes with music and song. And as the friend of all that beautifies life he is intimately associated with the Graces.

Belvedere Apollo. (Rome, Vatican Museum.)

Standing in these manifold relations to nature and man, Apollo at all times held a prominent position in the religion of the Greeks; and as early as Homer his name is coupled with those of Zeus and Athenê, as if between them the three possessed the sum total of divine power. His worship was diffused equally over all the regions in which Greeks were settled; but from remote antiquity he had been the chief god of the Dorians, who were also the first to raise him into a type of moral excellence. The two chief centres of his worship were the island of Delos, his birthplace, where, at his magnificent temple standing by the sea, were held every five years the festive games called Delia, to which the Greek states sent solemn embassies; and Delphi, with its oracle and numerous festivals. (See PYTHIA; THEOXENIA.) Foremost among the seats of his worship in Asia was Patara in Lycia, with a famous oracle.

To the Romans, Apollo became known in the reign of their last king, Tarquinius Superbus, the first Roman who consulted the Delphic oracle, and who also acquired the Sibylline Books (q. v.). By the influence of these writings the worship of Apollo soon became so naturalized among them that in B.C. 431 they built a temple to him as god of healing, from which the expiatory processions (see SUPPLICATIONES) prescribed in the Sibylline Books used to set out. In the Lectisternia (q. v.), first instituted in B.C. 399, Apollo occupies the foremost place. In B.C. 212, during the agony of

Apollo Musagetes. (Osterley Denkm. der alten Kunst, taf. 32.)

the Second Punic War, the Ludi Apollinares were, in obedience to an oracular response, established in honour of him. He was made one of the chief gods of Rome by Augustus, who believed himself to be under his peculiar protection, and ascribed the victory of Actium to his aid; hence he enlarged the old temple of Apollo on that promontory, and decorated it with a portion of the spoils. He also renewed the games held near it, previously every two years, afterwards every four, with gymnastic and artistic contests and regattas on the sea. At Rome he reared a splendid new temple to him near his own house on the Palatine, and transferred the Ludi Saeculares (q. v.) to him and Diana.

The manifold symbols of Apollo correspond with the multitude of his attributes. The commonest is either the lyre or the bow, according as he was conceived as the god of song or as the far-hitting archer. The Delphian diviner, Pythian Apollo, is indicated by the tripod, which was also the favourite offering at his altars. Among plants, the bay, used for purposes of expiation, was early sacred to him. (See DAPHNÉ.) It was planted round his temples, and plaited into garlands of victory at the Pythian Games. The palm-tree was also sacred to him, for it was under a palm-tree that he was born in Delos. Among animals, the wolf, the dolphin, the snow-white and musical swan, the hawk, raven, crow, and snake were under his special protection; the last four in connection with his prophetic functions.

In ancient art he was represented as a long-haired but beardless youth, of tall yet muscular build, and handsome features. Images of him were as abundant as his worship was extensive: there was scarcely an artist of antiquity who did not try his hand upon some incident in the story of Apollo. The ideal type of this god seems to have been fixed chiefly by Praxiteles and Scopas. The most famous statue preserved of him is the Apollo Belvedere in the Vatican, which represents him either as fighting with the Pythian dragon, or with his ægis frightening back the foes who threaten to storm his sanctuary. Other great works, as the Apollo Musagetes in the Vatican, probably from the hand of Scopas, show him as a Citharoedus in the long Ionian robe, or nude. The Apollo Sauroctonus (lizard-killer), copied from a bronze statue by Praxiteles, is especially celebrated for its beauty. It represents a delicate youthful figure leaning against a tree, dart in hand, ready to stab a lizard that is crawling up the tree. It is preserved in bronze at the Villa Albani in Rome, and in marble at Paris.

Apollodōrus (Ἀπολλόδωρος). (1) A Greek poet of the New Comedy, born at Carystus, between B.C. 300 and 260. He wrote forty-seven plays, and won five victories. From him Terence borrowed the plots of his *Phormio* and *Hecyra*. (2) A Greek grammarian and historian of Athens, about B.C. 140, a pupil of Aristarchus and the Stoic Panaetius. He was a most prolific writer on grammar, mythology, geography, and history. Some of his works were written in iambic senarii—e. g. a geography, and the *Chronica*, a condensed enumeration of the most important data in history and literature from the fall of Troy, which he places in B.C. 1183, down to his own time—undoubtedly the most important of ancient works on the subject. Besides fragments, we have under his name a book entitled *Bibliotheca*, a great storehouse of mythological material from the oldest theogonies down to Theseus, and, with all its faults of arrangement and treatment, a valuable aid to our knowledge of Greek mythology. Yet there are grounds for doubting whether it is from his hand at all, or whether it is even an extract from his great work, *On the Gods*, in twenty-four books. A good edition is Hercher's (Berlin, 1874). (3) A Greek painter of Athens, about B.C. 420, the first who graduated light and shade in his pictures, whence he received the name of SCIAGRĂPHUS (shadow-painter). This invention entitled him to be regarded as the founder of a new style, which aimed at producing illusion by pictorial means, and which was carried on further by his younger contemporary Zeuxis (Pliny, *H. N.* xxxv. 60). (4) A Greek architect of Damascus, who lived for a time at Rome, where, among other things, he built Trajan's Forum and Trajan's Column. He was first banished and then put to death under Hadrian, A.D. 129, having incurred that emperor's anger by the freedom of his criticisms. We have a work by him on engines of war, addressed to Hadrian.

Apollonia (Ἀπολλωνία). (1) An important town in Illyria, not far from the mouth of the Aoüs, and sixty stadia from the sea. It was founded by the Corinthians and Coreyraeans, and was equally celebrated as a place of commerce and of learning. Many distinguished Romans, among others the young Octavius, afterwards the emperor Augustus, pursued their studies here. Persons travelling from Italy to Greece and the East usually landed either at Apollonia or Dyrrhachium. (2) A town in Macedonia, on the Via Egnatia, between Thessalonica and Amphipolis, and south of the lake of Bolbé. (3) A town in Thrace, on the Black Sea, a colony of Miletus, which had a celebrated temple of Apollo, from which Lucullus carried away a colossus of this god, and erected it on the Capitol at Rome. (4) A castle or fortified town of the Locri Ozolae, near Naupactus. (5) A town on the northern coast of Sicily. (6) A town in Bithynia, on the lake Apolloniatis, through which the river Rhyndacus flows. (7) A town in Cyrenaica, and the harbour of Cyrené, one of the five towns of the Pentapolis, in Libya; it was the birthplace of Eratosthenes (q. v.).

Apollonia (Ἀπολλώνια). A propitiatory festival solemnized at Sicyon in honour of Apollo and Artemis. See Pausan. ii. 7, § 7.

Apollōnis (Ἀπολλωνίς). A city in Lydia, between Pergamus and Sardis, named after Apollonis, the mother of King Eumenes (q. v.).

Apollonius (Ἀπολλώνιος). (1) APOLLONIUS RHODIUS. A Greek scholar and epic poet of the Alexandrian Age, born at Alexandria about B.C. 260. A pupil of Callimachus, he wrote a long epic, *Argonautica*, in four books, in which, departing from his master's taste for the learned and artificial, he aimed at all the simplicity of Homer. The party of Callimachus rejected the poem, and Apollonius retired in disgust to Rhodes, where his labours as a rhetorician and his newly revised poem won him hearty recognition and even admission to citizenship, whence his surname. Afterwards, returning to Alexandria, he recited his poem once more, and this time with universal applause, so that Ptolemy Epiphanes, in B.C. 196, appointed him to succeed

Eratosthenes as librarian. He probably died during the tenure of this office. His epic poem, which has survived, has a certain simplicity, though falling far short of the naturalness and beauty of Homer. Its uniform mediocrity often makes it positively tedious, though it is constructed with great care, especially in its versification. By the Romans it was much prized, and more than once imitated, as by Varro Atacinus and Valerius Flaccus. A valuable collection of scholia upon it testifies the esteem in which it was held by the learned of old. A good edition is that by Seaton, 1888.

(2) Apollonius of Tralles. A Greek sculptor of the school of Rhodes, and joint author with his countryman Tauriscus of the celebrated Dircé group. (See Antiopé.) Among other artists of the name, the worthiest of mention is Apollonius of Athens, of the first century B.C. From his hand is the Heracles, now only a torso, preserved in the Belvedere at Rome.

(3) Apollonius of Perga, in Pamphylia. A Greek mathematician called "the Geometer," who lived at Pergamus and Alexandria in the first century B.C., and wrote a work on Conic Sections in eight books, of which we have only the first four in the original — the fifth, sixth, and seventh in an Arabic translation, and the eighth in extracts. See Schömann, *Apollonius von Perga* (1878).

(4) Apollonius of Tyăna, in Cappadocia, the most celebrated of the Neo-Pythagoreans, lived after the middle of the first century A.D. By a severely ascetic life on the supposed principles of Pythagoras, and by pretended miracles, he obtained such a hold upon the multitude that he was worshipped as a god, and set up as a rival to Christ. The account of his life by the elder Philostratus (q. v.) is more romance than history, and offers little to build upon. Having received his philosophical education, and lived in the temple of Asclepius at Aegae till his twentieth year, he divided his patrimony among the poor, and roamed all over the world; he was even said to have reached India and the sources of the Nile. Twice he lived at Rome: first under Nero, until the expulsion of the philosophers; and again in Domitian's reign, when he had to answer a charge of conspiring against the emperor. Smuggled out of Rome during his trial, he continued his life as a wandering preacher of morals and worker of marvels for some years longer, and is said to have died at a great age, the master of a school at Ephesus. Of his alleged writings, eighty-five letters have alone survived. See the work by Pettersch (Berlin, 1879); and *Apollonius Tyanensis* by Göttsching (1889).

(5) Apollonius Dyscŏlus ("the Surly"). A Greek scholar of Alexandria, where he had received his education, and where he ended his days a member of the Museum, after having laboured as a teacher at Rome under Antoninus Pius, about A.D. 140. He is the father of scientific Grammar, having been the first to reduce it to systematic form. His extant works are the treatises on Pronouns, Adverbs, Conjunctions, and the Syntax of the parts of speech, in four books. He was followed especially by the Latin grammarians, above all by Priscian. See Skrzeczka, *Die Lehre des Apollonius Dyscolus* (1869); and the article Priscianus.

(6) Apollonius the Sophist, of Alexandria. His precise date A.D. is unknown. He was the author of an extant lexicon of Homeric glosses, based on Apion's lost writings. See Glossa.

(7) Apollonius of Tyre, the hero of a Greek romance now lost, composed in Asia Minor, in the third century A.D., on the model of the Ephesian *History of Xenophon*. We have a free Latin version made by a Christian, about the sixth century, probably in Italy, which was much read in the Middle Ages, and translated into Anglo-Saxon, English, French, Italian, Middle-Greek, and German, in prose and verse. Its materials are used in the pseudo-Shakespearian drama of *Pericles, Prince of Tyre*. See Simrock, *Quellen des Shakespeare* (Bonn, 1872); and Hagen, *Der Roman von König Apollonius in seinen verschiedenen Bearbeitungen* (1878).

Apologetĭcum. (1) A treatise of Tertullian composed A.D. 199, addressed to the *praesides imperii*, and containing a defence of the Christians against the charge of disloyalty to the State and to the emperor. The work is perhaps the most vigorous and original of any that its author wrote. Good editions are those of Oehler (Halle, 1849); Kayser (Paderborn, 1865); and of Migne (Paris, 1870). (2) A poem in 1054 lines, by Commodianus (q. v.), composed A.D. 249, and entitled *Carmen Apologeticum adversus Iudaeos et Gentes*. It is written in hexameters that for the most part set all prosody at defiance, and, like English hexameters, follow the accentuation of the popular pronunciation of the day.

Apologia (*ἀπολογία*). The title of Plato's defence of Socrates, put into the mouth of the latter, and doubtless giving the substance of the speech made by the philosopher before his judges. See Plato; Socrates.

Apomnemoneumăta (*ἀπομνημονεύματα*). "Reminiscences." The Greek title of Xenophon's memoirs of Socrates, better known by their Latin title *Memorabilia* (q. v.).

Apŏni or Apŏnus Fons. Warm medicinal springs, near Patavium, hence called Aquae Patavinae, and much frequented by the sick.

Apopempsis (*ἀποπεμψις*). See Divortium.

Apophăsis (*ἀπόφασις*). Literally, "a declaration." (1) The proclamation at Athens of the decision which the majority of the judges came to at the end of a trial, and was apparently made by a herald under the direction of the presiding magistrate. The decisions of arbitrators (*διαιτηταί*) were called by the same name. (2) Such proclamations being generally made on court days, *ἀπόφασις* came to mean the day on which the trial took place. (3) The word was also employed to indicate the account of a person's property, which was obliged to be given when an *antidosis* (q. v.) was demanded.

Apophŏra (*ἀποφορά*). This term, which properly means "produce or profit" of any kind, was used at Athens to signify the profit which accrued to masters from their slaves. It thus signified the sum which slaves paid to their masters when they laboured on their own account; and the sum which masters received when they let out their slaves on hire, either for the mines or for any other kind of labour; and also the money which was paid by the state for the use of the slaves who served in the fleet (Xen. *Rep. Ath.* i. 11). The term *apophora* was also applied to the money which was paid by the allied states to Sparta, for the purpose of carrying on the war against the Persians. When Athens acquired the supremacy, these moneys were called *φόροι*.

Apophorēta. (1) (*ἀποφόρητα*). Presents which were given to friends at the end of an entertainment, to carry home with them (Petron. 56). Although the name is Greek, the custom is Roman, for Athenaeus expressly tells us that when Cleopatra presented to Antony and his staff the gold and silver dinner service which they had been using at a banquet in Cilicia, she was imitating a Roman usage. Book xiv. of Martial consists of an introductory epigram and 222 distichs, each describing and designed to accompany one of these presents, which range from nuts to works of art and slaves. The first epigram speaks of the Saturnalia as the special time for their distribution. They were also given at weddings (Juv. vi. 203, schol.). (2) (*ἀποφορήτη*). A utensil mentioned by Isidore as a kind of plate.

Apophrădes Heměrai (*ἀποφράδες ἡμέραι*). Unlucky or unfortunate days (*dies nefasti*), on which no public business, nor any important affairs of any kind, were transacted at Athens. Such were the last three days but one of every month, and the twenty-fifth day of the month Thargelion, on which the Plynteria were celebrated.

Apophthegmăta (*ἀποφθέγματα*). (1) A collection of pithy sayings gathered together by Cato the Elder. (2) A similar collection made by Iulius Caesar, and spoken of by Suetonius as *Dicta Collectanea*. See Suet. *Iul.* 56; and the article Proverbium.

Aporrhaxis (*ἀπόρραξις*). The game of "bounce-ball." See Pila.

Aporrhesŏos Dikē (*ἀπορρήσεως δίκη*). The term *ἀπόρρησις*, "prohibition," has a technical meaning in Attic law in connection with the sale of landed property. Public notice was required to be given of every such sale, for the protection of mortgagees and other creditors; and any one having a claim upon the estate might interdict the sale by an *ἀπόρρησις*. The vendor, on the other hand, had his remedy against fraudulent or malicious obstruction in an action for damages, called *ἀπορρήσεως δίκη*.

Aporrhēta (*τὰ ἀπόρρητα*). Literally, "things forbidden." The word has two peculiar, but widely different, acceptations in the Attic usage. In one of these it implies contraband goods—i. e. those of which the export (not the import) was prohibited. The chief of these were corn (of which there was a steady importation) and articles used in the building and equipment of the fleet. An enumeration of these at different periods of Athenian history is given by Böckh (*P. E.* pp. 53, 54).

In the other sense, it denotes various contumelious epithets, from the application of which both the living and the dead were protected by special laws (Meier, *Att. Process*, p. 482).

Aposphragisma (*ἀποσφράγισμα*). The device on a signet-ring. See Anulus.

Apostŏleis (*ἀποστολεῖς*). Ten commissioners, chosen out of the body of Athenian citizens without distinction of tribes, in order to secure the efficiency and promptitude of a naval expedition (*ἀπόστολος*) which had been voted. They were thus an extraordinary authority, appointed by decree of the people (Böckh, *Urkunden über das Seewesen*, p. 466; Hudtwalcker, *De Diaetet.* p. 71; Meier and Schömann, *Att. Prozess*, p. 112, with Lipsius's note in the new ed.).

Apothēca (*ἀποθήκη*). A storehouse or magazine (Thuc. vi. 97) for books (Luc. *Indoct.* 5); a burial-place (id. *Contempl.* 22); but especially a place in the upper part of the house in which the Romans kept their wine in *amphorae*. It was usually above the *fumarium*, since it was thought that the passage of the smoke through the room tended greatly to improve the flavour of the wine. See Cella; Vinum.

Apotheōsis (*ἀποθέωσις, consecratio*). The enrolment of a human being among the gods, of which the Greeks have an instance as early as Homer, but only in the single case of Leucothea. The oldest notion was that of a bodily removal; then arose the idea of the mortal element being purged away by fire, as in the case of Heracles. There was a kind of deification which consisted in the decreeing of heroic honours to distinguished men after death, which was done from the time of the Peloponnesian War onwards, even in the case of living men. (See Heros.) The successors of Alexander the Great—both the Seleucidae, and still more the Ptolemies—caused themselves to be worshipped as gods. Of the Romans, whose legend told of the translation of Aeneas and Romulus into heaven, Iulius Caesar was the first who claimed divine honours, if not by building temples to himself, yet by setting his statue among the gods in every sanctuary at Rome and in the Empire, and by having a special flamen assigned to him. The belief in his divinity was confirmed by the comet that shone several months after his death, as long as his funeral games lasted; and under the Second Triumvirate he was formally installed among the deities of Rome, as Divus Iulius, by a decree of the Senate and people. His adopted son and successor Octavianus persistently declined any offer of public worship, but he accepted the title of Augustus (the consecrated), and allowed his person to be adored in the provinces. On his death the Senate decreed divine honours to him under the title of Divus Augustus, the erection of a temple, the founding of special games, and the establishment of a peculiar priesthood. After this, admission to the number of the Divi, as the deified emperors were called, became a prerogative of the imperial dignity. It was, however, left dependent on a resolution of the Senate, moved in honour of the deceased emperor by his successor. Hence it was not every emperor who obtained it, nor did consecration itself always lead to a permanent worship. Empresses were often consecrated, the first being Augustus's wife Livia as Diva Augusta, and even other members of the imperial house.

Apotheosis of Antoninus Pius and Faustina. (From the Pedestal of the Column of Antoninus Pius.)

The ceremony of Apotheosis, used from the time of Augustus, was the following: After the passing of the Senate's decree a waxen image of the dead, whose body lay hidden below, was exhibited for seven days on an ivory bed of state in the palace, covered with gold-embroidered coverlets; then the bier was borne by knights and senators amid a brilliant retinue, down the Via Sacra to the ancient Forum, where the funeral oration was delivered, and thence to the Campus Martius, where it was deposited in the second of the four stories of a richly decorated funeral pile of pyramidal shape. When the last honours had been performed, the pile was set on fire; and, as it burned up, an eagle soared from the topmost story into the sky, as a symbol of the ascending soul. See Herodian, iv. 3; and the articles AUGUSTALES; MANES.

Apotimēma (*ἀποτίμημα*). See DOS.

Apotympanismos (*ἀποτυμπανισμός*). Beating to death with sticks, cudgels, or clubs (*τὸ τυμπάνῳ ἀποκτεῖναι, ὅπερ ἐστὶ ξύλον ὥσπερ ῥόπαλον, Lex. Rhet.* p. 198) which is mentioned as a mode of execution at Athens and elsewhere. See FUSTUARIUM.

Apparitōres. The general name for the free attendants of the magistrates at Rome, as distinguished from the *servi publici*. They received wages (*merces*) from the public treasury, and had places of their own in the theatre and circus (Tac. *Ann.* xvi. 12), doubtless near the magistrates on whom they waited. They were divided into five classes —the ACCENSI, LICTORES, PRAECONES, SCRIBAE, and VIATORES, treated in separate articles.

Appellatio. The Latin term for an appeal to a magistrate to veto the decision of an equal or inferior magistrate. Thus a consul could be appealed to against the other consul, and against all other magistrates except the tribunes; but a tribune against both his colleagues and all other magistrates whatsoever. On the other hand, the *provocatio* (q. v.) under the Republic was an appeal from a magistrate's sentence to the people as supreme judge. During the imperial period the two processes run into one, for the emperor held united in his person both the supreme judicial function and the plenary power of all magistrates, particularly the tribunician veto, so that an appeal to him was at once an *appellatio* and a *provocatio*. This appeal, in our sense of the word, was only permitted in important cases; it had to be made within a short time after sentence was passed, and always addressed to the authority next in order, so that it only reached the emperor if no intermediate authority was competent. If the result was that the disputed verdict was neither quashed nor awarded, but confirmed, the appellant had to pay a fine. As the power of life and death rested with the emperor and the Senate alone, governors of provinces were bound to send to Rome any citizen appealing on a capital charge. See EPHESIS.

Appiānus (*Ἀππιανός*). A Greek historian of Alexandria, who lived about the middle of the second century A.D. At first he pursued the calling of an advocate at Rome; in later life, on the recommendation of his friend the rhetorician Fronto, he obtained from Antoninus Pius the post of an imperial procurator in Egypt. He wrote an extensive work on the development of the Roman Empire from the earliest times down to Trajan, consisting of a number of special histories of the several periods and the several lands and peoples till the time when they fell under the Roman dominion. Of the twenty four books of which it originally consisted, only eleven are preserved complete besides the Preface: *Spain* (book vi.), *Hannibal* (vii.), *Carthage* (viii.), *Syria* (xi.), *Mithridates* (xii.), the *Roman Civil Wars* (xiii.–xvii.), and *Illyria* (xxiii.), the rest being lost altogether or only surviving in fragments. Appianus's style is plain and bald, even to dryness, and his historical point of view is purely Roman. The book is a mere compilation, and is disfigured by many oversights and blunders, especially in chronology; nevertheless the use made by the writer of lost authorities lends it considerable worth, and for the history of the Civil Wars it is positively invaluable. The best text is that in Bekker's edition, 2 vols. (Leipzig, 1853).

Appias. A nymph of the Appian Well in the Forum of Iulius Caesar, near the temple of Venus Genetrix, and surrounded by statues of nymphs called Appiades—a name also given to prostitutes living in that vicinity (Ovid, *A. A.* ii. 452).

Appia Via. See VIAE.

Applicatiōnis Ius. See EXSILIUM.

Apries (*Ἀπρίης*). An Egyptian king, the Pharaoh-Hophra of the Old Testament, who succeeded his father Psammis and reigned B.C. 595–570, being then dethroned and put to death by Amasis (q. v.) (Herod. ii. 161).

Aprosklētos Dikē (*ἀπρόσκλητος δίκη*). If there were insufficient or fraudulent service of the summons (*πρόσκλησις*) in the case of a suit, the suit was called *ἀπρόσκλητος*, and dismissed by the magistrate (Dem. *c. Nicostr.* p. 1251, § 15). See DIKĒ; PROSKLESIS.

Aprostasiou Graphē (*ἀπροστασίου γραφή*). An action at Athens, falling under the jurisdiction of the polemarch, which was brought against those resident aliens who had neglected to provide themselves with a patron (*προστάτης*). It is probable that the aliens' tax was regularly paid through the *προστάτης*, and that he was responsible for it; and in that case the default of payment would of itself prove neglect to comply with the provisions of the law. See Meier, *Att. Process*, p. 315.

Apsĭnes (*Ἀψίνης*). A Greek rhetorician of Gadara, who taught at Athens in the first half of the third century A.D., and wrote a valuable treatise on rhetoric, and also a work on the questions usually discussed in the schools of the rhetoricians. These two treatises are printed in the *Rhetores Graeci*, by Walz, ix. p. 534 foll.

Apsis. See ABSIS.

Apsus (*Ἄψος*). A river in Illyria, flowing into the Ionian Sea (Lucan, v. 461).

Apsȳchon Dikē (*ἀψύχων δίκη*). An action against inanimate objects (*ἄψυχα*) which had caused the death of a human being. It thus somewhat resembled the English law of deodand, lately abolished. It was tried in the court of the Prytaneum, and, according to Schömann, partook more of the nature of a religious ceremony than a judicial proceeding. If the instruments with which a murder had been committed were captured, and not the murderer himself, these, after the ephetae had pronounced their sentence, were conveyed out of the country by the phylobasileis, or presidents of the four old-Ionic tribes. In the same way were treated such things as had accidentally caused the death of any one. Animals

likewise, by which any one had been killed, were here condemned to death, and then conveyed out of the country (Pollux, viii. 111, 120; Dem. *c. Aristocr.* p. 645, § 89; Schömann, *Antiq.* i. 470, E. T.; cf. Plat. *Leg.* ix. 873 E).

Apsyrtus (Ἄψυρτος). See ABSYRTUS.

Aptĕra (Ἀπτέρα). A city of Crete about eighty stadia from Cydonia. Its name was said to be derived from the result of a contest in music held at this place between the Sirens and the Muses, when the former, being defeated, were so affected that their wings dropped from their shoulders (Steph. Byzant. s. v. Ἀπτέρα).

Apuāni. A Ligurian people, subdued by the Romans and transferred to Samnium in B.C. 180.

Apuleiae Leges. See LEX.

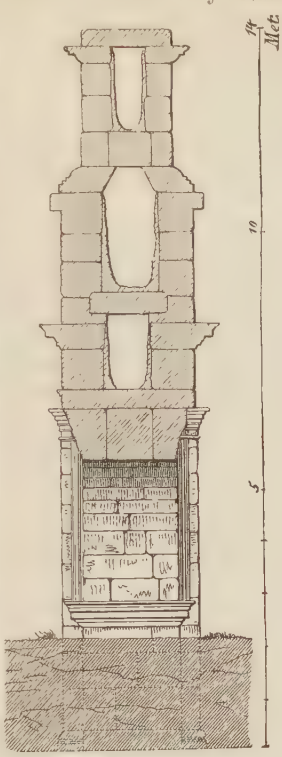
Apuleius, Lucius. A Roman writer of the African Period, born at Madaura, in Numidia, about A.D. 130. Having been educated at Carthage, he went to Athens to study philosophy, especially that of Plato; later, he travelled far and wide, everywhere obtaining initiation into the mysteries. For some time he lived in Rome as an advocate. After returning to Africa, he married a lady considerably older than himself, the mother of a friend, Aemilia Pudentilla, whereupon her kinsmen charged him with having won the rich widow's hand by magic, and of having contrived the death of her son—a charge to which he replied with much wit in his oration *De Magia* (earlier than A.D. 161). He afterwards settled down at Carthage, and thence made excursions through Africa, delivering orations or lectures. Of the rest of his life and the year of his death nothing is known. Beside the apology above-mentioned, and a few rhetorical and philosophic writings, another work, his chief one, also survives, which was composed at a ripe age, with hints borrowed from a book of Lucian's. This is a satirical and fantastic moral romance, *Metamorphoseon Libri XI.* (*de Asino Aureo*), the adventures of one Lucius, who is transformed into an ass, and under that disguise has the amplest opportunities of observing, undetected, the preposterous doings of mankind. Then, enlightened by this experience, and with the enchantment taken off him by admission into the mysteries of Osiris, he becomes quite a new man. Of the many episodes interwoven into the story, the most interesting is the beautiful allegorical fairy tale of *Cupid and Psyche*, so much used by later poets and artists. Throughout the book Apuleius paints the moral and religious conditions of his time with much humour and in life-like colours, although his language, while clever, is often affected, bombastic, and disfigured by obsolete and provincial phrases. The *editio princeps* is that published at Rome in 1469; and the most elaborate edition remains that of F. Oudendorp (Leyden, 1786–1823). The *Cupid and Psyche* was translated in 1566 by Adlington, whose version was reprinted (London, 1887), with an introduction by Andrew Lang. Of the *Golden Ass*, as a whole, there is an English translation by Sir G. Head (1851), and of the whole of Apuleius (1853). The best edition of the entire works is that by G. F. Hildebrand (Leipzig, 1842). O. Jahn has edited the *Cupid and Psyche* separately (Leipzig, 1856).

Apuleius Saturnīnus. See SATURNINUS.

Apulia. A district which included, in its widest signification, the whole of the southeast of Italy from the river Frento to the promontory Iapygium. In its narrower sense it was the country east of Samnium, on both sides of the Aufidus, the Daunia and Peucetia of the Greeks; the southeast part was called Calabria by the Romans. The Greeks gave the name of Daunia to the north part of the country from the Frento to the Aufidus, of Peucetia to the country from the Aufidus to Tarentum and Brundusium, and of Iapygia or Messapia to the whole of the remaining southern part; though they sometimes included under Iapygia all Apulia in its widest meaning. The country was very fertile, especially in the neighbourhood of Tarentum, and the mountains afforded excellent pasturage. The population was of a mixed nature: they were for the most part of Illyrian origin, and are said to have settled in the country under the guidance of Iapyx, Dannius, and Peucetius, three sons of an Illyrian king, Lycaon. Subsequently many towns were founded by Greek colonists. The Apulians joined the Samnites against the Romans, and became subject to the latter on the conquest of the Samnites.

Aqua. See AQUAE DUCTUS.

Aquae. The name given by the Romans to many mineral springs and bathing resorts. (1) CUTILIAE, mineral springs in Samnium, near the ancient town of Cutilia, which perished in early times, and east of Reaté. There was a celebrated lake in its neighbourhood, with a floating island, which was regarded as the umbilicus or centre of Italy. Vespasian died at this place. (2) PATAVĪNAE. See APONI FONS. (3) SEXTIAE (Aix), a Roman colony in Gallia Narbonensis, founded by Sextius Calvinus, B.C. 122; its mineral waters were long celebrated. Near this place Marius defeated the Teutoni, B.C. 102. (4) STATIELLAE, a town of the Statielli in Liguria, celebrated for its warm baths. (5) MATTIĀCAE, a town of the Mattiaci in Germany, now Wiesbaden. (6) BADĒNAE, a German town, now Baden. (7) PANNONĬCAE, a town in Pannonia, now Baden in Austria.



Aquae Ductus (ὑδραγωγία, ὑδραγωγεῖον, ὑπόνομος). A water-conduit or aqueduct.

(1) GREEK. As nearly all the ancient aqueducts now remaining are of Roman construction, it has been generally imagined that works of this description were entirely unknown to the Greeks. This, however, is an error, since some are mentioned by Pausanias. The Greeks, in fact, at a very early period, had some powers of hydraulic engineering, as is shown by the drainage tunnels of the lake Copaïs, and the similar works of Phaeax at Agrigentum; and we have an instance of a channel for water being carried through a mountain to supply the city of Samos. The height of the mountain was 150 orgyiae (900 Greek feet); the length of the tunnel was seven stadia (seven eighths of a Roman mile, or about 1420 yards); its section was a square of eight Greek feet. The actual channel for the water was cut below this, and was, if the text is right, thirty Greek feet deep and three wide; the water passed through pipes from a copious spring, and was thus brought to the city (Herod. iii. 60). There are still remains of this tunnel. Müller conjectures that the work was one of those executed by Polycrates. Indeed, many of the Greek water-works appear to date from the age of the Tyrants. See EMISSARIUM.

But from early times, the Greeks, where the needs of a city called for it, constructed underground conduits following the undulations of the surface or carried through the hills by tunnels, and closely resembling the earlier Oriental aqueducts, of which they were probably imitations. Thus the conduit which supplied the acropolis of Thebes was attributed to Cadmus, and the canalization of the mountain torrents round Argos to Danaüs. The Greek aqueducts were usually rectangular channels cut in the rock or constructed of solid masonry, but in the Troad we have an instance of one composed of earthenware pipes (Hahn, *Ausgrab. auf der Homer. Pergamus*)

At Athens the rocky part of the city was dependent on cisterns. Two conduits entered the city on the east from the upper course of the Ilissus, which lower down was canalized, and part of its water went to supplement the *Enneakrounos*, below which an underground conduit ran from the river, repeatedly crossing under its bed, and accessible to use by shafts, and finally carried to the Piraeus. Below the Enneakrounos, a stream from Hymettus was carried over the Ilissus into the city. Later, two large conduits were constructed from Lycabettus on the east and west of that mountain. A system of canals from the Cephissus served to irrigate the olive-woods (E. Curtius, *VII Karten von Athen*). Finally, Hadrian, near the end of his reign, built an aqueduct of the Roman type, drawing its water from the Cephissus. Among the finest and best preserved of Greek aqueducts are those of Syracuse, which Thucydides (vi. 100) tells us were laid under ground to bring drinking-water into the city, and which are still in use.

(2) Roman. The Romans were in a very different position, with respect to the supply of water, from most of the Greek cities. They at first had recourse to the Tiber and to wells sunk in the city; but the water obtained from those sources was very unwholesome, and must soon have proved insufficient. Consequently, to supply the demands of the public baths and the fullers, and later of the growing population, and later still of the *naumachiae*, they had recourse to public works in order to bring pure water from a considerable distance—from the hills, in fact, which surround the Campagna. The date of the first aqueduct is assigned by Frontinus to the year A.U.C. 441, or B.C. 312 (*De Aquaed. Urb. Rom.* 4); and the number of aqueducts was gradually increased, partly at the public expense and partly by the munificence of individuals, till, in the time of Procopius, they amounted to fourteen; and, even before they were all erected, they might well excite the admiration which Pliny expresses with respect to the Claudian aqueduct (*H. N.* xxxvi. § 123). The Roman aqueducts are among the most magnificent structures of antiquity. Some of these were constructed underground; others, latterly almost all, conveyed the water, often for long distances, in covered channels of brick or stone, over lofty arcades stretching straight through hill and valley. They started from a well-head (*caput aquarum*) and ended in a reservoir (*castellum*), out of which the water ran in Rome into three chambers, lying one above another, the lowest chamber sending it through leaden or clay pipes into the public fountains and basins, the middle one into the great bathing establishments, the uppermost into private houses. Private citizens paid a tax for the water they obtained from these public sources. Under the Republic the construction and repair of aqueducts devolved upon the censors, and their management upon the aediles, but from the time of Augustus, upon a special *curator aquarum*, assisted by a large staff of pipe-masters, fountain-masters, inspectors (*aquarii*), and others, taken partly from the number of the public slaves. The amount of water brought into Rome by its numerous aqueducts, the first of which, the Aqua Appia, was projected B.C. 312, may be estimated from the fact that the four still in use are quite sufficient to supply all the houses, fountains, etc., of modern Rome.

Section of the Aqua Marcia, Tepula, and Iulia, near the Porta San Lorenzo

In the time of Frontinus (A.D. 97) there were in Rome nine aqueducts, of which four were constructed in the time of the Republic and five under the Empire. These were as follows:

(1) The Aqua Appia, begun by the censor Appius Claudius Caecus (q. v.) in B.C. 312. (See Middleton, *Ancient Rome*, p. 466.) Its length was 11,190 *passus*, of which 11,130 were carried under the earth, and the remaining sixty *passus* on arches, from the Porta Capena to the Porta Trigemina, where it ended. See Livy, ix. 29.

(2) The Anio Vetus, commenced by the censor Manius Curius Dentatus in B.C. 272, the expense of its construction being defrayed out of the spoils taken from Pyrrhus. Its source was in the river Anio, above Tibur, ten Roman miles from the city; but, because of its windings, the actual length was forty-three miles, of which length only 221 *passus* were above ground. There are remains of this aqueduct near the Porta Maggiore.

(3) The Aqua Marcia, built by the praetor Q. Marcius Rex in B.C. 144, at the cost of 180,000,000 sesterces. It commenced three miles south of the Via Valeria, thirty-six miles from Rome, and its length was some 61,710 *passus*, of which 7463 were above ground, 6935 being on arches. Vitruvius speaks of the excellence of its water as proverbial (viii. 3, § 1). It is still in use.

(4) The Aqua Tepula, built by the censors Cn. Servilius Caepio and L. Cassius Longinus in B.C. 127. It commenced two miles to the right of the tenth mile-stone on the Via Latina. Its water was slightly warm (*tepida*), hence the name *tepula*

applied to it. It was afterwards connected with the Aqua Iulia.

(5) The Aqua Iulia, built by M. Vipsanius Agrippa (q. v.), in B.C. 33, during his aedileship. Its length was 15,426 *passus*, of which 7000 were above ground, partly on arches.

(6) The Aqua Virgo, also built by Agrippa during his aedileship to supply his baths. (See Balneae.) It began near the eighth mile-stone on the Via Collatina, being in length 14,105 *passus*, of which 12,865 were underground. It is still in use.

(7) The Aqua Alsietīna, or Aqua Augusta, built by Augustus. It extended from the Lacus Alsietinus, which lay 6500 *passus* to the right of the fourteenth mile-stone on the Via Claudia, a distance of 22,172 *passus*. Of this length, only 358 *passus* were on arches. Its water was so bad as to be used only for watering gardens and for the *naumachiae*

(8) The Aqua Claudia, begun by the emperor Caligula in A.D. 38. It began near the thirty-eighth mile-stone on the Via Sublacensis, and furnished excellent water. Its length was 46,406 *passus*, of which 9567 were on arches.

(9) The Anio Novus, the longest of all the aqueducts, being nearly fifty-nine miles in length. It was begun by Caligula in A.D. 38, and finished by Claudius in A.D. 52. Of its length, 9400 feet were above ground, some of its arches being 109 feet high. (See Frontin. 15.) Near the city the Aqua Claudia and the Anio Nova united, forming two channels on the same arches.

It has been calculated that these nine aqueducts supplied the city of Rome with some 332,306,624 gallons of water a day, or about 332 gallons a head. At the present time, forty gallons per head are considered sufficient After the time of Frontinus two other aqueducts were built.

(10) The Aqua Traiāna, built by Trajan about A.D. 110, and brought from the Lacus Sabatinus to supply the Regio Transtiberina.

(11) The Aqua Alexandrīna, built by Alexander Severus in A.D. 226 from a spot between Gabii and Lake Regillus, about fourteen miles from Rome, and intended to supply the baths of Severus. There was also

(12) The Aqua Crabra, originally carried directly through the Circus Maximus from a point near the source of the Aqua Iulia; but its water was so bad that it was abandoned to the people of the Ager Tusculanus, and hence became known as the Aqua Damnata.

See Frontinus, *De Aquaeductibus Urbis Romanae;* Fabretti, *De Aquis et Aquaeductibus Veteris Romae;* Stieglitz, *Archäologie der Baukunst;* Hirt, *Geschichte der Baukunst;* Platner and Bunsen, *Beschreibung der Stadt Rom;* Canina, *Storia dell' Architettura Romana;* Burn, *Rome and the Campagna* (1871); Lanciani, *Topografia di Roma Antica* (1880); Middleton, *Ancient Rome in 1885;* id. *Remains of Ancient Rome* (1892); and the illustration in the article Nemausus.

Aquae Ductus. See Servitutes.

Aquae et Ignis Interdictio. See Exsilium.

Aquae Haustus. See Servitutes.

Aquaelicium or **Aquilicium.** A sacrifice for rain. In times of drought, the Roman matrons, clad in the stola, with bare feet and loosened hair, and the magistrates without their purple robes and with reversed fasces, used to carry in procession a stone which lay outside the Porta Capena near the Temple of Mars, through the city to the Capitol. The name of the stone was *lapis*, or *petra manalis* (Paul. ex Fest. p. 128), i. e. the stone from which water flows.

Aquaemanālis. A ewer used in washing the hands at meals, also called *gutturnium* (Varro ap. Non. 547).

Aquarii and **Aquariŏli.** (1) Slaves who carried water for bathing into the women's apartments. (2) Public officers who attended to the aqueducts. See Aquae Ductus.

Aquĭla. (1) The eagle. See Signa Militaria. (2) (*ἀετός*). In architecture, the gable of a house; the pediment of a temple See Fastigium

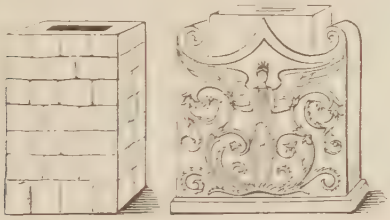
Aquĭla. (1) A native of Sinopé in Asia Minor. He first applied himself to the study of mathematics and architecture; and the emperor Hadrian, according to Saint Epiphanius, made him superintendent of public buildings, and gave him charge of the restoration and enlargement of Jerusalem, under its new name of Aelia Capitolina. This commission afforded him an opportunity of becoming acquainted with Christianity, which he subsequently embraced, and received the rite of baptism. Becoming afterwards addicted, however, to judicial astrology, he was excommunicated, and then attached himself to Judaism. Aquila is rendered famous by his Greek version of the Old Testament, which he published A.D. 138 It is the first that was made after the Septuagint translation, and appears to have been executed with great care. Aquila's method was to translate word for word, and to express, as far as this could conveniently be done, even the etymological meaning of terms. Although his version was undertaken with the view of opposing and superseding that of the Septuagint, of which last the churches made use after the example of the apostles, still the Fathers found it in general so exact that they often, in preference, drew their texts from it. St. Jerome, who had at first censured it, afterwards praised its exactness The Hellenistic Jews preferred it also for the use of their synagogues Some fragments of it are preserved in the *Hexapla* of Origen. Aquila joined to a second edition of his version some Jewish traditions which he had obtained from the rabbi Akiba, his preceptor. This edition was still more favourably received by the Hellenistic Jews than the previous one had been. The emperor Justinian, however, interdicted the reading of it, on the ground that it only made the Jews more stubborn in error. See Clarke, *Succession of Sacred Lit.* i. 44. (2) Romānus. A Latin rhetorician of the third century A.D., author of a work *De Figuris.* Text by Halm (1863).

Aquilēia. A town in Gallia Transpadana near the head of the Adriatic, founded by the Romans in B.C. 182. It was a strong fortress, and intended to be a barrier against the encroachments of the Northern barbarians. It was taken, however, in A.D. 452 by Attila (q. v.), who destroyed it, the inhabitants escaping to the lagoons of the Adriatic, where subsequently arose the city of Venice.

Aquilius or **Aquillius.** (1) A Roman consul who held office in B.C. 129, finishing the war against Aristonicus, son of Eumenes, king of Pergamus. (2) Nepos. A general and consul (B.C. 101). He ended the Servile War in Sicily, but in 88 was defeated and taken by Mithridates, who put him to death by pouring molten gold down his throat. See Appian, *Bell. Mithridat.* 26.

Aquillia Via. A Roman road beginning at Capua, and running south through Lucania and Bruttii to Rhegium. See VIAE.

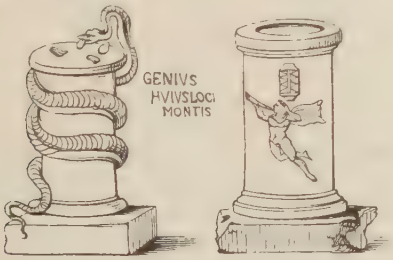
Aquilonia. A town of Samnium, destroyed by the Romans in the Samnite Wars (q. v.).



Aquīnum. A town of the Volsci in Latium, the birthplace of Juvenal. It was celebrated for its purple dye.

Aquitāni. A Gallic people of Iberian or Spanish origin, inhabiting the territory of Aquitania

Aquitania. (1) The country of the Aquitani, extending from the Garumnus (Garonne) to the Pyrenees. (2) A Roman province formed in the reign of Augustus, extending from the Liger (Loire) to the Pyrenees, and bounded on the north by the Mons Cevennus. See GALLIA.



Ara (*βωμός, ἐσχάρα*). An altar. With reference to these terms, *βωμός* properly signifies any elevation; *ἐσχάρα* (Lat. *focus*) means an altar for burnt-offerings; *ara* and *altare* are often used without any distinction, but properly *ara* was a structure of less height than *altare* (*altus*), the latter being erected in honour of the superior gods, and the former to the inferior gods, demigods, and heroes. (Cf. Verg. *Ecl.* v. 65.) Sacrifices to the infernal gods were not offered on altars, but in cavities dug in the ground and known as *scrobes, scrobiculi, βόθροι, λάκκοι* (Festus, s. v. *altaria*).

In early times, and always in sudden emergencies, altars were made of earth, turf, or stones collected on the spot. Otherwise they were built of masonry or brickwork, as shown in the following illustrations.

Altar (Column of Trajan). Etruscan Altar.

Subsequently a base was added (*βάσις*), and a corresponding projection at the top (*ἐσχάρις*) to hold the fire. A movable pan or brazier (*ἐπίπυρον*) sometimes served this purpose. Altars were either square or round.

Altar (Herculaneum). Altar (Antium).

Vitruvius directs that altars, though differing in elevation according to the rank of the divinities to whom they were erected, should always be lower than the statues (*simulacra*) before which they were placed. Of the application of this rule we have an example in a medallion on the Arch of Constantine at Rome, shown in the annexed illustration.

Altar with Statue of Apollo (Arch of Constantine).

All altars were places of refuge. The suppliants were considered as placing themselves under the protection of the deities to whom the altars were consecrated; and violence to the unfortunate, even to slaves and criminals, in such circumstances, was regarded as violence towards the deities themselves. It was also the practice among the Greeks to take solemn oaths at altars, either taking hold of the altar or of the statue of the god. Cicero (*pro Balb.* 5, § 12) expressly mentions this as a Greek practice. See K. F. Hermann, *Gottesdienst. Alterth.*, § 17 and § 22.

Arabarches. The governor of Upper Egypt, or the Thebais, under the Roman Empire, this district being often called Arabia (*C. I. G.* 4751). See ALABARCHES.

Arabia (*Ἀραβία*). A country at the southwestern extremity of Asia, forming a large peninsula, of a sort of hatchet shape, bounded on the west by the Arabicus Sinus (Red Sea), on the south and southeast by the Erythraeum Mare (Gulf of Bab-el-Mandeb and Indian Ocean), and on the northeast by the Persicus Sinus (Persian Gulf). On the north or land side its boundaries were somewhat indefinite, but it seems to have included the whole of the desert country between Egypt and Syria, on the one side, and the banks of the Euphrates on the other. It was divided into three parts. (1) ARABIA PETRAEA, including the triangular piece of land between the two heads of the Red Sea (the peninsula of Mt. Sinai) and the country immediately to the north and northeast, and called from its capital Petra; while the literal signification of the name, "Rocky Arabia," agrees also with the nature of the country. (2) ARABIA DESERTA, including the great Syrian Desert and a portion of the interior of the Arabian peninsula. (3) ARABIA FELIX, consisting of the whole country not included in the two other divisions. The ignorance of the ancients respecting the interior of the peninsula led them to class it with Arabia Felix, although it properly belongs to Arabia Deserta,

for it consists of a sandy desert. There is on the west coast a belt of fertile land, which caused the ancients to apply the epithet of Felix to the whole peninsula. The inhabitants of Arabia were of the Semitic race, and hence closely related to the Israelites. The northwest district (Arabia Petraea) was inhabited by the various tribes that constantly appear in Jewish history—the Amalekites, Midianites, Edomites, Moabites, Ammonites, etc. The Greeks and Romans called the inhabitants by the name of Nabathaei, whose capital was Petra. The people of Arabia Deserta were called Arabes Scenitae, from their dwelling in tents, and Arabes Nomadae, from their mode of life. From the earliest known period a considerable traffic was carried on by the people in the north (especially the Nabathaei) by means of caravans, and by those on the south and east coast by sea, in the productions of their own country (chiefly gums, spices, and precious stones), and in those of India and Arabia. The only part of Arabia ever conquered was Arabia Petraea, which became under Trajan a Roman province. Christianity was early introduced into Arabia, where it spread to a great extent, and continued to exist side by side with the old religion, Sabaeism, or the worship of heavenly bodies, and with some admixture of Judaism, until the total revolution produced by the rise of Mohammedanism in A.D. 622.

Arabĭcus Sinus (Ἀραβικὸς κόλπος). The Red Sea; a long, narrow gulf between Africa and Arabia, connected on the south with the Indian Ocean by the Strait of Bab-el-Mandeb, and on the north divided into two heads by the peninsula of Arabia Petraea (Peninsula of Sinai), the eastern of which was called Sinus Aelanites or Aelaniticus (Gulf of Akaba), and the western Sinus Heroöpolites or Heroöpoliticus (Gulf of Suez). Respecting its other name, see ERYTHRAEUM MARE.

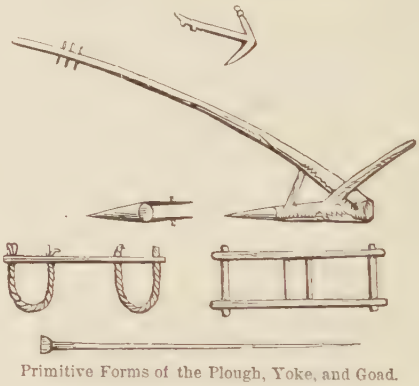
Arachné (Ἀράχνη). A Lydian maiden, daughter of Idmon of Colophon, a famous dyer in purple. Arachné excelled in the art of weaving, and, proud of her talent, ventured to challenge Athené to compete with her. The maiden produced a piece of cloth in which the amours of the gods were woven, and as the goddess could find no fault with it she tore the work to pieces. Arachné, in despair, hanged herself. Athené loosened the rope and saved her life, but the rope was changed into a cobweb, and Arachné herself into a spider (ἀράχνη). This fable seems to suggest that man learned the art of weaving from the spider, and that it was invented in Lydia.

Arachosia (Ἀραχωσία). An eastern province of the Persian Empire, bounded on the east by the Indus, and noted for its fertility.

Arachtus or **Aretho**. A river of Epirus, rising in Mt. Lacmon, and flowing into the Sinus Ambracius.

Aracynthus (Ἀράκυνθος). A mountain on the southwestern coast of Aetolia, near Pleuron, sometimes placed in Acarnania, and (erroneously) between Boeotia and Attica.

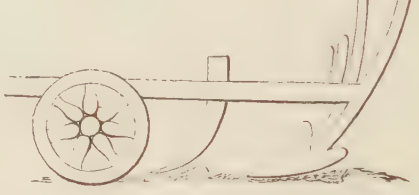
Arădus (Ἄραδος). An island off the coast of Phœnicia, with a flourishing city, reputed to have been founded by exiles from Sidon. Its harbour, on the mainland, was called Antaradus (Herod. vii. 98).



Araeostȳlos (ἀραιόστυλος). See TEMPLUM.

Arar or **Arăris**. The modern Saône; a river of Gaul, rising in the Vosges and emptying into the Rhodanus (Rhone) at Lugdunum (Lyons).

Aratēa. A name given to the Latin translations of the *Phaenomena* and *Prognostica* of Aratus (q. v.), made by Cicero, Germanicus, and Avienus. The original has been translated into English, with notes, by Poste (1880). Cicero has quoted nearly all of his own version, and there are besides 480 lines extant in a single fragment. We have the version of Germanicus entire, with scholia (ed. princeps, Bologna, 1474, best recent edition by Breysig, Berlin, 1867); and also that of Avienus in 1877 lines (ed. princeps, Venice, 1488). See Schaubach, *De Arati Interpretibus Romanis* (Meiningen, 1817); and the article ARATUS.



Aratēa (τὰ Ἀράτεια). Two sacrifices offered every year at Sicyon in honour of Aratus, a general of the Achaeans, who was honoured as a hero. See Plut. *Arat.* ch. 53.

Arātrum (ἄροτρον). A plough. The annexed illustrations will give a good notion of the various forms of ploughs employed in Greece and in Italy.

Primitive Forms of the Plough, Yoke, and Goad.

The following representation of a Roman plough is taken from a piece of engraved jasper.

Ancient Plough (Roman)

See the articles AGRICULTURA; IUGUM.

Arātus (Ἄρατος) (1) A Greek poet, of Soli in Cilicia, about B.C. 270, contemporary of Callimachus and Theocritus. At the request of the Macedonian king, Antigonus Gonatas, at whose court he lived as physician, he wrote, without much knowledge of the subject but guided by the works of Eudoxus and Theophrastus, two astronomical poems, *Phaenomena* (Φαινόμενα) and *Prognostica* (Διοσημεῖα) (aspects of the sky and signs of weather). Without genuine poetic inspiration, Aratus manages his intractable material with considerable tact and dignified simplicity. The language, while not always free from stiffness, is

choice, and the versification correct. The poems enjoyed a high repute with the general public, as well as with poets and specialists, and the great astronomer Hipparchus wrote a commentary on them in four books. The Romans also took pleasure in reading and translating them—e. g. Cicero, Germanicus, and Avienus. Eng. trans. by Poste (London, 1880). (See ARATEA.) Aratus is mentioned by his contemporary Theocritus in the Sixth and Seventh Idyls, and by St. Paul in his speech (Acts, xvii. 28). Recent edition by Maas. (2) A Greek patriot, born in Sicyon B.C. 273, who expelled from his native state the tyrant Nicocles, and persuaded his countrymen to join the Achaean League, and in 244 secured the adhesion of Corinth. He afterwards had equal success with other States in southern Greece, so that the League became powerful, exciting the jealousy of the Aetolians, who made war upon it, but were defeated by Aratus aided by Antigonus, and for a time by Philip, nephew of Antigonus. This strong alliance overthrew Cleomenes, king of Sparta. Later, however, Aratus incurred the ill-will of Philip, who destroyed him by poison, B.C. 213. See Plut. *Arat.*

Araxes (Ἀράξης). The name of several rivers. (1) In Armenia, rising in Mt. Aba or Abus, joining the Cyrus, and falling with it into the Caspian Sea. The Araxes was proverbial for the force of its current. (2) In Mesopotamia. (3) In Persia, the river on which Persepolis stood, flowing into a salt lake not far below that city. (4) It is doubtful whether the Araxes of Herodotus is the same as the Oxus, Iaxartes, or Volga. (5) The Peneus in Thessaly.

Arbāces (Ἀρβάκης). The founder of the Median Empire, according to Ctesias. He is said to have taken Nineveh in conjunction with Belesis, the Babylonian, and to have destroyed the old Assyrian Empire under the reign of Sardanapalus, B.C. 876. See SARDANAPALUS.

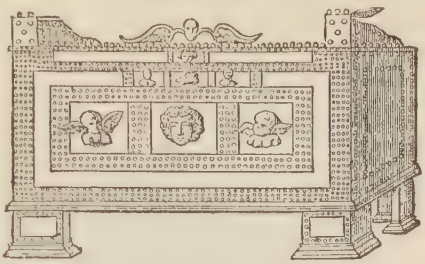
Arbēla (*τὰ Ἄρβηλα*). A city of Adiabené in Assyria, the headquarters of Darius Codomanus before the last battle in which he was overthrown by Alexander (B.C. 331), which is hence frequently called the battle of Arbela, though it was really fought near Gaugamela, about fifty miles west of Arbela.

Arbĭter. See IUDEX.

Arbĭter, PETRONIUS. See PETRONIUS.

Arbor Infēlix. (1) A tree that was either sterile, or produced black berries and fruit (Plin. *H. N.* xvi. § 108). (2) The cross. See CRUX.

Arbuscŭla. A well-known actress in pantomime of the time of Cicero. Horace alludes to her in I. *Sat.* x. 77



Arbŭtum (*unedo, μιμαίκυλον*). The fruit of the wild strawberry, or arbutus

Arbŭtus (*κόμαρος*). The wild strawberry-tree.

Arbyla (*ἀρβύλη*). See PERO.

Arca. A city in the northern part of Phœnicia; the birthplace of Alexander Severus.

Arca (*κιβωτός*). A chest or coffer, is used in several significations, of which the principal are: (1) A chest in which the Romans were accustomed to place their money; and the phrase *ex arca solvere* had the meaning of paying in ready money. These chests were either made of or bound with iron or other metals. The term *arcae* was usually applied to the chests in which the rich kept their money, and was opposed to the smaller *loculi*, *sacculus*, and *crumena*. (2) The arca was frequently used in later times as equivalent to the *fiscus*—that is, the imperial treasury. See AERARIUM; FISCUS. (3) The arca also signified the coffin in which persons were buried, or the bier on which the corpse was placed previously to burial. (4) It was also a strong cell made of oak, in which criminals and slaves were confined.

Roman Arca, or Treasure-chest. (From Pompeii.)

Arcadia (Ἀρκαδία). A country in the middle of the Peloponnesus, surrounded on all sides by mountains, the Switzerland of Greece. The Acheloüs, the greatest river of the Peloponnesus, rises in Arcadia. The northern and eastern parts of the country were barren and unproductive; the western and southern were more fertile, with numerous valleys where corn was grown. The Arcadians regarded themselves as the most ancient people in Greece: the Greek writers call them indigenous and Pelasgians. They were chiefly employed in hunting and in the tending of cattle, whence their worship of Pan, who was especially the god of Arcadia, and of Artemis. They were passionately fond of music, and cultivated it with success. The Arcadians experienced fewer changes than any other people in Greece, and retained possession of their country upon the conquest of the rest of the Peloponnesus by the Dorians. After the Second Messenian War the different towns became independent republics, of which the most important were Mantinea, Tegea, Orchomenus, Psophis, and Pheneus. Like the Swiss, the Arcadians frequently served as mercenaries. The Lacedaemonians made many attempts to obtain possession of parts of Arcadia, but these attempts were finally frustrated by the battle of Leuctra (B.C. 371); and in order to resist all future aggressions on the part of Sparta, the Arcadians, upon the advice of Epaminondas, built the city of Megalopolis. They subsequently joined the Achaean League, and finally became subject to the Romans.

Arcadĭcum Foedus (*κοινόν, τὸ Ἀρκαδικόν*). The Arcadian League, established some time after the battle of Leuctra (B.C. 371), when the victory of Epaminondas had destroyed the supremacy of Sparta in the Peloponnesus and restored the independence of the Arcadian towns. (See Grote, x. pp. 306, 317 foll.) The Arcadian League succeeded in giving unity to the Arcadians for only a short time, however, and its influence soon declined. See MEGALOPOLIS.

Arcadius. Emperor of the East, elder son of Theodosius I., and brother of Honorius (q. v.), who received the Western Empire. Arcadius was both weak and vicious, a tool of favourites, and an inefficient ruler. During his reign Alaric (q. v.)

ravaged the Empire. Arcadius ruled from A.D. 395 to 408.

Arcarius. A person in charge of the money-chest in great houses. See ARCA.

Arcas (Ἄρκας). A king of the Arcadians, and son of Zeus and Callisto (q. v.), from whom Arcadia was supposed to have derived its name (Apollod. iii. 8, 2).

Arcé or **Arcae** (Ἄρκαι). A city of Phœnicia, the birthplace of Alexander Severus.

Arcĕra. A covered carriage or litter, spread with cloths, which was used in ancient times in Rome to carry the aged and infirm, and is mentioned in the Twelve Tables. It is said to have obtained the name of *arcera* on account of its resemblance to an *arca*.

Arcera. (Ginzrot, *Wagen*, Taf. 19, fig. 2.)

Arcesilāus (Ἀρκεσίλαος). (1) Son of Battus, king of Cyrené, who was driven from his kingdom in a sedition, and died B.C. 575. The second of this name died B.C. 550 (Herod. iv. 159). (2) A philosopher, born at Pitané, in Aeolis, the founder of what was termed the Middle Academy. The period of his birth is usually given as B.C. 316. Arcesilaüs at first applied himself to rhetoric, but subsequently passed to the study of philosophy, in which he had for teachers, first Theophrastus, then Crantor the Academician, and probably also Polemo (Diog. Laërt. iv. 24, 29; Cic. *Acad.* i. 9). Besides the instructors above named, Arcesilaüs is also said to have diligently attended the lectures of the Eretrian Menedamus, the Megarian Diodorus, and the sceptic Pyrrho. His love for the quibbling of these individuals has been referred to as the source of his scepticism and his skill in refuting philosophical principles. At the same time it is on all hands admitted that of philosophers Plato was his favourite. He seems to have been sincerely of opinion that his view of things did not differ from the true spirit of the Platonic doctrine; nay, more, that it was perfectly in agreement with those older philosophical teachings, from which, according to the opinion of many, Plato had drawn his own doctrines—namely, those of Socrates, Parmenides, and Heraclitus.

Upon the death of Crantor, the school in the Academy was transferred by a certain Socratides to Arcesilaüs, who here introduced the old Socratic method of teaching in dialogues, although it was rather a corruption than an imitation of the genuine Socratic mode. Arcesilaüs does not appear to have committed his opinions to writing; at least the ancients were not acquainted with any work which could confidently be ascribed to him. Now, as his disciple Lacydes also abstained from writing, the ancients themselves appear to have derived their knowledge of his opinions only from the works of his opponents, of whom Chrysippus was the most eminent. Such a course must naturally be both defective and uncertain, and accordingly we have little that we can confidently advance with respect to his doctrines. According to these statements the results of his opinions would be a perfect scepticism, expressed in the formula that he knew nothing, not even that which Socrates had ever maintained that he knew—namely, his own ignorance (Cic. *Acad.* i. 12). This expression of his opinion implicitly ascribes to Arcesilaüs a full consciousness that he differed in a most important point from the doctrine of Socrates and Plato. But, as the ancients do not appear to have ascribed any such conviction to Arcesilaüs, it seems to be a more probable opinion which imputes to him a desire to restore the genuine Platonic dogma, and to purify it from all those precise and positive determinations which his successors had appended to it. Indeed, one statement expressly declares that the subject of his lecture to his most accomplished scholars was the doctrine of Plato (Cic. *l. c.*); and he would therefore appear to have adopted this formula with a view to meet more easily the objections of the dogmatists. Now if we thus attach Arcesilaüs to Plato, we must suppose him to have been in the same case with many others, and unable to discover in the writings of Plato any fixed and determinate principles of science. The ambiguous manner in which almost every view is therein advanced, and the results of one investigation admitted only conditionally to other inquiries, may perhaps have led him to regard the speculations of Plato in the light of mere shrewd and intelligent conjectures. Accordingly, we are told that Arcesilaüs denied the certainty not only of intellectual, but also of sensuous knowledge (Cic. *De Orat.* iii. 18).

Archelāus (Ἀρχέλαος). (1) A king of Macedonia (B.C. 413–399), who improved the condition of the country and patronized art and literature. (2) See MITHRIDATES. (3) See AEGYPTUS. (4) See PHILOSOPHIA.

Archestrătus (Ἀρχέστρατος). A poet of Gela, in Sicily, who flourished about B.C. 318, and composed the humorous didatic poem Ἡδυπάθεια (Good Cheer), supposed to describe a gastronomic tour round the then known world, with playful echoes of Homer and the dogmatic philosophers. The numerous fragments display much talent and wit. It was imitated in Latin by Ennius (q. v.).

Archias. See LICINIUS ARCHIAS.

Archiāter (ἀρχίατρος). See MEDICUS.

Archidāmus (Ἀρχίδαμος). See SPARTA.

Archilŏchus (Ἀρχίλοχος). A Greek lyric poet, especially eminent as a writer of lampoons. Born at Paros, he was the son of Telesicles by a slave-woman, but was driven by poverty to go with a colony to Thasos in B.C. 640 or 650. From Thasos he was soon driven by want, and by the enmities which his unrestrained passion for invective had drawn upon him. He seems to have roamed restlessly from place to place, until, on his return to Paros, he was slain in a fight by the Naxian, Calondas. Long afterwards, when this man visited the Delphian temple, the god is said to have driven him from his threshold as the slayer of a servant of the Muses, and refused to admit him until he had propitiated the soul of the poet at his tomb—a story which expresses the high value set on his art by the ancients, who placed him on a level with Homer, Pindar, and Sophocles; for Archilochus had an extraordinary poetical genius, which enabled him to invent a large number of new metres, and to manipulate them with the ease of a

master. He brought iambic poetry, in particular, to artistic perfection. The many misfortunes of his stormy life had bred in his irritable nature a deeply settled indignation, which in poems perfect in form and alive with force and fury, vented itself in bitter mockery even of his friends, and in merciless, unpardonable abuse of his foes. Such was the effect of his lampoons that Lycambes, who had first promised and then refused him his daughter Neobulé, hanged himself and his family in the despair engendered by the poet's furious attacks. Of his poems, which were written in the Old-Ionic dialect, and taken by Horace for his model in his epodes, only a number of short fragments are preserved. The best text of these will be found in the collection of Bergk.

Archimēdes (Ἀρχιμήδης). A remarkable mathematician and inventor, born at Syracuse in B.C. 287. After spending a long time in travel and study he returned to his native city, and there introduced a great number of inventions, among them the endless screw, first used by him in launching large ships; and the so-called Archimedean screw (*cochlea*), used in draining the fields after the annual inundation of the Nile. During the siege of Syracuse by the Romans (215–212), he invented the catapults which long kept the enemy at bay, being adapted for use at both short and long range. He is said to have set fire to the Roman ships by means of powerful burning-glasses—a story which Buffon in 1777 showed by experiment to be not at all absurd, and which Ball regards as not improbable. He first established the truth that a body plunged in fluid loses as much of its weight as is equal to the weight of an equal volume of the fluid. When Syracuse finally fell, he was slain by the Roman soldiers, who were tempted by the bright metal of his instruments, which they took for gold. Cicero, when quaestor in Sicily (B.C. 75), discovered the tomb of Archimedes (*Tusc. Disp.* v. 23). There still exist nine treatises by him which have been edited with a Latin version, by Heiberg, 3 vols. (Leipzig, 1880–81). See Ball, *Short Hist. of Mathematics*, pp. 59–70 (London, 1888).

Archimimus (*ἀρχίμιμος*). See MIMUS.

Architectūra (*ἀρχιτεκτονία, ἀρχιτεχτονική*). (I.) GREEK.—Of the earliest efforts of the Greeks in architecture we have evidence in the so-called Cyclopean Walls surrounding the castles of kings in the Heroic Age of Tiryns, Argos, Mycenae, and elsewhere. They are of enormous thickness, some being constructed of rude, colossal blocks, whose gaps are filled up with smaller stones; while others are built of stones more or less carefully hewn, their interstices exactly fitting into each other. Gradually they begin to show an approximation to buildings with rectangular blocks. The gates let into these walls are closed at the top either by the courses of stone jutting over from each side till they touch, or by a long straight block laid over the two leaning side-posts. Of the latter kind is the famous Lion Gate at Mycenae (q. v.), so called from its two lions standing with their fore-feet on the broad pedestal of a pillar, and remarkable as the oldest specimen of Greek sculpture.

Among the most striking relics of this primitive age are the so-called *θησαυροί* (treasuries, usually subterranean) of ancient dynasties, the most considerable being the treasure-house of Atreus at Mycenae. (See MYCENAE.) The usual form of

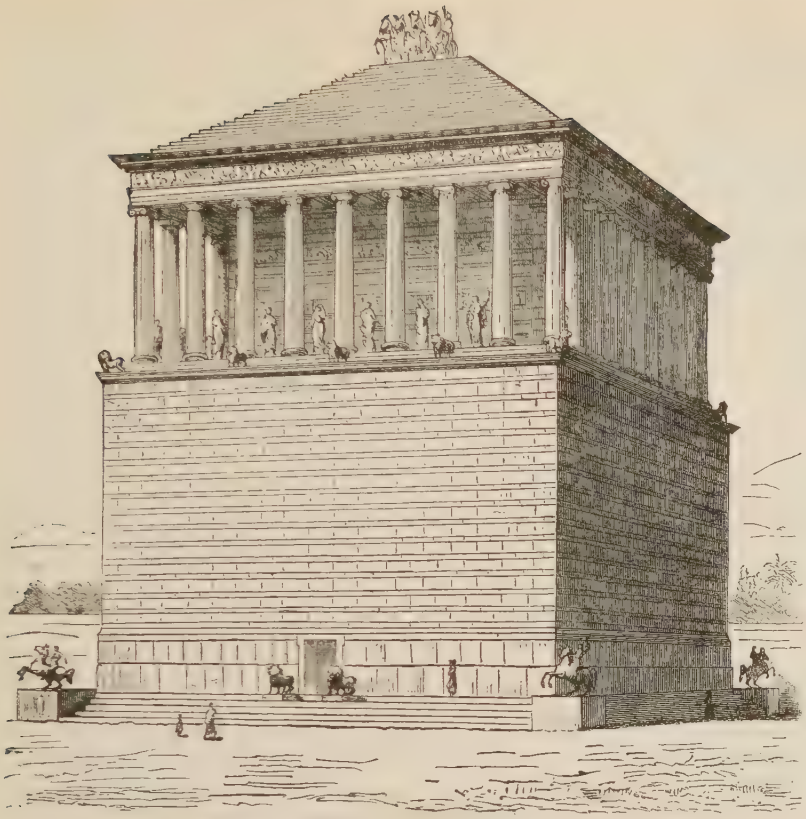
Gate of Thoricos.

these buildings is that of a circular chamber vaulted over by the horizontal courses approaching from all sides till they meet. Thus the vault is not a true arch. The interior seems originally to have been covered with metal plates, thus agreeing with Homer's descriptions of metal as a favourite ornament of princely houses. (See DOMUS.) An open-air building preserved from that age is the supposed Temple of Heré on Mt. Ocha (now Hagios Elias) in Euboea, a rectangle built of regular square blocks, with walls more than a yard thick, two small windows, and a door with leaning posts and a huge lintel in the southern side-wall. The sloping roof is of hewn flag-stones resting on the thickness of the wall and overlapping each other, but the centre is left open as in the hypaethral temples of a later time.

From the simple shape of a rectangular house shut in by blank walls we gradually advance to finer and richer types, formed especially by the introduction of columns detached from the wall and serving to support the roof and ceiling. Even in Homer we find columns in the palaces to support the halls that surround the court-yard and the ceiling of the banqueting-room. The construction of columns (see COLUMNA) received its artistic development first from the Dorians, after their migration into the Peloponnesus about B.C. 1000, next from the Ionians—and from each in a form suitable to their several characters. If the simple, serious character of the Dorians speaks in the Doric order, no less does the lighter, nimbler, and more showy genius of the Ionian race appear in the order named after them. By about B.C. 650, the Ionic style was flourishing side by side with the Doric.

As it was in the construction of temples that architecture had developed her favourite forms, all other public buildings borrowed their artistic character from the temple. (See TEMPLUM.) The structure and furniture of private houses were, during the best days of Greece, kept down to the simplest forms. About B.C. 600, in the Greek islands and on the coast of Asia Minor, we come across the first architects known to us by name. It was then that Rhoecus and Theodorus of Samos, celebrated likewise as inventors of casting in bronze, built the great Temple of Heré in that island, while Chersiphron of Cnosus in Crete, with his son Metagenes, began the Temple of Artemis at Ephesus, one of the seven wonders of the world, which was not finished till one hundred and twenty years after. In Greece Proper a vast temple to Zeus was begun at Athens in the sixth century B.C. (see OLYMPIEUM), and two

more at Delphi and Olympia—one of the Corinthian Spintharus, the other by the Elean Libon. Here, and in the western colonies, the Doric style still predominated everywhere. Among the chief remains of this period, in addition to many ruined temples in Sicily, especially at Selinus and Agrigentum, should be mentioned the Temple of Poseidon at Paestum (Posidonia) in South Italy, one of the best preserved and most beautiful relics of antiquity. The patriotic fervour of the Persian Wars created a general expansion of Greek life, in which architecture and the sister art of sculpture were not slow to take a part. In these departments, as in the whole onward movement, a central position was taken by Athens, whose leading statesmen, Cimon and Pericles, lavished the great resources of the state at once in strengthening and beautifying the city. During this period arose a group of masterpieces that still astonish us in their ruins, some in the forms of a softened Doric, others in the Ionic style, which had now found its way into Attica, and was here developed into nobler shapes. The Doric order is represented by the Temple of Theseus; the Propylaea (q. v.), built by Mnesicles; the Parthenon (q. v.), a joint production of Ictinus and Callicrates—while the Erechtheum (q. v.) is the most brilliant creation of the Ionic order in Attica. See ATHENAE.



The progress of the drama to its perfection in this period led to a corresponding improvement in the building of theatres. A stone theatre was begun at Athens even before the Persian Wars, and the Odeum of Pericles served similar purposes. How soon the highest results were achieved in this department, when once the fundamental forms had thus been laid down in outline at Athens, is shown by the theatre at Epidaurus, a work of Polyclitus, unsurpassed, as the ancients testify, by any later theatres in harmony and beauty. Another was built at Syracuse before B.C. 420. Nor is it only in the erection of single buildings that the great advance then made by architecture shows itself. In laying out new towns, or parts of towns, men began to proceed on artistic principles, an innovation due to Hippodamus of Miletus. See THEATRUM.

In the fourth century B.C., owing to the change wrought in the Greek mind by the Peloponnesian War, in place of the pure and even tone of the preceding period, a desire for effect became more and more general, both in architecture and sculpture.

Porch of the Erechtheum at Athens. (Drawing by Boudier.)

The sober Doric style fell into abeyance and gave way to the Ionic, by the side of which a new order, the Corinthian, said to have been invented by the sculptor Callimachus, with its more gorgeous decorations, became increasingly fashionable. In the first half of the fourth century arose what the ancients considered the largest and grandest temple in the Peloponnesus, that of Athené at Tegea, a work of the sculptor and architect Scopas. During the middle of the century another of the "seven wonders," the splendid tomb of Mausolus at Halicarnassus, was constructed. (See MAUSOLEUM.) Many magnificent temples arose in that time. In Asia Minor, the temple at Ephesus, burned down by Herostratus, was rebuilt by Alexander's bold architect Dinocrates. In the islands the ruins of the Temple of Athené at Priené, of Apollo

Mausoleum at Halicarnassus. (Restoration by Reber.)

at Miletus, of Dionysus at Teos, and others, even to this day offer a brilliant testimony to their former magnificence. Among Athenian buildings of that age the Monument of Lysicrates (q. v.) is conspicuous for its graceful elegance and elaborate development of the Corinthian style. In the succeeding age, Greek architecture shows its finest achievements in the building of theatres, especially those of Asiatic towns; in the gorgeous palaces of newly built royal capitals; and in general in the luxurious completeness of private buildings. As an important specimen of the last age of Attic architecture may also be mentioned the Tower of the Winds at Athens. See ANDRONICUS.

(II.) ETRUSCAN AND ROMAN. — In architecture, as well as sculpture, the Romans were long under the influence of the Etruscans, who, though not possessing the gift of rising to the ideal, united wonderful activity and inventiveness with a passion for covering their buildings with rich ornamental carving. None of their temples have survived, for they built all the upper parts of wood; but many proofs of their activity in building remain, surviving from various ages, in the shape of tombs and walls. The latter clearly show how they progressed from piling up polygonal blocks in Cyclopean style to regular courses of squared stone. Here and there a building still shows that the Etruscans originally made vaultings by letting horizontal courses jut over, as in the ancient Greek *θησαυροί* above mentioned: on the other hand, some very old gateways, as at Volterra and Perugia, exhibit the true arch of wedge-shaped stones, the introduction of which into Italy is probably due to Etruscan ingenuity, and from the introduction of which a new and magnificent development of architecture takes its rise. The most imposing of ancient Italian arch building is to be seen in the sewers of Rome constructed in the sixth century B.C. See CLOACA.

When all other traces of Etruscan influence were being swept away at Rome by the intrusion of Greek forms of art, especially after the conquest of Greece in the middle of the second century B.C., the Roman architects kept alive in full vigour the Etruscan method of building the arch, which they developed and completed by the inventions of the cross-arch (or groined vault) and the dome. With the arch, which admits of a bolder and more varied management of spaces, the Romans combined, as a decorative element, the columns of the Greek orders. Among these their growing love of pomp gave the preference more and more to the Corinthian, adding to it afterwards a still more gorgeous embellishment in what is called the Roman or Composite capital. Another service rendered by the Romans was the introduction of building in brick. A more vigorous advance in Roman architecture dates from the opening of the third century B.C., when they began making great military roads and aqueducts. In the first half of the second century they built, on Greek models, the first basilica, which, besides its practical utility, served to embellish the Forum. Soon after the middle of the century appeared the first of their more ambitious temples in the Greek style. There is simple grandeur in the ruins of the Tabularium (q. v.), or Record Office, built B.C. 78 on the slope of the Capitol next the Forum. These are among the few remains of Roman republican architecture; but in the last decades of the Republic simplicity gradually disappeared, and men were eager to display a princely pomp in public and private buildings; witness the first stone theatre erected by Pompey as early as B.C. 55. Then all that went before was eclipsed by the vast works undertaken by Caesar — the Theatre, Amphitheatre, Circus, Basilica Iulia, Forum Caesaris with its temple to Venus Genetrix. These were finished by Augustus, under whom Roman architecture seems to have reached its culminating-point. Augustus, aided by his son-in-law Agrippa, a man who understood building, not only

Arch of Titus at Rome.

completed his uncle's plans, but added many magnificent structures—the Forum Augusti with its temple to Mars Ultor, the Theatre of Marcellus with its Portico of Octavia, the Mausoleum, and others. Augustus could fairly boast that "having found Rome a city of brick, he left it a city of marble." The grandest monument of that age, and one of the loftiest creations of Roman art in general, is the Pantheon (q. v.), built by Agrippa, adjacent to, but not connected with, his Thermae, the first of the many works of that kind in Rome. This structure is remarkable as being the only ancient building in Rome of which the walls and arches are now in a complete state of preservation. It was erected by Agrippa in B.C. 27, the original inscription being still retained upon the architrave of its porch. The Pantheon is a circular structure 146 feet and 6 inches in height and inner diameter, with a portico 103 feet long composed of sixteen Corinthian columns, 46 feet in height. Inside the portico at the entrance are two niches which once contained the colossal statues of Agrippa the builder, and of Augustus Caesar. The walls of the building, which are 19 feet thick, support a dome or cupola of vast dimensions, constructed of concrete. At the vertex of the cupola is an opening nearly 30 feet in diameter, lighting the interior.

A still more splendid aspect was imparted to the city by the rebuilding of the old town burned down in Nero's fire, and by the "Golden House" of Nero, a gorgeous pile, the like of which was never seen before, but which was destroyed on the violent death of its creator. The immense and complicated structure, or rather mass of structures, known as the Palace of the Caesars, formed one of the most striking achievements of Roman architectural genius. (See PALATIUM.) It was, as Professor Lanciani puts it, a labyrinth of "endless suites of apartments, halls, terraces, porticoes, crypts, and cellars," having its main approach on the Via Sacra. At its arched entrance was a magnificent quadriga cut from a single block of white marble by Lysias. Beyond was a peristyle of fifty-two fluted columns adorned with a host of exquisite statues representing the Danaïdae, and adjacent to a great library. The magnificence of the palace as a whole may be conjectured from a simple summary of the treasures which we know to have been lavished upon the mere vestibule—a hundred and twenty columns of marble and bronze, statuary, bas-reliefs by Bupalus and Anthermus, a quadriga in gilded bronze, exquisite ivory carvings, hundreds of medallions in gold, silver, and bronze, immense collections of gold and silver plate, gems and cameos, and a colossal bronze statue of Augustus, fifty feet in height. (See Lanciani, *Ancient Rome in the Light of Recent Discoveries*, ch. v.).

Of the luxurious grandeur of private buildings we have ocular proof in the dwelling-houses of Pompeii, a petty country town in comparison with Rome. The progress made under the Flavian emperors is evidenced by Vespasian's amphitheatre, known as the Colosseum, the mightiest Roman ruin in the world; by the ruined Thermae, or Baths, of Titus, and by his triumphal arch, the oldest specimen extant in Rome of this class of monument, itself a creation of the Roman mind. But all previous buildings were surpassed in size and splendour when Trajan's architect, Apollodorus of Damascus, raised the Forum Traianum with its huge Basilica Ulpia and the still surviving Column of Trajan, besides other magnificent structures, including libraries, a great temple, a two-storied gallery, and a triumphal arch. The Basilica had five halls, the central one being 27 yards long, and the whole structure 61 yards wide. It was paved with slabs of rare marble. Only a part of this Forum has yet been excavated, but enough has been brought to light to justify the vivid description of Ammianus Marcellinus (xvi. 10), whose account refers to the time of the emperor Constantine's visit to Rome in the year 356. No less extensive were the works of Hadrian, who, besides adorning Athens with many magnificent buildings, bequeathed to Rome a Temple of Venus and Roma, the most colossal of all Roman temples (see p. 763), and his own Mausoleum (q. v.), the core of which is preserved in the Castle of St.

Colosseum at Rome.

Angelo. While the works of the Antonines already show a gradual decline in architectural feeling, the Triumphal Arch of Severus ushers in the period of decay that set in with the third century. In this closing period of Roman rule the buildings grow more and more gigantic — witness the Baths of Caracalla, those of Diocletian, with his palace at Salona (three miles from Spalatro) in Dalmatia, and the Basilica of Constantine, breathing the last feeble gasp of ancient life. But outside of Rome and Italy, in every part of the enormous Empire to its utmost barbarian borders, bridges, numberless remains of roads and aqueducts and viaducts, ramparts and gateways, palaces, villas, marketplaces and judgment-halls, baths, theatres, amphitheatres, and temples, attest the versatility, majesty, and solidity of Roman architecture, most of whose creations only the rudest shocks have been able to destroy. See Reber, *Hist. of Ancient Art*, Eng. trans. (N. Y. 1883); Lübke, *Geschichte der Kunst*, vol. i. (new ed. 1891); Fergusson, *Hist. of Architecture*, vol. i. (new ed. 1891); and BALNEAE; DOMUS; PALATIUM; TEMPLUM.

Composite Capital.

Architheōrus (*ἀρχιθέωρος*). See DELIA.

Archōn (*ἄρχων*). "Ruler." The Athenian name for the supreme authority established on the abolition of royalty. On the death of the last king, Codrus, B.C. 1068, the headship of the state for life was bestowed on his son Medon and his descendants under the title of Archon. In B.C. 752 their term of office was reduced to ten years; in 714 their exclusive privilege was abolished, and the right to hold the office thrown open to all the nobility, while its duration was diminished to one year; finally in B.C. 683 the power was divided among nine Archons. By Solon's legislation his wealthiest class, the *πεντακοσιομέδιμνοι*, became eligible to the office; and by Aristides' arrangement after the Persian Wars, it was thrown open to the whole body of citizens, Clisthenes having previously, in the interests of the democracy, substituted the drawing of lots for election by vote. The political power of the office, having steadily decreased with time, sank to nothing when democracy was established; its holders had no longer even the right to deliberate and originate motions, their action being limited to certain priestly and judicial functions, relics of their once regal power.

The titles and duties of the several archons were as follows: (1) Their president, named emphatically Archon or Archon Eponymus (*ἄρχων ἐπώνυμος*) because the civil year was named after him. He had charge of the Great Dionysia, the Thargelia, the embassies to festivals (*θεωρίαι*), and the nomination of choregi; also the position of guardian-in-chief, and the power to appoint guardians; the presidency in all suits about family rights (such as questions of divorce or inheritance), and in disputes among the choregi. (2) The Archon Basileus (*ἄρχων βασιλεύς*), called so because on him devolved certain sacred rites inseparably connected with the name of king. He had the care of the Eleusinian Mysteries, and was obliged therefore to be an initiated person; of the Lenaea and Anthesteria; of gymnastic contests, over which he appointed a superintendent; and of a number of antiquated sacrifices, some of which fell to the share of his wife, the *βασίλισσα* (queen); and lastly, the position of president in all suits touching religious law, including those trials for murder that came within the jurisdiction of the Ephetae (q. v.). (3) The Archon Polemarchos (*ἄρχων πολέμαρχος*, leader in war) was originally intrusted with the war department, and as late as the battle of Marathon had the right of voting with the ten generals, and the old royal privilege of commanding the right wing. Afterwards he only had charge of the state sacrifices offered to the gods of war and to the shade of Harmodius; the public funerals of those who fell in war, and the annual feasts in honour of them; and finally, jurisdiction in all questions concerning the personal and family rights of resident aliens (*μέτοικοι*) and strangers. All this rested on the old assumption that foreigner meant enemy. Each of these three superior archons had two assessors chosen by himself, but responsible. (4) The six Thesmothetae (*θεσμοθέται*, law-givers) administered justice in all cases not pertaining to the senior archons or some other authority, revised the laws once a year, and superintended the apportioning of public offices by lot. The several archons exercised their jurisdiction at different places in the city; that of the Polemarch alone lay outside the walls. Duties common to all nine were: the yearly appointment by lot of the Heliastae (q. v.), the choice of umpires in the Panathenaea, the holding of elections of the generals and other military officers, jurisdiction in the case of officials suspended or deposed by the people, and latterly even in suits which had previously been subject to the *nautodicae*. (See NAUTODICAE.) If they had discharged their office without blame they entered the Areopagus as members for life. (See AREOPAGUS.) The office of archon lasted even under the Roman rule. See Lugebil, *Zur Geschichte der Staatsverfassung von Athen* (Leipzig, 1871); Meier, *Index Archontum Eponymorum*, etc.

Archōnes (*ἀρχώνης*). The chief farmer of the taxes at Athens. See TELONES.

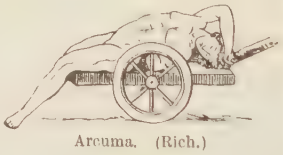
Archȳtas (Ἀρχύτας). (1) A musician of Mitylené, mentioned by Diogenes Laërtius as having written a treatise on agriculture. (2) A famous Tarentine astronomer and geometrician, the son of Hestiaeus. He was seven times elected governor of his native city. He is said to have been instrumental in rescuing Plato (q. v.) from the tyrant Dionysius. Many stories are told of his ingenuity. For him is claimed the invention of the screw, of the pulley, and of a wooden pigeon that could fly. He is also reported to have attempted to calculate the number of the grains of sand upon the sea-shore. Only a single fragment of his writings has come down to us in Porphyry. He perished in a shipwreck about B.C. 394. See his life in Diog. Laërt.; Plato, 338 C; and Horace, *Carm.* i. xxviii., with the commentators.

Arcifinius Ager. See AGRIMETATIO; AGRIMENSORES.

Arcitĕnens. An epithet of Apollo as bearing a bow, with which he destroyed the serpent Python.

Arctīnus. See CYCLIC POETS.

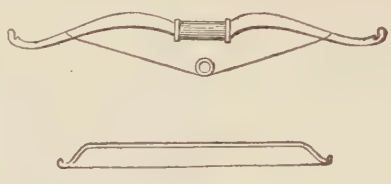
Arctos (*ἄρκτος*). "The Bear." The name of two constellations near the North Pole. (1) THE GREAT BEAR (*Ursa Major*), also called the WAGON (*plaustrum*). The ancient Italian name of this constellation was *Septem Triones*, that is, the Seven Ploughing Oxen, also *Septentrio*, and with the epithet *Maior* to distinguish it from the *Septentrio Minor*, or *Lesser Bear*. (2) THE LESSER or LITTLE BEAR (*Ursa Minor*), likewise called the WAGON and CYNOSURA (dog's tail) from the resemblance of the constellation to the upturned curl of a dog's tail. The constellation before the Great Bear was called *Boötes*, *Arctophylax*, or *Arcturus*. At a later time *Arctophylax* became the general name of the constellation, and the word *Arcturus* was confined to the chief star in it. All these constellations are connected in mythology with the Arcadian nymph Callisto, the daughter of Lycaon. Metamorphosed by Zeus upon the earth into a she-bear, Callisto was pursued by her son Arcas in the chase, and when he was on the point of killing her, Zeus placed them both among the stars—Callisto becoming the Great Bear, and Arcas the Little Bear or Boötes. In the poets the epithets of these stars have constant reference to the family and country of Callisto: thus we find them called *Lycaonis Arctos; Maenalia Arctos* and *Maenalis Ursa* (from Mt. Maenalus in Arcadia); *Erymanthis Ursa* (from Mt. Erymanthus in Arcadia); *Parrhasides Stellae* (from the Arcadian town Parrhasia). (See CALLISTO.) Though most traditions identified Boötes with Arcas, others pronounced him to be Icarus or his daughter Erigoné. Hence the Septentriones are called *Boves Icarii*.



Arctūrus. See ARCTOS.

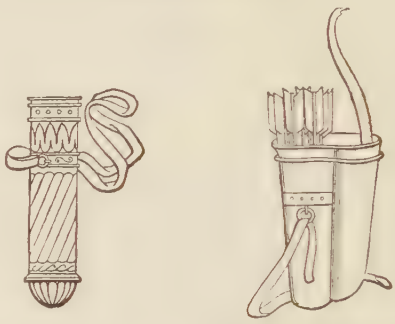
Arcuballista. A cross-bow. See BALLISTA.

Arcŭla (*κιβώτιον*). (1) A painter's colour-box (Varro, R. R. iii. 17, 4). (2) A stone coffin. See SEPULCRUM.



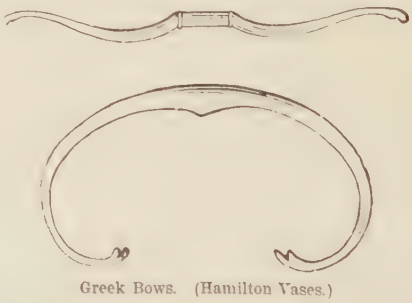
Arcŭlum. A kind of porter's knot or pad for carrying burdens on the head. See CESTICILLUS.

Arcŭma or Arcirma. A cariole or small carriage to hold one person only (Paul. Diac. p. 14).



Arcuma. (Rich.)

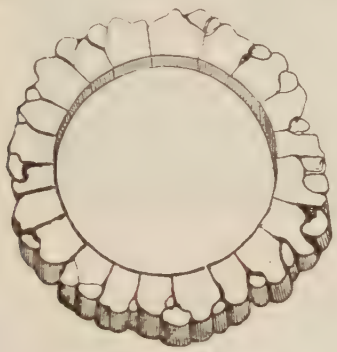
Arcus (*βιός, τόξον*). The bow used for shooting arrows. Two kinds of bow were known to antiquity. One consisted of the two horns of the antelope, or an arm of wood similarly shaped, joined by a bridge which served both as a hold for the hand and as a rest for the arrow. The string, made of plaited horse-hair or twisted ox-gut, was fastened to each end (fig. 1). The other, called the Scythian or Parthian bow, was made of a piece of flexible wood, the ends of which were tipped with metal, and bent slightly upwards to hold the string (fig. 2). The arrow (Gr. *ὀϊστός*, or *τόξευμα*; Lat. *sagitta*) was made of a stem of reed or light wood, one end furnished with a three-cornered point, sometimes simple and sometimes barbed, the other end with feathers. A notch in the shaft served to place it on the string. The arrows (and sometimes the bow) were kept in a quiver (*φαρέτρη, pharetra*) made of leather, wood, or metal, fitted with a suspender, and sometimes open, sometimes having a lid. The quiver was worn either on the back, according to the Greek manner, or in Oriental fashion, on the left hip. The Cretans had the reputation of being the best archers among the Greeks. They generally served among the light-armed auxiliaries as a special corps. Mounted bowmen were employed by the ancient Athenians (see HIPPEIS); but it was not until after the Punic Wars that archers formed a regular part of the Roman army. They were then furnished by the allies, or raised by recruiting, and were mostly taken from Crete and the Balearic Islands. See ARMA.



(From *Museum Hunter*. pl. 23 L.)

(*Museo Pio Clementino*, iv. tav. xliii.)

Bows and Quivers.



Greek Bows. (Hamilton Vases.)

Arcus (*fornix, καμάρα*). An arch suspended over the head of an aperture, or carried from one side of a wall to another, and serving as the roof or ceiling to the space below. An arch is formed of a series of wedge-like stones or of bricks, supporting each other, and all bound firmly together by the pressure of the centre one upon them, which latter is therefore distinguished by the name of keystone.

It would seem, at first sight, that the arch, as thus defined, and as used by the Romans, was not known to the Greeks in the early periods of their history, otherwise a language so copious as theirs, and of such ready application, would not have wanted a name properly Greek by which to distin-

guish it. The use of both arches and vaults appears, however, to have been known to them even before the Trojan War, and its use is exemplified in two of the earliest buildings now remaining—the chamber built at Orchomenus by Minyas, king of Boeotia (Pausan. ix. 38), and the treasury of Atreus at Mycenae (Pausan. ii. 16). Both of these works are constructed underground, and each of them consists of a circular chamber formed by regular courses of stones laid horizontally over each other, each course projecting towards the interior, and beyond the one below it, till they meet in an apex over the centre, and thus resemble the inside of a dome. Each of the horizontal courses of stones formed a perfect circle, or two semicircular arches joined together, as the subjoined plan will render evident. See Schliemann, *Mycenae*, p. 43; Leake, *Morea*, ii. 377; and the articles ARCHITECTURA; MYCENAE.

Circular Masonry at Mycenae.

The principle of the construction is that of an arch-shaped mass resisting a great superincumbent weight, and deriving its strength and coherence from the weight itself. Thus it seems that the Greeks did understand the constructive principle on which the arch is formed. They made use of a contrivance, even before the Trojan War, by which they were enabled to gain all the advantages of our archway in making corridors, or hollow galleries, and which in appearance resembled the pointed arch, such as is now termed Gothic. This was effected by cutting away the superincumbent stones in the manner already described, at an angle of forty-five degrees with the horizon. The mode of construction and appearance of such arches are represented in the annexed drawing of the walls of Tiryns from Sir William Gell's *Argolis*.

Pointed Arch in the Walls of Tiryns.

The principle of the true arch was known to the Egyptians, but it is remarkable that they did not make use of it in their most massive works (Wilkinson, ii. 299, ed. of 1878). The Assyrians used it in subterranean buildings (Layard, *Nineveh*, i. 167; ii. 260). There are also a few specimens of the true arch in ancient Greece. At Oeniadae, in Acarnania, is a postern of a perfect arch in the polygonal walls of the city (Leake, *Northern Greece*, iii. 560 seq.); and at Xerokampo, in the neighbourhood of Sparta, is a bridge on the true arch-principle (Mure, *Tour in Greece*, ii. 248), though the latter, in the opinion of many archæologists, is of Roman construction (Dennis, *Etruria*, ii. 250 seq.). But these are rare instances; and the Etruscans are the first people who employed the true arch extensively. Hence the use of the arch passed into the architecture of buildings. The Romans probably borrowed it from the Etruscans. Thus the Cloaca Maxima, long held to be the oldest instance of the arch at Rome, and attributed to the Tarquinii (see CLOACA), closely resembles the canal of the Marta (Dennis, *Etruria*, i. 430 seq.) See pp. 373 and 628.

Arcus Triumphālis. A triumphal arch. These arches were peculiar to the Romans, and were usually detached structures built across the principal streets of the city, and, according to the space of their respective localities, consisted of either a single archway, or of a central one for carriages, with two smaller ones on each side for foot-passengers, which sometimes had side communications with the central arch. Sometimes there were two arches of equal height, side by side. Each front was ornamented with trophies and bas-reliefs, which were also placed on the sides of the passages. Both façades had usually columns against the piers, supporting an entablature, surmounted by a lofty attica, on the front of which was the inscription, and on the top of it bronze chariots, war-horses, statues, and trophies. The triumphal arch recalls its original, the city gate, in the concentration of ornament on the façades, while the sides, which in the city gate are buried in the wall, are comparatively plain.

Stertinius is the first upon record who erected anything of the kind. He built an arch in the Forum Boarium, about B.C. 196, and another in the Circus Maximus, each of which was surmounted by gilt statues. Six years afterwards, Scipio Africanus built another on the Clivus Capitolinus, on which he placed seven gilt statues and two figures of horses; and in B.C. 121, Fabius Maximus built a fourth in the Via Sacra, which is called by Cicero the Fornix Fabianus. None of these remain, the Arch of Augustus at Rimini being one of the earliest among those still standing.

There are twenty-one arches recorded by different writers as having been erected in the city of Rome, five of which still remain: (1) ARCUS DRUSI, which was erected to the honour of Claudius Drusus on the Appian Way. (2) ARCUS TITI, at the foot of the Palatine, which was erected to the honour of Titus after his conquest of Iudaea, but does not appear to have been finished till after his death, since in the inscription upon it he is called *Divus*, and is also represented as being carried up to heaven upon an eagle. The bas-re-

Arch of Constantine at Rome.

liefs of this arch represent the spoils from the Temple of Jerusalem carried in triumphal procession. This arch has only a single opening, with two columns of the Roman or Composite order on each side of it. (3) ARCUS SEPTĪMI SEVĒRI, which was erected by the Senate (A.D. 207) at the end of the Via Sacra, in honour of that emperor and his two sons, Caracalla and Geta, on account of his conquest of the Parthians and Arabians. (4) ARCUS GALLIĒNI, erected to the honour of Gallienus by a private individual, M. Aurelius Victor. (5) ARCUS CONSTANTĪNI, which is larger and more profusely ornamented than the Arch of Titus. It has three arches in each front, with columns similarly disposed, and statues on the entablatures over them, which, with the other sculpt-

Arch of Septimius Severus.

ured ornaments, originally decorated the Arch of Trajan.

Arch of Augustus at Aosta.

See Burn, *Rome and the Campagna;* Middleton, *Ancien. Rome in 1885;* id. *Remains of Ancient Rome* 1892); and the article ARCHITECTURA.

Ardălus (Ἄρδαλος). A son of Hephaestus, and the reputed inventor of the pipe, whence the Muses, to whom he gave it, are called Ardalides (Pausan. ii. 21).

Ardanion (*ἀρδάνιον*). A vessel of water placed at the door of a house in which a dead person was lying, in order that those leaving might purify themselves by sprinkling with the water. See Aristoph. *Eccles.* 1033.

Ardea. The chief town of the Rutuli in Latium, situated about three miles from the sea, one of the most ancient places in Italy, and the capital of Turnus. It was conquered and colonized by the Romans B.C. 442 (Livy, iv. 9).

Arduenna Silva. The Ardennes, a vast forest in the northeast of Gaul, extending from the Rhine and the Treviri to the Nervii and Remi, and north as far as the Scheldt (Tac. *Ann.* viii. 42).

Area. Any open space (*purus locus*). (1) A site for a building. (2) The site of a house pulled down in consequence of its owner's treason and devoted to religious uses (Cic. *Ad Att.* iv. 1, 2). (3) An open space in front of a temple, house, sepulchre, or public building. (4) A market-place. (5) A threshing-floor (ἅλως).

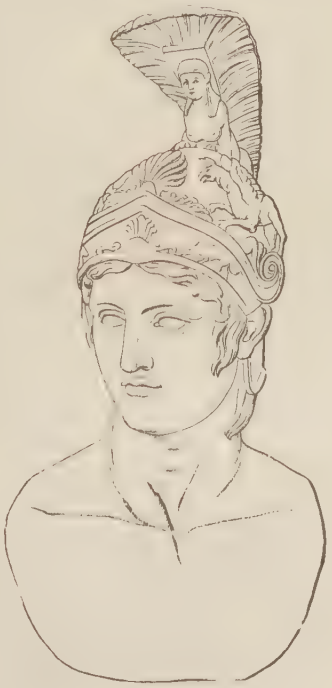
Area before a Sepulchre. (Villa Corsini, Rome.)

Aregŏnis (Ἀρηγονίς). The mother of Mopsus (q. v.) by Ampyx.

Areiopăgus. See AREOPAGUS.

Arelāté, Arĕlas, or Arelātum. Now Arles; a town in Gallia Narbonensis, at the head of the delta of the Rhone, on the left bank, and a Roman colony. The Roman remains at Arles attest the greatness of the ancient city: there are still the ruins of an aqueduct, theatre, amphitheatre, etc.

Aremorĭca. See ARMORICA.



Arēna. (1) Sand, a subject to which Vitruvius (ii. 4) has devoted a chapter. (2) See AMPHITHEATRUM.

Arenarii. Gladiators fighting in the arena. See GLADIATORES.

Areopăgus (Ἄρειος πάγος). The hill of Ares (q. v.). A rocky eminence lying to the west of the Athenian Acropolis. To account for the name, various stories were told. Thus, some said that it was so called from the Amazons, the daughters of Ares, having encamped there when they attacked Athens; others again, as Aeschylus, from the sacrifices there offered by them to that god; while the more received opinion connected the name with the legend of Ares having been brought to trial there by Poseidon for the murder of his son, Halirrhothius (q. v.).

To no legend, however, did the place owe its fame, but rather to the ancient criminal court or council (*ἡ ἐν Ἀρείῳ πάγῳ βουλή*) which held its sittings there, and sometimes received the name of *ἡ ἄνω βουλή*, to distinguish it from the Solonian Senate of Four Hundred, or the later Clisthenian Senate of Five Hundred. Solon's legislation raised the Areopagus into one of the most powerful bodies by transferring to it the greater part of the jurisdiction of the Ephetae (q. v.), as well as the supervision of the entire public administration, the conduct of magistrates, the transactions of the popular assembly, religion, laws, morals, and discipline, and giving it power to call even private persons to account for offensive behaviour. See SOLONIAN CONSTITUTION.

Ares (Ἄρης). The Greek name for the god of war, son of Zeus by Heré, whose quarrelsome temper Homer supposes to have passed over to her son so effectively that he delighted in nothing but battle and bloodshed. His insatiable thirst for blood makes him hateful to his father and to all the gods, especially Athené. His favourite haunt

Head of Ares. (Glyptothek, Munich.)

is the land of the wild and warlike Thracians. In form and equipment the ideal of warlike heroes, he advances, according to Homer, now on foot, now in a chariot drawn by magnificent steeds, attended by his equally bloodthirsty sister Eris (strife), his sons Deimos and Phobos (fear and fright), and Enyo, the goddess of battle and waster of cities (he himself being called Enyalios), rushing in blind rage through indiscriminate slaughter. Though fighting on the Trojan side, the bloodshed only is dear to his heart. But his unbridled strength and blind valour turn to his disadvantage, and always bring about his defeat in the presence of Athené, the goddess of ordered battalions; he is also beaten by heroes fighting under her leadership, as by Heracles in the contest with Cycnus, and by Diomede before Troy. And this view of Ares as the bloodthirsty god of battles is, in the main, that of later times also. As early as Homer he is the friend and lover of Aphrodité, who has borne him Eros and Anteros, Deimos and Phobos, as well as Harmonia, wife of Cadmus the founder of Thebes, where both goddesses were worshipped as ancestral deities. He is not named so often as the gods of peace; but, as Ares or Enyalius, he was doubtless worshipped every-

Ares. (Villa Ludovisi, Rome.)

where, notably in Sparta, in Arcadia, and (as the father of Oenomaüs) in Elis. At Sparta young dogs were sacrificed to him under the title of Theritas. At Athens the ancient site of a high court of justice, the Areopagus (q. v.), was consecrated to him. There, in former days, the Olympian gods had sat in judgment on him and absolved him when he had slain Halirrhothius for offering violence to Alcippé, his daughter by Agraulos. His symbols were the spear and the burning torch. Before the introduction of trumpets, two priests of Ares, marching in front of the armies, hurled the torch at the foe as the signal of battle.

In works of art he was represented as a young and handsome man of strong, sinewy frame, his hair in short curls, and a somewhat sombre look in his countenance; in the early style he is bearded and in armour, in the later beardless and with only the helmet on. He is often represented in company with Aphrodité, and their boy Eros, who plays with his father's arms. One of the most famous statues extant is that in the Villa Ludovisi given above, which displays him in an easy resting attitude, with his arms laid aside, and Eros at his feet. On his identification with the Italian Mars, see MARS.

Arestorĭdes. A patronymic applied to Argos (q. v.).

Aretaeus (Ἀρέταιος). A physician of Cappadocia, born near the close of the second century A.D. He was the author of two works, each in four books, on the causes, symptoms, and cure of acute and chronic pains. He wrote in the Ionic dialect with much elegance and clearness; and his treatises show a correctness of understanding with regard to medicine unusual among the ancient writers on this subject. He discourses with especial acuteness of the nerves, of indigestion, and gives an excellent account of diseases of the throat and tonsils. See Mann, *Aretaei Therapia* (1858).

Aretalŏgi (*ἀρεταλόγοι*). Literally "persons discoursing about virtue." Originally poor stoics or cynics, who, being unable to gain a living by their public lectures, obtained a precarious maintenance at the tables of the rich by their philosophical conversation. The name is generally equivalent to *parasitus* (q. v.) or *scurra*. See Suet. *Aug.* 74.

Arētē (Ἀρήτη). The wife of Alcinoüs (q. v.), king of the Phaeacians, and the protector of Odysseus (q. v.).

Arethūsa (Ἀρέθουσα). (1) One of the Nereids, and nymph of the fountain of the same name in the island of Ortygia, near Syracuse. For the story, see ALPHEUS. (2) One of the Hesperides (q. v.).

Aretīnum. A Roman colony in Etruria (Sil. Ital. v. 123).

Aretium. See ARRETIUM.

Arētus (Ἄρητος). A famous warrior, whose only weapon was an iron club, and who was treacherously slain by Lycurgus, king of Arcadia. See Pausan. viii. 11.

Areus (Ἀρεύς). The name of two kings of Sparta, the first reigning B.C. 309–265; and the second, as a child, about B.C. 264–256.

Argé. A beautiful huntress changed into a stag by Apollo (Hyg. *Fab.* 205).

Argēi. We learn from Livy (i 21) that Numa consecrated places for the celebration of religious services, which were called by the pontifices *argei*. Varro calls them the "chapels of the argei," and says they were twenty-seven in number, distributed in the different districts of the city. We know but little of the particular uses to which they were applied, and that little is unimportant. Thus, we are told that they were solemnly visited on the Liberalia, or festival of Bacchus; and, also, that

whenever the flamen Dialis went (*ivit*) to them, he was to adhere to certain observances. They seem also to have been the depositaries of the topographical records. There was a tradition that these *argei* were named from the chieftains who came with Hercules, the Argive, to Rome, and occupied the Capitoline, or, as it was anciently called, Saturnian Hill. See Aul. Gell. x. 16; Varro, *L. L.* v. 45.

The name *argei* was also given to certain figures thrown into the Tiber from the Sublician Bridge, on the Ides of May in every year. This was done by the pontifices, the vestals, the praetors, and other citizens, after the performance of the customary sacrifices. The images were thirty in number, made of bulrushes, and in the form of men. Ovid makes various suppositions to account for the origin of this rite; we can only conjecture that it was a symbolical offering to propitiate the gods, and that the number was a representative either of the thirty patrician curiae at Rome, or perhaps of the thirty Latin townships. See Varro, *L. L.* vii. 44; Ovid. *Fast.* v. 671; and Festus, s. v.

Argentarii (*τραπεζῖται*). Dealers in money, including money-changers, usurers, and bankers proper. See TRAPEZITAE.

Argenteus. A Roman silver coin, valued at about twelve cents. See NUMISMATICS (Roman).

Argentorātum. The modern city of Strasburg; a Roman municipium in Gallia Belgica, on the Rhine. The Romans had a manufactory of arms here; and here, also, the emperor Julian defeated the Alemanni. In the sixth century we find it called Stratisburgium, whence comes the modern name.

Argentum (*ἄργυρος*). Silver. The Athenians obtained their silver from the silver mines at Laurium, which were generally regarded as the chief source of the wealth of Athens. We learn from Xenophon that these mines had been worked in remote antiquity; and Xenophon speaks of them as if he considered them inexhaustible. In the time of Demosthenes, however, the profit arising from them had greatly diminished; and in the second century of the Christian era they were no longer worked. The ore from which the silver was obtained was called "silver earth" (*ἀργυρῖτις γῆ*, or simply *ἀργυρῖτις*). The same term (*terra*) was also applied to the ore by the Romans, who obtained most of their silver from Spain. See CAELATURA; METALLUM.

The relative value of gold and silver differed considerably at different periods in Greek and Roman history. Herodotus mentions it as 1 to 13; Plato as 1 to 12; Menander as 1 to 10; and Livy as 1 to 10, about B.C. 189. According to Suetonius, Iulius Caesar, on one occasion, exchanged gold for silver in the proportion of 1 to 9; but the most usual proportion under the early Roman emperors was about 1 to 12; and from Constantine to Justinian about 1 to 14, or 1 to 15.

For the use of silver in coinage, see the articles NUMMUS; DENARIUS; DRACHMA, and especially NUMISMATICS.

Argentum Vivum (*ἄργυρος χυτός*). Quicksilver or mercury. See Pliny, *H. N.* xxxiii. 20.

Arges (Ἄργης). See CYCLOPES.

Argi. See ARGOS.

Argīa (Ἀργεία). The daughter of Adrastus and wife of Polynices (q. v.) (Hyg. *Fab.* 69 and 72). See CREON.

Argias Graphé (*ἀργίας γραφή*). An action to which any Athenian citizen was liable, according to the old law, if he could not bring evidence that he had some lawful calling. The law was introduced by Draco, who made the penalty of conviction death; Solon re-enacted the law, substituting, however, for the capital punishment a fine of 100 drachmae for the first conviction, and a loss of civic rights (*ἀτιμία*) if the same person was convicted three times of indolence. According to Iulius Pollux, Draco did not impose a severer punishment than *ἀτιμία*, and Solon did not punish it at all till the third offence. See Plut. *Sol.* 37; Poll. viii. 42.

Argilētum. A district in Rome, extending from the south of the Quirinal to the Capitoline and the Forum. It was chiefly inhabited by mechanics and booksellers (Mart. i. 4). Varro derives the name from *argilla*, "potter's clay," and some make it *Argi letum*, as referring to the hero Argus (Verg. *Aen.* viii. 346).

Argilla. See CRETA.

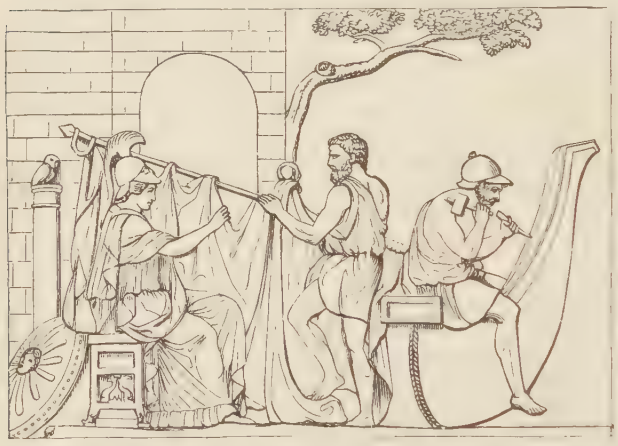
Arginūsae (Ἀργινοῦσαι). Three small islands off the coast of Aeolis, opposite Mytilené in Lesbos, celebrated for the naval victory of the Athenians over the Lacedaemonians under Callicratidas, B.C. 406. See PELOPONNESIAN WAR.

Argiphontes (Ἀργειφόντης). "Argus-slayer." An epithet applied to Hermes. See ARGUS.

Argītis. A species of wine, celebrated by Vergil for its durability. It is believed to have been a white wine. See Verg. *Georg.* ii. 99.

Argīvi. See ARGOS.

Argo (Ἀργώ). See ARGONAUTAE.



Argolĭcus Sinus. See ARGOS.

Argŏlis (Ἀργολίς). See ARGOS.

Argonautae (Ἀργοναῦται). A name given to those who sailed in the ship Argo under the lead of Iason (q. v.), son of Aeson, a generation before the Trojan War, to Aea, afterwards identified with Colchis at the eastern end of the Euxine Sea. The expedition was undertaken for the recovery of the golden fleece of the ram on which Phrixus, son of Athamas (q. v.), had fled from his father and Ino, his step-mother, to the court of Aeëtes, king of Aea, a mighty magician. Having been hospitably received by him, and married to his daughter Chalciopé, he had sacrificed the ram, and hung its fleece up in the grove of Ares, where it was guarded by a sleepless dragon. The task of bringing it back was laid upon Iason by his uncle Pelias, son of Poseidon and Tyro, who had deprived his half-brother Aeson of the sovereignty of Iolcus in Thessaly. Aeson, to protect his son from the plots of Pelias, had conveyed him secretly to the centaur Chiron on Mount Pelion, who brought him up until he was twenty years of age. Then Iason came home, and without a shoe on his left foot, having lost it in wading through a mountain torrent, presented himself before Pelias, demanding his father's restoration to his sovereignty. The crafty Pelias, whom an oracle had warned against a one-shoed man, promised on his oath to do what he asked, if Iason would go instead of himself to bring the golden fleece. This task the oracle had imposed upon himself, but he was too old to perform it. Anoth-

er version of the story is, that Iason, after completing his education with Chiron, preferred to live in the country; that he came, with one shoe on, to a sacrifice that Pelias was offering to Poseidon on the sea-shore; that Pelias asked him what he would do if he were king and had been forewarned of his death at the hand of a subject; and that, upon Iason answering that he would make him bring the golden fleece, Pelias gave him the commission. Heré had put that answer into Iason's mouth, because she regarded him with favour, and wished to punish Pelias for having slain Sidero in her temple. See SALMONEUS.

The vessel for the voyage, the fifty-oared Argo, is said to have been named after its builder Argos, a son of Phrixus after his return to Orchomenus, the home of his fathers. The ship was built of the pines of Pelion under the direction of Athené, like Heré a protectress of Iason, who inserted in the prow a piece of the speaking oak of Dodona. The heroes who, at Iason's call, took part in the expedition (fifty all told, according to the number of the oars), were originally, in the version to which the Minyan family gave currency, Minyans of Iolcos, Orchomenus, Pylos, and other places. Among them were Acastus the son of Pelias, a close friend of Iason; Admetus, Erginus, Euphemus, Periclymenus, and Tiphys. But, as the story spread, all the Greek heroes that could have been living at the time were included among the number of the Argonauts—e. g. Heracles, Castor and Polydeuces, Idas and Lynceus, Calaïs and Zetes the sons of Boreas, Peleus, Tydeus, Meleager, Amphiaraüs, Orpheus, Mopsus and Idmon the prophets of the expedition, and even the huntress Atalanta. Iason takes the command, and Tiphys manages the helm. Setting sail from Pegasae, the port of Iolcos, the Argonauts make the island of Lemnos, where only women dwell, and after some considerable stay there (see HYPSIPYLÉ) go past Samothrace and through the Hellespont to the island of Cyzicus, where they are hospitably received by Cyzicus, the king of the Doliones; but, attempting to proceed, are beaten back by a storm at night, and, being taken by their late friends for pirates, are attacked, and have the ill-fortune to kill their young king. On the coast of Mysia they leave Heracles behind to look for Hylas (q. v.), who has been carried off by nymphs. On the Bithynian shore, Polydeuces vanquishes the Bebrycian king Amycus (q. v.) in a boxing-match. At Salmydessus in Thrace, the blind seer Phineus, whom Calaïs and Zetes had rid of the Harpies, his tormentors, instructs them with regard to the rest of their journey, and especially how to sail through the Symplegades, two floating rocks that clash together at the entrance to the Black Sea. By his advice Iason sends a dove before him, and as she has only her tail-feathers cut off by the colliding rocks, they venture on the feat of rowing the Argo through. By Heré's help, or, according to another account, that of Athené, they do what no man has done before: they pass through, the ship only losing her rudder. Skirting the southern shore of the Pontus, they meet with a friendly reception from Lycus, king of the Maryandini, though here the seer Idmon is killed by a wild boar in hunting, and the helmsman Tiphys dies of a disease, whereupon Ancaeus takes his place. Past the land of the Amazons they come to the island of Aretias, whence they scare away the Stymphalian birds (see HERACLES), and take on board the sons of Phrixus, who had been shipwrecked there on their way to Greece. At length they reach the mouth of the Phasis in the land of the Colchians. Upon Iason's demand, Aeëtes promises to give up the golden fleece, on condition that Iason catches two brazen-hoofed, fire-breathing bulls, yokes them to a brazen plough, and ploughs with them the field of Ares, sows the furrows with dragons' teeth, and overcomes the mail-clad men that are to spring out of them. The hero has given up all hope of success, when Aphrodité kindles in the breast of the king's daughter Medea an irresistible love for the stranger. Medea gives him an ointment to protect him from the fiery breath of the bulls, as well as the strength to harness them, and advises him to throw a stone in among the earth-born giants, who will kill each other. But when all this is done Aeëtes does not give up the fleece. Then Iason, with the help of Medea, whom he promises to take home with him as his wife, throws the dragon that guards it into a sleep, takes it down, and escapes with Medea and his comrades. Aeëtes sends his son Absyrtus in pursuit, whom Iason kills by stratagem. Another story is that Medea takes her little brother Absyrtus with her, cuts him to pieces, and throws the limbs one by one into the sea, so that her father, while pursuing her, might be delayed in picking them up and laying them out.

Athené superintending the Building of the Argo. (Zoëga, Bassi rilievi, tav. 45.)

As to the return of the Argonauts, the legends differ considerably. One of the oldest makes them sail up the Phasis into the river Oceanus, and over that to Libya, where they drag the ship twelve days' journey overland to Lake Tritonis, and get home across the Mediterranean. Other accounts agree with this in substance, while others, again, mix up the older tradition with the adventures of Odysseus. The heroes sail up the Danube into the Adriatic, and are within hail of Corcyra (Corfu) when a storm breaks out, and the piece of oak from Dodona foretells their ruin unless they have the murder of Absyrtus expiated by Circé. Hence they

sail up the Eridanus into the Rhone, and so into the Tyrrhenian Sea to the island of Circé, who purifies them. They go past the island of the Sirens, against whose magic the songs of Orpheus protect them. All but Butes (q. v.) pass in safety between Scylla and Charybdis with the help of the gods, and reach the island of the Phaeacians, where Iason marries Medea to evade the sentence of their host Alcinoüs, who, in his capacity as umpire, has given judgment that the girl Medea be delivered up to her Colchian pursuers. Already within sight of the Peloponnesus, a storm drives them into the Libyan Syrtes, whence they carry their ship, saved by divine assistance, to Lake Tritonis. Thence, guided by Triton (see EUPHEMUS) into the Mediterranean, they return by way of Crete to Iolcos.

During their absence Pelias has put to death Aeson and his son Promachus, and Iason's mother has taken her own life. Medea sets to work to avenge them. Before the eyes of Pelias's daughters she cuts up an old he-goat, and by boiling it in a magic caldron restores it to life and youth. Promising in like manner to renew the youth of the aged Pelias, she induces them to kill their father and then leaves them in the lurch. Driven away by Acastus, the son of the murdered king, Iason and Medea take refuge with Creon, king of Corinth. But, after ten years of happy wedlock, Iason resolves to marry Creon's daughter Creüsa, or Glaucé. On this, Medea kills the bride and her father by sending the unsuspecting maiden a poisoned robe and a diadem as a bridal gift, murders her own two sons, Mermerus and Pheres, in her faithless husband's sight, and, escaping in a car drawn by serpents, sent by her grandfather Helios, makes her way to Aegeus, king of Athens. (See MEDEA.) Iason is said to have come by his death through the Argo, which he had set up and consecrated on the Isthmus. One day, when he was lying down to rest under the ship, the stern fell off and killed him.

The legend of the Argonauts is extremely ancient; even Homer speaks of it as universally known. We first find it treated in detail in Pindar; then the Alexandrian poet Apollonius of Rhodes (q. v.) tried to harmonize the various versions, and was followed by the Latin poets Valerius Flaccus, Varro Atacinus, and the late Greek Pseudo-Orpheus. See Roscher, *Ausführliches Lexicon*, 530–537; A. Lang, *Custom and Myth*, pp. 94–102 (1884); and id. Introduction to Mrs. Hunt's translation of Grimm's *Household Tales* (1884).

Argonautĭca. See APOLLONIUS; VALERIUS FLACCUS; VARRO.

Argos (Ἄργος) is said to have signified, in the language of the Macedonians and Thessalians, a plain, and it may therefore contain the same root as the Latin word *ager*. In Homer we find mention of the Pelasgic Argos—that is, a town or district of Thessaly—and of the Achaean Argos, by which he means sometimes the whole Peloponnesus, sometimes Agamemnon's kingdom of Argos, of which Mycenae was the capital, and sometimes the town of Argos. As Argos frequently signifies the whole Peloponnesus, the most important part of Greece, so the Ἀργεῖοι often occur in Homer as a name of the whole body of the Greeks, in which sense the Roman poets also use *Argivi*.—(1) ARGOS, a district of Peloponnesus, lying between Arcadia and the Aegean Sea, and also called by Greek writers Argia, or Argolicé, or Argolis. Under the Romans ARGŌLIS became the usual name of the country. (2) The chief city of Argolis, about two miles from the sea, on the Sinus Argolicus. It was fabled to have been built by seven Cyclopes from Syria (Eurip. *Iph. in Aul.* 152, 534) for Inachus, the first king. The city was under the especial protection of Heré. Its inhabitants were called Argivi and Argolici—names which are often applied to the whole Greek race. (See HELLAS.) The city is often spoken of in the plural form, *Argi*.

Argos Amphilochĭcum. The chief town of Amphilochia in Acarnania, on the Ambracian Gulf.

Argus (Ἄργος). (1) The son of Zeus and Niobé, and third king of Argos. (2) Called Panoptes, "all-seeing," as having a hundred eyes. He was the son of Agenor, or Arestor, or Inachus. Heré appointed him guardian of the cow into which Io had been metamorphosed; but Hermes, at the command of Zeus, sent him to sleep by the sweet notes of his lute, and then cut off his head. Heré transplanted his eyes to the tail of the peacock, her favourite bird. See Io. (3) The builder of the Argo, son of Phrixus (Apoll. Rhod. i. 112).

Argyraspĭdes (*ἀργυράσπιδες*). A division of the Macedonian army, who were so called because they carried shields covered with silver plates. They were held in high honour by Alexander the Great, after whose death they went over to Antigonus. Livy mentions them as the royal cohort in the army of Antigonus. The Roman emperor Alexander Severus had in his army a body of men who were called *argyroaspides*. (Lamprid. *Alex. Sev.* 50.)

Argyriou Dikē (*ἀργυρίου δίκη*). A civil suit to compel the defendant to pay over to the plaintiff money in his possession, or for which he was liable.

Argyrĭpa. See ARPI.

Argyrītis (*ἀργυρῖτις*). See ARGENTUM.

Argyrokopeion (*ἀργυροκοπεῖον*). The mint at Athens. See MONETA; NUMISMATICS.

Argyrolŏgoi (*ἀργυρολόγοι*). The ships of the Athenians, ostensibly employed during the Peloponnesian War in levying the regular tribute from the allies; but often engaged in making arbitrary exactions and forced contributions even from neutrals. Cf. Thucyd. iii. 19; iv. 50, 75; Xen. *Hell.* i. 1, 8.

Argўros (*ἄργυρος*). See ARGENTUM.

Argyrotamiae (*ἀργυροταμίαι*). The native financial officers of the Greek provinces during the period of Roman rule, and distinguished from the *ταμίαι* or Roman quaestors. (*C. I. G.* 2787.)

Arĭa (Ἀρία and Ἀρεία). The most important of the eastern provinces of the ancient Persian Empire, bounded on the east by the Paropamisadae, on the north by the Margiana and by Hyrcania, on the west by Parthia, and on the south by the desert of Carmania. From Aria was derived the name under which all the eastern provinces were included. See ARIANA; PERSIA.

Ariadné (Ἀριάδνη). The daughter of Minos and Pasiphaë, who fell in love with Theseus when he came to Crete to kill the Minotaur, and gave him a clew of yarn, to help him to find his way back to the light of day after slaying the monster in the Labyrinth. She then escaped with him. Homer

represents Ariadné as slain by Artemis in the island of Dia, close to Crete, at the request of Dionysus. But the later legend shifts the scene to the isle of Naxos, where the slumbering Ariadné is deserted by Theseus. On waking, she is in the depths of despair, when Dionysus comes and raises her to the dignity of a god's wife. Zeus grants her immortality, and sets her bridal gift, a crown, among the stars. She received divine honours: at Naxos her festivals were held, now with dismal rites recalling her abandonment, and now with bacchanalian revelry befitting the happy bride of Dionysus. The story of Ariadné has been a favourite subject for artists and poets in all ages.

Sleeping Ariadné. (Vatican.)

At Athens in the autumn they held a joyous festival to her and Dionysus, which Theseus was supposed to have founded on his return from Crete. In Italy, where they identified Dionysus with their wine-god Liber, they also took Ariadné for the wine-goddess Libera (q. v.). See in English, F. Tennyson's *Ariadne*, and Ross's *Ariadne in Naxos*.

Ariadnēa (Ἀριάδνεια). Festivals held in honour of Ariadné in Naxos, and also in Cyprus.

Ariaeus (Ἀριαῖος). The friend of Cyrus, and commander of the left wing of his army at the battle of Cunaxa (q. v.) in B.C. 401. After the death of Cyrus he deserted the Greeks, and thus procured his pardon from King Artaxerxes (Xen. *Anab.* i. 8, 5, etc.).

Ariāna (Ἀριανή). A name derived from Aria (q. v.) and applied to the eastern provinces of the Persian Empire, including Aria, Parthia, the Paropamisadae, Arachosia, Drangiana, Gedrosia, and Carmania. See PERSIA.

Ariarāthes (Ἀριαράθης). The name of several kings of Cappadocia. (1) Son of Ariamnes I., defeated by Perdiccas, and crucified, B.C. 322. Eumenes then obtained possession of Cappadocia. (2) Son of Holophernes, and nephew of Ariarathes I., recovered Cappadocia after the death of Eumenes, 315. He was succeeded by Ariamnes II. (3) Son of Ariamnes II., and grandson of the preceding, married Stratonicé, daughter of Antiochus II., king of Syria. (4) Son of the preceding, reigned 220–162. He married Antiochis, the daughter of Antiochus the Great, and assisted Antiochus in his war against the Romans. After the defeat of Antiochus, Ariarathes sued for peace in 188, which he obtained on favourable terms. (5) Son of the preceding, surnamed Philopator, reigned 163–130. He assisted the Romans in their war against Aristonicus of Pergamus, and fell in this war, B.C. 130. (6) Son of the preceding, reigned 130–96. He married Laodicé, sister of Mithridates VI., king of Pontus, and was put to death by Mithridates. (7) Son of the preceding, also murdered by Mithridates, who now took possession of his kingdom. The Cappadocians rebelled against Mithridates, and placed upon the throne (8) the second son of No. 6; but he was speedily driven out of the kingdom by Mithridates, and shortly afterwards died. (9) Son of Ariobarzanes II., reigned 42–36. He was deposed and put to death by Antony, who appointed Archelaüs as his successor.

Ariaspae (Ἀριάσπαι) or **Agriaspae.** A people in the south part of the Persian province of Drangiana, on the borders of Gedrosia (Arr. *Anab.*. iii. 27, 4).

Aricia. Now Riccia; an ancient town of Latium at the foot of the Alban Mount, on the Appian Way, sixteen miles from Rome. It was subdued by the Romans, with the other Latin towns, in B.C. 338, and received the Roman franchise. In its neighbourhood were the celebrated grove and temple of Diana Aricina, on the borders of the Lacus Nemorensis. Diana was worshipped here with barbarous customs; her priest, called Rex Nemorensis, was always a runaway slave, who obtained his office by killing his predecessor in single combat.

This custom is very strikingly alluded to by Macaulay in the following lines:

> "From where the witch's fortress
> O'erhangs the dark-blue seas,
> From the still, glassy lake that sleeps
> Beneath Aricia's trees—
> Those trees in whose dim shadow
> The ghastly priest doth reign,
> The priest who slew the slayer,
> And shall himself be slain."
>
> —*Battle of Lake Regillus.*

Aries (κριός). The battering-ram, one of the most effective engines used by the ancients to make a breach in the walls of a besieged town. Originally it consisted of a strong pole, with iron-mounted head, brought up to the wall in earlier

Aries, Battering-ram. (Column of Trajan.)

times by hand, in later times on wheels. In its final form it was constructed in the following manner: A stout beam, sometimes composed of several pieces, and measuring from sixty-five to one hundred feet long or more, was hung by ropes on a strongly mounted horizontal beam, and swung backwards and forwards, so as to loosen the stones of the wall and make it fall. As the engine stood close to the wall, the men

working it were sheltered by a roofed shell of boards, called the ram tortoise-shell (*testudo arietina*) and resting on a framework that ran upon wheels. To protect the roof and sides of the shell against fire thrown from the walls, they were coated with raw or well-soaked hides, or other similar contrivances. The loosened stones were picked out of the wall with a strong iron hook at the end of a pole—the wall-sickle (*falx muralis*), as it was called. Single holes were punched in the wall with the wall-borer (*terebra*), a ram with a sharp point, which was pushed forward on rollers.

Battering-ram under shed. *Testudo Arietina.* (Column of Septimius Severus.)

The besieged tried to knock the ram's head off by dropping heavy stones on it, or to catch it in a noose and turn the blow aside or upwards, or to deaden the force of its blows with sand-bags and mats. By the usage of war, a town that wished to secure indulgent treatment must surrender before the ram touched the walls.

Arimaspi (Ἀριμασποί). A people in the north of Scythia, represented as men with only one eye, who fought with the griffins for the possession of the gold in their neighbourhood. The germ of the fable is perhaps to be recognized in the fact that the Ural Mountains abound in gold. See ARISTEAS; AURUM.

Arimazes (Ἀριμάζης or Ἀριομάζης). A powerful Indian prince of Sogdiana, who treated Alexander the Great with much insolence, and who, in consequence, after surrendering, was crucified together with his family (Quint. Curt. vii. 11).

Arĭmi (Ἄριμοι) and **Arĭma** (τὰ Ἄριμα). The names of a mythical people, district, and range of mountains in Asia Minor, which the old Greek poets made the scene of the punishment of the monster Typhoeus (q. v.).

Arimĭnum. Now Rimini; a town in Umbria, at the mouth of the little river Ariminus. It was originally inhabited by Umbrians and Pelasgians, was afterwards in the possession of the Senones, and was colonized by the Romans in B.C. 268, from which time it appears as a flourishing place. After leaving Cisalpine Gaul, it was the first town on the eastern coast of Italy at which a person arrived in Italia proper.

Ariobarzānes (Ἀριοβαρζάνης). I.—KINGS OF SATRAPS OF PONTUS. (1) Betrayed by his son Mithridates to the Persian king, about B.C. 400. (2) Son of Mithridates I., reigned 363–337. He revolted from Artaxerxes in 362, and may be regarded as the founder of the kingdom of Pontus. (3) Son of Mithridates III., reigned 266–240, and was succeeded by Mithridates IV. II.—KINGS OF CAPPADOCIA. (1) Surnamed Philoromaeus, reigned B.C. 93–63, and was elected king by the Cappadocians, under the direction of the Romans. He was several times expelled from his kingdom by Mithridates, but was finally restored by Pompey in 63, shortly before his death. (2) Surnamed Philopator, succeeded his father in 63. (3) Surnamed Eusebes and Philoromaeus, son of No. 2, whom he succeeded about 51. He assisted Pompey against Caesar, who not only pardoned him, but even enlarged his territories. He was slain in B.C. 42 by Cassius.

Arĭon. (1) (Ἀρίων). A Greek poet and musician, of Methymna in Lesbos, who flourished about B.C. 625. In the course of a roving life he spent a considerable time at the court of Periander, tyrant of Corinth. Here he first gave the dithyramb (q. v.) an artistic form, and was therefore regarded as the inventor of that style in general. He is best known by the story of his rescue on the back of a dolphin. Returning from a journey through Lower Italy and Sicily, he trusted himself to a crew of Corinthian sailors, who resolved to kill him on the open sea for the sake of his treasures. As a last favour he extorted the permission to sing his songs once more to the lyre, and then to throw himself into the sea. His strains drew a number of dolphins around him, one of which took him on its back, and carried him safe to land at the foot of the foreland of Taenarum. Thence he hastened to Corinth, and convicted the sailors, who were telling Periander that they had left the minstrel safe at Tarentum (Hyg. *Fab.* 194). A bronze statue of a man on a dolphin, which stood on the top of Taenarum, was supposed to be his thank-offering to Poseidon (Herod. i. 24). A hymn of thanksgiving to the god of the sea, preserved under his name, belongs to a later time. (2) (Ἀρείων). A fabulous horse said to have been begotten by Poseidon.

Ariovistus. A German who had conquered a great part of Gaul, but was defeated by Caesar and driven back across the Rhine in B.C. 58 (Caes. *B. G.* Bk. i.).

Aristaenĕtus (Ἀριστaίνετος). A Greek grammarian and rhetorician, of Nicaea in Bithynia, friend of Libanius, who praises him in the highest terms; he was killed in an earthquake at Nicomedia, A.D. 358. His name is erroneously attached to a collection, probably composed in the fifth or sixth century, of erotic Epistles, feeble imitations of Alciphron, loose in tone and declamatory in style. The text and a Latin version are contained in the Didot collection of the *Epistolographi Graeci* (Paris, 1873). See NOVELS AND ROMANCES.

Aristaeus (Ἀριστaῖος). A son of Apollo and Cyrené, was born in Libya. He afterwards went to Thrace, where he fell in love with Eurydicé, the wife of Orpheus. The latter, while fleeing from him, perished by the bite of a serpent; whereupon the Nymphs, in anger, destroyed the bees of Aristaeus. The way in which he recovered his bees is related in the Fourth Georgic of Vergil. After his death he was worshipped as a god, on account of the benefits he had conferred upon mankind. He was regarded as the protector of flocks and shepherds, of vine and olive plantations; he taught men to keep bees, and averted from the fields the burning heat of the sun and other causes of destruction. He is said to have had the care of Dionysus when young.

Aristagŏras (Ἀριστaγόρας). A native of Miletus, brother-in-law of Histiaeus, and left by the latter during his stay at the Persian court in charge of the government of Miletus. Having failed in an attempt upon Naxos (B.C. 501), which he had promised to subdue for the Persians, and fearing the consequences of his failure, he induced the Ionian cities to revolt from Persia. He applied for assistance to the Spartans and Athenians: the former refused, but the latter sent him twenty ships and

some troops. In 499 his army captured and burned Sardis, but was finally chased back to the coast. The Athenians now departed; the Persians conquered most of the Ionian cities; and Aristagoras in despair fled to Thrace, where he was slain by the Edonians in 497.

Aristarchus (Ἀρίσταρχος). (1) A Samian mathematician and astronomer at Alexandria, who flourished between B.C. 280 and 264. (2) Of Samothrace, the celebrated grammarian, flourished B.C. 156. He was a pupil of Aristophanes, and founded at Alexandria a grammatical and critical school. At an advanced age he went to Cyprus, where he died at the age of seventy-two, of voluntary starvation, because he was suffering from incurable dropsy. Aristarchus was the greatest critic of antiquity. His labours were chiefly devoted to the Homeric poems, of which he published an edition which has been the basis of the text from his time to the present day. He divided the *Iliad* and *Odyssey* into twenty-four books each. His text of the Homeric poems is substantially the groundwork of our present recensions. It had marginal notes indicating the verses which Aristarchus regarded as spurious or doubtful, and pointing out anything worthy of remark. The meaning of the notes, and the reasons for appending them, were explained in separate commentaries and excursuses, founded on a marvellously minute acquaintance with the language and contents of the Homeric poems and the whole of Greek literature. He was the head of the school of *Aristarcheans*, who continued working on classical texts in his spirit till after the beginning of the Empire. Of his numerous grammatical and exegetical works only fragments remain. An idea of his Homeric studies, and of their character, can best be gathered from the Venetian scholia to the *Iliad*, which are largely founded on extracts from the Aristarcheans Didymus and Aristonicus. See HOMERUS.

Aristeas (Ἀριστέας). An epic poet of Proconnesus, of whose life we have only fabulous accounts. His date is quite uncertain. He is represented as a magician, whose soul could leave and re-enter its body according to its pleasure. He was connected with the worship of Apollo, which he was said to have introduced at Metapontum. He wrote an epic poem on the Arimaspi (q. v.), in three books, from which the pseudo-Longinus quotes. See Herod. iv. 13.

Aristĕrae (Ἀριστεραί). An island on the coast of the Peloponnesus (Pausan. ii. 34).

Aristīdes (Ἀριστείδης). (1) An Athenian, surnamed "the Just," son of Lysimachus, of an ancient and noble family. He fought at the battle of Marathon, B.C. 490; and in the next year, 489, was archon. He was the great rival of Themistocles, and it was through the influence of the latter with the people that he suffered ostracism (q. v.) in 483 or 482. He was still in exile in 480 at the battle of Salamis, where he did good service by dislodging the enemy, with a band raised and armed by himself, from the islet of Psyttalea. He was recalled from banishment after the battle, was appointed general in the following year (479), and commanded the Athenians at the battle of Plataea. In 477, when the allies had become disgusted with the conduct of Pausanias and the Spartans, he and his colleague Cimon had the glory of obtaining for Athens the command of the maritime confederacy (see CONFEDERACY OF DELOS); and to Aristides was by general consent intrusted the task of drawing up its laws and fixing its assessments. The first tribute of four hundred and sixty talents, paid into a common treasury at Delos, bore his name. This is his last recorded act. He probably died in 468, and so poor that he did not leave enough to pay for his funeral. His daughters were portioned by the State, and his son Lysimachus received a grant of land and of money. (2) The author of a licentious romance, in prose, entitled *Milesiaca*, having Miletus for its scene. It was translated into Latin by L. Cornelius Sisenna, a contemporary of Sulla, and became popular with the Romans. The title of his work gave rise to the term "Milesian" as applied to works of fiction. (3) Of Thebes, a celebrated Greek painter, who flourished about B.C. 360–330. His pictures were so much valued that long after his death Attalus, king of Pergamus, offered 600,000 sesterces for one. (4) See THEODORUS. (5) See QUINTILIANUS.

Aristion (Ἀριστίων). A philosopher who, by the influence of Mithridates, made himself tyrant of Athens. He committed suicide, on the capture of Athens by Sulla in B.C. 87.

Aristippus (Ἀρίστιππος). A Greek philosopher, a native of Cyrené and a pupil of Socrates, after whose death in B.C. 399 he travelled about the Greek cities, imparting instruction for money. He was founder of the Cyrenaic School, or the system of Hedonism (from ἡδονή, pleasure). His doctrine was that as a basis for human knowledge the only things real and true are our sensations, and not the external objects that produce them; that the aim of life is what all living things strive after, pleasure; and that virtue is only so far a good thing as it tends to the production of pleasure. The wise man shows his wisdom in governing his desires; mental training, indeed, being the only thing which can qualify us for real enjoyment. In pleasure there is no difference of kind, only of degree and duration. Aristippus's writings seem to have disappeared early; five letters, in the Doric dialect, which have come down under his name are undoubtedly spurious. See Ueberweg, *Hist. of Philosophy*, pp. 59–98, Eng. trans. (N. Y. 1872); his life by Diogenes Laërtius; and the articles CYRENAICI; EPICURUS; PHILOSOPHIA.

Aristobūlus (Ἀριστόβουλος). A Greek historian, who in his youth accompanied Alexander the Great on his campaigns. In his eighty-fifth year, when living at Cassandrea in Thrace, he wrote a work upon Alexander, in which he recorded his careful observations on geography, ethnography, and natural science. The book is highly praised for its trustworthiness, but only fragments of it have reached us. He and Ptolemy were the chief authorities for Arrian's *Anabasis*.

Aristoclēa (Ἀριστόκλεια). A beautiful woman, who, while offering sacrifice naked, was seen by Strato, who fell violently in love with her, and contended for her so furiously with his rival Callisthenes that she died during the struggle, upon which Strato took his own life, while Callisthenes was never seen again (Plut. *in Amat*).

Aristŏcles (Ἀριστοκλῆς). (1) A Greek artist, and, like his brother Canachus, a sculptor in bronze at Sicyon. He flourished about B.C. 480, and founded a school at Sicyon that lasted for a long time. (2) An Athenian sculptor of the same

name and of the same period, author of a relief known as "The Athenian Hoplite," one of the oldest remaining monuments of Attic art. See cut, p. 649.

Aristocratia (*ἀριστοκρατία*). Literally, "the government of the best." As used by Plato, Aristotle, Polybius, and others, it meant government by a class whose supremacy was founded less on wealth than on personal distinction; whereas government by the wealthy was *ὀλιγαρχία*. See Arist. *Pol.* iv. 3, 10; Plato *Pol.* p. 301 A; and the articles EUPATRIDAE; GEOMORI; PATRICII.

Aristodēmus (*Ἀριστόδημος*). (1) A descendant of Heracles, son of Aristomachus, brother of Temenus and Cresphontes, and father of Eurysthenes and Procles. He was killed at Naupactus by a flash of lightning, just as he was setting out on the expedition into the Peloponnesus, and his two sons obtained Sparta, which would have fallen to him. (2) A Messenian, the chief hero in the First Messenian War. He sacrificed his own daughter to save his country. He was afterwards elected king in place of Euphaës; and continued the war against the Spartans, till at length, finding resistance hopeless, he put an end to his life on the tomb of his daughter, about B.C. 723.

Aristogīton (*Ἀριστογείτων*). See HARMODIUS.

Aristomăchus (*Ἀριστομάχος*). The son of Cleodemus or Cleodacus, grandson of Hyllus, great-grandson of Heracles, and father of Temenus, Cresphontes, and Aristodemus. He fell in battle when he invaded the Peloponnesus; but his sons were more successful, and conquered the Peloponnesus.

Aristomĕnes (*Ἀριστομένης*). A Messenian, the hero of the second war with Sparta, who belongs more to legend than to history. He was a native of Andania, and was sprung from the royal line of Aepytus. Tired of the yoke of Sparta, he began the war in B.C. 685. After the defeat of the Messenians, in the third year of the war, Aristomenes retreated to the mountain fortress of Ira, and there maintained the war for eleven years, constantly ravaging the land of Laconia. In one of his incursions the Spartans overpowered him with superior numbers, and, carrying him with fifty of his comrades to Sparta, cast them into the pit where condemned criminals were thrown. The rest perished; but not so Aristomenes, the favourite of the gods; for legends tell how an eagle bore him up on its wings as he fell, and a fox guided him on the third day from the cavern. But the city of Ira, which he had so long successfully defended, fell into the hands of the Spartans, who again became masters of Messenia, B.C. 668. Aristomenes settled at Ialysus, in Rhodes, where he married his daughter to Damagetus, king of Ialysus.

Ariston (*Ἀρίστων*). (1) Of Chios, a Stoic philosopher, and a disciple of Zeno, who flourished about B.C. 260. (2) A Peripatetic philosopher of Iulis, in the island of Ceos, who succeeded Lycon as head of the Peripatetic school, about B.C. 230.

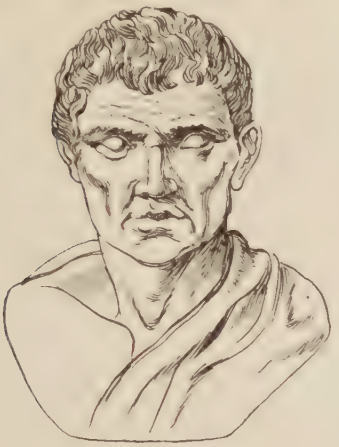
Ariston (*ἄριστον*). Breakfast. See CENA; PRANDIUM.

Aristonīcus (*Ἀριστόνικος*). A natural son of Eumenes II. of Pergamus. Upon the death of his brother Attalus III., B.C. 133, who left his kingdom to the Romans, Aristonicus laid claim to the crown. He defeated in 131 the consul P. Licinius Crassus; but in 130 he was himself defeated and taken prisoner by M. Perperna, was carried to Rome by M'. Aquillus in 129, and was there put to death.

Aristophănes (*Ἀριστοφάνης*). (1) The greatest writer of Greek comedy. He lived at Athens, B.C. 444–388. His father, Philippus, is said to have been not a native Athenian, but a settler from Rhodes or Egypt, who afterwards acquired citizenship. However this may be, the demagogue Cleon, whose displeasure Aristophanes had incurred, tried to call in question his right to the citizenship. His first comedy appeared in B.C. 427, but was not performed under his own name because of his youth; and several more of his plays were brought upon the stage by Callistratus and Philonides, till in 424 he brought out *The Knights* in his own person. Forty-four of his plays were known to antiquity, though four of them were considered doubtful. Of these we possess eleven, the only complete Greek comedies which have survived, besides the titles and numerous fragments of twenty-six others. The eleven are: (1) *The Acharnians* (*Ἀχαρνεῖς*), which gained him the victory over Cratinus and Eupolis, B.C. 425, written during the great Peloponnesian War to induce the Athenians to make peace. (2) *The Knights* (*Ἱππεῖς*) mentioned above, B.C. 424, also crowned with the first prize, and aimed directly against the demagogue Cleon. (3) *The Clouds* (*Νεφέλαι*), B.C. 423, his most famous and, in his own opinion, his most successful piece, though when played it only won the third prize. We have it now in a second, and apparently unfinished, edition. It is directed against the pernicious influence of the Sophists, as the representative of whom Socrates is attacked. (4) *The Wasps* (*Σφῆκες*), brought out in B.C. 422, and, like the two following, rewarded with the second prize; it is a satire upon the Athenian passion for lawsuits. (5) *The Peace* (*Εἰρήνη*), of the year B.C. 421, recommending the conclusion of peace. (6) *The Birds* (*Ὄρνιθες*), acted in B.C. 414, and exposing the romantic hopes built on the expedition to Sicily. This is unquestionably the happiest production of the poet's genius, and is marked by a careful reserve in the employment of dramatic resource. (7) *The Lysistraté* (*Λυσιστράτη*), B.C. 411, a Women's Conspiracy to bring about peace; the last of the strictly political plays. (8) *Thesmophoriazusae* (*Θεσμοφοριάζουσαι*), probably to be dated B.C. 410. It is written against Euripides's dislike of women, for which the women who are celebrating the Thesmophoria drag him to justice. (9) *The Frogs* (*Βάτραχοι*), which was acted in B.C. 405, and won the first prize. It is a piece sparkling with genius, on the decay of tragic art, the blame of which is laid on Euripides, then recently deceased. (10) *Ecclesiazusae* (*Ἐκκλησιάζουσαι*), or The National Assembly of Women, B.C. 392. It is levelled against the vain attempts to restore the Athenian state by cut-and-dried constitutions. (11) *Plutus* (*Πλοῦτος*), or The God of Wealth. The blind god is restored to sight, and better times are brought about. This play was acted first in B.C. 408, then in 388 in a revised form suitable to the time, and dispensing with chorus and parabasis. This play marks the transition to the Middle Comedy. See COMOEDIA.

In the opinion of the ancients, Aristophanes holds a middle place between Cratinus and Eupolis, being neither so rough as the former nor so mild as the latter, but combining the severity of the one with the grace of the other. What was

thought of him in his own time is evident from Plato's *Symposium*, where he is numbered among the noblest of men; and an epigram attributed to that philosopher says that the Graces, looking for an enduring shrine, found it in the soul of Aristophanes. He unites understanding, feeling, and fancy in a degree possessed by few poets of antiquity. His keen glance penetrates the many evils of his time and their most hidden causes; his scorn for all that is base, and his patriotic spirit, burning to bring back the grand days of Marathon, urge him on, without respect of persons or regard for self, to drag the faults he sees into daylight, and lash them with stinging sarcasm; while his inexhaustible fancy invents ever new and original materials, which he manipulates with perfect mastery of language and technical skill. If his jokes are often coarse and actually indecent, the fact must be imputed to the character of the Old Comedy and the licentiousness of the Dionysiac festival, during which the plays were acted. No literature has anything to compare with these comedies. Ancient scholars, recognizing their great importance, bestowed infinite pains in commenting on them, and valuable relics of their writings are enshrined in the existing collections of scholia.



The principal MS. of Aristophanes is that of Ravenna, which contains the eleven extant plays. Next in importance is the Codex Venetus Marcianus of nearly the same date, but which lacks the *Acharnians*, *Thesmophoriazusae*, *Ecclesiazusae*, and *Lysistraté*. Both of these are probably derived from one Alexandrian archetype. The *editio princeps* of Aristophanes is that of Aldus (Venice, 1498), containing nine plays, to which Junta added two more (1515). The ed. of Invernizzi-Beck contains a collation of the Ravenna MS. Other editions are those of Bekker (1829); Dindorf (5th ed. 1869); Meineke (1860); Blaydes (1886); Holden (5th ed. 1887). Eng. trans. of eight plays by Rudd (1867); of five plays by Frere (1871). There is a complete concordance by Dunbar (1883).

(2) ARISTOPHANES THE GRAMMARIAN (or SCHOLAR) of Byzantium, born about B.C. 260, went in his early youth to Alexandria, and was there a pupil of Zenodotus and Callimachus. On the death of Apollonius of Rhodes, Aristophanes, when past his sixtieth year, was appointed to be chief librarian, and died at the age of seventy-seven. His fame was eclipsed by that of his pupil Aristarchus, but he still passed for one of the ablest grammarians and critics of antiquity, distinguished by industry, learning, and sound judgment. In addition to the Homeric poems, which formed his favourite study, and of which he was the first to attempt a really critical text, he devoted his labours to Hesiod; the lyric poets, especially Alcaeus and Pindar; and the tragic and comic poets, Aristophanes and Menander in particular. The received introductions to the plays of the tragedians and Aristophanes are in their best parts derived from him. He was also the author of a large and much-quoted work of a lexicographical character, considerable fragments of which still survive. See HOMERUS; TEXTUAL CRITICISM.

Aristŏphon (Ἀριστόφων). The name of two Attic orators, both contemporaries of Demosthenes. The first (of the deme Azenia) defended the law of Leptines against Demosthenes in B.C. 354. No oration of either Aristophon is extant.

Aristotēles (Ἀριστοτέλης). A great philosopher, the son of Nicomachus, court physician to Philip II. of Macedon, and born in B.C. 384 at Stagira, a small town in the Thracian Chalcidicé. He received from his father a training in the natural science of the day; but his philosophical education was obtained in Athens, where he was a pupil and companion of Plato during the last twenty years of the latter's life (367–347). His mind was, however, of too exact and unimaginative a type to accept the mystical idealism of Plato's later years, and we find him gradually developing a system of philosophy of his own, distinct from, and often antagonistic to, that of his teacher, whose doctrines he nevertheless always treated with pious respect, even when controverting them. In the later years of his association with Plato and the Academy he began to lecture on his own account, treating especially the subject of rhetoric. At the death of Plato the pre-eminent ability of Aristotle would seem to have designated him to succeed to the leadership of the Academy, but his divergence from his master's teaching was too great to make this possible. At the invitation of his friend Hermeas, ruler of Atarneus and Assos in Mysia, he repaired to his court, where he spent several years, and married his niece and adopted daughter Pythias. His son Nicomachus, however, was the offspring of a later union with Herpyllis, said to have been a slave, but to whom he testifies the warmest gratitude in his will. From 344 to 342 he was again in Athens, but in the latter year he accepted an invitation from King Philip to undertake the oversight of the education of his son Alexander. It is not too fanciful to trace, in the lofty views of the future conqueror, and his passionate love for the Homeric poems, the influence of his three years' association with the great philosopher. Aristotle did not forget, in this influential position, the town of his birth, but obtained from Alexander that Stagira, which had been destroyed by Philip, should be rebuilt. On Alexander's accession to the throne of Macedon in 335, Aristotle removed to Athens, and established his school in the gymnasium known as the Lyceum, from whose shady walks (περίπατοι) his pupils became known as Peripatetics. He is said to have given two classes of lectures: the more abstruse discussions (ἀκροαματικά) in the morning for an inner circle of advanced pupils, and the popular discourses (ἐξωτερικά) in the evening for the general body of lovers of knowledge. At the death of Alexander, in 323, the anti-Macedonian party in Athens recovered a temporary ascendency, and Aristotle was involved in an accusation for impiety, to escape which he fled to Chalcis in Euboea, in order, as he said, "that the Athenians might not for a second time commit a sin against philosophy." Here he died soon after, in 322, of a stomach complaint. A grave recently (1891) excavated at Chalcis, by the explorers of the American School at Athens, is identified with considerable probability as that of Aristotle. His will, perhaps genuine, is preserved to us in Diogenes Laërtius, v. 1. A statuette in the Mattei Palace and a life-size statue in the Villa Spada at Rome reproduce the keen features of the profound thinker. His character, if we may judge from the tone of his writings and from the provisions of his will, was mild and generous; and the slanderous reports found in such writers as Athenaeus may be dismissed as utterly without foundation.

The many-sided activity of Aristotle's mind and his prodigious industry are shown in the extent and variety of his writings, which embraced, according to Diogenes Laërtius, 146 works in 400 books. Another list, which seems to rest on the authority of the Peripatetic Andronicus, who in the time of Cicero published a new edition of Aristotle's works, gives the number of books as 1000.

Head of Aristotle.

The history of his writings, if a widely accepted tradition be true, is a romantic one. After the death of Theophrastus, who had succeeded to the leadership of the Peripatetic School, his library, including the works of Aristotle, is said to have passed into the hands of his pupil Neleus of Scepsis in the Troad. The heirs of Neleus, to protect the books from the literary greed of the Attalids of Pergamus, concealed them in a vault, where they were injured by dampness and the ravages of moths and worms. In this hiding-place they were discovered about the year B.C. 100 by Apellicon (q. v.), a rich book-lover, and conveyed to Athens, whence they were taken to Rome after the capture of Athens by Sulla in B.C. 86. In Rome they soon attracted the attention of scholars, and the new edition then prepared by Andronicus (see above) gave a fresh impetus to the study of Aristotle and of philosophy in general. Strangely enough, the list of works in Diogenes Laërtius, mentioned above, does not seem to contain any of the forty treatises in our Aristotle, and it is not impossible that the whole catalogue is a list of forgeries, compiled at a time when the real works were lost to sight. The greater part of what has come down to us under the name of Aristotle is undoubtedly genuine.

The works of Aristotle fall naturally under three heads: I. Dialogues and other works of a popular character. II. Collections of facts and material for scientific treatment. III. Systematic works. Among his writings of a popular character the only one which we possess of any consequence is the interesting tract *On the Polity of the Athenians*, recently discovered in some Egyptian papyri, and edited by Kenyon under the auspices of the British Museum (London, 1891). It is written in a clear and easy style, and sheds a flood of new light on Athenian political history, and especially on the Constitution in Aristotle's own time. Of the works of the second class nothing worthy of mention has been preserved. The systematic treatises are marked by a severe plainness of style, with none of the golden flow of language which the ancients praised in Aristotle. This may be due to the fact that these works were not, in most cases, published by Aristotle himself or during his lifetime, but were edited after his death, from unfinished MSS., by Eudemus, Nicomachus, or Theophrastus.

Aristotle's systematic treatises may be grouped in several divisions, in accordance with the subjects discussed, as follows: I. Logic. II. Natural Science. III. Psychology and Metaphysics. IV. Ethics. V. Politics. VI. Rhetoric.

I. The writings on the general subject of LOGIC were included by the later Peripatetics under the name of *Organon*, or Instrument, as having to do with reasoning, the chief instrument of dialectic and scientific investigation. They embrace (1) the *Categories* (Κατηγορίαι), treating of the ten fundamental forms of predicating existence (probably not by Aristotle himself, but by one of his pupils). (2) *On Interpretation* (Περὶ Ἑρμηνείας), dealing with the forms and parts of the sentence. (3) *Prior* and *Posterior Analytics* (Ἀναλυτικὰ Πρότερα and Ὕστερα), containing (*a*) the doctrine of scientific proof and (*b*) of cognition or knowledge in general. (4) The *Topics* (Τοπικά), on the art of dialectic. (5) The *Sophistical Refutations* (Σοφιστικοὶ Ἔλεγχοι), an examination of the fallacies of the Sophists, then in such vogue. All of the most important of Aristotle's works in the domain of Logic have come down to us, and they include the most enduring contribution which the great analyst has made to human thought. The science of deductive reasoning has made no essential progress since his day. II. The works in the department of NATURAL SCIENCE are (1) the *Physics* (Φυσικὴ Ἀκρόασις). This is not a treatise on physics in the modern sense of the term, but is happily styled by Hegel the "metaphysics of physics." It treats of the principles of existence, of matter and form, explaining the fundamental conceptions in accordance with which we look at the phenomena of nature. (2) *On the Heavens* (Περὶ Οὐρανοῦ). (3) *On Generation and Decay* (Περὶ Γενέσεως καὶ Φθορᾶς), discussing the pairs of opposites, hot and cold, and wet and dry, and how their different combinations produce the four elements of fire, air, earth, and water. (4) *Meteorology* (Μετεωρολογικά). (5) *Researches about Animals* (Αἱ περὶ τὰ Ζῷα Ἱστορίαι). (6) *On the Parts of Animals* (Περὶ Ζῴων Μορίων). (7) *On the Generation of Animals* (Περὶ Ζῴων Γενέσεως). (8) *On Locomotion of Animals* (Περὶ Πορείας Ζῴων). (9) A number of shorter works are usually classed together under the head of *Parva Naturalia*. They treat of sense and sensation, youth and age, and other phenomena of life. The treatises *On Plants*, *On the Universe*, *On Motion*, *On Respiration*, *On Colour*, *On Physiognomy*, *On Strange Statements*, and the collection of various scientific *Problems*, are all of doubtful authenticity. The above-mentioned works exhibit an astonishing breadth of observation in natural history. The *Researches about Animals* shows an acquaintance with almost five hundred different species, and the observations on the purpose and adaptation of the organs of various creatures are characterized by remarkable insight. III. PSYCHOLOGY AND METAPHYSICS. (1) *On the Soul* (Περὶ τῆς Ψυχῆς). This treatise might fairly be classed with the works on natural science, as it does not deal with psychology in the modern sense, but with the physiology of the vital prin-

ciple in animals generally. (2) The *Metaphysics* (Μεταφυσικά), as the name indicates, forms the highest step in Aristotle's system, and deals with the first principles of all existence. Here he grapples with the deepest questions of philosophy, but with less clear and satisfactory results than he reaches in many of his discussions. His doctrine of mind (νοῦς), or the godhead, as the power that moves the starry heavens, is not sufficient to account for the structure of the universe or the origin of existing things. IV. Ethics. The ethical works of Aristotle embrace (1) the *Nicomachean Ethics* (Ἠθικὰ Νικομάχεια); (2) the *Eudemean Ethics* (Ἠθικὰ Εὐδήμεια); (3) the so-called *Magna Moralia* (Ἠθικὰ Μεγάλα). The foundation principles of the Aristotelian system of morals appear alike in all of these works, but it is probable that the first alone is the work of the philosopher himself. He teaches that happiness is the highest good, and that this is found in an activity of the soul in accordance with virtue. Virtue is a permanent state of the soul, and consists in the mean between the too much (ὑπερβολή) and the too little (ἔλλειψις). The *Nicomachean Ethics* is one of the most interesting of Aristotle's works, and his descriptions of some of the virtuous characters (see bk. iv.) are exceedingly impressive. V. Politics. Closely connected with the *Ethics* is the *Politics* (Πολιτικά). The best ordering of the State was, to Aristotle's mind, the worthiest problem for the philosopher; and though his treatment of the subject was not brought to a logical conclusion, yet the work contains much valuable information and abounds in interesting remarks. The *Economics* (Οἰκονομικά) is probably the work of some later writer of the Peripatetic School. VI. Rhetoric. The rhetorical works include (1) the *Poetics* (Περὶ Ποιητικῆς), and (2) the *Art of Rhetoric* (Τέχνη Ῥητορική). The first of these, though insignificant in length, has received more consideration in recent years than almost any other work of the author. The famous definition of tragedy in chap. vi., the discussion of the parts of tragedy in chap. xii., and the distinction between epic and tragic poetry in chap. xxvi. are passages of the greatest interest and value. The celebrated doctrine of the κάθαρσις effected by tragedy (vi. 2) has given rise to much discussion, but has not yet been satisfactorily explained. The doctrine of the three "unities" of tragedy, upon which so much stress has been laid by the French critics, was first promulgated by Aristotle in this work. The *Rhetoric* treats of oratorical proof, and its leading elements, together with an interesting discussion (bk. iii.) of style—all marked by the author's usual clear and exhaustive treatment.

In reviewing the works of Aristotle we are at a loss whether to admire most his vast and accurate observation of nature, his profound acquaintance with the literature of his day, or his deep and penetrating insight, his keen analysis, and his unfailing good sense. In his love for research and his critical tendency he may be regarded as the forerunner of the Alexandrian Age which was soon to open. His style, though so concise as sometimes to be obscure, is often a model of condensed energy, and his occasional illustrations are marvellously appropriate. His influence on the course of human thought since his day has been almost boundless. In antiquity he was the most honoured philosopher, while the early Christian writers compared Plato and Aristotle to Moses and Christ. He was the oracle of the Middle Ages, when his writings, through his followers, the schoolmen, were almost all that saved Europe from utter barbarism. The Arabians, in the reign of the calif Al Mamun (A.D. 813), began to translate his works, which became the foundation of Saracenic culture, and were brought by them to the knowledge of Western Europe through the medium of Latin versions from the Arabic. In Arabic tradition Aristotle is the "wisest man," just as his pupil Ishkander (Alexander) is the hero of warlike fable. The Roman Catholic Church almost canonized him, and his philosophical system, as modified by the great Dominicans Albertus Magnus and Thomas Aquinas, lies at the basis of Catholic theology to-day. But when the Renaissance gave back to Europe the knowledge of Plato, the popularity of Aristotle declined. Plato's perfection of form, and the fact that he wrote for the enlightened public generally, rather than for an inner circle of special students, no doubt contributed to this result. The Reformers, who regarded Aristotle as the bulwark of the Papacy, attacked him bitterly, and by the middle of the eighteenth century he had been almost set aside. It was reserved for the nineteenth century, through the labours of Schleiermacher, Spengel, Brandis, and others, to find the key to the true historical appreciation of the value of Aristotle.

The influence of Aristotle on the vocabulary of modern philosophy is worthy of especial notice. A large number of terms which are in constant use to-day are derived from him, either directly or through the medium of Latin equivalents. Some of these are: *principle* (ἀρχή), *subject* (ὑποκείμενον), *matter* (*materies* = ὕλη), *form*, *end*, *final cause*, *faculty* (δύναμις), *energy*, *category*, *predicament*, *habit*, *mean*, *extreme*, *quintessence*, *metaphysics*, etc.

The great edition of the Prussian Academy (Berlin, 1831–70), in five quarto volumes, contains the text in Bekker's recension (i. and ii.); the Latin translation by Pacius, Argyropylus, Bessario, and others (iii.); the Scholia edited by Brandis (iv.); the fragments, and the Aristotelian Index of Bonitz (v.). A convenient text edition is published in the Teubner Series (Leipzig). Annotated editions of single works are numerous. Among them may be mentioned the *Psychology*, by Trendelenburg (Jena, 1877); the *Metaphysics*, by Schwegler-Bonitz (Bonn, 1848); the *Nicomachean Ethics*, by Ramsauer (Leipzig, 1878); the *Politics*, by Susemihl (Leipzig, 1879); the *Rhetoric*, by Spengel (Leipzig, 1867); the *Poetics*, by Vahlen (Berlin, 1884). Valuable English works are Grant's *Ethics* (London, 1866); Bywater's *Ethics* (Oxford, 1890); Newman's *Politics* (Oxford, 1887); Jowett's *Politics* (Oxford, 1885); Wallace's *Psychology* (Cambridge, 1884); Grote's *Aristotle* (London, 1872). The ancient commentaries of Alexander Aphrodisiensis (A.D. 200) and Simplicius (A.D. 530) are of great importance historically. The *Paraphrases* of Themistius (A.D. 375) are occasionally useful in settling doubtful points in the text. The literal translations in the Bohn Library are of respectable merit.

Aristoxĕnus (Ἀριστόξενος). A Greek philosopher and musician, a native of Tarentum, and a pupil of Aristotle. He lived about B.C. 330, and was a prolific writer on various subjects, but most particularly on music. In contrast with the Pythagoreans, who referred everything to the relations of numbers, he regarded music as founded on the difference of tones as perceived by the ear. Of

his Ἁρμονικὰ Στοιχεῖα three books are preserved, but they are neither complete nor in their original shape. They have been edited by Marquard (Berlin, 1869) and Saran (Leipzig, 1893). Only a part of his Ῥυθμικὰ Στοιχεῖα has survived. See MUSICA.

Arithmetĭca (*ἀριθμητική* sc. *τέχνη*). See ABACUS; LOGISTICA; MATHEMATICA.

Arĭus (Ἄρειος). A celebrated writer and theologian of Alexandria, who denied the eternal divinity and consubstantiality of the Second Person of the Trinity. Though much persecuted for his heresy, he succeeded in winning the favour of the emperor Constantine, and supplanted his great opponent St. Athanasius. When about to enter the cathedral at Constantinople in triumph, he suddenly died, A.D. 336. From him the sect of the Arians gets its name.

Ariusia (Ἀριουσία). A district on the north coast of Chios, famous for its wine.

Arma, Armatūra (*ὅπλα, ἔντεα, τεύχεα*). Arms, armour. The weapons of attack and defence employed by the Greeks of historic times are essentially the same as those with which the Homeric heroes appear equipped in an earlier age. The changes gradually introduced, especially after the Persian Wars, tended to make the armour lighter and to give greater power of movement to the combatants. For defensive armour they used a helmet (*κόρυς, κυνέη*); a cuirass (*θώραξ*) (see THORAX); a girdle (*ζώνη*) of leather or felt, covering the lower part of the body, and reaching down to the middle of the thighs. Sometimes this consisted of narrow strips called *πτέρυγες* (wings) arranged either in single or double rows, and covered with metal. Sometimes it was a complete coat plated with bands of metal. The greaves (*κνημῖδες*) covered the front part of the legs from the ankles to just above the knee, and consisted of flexible metal plates or leather fastened behind with buckles. The weapons of defence were completed by the shield.

For offensive weapons they had, besides the sword (*ξίφος*), the lance (*δόρυ*), five to seven feet long. This was of iron, sometimes broader, sometimes narrower, and sometimes hooked and with an iron joint on the butt end which served to fix the spear more easily in the ground, or could be used as an offensive weapon when the regular head was broken off. The cavalry used a shorter lance (*πάλτον*) for hurling as well as thrusting; this was much shorter than the Macedonian *σάρισσα*. The other weapons of attack were javelins (*ἀκόντια*) of different sizes, the longer kinds of which were hurled by means of a thong, bows and arrows (see ARCUS), and slings. On the equipment of the different kinds of troops, see GYMNETAE; HIPPEIS; HOPLITAE; PELTASTAE.

Among the Romans the full equipment of defensive armour similarly consisted of helmet (*cassis, galea*), cuirass (see LORICA), greaves (*ocrea*), and shield (*clipeus, scutum*). With regard to the greaves, it must be noted that in later times the infantry wore them only on the right leg, which was unprotected by the shield.

Besides the sword (*ensis, gladius*), the horse and foot of the legion alike used, as an offensive weapon, the lance (see HASTA). It was only the light-armed troops that fought with javelins and slings. Then the *pilum* (q. v.) was introduced, first for a part and finally for the whole of the legion. This was the missile which the Romans hurled at the commencement of a battle before coming to close quarters with their swords. Bows were not a national weapon with the Romans, and were only used by their allies. See EXERCITUS; LEGIO.

Armamenta. A term more particularly applied to the tackle of a ship. See NAVIS.

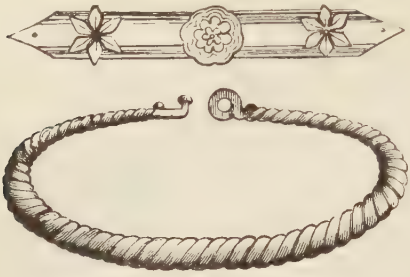
Armamentarium (*ὁπλοθήκη, σκευοθήκη*). A place where *armamenta* (q. v.) were kept. A naval arsenal. A very celebrated one was that in the Piraeus (q. v.), built about B.C. 342–330, and destroyed by Sulla. See Plut. *Sulla*, 14.

Armarium, from a Pompeian Painting. (Rich.)

Armarium. A cupboard, book-case, or closet. In private houses it was usually placed in the *atrium* (q. v.). In an inscription (Orelli, 4549) the word is applied to a sepulchre.

Armenia (Ἀρμενία). A country of Asia, lying between Asia Minor and the Caspian Sea, in a lofty table-land, backed by the chain of the Caucasus, watered by the rivers Cyrus and Araxes, and containing the sources of the Tigris and of the Euphrates, the latter of which divides the country into two unequal parts, which were called Maior and Minor. The people of Armenia were one of the most ancient families of that branch of the human race which is called Caucasian. (See INDO-EUROPEAN LANGUAGES.) They were conquered by the Assyrians and Persians, and were at a later time subject to the Greek kings of Syria. When Antiochus the Great (q. v.) was defeated by the Romans (B.C. 190), the country regained its independence, and was at this period divided into the two kingdoms of Armenia Maior and Minor. Ultimately, Armenia Minor was made a Roman province by Trajan; and Armenia Maior, after being a perpetual object of contention between the Romans and the Parthians, was subjected to the revived Persian Empire by its first king, Artaxerxes, in A.D. 226.

Armilausa. A kind of military tunic worn by foot-soldiers and reaching to the knees. See Mayor on Juv. v. 143; and Ducange, *s. h. v.* (ed. Favre, 1883).



Armilla (*ψέλεον, ὄφις*). A bracelet or armlet. Among the Persians and Medes these ornaments were worn by men, probably as a mark of distinction (Herod. viii. 113); but in Greece they seem to have been confined to women, or to effeminate men. The Greek name *ὄφεις* (also *δράκοντες*) was given them because of their serpentine shape.

Bracelet. (On Statue of Sleeping Ariadné in the Vatican.)

Bracelets were likewise worn at Rome by ladies of rank, but it was considered a mark of effeminacy for men in an ordinary way to use such feminine ornaments (Suet. *Cal.* 52; *Ner.* 30). They were, however, publicly conferred by a Roman general upon soldiers for deeds of extraordinary

merit (Liv. x. 44; Plin. *H. N.* xxxiii. § 37), in which case they were worn as a mark of honour, and probably differed in form from the ordinary ornaments of the kind.

Roman Bracelets.

The cut below shows the Roman military bracelet. The original, which is of pure gold, was found in Cheshire, England.

Roman Military Bracelet.

Armillum. A wine-jug (*urceolus*) used in sacrifices, and carried on the shoulder (*armus*), whence the name.

Armilustrium. A Roman festival for the purification of arms, and celebrated annually on the 19th of October. It marked the end of the campaigning season, as the Quinquatrus marked the beginning of it. See Mommsen, *Inscr. Lat. Ant.* p. 404; and Livy, xxvii. 37.

Arminius. The Latinized form of *Hermann*, "the chieftain." Son of Sigimer, and chief of the tribe of the Cherusci, who inhabited the country to the north of the Hartz Mountains, now forming the south of Hanover and Brunswick. He was born in B.C. 18; and in his youth he led the Cherusci as auxiliaries of the Roman legions in Germany, where he learned the Roman language, was admitted to the freedom of the city, and enrolled among the equites. In A.D. 9, Arminius persuaded his countrymen to rise against the Romans, who were now masters of this part of Germany. His attempt was crowned with success. Quintilius Varus, who was stationed in the country with three legions, was destroyed, with almost all his troops (see VARUS); and the Romans had to relinquish all their possessions beyond the Rhine. In A.D. 14, Arminius had to defend his country against Germanicus. At first he was successful, but Germanicus made good his retreat to the Rhine. It was in the course of this campaign that Thusnelda, the wife of Arminius, fell into the hands of the Romans. In A.D. 16, Arminius was defeated by Germanicus, and his country was probably only saved from subjection by the jealousy of Tiberius, who recalled Germanicus in the following year. At length Arminius aimed at absolute power, and was in consequence cut off by his own relations in the thirty-seventh year of his age, A.D. 19. A colossal statue of Arminius by Bandel was erected in August, 1875, near Detmold in Germany. See Böttger, *Hermann der Cheruskerfürst* (1874), and the article GERMANIA.

Armoracia (*ῥαφανίς*). Horseradish.

Armorĭca or **Aremorĭca.** The name of the northwest coast of Gaul from the Ligeris (Loire) to the Sequana (Seine), derived from the Keltic *ar, air*, "upon;" *muir, môr*, "the sea." Later, the name was confined to Brittany.

Army. See CASTRA; EXERCITUS; LEGIO; SACRAMENTUM.

Arné (*Ἀρνη*). A daughter of Aeolus, who gave her name to two towns, one in Thessaly and the other in Boeotia. Poseidon, under the form of a bull, became her lover (Pausan. ix. 40; Ovid, *Met.* vi. 4).

Arnēis (*Ἀρνηΐς*). The same as Arnis (q. v.).

Arnis (*Ἀρνίς*). A festival held by the Argives in August, during which they killed any dog that came into the Agora; hence the name *κυνοφόντις* given to the feast (Athen. iii. p. 99 *e*). The massacre of dogs was probably due to the fear of madness, as was the similar killing of dogs at Rome in the same month, which is, however, usually assigned to their having failed to give notice of the attack of the Gauls on the Capitol. See Pliny, *H. N.* xxix. 59.

Arnobius. An African who won a high reputation as a master of rhetoric at Sicca in Numidia, in the reign of Diocletian. He was at first a heathen and an assailant of Christianity; but on becoming a Christian, to prove the sincerity of his conversion, he wrote (about A.D. 295) the extant work *Adversus Gentes*. This is a superficial and rhetorical defence of Christianity and attack on polytheism, but it is full of instruction with regard to the contemporary heathenism and its various worships. It is contained in seven books. The text is derived from a MS. in Paris of the ninth century, in which the work is entitled *Adversus Nationes*. The *editio princeps* is that of Sabaeus (Rome, 1543). Good editions are those of Hillebrand (Halle, 1844), and Reifferscheid (1875). Eng. trans. in the *Ante-Nicene Library*, vol. xix.

Arnus. The modern Arno; the chief river of Etruria, which, rising in the Apennines, and flowing by Pisae (Pisa), emptied into the Tuscan Sea.

Arŏtoi Hiĕroi (*ἄροτοι ἱεροί*). "Sacred ploughings," three in number, held in Attica in the month Maimacterion (Nov.–Dec.), to commemorate the institution of agriculture. The first ploughing was held at Sciros; the second on the Rarion Plain near Eleusis; the third under the Acropolis. A family of priests known as *Βουζύγιοι*, a sort of Arval Brotherhood (see FRATRES ARVALES), cared for the sacred plough and oxen. See Schömann, *Griech. Alt.* ii. 266.

Arpi. See ARGYRIPA.

Arpīnum. A town of Latium on the river Fibrenus, originally belonging to the Volscians and afterwards to the Samnites, was a Roman municipium, and received the *ius suffragii*, or right of voting in the Roman Comitia, B.C. 188. It was the birthplace of Marius and Cicero.

Arquītes. See SAGITTARII.

Arra, Arrăbo. An earnest. The word *arrabo* is Semitic, and occurs (*ἀρραβών, LXX.*) in Gen. xxxviii. 17–20, of a ring, bracelets, and staff given as a pledge for the price, and the corresponding verb in Hebrew several times. The Phœnician traders probably brought word and custom to Greece, and Plautus probably followed in this a Greek original. He uses the word for anything given as sign of a bargain being made and as pledge of its fulfilment. The original idea seems to have been a temporary deposit reclaimable on the bargain being fulfilled. The thing thus serving as *arra* ("earnest"—"arles," Scotch; *les arrhes*, French; "erles penny," North-Country English), given on hiring a servant—"Queen's shilling" in enlisting recruits (*Handgeld, Gottesheller, Weinkauf*, in Germany)—might be a mere token or a pledge of some value, as a ring or a piece of money, or might pass into part payment of the price or part delivery of the thing purchased, and, according to any special agreement or custom, might be forfeitable by the party not carrying out his bargain, such forfeit being in lieu of or in addition to other remedies for breach of contract.

Arretium. The modern Arezzo; one of the more important of the twelve cities of Etruria, was situated in the northeast of the country at the foot of the Apennines, and possessed a fertile territory near the sources of the Arnus and the Tiber, producing good wine and corn. It was particularly celebrated for its pottery.

Arrhephoria (*τὰ ἀρρηφόρια*). A festival which, according to the various ways in which the name is written (for we find *ἐρσηφόρια* or *ἐρρηφόρια*), is attributed to different deities. The first form is derived from *ἄρρητα*, and thus would indicate a festival at which mysterious things were carried about. The other name would point to Ersé or Hersé, who was believed to be a daughter of Cecrops, and whose worship was intimately connected with that of Athené. But, even admitting the latter, we still have sufficient ground for believing that the festival was solemnized, in a higher sense, in honour of Athené. It was held at Athens, in the month of Scitophorion. See Mommsen, *Heortologie*, pp. 443 foll.

Arrhidaeus (*Ἀρριδαῖος*). The son of Philip of Macedon and a female dancer, Philinna of Larissa. He was of imbecile understanding. On the death of Alexander, B.C. 323, he was elected king under the name of Philip, and in 322 he married Eurydicé. On their return to Macedonia he and his wife were made prisoners and put to death by order of Olympias, in the year 317.

Arria. (1) See PAETUS. (2) See THRASEA.

Arrĭānus, FLAVIUS. A Greek author, who wrote chiefly on philosophy and history. He was born at Nicomedia in Bithynia, towards the end of the first century A.D., and was a pupil of the Stoic philosopher Epictetus. He lived under the emperors Hadrian, Antoninus Pius, and Marcus Aurelius, enjoying a high reputation for culture and ability, which procured him the citizenship of Rome and Athens, and high offices of state, such as the governorship of Cappadocia under Hadrian, A.D. 136, and the consulship under Antoninus. His last years were spent in his native town, where he filled the office of priest to Demeter, and died at an advanced age. From the likeness of his character to that of the famous Athenian, he was nicknamed "Xenophon Junior." Of his philosophical works we have still the first half (four books) of the *Discourses of Epictetus*, a leading authority for the tenets of that philosopher and the Stoical ethics; and the handbook called the *Encheiridion of Epictetus*, a short manual of morality, which on account of its pithy and practical precepts became a great favourite with Pagans and Christians, had a commentary written on it by Simplicius in the sixth century, and after the revival of learning was long used as a school-book. Of his numerous historical writings we possess the chief one, the *Anabasis of Alexander*, in seven books. This is a complete history of that conqueror from his accession to his death, drawn from the best sources, especially Ptolemy and Aristobulus, and modelled on Xenophon, of whom we are reminded by the very title and the number of books, though it has none of Xenophon's charm. It is the best work on Alexander that has survived from antiquity. To this we should add the *Indica*, a short work on India, written in the Ionic dialect, and especially valuable for its abstract of Nearchus's report of his voyage from the mouth of the Indus to the Persian Gulf; also the description of another coasting voyage, the *Periplus Ponti Euxini*, and a trifling treatise on hunting, the *Cynegeticus*. A work on tactics wrongly ascribed to him is probably from the hand of Aelian the Tactician. Of his other histories—e. g. of the successors of Alexander, of Trajan's battles with the Parthians, of his own native country till its absorption into the Empire, and the campaign against the Alani during his command in Cappadocia—we have only abstracts or fragments. The best edition of the *Anabasis* is that of Krüger (1848). There is an English translation by Chinnock (1893).

Arrogatio. One of the Roman methods of adoption. See ADOPTIO.

Arsăces (*Ἀρσάκης*). The name of (1) the founder of the Parthian Empire, which was also borne by all his successors, who were hence called the *Arsacidae*. He was of obscure origin, but he induced the Parthians to revolt from Antiochus II., king of Syria, and became the first monarch of the Parthians, about B.C. 250. The events which immediately followed are stated very differently by different historians. He reigned only two years, and was succeeded by his brother Tiridates. (2) TIRIDĀTES, reigned thirty-seven years, B.C. 248–211, and defeated Seleucus Callinicus, the successor of Antiochus II. (3) ARTABĀNUS I., son of the preceding, was attacked by Antiochus III. (the Great), who, however, at length recognized him as king, about 210. (4) PRIAPATIUS, son of the preceding, reigned fifteen years, and left three sons, Phraates, Mithridates, and Artabanus. (5) PHRAATES I. was succeeded by his brother (6) MITHRIDĀTES I., who greatly enlarged the Parthian Empire by his conquests. He defeated Demetrius Nicator, king of Syria, and took him prisoner in 138. He died during the captivity of Demetrius, between 138 and 130. (7) PHRAĀTES II., son of the preceding, defeated and slew in battle Antiochus VII. Sidetes, B.C. 128. Phraates himself was shortly after killed by the Scythians. (8) ARTABĀNUS II., youngest son of No. 4, fell in battle against the Thogarii or Tocharii, apparently after a short reign. (9) MITHRIDĀTES II., son of the preceding, added many nations to the Parthian

Coin of Arsaces VI. (Mithridates I.).

Empire, whence he obtained the surname of Great. He sent an ambassador to Sulla, B.C. 92. (10) MNASCĪRES (?), the successor of the preceding, of whom nothing is known. (11) SANATRŎCES, reigned seven years, and died about B.C. 70. (12) PHRAATES III., son of the preceding, lived at the time of the war between the Romans and Mithridates of Pontus, by both of whom he was courted. He was murdered by his two sons, Mithridates and Orodes. (13) MITHRIDĀTES III., son of the preceding, was expelled from the throne on account of his cruelty, and was succeeded by his brother Orodes. (14) ORŌDES I., brother of the preceding, was the Parthian king whose general Surenas defeated Crassus and the Romans, B.C. 53. (See CRASSUS.) After the death of Crassus, Orodes gave the command of the army to his son Pacorus, who invaded Syria both in 51 and 50, but was in each year driven back by Cassius. In 40, the Parthians again invaded Syria, under the command of Pacorus and Labienus, but were defeated in 39 by Ventidius Bassus, one of Antony's legates. In 38, Pacorus once more invaded Syria, but was completely defeated and fell in the battle. This defeat was a severe blow to the aged king, Orodes, who shortly afterwards surrendered the crown to his son Phraates during his lifetime. (15) PHRAATES IV. was a cruel tyrant. In 36, Antony invaded Parthia, but was obliged to retreat after losing a great part of his army. A few years afterwards Phraates was driven out of the country by his subjects, and Tiridates proclaimed king in his stead. Phraates, however, was soon restored by the Scythians, and Tiridates fled to Augustus, carrying with him the youngest son of Phraates. Augustus restored his son to Phraates, on condition of his surrendering the Roman standards and prisoners taken in the war with Crassus and Antony. They were given up in 20, and their restoration was celebrated not only by the poets, but by festivals and commemorative monuments. Phraates also sent to Augustus as hostages his four sons. In A.D. 2, Phraates was poisoned by his wife Thermusa and her son Phraataces. (16) PHRAATĂCES reigned only a short time, as he was expelled by his subjects on account of his crimes. The Parthian nobles then elected as king Orodes, who was of the family of the Arsacidae. (17) ORŌDES II. also reigned only a short time, as he was killed by the Parthians on account of his cruelty. Upon his death the Parthians applied to the Romans for Vonones, one of the sons of Phraates IV., who was accordingly granted to them. (18) VONŌNES I., son of Phraates IV., was also disliked by his subjects, who therefore invited Artabanus, king of Media, to take possession of the kingdom. Artabanus drove Vonones out of Parthia, who resided first in Armenia, next in Syria, and subsequently in Cilicia. He was put to death in A.D. 19. (19) ARTABĀNUS III. obtained the Parthian kingdom soon after the expulsion of Vonones, about A.D. 16. Artabanus was involved in hostilities with the Romans, and was expelled more than once by his subjects. (20) GOTARZES succeeded his father, Artabanus III., but was defeated by his brother Bardanes and retired into Hyrcania. (21) BARDĀNES, brother of the preceding, was put to death by his subjects in 47, whereupon Gotarzes again obtained the crown. (22) VONŌNES II. succeeded Gotarzes about 50. His reign was short. (23) VOLOGĒSES I., son of Vonones II. or Artabanus III. Soon after his accession he conquered Armenia, which he gave to his brother Tiridates. He carried on war with the Romans, but was defeated by Domitius Corbulo, and at length made peace with the Romans on condition that Tiridates should receive Armenia as a gift from the Roman emperor. Accordingly Tiridates came to Rome in 63, and obtained from Nero the Armenian crown. (24) PACŎRUS succeeded his father, Vologeses I., and was a contemporary of Domitian and Trajan. (25) CHOSROËS or OSROËS succeeded his brother Pacorus during the reign of Trajan. His conquest of Armenia occasioned the invasion of Parthia by Trajan, who stripped it of many of its provinces, and made the Parthians for a time subject to Rome. (See TRAIANUS.) Upon the death of Trajan, in A.D. 117, Hadrian relinquished the conquests of Trajan, and made the Euphrates, as before, the eastern boundary of the Roman Empire. (26) VOLOGĒSES II. succeeded his father, Chosroës, and reigned from about A.D. 122 to 149. (27) VOLOGĒSES III. was defeated by the generals of the emperor Verus, and purchased peace by ceding Mesopotamia to the Romans. From this time to the downfall of the Parthian Empire there is great confusion in the list of kings. The last king of Parthia was ARTABĀNUS IV., in whose reign the Persians recovered their long-lost independence.

Coin of Parthian Arsacidae.

They were led by Artaxerxes, the son of Sassan, and defeated the Parthians in three great battles, in the last of which Artabanus was taken prisoner and killed, A.D. 226. Thus ended the Parthian Empire of the Arsacidae, after it had existed 476 years. The Parthians were now obliged to submit to Artaxerxes, the founder of the dynasty of the Sassanidae, which continued to reign till A.D. 651. See PARTHIA.

Arsacia (Ἀρσακία). See RHAGAE.

Arsacĭdae. The name of a dynasty of Parthian kings. (See ARSACES.) It was also the name of a dynasty of Armenian kings, who reigned in Armenia from B.C. 149 to A.D. 428.

Ars Amōris or **Ars Amatoria.** A poem on the art of love by P. Ovidius Naso (q. v.), brilliant and licentious, whose immorality was at least the pretence of its author's subsequent banishment by Augustus. It is in three books.

Ars Donāti. The title of a grammar by Aelius

Donatus (q. v.) that was a favourite school-book in the Middle Ages, so that in Old English the word "donat" (Chaucer) is used as a generic term for a grammar.

Arsinŏë (Ἀρσινόη). (1) The daughter of Meleager, and mother of Ptolemy I. of Egypt, by Philip, father of Alexander. During her pregnancy she was married to Lagus. (2) The daughter of Ptolemy I. of Egypt and Berenicé. She married Lysimachus, king of Thrace, who was already advanced in years, by whom she had several children. Lysimachus, setting out for Asia, left her in Macedonia, with two sons, Lysimachus and Philip, a part of the fruits of their union. This monarch having been slain in an expedition, Ptolemy Ceraunus seized on Macedonia, but could not take the city of Cassandria, where Arsinoé had taken refuge with her children. He therefore offered her his hand in marriage, and with much difficulty obtained her consent. But no sooner had he been admitted into the city for the purpose of celebrating the nuptials, than he caused her two sons to be slain, and exiled Arsinoé herself to Samothrace. From this island she soon took her departure to wed Ptolemy Philadelphus, her own brother, the first instance of this kind of union, and which became afterwards so common in the time of the Ptolemies. Although many years older than Ptolemy, she nevertheless inspired him with such a passion that, after her death, he gave her name to one of the nomes of Egypt (Arsinoïtis), and to several cities both in that country and elsewhere. He even gave orders to have a temple erected to her, but his own death and that of the architect prevented the fulfilment of his wishes. It was intended to have had the ceiling of loadstone, and the statue of iron, in order that the latter might appear to be suspended in the air (Plin. *H. N.* xxxiv. 14). (3) A daughter of Lysimachus, king of Thrace, and the earlier wife of Ptolemy Philadelphus. She became by him the mother of Ptolemy III. (Energetes), Lysimachus, and Berenicé. After Ptolemy's union with Arsinoé, his own sister, she was banished to Coptos. The charge brought against her was a design to overthrow her rival. (4) Daughter of Ptolemy III. and Berenicé, married Ptolemy Philopator, her brother. Her husband subsequently having become enamoured of Agathoclea, and being completely ruled by this woman and her brothers, was induced, at their instigation, to order Arsinoé to be put to death. (5) A daughter of Ptolemy Auletes, proclaimed queen by Ganymedes, when Caesar attacked Alexandria. She was conquered, and brought in triumph to Rome; but, as this proved displeasing to the people, she was set at liberty. Subsequently, at the instigation of her younger sister Cleopatra, she was put to death by the orders of Antony, in the Temple of Artemis at Miletus. See Mahaffy's *Empire of the Ptolemies* (1896).

Arsinŏë (Ἀρσινόη). The name of several cities, each called after one or other of the persons mentioned above. Of these the most important were: (1) In the Nomos Heroöpolites in Lower Egypt, near or upon the head of the Sinus Heroöpolites, or west branch of the Red Sea (Gulf of Suez). It was afterwards called Cleopatra. (2) The chief city of the Nomos Arsinoïtes in Middle Egypt; formerly called Crocodilopolis, from its being the chief seat of the Egyptian worship of the crocodile.

Ars Poetĭca. A poetical epistle written by Q. Horatius Flaccus (q. v.) in hexameters, and addressed to the Pisos. It is best regarded as an expression of his matured views on topics connected with literary studies. It abounds in happy turns of phrase, and is marked throughout its lines by sound sense and excellent literary taste.

Art, Ancient. See the articles Aes; Architectura; Aurum; Caelatura; Columna; Fictilé; Gemma; Numismatics; Pictura; Statuaria.

Artăba (ἀρτάβη). A Persian measure of capacity, much used as a corn-measure, and containing 51 choenices, or 12¾ gallons, nearly (Herod. i. 192).

Artabānus (Ἀρτάβανος). (1) Son of Hystaspes and brother of Darius; is frequently mentioned in the reign of his nephew Xerxes as a wise and frank counsellor. (2) An Hyrcanian, commander of the body-guard of Xerxes, assassinated this king in B.C. 465, but was shortly afterwards killed by Artaxerxes. (3) The name of several kings of Parthia.

Artabāzes (Ἀρταβάζης) or **Artavasdes**. A king of Armenia, the son and successor of Tigranes, who began to reign about B.C. 70. It was principally through his treacherous advice, as to the mode of entering Parthia, that Crassus failed in his expedition against that country. He was subsequently taken by Antony, to whom he had also acted a treacherous part in his Parthian expedition, who led him in triumph at Alexandria. He was put to death, after the battle of Actium, by Cleopatra, who wished to obtain assistance from the king of Media, and therefore sent him the head of Artavasdes, his enemy. The prince appears to have been a very well educated man. He wrote in Greek two historical works, some tragedies, discourses, etc. (Plut. *Anton.* 50, seqq.).

Artaxăta (τὰ Ἀρτάξατα). The chief city of Greater Armenia, and the seat of the kings. It was burned by the Roman Corbulo (q. v.), and when rebuilt by Tiridates was named Neronea, in honour of the emperor Nero. See Artaxias.

Artaxerxes (Ἀρταξέρξης). The name of four Persian kings. (1) Surnamed Longimănus, from his right hand being longer than his left, succeeded his father, Xerxes I., and reigned B.C. 465–425. He carried on war against the Egyptians, who were assisted in their revolt by the Athenians. He was succeeded by his son, Xerxes II. (2) Surnamed Mnemon, from his good memory, succeeded his father, Darius II., and reigned B.C. 405–359. Respecting the war between him and his brother Cyrus, see Cyrus. Tissaphernes was appointed satrap of Western Asia in the place of Cyrus, and was actively engaged in wars with the Greeks. Artaxerxes had to carry on frequent wars with tributary princes and satraps, who endeavoured to make themselves independent. Thus he maintained a long struggle against Evagoras of Cyprus, from 385 to 376; and his attempts to recover Egypt were unsuccessful. Towards the end of his reign he put to death his eldest son Darius, who had formed a plot to assassinate him. His last days were still further embittered by the unnatural conduct of his son Ochus, who caused the destruction of two of his brothers, in order to secure the succession for himself. Artaxerxes was succeeded

by Ochus, who ascended the throne under the name of Artaxerxes III. (3) Also called OCHUS, reigned B.C. 359–338. By the aid of his Greek generals and mercenaries he reconquered Phœnicia and Egypt. The reins of government were entirely in the hands of the eunuch Bagoas and of Mentor the Rhodian. At last he was poisoned by Bagoas, and was succeeded by his youngest son, Arses. (4) The founder of the dynasty of the Sassanidae. See PERSIA; SASSANIDAE.

Artaxĭas (Ἀρταξίας) or **Artaxes**. The name of three kings of Armenia. (1) The founder of the Armenian kingdom, was one of the generals of Antiochus the Great, but revolted from him about B.C. 188, and became an independent sovereign. Hannibal took refuge at the court of Artaxias, and superintended the building of Artaxata, the capital of Armenia. Artaxias was conquered and taken prisoner by Antiochus IV. Epiphanes, about 165. (2) Son of Artavasdes, was put to death by his own subjects in B.C. 20, and Augustus placed Tigranes on the throne. (3) Son of Polemon, king of Pontus, was proclaimed king of Armenia by Germanicus in A.D. 18. He died about 35.

Artemidōrus (Ἀρτεμίδωρος). (1) THE GEOGRAPHER, a native of Ephesus, who travelled about B.C. 100 through the countries bordering on the Mediterranean and part of the Atlantic coast, and wrote a long work on his researches, the *Γεωγραφούμενα*, in eleven books, as well as an abstract of the same. Of both works, which were much consulted by later geographers, we have only fragments. (2) THE DREAM-INTERPRETER, born at Ephesus at the beginning of the second century A.D., surnamed "the Daldian," from his mother's birthplace, Daldis in Lydia, wrote a work on the interpretation of dreams, the *Ὀνειροκριτικά*, in four books. He had gathered his materials from the works of earlier authors and by oral inquiries during his travels in Asia, Italy, and Greece. The book is an acute exposition of the theory of interpreting dreams, and its practical application to examples systematically arranged according to the several stages of human life. An appendix, counted as a fifth book, gives a collection of dreams that have come true. For the light thrown on the mental condition of antiquity, especially in the second century A.D., and for many items of information on religious rites and myths relating to dreams, these writings are of value. See Reichardt, *De Artemidoro Daldiano* (1893).

Artĕmis (Ἄρτεμις). The virgin daughter of Zeus and Leto (Latona), by the common account born a twin-sister of Apollo, and just before him, at Delos. The Ortygia (see ASTERIA) named in another tradition as her birthplace was interpreted to mean Delos, though several other places where the worship of Artemis had long prevailed put forward pretensions to that name and its mythological renown, especially the well-known island of Ortygia off Syracuse. She, as well as her mother, was worshipped jointly with her brother at Delos, Delphi, and all the most venerable spots where Apollo was honoured. She is armed, as he is, with bow and arrows, which, like him, and often together with him, she wields against monsters and giants; hence the pæan was chanted to her as well as to him. Like those of Apollo, the shafts of Artemis were regarded as the cause of sudden death, especially to maidens and wives. But she was also a beneficent and helpful deity. As Apollo is the luminous god of day, she with her torch is a goddess of light by night, and in course of time becomes identified with all possible goddesses of moon and night. (See SELENÉ; HECATÉ; BENDIS; BRITOMARTIS.) Her proper domain is that of nature, with its hills and valleys, woods, meadows, rivers, and fountains; there, amid her nymphs, herself the fairest and tallest, she is a mighty huntress, sometimes chasing wild animals, sometimes dancing, playing, or bathing with her companions. Her favourite haunt was thought to be the mountains and forests of Arcadia, where, in many spots, she had sanctuaries, consecrated hunting-grounds, and sacred animals. To her, as goddess of the forest and the chase, all beasts of the woods and fields—in fact, all game—were dear and sacred; but her favourite animal was held all over Greece

Diana of Versailles. (Louvre.)

to be the hind. From this sacred animal and the hunting of it, the month which the other Greeks called Artemision or Artemisios (March-April) was named by the Athenians Elaphebolion (Ἐλαφηβολιών), and her festival as goddess of game and hunting, at which deer or cakes in the shape of deer were offered up, Elaphebolia. As goddess of the chase, she had also some influence in war, and the Spartans before battle sought her favour by the gift of a she-goat. Miltiades, too, before the battle of Marathon, had vowed to her as many goats as there should be enemies fallen on the field; but the number proving so great that the vow could not be kept, five hundred goats were sacrificed at each anniversary of the victory in the month of Boedromion. Again, she was much worshipped as the goddess of the moon. At Amarynthus in Euboea the whole island kept holiday to her with processions and prize-fights. At Munychia in Attica, at full moon in the month of Munychion (April-May), large round loaves or cakes, decked all around with lights as a symbol of her own luminary, were borne in procession and presented to her; and at the same time was solemnized the festival of the victory of Salamis in

Cyprus, because on that occasion the goddess had shone in her full glory on the Greeks. An ancient shrine of the Moon-goddess at Brauron in Attica was held in such veneration that the Brauronia, originally a merely local festival, was afterwards made a public ceremony, to which Athens itself sent deputies every five years, and a precinct was dedicated to "Artemis of Brauron" on the Acropolis itself. (See ACROPOLIS.) At this feast the girls between five and ten years of age, clad in saffron-coloured garments, were conducted by their mothers in procession to the goddess and commended to her care; for Artemis is also a protectress of youth, especially those of her own sex. As such she patronized a nurses' festival at Sparta in a temple outside the town, to which little boys were brought by their nurses; while the Ionians at their Apaturia (q. v.) presented her with the hair of boys. Almost everywhere young girls revered the virgin goddess as the guardian of their maiden years, and before marriage they offered up to her a lock of their hair, their girdle, and their maiden garment. She was also worshipped in many parts as the goddess of good repute, especially in youths and maidens, and was regarded as an enemy of all disorderly doings. With her attributes as the goddess of the moon, and as the promoter of healthy development, especially in the female frame, is connected the notion of her assisting in childbirth. (See ILITHYIA.) In early times human sacrifices had been offered to Artemis. A relic of this was the yearly custom observed at Sparta of flogging the boys till they bled at the altar of a deity not unknown elsewhere and named Artemis Orthia (the upright), probably from her stiff posture in the antiquated wooden image. At Sparta, as in other places, the ancient image was looked upon as the same which Iphigenia and Orestes brought away from Tauris (the Crimea)—viz., that of the Tauric Artemis, a Scythian deity who was identified with Artemis because of the human sacrifices common in her worship. The Artemis of Ephesus, too, so greatly honoured by all the Ionians of Asia (Acts, xix. 28), is no Greek divinity, but Asiatic. This is sufficiently shown by the fact that eunuchs were employed in her worship—a practice quite foreign to Greek ideas. The Greek colonists identified her with their own Artemis, because she was goddess of the moon and a power of nature, present in mountains, woods, and marshy places, nourishing life in plants, animals, and men. But, unlike Artemis, she was not regarded as a virgin, but as a mother and foster-mother, as is clearly shown by the multitude of breasts in the effigy. Her worship, frantic and fanatical after the manner of Asia, was traced back to the Amazons. A number of other deities native to Asia were also worshipped by the Greeks under the name of Artemis.

Ancient Representation of the Ephesian Artemis.

Artemis appears in works of art as the ideal of austere maiden beauty—tall of stature, with bow and quiver on her shoulder, or torch in her hand, and generally leading or carrying a hind, or riding in a chariot drawn by hinds. Her commonest character is that of a huntress. In earlier times the figure is fuller and stronger and the clothing more complete; in later works she is represented as more slender and lighter of foot, the hair loose, the dress girt high, the feet protected by the Cretan shoe. The most celebrated of her existing statues is the Diana of Versailles, from Hadrian's villa at Tibur. On the identification of Artemis with the Italian Diana, see DIANA.

Artemisia (Ἀρτεμισία). (1) The daughter of Lygdamis of Halicarnassus, reigned over Halicarnassus, and also over Cos and other adjacent islands. She joined the fleet of Xerxes, when he invaded Greece, with five vessels, the best equipped of the whole fleet after those of the Sidonians; and she displayed so much valour and skill at the battle of Salamis as to elicit from Xerxes the well-known remark that the men had acted like women in the fight and the women like men. The Athenians, indignant that a woman should appear in arms against them, offered a reward of 10,000 drachmae to any one who should take her prisoner. She, however, escaped after the action (Herod. vii. 99; viii. 88, 93). If we are to believe Ptolemy Hephaestion, a writer who mixed up many fables with some truth, Artemisia subsequently conceived an attachment for a youth of Abydos, named Dardanus; but, not meeting with a return for her passion, she put out his eyes while he slept, and then threw herself down from the Lover's Leap at the promontory of Leucaté. (2) Another queen of Caria, not to be confounded with the preceding. She was the daughter of Hecatomnus, king of Caria, and married her brother Mausolus, a species of union sanctioned by the customs of the country. She lost her husband, who was remarkable for personal beauty, B.C. 365, and she became, in consequence, a prey to the deepest affliction. A splendid tomb was erected to his memory, called Mausoleum (Μαυσωλεῖον, scil. μνημεῖον, i. e. "tomb of Mausolus"), and the most noted writers of the day were invited to attend a literary contest, in which ample rewards were to be bestowed on those who should celebrate with most ability the praises of the deceased. Among the individuals who came together on that occasion were, according to Aulus Gellius (x. 18), Theopompus, Theodectes, Naucrites, and even Isocrates. The prize was won by Theopompus. Valerius Maximus and Aulus Gellius relate a marvellous story concerning the excessive grief of Artemisia. They say that she actually mixed the ashes of her husband with water and drank them off (Val. Max. iv. 6). The grief of Artemisia, poignant though it was, did not cause her to neglect the care of her dominions: she conquered the island of Rhodes, and gained possession of some Greek cities on the mainland; and yet it is said that she died of grief two years after the loss of her husband. See MAUSOLEUM.

Artemisia (τὰ Ἀρτεμίσια). Festivals celebrated in honour of Artemis (q. v.) in various parts of Greece in the spring.

Artemisium (Ἀρτεμίσιον). A promontory on the northwestern coast of Euboea, and noted for the naval victory won by the Greeks over the Persians on the same day as the battle of Thermopylae (Herod. vii. 175), in B.C. 480.

Artes Liberāles. See LIBERALES ARTES.

Artiazein (*ἀρτιάζειν*). See PAR IMPAR.

Artifĭces. Artisans. See COLLEGIUM.

Artŷnoi or **Artynai** (*ἄρτυνοι, ἄρτυναι*). A deliberative and executive council in Argos and Epidaurus, inside the governing aristocracy. See Müller, *Dorier*, ii. 140.

Arundo. See CALAMUS.

Aruns. An Etruscan word which was regarded by the Romans as a proper name, but perhaps signified a younger son in general. (1) Younger brother of Lucumo, i. e. L. Tarquinius Priscus. (2) Younger brother of L. Tarquinius Superbus; was murdered by his wife. (3) Younger son of Tarquinius Superbus; fell in combat with Brutus.

Arūra (*ἄρουρα*). A Greek measure of surface = 21,904 sq. ft. English. See Hultsch, *Metrol.* p. 38, n. 4; and id. p. 284.

Arusiānus Messius. A Latin grammarian who flourished about A.D. 390, and made an alphabetical collection, for use in schools, of words that admit of various constructions, with examples from Terence, Cicero, Vergil, and Sallust. The title of the collection was *Exempla Elocutionum*. The text is printed in Keil's *Grammatici Latini*, vii. 449. See Gräfenhan, *Geschichte d. class. Philol.* iv. 194–196.

Arūspex. See HARUSPEX.

Arvāles Fratres. See FRATRES ARVALES.

Arx (*ἄκρα*). A height within the walls of a city. The same city could have several *arces*, as was the case with Rome; but, as there was generally one principal *arx*, the word came to be equivalent to Acropolis (q. v.). At Rome one of the summits of the Capitoline Hill was especially known as the Arx, the German school of topography placing it on the northeast summit (*Arx Caeli*) and the Capitolium (q. v.) on the southwest (Palazzo Caffarelli). At Rome the Arx was the regular place for taking the auspices (Livy, i. 18; x. 7); outside the wall the haruspex turned towards it if it was in sight (Livy, iv. 18). See HARUSPEX.

Aryan Languages. See INDO-EUROPEAN LANGUAGES.

Aryballos (*ἀρύβαλλος*). A vessel resembling the ampulla or *λήκυθος*. See AMPULLA.

Arzanēné (*Ἀρζανηνή*). A district of Armenia Maior, bounded on the south by the Tigris, forming part of Gordyené.

As (*libra*). A pound; the unit of weight among the Romans. See LIBRA; PONDERA.

As. The unit of value in the Roman and Old Italian coinages, and made of copper or bronze. (See AES.) It was originally a pound of copper (*aes grave*), of the value of 16⅔ cents, and was uncoined (*aes rude*). Servius Tullius stamped upon it the figures of animals (hence the term *pecunia*, from *pecus*). In the First Punic War, money being scarce, the *as* was reduced to one sixth of its original weight, and to a value of 2.8 cents. In the Second Punic War it was again reduced, so as to weigh but one ounce, having a value of 1.4 cents. The Lex Papiria (B.C. 191) still further reduced the *as* to half an ounce in weight, and a value of 7.9⅓ mills, which continued the standard weight and value even under the Empire. For a fuller account, see the article NUMISMATICS (Roman).

Asaminthus (*ἀσάμινθος, σκαφή, ἔμβασις*). A bath-tub used in Homeric times, in which the bather sat while hot water was poured over his head and shoulders. See *Odyss.* x. 361, and the article BALNEAE.

Asander (*Ἄσανδρος*). (1) Son of Philotas, brother of Parmenio, and one of the generals of Alexander the Great. After the death of Alexander (B.C. 323) he obtained Caria for his satrapy. (2) A general of Pharnaces II., king of Bosporus, whom he put to death in B.C. 17, in hopes of obtaining the kingdom. He was confirmed in the sovereignty by Augustus.

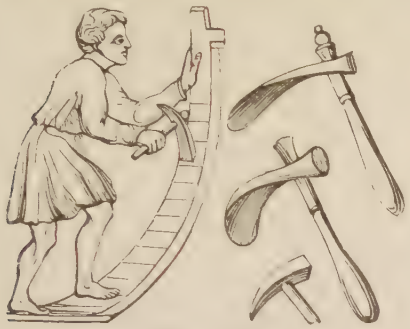
Asbestos or **Amianthus** (*ἄσβεστος, ἀμίαντος*). A mineral obtained by the ancients from India, Cyprus, and Euboea. It was well adapted for making the wicks of lamps, because indestructible by fire; and hence the Greeks, who used it for this purpose, gave it the name *ἄσβεστος*, which means inextinguishable. Pausanias mentions that the golden lamp which burned day and night in the temple of Athené Polias at Athens had a wick of this substance.

It was also spun and woven into cloth. Thus manufactured, it was used for napkins (*χειρεκμαγεῖα, χειρόμακτρα*), which were never washed, but cleansed in a much more effective manner, whenever they required it, by being thrown into the fire.

Another use to which asbestine cloth was applied was to preserve the remains of dead bodies burned in the funeral pile. But the expense of this kind of cloth was so great that it could only be used at the obsequies of persons of the most exalted rank. The testimony of Pliny has been corroborated by the discovery of pieces of the cloth in ancient Roman or Italian sepulchres. The most remarkable specimen of this kind was found at Rome, A.D. 1702, in a marble sarcophagus, enveloping a skull and bones, and in size about five feet by six and a half. It is now in the Vatican.

Ascalăphus (*Ἀσκάλαφος*). (1) The son of Ares and Astyoché, who led, with his brother Ialmenus, the Minyans of Orchomenus against Troy, and was slain by Deïphobus (*Il.* ii. 512). (2) The son of Acheron and Gorgyra or Orphné. When Pluto gave Persephoné (Proserpina) permission to return to the upper world, provided she had eaten nothing, Ascalaphus declared that she had eaten part of a pomegranate. Persephoné, in revenge, changed him into an owl by sprinkling him with water from the river Phlegethon (Ovid, *Met.* v. 540).

Ascălon (*Ἀσκάλων*). One of the chief cities of the Philistines, on the coast of Palestine, between Azotus and Gaza.



Ascania (*Ἀσκανία*). (1) In Bithynia, a great fresh-water lake, at the eastern end of which stood the city of Nicaea. (2) A salt-water lake on the borders of Phrygia and Pisidia.

Ascanius. The son of Aeneas (q. v.) and Creüsa. According to the ordinary account, he accompanied his father to Italy, and, thirty years after the building of Lavinium, founded Alba Longa, where, after his death, his step-brother Silvius reigned. To him, by his name of Iulus, the gens Iulia traced its origin. See TROJAN WAR.

Ascaules (*ἀσκαύλης*). See TIBIA.

Ascia (*σκέπαρνον, τύκος*). (1) An adze, used in working wood, as shown in the accompanying

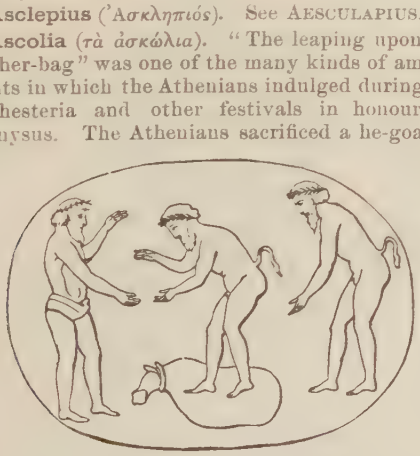
illustrations. The left-hand figure represents a ship-carpenter shaping the rib of a vessel with an

Ascia, or Adze.

ascia. (2) A mason's hammer used in dressing stone. (3) A bricklayer's tool for mixing mortar. (4) A hoe.

Asciburgium. The modern Asburg; an ancient town on the left bank of the Rhine.

Asclepiădes. See Aesculapius.



Asclepiădes (Ἀσκληπιάδης). A Greek poet, a native of Samos, and a younger contemporary of Theocritus. He was the author of thirty-nine epigrams, mostly erotic, in the Greek Anthology. The well-known Asclepiadean metre was perhaps named after him. See Anthology.

Asclepiēa (*τὰ* Ἀσκλεπίεια). Festivals celebrated in places where temples of Asclepius (Aesculapius) existed, and of which the most celebrated was that of Epidaurus, held every fifth year, nine days after the Isthmian Games. See Schol. *ad* Pind. *Nem.* iii. 145; Pausan. ii. 26, § 7.

Asclepiodōtus (Ἀσκληπιόδοτος). A Greek writer, pupil of the Stoic Posidonius of Rhodes, who died B.C. 51. On the basis of his lectures Asclepiodotus seems to have written the military treatise preserved under his name on the Macedonian military system.

Asclepius (Ἀσκληπιός). See Aesculapius.

Ascolia (*τὰ ἀσκώλια*). "The leaping upon the leather-bag" was one of the many kinds of amusements in which the Athenians indulged during the Anthesteria and other festivals in honour of Dionysus. The Athenians sacrificed a he-goat to

Ascoliasmus: Dancing on a Wine-skin. (From an Ancient Gem in Krause.)

the god, made a bag out of the skin, smeared it with oil, and then tried to dance upon it (Verg. *Georg.* ii. 384). The various accidents accompanying this attempt afforded great amusement to the spectators. He who succeeded was victor, and received the skin as a reward.

Asconius Pediānus, Quintus. A Roman grammarian and historian, probably born at Patavium about the year A.D. 3. He lived latterly at Rome, where he enjoyed the favour of men in high place. During the reigns of Claudius and Nero, having carefully studied the literature of the Ciceronian age, and availing himself of state-papers then existing, he composed for the use of his own sons his valuable historical commentaries on Cicero's orations, of which only those on five orations (*In Pisonem, Pro Scauro, Pro Milone, Pro Cornelio, In toga candida*) are preserved, unfortunately in a very fragmentary condition. The commentaries on the Verrine orations, which bear his name, belong probably to the fourth century A.D. They treat chiefly of grammatical points. No other works by Asconius have survived. He died, after twelve years' blindness, about A.D. 88. The *editio princeps* is that published at Venice in 1477. Text in the editions of Cicero by C. G. Schütze and Orelli-Baiter. See Gräfenhan, *Gesch. d. klass. Philol.* iv. 292.

Ascopera, from an Ancient Painting. (Rich.)

Ascopēra (*ἀσκοπήρα*). A large knapsack of undressed leather carried by travellers on foot (Suet. *Nero*, 45).

Ascos (*ἀσκός*). (1) A wine-skin. (2) Vessels, such as those shown in the accompanying illustration, used for wine.

Ascoi. (Dennis's *Etruria*.)

Ascra (Ἄσκρα). A town in Boeotia on Mount Helicon, where Hesiod resided, who had removed thither with his father from Cymé in Aeolis, and who is therefore called Ascraeus. See Hesiodus.

Ascŭlum. (1) Picēnum, the chief town of Picenum, and a Roman municipium, was destroyed by the Romans in the Social War (B.C. 89), but was afterwards rebuilt. (2) Apŭlum, a town of Apulia in Daunia, on the confines of Samnium, near which Pyrrhus defeated the Romans in the year B.C. 279.

Asdrŭbal (Ἀσδρούβας). See Hasdrubal.

Asebeias Graphé (*ἀσεβείας γραφή*). One of the many forms prescribed by the Attic laws for the impeachment of impiety. This crime was apparently as ill-defined at Athens, and therefore as liable to be made the pretext for persecution, as it has been in all other countries in which the civil power has attempted to reach offences so much beyond the natural limits of its jurisdiction. The occasions, however, upon which the Athenian accuser professed to come forward may be classed as, first, breaches of the ceremonial law of public worship; and, secondly, indications of that which in analogous cases of modern times would be called heterodoxy or heresy. The former comprehended encroachment upon consecrated grounds, the plunder or other injury of temples, the violation of asylums, the interruption of sacrifices and

festivals, the mutilation of statues of the gods, the introduction of deities not acknowledged by the state, etc.

The heretical delinquencies may be exemplified by the expulsion of Protagoras for writing that "he could not learn whether the gods existed or not"; in the persecution of Anaxagoras—like that of Galileo, in after-times, for impugning the received opinions about the sun—and the condemnation of Socrates for not holding the objects of the public worship to be gods. Any citizen in the enjoyment of free civic rights might bring the accusation, and the Archon Basileus was the magistrate who conducted the examination. The court was the Areopagus (q. v.) or the Heliastic Court. See DICASTES.

If the accuser failed to obtain a fifth of the votes of the dicasts, he forfeited a thousand drachmas, and incurred probably a modified *ἀτιμία*, though not to the extent of exclusion from office (Demosth. *c. Eubul.* p. 1301, § 28). See Meier, *Att. Prozess*; Schömann, *Antiq.* i. 498.

Asellio, GAIUS (?) SEMPRONIUS. A Roman annalist. He was military tribune in Spain under P. Scipio Africanus in B.C. 133, and wrote a history of Rome from the time of the Punic Wars to the age of the Gracchi, or later.

Asia (Ἀσία). A daughter of Oceanus and Tethys, wife of Iapetus, and mother of Atlas, Epimetheus, and Prometheus (Hes. *Theog.* 359). The name of the continent of Asia is traditionally derived from hers.

Asia (Ἀσία), in the poets **Asis** (Ἀσίς). One of the three great divisions which the ancients made of the known world. It was first used by the Greeks for the western part of Asia Minor, especially the plains watered by the river Caÿster, where the Ionian colonists first settled; and thence, as their geographical knowledge advanced, they extended it to the whole country. The southern part of the continent was supposed to extend much farther to the east than it really does, while to the north and northeast parts, which were quite unknown, much too small an extent was assigned. The different opinions about the boundaries of Asia on the side of Africa are mentioned under AFRICA; on the side of Europe the boundary was formed by the river Tanais (Don), the Palus Maeotis (Sea of Azof), Pontus Euxinus (Black Sea), Propontis (Sea of Marmora), and the Aegean (Archipelago). The most general division of Asia was into two parts, which were different at different times, and known by different names. To the earliest Greek colonists the river Halys, the eastern boundary of the Lydian kingdom, formed a natural division between UPPER and LOWER ASIA; and afterwards the Euphrates was adopted as a more natural boundary. Another division was made by the Taurus into ASIA INTRA TAURUM, i. e. the part of Asia north and northwest of the Taurus, and ASIA EXTRA TAURUM, all the rest of the continent. The division ultimately adopted, but apparently not till the fourth century of our era, was that of ASIA MAIOR and ASIA MINOR. (1) ASIA MAIOR was the part of the continent east of the Tanaïs, the Euxine, an imaginary line drawn from the Euxine to Trapezus (Trebizond), to the Gulf of Issus and the Mediterranean; thus it included the countries of Sarmatia Asiatica, with all the Scythian tribes to the east, Colchis, Iberia, Albania, Armenia, Syria, Arabia, Babylonia, Mesopotamia, Assyria, Media, Susiana, Persia, Ariana, Hyrcania, Margiana, Bactriana, Sogdiana, India, the land of the Sinae, and Serica; respecting which, see the several articles. (2) ASIA MINOR (Anatolia) was the peninsula on the extreme west of Asia, bounded by the Euxine, Aegean, and Mediterranean on the north, west, and south; and on the east by the mountains on the west of the upper course of the Euphrates. It was divided into Mysia, Lydia, and Caria, on the west; Lycia, Pamphylia, and Cilicia, on the south; Bithynia, Paphlagonia, and Pontus, on the north; and Phrygia, Pisidia, Galatia, and Cappadocia, in the centre. (3) ASIA PROPRIA, or simply ASIA, the Roman province formed out of the kingdom of Pergamus, which was bequeathed to the Romans by Attalus III. (B.C. 130), and the Greek cities on the western coast, and the adjacent islands, with Rhodes. It included the districts of Mysia, Lydia, Caria, and Phrygia; and was governed at first by propraetors, afterwards by proconsuls.

Asia Palus (Ἄσιος λειμών). A marsh in Lydia formed by the river Caÿster near its mouth, and noted as the haunt of water-fowl (Hom. *Il.* ii. 470.)

Asiarchae (Ἀσιάρχαι). In the Roman province of Asia, the chief presidents of the religious rites, whose office it was to exhibit games and theatrical amusements every year, in honour of the gods and the Roman emperor, at their own expense, like the Roman aediles.

Asiatic Style of Oratory. The florid style, abounding in tropes and rhetorical display, and thus opposed to the ATTIC STYLE (q. v.). Of the Asiatic School at Rome, Hortensius (q. v.) was the most conspicuous example. See Cicero, *Brutus*, 95.

Asilla (*ἀσίλλα*). A wooden pole or yoke, held by a man either on his two shoulders, or more

Asilla, or Pole for Carrying Burdens.

Illustration 1 is from a bronze lamp found at Stabiae; No. 2 is from a sardonyx in the Florentine Museum; No. 3 is from a Grecian vase in the Hamilton Collection.

commonly on one shoulder only, and used for carrying burdens.

Asilus (*οἶστρος, tabanus*). The gad-fly or horse-fly.

Asinaria. A comedy of Plautus (q. v.) with a

farcical plot, taken from the *Ὀναγός* of Demophilos. It was written about B.C. 194.

Asĭnărus (*Ἀσίναρος*). A river in eastern Sicily, on which the Athenians were defeated by the Syracusans, B.C. 413, in the Peloponnesian War (q. v.).

Asĭné (*Ἀσίνη*). (1) A town in Laconia on the sea-coast between Taenarum and Gythium. (2) A town in Argolis, west of Herminoé, built by the Dryopes (q. v.). (3) A town in Messenia.

Asinius Pollio. See POLLIO.

Asōpus (*Ἀσωπός*). (1) A river in Thessaly rising in Mt. Oeta and emptying into the Sinus Maliacus. (2) A river of Boeotia rising in Mt. Cithaeron and flowing into the Euripus. On its banks the battle of Plataea was fought. (3) A river of Achaea flowing into the Corinthian Gulf near Sicyon. (4) The god of the last-named river, and father of the nymph Aegina (q. v.).

Aspasia (*Ἀσπασία*). (1) A celebrated woman, a native of Miletus. She came as an adventuress to Athens, in the time of Pericles, and, by the combined charms of her person, manners, and conversation, completely won the affection and esteem of that distinguished statesman. Her station had freed her from the restraints which custom laid on the education of the Athenian matron, and she had enriched her mind with accomplishments which were rare even among men. Her acquaintance with Pericles seems to have begun while he was still united to a lady of high birth, and we can hardly doubt that it was Aspasia who first disturbed this union, although it is said to have been dissolved by mutual consent. But after parting from his wife, who had borne him two sons, Pericles attached himself to Aspasia by the most intimate relation which the laws permitted him to contract with a foreign woman; and she acquired an ascendency over him which soon became notorious, and furnished the comic poets with an inexhaustible fund of ridicule and his enemies with a ground for serious charges. The Samian War was ascribed to her interposition on behalf of her birthplace, and rumours were set afloat which represented her as ministering to the vices of Pericles by the most odious and degrading of offices. There was, perhaps, as little foundation for this report as for a similar one in which Phidias was implicated (Plut. *Pericl.* 13); though among all the imputations brought against Pericles, this is that which it is the most difficult clearly to refute. But we are inclined to believe that it may have arisen from the peculiar nature of Aspasia's private circles, which, with a bold neglect of established usage, were composed not only of the most intelligent and accomplished men to be found at Athens, but also of matrons, who, it is said, were brought by their husbands to listen to her conversation. This must have been highly instructive as well as brilliant, since Plato did not hesitate to describe her as the preceptress of Socrates, and to assert in the *Menexenus* that she both formed the rhetoric of Pericles and composed one of his most admired harangues, the celebrated funeral oration. The innovation, which drew women of free birth and good standing into her company for such a purpose, must, even where the truth was understood, have surprised and offended many, and it was liable to the grossest misconstruction. And if her female friends were sometimes seen watching the progress of the works of Phidias, it was easy, through his intimacy with Pericles, to connect this fact with a calumny of the same kind.

Aspasia. (Vatican.)

There was another rumour still more dangerous, which grew out of the character of the persons who were admitted to the society of Pericles and Aspasia. No persons were more welcome at the house of Pericles than such as were distinguished by philosophical studies, and especially by the profession of new philosophical tenets. The mere presence of Anaxagoras, Zeno, Protagoras, and other celebrated men, who were known to hold doctrines very remote from the religious conceptions of the vulgar, was sufficient to make a circle in which they were familiar pass for a school of impiety. Such were the materials out of which the comic poet Hermippus formed a criminal prosecution against Aspasia. His indictment included two heads: an offence against religion, and that of corrupting Athenian women to gratify the passions of Pericles. The danger was averted; but it seems that Pericles, who pleaded her cause, found need of his most strenuous exertions to save Aspasia, and that he even descended, in her behalf, to tears and entreaties, which no similar emergency of his own could ever draw from him.

After the death of Pericles, Aspasia attached herself to a young man of obscure birth, named Lysicles, who rose through her influence in moulding his character to some of the highest employments in the Republic. (See Plut. *Pericl.*; Xen. *Mem.* ii. 6.) (2) Daughter of Hermotimus, and a native of Phocaea in Asia Minor. She was so remarkable for her beauty that a satrap of Persia carried her off and made her a present to Cyrus the Younger. Her modest deportment soon won the affections of the prince, who lived with her as with a lawful wife. Her name at first was Milto (vermilion), which had been given her in early life on account of the brilliancy of her complexion. Cyrus, however, changed it to Aspasia, calling her thus after the mistress of Pericles. After the death of the prince she fell into the hands of Artaxerxes, who for a long time vainly sought to gain her affections. She only yielded at last to his suit through absolute necessity. When the monarch declared his son Darius his successor, the latter, as it was customary in Persia for an heir to ask a favour of him who had declared him such, requested Aspasia of his father. Aspasia was accordingly sent for, and, contrary to the king's expectation, made choice of Darius. Artaxerxes therefore gave her up, in accordance with established custom, but soon took her away again, and made her a priestess of Artemis at Ecbatana, or of the goddess whom the Persians called Anaïtis. This station required her to pass the rest of her days in chastity (Plut. *Artax.*). Justin, however, says (x. 1) that Artaxerxes made her one of the priestesses of the sun.

Aspendus (*Ἄσπενδος*). A city of Pamphylia, lying for the most part on a rocky precipice, on the banks of the river Eurymedon. It was a flour-

ishing place even before the expedition of the younger Cyrus (Xen. *Anab.* i. 2, 12). It was here that the Athenian patriot Thrasybulus terminated his life. Being off the coast, he levied contributions from the Aspendians, who, seizing an opportunity when he was on shore, surprised him in his tent at night, and slew him (Xen. *Hist. Gr.* iv. 8).

Asper, Aemilius. A Roman grammarian, the author of a commentary on Vergil, now existing in a fragmentary condition, and written probably about A.D. 80. In this he treated systematically Vergil's deviations from ordinary usage in syntax. See Ribbeck's Prolegom. to Vergil, p. 128. Another Asper wrote an *Ars Grammatica*, printed in Keil's *Grammatici Latini*, v. 547.

Asphaltus (*ἄσφαλτος*). See Bitumen.

Aspis (*ἀσπίς*). See Clipeus.

Aspis (*ἀσπίς*). The asp, a species of deadly serpent often mentioned by both Greek and Roman writers. It would seem that several different species of poisonous reptiles were known to the ancients under this common name.

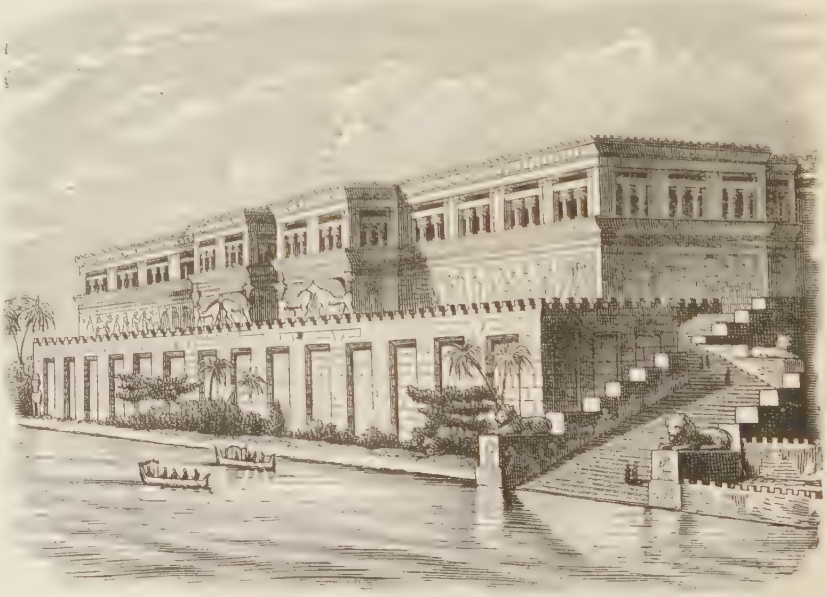
Assarăcus (*Ἀσσάρακος*). Son of Tros and founder of the collateral line to which Anchises and Aeneas belong in the royal house of Troy. See Anchises; Aeneas; Dardanus.

Assarion (*ἀσσάριον*). The Greek name for the Latin *as* (q. v.).

Asser. The pole of a litter. See Lectica.

Assertor or **Adsertor.** Contains the same root as the verb *adserere*, which, when coupled with the word *manu*, signifies to lay hold of a thing, to draw it towards one. Hence the phrase *adserere in libertatem*, or *liberali adserere manu*, applies to him who lays his hand on a person reputed to be a slave, and *asserts* or maintains his freedom. The person who thus maintained the freedom of a reputed slave was called *adsertor*, and by the laws of the Twelve Tables it was enacted in favour of liberty that such *adsertor* should not be called on to give security in the *sacramenti actio* to more than the amount of fifty asses. The person whose freedom was thus claimed was said to be *adsertus*.

Assessor or **Adsessor.** Literally one who sits by the side of another. The consuls, praetors, governors of provinces, and the iudices were often imperfectly acquainted with the law and the forms of procedure, and it was necessary that they should have the aid of those who had made the law their study. These advisers were known as *assessores*. The *praefectus praetorio* and *praefectus urbi*, and other civil and military functionaries, had their assessors. The emperor Alexander Severus gave the assessors a regular salary. See Bethmann-Hollweg, *Der römische Civil-Prozess*, iii. 129, § 141.



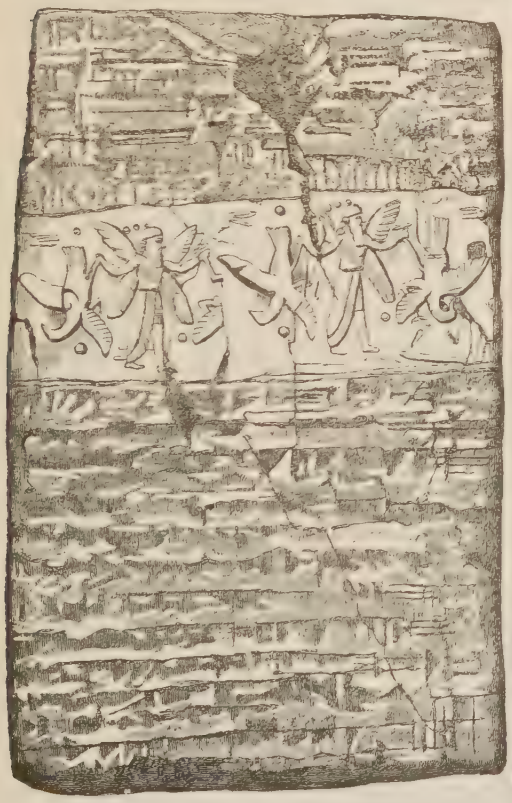
Assidui. See Locupletes.

Assignatio. The Latin term for the assignment of public land to citizens or colonies. See Agrariae Leges; Colonia.

Assus (*Ἄσσος*). A city in the Troad, on the Adramyttian Gulf, opposite to Lesbos, afterwards called Apollonia; the birthplace of Cleanthes the Stoic.

Assyria (in Greek, *Ἀσσυρία*; in Assyrian inscriptions called *Assur*; in the Persian, *Athura*; and in the Median, *Assura*). The country properly so called, in the narrowest sense, was a district of Asia, extending along the east side of the Tigris, which divided it on the west and northwest from Mesopotamia and Babylonia, and bounded on the north and east by Mount Niphates and Mount Zagrus, which separated it from Armenia and Media, and on the southeast by Susiana. It was watered by several streams flowing into the Tigris from the east, two of which, the Lycus or Zabatus (Great Zab) and the Caprus or Zabas (Little Zab), divided the country into three parts. The district between the upper Tigris and the Lycus, called Aturia, was probably the most ancient seat of the monarchy, containing the capital, Nineveh or Ninus. The Lycus and the Little Zab bounded the finest portion, called Adiabené. The district southeast of the Little Zab contained the two subdivisions Apolloniatis and Sittacené. In a wider sense the name Assyria was used to designate the whole country watered by the Tigris and Euphrates, including Mesopotamia and Babylonia; and in a still more extended application it meant the whole Assyrian Empire, one of the first great states of which we have any record.

The remarkable fertility of the country enabled it to support a large population; and its great material prosperity, power, and culture are at-



Restoration of an Assyrian Palace. (Reber.)

tested by ancient writers, as well as by the monuments that remain to us in the shape of ruins of cities, extensive canals and water-works, and proofs secured by excavators of the possession of the arts and sciences. At the present day the country is almost a desert; but from Tekrit to Bagdad, and in the vicinity of Nineveh (q. v.), abundant ruins mark the former wealth and splendour of the people.

ETHNOLOGY.—The Assyrians were a branch of the Semitic race, to which the Syrians, Phœnicians, Jews, and Arabs belonged, and which in Chaldaea appears to have supplanted the Scythic or Turanian stock as early as B.C. 2100. Assyria had in the earliest times a close connection with Aethiopia and Arabia. Hence Herodotus speaks of Sennacherib as king of the Arabians as well as of the Assyrians. See BABYLONIA.

LANGUAGE.—The language of the Assyrians is allied to the North Branch of the Semitic family, its vocabulary showing a close affinity to Hebrew and Phœnician. In the fulness of its verbal system and richness of synonyms, however, it resembles the Arabic. The ethnic type of the Assyrians is the Semitic modified by some admixture with Akkadian elements. See AKKAD; CUNEIFORM INSCRIPTIONS.

Assyrian literature is known to us chiefly from the discovery in the palace of Assur-bani-pal, at

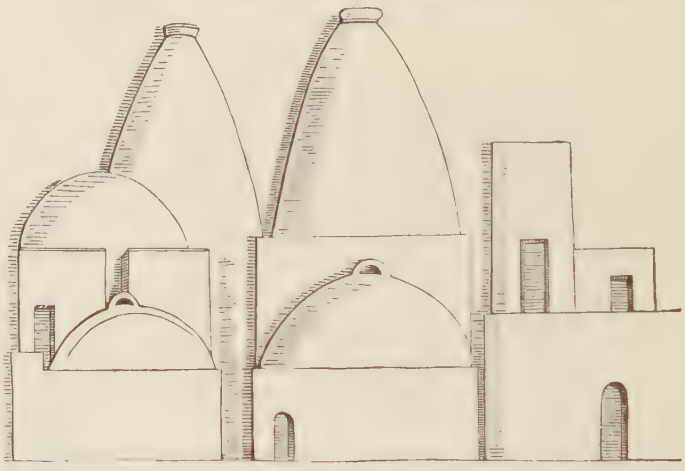
Clay Tablet with Cylinder, impressed, from Kouyunjik.

Nineveh, of a library of many thousand tablets collected by that king and his father, Esar-haddon. Duplicate copies of some of these tablets have been found in excavating the Babylonian cities. Of these tablets, many are syllabaries, dictionaries, geographies, and other educational works, often couched in the ancient Akkadian and Sumirian tongues; so that from them, Assyriologists have learned much about the older languages of Chaldaea. The richest literary discoveries, however, have been in the field of poetry and mythology. In 1872 the late Mr. George Smith, of the British Museum, discovered a series of tablets containing an epic in twelve books, one of which relates to the legend of the Deluge, and bears a very striking resemblance to the account given in the Old Testament. In both accounts the Deluge is a punishment for human sins; in both, the builder of an ark gathers into it his family and the beasts of the field; in both, the ark rests upon a mountain; in both, peace between God and man is restored; and in both, a sign of the restoration is the appearance of the rainbow. Many other interesting resemblances to portions of the Book of Genesis are contained in the Assyrian tablets. The hymns and prayers are likewise beautiful and poetic.

Inscribed Tablet impressed with Seals.

RESULTS OF EXCAVATIONS.—Successful excavations have been made by Botta, Layard, Oppert, Rawlinson, Smith, and others, with the result of opening up very many palaces and temples, and bringing to light sculptures covered with inscriptions, and including obelisks, sphinxes, winged lions and bulls, and bas-reliefs of battle-scenes, sieges, hunts, etc. Many smaller objects are no less interesting, such as ornaments, bells, engraved gems, and bronzes. It has been learned that the Assyrians were acquainted with glass; that they employed the arch in building; that they used the lens as a magnifying instrument; and had, among other mechanical appliances, the lever and the roller.

Nebo. (British Museum.)



RELIGION. — The religion of Assyria was simpler than that of the Babylonians, although polytheistic in character. The national deity was Assur, regarded as the found-

er of the nation. Beside him there are two principal triads, with many minor deities. The first triad is known as the Nature Triad (Anu "the Progenitor," Bel "the Lord of the World," Hea "the Lord of the Sea, Rivers, and Fountains"). The second triad is the Celestial Triad (Sin the Moon-god, Shamas the Sun-god, Istar the Star-goddess). Minor gods are Merodach or Marduk, son of Hea; Nebo the god of learning, who possesses many of the attributes of the Greek Hermes (q. v.); and Nergal and Nusku the war-gods. (See 2 Kings, xvii. 30.)

History.—Ancient accounts of Assyrian history are those of Berosus (q. v.), a Graeco-Chaldean priest, who wrote at Babylon, where he had access to the inscriptional records, about B.C. 268; of Herodotus; and of Ctesias of Cnidus, physician to the Persian king Artaxerxes Mnemon (B.C. 405). The narrative of Berosus has met with much confirmation from recent excavations and explorations. In the Bible narrative we are told that Nineveh was founded from Babylonia. "Out of that land [Babylonia] he [Nimrod] went forth into Assyria" (Gen. x. 11)—and this statement is fully confirmed by the results of recent explorations. The earliest inscriptions found on the bricks from Assur (Kileh-Shergat), the ancient capital, give to the first rulers of the land the Akkadian title of Patesi, or "high-priest of the city of Assur," and to the city itself the Akkadian name of Pal-bi-ki. The next notice of Assyria does not occur until the Assyrian king Pul, or Tiglath-pileser II., invaded Palestine, and was bought off by Menahem, king of Israel (B.C. 738). In the same reign we find the Jewish king Jehoahaz (Ahaz) becoming a vassal of the court of Assyria, and the tribes beyond Jordan carried away captive (B.C. 734). In B.C. 722, Samaria is captured by Sargon the Tartan, who had usurped the throne from his weak master, Shalmaneser IV. The next reference to Assyria is that of the siege and capture of Jerusalem by Sargon (Isaiah, x., xi., xx.), and the siege of Ashdod (B.C. 712–711). This event is now proved to be distinct from the siege by Sennacherib in B.C. 701, which terminated apparently in a disaster for the Assyrian army. The last mention of Assyria is the record of the murder of Sennacherib by his sons in B.C. 681, and the accession of his faithful son Esar-haddon, the most powerful of all the Assyrian monarchs, for he carried his arms as far as the Mediterranean and conquered Egypt. Little credit is to be attached to the expedition of Holofernes recorded in the apocryphal Book of Judith.

After this the Empire appears to have gradually decayed, until at last, in the reign of Assur-banipal or Sardanapalus, or that of Esar-haddon II. (Sarakos), a league for its destruction was formed between Nabopolassar, governor of Babylon, and Cyaxares, king of Media, which was strengthened by the marriage of Nebuchadnezzar, son of the former, to Nitocris, daughter of the latter. The war and siege are said to have been interrupted by an invasion of the Scythians, which drew off Cyaxares; but at length Nineveh was taken and destroyed about B.C. 605, or, according to Rawlinson, 625. In the time of Darius Hystaspes Assyria rebelled without success in conjunction with Media. In the time of Herodotus the capital had ceased to exist; and when Xenophon passed it the very name was forgotten, though he testifies to the extent of the deserted city, and asserts the height of the ruined walls to be 150 feet. An inconsiderable town seems to have existed on its ruins in the reign of Claudius; and the last notice we have of Nineveh in the classics is in Tacitus.

The fanciful history related by Ctesias is now found to be based on distorted Graeco-Persian traditions; and though the writer managed to make the ancient world give credit to him in preference to Herodotus, his work is now proved to be very untrustworthy. According to him, for thirty generations after Ninyas the kings led a life of luxury and indolence in their palace; the last of them, Sardanapalus, made a vigorous defence against Arbaces, the rebel governor of Media, but, finding it impossible to defend Nineveh, he set fire to his palace, and burned himself with all his treasures. This event took place 1306 years after Ninus. Now, the above account represents Nineveh to have perished nearly three centuries before the real date, which was about B.C. 606, and is utterly incompatible with Scripture. Herodotus assigns to the Empire a duration of 520 years, and Berosus of 526. In order to reconcile these conflicting accounts, historians have supposed that Nineveh was twice destroyed, but this supposition is now generally rejected. However, that part of Nineveh was actually destroyed by fire is proved by the condition of the slabs and statues found in its ruins, which show the action of intense heat.

Assyrian Dwellings. (Relief from Kouyunjik.)

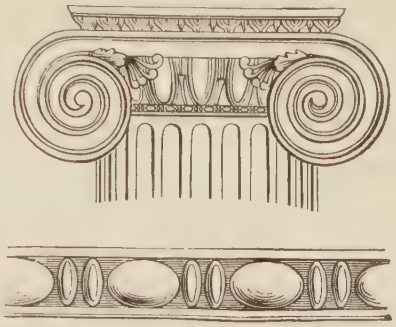
Asta. (1) The modern Asti in Piedmont, an inland town of Liguria on the Tanarus, a Roman colony. (2) A town in Hispania Baetica, near Gades, a Roman colony.

Astabŏras (Ἀσταβόρας) and **Astăpus** (Ἀστάπους). Two rivers of Aethiopia, having their sources in the highlands of Abyssinia, and uniting to form the Nile. The land enclosed by them was the island of Meroé (q. v.).

Astăcus (Ἄστακος). A celebrated city of Bithynia, on the Sinus Astacenus, a bay of the Propontis, was a colony from Megara, but afterwards received fresh colonists from Athens, who called the place Olbia. It was destroyed by Lysimachus, but was rebuilt on a neighbouring site by Nicomedes I., who named his new city Nicomedia.

Astarté (Ἀστάρτη). See APHRODITÉ.

Asteria (Ἀστερία). A daughter of the Titan Coeus and the Titanid Phoebé, sister of Leto, and mother of Hecaté by Perses, son of the Titan Crius. She is said to have turned into a quail (ὄρτυξ) and plunged into the sea to escape the advances of Zeus. After her the island of Delos (q. v.) was first called ASTERIA, and later ORTYGIA.



Astĕris (Ἀστερίς) or **Asteria** (Ἀστερία). A small island between Ithaca and Cephallenia.

Astraea (Ἀστραία). The daughter of Zeus and Themis, and goddess of justice, who lived during the Golden Age among men; but when the wickedness of men increased she withdrew to heaven, and was placed among the stars under the name of Virgo. Her sister Pudicitia (Αἰδώς) left the earth along with her (Hyg. *Poet. Astr.* ii. 25).

Astraeus (Ἀστραῖος). A Titan, husband of Eos, and father of the winds and the stars, whence Ovid calls the winds *Astraei fratres*.

Astragălus (ἀστράγαλος). A word which literally signifies that particular bone in the ankles of certain quadrupeds which the Greeks as well as the Romans used for dice and other purposes, as described under the corresponding Latin word TALUS.

As a technical term *astragalus* is used by Vitruvius for a certain moulding (the astragal), which seems to have derived its name from its resemblance to a string or chain of *tali;* and it is, in fact, always used in positions where it seems intended to bind together the parts to which it is applied. It belongs properly to the more highly decorated forms of the Ionic order, in which it appears as a lower edging to the larger mouldings, especially the *echinus* (ovolo), particularly in the capital, as shown in the following wood-cut, which represents an Ionic capital found in the ruins of the temple of Dionysus at Teos. It is also often used in the entablature as an edging to the divisions of the cornice, frieze, and architrave. The lower figure in the illustration represents a portion of the astragal which runs beneath the crowning moulding of the architrave of the Temple of Erechtheus.

Astragalus. (From Ionic Capital.)

The term is also applied to a plain convex moulding of the same sectional outline as the former, but without the division into links, like a *torus* on a small scale.

Astrateias Graphé (ἀστρατείας γραφή). An accusation brought against persons who failed to appear among the troops after they had been enrolled for the campaign by the generals. The court was composed of soldiers, and the generals presided. See EXERCITUS, p. 649.

Astrologia (ἀστρολογία). Equivalent to *astronomia*, a word which is not earlier than Seneca. See ASTRONOMIA.

Astronomia (ἀστρονομία) and **Astrologia** (ἀστρολογία). These terms were at first synonymous expressions among the ancients, both signifying "the science of the stars." But afterwards astrology came to mean that part of the science which deals with the supposed influence of the stars on the destinies of men. Among the Greeks, astronomy, the origin of which they themselves ascribed to the Assyrians, Babylonians, and Egyptians, was for centuries the subject of philosophical speculation without a sufficient groundwork in observation, because mathematics and mechanics had not reached the requisite degree of perfection. The list of observing astronomers opens with Eudoxus of Cnidus in the first half of the fourth century B.C., who assumed that the earth was spherical, and tried to explain the phenomena of the heavens by a complicated theory of concentric spheres. Aristotle, too, maintained and proved the spherical form of the earth, which he took to be the immovable centre of the universe. Astronomy was first raised into a real science after B.C. 300 at Rhodes and Alexandria, in the Museum of which town the first observatory was built; and Aristyllus and Timochares determined the places of the fixed stars with comparative accuracy, though as yet with very rude apparatus. A great step in advance was taken by Aristarchus of Samos, who observed the summer solstice at Alexandria in B.C. 279, maintained the earth's rotation on her axis and revolution round the sun, and made an attempt, by no means contemptible, to ascertain the size and distance of the sun and moon. His successor Eratosthenes also rendered essential service to the progress of the science; thus, he came very near

to determining the exact obliquity of the ecliptic. The true founder of scientific astronomy, and the greatest independent observer of antiquity, was Hipparchus of Nicaea (in the second century B.C.), who discovered the precession of the equinoxes, and determined the length of the solar year (at 365 days, 5 hours, 55 minutes, 12 seconds), as well as the time of the moon's revolution, and the magnitude and distances of the heavenly bodies. The last important astronomer of antiquity, and the greatest after Hipparchus, is Claudius Ptolemaeus in the second century A.D. In his chief work, commonly known by its Arabic name of *Almagest*, he digested the discoveries of his predecessors, especially Hipparchus, and his own into a formal system, which passed current all through the Middle Ages. According to it the earth is a sphere resting motionless in the middle of the equally spherical universe, while the sun, moon, planets, and fixed stars roll at various distances around her.

The Romans regarded astronomy as an idle speculation, and gave little attention to it. When Iulius Caesar reformed the Roman calendar he was obliged to bring an astronomer, Sosigenes, from Alexandria to help him.

ASTROLOGY, in the narrower sense of the word, and applied to predictions based upon the observation of the heavenly bodies, arose among the Chaldaeans, and in Greece did not come into vogue until after the time of Alexander the Great. In Rome the professional astrologers were called Chaldaei, or Mathematici, the latter name referring to the astronomical calculations which they made. In the Republican period they were known, but held in utter contempt. In B.C. 139 their unpopularity was so great that they were expelled from Rome and Italy. But in the turbulent times of the civil wars their reputation rose considerably, and still more under the Empire, when the most extensive demands were made upon their science. They were, indeed, repeatedly driven out of Italy and involved in trials for treason (*maiestas*); but this only enhanced the consideration in which they were held, the more so as they were frequently taken into counsel by the emperors and the members of the imperial family. In later times all that the Chaldaeans were forbidden to do was to consult the stars on questions referring to the emperor's life, which was made a criminal offence. The Christian emperors (but none before them) issued many prohibitions against all consultation of astrologers whatever.

In the practice of their art they used calendars written on tablets, in which were set down for every day the motion and relative distances of the stars, whether lucky or unlucky. By another set of tablets they made their calculations of every hour in detail, noting the hour of a person's birth and the relative position of the constellation dominant at the time. In accordance with this they determined the fortunes of him who was born at the hour in question. By a similar process they ascertained the times that were favourable or unfavourable to any undertaking. Among the lucky stars were Iupiter, Venus, and Luna; among the unlucky, Saturn and Mars were the chief. Mercury was lucky or unlucky, according to circumstances.

For an account of ancient astronomy and astrology, the reader is referred to Ball, *Short History of Mathematics* (1888); Lewis, *Astronomy of the Ancients* (1862); Becker, *Handbuch der röm. Alterth.* (1880); Whewell, *History of the Inductive Sciences* (3d ed. 1858); Wolf, *Geschichte der Astronomie* (1877); Delambre, *Histoire de l'Astronomie* (1827); the treatise of Iulius Firmicus in Latin, of Manetho and Ptolemy in Greek; and the Latin poem of Manilius (q. v.), entitled *Astronomica*.

Astŭra. A river in Latium, flowing between Antium and Circeii into the Tyrrhenian Sea. At its mouth it formed a small island, with a town upon it, also called Astura, where Cicero had an estate.

Astŭres. A warlike people in the northwest of Spain, bounded on the east by the Cantabri and Vaccaei, on the west by the Gallaeci, on the north by the ocean, and on the south by the Vettones. Their chief town was Asturica Augusta (Astorga), and they have given their name also to the modern Spanish province of Asturias.

Astyăges (Ἀστυάγης). A son of Cyaxares, and last king of Media (q. v.) who reigned B.C. 594–559, and was deprived of his kingdom by his grandson, Cyrus (q. v.).

Astyănax (Ἀστυάναξ). The son of Hector and Andromaché. After the capture of Troy the Greeks hurled him down from the walls, that he might not restore the kingdom of Troy. See HECTOR.

Astynŏmi (*ἀστυνόμοι*). The title of ten officers at Athens drawn annually by lot from the ten tribes, five for the city and five for the Piraeus. They formed a kind of city police, responsible for the cleanliness and order of the streets, and probably for the safety of the public buildings. See Böckh, *Publ. Economy of Athens*, p. 203 foll. See, also, AEDILES.

Asylia (*ἀσυλία*). "Inviolability." (1) The security of person and property enjoyed by ambassadors, heralds, athletes, on their goings to and from the great games, and sometimes to individuals by special favour. See Plut. *Arat.* 28. (2) The right of sanctuary.

Atābŭlus. The name given in Apulia to the sirocco or parching southeast wind, now locally known as *altino*.

Atacīni. A people of Gallia Narbonensis, whose capital was Narbo (Narbonne). They derived their name from the river Atax, now the Aude.

Atacīnus, VARRO. See VARRO.

Atalanta (Ἀταλάντη). A Greek heroine of the type of Artemis (q. v.). There were two slightly different versions of her story, one current in Arcadia and the other in Boeotia.

(1) THE ARCADIAN VERSION. Atalanta, daughter of Zeus and Clymené, was exposed by her father, who had desired male offspring only. She was suckled by a bear, until she was found and brought up by a party of hunters. Under their care she grew up to be a huntress—keen, swift, and beautiful. She took part in the Calydonian boar-hunt, was the first who struck the boar, and received from Meleager the head and skin of the beast as the prize of victory. (See MELEAGER.) She is also associated with the voyage of the Argonauts. She turned a deaf ear to the entreaties of her numerous suitors; but at last she propitiated the wrath of Aphrodité by returning the faithful love of the beautiful Milanion, who had followed her persistently, and suffered and struggled for her. Their son was Parthenopaeus, one of the Seven against Thebes. Swinburne's poem, *Atalanta in Calydon*, gives a magnificent setting to the story.

(2) The Boeotian Version. Atalanta was the daughter of Schoeneus, son of Athamas, and distinguished for beauty and swiftness of foot. An oracle warned her against marriage, and she accordingly lived a lonely life in the forest. She met the addresses of her suitors by challenging them to race with her, overtaking them in the race and spearing them in the back. She was at length beaten, however, by Hippomenes, who during the race dropped on the ground three golden apples given him by Aphrodité. Atalanta stooped down to pick up the apples, and thus lost the race. Hippomenes forgot to render thanks to Aphrodité, and the goddess in anger caused the pair in their passion to profane the sanctuary of Cybelé, where they were changed into lions. See W. S. Landor's *Hippomenes and Atalanta*.

Atargătis (Ἀτάργατις). See Syria Dea.

Atax. A river of Gaul, now the Aude.

Até (Ἄτη). According to Homer, the daughter of Zeus; according to Hesiod, of Eris (or Strife). She personifies infatuation, the infatuation being generally held to imply guilt as its cause and evil as its consequence. At first she dwelt on Olympus; but after she had entrapped Zeus himself into his rash oath on the occasion of the birth of Heracles (q. v.), he hurled her down to earth. Here she pursues her mission of evil, walking lightly over men's heads, but never touching the ground. Behind her go the Litai (Prayers), the lame, wrinkled, squinting daughters of Zeus. The Litai, if called upon, heal the hurts inflicted by Até; but they bring fresh evil upon the stubborn. In later times Até is transformed into an avenger of unrighteousness, like Diké, the Erinyes, and Nemesis.

Ateius Capĭto, Gaius. A Roman jurist of the age of Augustus and Tiberius, who was born about B.C. 30, and died about A.D. 22. Unlike his contemporary Antistius Labeo (q. v.), he recommended himself to the ruling powers by his submissive attitude. He was rewarded by many tokens of distinction; among others, by the consulship, to which he was elected in A.D. 5, before attaining the legal age. As a jurist (again unlike Antistius) he represented the conservative tendency, and so became the founder of a special school called the *Sabiniani*, after his pupil Masurius Sabinus, and opposed in its theory of legal interpretation to the radical school of Proculus. See Iurisprudentia.

Ateleia (*ἀτέλεια*). Immunity from public burdens was enjoyed at Athens by the archons for the time being; by the descendants of certain persons, on whom it had been conferred as a reward for great services, as in the case of Harmodius and Aristogiton; and by the inhabitants of certain foreign States. It was of several kinds: it might be a general immunity (*ἀτέλεια ἁπάντων*), or a more special exemption, as from custom-duties, from the liturgies, or from providing sacrifices (*ἀτέλεια ἱερῶν*). Exemption from military service was also called *ἀτέλεια*.

Atella. The modern Aversa; a town in Campania between Capua and Neapolis, originally inhabited by the Oscans, afterwards a Roman municipium and a colony.

Atellānae Fabŭlae. Plays of a farcical nature; so called from Atella, a town of the Osci in Campania. See Comoedia; Literature (Roman).

Aternum. The modern Pescara; a town in central Italy, on the Adriatic, at the mouth of the river Aternus, was the common harbour of the Vestini, Marrucini, and Peligni.

Atesté. The modern Este; a Roman colony in the country of the Veneti in northern Italy.

Athamania (Ἀθαμανία). A mountainous country in the south of Epirus, on the western side of Pindus, of which Argithea was the chief town. The Athamanes were a Thessalian people, who had been driven out of Thessaly by the Lapithae.

Athămas (Ἀθάμας). The son of Aeolus and Enareté, and king of Orchomenus in Boeotia. At the command of Heré, Athamas married Nephelé, by whom he became the father of Phrixus and Hellé. (See Phrixus.) But he was secretly in love with the mortal Ino, the daughter of Cadmus, by whom he begot Learchus and Melicertes. Having thus incurred the anger both of Heré and of Nephelé, Athamas was seized with madness, and in this state killed his own son, Learchus. Ino threw herself with Melicertes into the sea, and both were changed into marine deities—Ino becoming Leucothea, and Melicertes, Palaemon. Athamas, as the murderer of his son, was obliged to flee from Boeotia, and settled in Thessaly. Hence we have Athamantiades, son of Athamas, i. e. Palaemon; and Athamantis, daughter of Athamas, i. e. Hellé.

Athanasius (Ἀθανάσιος). A Christian bishop of the fourth century. He was a native of Egypt, and a deacon of the Church of Alexandria under Alexander the Bishop, whom he succeeded in his dignity A.D. 326. Previous to his obtaining this high office he had been private secretary to Alexander, and had also led for some time an ascetic life with the renowned St. Anthony. Alexander had also taken him to the council at Nice, where he gained the highest esteem of the fathers by the talent which he displayed in the Arian controversy. (See Arius.) He had a great share in the decrees passed here, and thereby drew on himself the hatred of the Arians. On his advancement to the prelacy he dedicated all his time and talents to the doctrine of the Trinity, and resolutely refused the request of Constantine for the restoration of Arius to the Catholic communion. In revenge for this refusal, the Arian party brought several accusations against him before the emperor. Of these he was acquitted in the first instance; but, on a new charge of having detained ships at Alexandria, laden with corn for Constantinople, either from conviction or policy, he was found guilty and banished to Gaul. Here he remained in exile eighteen months, or, as some accounts say, upwards of two years, his see in the meantime being unoccupied.

On the death of Constantine he was recalled, and restored to his functions by Constantius; but the Arian party made new complaints against him, and he was condemned by 90 Arian bishops assembled at Antioch. On the opposite side, 100 orthodox bishops, assembled at Alexandria, declared him innocent; and Pope Iulius confirmed this finding, in conjunction with more than 300 bishops assembled at Sardis from the East and West. In consequence of this, he returned a second time to his diocese. But when Constans, emperor of the West, died, and Constantius became master of the whole Empire, the Arians again ventured to rise

up against Athanasius. They condemned him in the councils of Arles and Milan, and, as the worthy patriarch refused to listen to anything but an express command of the emperor, when he was one day preparing to celebrate a festival in the church, a body of soldiers suddenly rushed in to make him prisoner. The surrounding priests and monks, however, placed him in security. Athanasius, displaced for a third time, fled into the deserts of Egypt. His enemies pursued him even here, and set a price on his head. To relieve the hermits, who dwelt in these solitary places and who would not betray his retreat, from suffering on his account, he went into those parts of the desert which were entirely uninhabited. He was followed by a faithful servant, who, at the risk of his life, supplied him with the means of subsistence. In this undisturbed spot Athanasius composed many writings, full of eloquence, to strengthen the faith of the believers or expose the falsehoods of his enemies. When Julian the Apostate ascended the throne, he allowed the orthodox bishops to return to their churches. Athanasius, therefore, returned after an absence of six years. The mildness which he exercised towards his enemies was imitated in Gaul, Spain, Italy, and Greece, and restored peace to the Church. But this peace was interrupted by the complaints of the heathen, whose temples the zeal of Athanasius kept always empty. They excited the emperor against him, and he was obliged to fly to the Thebaïs to save his life. The death of the emperor and the accession of Jovian again brought him back; but on Valens becoming emperor eight months after, and the Arians recovering their superiority, he was once more compelled to fly. He concealed himself in the tomb of his father, where he remained four months, until Valens, moved by the pressing entreaties and threats of the Alexandrians, allowed him to return. From this period he remained undisturbed in his office until he died, in A.D. 373.

Of the forty-six years of his official life, he spent twenty in banishment, and the greater part of the remainder in defending the Nicene Creed. Athanasius is one of the greatest men of which the Church can boast. His deep mind, his noble heart, his invincible courage, his living faith, his unbounded benevolence, sincere humility, lofty eloquence, and strictly virtuous life, gained the honour and love of all. His writings are on polemical, historical, and moral subjects. The polemical treat chiefly of the doctrines of the Trinity, the incarnation of Christ, and the divinity of the Holy Spirit. The historical ones are of the greatest importance for the history of the Church. In all his writings the style is distinguished, considering the age in which they were produced, for clearness and moderation. His apology, addressed to the emperor Constantine, is a masterpiece. The creed which bears his name is now generally allowed not to have been his. It was first printed in Greek in 1540, and several times afterwards to 1671. It has been questioned whether this creed was ever received by the Greek and Oriental Churches. In America the Episcopal Church has rejected it. The best edition of Athanasius is in the *Patrologia Graeco-Latina* of Migne (1860). His epistles and some of his orations were translated with notes by J. H. Newman (1842).

Athēnae (Ἀθῆναι). The chief city of Attica. The long southeastern triangle of the northern peninsula of Greece, which terminates in the abrupt promontory of Sunium (mod. Cávo Colónnais), has its most interesting and important division, topographically as well as historically, on the western side, facing the Saronic Gulf. Here, at a point midway between Sunium and the promontory that faces Salamis, the low Cape Zoster terminates the Anhydros range, a lower continuation of Hymettus. The long continuous ridge of Anhydros and Hymettus (1027 metres at its greatest height) extends, in a slightly northeasterly direction, towards the range of Pentelé (Πεντέλη), the ancient Brilessos (Βριλησσός) or Pentelicon (Πεντελικόν sc. ὄρος, Lat. Mons Pentelicus), from which it is separated by the pass through which the modern railway runs southeasterly towards the ancient mines of Laurium, near Sunium. The Pentelicus range (1086.6 metres high) extends northwest and southeast, and forms with Hymettus and Anhydros a well-nigh continuous dividing-wall between the eastern plain of Attica, the Mesogaea (Μεσόγαια), and the middle plain; while the plain of Marathon in the northeast is approachable from the Mesogaea only by a narrow way between Pentelicus and the sea towards Euboea, and from the middle plain by two difficult mountain ways between Pentelicus and Parnes. This last range (1412 metres high) lies to the northwest of Pentelicus and extends nearly east and west. Passable only by way of Decelea (mod. Tatóï) in the east and Phylé in the west, it effectually cuts off Attica from Boeotia. In its furthest extent towards the west, where it continues in the Cithaeron range, it divides the western Attic plain, the Eleusinian, from Boeotia. The middle Attic plain is separated from the Eleusinian by a lower mountain mass, Aegaleos (Αἰγάλεως) or Corydallos (Κορυδαλλός) (467 metres high), which, leaving easy way between itself and Parnes, continues southwest, broken midway by the pass of Daphné, till it terminates in "the rocky brow which looks o'er sea-born Salamis." Within these natural ramparts lies that which we may call *par excellence* the Attic plain, a great V-shaped recess open towards the sea. Its more important internal features, which, taken in connection with its enclosed character on the one hand and its free access to the sea on the other, rendered it an ideal theatre for the development of a Greek state, we must now examine in detail.

From the offshoots of Parnes and Pentelicus in the northeast rises the most considerable waterway of the plain—the Cephissus, which afforded in ancient as in modern times a perennial source of irrigation for the fields of the Attic farmer. As it approaches the sea, below the heights of the city, it seems to have been met by another stream from the east—the Ilissus, which, rising from Hymettus, is in modern times, owing to the denudation of its parent mountain, a much more insignificant stream than in ancient times, hardly more than a dry bed in summer. Hence the difficulty of determining its entire course. The Eridanus mentioned by ancient authors seems to have been a stream from the delicious and wholesome fountain of Kaisariané (Καισαριανή, anc. Κυλλοῦ πήρα), southeast of the sources of the Ilissus, into which the stream emptied east of the city.

Between the Cephissus and the Ilissus, about midway of the plain, a short range of hills, formed like the other heights of the plain of bluish-gray limestone and bearing to-day the name Tourkovoúni

Plan of Athens.

(Τουρκοβούνι, "Turk Mountain," anc. perh. Ἀγχεσμός) (339 metres high), terminates at the southwest in the bold separate peak of Lycabettus (277 metres high), from the pyramidal summit of which, crowned by a chapel of St. George, one commands the most splendid view of the Attic plain, the gulf with its islands, and the Peloponnesian mountains beyond. Some 1000 paces to the southwest of this height, too sharp and steep for habitation, rises a double group of hills of about half the height of Lycabettus. The first and highest of these is the famous Acropolis, the citadel of Athens (156 metres high). Under its western brow lies the lower rock of the Areopagus (Ἄρειος πάγος, "Mars' Hill") (115 metres high). From northwest to south of this extends the group of the Museum (Μουσεῖον, "Muses' Hill"), the Pnyx, and the "Nymphs' Hill" (so called from an inscription), separated by depressions. The highest point is at the southeast extremity of the group, in the summit of the Museum (147 metres high), crowned by the monument of the Syrian Antiochus Philopappus. This triple group of hills seems to have been called collectively in ancient times Pnyx (Πνύξ, "conglomeration").

Lycabettus, the Acropolis, and the Pnyx were

View of the Acropolis 1890. (From a photograph.)

manifestly formed by the action of water, which, forcing its way east and west, left the hard blue-gray limestone projecting in three great protuberances, "like bones of a wasted body," as Plato says.

Between four and five English miles southwest of the Acropolis we find as outpost on the sea the rocky peninsula of Acté or Munichia, which, originally an island, like Salamis, was gradually united to the plain by the soil washed from above. North of it lies the secure landlocked harbour of Piraeus (Πειραιεύς); east, the larger open roadstead of Phalerum (Φάληρον), the earlier port of Athens, into which the Cephissus and Ilissus drain, and which is terminated on the southeast by Cape Colias (Κωλιὰς ἄκρα).

If we examine the soil of the plain from the sea inland, we find that the sandy coast is succeeded by a swampy alluvial strip, the Halipedon (Ἁλίπεδον, "salt-plain" or "sea-plain"). This again gives place to the plain proper, which, though "light of soil" and requiring diligent cultivation, is yet the natural home of the olive, and is not ill adapted to the growth of wheat and vegetables. The stony foot-hills above the plain (Φελλεύς) were terraced and utilized for the cultivation of the vine; while the fragrant mountain-plants, particularly of purple Hymettus, furnished pasturage not only for sheep, but for the bees that have made Attic honey proverbial. The fig-tree, too, was made to flourish so well in the plain that Attic figs were as famous as the oil and honey from the same region.

To these resources we must add the abundance of potter's-clay, and the wealth of material for the architect and the sculptor afforded by the quarries of Pentelicus, Hymettus, and Eleusis, as well as by those of the hills of the city and the heights of Piraeus.

In his efforts to wring from the soil its uttermost, the farmer was aided by a climate exceptionally favourable. In the Attic year there are, on the average, not more than thirty-five days on which the sun does not show itself; and though the north winds from snowy Parnes render the winter cold most penetrating, their steady breath by day during the greater part of the year, alternating with the equally steady sea-breeze by night, combined with a wonderful purity and dryness of air, gave to Attica—and still gives to her, though in a less degree—a climate at once physically and mentally exhilarating. Justly, then, might "the children of Erechtheus" be called "blessed of old, and children of the happy gods," "lightly walking through brightest and clearest air," where the goddess of all fertility "irrigated the soil from the streams of ever-flowing Cephissus, and breathed over them temperate breezes."

We turn now to the development of the little city which grew up in the midst of this exceptional environment.

As in the case of other ancient Grecian settlements, so in that of Athens we find an avoidance of immediate proximity to the sea, such as would have been obtained by a settlement on the height of the Piraeus. The natural centre for the development of a town neither remote from the sea nor yet immediately accessible from it—such, too, as to be commanded by a natural asylum in the event of hostile inroads—is afforded, in the case of Athens, by the group of hills below Lycabettus. Not only do we find here a central and isolated position in a plain set apart from the rest of the world by nature, but also, within a narrow compass, arable land with a water-supply, the material for the primitive artisan, and an airy and wholesome position for habitation upon a foundation of native rock, thus leaving the cultivable area unencumbered.

It is not of special moment to us, in tracing the material development of the little community which has done more than any other towards the promotion of civilization, whether we give to the earliest inhabitants any other name than Athenians. The term Pelasgian itself needs interpretation; and, so far as any precise knowledge goes, we might as well regard these early occupants of the "land unsacked" as quite as truly an outgrowth of "the ground itself" as their symbolic cicada. It is evident from the mere consideration of their environment that we must accept the view of Thucydides, that Attica was exceptionally stable in population, and trace, so far as possible, the gradual accretions upon the primitive nucleus, by whatever name we choose to designate it.

The earliest and most permanent traces of human habitation to be found at Athens are the foundations of houses cut in the rock of the group of hills designated by the general name of Pnyx. These are extensive enough to warrant the belief that this region, which in historical times lay waste for the most part, was the seat of a thriving town, according to the conditions of that primitive period. Whether the remarkable rock-cuttings and the semicircular Pelasgic wall upon the hill called *par excellence* Pnyx be the monuments of a prehistoric worship of the primeval god of the sunny sky of Greece as well as of its stormier phenomena, Zeus Hypsistos, or whether we are to see here, as has been the prevailing fashion, the place of the Athenian popular assembly (that which under the former supposition is the altar becoming under the latter the famous bema, from which the orators "shook th' arsenal and fulmin'd over Greece"), to any one who has been upon the ground the extreme antiquity of these imposing works is at once obvious. To the early period under discussion seem to belong also the rock-hewn chambers, one of which is traditionally known as the "Prison of Socrates"—an impossible designation.

We cannot suppose that the inhabitants of this first rock-city, or Cranaa (Κραναά), concerned themselves with the sea, if at all, beyond the demands of their daily existence, which would hardly lead them beyond fishery. It was only enterprising accretions from without that could utilize and develop the entire resources of nature.

Further traces of the early city are to be found in the ancient names, which, attached to the several districts in and about the later city, maintained themselves, not only in the mouth of the people, but in public records, through the entire history of Athens. Among the most certainly distinguishable of these primitive divisions (δῆμοι) is that known, as far back as we can trace, as Ceramicus (Κεραμεικός), so called from the potter's-clay which here furnished abundant material for one of the earliest of human industries. This region stretches northward from the rocky brow of the Areopagus. Melité (Μελίτη) seems to have lain to the south of Ceramicus, and to have embraced the Hill of the Nymphs as well as the Areopagus. Collytus (Κολ-

The Theseum.

λυτός) stretched to the northeast of the Acropolis, bordering on the west not only upon Ceramicus, but also upon Melité, as seems proved by a mention of a boundary-stone in Strabo. Diomea (Διόμεια) may be placed next to Collytus, and between the Acropolis and Lycabettus. Ceriadae (Κεριάδαι), within the border of which, just below the precipice of the Nymphs' Hill, lay the depression, formed partly by nature, partly by quarrying, called the Barathrum (Βάραθρον), adjoined Melité on the west; while Coelé (Κοίλη), consonant with its name, occupied the gully between the Hill of the Nymphs and the bed of the Ilissus. The core of these ancient districts is the rock-city in Melité. To the north of Ceramicus, and, apparently, at all times outside the city limits, lay Colonos Hippios, called from its hill (κολωνός).

While the ancient city thus maintained itself in the little inland district just described, those influences were beginning to make themselves felt from the coast which were to govern the destiny of the future state. The Phœnician traders appear to have established their customary trading-posts at an early date not merely on Salamis (which has preserved its Phœnician name), but also on the coast opposite and on the heights of the Piraeus and Phalerum. Ancient rock-cuttings in the citadel of Piraeus seem to attest early settlement there. It was, indeed, such a position as we know, not only from Thucydides, but also from various material remains, to have been most likely to be chosen by these early navigators of the Mediterranean, and mediators between Orient and Occident. To this source, a mixed Oriental coast-settlement in which Phœnicians played the leading part, appears to be due the addition of Aphrodité and Heracles (Astarté and Melkart) to the primitive native worship of Zeus and the Nymphs, "daughters of ægis-holding Zeus," whose cult attached to springs and water-courses. The ritual of these two foreign deities, as carried on in the historical period, certainly points to a very early introduction of their worship. As to the primitive worship of Zeus, reference has already been made to what may, not improbably, be deemed his primeval sanctuary on the Pnyx; concerning a second early seat of his worship, not far removed, we are better informed. Southeast of the Acropolis, above the fountain Callirrhoë and the bed of the Ilissus, was shown in ancient times an opening in the rock into which, according to the legend, the last vestiges of Deucalion's flood had sunk. Here Deucalion was said to have "built the ancient sanctuary of Olympian Zeus," whose worship remained fixed at this spot through all the subsequent history of the city. Cleft rock and spring are fit emblems of the worship of Zeus and his daughters at this spot by the primeval Cranai.

The gradual influences of the influx into Attica, both overland from the north and oversea from the west, may be traced in the gods added to the Athenian pantheon. The Minyan Artemis, the Pelasgic Hermes, the Thracian Ares who gave his name to the Areopagus, Hephaestus the handicraftsman's god, gradually encroached upon the domain of the older cults; while Poseidon gained a seat at Phalerum, and later disputed, according to the legend, the possession of the land with Athené, the intellectual development of the old Oriental mother-goddess, who retained her guardianship of the olive-tree even after she had resigned her care of the fields to Eleusinian Demeter.

The incursions from the north and from the sea, which gradually brought in these new divinities, forced the growing state of the Cranai to take up a securer position on the rock of the Acropolis, which, falling off precipitously on all sides except the west, readily lent itself to the fortifications which the early inhabitants of Greece knew so

well how to build, and which we can understand now that the ruins of Tiryns and Mycenae, as well as the Acropolis itself, have been submitted to careful excavation and study. Here, on the top of the rock, which was levelled and provided with retaining-walls, as well as with a surrounding fortification, was established the ancient Polis (Πόλις, a term long retained as the official designation of the Acropolis), the seat of the worship of Zeus Polieus. Here, on the north side, where we now see the ruins of the later Erechtheum, were the old sanctuary of the local daemon Erechtheus and the palace of the royal race of the Cecropid and Erechtheid kings, the foundations of which, as well as of private dwellings of the same epoch, have been traced. Up to this palace led from the north a stairway, unearthed in the recent excavations, and in the enclosure west of the present Erechtheum was the sacred olive-tree, the gift of Athené, and the marble balustrade about the later Ionic temple.

Thus by the sacred olive and the hollow in the rock with its mysterious trident-mark—where the waves could be heard when the south-wind blew—flourished the old priestly and kingly race, hemmed in not only by the wall of the Polis proper, but also, as it seems, by a lower wall enclosing the skirts of the Acropolis, and called from its nine gates Enneapylon (Ἐννεάπυλον), the area within which and below the ramparts of the citadel was known as the Pelargicon (τὸ Πελαργικόν). The main entrance was then, as it has always been perforce, at the west end of the citadel, a fortified way winding up towards the right, the ancient warrior's exposed side, below the bastion of Athené Niké.

The Ionians who immigrated from across the Aegean brought in the Delian Apollo, the god of

Ruins of the Olympieum.

hard by it the tomb of Cecrops, both under the protection of the old local nymph Pandrosos (Cecropium and Pandroseum). Under the northwest brow of the Acropolis, below the "long rocks" (μακραὶ πέτραι), was the grotto of Pan; and still farther to the west, within the modern bastion of Odysseus, a spring called Clepsydra (Κλεψύδρα, "she that hides her water"), popularly supposed to pass underground to Phalerum. This spring was and still is approached from above by a remarkable fortified winding stairway cut in the rock. Under the south face of the Acropolis were a cave and spring, with which the worship of the healer Asclepius came to be associated; and in the southwest spur of the sacred rock, whence Aegeus was said to have flung himself down, Athené was established as goddess of victory (Νίκη), worshipped in an uncouth primitive idol with the sacrifice of a perfect cow, as so beautifully represented on

Ionic colonization and civilization. This new and important factor in the Athenian state established itself south of the Acropolis in what Thucydides regarded as old Athens, in the region called Cydathenaeum (Κυδαθήναιον), extending some 2000 metres around the southeast flank of the Acropolis and up towards Lycabettus. Under the south face of the Acropolis, close to the later Dionysiac Theatre, the northern Dionysus of Eleutherae was established in the Lenaeum, near the sanctuary of the "public" Aphrodité (Ἀφροδίτη πάνδημος). To the south of this seems to have lain the old marketplace, the ἀγορά of the Ionic ἄστυ. Here was established the first town-hall—the Prytaneum or Basileum—by which, under the auspices of Themis, the "sceptre-bearing" kings administered justice. The solemn court of murder, so soon as the taking of human life came to be recognized as a state offence, was established on the Areopagus, in a

cleft beneath which the Eumenides ("the gracious")—as the avengers of blood, the Erinyes, were here called—were solemnly worshipped. The bodies of the executed, as well as purificatory offerings and offscourings, were thrown into the deep recess of the Barathrum. Thus the highest priesthood was associated with the Acropolis, while the king came down to preside in his political function over the Ionic nobility of Cydathenaeum. The Thesean nobles, true to their Ionic instinct, encouraged closer intercourse with the sea, and Cydathenaeum was linked by a high-road to Phalerum, whence they trafficked abroad; whereas the influence of the Tyrian traders seems to have made itself felt upon the Cranaan city of Melité by a way leading up from the Salaminian Strait.

In the meantime the germ of the later city was rapidly maturing in the industrial settlement northwest of the Acropolis in Ceramicus, which seems to have kept pace in its development with the growing opposition of the lower classes to the encroachments and extortions of the Ionic nobility. After the period of ferment followed by the Solonian legislation, at the opening of the sixth century, came the first great period of the Athenian state—the democratic despotism of the Pisistratidae.

The centre of gravity of the city now shifted to the point at which it remained ever afterwards—to the centre of the settlement of the Ceramicus, which rapidly outgrew in importance the effete Cydathenaeum. Here was established the altar of the Twelve Gods, from which, as from the golden milestone of Rome, distances were reckoned; and here, too, was the focus of Athenian *πολυπραγμοσύνη*. On the Acropolis, Pisistratus probably built the temple of Athené Polias, "the old temple," on the site between the later Parthenon and Erechtheum, where its plan has lately been made out. From this period, too, we date the institution of the great Panathenaea and the carrying of the sacred ship from the outer Ceramicus around and into the citadel. Thus did Pisistratus add new glory to the cult of his patron goddess. Upon the terrace above Callirrhoë, Pisistratus began a great temple to Olympian Zeus, but did not carry out his ambitious design. He also built in, or led an aqueduct from, Callirrhoë, which thus became Enneacrunos (*Ἐννεάκρουνος*, "the fountain with nine pipes"), and long continued to be, as it had been, the main water supply of the town. The encouragement, if not the introduction, of the Dionysiac worship, which bore such abundant fruit in the succeeding century, seems also to have been an object of especial care to Pisistratus.

Close upon the downfall of the Pisistratidean tyrannis and the struggles of the Clisthenean reform came the Persian wars and the sack of the Acropolis by the barbarians. The remains of the ruined shrines of the pre-Persian period, with curious painted pediments of soft stone, and the statues of Parian marble, executed by artists under the patronage of the Pisistratidae, are among the most precious treasures brought to light by the excavation of the Acropolis.

The wide-reaching schemes of naval empire which sprang from the fertile brain of Themistocles, who fostered the growth of the Athenian navy and first saw the strategic importance of the Piraeus, were destined never to be fully realized. Before the Persian wars, Themistocles had caused the Piraeus to be fully fortified and made a strong naval station, invested with heavy fortress-walls about the citadel of Munichia, and with its harbours (Cantharos, the largest, Munichia, and Zea) narrowed and easily closed. After the devastation of the city, he whose merit it was that he "fastened the city to the Piraeus, the land to the sea," would fain have made the Piraeus the centre of the new city-development—impregnable by land and sea. But the machinations of the Peloponnesians necessitated the hurried fortification of the old site with an effective wall, and thus enabled the conservative party of Aristides and Cimon to carry out their design of maintaining the "wheel-shaped" city about the Acropolis, with a separate port-town and naval station at the Piraeus.

The Themistoclean wall, the successor of older fortifications, passed, as well as can be made out, over the Pnyx hill from the Barathrum to the peak of the Museum, skirted the Ilissus, which lay like a moat without it to the south, curved southeast of the Acropolis, coming around towards the northeast, so as to avoid the foot of Lycabettus, and finally passed from east to west across the plain, taking in the little water-courses from Lycabettus, and finally bending about to the point from which we started. It included Collytus and Diomea, cut Melité in twain, formed an "inner" and an "outer" Ceramicus, and excluded Coelé. The dimensions of the space thus enclosed were about 2000 metres east and west by 1500 metres north and south, the Acropolis lying some 500 metres nearer the south side. Of the gates, we note two in Melité—the Melitid Gate (*Μελιτίδες πύλαι*) and the "Gate of the Horsemen" (*Ἱππάδες πύλαι*); then the gate on the south leading to Phalerum (*Ἰωνίαι πύλαι*); the Gate of Diochares (*Διοχάρους πύλαι*) and the Diomean Gate (*Διομὴς πύλη*) in the east; the Acharnian Gate (*Ἀχαρνικὴ πύλη*) in the north; and the Dipylon (*Δίπυλον*), the most important, between the inner and outer Ceramici, where considerable remains of the ancient foundations are still to be seen. South of the last was the Piraic Gate (*Πειραϊκὴ πύλη*).

To unite the city thus fortified with the Piraeus, the Long Walls were begun, about B.C. 460—a northern, run from the Hill of the Nymphs to Munichia, and a southern, connecting the city with Phalerum. Between these, under Pericles, a second Piraic Wall was built, parallel to the northern, completing the system and linking city and port by a long double fortification—the *σκέλη*, or "legs."

Without and near the gates, particularly the Dipylon, the dead were interred; and public funerals were solemnized over the ashes of military heroes in the outer Ceramicus. Beautiful remains of the tombs of the period succeeding the Periclean, but bearing abundant traces of the Phidian art, have been fortunately preserved to us near the Dipylon, and form one of the most striking monuments of the ancient city.

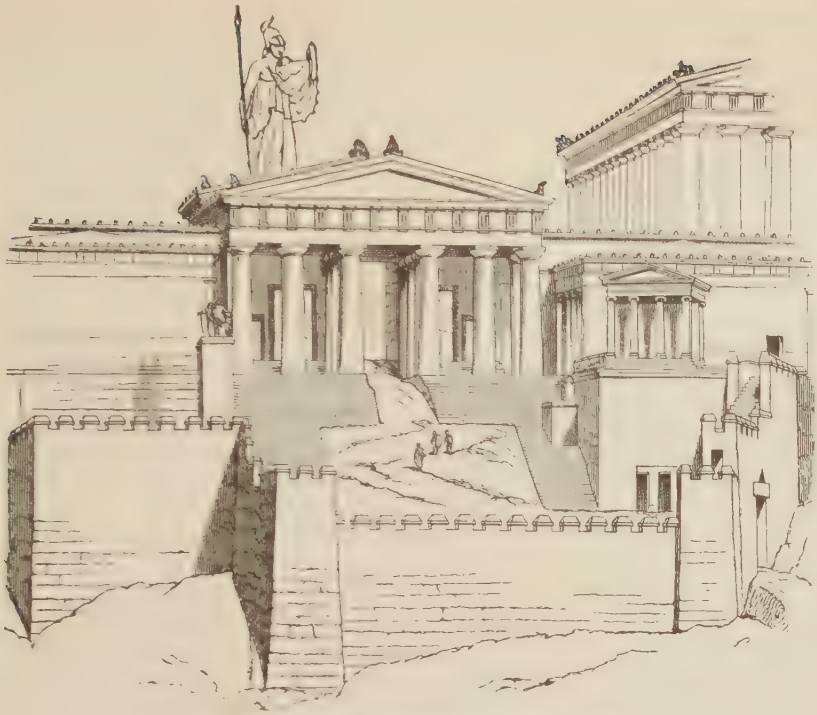
To the Cimonian period seems to belong the imposing temple, the best preserved of all Greek buildings of classical times, on the hill overlooking the Ceramicus from the west—the so-called Theseum, not improbably to be named the Heracleum.

On the Acropolis, in connection with a new and extensive plan of walling, levelling, and enlargement of area, preparations seem to have been made

by Cimon for an imposing new temple on the site now occupied by the Parthenon. Here not only was the irregular edge of the precipice raised and reinforced by a high wall outside the Pelasgian rampart supporting a deep inner grading, but a heavy foundation was built up from the bed-rock as support for a great temple structure, destined not to be completed according to the original design. On the north side, also, the plateau of the Acropolis was built up and walled, drums of columns and portions of architraves being freely used in the construction of the wall, and architectural fragments, inscribed marble tablets, and even statues employed as grading material. The bastion of Niké was also newly fortified. Though the nature of Cimon's whole undertaking was decorative rather than strategic, it might yet be truly said that the Acropolis was walled by the Pelasgians and Cimon.

Pericles, having at his disposal the treasures of the Attic League, which were transferred to Athens (B.C. 454) and apparently kept in the Opisthodomos—as the "ancient" Pisistratidean temple of the Polias, commonly called from its length the Hecatompedon (Ἑκατόμπεδον), and apparently rebuilt, at least in part, on its original site, was henceforth termed—reared upon Cimon's foundation the new and magnificent Doric Parthenon (dedicated B.C. 438). The architecture was intrusted to Ictinus and the sculpture to Phidias, whose chryselephantine statue of the Parthenos adorned the room to which alone the term Parthenon ("the virgin's chamber") strictly applied. The Propylaea (q. v.), a massive ornamental entrance to the Acropolis, in which the Doric and Ionic styles were happily blended, rose under the guidance of the brilliant architect Mnesicles; and, although never completed according to the architect's design, it remained among the greatest wonders of the city.

Of the host of statues of all kinds which fast thronged the Acropolis, particularly during the fifth century—among them the great bronze statue of Athené as champion (πρόμαχος), the bronze figure of the Wooden Horse, the heifer of Myron, and many others mentioned by ancient writers—we can take but passing notice. Their number was constantly increasing down to the times of the Roman Empire.



Some time in the period covered by the first Athenian empire the stately little Ionic temple of Athené Niké seems to have been reared upon the southwest bastion of the Acropolis, and surrounded on three sides with the exquisite marble balustrade, fragments of which are still preserved on the Acropolis.

The new Erechtheum, with its famous porch of the Maidens or Caryatides, was in course of construction at the close of the fifth century. See p. 112.

The agora of the inner Ceramicus, bounded on the south by the abrupt brow of the Areopagus, under which stood the statues of the Eponymi, the namesake-heroes of the ten Clistheneau tribes, seems to have been divided by a line of stone Hermae into a northern and a southern half. About the southern half stood various public buildings, the Council-hall (Βουλευτήριον), the Royal Stoa (Στοὰ Βασίλειος), the Painted Stoa (Στοὰ ποικίλη), the Metroön, the temple of Apollo Patroös, as well as the altar of the Twelve Gods and the statues of the democratic heroes Harmodius and Aristogiton. In its wider extent the agora of Ceramicus is bounded on the west by the hill of the so-called Theseum, and on the east

The Acropolis and the Wall of Themistocles.

View of the Athenian Propylaea. Restoration. (Reber.)

by the gate of Athené Archegetis. Its chief existing monument is the later Stoa of Attalus, king of Pergamos. The mention of these public works needs to be complemented by a word in regard to private structures. The dwelling-houses of the city during the period of Athenian greatness stood in striking contrast with the public structures. Built along narrow, irregular, and ill-kept streets, they gave but little indication of the social position or wealth of their occupants. In this respect the old city seems to have been inferior to the Piraeus, which was better laid out and contained more sumptuous private buildings. At all times, however, in both towns, houses and house-furniture were, for the most part, extremely simple, and the bustling open-air life of the male population was not conducive to private luxury. See DOMUS.

The Long Walls, destroyed at the close of the Peloponnesian War, were re-erected at the birth of the new Athenian empire, under which, and during the subsequent period of the Hellenistic successors of Alexander, the state received further adornment. Lycurgus completed the great stone theatre within the Lenaeum, overlapping the ancient Orchestra or "dancing-ring," traces of which are still discernible. The Street of the Tripods, winding about the southeastern foot of the Acropolis, is still marked by the delicate choragic monument (q. v.) of Lysicrates (B.C. 334). The Stoa of Eumenes lies

The Acropolis. View Taken from the Olympieum.—Evening Effect.

to the west of the great theatre. The eastern side of the market of Ceramicus is marked by the great stone bazaar of Attalus, previously noticed. Building was carried on by Antiochus Epiphanes till his death (in B.C. 164) upon the site of the old sanctuary of Zeus on the Ilissus, where Hadrian finally reared his colossal Corinthian temple, the few remaining columns of which (the *στῦλοι*) are one of the most prominent Athenian landmarks. Near it, towards the Acropolis, Hadrian set the gate, still standing, which should separate, according to its inscription, "the Athens of Theseus" from "the Athens of Hadrian." An octagonal tower with water-clock within and weather-vane on the summit, and bearing on its several faces reliefs representing the winds (Horologium or "Tower of the Winds"), was erected by Andronicus Cyrrhestes (q. v.) southeast of the agora, where it still stands. The famous Herodes Atticus built, in honour of his dead wife Regilla, the great Odeum, adjoining the Stoa of Eumenes, under the southwestern slope of the Acropolis. These are among the most prominent monuments of the later Greek and the Graeco-Roman period that still attract the visitor to the ancient site.

The subsequent history of the monuments is one of rapine, defacement, and destruction. The traces of the Valerian wall, forming a great loop north of the Acropolis, and the mediæval and modern fortifications, that have been removed from the approach to the Acropolis, are melancholy witnesses to barbarian invasion, mediæval slavery, and the struggle of reawakening liberty. The archives of the story of the material growth and development of the Athens that has influenced the world had been laid up for a curious posterity long before these structures arose.

BIBLIOGRAPHY.—E. Curtius, *Stadtgeschichte von Athen* (Berlin, 1891) (a most valuable work, containing a full collection of ancient authorities, citations of modern publications, excellent drawings, plans, and maps); art. "Athen" in Baumeister's *Denkmäler des klassischen Alterthums;* "Athen" in Bädeker's *Griechenland* (Eng. trans. 1889). Other works are cited by Curtius. See HELLAS.

Athenaea (*Ἀθήναια*). An ancient festival originally held in honour of Athené at Athens, and of an agrarian character. See CHALKEIA; PANATHENAEA.

Athenaeum (*Ἀθήναιον*). The first public educational institution at Rome, built by Hadrian about A.D. 135. The building was in the form of a theatre, and brilliantly fitted up. There rhetoricians and poets held their recitations, and salaried professors gave their lectures in the various branches of general liberal education—philosophy and rhetoric, as well as grammar and jurisprudence. This continued until at least the fifth century A. D.

Athenaeus (*Ἀθήναιος*). (1) An engineer, and contemporary of Archimedes, who flourished about B.C. 210. He was the author of a work, still preserved, on engines of war (*Περὶ Μηχανημάτων*).

(2) The Greek scholar, a native of Naucratis in Egypt. He was educated at Alexandria, where he lived from A.D. 170–230. After this he lived at Rome, and there wrote his *Δειπνοσοφισταί* (or "Banquet of the Learned"), in fifteen books. Of these the first, second, and part of the third are only preserved in a selection made in the eleventh century; the rest survive in a tolerably complete state. The work shows astonishing learning, and contains a number of notices of ancient life which would otherwise have been lost. The author gives us collections and extracts from more than 1500 works (now mostly lost), and by more than 700 writers. His book is thrown into the form of a conversation held in the year A.D. 228 at a dinner given by Larensius, a rich and accomplished Roman, and a descendant of the great antiquarian Varro. Among the guests are the most learned men of the time, including Galen the physician and Ulpian the jurist. The conversation ranges over numberless subjects connected with domestic and social life, manners and customs, trade, art, and science. Among the most valuable things in the book are the numerous passages from prose-writers and poets, especially from the masters of the Middle Comedy. Good editions are those of Dindorf (1827); and Meineke, 4 vols. (1859–67). There is a literal English translation in the Bohn Classical Library, 3 vols. (1854).

Athenagŏras (*Ἀθηναγόρας*). A Father of the Church, a native of Athens, and in philosophy a Platonist. He wrote a treatise on the doctrine of the resurrection of the body and a defence of the Christians, blending the teachings of the Greek philosophers with those of the Church. He flourished in the second half of the second century.

Athēné (*Ἀθήνη*) or **Pallas Athēné**. A Greek goddess, identified with the Roman Minerva. According to the story most generally current, she was the daughter of Zeus, who had swallowed his first wife, Metis (Counsel), the daughter of Oceanus, in the fear that she would bring forth a son stronger than himself. Hephaestus (or, according to another version, Prometheus) clave open the head of Zeus with an axe, on which Athené sprang forth in full armour, the goddess of eternal virginity. But her ancient epithet *Τριτογένεια* (born of Triton, or the roaring flood) points to water—that is, to Oceanus—as the source of her being. Oceanus was, according to Homer, the origin of all things and of all deities. The worship of Athené and the story of her birth were accordingly connected with many brooks and lakes in various regions—especially in Boeotia, Thessalia, and Libya—to which the name Triton was attached.

From the first, Athené took a very prominent place in the Greek popular religion. The Homeric hymns represent her as the favourite of her father, who refuses her nothing. When solemn oaths were to be taken, they joined her name with those of Zeus and Apollo, in a way which shows that the three deities represent the embodiment of all divine authority. With the exception of the two gods just mentioned, there is no other deity whose original character as a power of nature underwent so remarkable an ethical development. Both conceptions of Athené, the natural and the ethical, were intimately connected in the religion of Attica, whose capital, Athens, was named after Athené and was the most important seat of her worship. Athené was originally the maiden daughter of the god of heaven; the clear transparent æther, whose purity is always breaking forth in unveiled brilliancy through the clouds that surround it. As a deity of the sky, she, with Zeus, is the mistress of thunder and lightning. Like Zeus, she carries the aegis (q. v.) with the Gorgon's head, the sym-

bol of the tempest and its terrors. In many statues, accordingly, she is represented as hurling the thunder-bolt. But she also sends down from sky to earth light and warmth and fruitful dew, and with them prosperity to fields and plants. A whole series of fables and usages, belonging especially to the Athenian religion, represent her as the helper and protector of agriculture. The two deities Erechtheus and Erichthonius, honoured in Attica as powers of the fruitful soil, are her foster-children. She was worshipped with Erechtheus in the temple named after him the Erechtheum, the oldest sanctuary on the Athenian Acropolis. The names of her earliest priestesses, the daughters of Cecrops—Aglaurus, Pandrosus, and Hersé—signify the bright air, the dew, and the rain, and are mere personifications of their qualities, of such value to the Athenian territory.

The sowing season was opened in Attica by three sacred services of ploughing. Of these, two were in honour of Athené as inventress of the plough, while the third took place in honour of Demeter. It was Athené, also, who had taught men how to attach oxen to the yoke; above all, she had given them the olive-tree, the treasure of Attica. This tree she had made to grow out of the rock of the citadel, when disputing the possession of the land with Poseidon. Several festivals, having reference to these functions of the goddess, were celebrated in Attica—the Callyuteria and Plynteria, the Scirophoria, the Arrhephoria or Hersephoria, and the Oschophoria, which were common to Athené with Dionysus. (See DIONYSIA.) Even her chief feast, the Panathenaea, was originally a harvest festival. It is significant that the presentation of the *πέπλος* or mantle, the chief offering at the celebration, took place in the sowing season. But afterwards more was made of the intellectual gifts bestowed by the goddess.

Athené was very generally regarded as the goddess of war—an idea which in ancient times was the prevailing one. It was connected with the fact that, like her father, Zeus, she was supposed to be able to send storms and bad weather. In this capacity she appears in story as the true friend of all bold warriors, such as Perseus, Bellerophon, Iason, Heracles, Diomedes, and Odysseus. But her courage is a wise courage, not a blind rashness like that of Ares; and she is always represented, accordingly, as getting the better of him. In this connection she was honoured in Athenian worship mainly as a protector and defender; thus (to take a striking example), she was worshipped on the citadel of Athens under the name of *Πρόμαχος*, "champion," "protector." But she was also a goddess of victory. As the personification of victory (Athené Niké) she had a second and especial temple on the Athenian Acropolis. (See ACROPOLIS.) And the great statues in the temples represented her, like Zeus, with Niké in her outstretched hand. The occupations of peace, however, formed the main sphere of her activity. Like all the other deities who were supposed to dispense the blessings of nature, she is the protectress of growing children; and, as the goddess of the clear sky and of pure air, she bestows health and keeps off sickness. Further, she is (with Zeus) the patroness of the Athenian *φρατρίαι* or unions of kinsfolk. At Athens and Sparta she protects the popular and deliberative assemblies; in many places, and especially at Athens, the whole State is under her care (Athené Polias, Poliuchus). Elsewhere she presides over the larger unions of kindred peoples. The festival of Athené Itonia at Coronea was a confederate festival of all Boeotia. Under the title of *Παναχαΐς* she was worshipped as the goddess of the Achaean League.

Speaking broadly, Athené represents human wit and cleverness, and presides over the whole moral and intellectual side of human life. From her are derived all the productions of wisdom and understanding, every art and science, whether of war or of peace. A number of discoveries, of the most

Athené. (Vatican Museum.)

various kinds, is ascribed to her. It has been already mentioned that she was credited with the invention of the plough and the yoke. She was often associated with Poseidon as the inventress of horse-taming and ship-building. In the Athenian story she teaches Erichthonius to fasten his horses to the chariot. In the Corinthian story she teaches Bellerophon to subdue Pegasus. At Lindus in Rhodes she was worshipped as the goddess who helped Danaüs to build the first fifty-oared ship. In the fable of the Argonauts it is she who instructs the builders of the first ship, the Argo. Even in Homer all the productions of women's

art, as of spinning and weaving, are characterized as "works of Athené." Many a Παλλάδιον, or statue of Pallas, bore a spindle and distaff in its left hand. As the mistress and protectress of arts and handiwork, she was worshipped at the Chalkeia, or Feast of Smiths, under the title of Ἐργάνη. Under this name, too, she is mentioned in several inscriptions found on the Acropolis. Her genius covers the field of music and dancing. She is inventor of the flute and the trumpet, as well as of the Pyrrhic war-dance, in which she was said to have been the earliest performer, at the celebration of the victory of the Gods over the Giants.

It was Phidias (q. v.) who finally fixed the typical representation of Athené in works of art. Among his numerous statues of her, three —the most celebrated —were set up on the Acropolis of Athens. These were: (1) The colossal statue of Athené Parthenos, wrought in ivory and gold, thirty feet in height (with the pedestal), and standing in the Parthenon. (See PARTHENON.) The goddess was represented wearing a long robe falling down to the feet, and on her breast was the aegis with the Gorgon's head. A helmet was on her head; in one hand she bore a Victory, six feet in height, in the other a lance, which leaned against a shield adorned with scenes from the battles of the Amazons with the Giants. (2) The bronze statue of Athené Promachos, erected from the proceeds of the spoils taken at Marathon, and standing between the Propylaea and the Erechtheum. The proportions of this statue were so gigantic that the gleaming point of the lance and the crest of the helmet were visible to seamen on approaching the Piraeus from Sunium. (3) The Lemnian Pallas, so named because it had been dedicated by the Athenian colonists in Lemnos. The attractions of this statue won for it the name of "the Beautiful." Like the second, it was of bronze; being a representation of Athené as the goddess of peace, it was without a helmet. See MINERVA.

Pallas of Velletri. (Munich.)

Athenodōrus (Ἀθηνόδωρος). (1) A Rhodian sculptor associated with Agesander and Polydorus in producing the famous group of Laocoön (q. v.). (2) Of Tarsus, a Stoic philosopher, surnamed Cordylio, who was keeper of the library at Pergamus, and afterwards removed to Rome, where he lived with M. Cato, at whose house he died. (3) Of Tarsus, a Stoic philosopher, surnamed Cananites, from Cana, in Cilicia, the birthplace of his father. He taught at Apollonia in Epirus, where the young Octavius (subsequently the emperor Augustus) was one of his disciples. He accompanied the latter to Rome, and became one of his intimate friends. On one occasion he is said to have advised the emperor always to repeat the letters of the Greek alphabet before giving way to any impulse of anger.

Athĕsis. The modern Adige or Etsch; a river rising in the Rhaetian Alps. It receives the Atagis (Eisach), flows through upper Italy past Verona, and falls into the Adriatic through many mouths.

Athlētae (ἀθληταί, ἀθλητῆρες). A term in strictness applied to those who contended for prizes (ἆθλα) in the games which required strength, skill, and agility of body, in contradistinction to

those who engaged in equestrian and musical contests; though in a general sense it is found extended even to these.

The contests of the athletae were in running, wrestling, boxing, the pentathlon, and the pancratium. Details of these will be found in the separate articles LUCTA; PANCRATIUM; PENTATHLON; PUGILATUS; STADIUM.

In early times in Greece, athletic games were held occasionally at festivals in honour of the gods and heroes, but especially at the funerals of distinguished men; thus in the *Iliad* (xxiii.) games are held at the funeral of Patroclus. But the warriors, as a rule, do not appear to have trained especially for the games; since, as part of their general education, they had been instructed in gymnastics. In this department, Grecian legend told how Heracles, Peleus, and Theseus had been celebrated, as were also Castor and Pollux; but in the Homeric Age there were few who made athletics as such their especial business, though we must not forget the passage (*Od.* viii. 164) where Euryalus reproaches Odysseus as not being "like an athlete." Games were becoming fairly frequent, and the special skill required in the contests was gradually demanding increased application to the different branches of athletics.

In the next age, athletics became the national Hellenic sport, and never ceased to be so till the latest times of the ancient world; for, in the first instance, they satisfied the artistic instinct of the Greeks, as they developed the human frame in strength and beauty. But as it was the national sport, like horse-racing in England, every department tended to become more and more professionalized. The great festivals collected together the greatest concourses of the members of the Hellenic race; and the emulation to succeed before the immense gatherings of their countrymen, and the extravagant honours and rewards bestowed by the cities on their citizens when victorious, rendered victory in the games the most coveted distinction a Greek could acquire; so that every means was resorted to in order to attain the strength and skill necessary for success.

Euripides (*Autol.* Frag. 1) speaks with bitter contempt of the athletes, who, he says, are the greatest of the countless evils of Hellas, who are slaves to their belly, a degenerate lot, useless in war, unable to bear old age or misfortune — for their training is not an ennobling training.

The athletic contests, just as are the "weights" in the ring in this country, were divided into "light" (*κοῦφα*) and "heavy" (*βαρέα*) or "violent" (*βίαια*). See Aristot. *Pol.* v. 4, 7 foll.; Galen. vi. 487, K.; Philostr. *Gymn.* 3.

The training in each of the two main classes became severer and severer as time went on; for more and more striking performances were expected. We hear of a rule that the competitors at Olympia had to swear that they had diligently devoted ten months to the recognized special training in athletics (Pausan. v. 24, 9). This was to maintain that common system of athletic training which prevailed in all Hellenic wrestling-schools. The ordinary gymnastic master who taught the youths bodily exercises as a branch of general education was called *παιδοτρίβης*, and he who trained those who were intending to compete in the games was the *γυμναστής*; but this distinction disappeared in later times. The *γυμναστής* was in constant supervision of his pupils, followed them to the games (Pausan. v. 6, 8), where he made all necessary preparations for their contest, and during the struggle stood by with words of encouragement or reproach (Philostr. *Gymn.* 20). Just as a physician, a trainer required implicit obedience in those for whom he prescribed (Epictet. *Enchir.* 29). Subordinate to him was the *ἀλείπτης*, who originally, as his name indicates, looked to the anointing of the body; but often, especially in later times, took much more upon himself, became confused with the *παιδοτρίβης*, and used to prescribe the course of diet to be eaten, and even how it was to be eaten. The diet of athletes is said to have been fresh cheese, dried figs, and wheat; but Dromeus of Stymphalus, or, according to others, a trainer called Pythagoras, introduced a meat diet. However, it is very unlikely that the athletes were ever trained on anything but meat. Pork was the principal meat used, though we find also beef and goat's flesh. Fish was considered bad. They probably drank water and not wine after their exercises, as the latter was dangerous; and they had to abstain from all cakes. The bread they ate was of a particular kind, slightly leavened and hardly baked at all. The usual course was to eat bread for the morning meal and meat for the evening. After the morning meal their exercises continued till the evening, interrupted only by a few intervals (Galen. vi. 168–169). Those who submitted to the severest training (*βίαιος τροφή, ἀναγκαιοφαγία, ἀδηφαγία*) had to eat enormous masses of meat after the day's exercise: two minae (=2⅞ lbs.) was a very small amount for an athlete, who generally slept it off late into the next day (Galen. i. 28, K.), though we sometimes hear of athletes promoting digestion by walking (Plin. *H. N.* xi. § 283). Many athletes did really eat vast quantities of food; so much, in fact, that their appetite became proverbial (Aristoph. *Pax*, 34).

The exercises which athletes went through were the ordinary ones of the palaestra and those required for the games; though we sometimes find athletes going through exercises which were not departments of competition, merely in order to increase their strength, such as putting heavy weights, bending bars of iron, wrenching back the necks of bulls, knocking suspended bags of sand backwards and forwards by blows of their fists (*κωρυκοβολία*), and also working with a mattock. The athletes practised, as a rule, each for a separate event. Hence the one-sidedness even of their physical training, and the fact that those who trained for that event which comprised the most varied exertions (such as the pentathlon), were justly considered to have the best-proportioned frames. But sometimes the athletes attempted more than one; for it was considered a great honour to be victorious at Olympia in both wrestling and in the pancratium on the same day. There were only seven such victors besides their mythic predecessor, Heracles. A certain Polites conquered on the same day in the three different kinds of races—the stadion, the diaulos, and the dolichos (Pausan. vi. 13, 3).

Victors in the principal games were called *ἱερονῖκαι;* those in the separate games, *ὀλυμπιονῖκαι*, etc.; and those who were successful in all four games were the *περιοδονῖκαι*. In Roman times, however, we find this latter term applied to celebrated athletes who had been victors in a great

number of games, even though they were not the four great ones. Another strange title of distinguished athletes at Rome was *παραδοξονίκης*, which was strictly applied to those who conquered in both wrestling and the pancratium.

In early times, the athletes used to practise in the gymnasium, where the young men who had made some progress in gymnastics, and were advanced from the palaestra, went through their ordinary unprofessional exercises. In Roman times we find the athletes frequenting the palaestrae, the gymnasia, *xysti* (covered places for use in bad weather), and the stadia. There were also exercising places in the great Roman balneae (q. v.).

Originally the athletes used to contend with a girdle around their loins (*διάζωμα*, *περίζωμα*, or simply *ζῶμα*), according to the custom of the Spartans; but very soon it became the custom to contend naked. It was professional for Roman athletes to wear their hair tied up in a knot called *cirrus*. The Greek as well as the Roman athletes used sometimes to shave off their hair in that tonsure which Aristophanes called "the bowl crop" (*σκαφίον*, *Thesm.* 838). Further, they occasionally wore a cap (*galericulum*); and as their wonderful style of boxing consisted in swinging round their arms and not striking out straight from the shoulder, they used to wear guards for the ears (*ἀμφωτίδες* or *ἐπωτίδες*). For the battered ears of ancient boxers, see Plat. *Protag.* 342 B; Mart. vii. 32, 5.

He who took to the profession of an athlete seldom abandoned it before his thirty-fifth year, which was considered the age at which he was in the prime of manhood; but if he had never won a victory by that time he generally gave up the business. A successful athlete continued to contend in the games till his strength failed (Plut. *Cat. Mai.* 4); and, as might be expected, in many cases, as he advanced in years, became a trainer of younger men: e. g. Iccus (Pausan. vi. 10, 5).

To be an Olympic victor, said Cicero, was esteemed by the Greeks a greater glory than a triumph at Rome. And indeed, the victorious Greek athlete used to have a kind of triumphal entry into the town his victory had ennobled. Surrounded by a large crowd, sometimes with a grand procession of chariots, clad in a purple mantle like a king, he drove into the city through a breach made in the wall for his chariot to pass through—a symbol that cities which possessed such citizens had no need of walls (Plut. *Symp.* ii. 5). Then followed the banquet, during which the victor heard his praises sung by a lyrical chorus and in the verse of the greatest poets of the day. Contests which involved the honour of such a triumphal entry were technically called *ἀγῶνες εἰσελαστικοί*, which in early times were the four great festivals only; but in Imperial Rome this privilege was extended to other games (Plin. *Epist.* x. 119, 120). Solid material rewards, too, were given. Even as reduced by Solon, the money reward which the Athenians gave the victor in the Olympic games was 500 drachmae, and 100 to the victor in any of the other games; sometimes he received maintenance in the Prytaneum and the honour of the first seat in the assemblies and theatre (*προεδρία*, Xenophan. *Frag.* 2, 7, ed. Bergk). Statues were often erected to him in his native city and at Olympia. In fact, Plato goes so far as to say (*Rep.* v. 465 D) that the victor at the Olympic games enjoyed a blessed life (*βίος μακαριστός*).

Yet among the many judgments passed by the ancients on the athletes we can find scarcely any that are favourable. Allusion has been made to the strictures of Xenophanes and Euripides, who attack them for their uselessness to the state and for their want of cultivation. Even from the physical point of view their training appeared to thoughtful men of science utterly bad. Plato sees in the athletes a habit of body which is sleepy and very subject to disease, which is too highly and extravagantly trained, and which unfits them for social or political duties. They are without information, cultivation, or grace of manner; hard and brutal, all violence and fierceness (ib. 410, 411). Aristotle declares that the habit of body of athletes is not suitable for that vigorous physical condition which a citizen should have, nor for health and the procreation of children. It is too one-sided, and the discipline which develops it is too severe. Plutarch disapproves of the *ἰσχὺς παλαιστική* and of athletic training generally.

We must now hastily review the rise of athletic games at Rome. Exhibitions of gladiators, not of athletes, were the national sport. Cicero says to M. Marius of the athletic contests exhibited by Pompeius in B.C. 55, "Why should I think you regretted not having seen the athletes, when you have despised the gladiators?" A certain kind of athletics had indeed been indigenous in Italy from the earliest times (Liv. i. 35), and we hear of contests in wrestling and boxing at the Roman games; but the whole practice was utterly unsystematic (cf. Suet. *Aug.* 45), and so quite unlike the elaborate manner in which it was cultivated in Greece. It was from Greece that the scientific practice of athletics came. In B.C. 186 M. Fulvius Nobilior gave the first exhibition of professional Greek athletes at Rome (Liv. xxxix. 22). We do not, however, hear of a similar exhibition again till Sulla's time, but there were a few others during the last century of the Republic. Varro com-

Roman Athlete. (Baumeister.)

plains, indeed, of there being a gymnasium at every villa (*R. R.* ii. 1, 1); but this was probably for medicinally prescribed exercises (*iatraliptice*), not regular athletics. But it was not till the Actian games were established by Augustus, and other periodic games (Dio Cass. li. 1) which comprised gymnastic contests in their programme, that athletics got a steady footing among the Romans. From that time these *certamina Graeca*, as they were called (Tac. *Ann.* xiv. 21), became more and more popular. Nero in A.D. 60 built a gymnasium and instituted a new set of games called Neronia, of which athletics formed a part, as they did also of the important Agon Capitolinus established by Domitian in A.D. 86, who further built a magnificent stadium for athletics in the Campus Martius, large enough to hold 30,000 spectators (Suet. *Dom.* 4, 5; Friedländer, p. 466). After this, athletics gradually attained increased prominence in the Roman games, till finally, in the fifth century, they supplanted the gladiatorial shows.

It is highly noticeable, however, that the names of the athletes which are preserved in inscriptions are almost all Greek; not more than four or five being Roman (Friedländer, p. 472). Everything connected with athletics, technical terms and all, are Greek (cf. Juv. iii. 68). The reason is that for a long time it was considered quite unbecoming the Roman dignity to be an athlete. The nakedness of the Greeks offended the Roman sense of propriety (Cic. *Tusc.* iv. 33, 70). The Romans saw the uselessness for war of the athletic training, for they themselves had been, as Polybius says (i. 6, 6), "the true athletes in the feats of war, trained in contests with the Samnites and Gauls."

Like all other classes in the community under the Roman Empire, the athletes crystallized into societies or guilds (*σύνοδοι*). They were well organized, had presidents called Xystarchi, and used to make provincial tours and give exhibitions (Friedländer, p. 475). The chief of these societies in the second century was that of the Herculanei (cf. *C. I. G.* 5906 foll.), who had their own special gymnasium, with its council-chamber (*curia*, Orelli, 2588), its records, its temple, and its president, who bore the title of *ἀρχιερεύς*, and who was also overseer of the imperial baths.

On athletics generally, the chief ancient work is Philostratus's *Γυμναστικός* (see Kayser's Teubner text, ii. 261–293). Modern writers are Krause, *Gymnastik und Agonistik der Hellenen*, passim; Hermann-Blümner, *Privatalterthümer der Griechen*, §§ 36, 50; Becker-Göll, *Charikles*, ii. 213 foll.; Grasberger, *Erziehung und Unterricht im klassischen Alterthum*, vols. i., iii., passim; Guhl and Koner, *Das Leben der Griechen und Römer*, 52; and especially Friedländer, *Darstellungen aus der Sittengeschichte Roms*, ii. 459–491; M. Planck, in Pauly's *Real-Encyclopädie*; Bussemaker and Saglio, in *Dict. des Antiquités*; and Blümner, in Baumeister's *Denkmäler des klassischen Alterthums*, s. v. *Athletae*. See also the article GYMNASIUM.

Athlothĕtae (*ἀθλοθέται*). See AGONOTHETAE.

Athos (*Ἄθως*). The mountainous peninsula also called ACTÉ, which projects from Chalcidicé in Macedonia. At its extremity it rises to the height of 6349 feet; the voyage round it was so dreaded by mariners that Xerxes had a canal cut through the isthmus which connects the peninsula with the mainland to afford a passage to his fleet. The isthmus is about 1½ mile across, and there are distinct traces of the canal to be seen at the present day. The peninsula contained several flourishing cities in antiquity, and is now studded with numerous monasteries, cloisters, and chapels. In these monasteries some valuable MSS. of ancient authors have been discovered. See Riley, *Athos, or the Mountain of the Monks* (London, 1887).

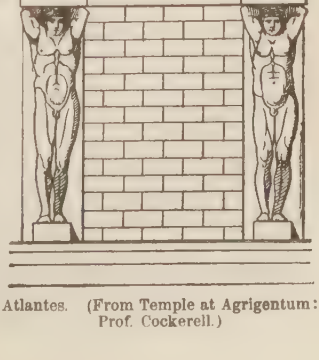
Atia. The mother of Augustus Caesar. See AUGUSTUS.

Atia Lex. See LEX.

Atilia Lex. See LEX; TUTOR.

Atilius Fortunatiānus. A Latin grammarian of the fourth century A.D., who wrote a manual of prosody for schools (*Omnis Summa Metrorum*). See H. Keil, *Grammatici Latini*, vi. pp. 245–250.

Atilius Regŭlus. See REGULUS.



Atilla. The mother of the poet Lucan. See LUCANUS.

Atimia (*ἀτιμία*). The forfeiture, in Greece, of a man's civil rights. It was either total or partial. A man was totally deprived of his rights—both for himself and for his descendants—when he was convicted of murder, theft, false witness, partiality as arbiter, violence offered to a magistrate, and so forth. This highest degree of *ἀτιμία* excluded the person affected by it from the Agora, and from all public assemblies; from the public sacrifices, and from the law courts; or rendered him liable to immediate imprisonment if he was found in any of these places. It was either temporary or perpetual, and either accompanied or not with confiscation of property. Partial *ἀτιμία* involved only the forfeiture of some few rights, as, for instance, the right of pleading in court. Public debtors were suspended from their civic functions till they discharged their debt to the State. People who had once become altogether *ἄτιμοι* were very seldom restored to their lost privileges. The converse term to *ἀτιμία* was *ἐπιτιμία*. See Lelyveld, *De Infamia ex Iure Attico* (1835); Meier and Schömann, *Att. Process*, p. 563; Wachsmuth, *Hellen. Alterth.* (2d ed.), ii. 195 foll.; and the article INFAMIA.

Atinia Lex. See LEX.

Atlantes (*Ἄτλαντες*). An African people living near Mt. Atlas who daily cursed the sun at its rising and setting for its heat. (Herod. iv. 184).

Atlantes (*Ἄτλαντες*) and **Telamōnes** (*τελαμῶνες*). Terms used in architecture, the former by the Greeks, the latter by the Romans, to designate those male figures which are sometimes fancifully used, like the female caryatides, in place of columns. Both words are derived from *τλῆναι*, and the former evidently refers to the fable of Atlas, who supported the vault of heaven; the latter perhaps to

Atlantes. (From Temple at Agrigentum: Prof. Cockerell.)

the strength of the Telamonian Aiax. A representation of such figures is given in the preceding illustration, from the temple of Zeus Olympius at Agrigentum. See CARYATIDES.

Atlantĭcum Mare. See OCEANUS.

Atlantĭdes (Ἀτλαντίδες). See HESPERIDES; PLEIADES.

Atlantis. See PLATO; TIMAEUS.

Atlas (Ἄτλας). "Bearer" or "Endurer." The son of the Titan Iapetus and Clymené (or, according to another account, Asia), brother of Menoetius, Prometheus, and Epimetheus. In Homer (*Od.* i. 52) he is called "the thinker of mischief," who knows the depths of the whole sea, and has under his care the pillars which hold heaven and earth asunder. In Hesiod he stands at the western end of the earth, near where the Hesperides dwell, holding the broad heaven on his head and unwearied hands. To this condition he is forced by Zeus, according to a later version, as a punishment for the part which he took in the battle with the Titans. By the ocean nymph Pleioné he is father of the Pleiades, and by Aethra of the Hyades. In Homer, the nymph Calypso is also his daughter, dwelling on the island Ogygia, the navel of the sea. Later authors make him the father of the Hesperides, by Hesperis. It is to him that Amphitrité flies when pursued by Poseidon. As their knowledge of the West extended, the Greeks transferred the abode of Atlas to the African mountain of the same name. Local stories of a mountain which supported the heaven would, no doubt, encourage the identification. In later times, Atlas was represented as a wealthy king, and owner of the garden of the Hesperides. Perseus, with the head of Medusa, turned him into a rocky mountain for his inhospitality. In works of art he is represented as carrying the heaven, or (after the earth was discovered to be spherical) the terrestrial globe.

Atlas. (From the Farnese collection now at Naples.)

Atlas Mons. The general name of the great mountain range which covers the surface of northern Africa between the Mediterranean and the Great Desert (Sahara) on the north and south, and the Atlantic and the Lesser Syrtis on the west and east.

Atossa (Ἄτοσσα). The daughter of Cyrus, and wife successively of her brother Cambyses, of Smerdis the Magian, and of Darius Hystaspes, by whom she became the mother of Xerxes.

Atramentum (μέλαν). A term applicable to any black liquid, but specifically used of three coloring substances. (1) *Atramentum sutorium*—blacking for leather. (2) *Atramentum tectorium* or *pictorium*—a black pigment used by painters. (3) *Atramentum librarium* (μέλαν γραφικόν)—ink, for which see WRITING AND WRITING MATERIALS.

Atrax (Ἄτραξ). (1) A town in Pelasgiotis in Thessaly, inhabited by the Perrhaebi, so called from the mythical Atrax, son of Peneus and Bura, and father of Caeneus and Hippodamia. Hence Caeneus is called Atracides, and Hippodamia, Atracis. (2) A river of Aetolia falling into the Ionian Sea.

Atrebătes. A people in Gallia Belgica, in the modern Artois, which is a corruption of their name. Their capital was Nemetocenna or Nemetacum, subsequently Atrebati, now Arras. Part of them crossed over to Britain, where they dwelt in the upper valley of the Thames, in what is now Oxfordshire and Berkshire.

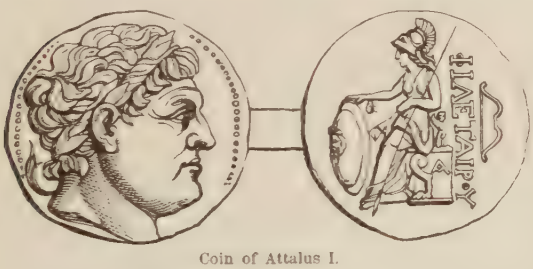
Atreus (Ἀτρεύς). The son of Pelops and Hippodamia, grandson of Tantalus, and brother of Thyestes and Nicippé. He was first married to Cleola, by whom he became the father of Plisthenes; then to Aeropé, the widow of his son Plisthenes, who was the mother of Agamemnon, Menelaüs, and Anaxibia, either by Plisthenes or by Atreus; and lastly to Pelopia, the daughter of his brother Thyestes. The awful fate of the house of Pelops afforded materials to the tragic poets of Greece. In consequence of the murder of their half-brother Chrysippus, Atreus and Thyestes were obliged to take to flight. They were hospitably received at Mycenae; and, after the death of Eurystheus, Atreus became king of Mycenae. Thyestes seduced Aeropé, the wife of Atreus, and was in consequence banished by his brother. From his place of exile he sent Plisthenes, the son of Atreus, whom he had brought up as his own child, with orders to slay Atreus; but Plisthenes fell by the hands of Atreus, who did not know that he was his own son. In order to take revenge, Atreus, pretending to be reconciled to Thyestes, recalled him to Mycenae, killed his two sons, and placed their flesh before their father at a banquet, who unwittingly partook of the dreadful meal. Thyestes fled with horror, and the gods cursed Atreus and his house. The kingdom of Atreus was now visited by famine, and the oracle advised Atreus to call back Thyestes. Atreus, who went out in search of him, came to King Thesprotus, where he married his third wife, Pelopia, the daughter of Thyestes, whom Atreus believed to be a daughter of Thesprotus. Pelopia was at the time with child by her own father. This child, Aegisthus, afterwards slew Atreus, because the latter had commanded him to slay his own father, Thyestes. The oldest accounts of the Pelopidae do not mention the horrible stories that are generally connected with them. See AEGISTHUS; AGAMEMNON; PELOPIDAE.

Atrīdes (Ἀτρείδης). A son of Atreus. A name usually applied to Agamemnon and his brother Menelaüs.

Atriensis. A Roman house-slave belonging to the *familia urbana*, and having especial charge of the *atrium*. See Plaut. *Asin.* ii. 2 and 4.

Atrium. See DOMUS.

Atropatēnē (Ἀτροπατηνή), or **Media Atropatia**, the northwestern part of Media, adjacent to Armenia, named after Atropates, a native of the country, who, having been made its governor by



Alexander, founded there a kingdom, which long remained independent.

Atrŏpos (Ἄτροπος, from ἀ priv. and τρέπω). "The Inflexible." The Fate who cuts the thread of life that is spun by Clotho, and measured off by Lachesis. See MOERAE; PARCAE.

Atta, T. QUINCTIUS or QUINTICIUS. A Roman dramatic poet, author of *togatae* (see COMOEDIA), who died B.C. 77, and was a contemporary of Afranius. He was celebrated for his power of drawing character, especially in conversational scenes in which women were introduced. Of his comedies only twelve titles remain, with a few insignificant fragments, which will be found in Ribbeck, *Scaenicae Romanorum Poesis Fragmenta*.

Attalīa (Ἀτταλεία). (1) A city of Lydia, formerly called Agroïra. (2) A city on the coast of Pamphylia, founded by Attalus II. Philadelphus, and subdued by the Romans under P. Servilius Isauricus.

Attălus. The name of several kings of Pergamus. (1) Son of Attalus, a brother of Philetaerus, succeeded his cousin Eumenes I., and reigned B.C. 241–197. He took part with the Romans in the struggle against Philip and the Achaeans. He was a wise and just prince, and was distinguished by his patronage of literature. (2) Surnamed PHILADELPHUS, second son of Attalus, succeeded his

Coin of Attalus I.

brother Eumenes II., and reigned B.C. 159–138. Like his father, he was an ally of the Romans, and also encouraged the arts and sciences. (3) Surnamed PHILOMĒTOR, son of Eumenes II. and Stratonicé, succeeded his uncle Attalus II., and reigned B.C. 138–133. In his will he made the Romans his heirs, but his kingdom was claimed by Aristonicus. See ARISTONICUS.

Atthidographi. See ATTHIS.

Atthis (Ἀτθίς). A chronicle of Attic history in which especial attention was paid to occurrences of political and religious significance. After the last half of the fourth century A.D., chronicles of this kind were composed by a number of writers (Atthidographi), among whom Androtion and Philochorus (q. v.) deserve special mention. These writings were much quoted by the grammarians.

Atthis or **Attis**. (Ἄτθις, Ἄττις). See ATTICA.

Attĭca (Ἀττική). A division of Greece, in the form of a triangle, two sides of which are washed by the Aegaean Sea, while the third is separated from Boeotia on the north by the mountains Cithaeron and Parnes. Megaris, which bounds it on the northwest, was formerly a part of Attica. In ancient times it was called Acté and Acticé, or the "coast-land" (ἀκτή), from which the later form, Attica, is said to have been derived. According to tradition, it derived its name from Atthis, the daughter of the mythical king Cranaüs; and old-fashioned etymologists found in it the root which appears in that of the goddess Athené. Attica is divided by many ancient writers into three districts. (1) The Highlands, the northeast of the country. (2) The Plain, the northwest of the country, including both the plain round Athens and the plain round Eleusis, and extending south to the promontory Zoster. (3) The Seacoast District, the south part of the country, terminating in the promontory Sunium. Besides these three divisions, we also read of (4) the Midland District, still called Mesogia, an undulating plain in the middle of the country. The soil of Attica is not very fertile. The greater part of it is not adapted for growing corn; but it produces olives, figs, and grapes, especially the two former, in great perfection. The country is dry; the chief river is the Cephissus, rising in Parnes and flowing through the Athenian plain. The abundance of wild flowers in the country made the honey of Mount Hymettus very celebrated in antiquity. Excellent marble was obtained from the quarries of Pentelicus, northeast of Athens, and a considerable supply of silver from the mines of Laurium near Sunium. The territory of Attica, including the island of Salamis, which belonged to it, contained between 700 and 800 square miles; and the population in its flourishing period was probably about 500,000, of which nearly four fifths were slaves.

Attica is said to have been originally inhabited by Pelasgians. Its most ancient political division was into twelve independent States, attributed to Cecrops, who, according to some legends, came from Egypt. Subsequently Ion, the grandson of Hellen, divided the people into four tribes, Geleontes, Hopletes, Argades, and Aegicores; and Theseus, who united the twelve independent States of Attica into one political body and made Athens the capital, again divided the nation into three classes, the Eupatridae, Geomori, and Demiurgi. Clisthenes (B.C. 510) abolished the old tribes and created ten new ones, according to a geographical division; these tribes were subdivided into demes or townships. See ATHENAE; CLISTHENES; DEMUS.

Attic Nights. See NOCTES ATTICAE; GELLIUS, AULUS.

Attic Style of Oratory. The name given to that style of ancient oratory that makes only a sparing use of verbal ornament, tropes, antitheses, and rhetorical devices, but is restrained, dignified, and severe. It is thus opposed to the so-called ASIATIC STYLE (q. v.). The best example of the severely Attic style is to be found in the orations of Demosthenes. See Cicero, *Brutus*, 95.

Attĭcus Herōdes, TIBERIUS CLAUDIUS. A Greek rhetorician, born about A.D. 104 at Marathon in Attica, who taught both at Athens and at Rome. Among his pupils were the future emperors, M. Aurelius and L. Verus. He was made consul by Antoninus Pius in A.D. 143, and died in 180, after having accumulated a large fortune, much of which he spent in embellishing Athens.

Attĭcus, T. POMPONIUS. A Roman of an old and wealthy equestrian family, born B.C. 109. He received a good education in boyhood and youth, and went in the year B.C. 88 to Athens, where he lived until 65, devoting himself entirely to study,

and much respected by the citizens for his generosity and cultivated refinement. In 65, he returned to Rome, to take possession of the inheritance left him by his uncle and adoptive father, Q. Caecilius. He now became Q. Caecilius Pomponianus. From this time onward he lived on terms of intimacy with men like Cicero, Hortensius, and Cornelius Nepos (who wrote a life of him which we still possess). He avoided public life and the strife of parties. This fact, in addition to his general amiability and good nature, enabled him during the Civil Wars to keep on the best of terms with the leaders of the conflicting parties—Cicero, Brutus, and Antonius. He died after a painful illness, of voluntary starvation, in the year B.C. 32.

Atticus was the author of several works, the most considerable of which was a history (*Liber Annalis*) dedicated to Cicero. This gave a short epitome of the bare events of Roman history down to B.C. 54, arranged according to the series of consuls and other magistrates, with contemporaneous notices. But his most important contribution to Latin literature was his edition of the letters which he had received from Cicero. He also did great service by setting his numerous slaves to work copying the writings of his contemporaries. In philosophy, he was an Epicurean. The fragments of the *Liber Annalis* will be found in Peter, *Hist. Frag.* 214.

Attĭla (in German, Etzel). The son of Mundzuck, or, as he is less correctly called, Mandras, a Hun of royal descent, who succeeded his uncle Rugilas in A.D. 433, and shared the supreme authority with his brother Bleda. These two leaders of the barbarians who had settled in Scythia and Hungary threatened the Eastern Empire, and twice compelled Theodosius II. (q. v.) to purchase peace. Their power was feared by all the nations of Europe and Asia. The Huns themselves esteemed Attila their bravest warrior and most skilful general; while he gave out that he had found the sword of their tutelar god, the Scythian Mars, the possession of which was supposed to convey a title to the whole earth. He caused his brother Bleda to be murdered (A.D. 444); and when he announced that it had been done by the command of God, the murder was celebrated as a victory. Being now sole master of a warlike people, his unbounded ambition made him the terror of all nations; and he became, as he called himself, "the Scourge of God" for the chastisement of the human race. In a short time he extended his dominion over all the people of Germany and Scythia, and the Eastern and Western emperors paid him tribute. The Vandals, the Ostrogoths, the Gepidae, and a part of the Franks united under his banners, so that some historians assure us that his army amounted to 700,000 men. His portrait, as given by Jornandes, was that of a modern Calmuc, with a large head, swarthy complexion, flat nose, small sunken eyes, and a short square body. His looks were fierce, his gait proud, and his deportment stern and haughty; yet he was merciful to a suppliant foe, and ruled his own people with justice and lenity.

Having heard a rumour of the riches and power of Persia, he directed his march thither, but was defeated on the plains of Armenia, and fell back to satisfy his desire for plunder in the dominions of the Emperor of the East. He found a pretext for war, went over to Illyricum, and laid waste all the countries from the Euxine to the Adriatic. The emperor Theodosius collected an army to oppose his progress; but in three bloody battles Fortune declared herself for the barbarians, and Constantinople was indebted to the strength of its walls and to the ignorance of the enemy in the art of besieging, for its preservation. Theodosius was at the mercy of the victor, and was compelled to purchase peace. A scheme was laid in the court of Theodosius to assassinate Attila under the cover of a solemn embassy, which intention he discovered; and, without violating the laws of hospitality in the persons of the ambassadors, wisely preferred a heavy ransom for the principal agent in the plot, and a new treaty at the expense of fresh payments. On the accession of Marcian, Attila demanded tribute, which was refused; and, although much exasperated, he resolved first to turn his arms against the Western emperor Valentinian, whose licentious sister Honoria, in revenge for being banished for an intrigue with her chamberlain, sent an offer of herself to Attila. The Hun, perceiving the pretence this proposal supplied, preceded his irruptions into Gaul by demanding Honoria in marriage, with a share of the imperial patrimony. Being refused, he affected to be satisfied, and pretended he was only about to enter Gaul to make war upon Theodoric, king of the Ostrogoths. He accordingly crossed the Rhine, A.D. 450, with a prodigious host, and marked his way with pillage and desolation, until completely defeated by Theodoric and the famous Aëtius in the bloody battle of Châlons (451). He, however, recruited his forces, and passed the Alps the next year, invading Italy and spreading his ravages over all Lombardy. This visitation was the origin of the famous republic of Venice, which was founded by the fugitives who fled at the terror of his name. Valentinian, unable to avert the storm, repaired from Ravenna to Rome, whence he sent the prelate Leo with a solemn deputation to avert the wrath of Attila, who consented to leave Italy on receiving a vast sum as the dowry of Honoria and an annual tribute. He did not much longer survive these transactions; and his death was singular, he being found dead, in consequence of suffocation from a broken blood-vessel, on the night of his marriage with a beautiful young virgin named Hilda (453). His body was enclosed in three coffins — the first of gold, the second of silver, and the third of iron. The captives who had made the grave were strangled, in order that the place of interment might be kept concealed from his foes. See Thierry, *Histoire d'Attila* (4th ed. 1874); and HUNNI.

Attis (Ἄττις) or **Atys** (Ἄτυς). A mythological personage in the worship of the Phrygian goddess Cybelé-Agdistis. The son of this goddess, so ran the story, had been mutilated by the gods in terror at his gigantic strength, and from his blood sprang the almond-tree. After eating its fruit, Nana, daughter of the river Sangarius, brought forth a boy, whom she exposed. He was brought up first among the wild goats of the forests, and afterwards by some shepherds, and grew up so beautiful that Agdistis fell in love with him. Wishing to wed the daughter of the king of Pessinus in Phrygia, he was driven to madness by the goddess. He then fled to the mountains, and destroyed his manhood at the foot of a pine-tree, which received his

spirit, while from his blood sprang violets to garland the tree. Agdistis besought Zeus that the body of her beloved one might know no corruption. Her prayer was heard; a tomb to Attis was raised on Mount Dindymus in the sanctuary of Cybelé, the priests of which had to undergo emasculation for Attis's sake. A festival of several days was held in honour of Attis and Cybelé in the beginning of spring. A pine-tree, felled in the forest, was covered with violets, and carried to the shrine of Cybelé as a symbol of the departed Attis. Then, amid tumultuous music and rites of wildest sorrow, they sought and mourned for Attis on the mountains. On the third day he was found again, the image of the goddess was purified from the contagion of death, and a feast of joy was celebrated, as wild as had been the days of sorrow. The poem of Catullus (q. v.) which deals with the story of Attis, in galliambic metre, is one of the weirdest and most powerful productions in all literature. With regard to it, see Ellis's Catullus (2d ed. 1889), and Grant Allen's *Attis* (1893).

Attius, Lucius. An early Roman poet of distinction, who forms a link between the ante-classical and classical periods of Latin literature; for Cicero, when a boy, had met him, and in after-life admired his verse. Attius was, like Horace, the son of a freedman, settled at Pisaurum. He began his career with a tragedy, the *Atreus*, and was the author of thirty-six more, besides *Annales* in hexameter verse, a history of Greek and Roman poetry (*Didascalia*), and two *praetextae*. His literary characteristics are dignity, vigour, and much rhetorical skill in the choice of words. Considerable fragments of his works remain to us, and can be found in Ribbeck's *Tragicorum Romanorum Fragmenta* (Leipzig, 1874); and L. Müller's *Lucilius* (1872). He is the author of the famous maxim of the tyrant, *Oderint dum metuant*, quoted by Cicero. He is said to have introduced some changes into the received forms of spelling, such as doubling the vowels when long, as in modern Dutch—thus *aara*, *vootum*. He died B.C. 94. See Boissier, *Le Poète Attius* (Paris, 1857).

Attius or **Attus Navius**. See Navius.

Atŭrus. The modern Adour; a river in Aquitania.

Auceps. A bird-catcher or fowler, whose occupation was called *aucupium* (*avis* + *capio*). The fowlers used for catching birds gins and snares (*laquei*, *pedicae*), rods tipped with bird-lime (*arundines*, *calami*), nets held by two parallel rods (*amites*), and traps (*transennae*).

Auctio signifies generally "an increasing, an enhancement," and hence the name is applied to a public sale of goods, at which persons bid against one another. As a species, *auctio* signifies a public sale of goods by the owner or his agent, or a sale of goods of a deceased person for the purpose of dividing the money among those entitled to it, which was called *auctio hereditaria*. The sale was sometimes conducted by an *argentarius*, or by a *magister auctionis*; and the time, place, and conditions of sale were announced either by a public notice (*tabula*, *album*), or by a crier (*praeco*).

The usual phrases to express the notification of a sale are *auctionem proscribere*, *praedicare*; and to determine on a sale, *auctionem constituere*. The purchasers (*emptores*), when assembled, were sometimes said *ad tabulam adesse*. The phrases signifying to bid are *liceri*, *licitari*, which was done either by word of mouth or by such significant hints as are known to all people who have attended an auction. The property was said to be knocked down (*addici*) to the purchaser. An entry was made in the books of the *argentarius* of the sale and the money due, and credit was given in the same books to the purchaser when he paid the money (*expensa pecunia lata*, *accepta relata*). Thus the book of the *argentarius* might be used as evidence for the purchaser, both of his having made a purchase and having paid for the thing purchased. If the money was not paid according to the conditions of sale, the *argentarius* could sue for it.

The *praeco* or crier seems to have acted the part of the modern auctioneer, so far as calling out the biddings and amusing the company. Slaves, when sold by auction, were placed on a stone or other elevated thing, and hence the phrase *homo de lapide emptus*. It was usual to put up a spear (*hasta*) in auctions—a symbol derived, it is said, from the ancient practice of selling under a spear the booty acquired in war. The term *asta publica* is used in Italy at the present time to signify an auction. By the auctio, the Quiritary ownership in the thing sold was transferred to the purchaser. See Bonorum Emptio; Sectio.

Auctor. (1) One who originates and proposes a *lex* or *senatus consultum*—in imperial times often used of the emperor. (2) In law, the owner and sometimes the vendor (*venditor*) of goods; also the maker of a will. (3) A person whose concurrence is necessary to give effect to a legal transaction. (4) A person under whose authority any legal act is done. See Tutor. (5) In criminal law, the instigator of a crime. (6) In jurisprudence, a jurist to whom the *ius respondendi* had been given by the emperor. See Iurisconsulti.

Auctorĭtas. The meanings of this word correlate with those of *auctor* (q. v.).

Auditorium. (1) A place where poets, orators, and critics were heard. (See Athenaeum.) (2) Under the Roman Empire, the enclosed courts about the Forum where magistrates heard civil causes. See Basilica.

Aufidia Lex. See Lex.

Aufĭdus. The principal river of Apulia, flowing with a rapid current into the Adriatic. Venusia, the birthplace of Horace, was on the Aufidus, now the Ofanto.

Augé (Αὐγή). Daughter of Aleus of Tegea, and mother of Telephus by Heracles (q. v.). See Telephus; Teuthras.

Augēas (Αὐγείας) or **Augĕas** (Αὐγέας). Son of Helios, or, according to another account, of Phorbas, and Hermioné. He was king of the Epeians in Elis, and one of the Argonauts. Besides his other possessions, for which Agamemnon and Trophonius built him a treasure-house, he was owner of an enormous flock of sheep and oxen, among which were twelve white bulls consecrated to the Sun. When Heracles, at the command of Eurystheus, came to cleanse his farm-yard, Augeas promised him the tenth part of his flock. But, the task completed, he refused the reward, on the ground that the work had been done in the service of Eurystheus. Heracles replied by sending an army against him,

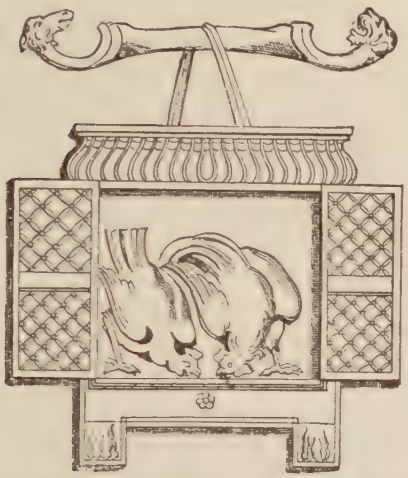
which was defeated in the passes of Elis by Eurytus and Cteatus, sons of Molioné; but Heracles appeared on the scene, and slew the Molionidae, and with them their uncle Augeas and his sons. See HERACLES; MOLIONIDAE.

Augītes (*αὐγίτης*). Probably the turquoise.

Augur. A diviner by means of birds. The derivation of the word is uncertain. Some ancient grammarians derived it from *avis* and *gero* (Festus, s. v. *augur;* Serv. *ad Verg. Aen.* v. 523), in support of which we may mention the analogy of *au-spex* and *au-ceps*, and the ancient forms *auger* and *augeratus* quoted by Priscian, i. 6, § 36; and this derivation is now accepted by Mommsen, Marquardt, Bouché-Leclercq, and others. Of modern suggestions may be mentioned that of Aufrecht and Kirchhoff, connecting the word with the Umbrian *uhtur = auctor* (cf. *ius est augurum cum auctoritate conjunctum*, Cic. *De Leg.* ii. 12, 31; and Nissen, *Das Templum*, p. 5); and that of Vaniček, from *avis* and the root *gar* (found in Sanskrit and in *γηρύειν*, *garrire*). Fick, and apparently Kuntze, connect it with *augeo*, *augustus* (cf. *augustum augurium* in Ennius), and take it to mean "assistant"; while Lange and Bréal see in the word the root *gush* (as in *γεύω*), and understand by it "an appreciator." By Greek writers on Roman affairs, the augurs are called *αὔγουρες*, *οἰωνοπόλοι*, *οἰωνοσκόποι*, *οἰωνισταί*, *οἰωνομάντεις*, *οἱ ἐπ᾽ οἰωνοῖς ἱερεῖς*.

The augurs at Rome formed a priestly *collegium*, traditionally said to have been founded by Romulus, and in the most ancient times no transaction took place, either of a private or a public nature, without consulting the auspices, and hence we find the question asked in a well-known passage of Livy (vi. 41, 4), "Auspiciis hanc urbem conditam esse, auspiciis bello ac pace, domi militiaeque omnia geri, quis est, qui ignoret?" But the private augur seems to have fallen into contempt. Thus Cicero, while arguing in favour of divination in general, follows Ennius in classing the *Marsus augur* with other impostors (*de Div.* i. 58, 132).

The public augurs, on the other hand, are of great importance in Roman history. The collegium originally consisted of three patricians, of whom the king was one. During the regal period the number was doubled; in B.C. 300 it was raised to nine (four patricians and five plebeians); and in the last century of the Republic, under Sulla, to fifteen, and finally by Julius Caesar to sixteen, a number which continued unaltered under the Empire. It can be shown that the college of augurs continued to exist until the end of the fourth century A.D. The office was, on account of its political importance, much sought after, and only filled by persons of high birth and distinguished merit. It was held for life, an augur not being precluded from holding other temporal or spiritual dignities. Vacancies in the collegium were originally filled up by co-optation; but after B.C. 104 the office was elective, the tribes choosing one of the candidates previously nominated. An *augurium* had to be taken before the augur entered upon his duties. In all probability the augurs ranked according to seniority, and the senior augur presided over the business of the collegium.



Augur with Lituus. (Bas-relief in Museum, Florence.)

The *insignia* of the office were the *trabea*, a state dress with a purple border, and the *lituus* (q. v.), a staff without knots and curved at the top.

The science of Roman augury was based chiefly on written tradition. This was contained partly in the *Libri Augurales*, the oldest manual of technical practice, and partly in the *Commentarii Augurales*, a collection of answers given in certain cases to the inquiries of the Senate. In ancient times the chief duty of the augurs was to observe, when commissioned by a magistrate to do so, the omens given by birds, and to mark out the *templum* or consecrated space within which the observation took place. The proceeding was as follows: immediately after midnight, or at the dawn of the day on which the official act was to take place, the augur, in the presence of the magistrate, selected an elevated spot with as wide a view as was obtainable. Taking his station here, he drew with his staff two straight lines cutting one another, the one from north to south, the other from east to west. Then to each of these straight lines he drew two parallel lines, thus forming a rectangular figure, which he consecrated according to a prescribed form of words. This space, as well as the space corresponding to it in the sky, was called a *templum*. (See TEMPLUM.) At the point of intersection in the centre of the rectangle was erected the *tabernaculum*. This was a square tent, with its entrance looking south. Here the augur sat down, asked the gods for a sign according to a prescribed formula, and waited for the answer. Complete quiet, a clear sky, and an absence of wind were necessary conditions of the observation. The least noise was sufficient to disturb it, unless indeed the noise was occasioned by omens of terror (*dirae*), supposing the augur to have observed them, or to intend doing so. As he looked south the augur had the east on his left, the west on his right. Accordingly, the Romans regarded signs on the left side as of prosperous omen, signs on the right side as unlucky—the east being deemed the region of light, the west that of darkness. The reverse was the case in ancient Greece, where the observer looked northwards. In his observation of birds the augur did not confine himself to noticing their flight. The birds were distinguished as *alites* and *oscines*. The *alites* included birds like eagles and vultures, which gave signs by their manner of flying. The *oscines* were birds which gave signs by their cry as well as their flight, such as ravens, owls, and crows. There were also birds which were held sacred to particular gods, and the mere appearance of which was an omen of good or evil. The augur's report was expressed in the words *aves admittunt*, "the birds allow it"; or *alio die*, "on another day," i. e. "the augury is postponed." The magistrate was bound by this report. The science of augury included other kinds of auspices besides the observation of birds, a cumbrous process which had dropped out of use in the Ciceronian age. These were: (1) Signs in the sky (*ex caelo*). The most important and decisive were

thunder and lightning. Lightning was a favourable omen if it appeared to the left of the augur, and flashed to the right; unfavourable, if it flashed from right to left. In certain cases, as, for example, that of the assembling of the Comitia, a storm was taken as an absolute prohibition of the meeting. (2) Signs from the behaviour of chickens while eating. It was a good omen if the chicken rushed eagerly out of its cage at its food, and dropped a bit out of its beak; an unfavourable

Auspicia Pullaria. (Bas-relief. Rome.) (From Goega's *Bassi-rilievi*, I. tav. xvi.)

omen if it was unwilling, or refused altogether, to leave its cage, or flew away, or declined its food. This clear and simple method of getting omens was generally adopted by armies in the field, the chickens being taken about in charge of a special functionary (*pullarius*). (3) Signs given by the cries or motion of animals, as reptiles and quadrupeds, in their course over a given piece of ground (*signa pedestria* or *ex quadrupedibus*). (4) Signs given by phenomena of terror (*signa ex diris*). These might consist in disturbances of the act of *auspicatio*, such as the falling of an object, a noise, a stumble, a slip in the recitation of the formula; or a disturbance occurring in the course of public business, such as, for instance, an epileptic seizure taking place in the public assembly — an event which broke up the meeting.

The two last-mentioned classes of signs were generally not asked for, because the former were usually, the latter always, unlucky. If they made their appearance unasked, they could not be passed over, if the observer saw them or wished to see them. Every official was expected to take auspices on entering upon his office, and on every occasion of performing an official act. Thus the words *imperium* and *auspicium* were often virtually synonymous. The *auspicia* were further divided, according to the dignity of the magistrate, into *maxima* and *minora*. The greatest *auspicia* were those which were taken by the king, dictator, consuls, praetors, and censors; the lesser were taken by aediles and quaestors. If two magistrates, though *collegae* (colleagues), were of unequal dignity — assuming, for instance, that a consul and a praetor were in the same camp—the higher officer alone had the right of taking the auspices. If the *collegae* were equal, the auspices passed from one to the other at stated times. No public act, whether of peace or war (crossing a river, for instance, or fighting a battle), could be undertaken without auspices. They were especially necessary at the election of all officials, the entry upon all offices, at all Comitia, and at the departure of a general for war. They had, further, to be taken on the actual day and at the actual place of the given undertaking.

The augurs always continued in possession of important functions. In certain places in the city, for instance on the Arx, and at the meeting-place of the Comitia, there were permanent posts of observation for taking the regular auspices. These places were put under the care of the augurs. Their boundaries might not be altered, nor the view which they commanded interfered with. The augurs had authority to prevent the erection of buildings which would do this. They had also the power of consecrating priests, as well as of inaugurating a part of the localities intended for religious purposes, and the places where public business was carried on. They were always present at the Comitia, and were authorized, if the signs which they saw or which were reported to them justified the proceeding, to announce the fact and postpone the business. If the constitutional character of a public act was called in question, the college of augurs had the exclusive power of deciding whether there was a flaw (*vitium*), in it, or not. If there were, the act was necessarily annulled. The dress of the augur was usually the *praetexta* (q. v.), but sometimes (possibly on military expeditions) the *trabea*, as in the accompanying illustration.

Augur wearing the Trabea. (British Museum.)

By the end of the republican period the augurs, and the whole business of the auspices, had ceased to be regarded as deserving serious attention.

On the whole subject of augury among the Romans, see Mascov, *De Jure Auspicii apud Romanos* (Lips. 1721); Werther, *De Auguriis Romanis* (Lemgo, 1835); Creuzer, *Symbolik*, ii. p. 935, etc.; Müller, *Etrusker*, ii. p. 110, etc.; Hartung, *Die Religion der Römer*, i. p. 98, etc.; Göttling, *Geschichte der Röm. Staatsverf.* p. 198, etc.; Rubino, *Röm. Verfassung*, p. 34, etc.; Rein, art. *Augures* in Pauly's *Realencyclopädie*; Preller, *Römische Mythologie*, 109–111 (ed. 1858); Nissen, *Das Templum*, chap. i.; Mommsen, *Römisches Staatsrecht*, i. 73–114; Marquardt, *Römische Staatsverwaltung*, vi. 381–393; Lange, *Römische Alterthümer*, i. 286–298 (=i. 330–345); Walter, *Geschichte des römischen Rechts*, §§ 151, 152; Madvig, *Die Verfassung und Verwaltung des römischen Staates*, ii. 633–643; Mispoulet, *Les Institutions Politiques des Romains*, i. 73, ii. 416–423; Willems, *Le Droit Public Romain*, 239–242, 324–326; Kuntze, *Prolegomena zur Geschichte Roms*, 61–102; Bouché-Leclercq, art. *Augur* and *Auspicia* in Da-

remberg and Saglio's *Dict. des Antiquités*, and *Histoire de la Divination dans l'Antiquité* (1879–82).

Auguracŭlum. A place on the Arx, on the summit of the Capitoline Hill, consecrated for purposes of augury. See ARX; AUGUR; TEMPLUM.

Augusta. The name of several towns founded or colonized by Augustus. Of these, one of the most important was Augusta Praetoria (Aosta), a town of the Salassi in Upper Italy, at the foot of the Graian and Pennine Alps. The modern town still contains many Roman remains, the most important of which are the town gates and a triumphal arch. In all, seventy cities in different parts of the Roman Empire were named Augusta, among them London (Londinium), which was sometimes styled Augusta Trinobantia from the British tribe, the Trinobantes (Tac. *Ann.* xiv. 31). See LONDINIUM; SEBASTA; TREVIRI; VINDELICI.

Augustae Historiae Scriptōres. Six writers (Aelius Spartianus, Vulcatius Gallicanus, Trebellius Pollio, Flavius Vopiscus, Aelius Lampridius, and Iulius Capitolinus) who wrote the lives of the emperors from Hadrian to Numerianus (A.D. 117–284). These lives are all equally devoid of literary excellence, but appear to be written truthfully, and are valuable for the information which they give. The best text is that of H. Peter, 2 vols. (Leipzig, 1865). The only English translation is that of J. Bernard (London, 1740).

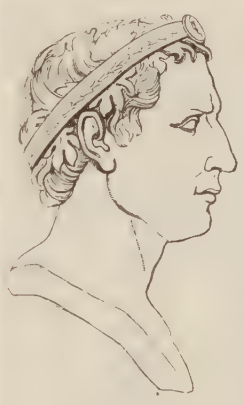
Augustāles, sc. *ludi;* or, **Augustalia,** sc. *certamina* (Σεβαστά, Αὐγουστάλια). Games celebrated in honour of Augustus Caesar at Rome and in other parts of the Empire. Two festivals were known under this name. (1) The 23d of September, the birthday of Augustus, celebrated after B.C. 13 by games held in the Circus (Dio Cass. liv. 26, 34). (2) The Augustalia proper held for ten days annually (Oct. 3–12), instituted in B.C. 19, when Augustus returned to Rome after settling the provinces (Dio Cass. liv. 34).

Augustāles, sc. *viri.* A religious association at Rome formed for the maintenance of the worship paid to the deified Caesars. See FLAMEN; MUNICIPIUM; SEVIRI; SODALITAS.

Augustīnus, AURELIUS. One of the most renowned Fathers of the Christian Church, was born at Tagasté, a city of Africa, November 13th, A.D. 354, during the reign of the emperor Constantius II. He has related his own life in the work to which he gave the title of *Confessiones*, and it is from this source, together with the *Retractationes*, some of his letters, and the *Vita Possidii* of the semi-Pelagian Gennadius, that we derive our principal information respecting him. His parents sent him to Carthage to complete his education, but he disappointed their expectations by his neglect of serious study and his devotion to pleasure, for in his sixteenth year he became very fond of women. For fifteen years he was connected with one, by whom he had a son. He left her only when he changed his whole course of life. A book of Cicero's, the *Hortensius*, which has not come down to our times, led him to the study of philosophy; and when he found that this did not satisfy his feelings, he went over to the sect of the Manichaeans. He was one of their disciples for nine years; but, after having obtained a correct knowledge of their doctrines, he left them, and departed from Africa to Rome, and thence to Milan, where he announced himself as a teacher of rhetoric. St. Ambrose was bishop of this city, and his discourses converted Augustine to the orthodox faith. The reading of St. Paul's epistles wrought an entire change in his life and character. The Catholic Church has a festival (May 3) in commemoration of this event. He retired into solitude, wrote there many books, and prepared himself for baptism, which he received in the thirty-third year of his age, together with his son Adeodatus, from the hands of Ambrose. He returned to Africa, sold his estate, and gave the proceeds to the poor, retaining only enough to support him in a moderate manner. As he was once present in the church at Hippo, the bishop, who was a very old man, signified a desire to consecrate a priest to assist and succeed him. At the desire of the people, Augustine entered upon the holy office, preached with extraordinary success, and, in the year 395, became bishop of Hippo. He entered into a warm controversy with Pelagius concerning the doctrines of free-will, of grace, and of predestination, and wrote a book concerning them. Augustine maintained that men were justified merely through grace, and not through good works. He died August 28th, A.D. 430, while Hippo was besieged by the Vandals.

There have been Fathers of the Church more learned—masters of a better language and a purer taste; but none have ever more powerfully touched the human heart and warmed it towards religion. Painters have therefore given him for a symbol a flaming heart. Augustine is one of the most voluminous of the Christian writers. His works, in Migne's *Patrologia Latina*, fill 16 volumes (xxxii.–xlvii.). The first of these contains the works which he wrote before he was a priest, and his *Retractationes* and *Confessiones;* the former a critical review of his own writings, and the latter a curious and interesting picture of his life. The remainder of these volumes consist of a treatise *On the City of God* (*De Civitate Dei*); commentaries on Scripture; epistles on a great variety of subjects, doctrinal, moral, and personal; sermons and homilies; treatises on various points of discipline; and elaborate arguments against heretics. With the exception of those of Aristotle, no writings contributed more than Augustine's to encourage the spirit of subtle disputation which distinguished the scholastic ages. They exhibit much facility of invention and strength of reasoning, with more argument than eloquence and more wit than learning. Erasmus calls Augustine a writer of obscure subtlety, who requires in the reader acute penetration, close attention, and quick recollection, and by no means repays him for the application of all these requisites. It was St. Augustine who finally established the vocabulary of ecclesiastical Latinity, setting the stamp of his authority upon the new coinages that fill the pages of Tertullian.

The best complete edition of his works is still that of the Benedictines, of which the last reprint was in 1836–40. There is an English translation of the whole in 15 vols. (Edinb. 1872–80). See Milman, *Latin Christianity*, 8 vols. (N. Y. and Lond. 1861–62); id. *Hist. of Christianity*, 3 vols., new ed. (N. Y. 1871); Cloth, *Der heil. Kirchenlehrer Augustin* (Aachen, 1840); Bindemann, *Der heilige Augustin* (Berlin, 1844–69); Dorner, *Augustin, sein theologisches System und seine religionsphilos. Anschauung*



(Berlin, 1873); Poujoulat, *Histoire de Saint Augustin*, 6th ed. (Tours, 1875); Böhringer, *Augustin* (Stuttgart, 1877–78); and Reuter, *Augustinische Studien* (Gotha, 1887). See also Regnier, *La Latinité des Sermons de Saint Augustin* (Paris, 1887). There is a new critical edition of the works of St. Augustine in the Vienna collection of the Latin Fathers (Corp. Vindobon. vol. xii.), edited by F. Weihrich (Vienna, 1877).

Augustŭlus, Romŭlus Momyllus. The last Roman emperor of the West, the son of Orestes, who commanded the Roman army in Gaul. Orestes caused his son to be crowned in A.D. 475, and during his reign the son was but a puppet in the hands of the father. In the following year, however, the young emperor was dethroned by Odoacer, king of the Heruli, who put Orestes to death, but treated Augustulus with consideration, allowing him to retire to Campania with an income of 6000 gold pieces for his support. The name Augustulus was given to this emperor in derision, but is nevertheless the appellation under which he is best known in history. See Odoacer.

Augustus. A title given to the Roman emperors, and equivalent to *sacrosanctus*. It is rendered into Greek by the term Σεβαστός (Dio Cass. liii. 16). The feminine form, Augusta, was often given to the women of the imperial family, like the modern titles "Royal Highness" and "Imperial Highness." Under Diocletian, the appellation, Augustus, was definitely applied to the two joint emperors, and the title, Caesar, to each of the heirs-presumptive. See Dominus.

Augustus Caesar. The first Roman emperor, was born on the 23d of September, B.C. 63, and was the son of C. Octavius, by Atia, a daughter of Iulia, the sister of C. Iulius Caesar. His original name was Gaius Octavius, and after his adoption by his great-uncle, C. Iulius Caesar Octavianus, Augustus being only a title given him by the Senate and the people in B.C. 27 to express their veneration for him. He was pursuing his studies at Apollonia when the news reached him of his uncle's murder at Rome, in March, 44. He forthwith set out for Italy, and upon landing was received with enthusiasm by the troops. He first joined the republican party in order to crush Antony, against whom he fought at Mutina in conjunction with the two consuls, C. Vibius Pansa and A. Hirtius. Antony was defeated, and obliged to retreat across the Alps; and the death of the two consuls gave Augustus the command of all their troops. He now returned to Rome, and compelled the Senate to elect him consul, and shortly afterwards he became reconciled to Antony. It was agreed that the Roman world should be divided between Augustus, Antony, and Lepidus, under the title of *triumviri rei publicae constituendae*, and that this arrangement should last for the next five years. They published a *proscriptio*, or list of all their enemies whose lives were to be sacrificed and their property confiscated; upwards of 2000 equites and 300 senators were thus put to death, among them Cicero. Soon afterwards, Augustus and Antony crossed over to Greece, and defeated Brutus and Cassius at the decisive battle of Philippi, in B.C. 42, by which the hopes of the republican party were ruined.

Augustus returned to Italy, where a new war awaited him (B.C. 41), excited by Fulvia, the wife of Antony. She was supported by L. Antonius, the consul and brother of the triumvir, who threw himself into the fortified town of Perusia, which Augustus succeeded in taking in 40. Antony now made preparations for war, but the death of Fulvia led to a reconciliation between the triumvirs, who concluded a peace at Brundusium. A new division of the provinces was again made: Augustus obtained all the parts of the Empire west of the town of Scodra in Illyricum, Antony the east provinces, and Lepidus Africa. Antony married Octavia, the sister of Augustus, in order to cement their alliance. In B.C. 36, Augustus conquered Sex. Pompey, who had held possession of Sicily for many years with a powerful fleet. Lepidus, who had landed in Sicily to support Augustus, was degraded by him, stripped of his power, and sent to Rome, where he resided for the remainder of his life, being allowed to retain the dignity of Pontifex Maximus. Meantime, Antony had repudiated Octavia, on account of his love for Cleopatra, and had alienated the minds of the Roman people by his arbitrary conduct. The Senate declared war against Cleopatra; and in September, B.C. 31, the fleet of Augustus gained a brilliant victory over Antony's near Actium in Acarnania. In the following year (30), Augustus sailed to Egypt. Antony and Cleopatra, who had escaped in safety from Actium, put an end to their lives. Augustus now became the undisputed master of the Roman world, but he declined all honours and distinctions which were likely to remind the Romans of kingly power. On the death of Lepidus, in B.C. 12, he became pontifex maximus. On those state matters which he did not choose to be discussed in public he consulted his personal friends, Maecenas, M. Agrippa, M. Valerius Messalla Corvinus, and Asinius Pollio. The wars of Augustus were chiefly undertaken to protect the frontiers of the Roman dominions. Most of them were carried on by his relations and friends, but several he conducted in person, as when, in 27, he attacked the warlike Cantabri and Astures in Spain. In 20, he went to Syria, where he received from Phraates, the Parthian monarch, the standards and prisoners which had been taken from Crassus and Antony. He died at Nola, on the 19th of August, A.D. 14, at the age of seventy-six. His last wife was Livia, who had been previously the wife of Tiberius Nero. He had no children by Livia, and only a daughter, Iulia, by his former wife Scribonia. Iulia had married Agrippa, and her two sons, Gaius and Lucius Caesar, were destined by Augustus as his successors. On the death of these two youths, Augustus was persuaded to adopt Tiberius, the son of Livia by her former husband, and to make him his colleague and successor. See Tiberius.

Augustus Caesar.

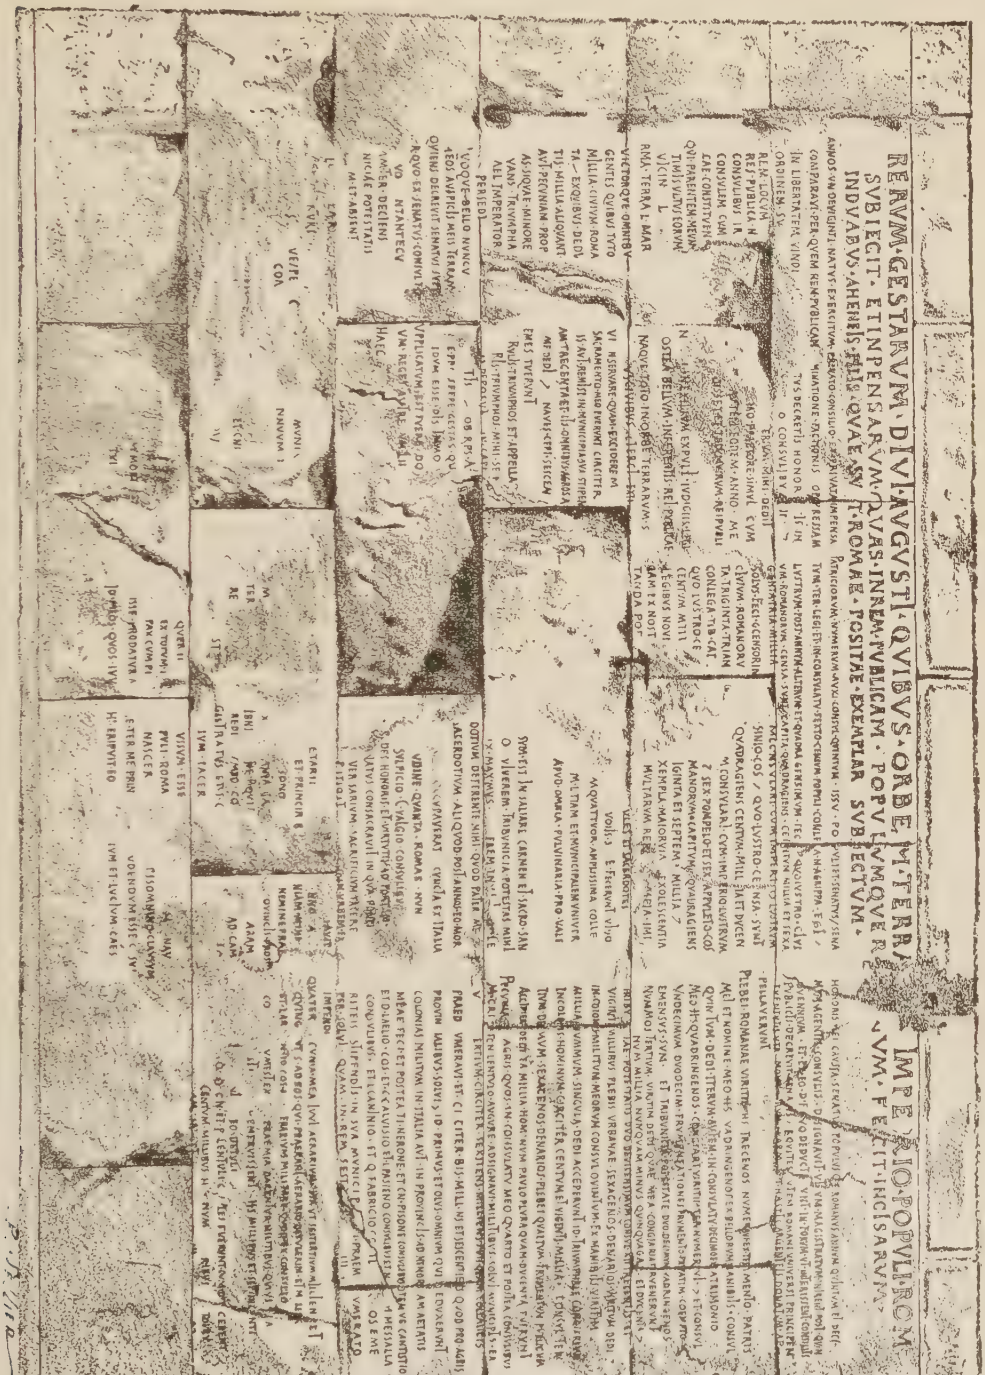
Augustus is described as having been something below the middle size, but extremely well proportioned (Suet. *Aug.* 79). His hair was inclined to curl, and of a yellowish-brown; his eyes were

bright and lively; but the general expression of his countenance was remarkably calm and mild. His health was throughout his life delicate, yet the constant attention which he paid to it, and his strict temperance in eating and drinking, enabled him to reach the full age of man. As a seducer, adulterer, and sensualist, his character was like that of his uncle (Suet. *Aug.* 69, 71). In his literary qualifications, without at all rivalling the attainments of Iulius Caesar, he was on a level with most Romans of distinction of his time; and it is said that both in speaking and writing his style was eminent for its perfect plainness and propriety (Suet. *Aug.* 68 foll.). His speeches on any public

Statue of Augustus. (Vatican.)

occasion were composed beforehand, and recited from memory; in fact, so careful was he not to commit himself by any inconsiderate expression, that even when discussing any important subject with his own wife, he wrote down what he had to say, and read it before her. Like his uncle, he was somewhat tinged with superstition. He was deficient in military talent; but in every species of artful policy, in clearly seeing, and steadily and dispassionately following his own interest, and in turning to advantage all the weaknesses of others, his ability has been rarely equalled. His deliberate cruelty, his repeated treachery, and his sacrifice of every duty and every feeling to the purposes of his ambition, speak for themselves; and yet it would be unjust to ascribe to a politic premeditation all the popular actions of his reign. Good is in itself so much more delightful than evil that he was doubtless not insensible to the pleasure of kind and beneficent actions, and perhaps sincerely rejoiced that they were no longer incompatible with his interests.

Among the various arts to which Augustus resorted to gain the good-will of his people, and perhaps to render them forgetful of their former freedom, one of the most remarkable was the encouragement which he extended to learning, and the patronage which he so liberally bestowed on all by whom it was cultivated. To this noble protection of literature he was prompted not less by taste and inclination than by sound policy; and in his patronage of the learned, his usual artifice had probably a smaller share than in those other parts of his conduct by which he acquired the favourable opinion of the world. Augustus was, in fact, himself an excellent judge of composition, and a true critic in poetry; so that his patronage was never misplaced, or lavished on those whose writings might have tended to corrupt the taste and learning of the age. The court of Augustus thus became a school of culture, where men of genius acquired that delicacy of taste, elevation of sentiment, and purity of expression which characterize the writers of the age. To Maecenas, the favourite minister of the emperor, the honour is due of having most successfully followed out the views of Augustus for promoting the interests of literature; but it is wrong to give Maecenas the credit, as some have done, of first having turned the attention of Augustus to the patronage of literature. On the contrary, he appears largely to have acted from the orders, or to have followed the example, of his imperial master.



Augustus was buried in a mausoleum, whose remains are still to be seen at Rome on the Via de' Pontefici. It was a pyramidal tower, 328 feet in height, covered with white marble, surmounted by a statue of the emperor, and divided into three stories by receding steps, each story being planted with cypress-trees. Before this structure was set the tablet of bronze containing the *index rerum a se gestarum*, which he had had prepared (Suet. *Aug.* 101). A copy of this important inscription was found in modern times on the inside of the *antae* of a temple at Ancyra (now Angora), in Galatia, and has been published in fac-simile by Prof. Mommsen, with a commentary. It is reproduced in the illustration on page 171.

For many interesting details regarding the personality of Augustus, see the life by Suetonius (ed. with Engl. notes by H. T. Peck, N. Y. 1889), and the following works: Ampère, *L'Empire Romain à Rome*, 3d ed. (Paris, 1867); Dezobry, *Rom in Jahrhunderte des Augustus* (Leipzig, 1837); Beulé, *Auguste, sa Famille, et ses Amis*, 4th ed. (Paris, 1868); Schiller, *Geschichte der röm. Kaiserzeit* (1883); and Gardthausen, *Augustus* (pt. i. 1891).

Aula (*αὐλή*). An open yard, or court. In the Homeric house the *αὐλή* served the purpose of a farm-yard, and was surrounded with farm-buildings and rooms for the men-servants of the house.

In the later Greek house it was a kind of quadrangle surrounded with a colonnade, into which the rooms of the house opened, and was used as a place for exercise and recreation (A. Winckler, *Die Wohnhäuser der Hellenen*). For further particulars, see DOMUS.

Aulaeum, usually in the plural, AULAEA (ἡ αὐλαία). A curtain, carpet, or hanging, mostly of the heavier and richer sort. Its uses were: (1) in temples to veil the statue of the god; (2) in houses, like the modern portière curtains; (3) to stretch over colonnades, and thus to form a tent; (4) as a

Wall of the Temple of Augustus, bearing the Latin Text of the *Index Rerum Gestarum* of Augustus.

drop-curtain in the Roman theatres. This curtain disappeared under the stage instead of being rolled up. Hence *aulaea premuntur*, "the curtain is let down," when the play begins; and *aulaeum tollitur*, "the play is ended." See Wieseler, *Theatergebäude* (1851), and the articles SIPARIUM; TAPES; THEATRUM; VELUM.

Aulerci. A powerful Gallic race divided into three tribes: (1) AULERCI EBUROVĪCES, dwelling near the coast on the left bank of the Sequana (Seine) in what is now Normandy, and having as their chief town Mediolanum, afterwards Eburovices (Evreux). (2) AULERCI CENOMĀNI, dwelling southwest of the preceding tribe near the Liger (Loire), and having Subdinnum (Le Mans) as their capital. (3) AULERCI BRANNOVĪCES, dwelling east of the Cenomani near the Aedui (q. v.).

Aulis (Αὐλίς). A harbour in Boeotia on the Euripus, where the Greek forces assembled before sailing for Troy. See IPHIGENIA; TROJAN WAR.

Aulon (Αὐλών). (1) A district and town on the borders of Elis and Messenia with a temple of Asclepius. (2) A town in Chalcidicé in Macedonia. (3) A fertile, grape-producing valley in Italy near Tarentum.

Aulularia. One of the best of the comedies of Plautus (q. v.), but lacking the conclusion.

Aulus Gellius. See GELLIUS, AULUS.

Aurea Domus. See DOMUS AUREA.

Aurelia Lex. See LEX.

Aureliāni. See GENABUM.

Aureliānus. (1) LUCIUS DOMITIUS. A Roman emperor (A.D. 270–275), distinguished for his military abilities and severity of character, was the son of a peasant, born about A.D. 212 in the territory of Sirmium in Illyria. His father occupied a small farm, the property of Aurelius, a rich senator. The son enlisted in the troops as a common soldier, successively rose to the rank of centurion, tribune, prefect of a legion, inspector of the camp, general, or, as it was then called, duke of a frontier; and at length, during the Gothic War, exercised the important office of commander-in-chief of the cavalry. In every station he distinguished himself by matchless valour, rigid discipline, and successful leadership. Theoclius affirms that in one day he killed forty-eight Sarmatians, and in several subsequent engagements nine hundred and fifty. This heroic valour was admired by the soldiers, and celebrated in their rude songs, the burden of which was "*Mille, mille, mille, mille, mille, mille, occidit.*" At length Valerian II. raised him to the consulship, and his good fortune was further favoured by a wealthy and noble marriage. His next elevation was to the throne, Claudius II., on his death-bed, having recommended Aurelian to the troops of Illyricum. The reign of this monarch lasted only four years and about nine months; but every instant of that short period was filled by some memorable achievement. He put an end to the Gothic War, chastised the Germans who invaded Italy, recovered Gaul, Spain, and Britain out of the hands of Tetricus, and destroyed the proud monarchy which Zenobia (q. v.) had erected in the East on the ruins of the afflicted Empire. Owing to the ungenerous excuse of the queen that she had waged war by the advice of her ministers, her secretary, the celebrated Longinus (q. v.), was put to death by the victor; but, after having graced his triumphal entry into Rome, Zenobia herself was presented with a villa near Tibur, and allowed to spend the remainder of her days as a Roman matron.

On his return to Rome, he surrounded the city with a new line of walls. He abandoned Dacia, which had been first conquered by Trajan, and made the southern bank of the Danube, as in the time of Augustus, the boundary of the Empire. He was killed by some of his officers while preparing to march against the Persians. (2) CAELIUS. A physician, a native of Numidia, who lived about the fourth or fifth century A.D. He left two books, one entitled, *Libri Quinque Tardarum sive Chronicarum Passionum*, and the other, *Libri Tres Celerum sive Acutarum Passionum*. Both are drawn from Greek authors,—from Themison, Thessalus, and, above all, Soranus. His work is particularly valuable, as preserving to us an account of many theories and views of practice which would otherwise have been lost; but even of itself it is deserving of much attention for the practical information which it contains. Caelius is remarkable for learning, understanding, and scrupulous accuracy; but his style is much loaded with technical terms, and by no means elegant. He has treated of the most important diseases which come under the care of a physician. He also wrote a compendium of the whole science of medicine in the form of a catechism (*Medicinales Responsiones*), of which considerable fragments remain. So far as known there are now no MSS. of Caelius Aurelianus in existence, the Lorsch codex used by Sichard in his *editio princeps* of the *Tardae Passiones* (Basle, 1529) having since that time been lost. The best edition of the two works together is that of Amman (Amsterdam, 1709), reprinted at Venice in 1757. See the treatise of Trilleri, *Notae in Cael. Aurel.* (Leipzig, 1817).

Aurelius, MARCUS. See ANTONINUS.

Aurelius Victor, SEXTUS. A Roman historian, born in Africa. He was probably governor of Pannonia under Julian in A.D. 361, and in 389 prefect of Rome. There is a history of the Caesars from Iulius to Constantius, written about A.D. 360, which bears his name. This appears, however, to be no more than a compilation from more comprehensive works, Suetonius being much employed. The same is the case with an *Epitome*, continued down to the death of Theodosius I. There is also a short but not altogether worthless book, entitled *De Viris Illustribus Urbis Romae*, which is attributed to Aurelius Victor. It begins with the Alban king Procas, and comes down to Cleopatra. It is not by Aurelius Victor, nor, again, is a little book which has been attributed to him, called *Origo Gentis Romanae*. This is full of forged quotations, and belongs to a much later period. Editions of all four of these works by Schröter (Leipzig, 1831), in 2 vols. There is also a good separate edition of the *De Viris Illustribus*, by Keil (Breslau, 1872), and of the *Origo*, by Sepp, new ed. (Eichstädt, 1885).

Aures. The earth-boards or mould-boards of the Roman plough. See ARATRUM.

Aureus. (1) The generic name for a Roman gold coin

Aureus of Augustus. (British Museum.)

(*aureus nummus*). (2) A gold coin which under the emperors was equal to about $5.10. It was first struck in the Second Punic War. See NUMISMATICS (Roman); NUMMUS; SOLIDUS.

Aurīga (ἡνίοχος). The driver of a chariot in the Circus. See CIRCUS; CURRUS.

Aurinia. A prophetess held in high repute among the ancient Germans (Tac. *Germ.* 8).

Auriscalpium (ὠτογλυφίς). A pick or probe for the ear (Mart. *Epist.* xiv. 23; Scribon, *Compos.* 230).

Aurōra. See EOS.

Aurum (χρυσός). Gold, from its malleability and the circumstance that it is found lying in lumps, was one of the earliest of metals used by man, and among the most primitive resources of civilization. This was suspected by the ancients, who make the earliest age of the world's history an age of gold. In the Heroic Age we find that gold was put to a great variety of uses. Homer speaks of the houses of Menelaüs and Alcinoüs as full of silver and gold; the armour of Glaucus was of gold (*Il.* vi. 236), so were the handmaids of Hephaestus (*Il.* xviii. 417), and the doves on Nestor's cup (*Il.* xi. 632). So in the decoration of the shield of Achilles, the chest of Cypselus, and other works of art, much gold was employed. And that this plenty of gold was not a mere figment of the poet we know from the best testimony, that of graves. At Mycenae, which is in Homer called πολύχρυσος, Dr. Schliemann has dug up a prodigious quantity of gold,—cups, and jugs, and masks, and ornaments of all sorts. The graves of the Crimea (though these are of later date) also yield abundance of gold, the corpses which are discovered in them being covered from head to foot with gold, beaten into the shape of animals, rosettes, and designs of all kinds. In the use of gold the wealthy Ionians of Asia Minor copied their neighbours, even binding their hair with it, in which custom the Athenians are said to have followed them (Thuc. i. 6). See CAELATURA.

There can be no question that to the smiths of early time gold must have been the metal which gave most scope for the artistic faculty. Its extreme softness and malleability enabled even workmen who had no more elaborate tools than a hammer and nails to work it into any given shape. All the vessels of Mycenae are thus hammered out and joined into shape by nails, and the earliest statues of the gods were produced by the same method, which was called by the ancients σφυρηλατεῖν. They did indeed sometimes, instead of welding two surfaces of gold together, unite them by a solder of borax (Schliemann's *Mycenae*. p. 231), but practically this process was unusual. Casting in hollow moulds belongs to a later period.

In the preparation of gold the ancients used only the simplest processes of melting and refining. When gold occurred mixed with silver they frequently did not separate the silver, but treated the mixed as a simple metal.

Asia was the source of gold, from the days when the Argonauts sailed to Colchis in search of the golden fleece, to the days when Alexander and his captains seized and dispersed the enormous hoards laid up during many generations by the Babylonian kings and their Persian successors. Arrian and Diodorus give us accounts which might well seem fabulous of the quantities of gold seized in the great cities of Asia. According to Diodorus (xvii. 71), in the city of Persepolis alone Alexander captured a treasure in gold and silver of 120,000 talents. The wealth in gold of Croesus is testified by his gift to Delphi (Herod. i. 50) of above 100 solid bricks of the metal. A private individual, Pythius, in the reign of Xerxes, possessed three millions of gold darics (Herod. vii. 27). The sources whence the gold of Asia was drawn were various—India was one of the chief. In Arabia, also, abundant gold was found and freely exported (Strabo, xvi. 3, 4). Lydia supplied great quantities of river-gold, both pure and mixed with silver. (See ELECTRUM.) But the richest source of all, in the opinion of the ancients, was the country of the Arimaspi (q. v.), where the gold was guarded by griffins, and with difficulty won from them by the hardy natives. Most modern writers suppose that the reality which gave rise to this fable was the gold mines of the Caucasus, whence gold penetrated through the country of the Scythians to Persia. A similar story was told or invented in regard to the Indian gold (Herod. iii. 102)—namely, that it was found in a country infested by huge ants (μύρμηκες), from whose pursuit men could only escape when riding on swift camels. The motive of these stories for deterring adventurers is very manifest.

The gold mines of Europe were also important. The Carthaginians, and after them the Romans, obtained their main supply from Spain, in the rivers of which country was a rich deposit of gold, notably in the Tagus. Both in Gaul and in Spain, at the time of the Roman conquests, whole districts were covered with rich auriferous deposits, yielding nuggets to the inhabitants on the application of the simplest systems of washing. In the provinces of Asturia and Lusitania, according to Pliny (*H. N.* xxxiii. 78), the workmen went through the laborious process of undermining whole hills by their excavations, and then turning on rivers to wash the fallen earth and separate the particles of metal. Gold was also found in the Italian Padus, in the Hebrus in Thrace, and other rivers. Polybius states (xxxiv. 10) that in his time great quantities of gold were found on the surface of the ground in Pannonia. In Greece proper, gold was found in small quantities in the islands of Siphnos and Thasos, and in larger quantities in the mountains of Thrace. These last, however, seem not to have yielded their full supply until they fell into the hands of Philip of Macedon, who procured from them, it is said, 1000 talents a year (Diod. xvi. 8).

Diodorus also informs us (iii. 12) that in Upper Egypt, on the confines of Aethiopia, were gold mines which were worked, from the time of the early kings of Egypt onwards, for the benefit of the state. But here the gold was not found as elsewhere, on the surface of the ground, but extracted from the heart of the mountains by a number of miserable slaves. Diodorus describes the process, which appears to be that of extracting gold from quartz. The stone, he says, which contained the metal was softened by fire, and then detached in masses by wedges of iron. These masses were brayed in stone mortars and ground to the fineness of sand. Finally, the gold was detached by washing, the workmen aiding the process with their hands and with fine sponges. The metal was purified by being placed, together with a certain quantity of lead, salt, tin, and bran, in jars hermetically sealed, and exposed for five days to the heat

of a fire, after which time the foreign substances were found to have evaporated.

In his thirty-third book the elder Pliny traces the history of the use of gold in Rome from earliest times. He says (chap. v.) that when the Gauls sacked the city no more than 1000 pounds' weight of gold could be found in it for ransom. The stock of gold in the treasury had increased seven years before the Third Punic War to 17,410 pounds; and after the successful termination of that war the metal came into commoner use for decoration, as for covering ceilings and walls, as well as for vessels. The custom of wearing gold rings was so late in Rome that even Marius wore one of iron. (See ANULUS.) The great influx of the metal and its use for all purposes of luxury dated in Rome as in Greece from the time of Oriental conquest. For ancient testimonies as to gold mines, see Sabatier, *Production de l'Or, de l'Argent, et du Cuivre chez les Anciens;* and for the use of gold in coinage, see NUMISMATICS.

Aurum Coronarium. When a general in a Roman province had obtained a victory, it was the custom for the cities in his own provinces, and for those from the neighbouring states, to send golden crowns to him, which were carried before him in his triumph at Rome. In the time of Cicero it appears to have been usual for the cities of the provinces, instead of sending crowns on occasion of a victory, to pay money, which was called *aurum coronarium.* This offering, which was at first voluntary, came to be regarded as a regular tribute, and seems to have been sometimes exacted by the governors of the provinces even when no victory had been gained. By a law of Iulius Caesar, it was provided that the aurum coronarium should not be given unless a triumph was decreed; but under the emperors it was exacted on many other occasions, as, for instance, on the adoption of Antoninus Pius. It continued to be collected, apparently as a part of the revenue, in the time of Valentinian I. and Theodosius.

Aurum Lustrāle. A tax imposed by Constantine on all merchants and traders, and payable at every lustrum, or every five years. See Zosimus, ii. 38.

Aurunci. See ITALIA.

Ausci or **Auscii.** A people in Aquitania in Gaul.

Ausetāni. A Spanish people in what is now Catalonia. Their capital was Ausa (Vique).

Auson (Αὔσων). A son of Odysseus and Calypso, from whom the Ausones were said to be descended.

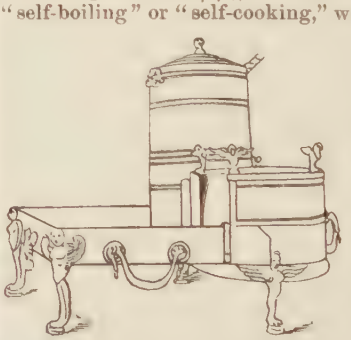
Ausŏnes (Αὔσονες); **Ausonia** (Αὐσονία). See ITALIA.

Ausonius, DECĪMUS MAGNUS. The most remarkable Latin poet of the fourth century A.D.; born about 310 at Burdigala (Bordeaux). He was son of the private physician of Valentinian I. and afterwards prefect of Illyria. Educated thoroughly in grammar, rhetoric, and law, he practised as an advocate in his native city, where he afterwards became professor of grammar and rhetoric. He was then invited by Valentinian to undertake the education of his son Gratian, who, after he had ascended the throne, conferred upon him the consulship and other distinctions. After the assassination of Gratian he retired to his estate near Burdigala, where he continued to reside, in full literary activity, till 390. He became a Christian, probably on accepting the office of tutor to the prince. Besides composing a turgid address of thanks to Gratian, delivered at Trèves, Ausonius wrote a series of poems, including verses in memory of deceased relatives (*Parentalia*), verses commemorating his colleagues (*Commemoratio Professorum Burdigalensium*), *Epitaphia, Eclogae, Epistulae, Epigrammata,* and a number of miscellaneous pieces, one of which (*Mosella*) is the narrative of a tour from Bingen on the Rhine to Berncastel (Tabernae) on the Moselle, and then up the Moselle past Neumagen (Noviomagum) to Trèves. Its subject has secured the poem some renown.

Ausonius is not a real poet, but he tries to make up for lack of genius by dexterity in metre, by the manipulation of words, and by ornaments of learning and rhetoric. The consequence is that his style is generally neither simple nor natural.

The *editio princeps* of Ausonius was published in Venice (1472 foll.). There are separate editions of the *Mosella* by Böcking, with notes (Berlin, 1828); a variorum (Bonn, 1842), this with a German translation; and by Schenkl (Berlin, 1883). There is an English translation by C. T. Brooks, in Waring's *Bride of the Rhine* (Boston, 1878). The other poems may be found in the editions by Schenkl (Berlin, 1883) and Peiper (Leipzig, 1886).

Auspex. See AUGUR; HARUSPEX.



Auspicium. See AUGUR; HARUSPEX.

Auster. Called Notus (Νότος) by the Greeks. The south wind, or, strictly, the southwest wind. It frequently brought with it fogs and rain; but at certain seasons of the year it was a dry, sultry wind, injurious both to man and to vegetation, the *sirocco* of the modern Italians. The name *auster* is from the root found in the Latin *uro,* "to burn."

Autariātae (Αὐταριᾶται). An Illyrian people living in the mountains of Dalmatia.

Authentĭcum. A private collection of the later imperial edicts, styled also *Liber Authenticorum,* made later than A.D. 560. See NOVELLAE.

Authepsa (αὐθέψης), which literally means "self-boiling" or "self-cooking," was the name of a vessel which was used for heating water, or for keeping it hot. Its form was not greatly different from that of our modern tea-urn, as shown by the annexed illustration.

Authepsa. (From the Naples Museum.)

Cicero speaks of authepsae among other costly Corinthian and Delian vessels. In later times they were made of silver.

Autochthŏnes (αὐτόχθονες). See ABORIGINES.

Autolўcus (Αὐτόλυκος). Son of Hermes and Chioné, or (according to another account) Philonis; father of Anticlea, the mother of Odysseus. In Greek mythology he figured as the prince of thieves. From his father he inherited the gift of making himself and all his stolen goods invisible, or changing them so as to preclude the possibility

of recognition. He was an accomplished wrestler, and was said to have given Heracles instruction.

Automĕdon (Αὐτομέδων). Son of Diores; the comrade and charioteer of Achilles (q. v.), and afterwards of Pyrrhus, the son of Achilles.

Automolias Graphé (*αὐτομολίας γραφή*). An accusation brought against persons guilty of having deserted to the enemy. See Astrateias Graphé.

Autonoë (Αὐτονόη). A daughter of Cadmus and wife of Aristaeus, by whom she became the mother of Actaeon (q. v.). See Pausan. i. 44.

Autonŏmi (*αὐτόνομοι*). The Greek name for those States that were governed by their own laws and not subject to any foreign power.

Auxiliāres. See Socii.

Auxo (Αὐξώ). See Charites.

Avernus. See Lucrinus Lacus.

Avesta. See Persia; Zoroaster.

Aviānus (or **Avianius**), Flavius. A Latin fabulist, of whose works we have a collection of forty-two fables in elegiac verse, whose composition may conjecturally be assigned to the fourth century A.D. They are dedicated in prose to a certain Theodosius, by some identified with Theodosius Macrobius, the author of the *Saturnalia*. The book was used in the schools down through the Middle Ages, during which it was much imitated, as in the *Novus Avianus* of Alexander Neckam, composed in the thirteenth century. Good texts of Avianus are those of Lachmann (Berlin, 1845), Fröhner (Leipzig, 1862), and Robinson Ellis, with *apparatus criticus*, commentary, excursus, and index (London, 1887). The earliest *Novus Avianus* has been edited by Grosse (Königsberg, 1868); and the fragments of Neckam's work may be found in Fröhner, p. 65.

Aviēnus, Rufus Festus. A Latin poet of the fourth century A.D. He wrote in hexameter verse a translation of the *Phaenomena* of Aratus (q. v.); a geography based upon Dionysius Periegetes (*Descriptio Orbis Terrarum*); and another geographical piece (*Ora Maritima*) in iambics, describing the coasts of the Mediterranean, Black, and Caspian seas. Of the last work only a part of the first book is extant. He is known to have written also, in iambics, a poetical version of Livy and a condensed paraphrase of the *Aeneid* of Vergil, of which poet he is, in style, an imitator. The *editio princeps* of the complete works was published in Venice (1488). A good edition is Holder's (Innsbruck, 1887).

Axamenta. The songs of the Salian priests. See Carmina Saliaria; Salii.

Axīné (*ἀξίνη*). See Securis.

Axis. See Currus.

Axius (Ἀξιός). The chief river of Macedonia, rising in Mount Scardus and flowing southeast into the Thermaicus Sinus.

Axŏnes (*ἄξονες, κύρβεις*). Wooden tablets painted white, and made to turn on an upright axis, on which were inscribed the laws of Solon (q. v.). See Hermann, *Staatsalterth.* § 107, 1.

Azōtus (Ἄζωτος). Ashdod or Ashdoud; a city of Palestine near the sea-coast. It was one of the five chief towns of the Philistines, and a seat of the worship of Dagon. See Herod. ii. 157.

B

B, as a symbol.

In Greek.—In late Greek inscriptions we sometimes find B (*β*) = *βασιλικός, βοήθει*, or *βουλῆς*; as Ψ. B. = *ψηφίσματι βουλῆς*, six times in all. B, *β′* = 2; , *β* = 2000.

In Latin.—

B = Badius, beneficiarius, bonus, bos.

B = beteranus = veteranus (*C. I. L.* x. 719); also bixit = vixit.

B·B = bonis bene.

B·B·M·B = bonis bene, malis bene.

BB·VV = boni viri.

B·D = bona dea.

B·D·S·M = bene de se merenti; B·M·D·S = bene merenti de se.

B·F = bona fortuna, bonum factum.

B·M = bene merenti, bona meus, bonae memoriae, bos mas.

B·M·F = bene merenti fecit, bonae memoriae femina.

B·M·F·D·S = bene merenti fecerunt de suo.

B·M·M·P = bene merenti memoriam posuit.

B·M·P = bene merenti posuit, bonae memoriae puella.

B·M·P·C = bene merenti ponendum curavit.

B·M·R = bonae memoriae religiosa.

B·M·V = bonae memoriae vir.

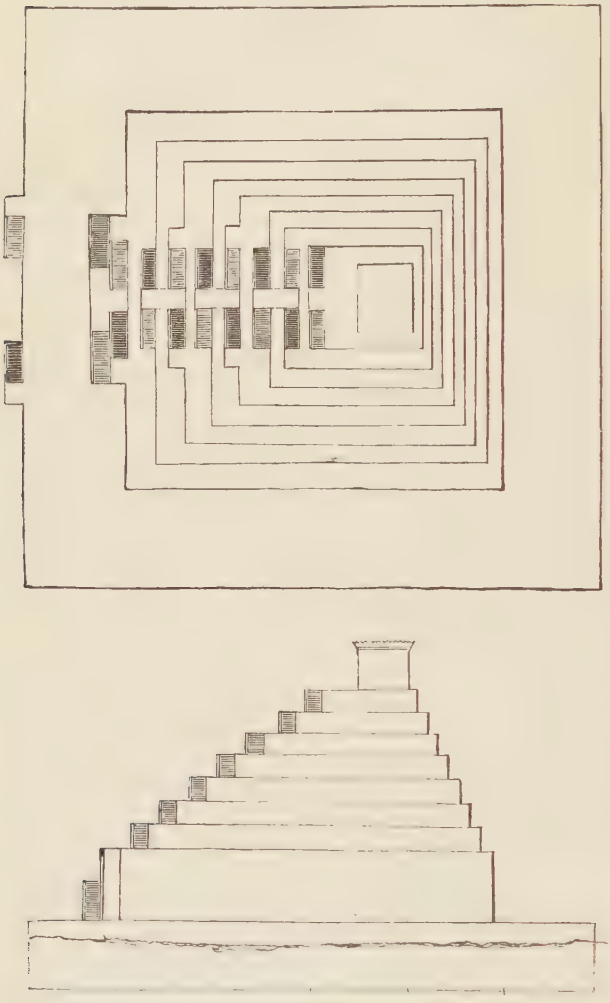
B·P = bonus puer.

B·Q = bene quiescat.

B·R·P·N = bono rei publicae natus.

B·V = bene vale.

B·V·V = balnea, vina, Venus.



Baal. See Belus.

Baalbek. See Heliopolis.

Babel, Tower of. The tower mentioned in Genesis xi. as having been commenced by the descendants of Noah on the plain of Shinar (Sumir), in order to reach the heavens and thus escape from the danger of a second Deluge. Jehovah, however, confounded the language of the builders, so that they no longer understood one another, and thus became scattered. From this the tower, which remained unfinished, was called *Babel* or "confusion" (Heb. *balbel*, to confound). This etymology is, however, only a specimen of Old Testament paronomasia, in that *Babel* is in reality the Assyrian *bab-ili*, "the gate of God"—a Semitic rendering of the Sumirian name *Ca-dimíra*. Some fragments of a cuneiform text were discovered by Mr. George Smith containing a narrative closely parallel to the Biblical account. The story in Greek mythology of the attempt of the Giants to scale heaven is probably an echo of Babylonian tradition. See Gigantes.

Nothing is known regarding the site of the Tower of Babel, beyond the fact that it was in or very near Babylon. It is generally held to be represented by the great pile Birs Nimroud, which stands in Borsippa, a suburb of Babylon, eight

miles distant, and dedicated to the god Nebo. Sir Henry Rawlinson made the discovery that the pile consisted of seven stages of brickwork on an earthen platform, each stage being of a different colour. The temple was known as the Temple of the Seven Lights (planets), each stage being consecrated to a light or planet.

Plan and Elevation of the Temple at Borsippa. (From Oppert's measurement.)

Another proposed site is that of the ruins now called Bab-il, within the city of Babylon. Here the mound is 1100 yards in length and 800 in breadth. See Lenormant, *Les Origines de l'Histoire d'après la Bible*, vol. i. (1882); Smith, *Account of Genesis*, ed. by Sayce (1880); and Sayce, *Fresh Light from the Ancient Monuments* (3d ed. 1886).

Babrius (Βάβριος) or **Babrias** (Βαβρίας). The compiler of a comprehensive collection of Aesop's fables in choliambic metre. The book is probably to be assigned to the beginning of the first century B.C. Until 1842 nothing was known of Babrius but fragments and paraphrases, bearing the name of Aesopus. (See AESOPUS.) But in that year a Greek, Minoides Minas, discovered 123 of the original fables in the monastery on Mt. Athos. In 1857, he brought out 95 more, the genuineness of which was disputed by Cobet and other scholars. These were edited by Lewis in 1859, and are included in Bergk's *Anthologia Lyrica*, 4th ed. (1883). Babrius has been edited also by Lachmann (Berlin, 1845), and, with additions from the Bodleian and Vatican MSS., by Gitlbauer (Vienna, 1882). The style of Babrius is simple and pleasing, the tone fresh and lively. The fables of Phaedrus (q. v.) were imitated, with considerable closeness to the original, from the *μῦθοι* or *μυθίαμβοι* of Babrius. An excellent text, with dissertations, notes, and lexicon, is that of Rutherford (London, 1883).

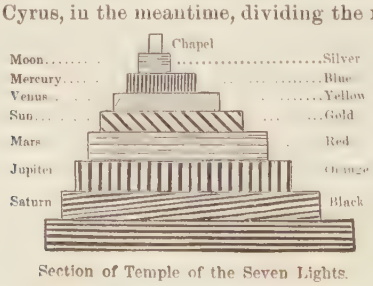
Babylon (Βαβυλών). (1) The name of a fortress in Lower Egypt on the right bank of the Nile, opposite the pyramids of Ghizeh. It was said to have been founded by exiles from Babylonia, and under the Romans became a place of considerable importance. (2) A celebrated city, the capital of the Babylonian (Chaldaean) Empire, situated on the Euphrates. The ancient accounts of its origin and of the structure of the city are extremely confused. The god Belus (q. v.) is spoken of as its founder, and also Semiramis and Nitocris. According to Diodorus (ii. 7), Semiramis employed upon it two million workmen collected from all parts of her realm. It must be understood, however, that nearly all the ancient accounts of Babylon refer not to the primitive city, but to the later capital and residence of Nebuchadnezzar. Herodotus describes it in the first book of his history, as if from his personal observation.

The shape of the city of Babylon was that of a square, traversed each way by twenty-five principal streets, which, of course, intersected each other, dividing the city into 625 squares. These streets were terminated at each end by gates of brass of prodigious size and strength, with a smaller one opening towards the river. Respecting the height and thickness of the walls of Babylon, there are great variations among the ancient writers. Herodotus makes them 200 royal cubits (or 337 feet 8 inches) high and 50 royal cubits (or 84 feet 6 inches) broad, which seems incredible. A difficulty also presents itself with regard to the extent of the walls of Babylon. Herodotus makes them 120 stadia each side, or 480 in circumference. Pliny and Solinus give them the circuit at 60 Roman miles, which, reckoning eight stadia to a mile, agrees with the account of Herodotus. Strabo makes it 385 stadia. Diodorus, from Ctesias, assigns 360, but from Clitarchus, who accompanied Alexander, 365. Curtius gives 368. Taking the circumference of Babylon at 365 stadia, and these at 491 feet, each side of the square (which is equal to 91¼ stadia) will be 8.485 British miles, or nearly 8½. This gives an area of 72 miles and an inconsiderable fraction. It is to be remembered, however, that the walls, like those of most Oriental towns, enclosed rather populous districts than mere cities. That the

area enclosed by the walls of Babylon was only partly built on is proved by the words of Quintus Curtius (v. 4), who says that "the buildings in Babylon are not contiguous to the walls, but some considerable space was left all around." Diodorus, moreover, describes a vast space taken up by the palaces and public buildings. The enclosure of one of the palaces was a square of 15 stadia, or near 1½ mile; the other of 5 stadia—here are more than 2½ square miles occupied by the palaces alone. Besides these, there were the Temple and Tower of Belus, of vast extent; and the Hanging Gardens. From all this, and much more that might be adduced, we may collect most clearly that much vacant space remained within the walls of Babylon; and this would seem to do away, in some degree, with the great difficulty respecting the magnitude of the city itself. Nor is it stated as the effect of the subsequent decline of Babylon, but as the actual state of it when Alexander first entered the place, for Curtius leaves us to understand that the system of cultivating a large proportion of the enclosed space originat-

Plan of Babylon. (According to Rich.)

ed with the foundation itself; and the history of its two sieges, by Cyrus and Darius Hystaspis, seems to show it (Rennell's *Geography of Herodotus*, i. 447). The walls of Babylon were built of brick baked in the sun, cemented with bitumen instead of mortar, and were encompassed by a broad and deep ditch, lined with the same materials, as were also the banks of the river in its course through the city, the inhabitants descending to the water by steps through the smaller brass gates already mentioned. Over the river was a bridge, connecting the two halves of the city, which stood, the one on its eastern, the other on its western bank; the river running nearly north and south. The bridge was five furlongs in length and thirty feet in breadth, and had a palace at each end, with, it is said, a subterranean passage beneath the river from one to the other, the work of Semiramis. Of this bridge no traces have yet been found.



Within or near the city was the Temple of Belus, or Baal, which Herodotus describes as a square of two stadia; in the midst of this arose the celebrated tower, to which both the same writer and Strabo give an elevation of one stadium, and the same measure at its base. The whole was divided into eight separate towers, one above another, of decreasing dimensions to the summit, where stood a chapel, containing a couch, table, and other things of gold. Here the principal devotions were performed; and over this, on the highest platform of all, was the observatory, by the help of which the Babylonians are said to have attained to great skill in astronomy. A winding staircase on the outside formed the ascent to this stupendous edifice. The Old Palace, which stood on the east side of the bridge over the river, was 3¾ miles in extent. The New Palace, which stood on the west side of the river, opposite to the other, was 7½ miles in extent. It was surrounded with three walls, one within another, with considerable spaces between them. These walls, as also those of the other palace, were embellished with an infinite variety of sculptures, representing all kinds of animals to the life. Among the rest was a curious hunting-piece, in which Semiramis on horseback was throwing her javelin at a leopard, and her husband Ninus piercing a lion. In this last palace were the Hanging Gardens, so celebrated among the Greeks. They contained a square of 400 feet on every side, and were carried up in the manner of several large terraces, one above another, till the height equalled that of the walls of the city. The ascent was from terrace to terrace by stairs ten feet wide. The whole pile was sustained by vast arches raised upon other arches, one above another, and strengthened by a wall, surrounding it on every side, of twenty-two feet in thickness. On the top of the arches were first laid large flat stones, sixteen feet long and four broad; over these was a layer of reeds, mixed with a great quantity of bitumen, upon which were two rows of bricks closely cemented together. The whole was covered with thick sheets of lead, upon which lay the mould of the garden. And all this floorage was contrived to keep the moisture of the mould from running away through the arches. The earth laid thereon was so deep that large trees might take root in it; and with such the terraces were covered, as well as with all other plants and flowers that were proper to adorn a pleasure-garden. In the upper terrace there was an engine, or kind of pump, by which water was drawn up out of the river, and from thence the whole garden was watered. In the spaces between the several arches upon which this whole structure rested were large and magnificent apartments, that were very light, and had the advantage of a beautiful prospect. Amyitis, the wife of Nebuchadnezzar, having been bred in Media (for she was the daughter of Astyages, the king of that country), desired to have something in imitation of her native hills and forests; and the monarch, in order to gratify her, is said to have raised this prodigious structure. Near Babylon was the famous Birs Nimroud. See BABEL, TOWER OF.

Babylon was probably in the zenith of its glory and dominion just before the death of Nebuchad-

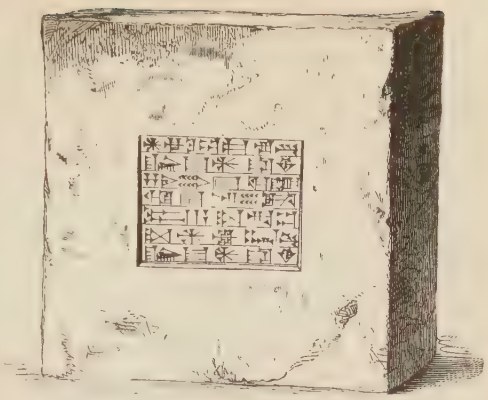
The Mudjelibeh or Kasr (Rich.)

nezzar. The spoils of Nineveh, Jerusalem, and Egypt had enriched it; its armies had swept like a torrent over the finest countries of the East, and had at this time no longer an enemy to contend with; the arts and sciences, driven from Phœnicia and Egypt, were centred here; and hither the philosophers of the West came to imbibe instruction. The fall of Babylon, before the victorious arms of Cyrus, occurred B.C. 538. The height and strength of the walls had long baffled every effort of the invader. Having understood, at length, that on a certain day, then near approaching, a great annual festival was to be kept at Babylon, when it was customary for the Babylonians to spend the night in revelling and drunkenness, he thought this a fit opportunity for executing a scheme which he had planned. This was no other than to surprise the city by turning the course of the river—a mode of capture of which the Babylonians, who looked upon the river as one of their greatest protections, had not the smallest apprehension. Accordingly, on the night of the feast, he sent a party of his men to the head of the canal, which led to the great lake made by Nebuchadnezzar to receive the waters of the Euphrates while he was facing the banks of the river with walls of brick and bitumen. This party had directions, as soon as it was dark, to commence breaking down the great bank or dam which kept the waters of the river in their place, and separated them from the canal above mentioned; while Cyrus, in the meantime, dividing the rest of his army, stationed one part at the place where the river entered the city, and the other where it came out, with orders to enter the channel of the river as soon as they should find it fordable. This happened by midnight; for, by cutting down the bank leading to the great lake, and making, besides, openings into the trenches which, in the course of the two years' siege, had been dug around the city, the river was so drained of its water that it became nearly dry. When the army of Cyrus entered the channel from their respective stations on each side of the city, they rushed onward towards the centre of the place; and finding the gates leading towards the river left open in the drunkenness and negligence of the night, they entered them, and met by concert at the palace before any alarm had been given; here the guards, partaking, no doubt, in the negligence and disorder of the night, were surprised and killed. Soon after, the soldiers of Cyrus, having killed the guard, and meeting with no resistance, advanced towards the banqueting-hall, where they encountered Belshazzar, the ill-fated monarch, and slew him, with his armed followers. See, however, CYRUS, p. 460.

Section of Temple of the Seven Lights.

Under Cyrus, Babylon was reduced to the rank of a provincial city, and having revolted under Darius Hystaspis was severely punished, and by Xerxes plundered and despoiled, after which it steadily decayed. See BABYLONIA.

Babylonia (Βαβυλωνία; in the Assyrian inscriptions called *Babilu*; in the Persian, *Babirush*). A plain watered by the lower streams of the Tigris and Euphrates, and forming the modern province of Irak-Arabi. The boundaries of Babylonia varied considerably during the different periods of Babylonian and Assyrian power; but in general the northern boundary consisted partly of the Euphrates and its affluents, and partly of the frontier forts established by the monarchs of Assyria and Babylonia, these forts and their outposts forming in all probability the "Median Wall" of the classical writers. The Tigris River formed a natural eastern boundary-line, though the province of Namri (Kurdistan) lying east of that stream was sometimes included in the Chaldaean Empire. The Euphrates with the desert lying east of it was the western limit, while the territory terminated at the Persian Gulf on the south, this body of water in early times having extended further inland than at present. The country so bounded is spoken of in the Old Testament as Shinar, Babel, and "the land of the Chaldees," and has always been one of the richest and most fertile districts of Western Asia, so that Herodotus (i. 193) speaks



of it as supplying one third of the grain produced by the whole Persian Empire—a fact to which the inscriptions bear witness. A magnificent system of artificial irrigation enhanced this natural productiveness, a network of canals having extended over the entire territory, some of them being still navigable, and the greatest of them—the Nar Malka, which connected the Tigris with the Euphrates—having been used as late as A.D. 700.

Babylonia was divided into several provinces of varying number and extent at different periods. The chief division was into the two large provinces of Sumir (Shinar) or South Babylonia, and Akkad or North Babylonia, which latter extended from the city of Babylon to the Assyrian frontier. Babylon was the capital of Sumir, and the double city Sippara-Akkad (Agade) on both banks of the Euphrates was the capital of North Babylonia. Minor divisions were Gan-Duniyas, Edina (Eden), Gambulu (Afadj) and Mat Kaldu, the land of the Chaldaeans on the Persian Gulf.

ETHNOLOGY AND CIVILIZATION.—Babylonia was a land of mixed races, as is testified both by the sacred and profane writers of antiquity, and by the heterogeneous character of its linguistic and monumental remains. The first population was Ugro-Finnic in its racial affiliations, as is seen by the statues of this period, which exhibit features of a pure Tartar type, with doliocephalic skulls, high cheek-bones, and slanting eyes. This type is ethnically altered to the Proto-Medes and to the Elamites of Susiana. The name of Sumero-Akkadians has been applied to this people, who originally came from the mountains to the northeast, whence the name *Akkadai*, "mountaineers." At the time of their immigration into Babylonia they are believed to have brought with them the elements of civilization. Not long after them, the Semites entered Babylonia, their type also appearing in the glyptic remains; and later, other ethnic elements were added to the population by the natural operations of war and commerce. That the Semitic immigrants ultimately attained to a high degree of influence in the land is seen in the fact that as early as B.C. 3800 we find a Semitic line of kings, under Sargon of Akkad, ruling in North Babylonia.

The Babylonian people were possessed of a civilization whose greatness has only of late been properly appreciated; for the meagre notices in Herodotus and other ancient writers give little more than a faint suggestion of the truth. The recovery and decipherment in recent times of many thousands of inscribed tablets from the libraries of the oldest cities of Babylonia, give us a means of reconstructing a very accurate picture of the sociology of their ancient life, and one more clear in its details than that given us by the records of almost any other ancient people, except perhaps of Egypt.

The government was despotic, and of a typically Oriental type. The laws were administered by supreme judges under whom were ordinary judges, who sat in the gates of the temple and at the great gate of the city to hear causes, and gave judgment in strict conformity with precedent, the chief punishments being fines, loss of civic rights, imprisonment, and death. Appeals could be made to the king. The chief taxes were the "king's tax," or tax on all property; the "army tax"; and the tax levied, like the English "ship-money" of former

Babylonian Brick, with Cuneiform Inscription.

times, upon certain districts for ships. Local taxes were temple-tithes (*esritum*), the first-fruit tax, the sheep tax, and a tax for the maintenance of roads and canals. A silver currency was employed (talents, manehs, shekels, paras), coined money having been introduced in the reign of Darius. These early coins were perhaps the tetradrachma (q. v.) of the Athenian Greeks.

Women occupied a favourable position, especially after marriage, which was effected by both a religious and a civil ceremony. Offences against a mother were séverely punished, sometimes even by mutilation. Women could own slaves and other property in their own right, and could even engage in business. All Chaldaeans of free birth were educated. Slaves were protected by law against harsh treatment from their masters; they could own property; and in fact were often taught trades and other self-supporting occupations by their owners.

ART, LITERATURE, AND MANUFACTURES.—The recent explorations of Rassam at Sippara and of De Sarzec at Tel-lô have added immensely to our knowledge of Chaldaean art, which had hitherto been represented by a few engraved cylinders and gems. The statues discovered by these gentlemen have much artistic merit. The largest is nearly life-size, is accurate in its anatomy, and is carved in hard green diorite. Another even more remarkable piece of workmanship is a head cut in red porphyry, the execution making it evident that tools of rare excellence must have been used. Several bronze statuettes attest a knowledge of the art of casting metals. Many talismans and amulets have been found, the stones selected by the lapidaries being green and red jasper, haematite, chalcedony, crystal, carnelian, lapis-lazuli, sardonyx, and onyx. Music was cultivated, as the sculptors prove by their representations of the harp, cymbals, and other instruments.

Among the Sumero-Akkadian population, the scribe caste contained many members of high rank, and literature in consequence was highly esteemed. As has been already stated, every free Babylonian had a certain amount of education, including a knowledge of tablet writing. Libraries were common, and tablets have been found directing the student how to ask for such works as he needed from the libraries; whence it appears that a very careful system of cataloguing prevailed. Various schools of literature are noted as having existed,

each influenced by local schools of thought. In the most ancient school of Eridhu, for example, magic was cultivated, with the result that many works on magic and its cognate subjects were written and compiled, among them the series of tablets known as the "books of spells relating to diseases of the head," and having a remarkable resemblance to the Atharvaveda or Black-Veda of the Aryans. The school of Erech produced the epic poem of Gizdhubar, consisting of twelve books arranged according to the twelve signs of the zodiac. An admirable specimen of Babylonian literature is a tablet, of which both Assyrian and Babylonian versions exist, describing the war in heaven between Merodach (Marduk) and the demon Tiamat. This tablet came from the library of the Temple of Nebo at Borsippa. Besides poetry and magic, the remains of these great libraries have yielded specimens of historical writing, legal, geographical, and religious composition, and treatises on astrology, divination, astronomy, and mythology, besides fables and proverbs. The greater part of the Chaldaean classics were copied by the Assyrians under Assur-bani-pal, and thus became a part also of the literature of the Northern Empire. See ASSYRIA.

The natural products of Babylonia were very numerous, comprising, besides corn and other cereals, many kinds of fruits, such as grapes and melons, and also vegetables—sesame, onions, garlic, cucumbers, etc. Trades were varied, and the tablets make especial mention of weaving, dyeing, pottery, building, and many other mechanical arts.

CHRONOLOGY AND HISTORY.—Hitherto students of Babylonia have been almost entirely dependent upon the fragmentary portions of the Canon of Kings, drawn up by the Graeco-Chaldaean priest Berosus (q.v.), about B.C. 268; but these lists are now confirmed and superseded by Babylonian Canon inscriptions dating from the sixth century before our era. The documents are: (1) a Canon of Kings by their dynasties, extending from B.C. 2200 until B.C. 647, partly mutilated, but capable of restoration; (2) the Tablet of Synchronous History of Assyria and Babylonia, which gives the names of the Babylonian kings from about B.C. 1800 to B.C. 732; (3) a Chronicle Tablet giving the chief events in Babylonia, the month and day being given in most cases, from B.C. 747 to B.C. 660; and (4) a collection of dated contract tablets extending from B.C. 680 to B.C. 150. This unequalled series of chronological documents gives an almost complete sequence to Babylonian history, and although there are still *lacunae*, the basis is now much more sure than when we were dependent solely upon the second-hand statements of Ctesias and Berosus.

It is now evident, from the monuments and inscriptions which have been obtained from the traditionally oldest cities of Chaldaea, that the civilization of the ancient people of Babylonia has an antiquity surpassing that of ancient Egypt. The earliest monument of which we can accurately fix the date is a stone whorl in the British Museum, brought from Sepharvaim by Mr. Rassam. It is an oval-shaped stone, inscribed in what is called *line* writing—that is, writing in which the characters are formed more by lines than by the ordinary wedges, a style that goes back to a time when the hieroglyphic or pictorial system of writing was beginning to be discontinued. The king's name inscribed is that of Sargon I., king of Akkad, who is now universally assigned to the remote antiquity of B.C. 3800, and other inscriptions of this distant period are to be found in other European museums. Older still, in all probability, are the very archaic records found by M. de Sarzec at Tel-lô, in the neighbourhood of Erech, which, written in the ancient agglutinative dialect of the Sumero-Akkadian inhabitants, must precede the Semitic inscriptions of the northern kingdom of Sargon and his successors. These early inscriptions are mostly of a very short character, containing little more than the names and titles of the kings who ruled the cities, but at the same time they afford us information as to the state of civilization existing in Chaldaea nearly 4000 years before the Christian era. The Empire had not become one consolidated whole, and polyarchy was the most prevalent form of government, each city being ruled by its local king. Thus, Sargon was king of Akkad, and especially styles himself king of "the city." Ur-bahu and Dungi were rulers of Ur, and others held sway in the cities of Eridhu, Larsa, and Babylon. Some of these early rulers claim the titles of king of Sumir (Shinar) and Akkad, a division which in after-time had the geographical signification of North and South Babylonia, but which in the earlier ages are certainly rather to be regarded as ethnic than local divisions of this early population. Babylon, though always one of the most important cities of the empire, was not the earliest capital, for the cradle of Chaldaean civilization was in the region of the south. Here all the ancient legends connected with Gizdhubar as Nimrod are located, and find their centre in the city of Uru-ki, the Erech of Genesis, the name of which means "the city of the land," or capital.

The next most important city in this southern region was Ur, the sacred city of the Moon-god, the ruins of which are marked by the mound of Mugheir, on the west bank of the Euphrates, the city from which Abram came. Larsa (Senkereh), the Ellasar of Gen. xiv.; Sergul or Kulunu, the Calneh of Genesis, now known as the site of Zerghul on the Shat-el-Hie; and Eridhu, the most sacred city of South Babylonia, called frequently the "Holy City," were all seats of local rulers.

The first ruler who succeeded in combining those various city kingdoms into one consolidated whole was Ur-bahu, whose reign must be placed about B.C. 2700. This ruler restored temples in nearly all the above-mentioned cities, and appointed "priest viceroys" to rule in them. He was succeeded by his son Dungi, who has left us a large number of inscriptions. Already Chaldaean civilization had made great progress and was far advanced, and the sciences, especially mathematics and astronomy, were studied; while the ships of Chaldaea navigated the Persian Gulf. The first really historical chronicle belongs to this period, and is found on a statue of Gudea, which shows the Babylonians already at war with Elam and the nations to the west. The wars with Elam form the chief features of the history of this period. In B.C. 2280 a powerful confederation of Elamites under Kudurnakhundi invaded South Chaldaea, and sacked the capital, Erech, carrying away the statue of the divine patroness Nana or Istar. This dynasty lasted until about B.C. 2120, and was very powerful, as shown by the numerous inscriptions of the kings found in various parts of Babylon. Of the kings of this period two are specially im-

portant—viz., Kudur-mabug, who appears to have been lord-paramount of the confederation of kings, and who claimed the title of "lord of the west," or Syria; and his son, Eri-aku, who was ruler of Larsa. This latter ruler is almost universally identified by Assyriologists with the Arioch, king of Ellasar, mentioned in Gen. xiv. This dynasty was overthrown by the powerful usurper, King Khammuragas, who appears not to have been of native Babylonian origin, but rather a Kassite or Cosscan who had settled in the land and availed himself of this period of depression to seize the throne. This Kassite dynasty is one of the most important periods in Babylonian history, as great political changes took place at this time. It was at this time that Babylon began to assume its position as the capital of the whole Empire. Khammuragas rebuilt the temples of Bel at Babylon, Nebo in Borsippa, and restored several of the sacred edifices in South Babylonia—at Ur, Erech, and Larsa —which had suffered at the hands of the Elamite invaders. His greatest public work, however, was the construction of a canal called the river of Khammuragas, "joy of men," which there is little doubt was the Nar Malka, or Royal River of the classics. This canal crossed North Babylonia, passing through Sippara, and is now represented by the Yusifieh Canal, one of the few ancient canals navigable at the present day. This dynasty lasted about 180 years, the founder himself ruling forty-five. The very numerous collection of inscriptions of this period in the British Museum shows that at this time Babylonia was occupied by a much mixed population, consisting of Sumero - Akkadians, Elamites, Kassites, and a large Semitic element. The Semites appear principally as traders and merchants.

Babylonian Seal and its Impression. (British Museum.)

The three succeeding dynasties, extending over a period of about 600 years, consisted of a mixture of Semitic and non-Semitic princes, who ruled with Babylon as capital. The history of this period is chiefly to be derived from the Tablet of Synchronous History, and only a few Babylonian records of the period have been preserved. One of the most important is the memorial stone of Nebuchadnezzar I., B.C. 1150—a usurper who seized the throne and waged war against the rising Empire of Assyria. In this inscription the king records the result of a campaign against the Elamite chiefs in the region of Namri or Kurdistan, and on the banks of the Ulai River, on which the city of Shushan was afterwards built. The description of the campaign undertaken in the hot summer months is extremely graphic for so ancient a document: "In the month Tammuz he took the road; the rocks were burning and scorched like fire; from the gardens was burned all vegetation; there was no water in the springs, and cut off were the drinking-places; the strength of the great horses wearied, and to the warlike hero his courage returned." The writer then describes the battle, in which the Babylonians were undoubtedly worsted, and only saved from complete defeat by the aid of the governor of an adjacent city who refused to surrender to the Elamites. In return for this the city has a charter of freedom granted it, declaring it free from taxes and from the usual levy for men in time of war.

The history is, after this date, chiefly to be derived from Assyrian sources, and it is not until the time of Nabunazir, the Nabonassar of the Canon of Ptolemy, that we have any complete sequence of Babylonian history. Our information is now chiefly derived from the important, but unfortunately fragmentary, Chronicle Tablet already spoken of. Nabonassar, whose reign forms an important epoch in Babylonian history, ascended the throne in B.C. 747, and ruled for fourteen years. During his reign the country was twice invaded by the Assyrians, and, though they claim the victory, they do not seem to have shaken the king on his throne. Nadinu (the Nadinos of Ptolemy), who succeeded to his father's throne in B.C. 734, only ruled for two years, when one of the popular revolts unseated him and placed Ukinziru (the Chimzoros of Ptolemy) on the throne. In the third year the country was invaded by the armies of Tiglath-pileser III., king of Assyria, who drove the Babylonian king from his capital into the marshes of South Babylonia, where he found him and put him to death, ascending his throne under the Babylonian name of Pulu or Pul. This conquest of Babylonia, in B.C. 729, was a very important event in the history of the Kingdom, for it brought the two courts of the north and south kingdoms once more into close relationship. The death of Shalmaneser IV., king of Assyria, and the usurpation of the throne by Sargon the Tartan in B.C. 722, was the opportunity seized by the Babylonians for once more becoming independent, under the leadership of a prince of very ancient descent—Merodach-baladan II. This prince was one of the most popular rulers of the middle Babylonian Kingdom, and was supported by all classes of the people as well as by the Elamite court, who were the most powerful opponents of Assyria. For twelve years the wars in Syria and other parts of the Empire kept the Assyrians from despatching sufficiently strong forces to the south to crush this powerful prince. In B.C. 712, Sargon was purposing to march into Babylonia, when a counteraction was caused by the Babylonian prince sending an embassy to Hezekiah and the other princes of Syria, and raising a revolt which called the invaders away (2 Kings, xx. 6); but in B.C. 710 the

storm broke, and Sargon captured Babylon, proclaiming himself king. On the assassination of Sargon in B.C. 705, Merodach-baladan returned, and after a reign of some nine months was driven from the land by Sennacherib, seeking refuge in the Elamite provinces on the east shore of the Persian Gulf. For some years Babylonia was now ruled by viceroys and princes appointed by the kings of Assyria, although several native princes attempted revolt. In B.C. 688, Sennacherib, after a very severe campaign, in which he defeated the allied Elamites and Babylonians, became sovereign of the two kingdoms. His son and successor, Esarhaddon, attempted to carry out a policy of a more conciliatory kind, and divided his time between the two courts; but the violent opposition of Egypt in Syria weakened his power, and the Elamites and Babylonians constantly harassed him. Shortly before his death he appointed his son Samas-sum-yukin (the Saosduchinos of Ptolemy) ruler, which appointment was confirmed by his son and successor Assur-bani-pal. This prince, tempted by the intrigue of the Babylonian priests, revolted against his brother, and was defeated after a terrible war, in which Babylon, Sippara, and Borsippa were besieged, and burned himself in his palace, B.C. 647. Kandalanu, who succeeded him, was little more than a viceroy, depending in every way upon the Ninevite court, although tablets are dated in his reign. On the disruption of the Assyrian Empire after the death of Assur-bani-pal, the throne of Babylon was seized by Nabu-abla-utzar, or Nabopolassar, the general of the Babylonian garrison, who had married a Median princess, and was himself, no doubt, of collateral descent from the royal line of Babylonian kings.

The general disruption of the states of Western Asia which took place in B.C. 625, subsequent upon the inroad of a large mass of Aryan and other invaders from the east, afforded the Babylonians an opportunity for throwing off the hated yoke of Assyria, and Nabopolassar was proclaimed king in B.C. 625. He was succeeded in B.C. 604 by his son Nebuchadnezzar, one of the greatest sovereigns who ever ruled over the ancient Empire. During a long reign of forty-three years the prince succeeded in recovering the long-lost provinces of the kingdom, and once more making Babylon queen of nations. He not only restored the Empire and rebuilt Babylon, but almost every temple and edifice throughout the land underwent restoration at his hands. It is an astonishing fact that not a single mound throughout Babylonia has as yet been opened by the explorers which has not been found to contain bricks, cylinders, or tablets inscribed with his name. In B.C. 599, he captured Jerusalem, and sent Jehoiakim captive to Babylon; and eleven years later, owing to the still disturbed state of the kingdom (B.C. 588), he destroyed the city, and removed most of the inhabitants to Chaldaea. Nebuchadnezzar was succeeded in B.C. 561 by his son Evil-merodach, who released Jehoiakim, but was murdered by his brother-in-law Nergal-Sharezer, who was the *rab makhu*, or "chief seer," of one of the temples. His reign lasted until B.C. 556, his son Labasi-Kudar (the Laborasoarchad of Ptolemy) only ruling a few months. The throne was in B.C. 556 usurped by a powerful and active prince, Nabu-naid or Nabonidus, the son of a "chief seer," whose reign is the most important, next to that of Nebuchadnezzar, in later Babylonian history. The inscriptions of this king are found in almost all temples, and some of them contain important historical facts. In a cylinder found at Sippara the king records his restoration of the temple at Kharran, which was destroyed by the Scythians, and in his sixth year, B.C. 549, he records the overthrow of Astyages, king of the Medes, and the capture of Ecbatana by Cyrus (q. v.). In the king's seventeenth year the whole land of Babylonia was in revolt against him for neglecting the duties of court and religion, leaving all to his son Belshazzar. During the summer of this year Cyrus invaded Babylonia, advancing from the neighbourhood of the modern Bagdad, and reaching Sippara on the fourteenth day of Tammuz (June), which the garrison yielded without fighting. Two days later, Tammuz 16, Babylon was taken in the same manner. Cyrus appointed Gobryas ruler. Three months later, Nabonidus, who was a prisoner, died, and after a week's mourning by the people was buried on the fourth day of Nisan, B.C. 538. Babylonia now became a Persian province, and under the rule of Cyrus (B.C. 538–529) and Cambyses (529–521) it appears to have been peaceful. On the accession to the throne of Darius, son of Hystaspes, the old rebellious spirit once more asserted itself, and for three years (521–519), the city held out against the Persians under Nadinta-Bel, who claimed to be Nebuchadnezzar, son of Nabonidus. Again, in B.C. 513, the city revolted under Arakha, an Armenian.

With the overthrow of the Persian monarchy Babylonia came under the short-lived dominion of Alexander the Great, who died in the capital (B.C. 323). Seleucus I., to whom it had been promised at the conference of Triparadisus, contested and won the possession of it from Antigonus (B.C. 312). About B.C. 140, it was taken from the Syrian monarchs by the Parthians. It came into the hands of the Romans only temporarily, first under Trajan (A.D. 114); under Septimius Severus (A.D. 199); and, again, under Julian (A.D. 363). When in 650 the successors of Mohammed put an end to the new Persian monarchy of the Sassanides, the province of Babylonia, where Bagdad was built (762–766), became the seat of the califs till 1258. Since 1638, when the Turks, for the second time, took it from the Persians, it has been under the dominion of Turkey, divided into the pachalics of Bagdad and Basra.

RELIGION. — During its long history many changes took place in the religion of Babylonia. The primitive Sumero-Akkadians had a sort of fetich-worship, regarding every object of nature as the abode of a spirit or living principle (Zi) which governed its relationship to man. The priests of this religion were a class of exorcists dealing only with the malevolent powers of nature—sickness, disease, and others hostile to the life of man. From the libraries of Nineveh the liturgies of these priests have been recovered in the form of magical formulas, incantations, and hymns, from which it appears that the first gods of the Sumero-Akkadian theogony are the Spirit of Heaven and the Spirit of Earth—the *Dingri*, or Creators—the parents of all the other gods. These other gods are very numerous, each locality having its own local pantheon, but in subordination to some one divine patron of the city.

One of the earliest seats of the Babylonian worship was Eridhu on the Persian Gulf, the seat of

the worship of Ea, the "lord of the waves" as well as "lord of laws," and identified with the mysterious fish-divinity of Berosus (q. v.), who relates that he taught the early inhabitants of the land the elements of civilization. The wife of Ea was Dav-kina, the "lady of the earth." The pair had a son, Tammuz, "the only-begotten," whose worship is united to that of his sister, Istar, who is also his consort. Next in importance came, among the local deities, the god Mul-lil (Belus or Bel of the Semites), whose sacred city was Nipur (Niffer). He it was who, according to one version of the story of the Deluge, destroyed mankind. His name means "lord of ghost-land," and his wife, Ninkigat or Allat, is the "lady of ghost-land." Their child was Namtar, the demon of fever and goddess of fate, who controls the agencies of disease.

Coins with Effigies of the Tyrian Baal.

After the Semitic influence began to prevail, especially in the northern cities, Samas, the sun-god, assumes great importance. Many cities had their own local sun-god or solar hero; and in Sippara, where stood the Temple of E Bábara (The House of Lustre), this worship attained its highest development. The great Semitic prince Sargon I. (B.C. 3800) did much to advance the cult of the sun, which as it spread over Chaldaea brought about a gradual change in the religion of the country, resulting in an amalgamation of the Semitic and Akkadian systems. Thus grew up the worship of Bel-Merodach (Marduk) who gradually, from being only a local sun-god, became the great national deity, as Assur was of the Assyrians, so completely overshadowing all the other divinities that the later faith of Babylonia approaches a pure monotheism. His temple, which stood on the eastern side of Babylon, was one of the wonders of the world. (See BABYLON.) Other divinities of the later religion are Zirpanit, the wife of Merodach; Nebo (see ASSYRIA) with his spouse Tasmit; Ninep, the god of war; Nergal, the god of death; and Gibil, the fire-god.

Mus. 1861–84); Sayce, *Ancient Empires of the East* (1884); id. *Fresh Light from the Ancient Monuments* (1885); Delitszch, *Wo lag das Paradies?* (1881). The reader is also referred to the *Babylonian and Oriental Record*, begun in 1886; and, for a summary of very recent discoveries, to a paper by Prof. Sayce in the *Contemporary Review* for January, 1897.

Babylonĭcum (generally in the plural, BABYLONĬCA). A Babylonian shawl or coverlet placed on couches. Also a horse-blanket.

Bacca. (1) Properly a berry, and used of the olive. (2) A bead of glass, amethyst, etc., strung on a necklace or worn as the pendant in an earring. See INAURIS; MONILÉ.

Baccar or **Baccăris** (*βάκχαρις*). A plant as to whose identity there is considerable dispute, some assigning the name to the foxglove and others to the clary.

Bacchae (*Βάκχαι*). (1) The female followers of Bacchus or Dionysus (q. v.) in his wanderings through the East, and represented as crowned with vine-leaves, wearing fawn-skins, and carrying the thyrsus in their hands. They are also known as Maenades (from *μαίνομαι*, to rave) and Thyiades (from *θύω*, to sacrifice). (2) Priestesses of Bacchus or Dionysus. See BACCHANTES. (3) The title of a play by Euripides which treats of the arrival of Dionysus at Thebes and the death of Pentheus (q. v.).

Baccha. (Bas-relief from the Villa Borghese.)

Bacchanalia. Festivals held in Italy in honour of Bacchus. See DIONYSIA; LIBERALIA.

Bacchanalĭbus, Senātus Consultum de. See DIONYSIA.

Bacchantes. Men and women who joined in the Dionysian festivals dressed in Asiatic robes and bonnets; and with their heads wreathed with vine and ivy leaves, with fawn-skins (*νεβρίδες*) flung over their shoulders, and thyrsi, or blunt spears twined with vine-leaves, in their hands, they ran through the country, shouting *Io Bacche! Euoi! Iacche!* Ἰὰ! Ἰή! swinging their thyrsi, beating on drums, and sounding various instruments. Indecent emblems were carried in procession, and the ceremonies often assumed a most immoral character and tendency. The women, who bore a chief part in these frantic revels, were called Bacchae, Maenades, Thyiades, Euades. See DIONYSIA.

Bacchĭadae (*Βακχιάδαι*). A Corinthian clan descended from Bacchis, one of the early kings of Corinth. In their hands the royal power remained until overthrown by Cypselus (q. v.). See Pausan. ii. 4; Herod. v. 92.

Bacchĭdes. A comedy of Plautus (q. v.), and considered by critics as among his best. The original was possibly the *Δὶς ἐξαπατῶν* of Menander. The *Bacchides* was performed in B.C. 189. The first scenes were lost between the fourth and sixth centuries A.D.

Bacchius and **Bithus.** Two celebrated gladiators, of equal age and strength, who, after conquering many competitors, engaged with each other, and died of mutual wounds; whence the proverb to express equality, *Bithus contra Bacchium.* See Horace, *Epist.* i. 7, 20.

Bacchus (*Βάκχος*). See DIONYSUS; IACCHUS; LIBER.

Bacchylĭdes (*Βακχυλίδης*). A Greek lyric poet who flourished in the middle of the fifth century B.C. He was a native of Iulis in the island of Ceos, the nephew and pupil of Simonides, and a contemporary of Pindar. For a long time he lived with his uncle at the court of Hiero, tyrant of Syracuse. He also resided for a considerable time at Athens, where he won many victories in the

dithyrambic contests. Later on his home was in the Peloponnesus. It would appear that he attempted to rival the many-sided talent of his uncle, but was inferior to him in sublimity and force. He attempted a great variety of styles: hymns, paeans, dithyrambs, drinking-songs, love-songs, and epigrams. Only fragments were known to exist until 1897, when the British Museum announced the discovery on an Egyptian papyrus of some 15 to 20 lyrics varying in length from 14 to 200 lines, but with serious *lacunae*.

Bacēnis Silva. A forest which separated the Suevi from the Cherusci. (Caes. *B. G.* vi. 10.)

Bactra (*τὰ Βάκτρα*) or **Zariaspa.** The modern Balkh. The capital of Bactria, at the northern foot of Mount Paropamisus (the Hindu Kush).

Bactria (*Βακτρία*) or **Bactriāna** (*Βακτριανή*). A province of the Persian Empire, bounded on the south by Mount Paropamisus, which separated it from Ariana; on the east by the northern branch of the same range, which divided it from the Sacae; on the northeast by the Oxus, which separated it from Sogdiana; and on the west by Margiana. It was included in the conquests of Alexander, and formed a part of the kingdom of the Seleucidae until B.C. 255, when Theodotus, its governor, revolted from Antiochus II., and founded the Greek kingdom of Bactria, which lasted till B.C. 134 or 125, when it was overthrown by the Parthians.

Bactrus (*Βάκτρος*). Now the Anderab; a river of Bactria emptying into the Oxus.

Bacŭlum (*βακτηρία, ῥάβδος, σκῆπτρον, σκυτάλη*). In Greece the practice of carrying a stick was as common as with us, as is seen by the testimony of Greek vases and sculptures, which show us walking-sticks of all forms and patterns. The Athenian dandies of the time of Aristophanes affected the straight cane with an ornamented head (*Περσικὴ βακτηρία*), while old men and rustics carried large canes with a crook (*καμπύλη*). In the ruder states of Greece, such as Sicyon and Sparta, huge club-like canes (*σκυτάλαι*) were common; and these at one time were the rage at Athens (Aristoph. *Av.* 1283).

It appears that the kings of Sparta carried a truncheon (*βακτηρία*) as the ensign of their authority. On the occasion of one of them lifting it up in a threatening attitude, Themistocles returned the celebrated answer, "Strike, but hear." In reference to this custom, the truncheon (*baculus*) was carried in the hand by actors on the Roman stage. The dicasts at Athens received, at the time of their appointment, a *βακτηρία* and *συμβόλον* as a mark of their authority.

Agamemnon with Staff. (From a Greek Vase.)

At Rome walking-sticks were unknown, except in the hands of the aged or infirm; but the staff was used upon the stage by actors who personated kings and princes (Suet. *Nero*, 24). See CADUCEUS; SCEPTRUM; SCYTALÉ.

Baebia Lex. See LEX.

Baecŭla. A town in Hispania Tarraconensis, west of Castulo, in the neighbourhood of silver mines.

Baeterrae. The modern Beziers; a town in Gallia Narbonensis, on the Obris, not far from Narbo.

Baetĭca. A division of Spain. See HISPANIA.

Baetis. The modern Guadalquivir (Wady el-Kiber); a river of southern Spain, formerly called Tartessus, rising in the territory of the Oretani and flowing southwest through Baetica, to which it gave the name, until it empties by two mouths into the Atlantic Ocean, north of Gades (Cadiz).

Bagistănus (*Βαγίστανος*). A mountain of Media, southwest of Ecbatana, and sacred to Zeus. Here Semiramis (q. v.) formed a park or garden of twelve stadia in circumference, and cut her image on the face of the rock (Diod. Sic. ii. 13). Alexander is said to have visited the spot.

Bagōas (*Βαγώας*). An Egyptian eunuch, highly trusted and favoured by Artaxerxes III. Ochus, whom he poisoned, B.C. 338, giving his flesh to cats, because he had killed the sacred bull, Apis (q. v.). He was put to death by Darius III. Codomannus, whom he had attempted likewise to destroy, 336. The name Bagoas frequently occurs in Persian history, and is sometimes used by Latin writers as synonymous with *eunuchus*, which indeed seems to be the original meaning of the Persian word.

Bagrădas. A river of Northern Africa, falling into the Gulf of Carthage near Utica, near which Regulus was said to have slain the serpent 200 feet long (Plin. *H. N.* viii. 14).

Bähr, JOHANN CHRISTIAN FELIX, a classical scholar of distinction, was born at Darmstadt in 1798. He was educated at the University of Heidelberg, and won so much reputation as a classicist that at the early age of twenty-five he became Professor Ordinarius of Classical Philology in that ancient seat of learning (1823). He died November 27th, 1872. His greatest work is his *Geschichte der römischen Litteratur*, which first appeared in 1828, and reached its fourth edition in 1870. In it the subject is presented with a lucidity, taste, and accuracy that are rarely found combined in so unusual a degree. To this history he added three supplements, dealing respectively with the Christian poets and historians (1836), the Christian theology of the Latin Fathers (1837), and the later Roman literature of the Carlovingian period (1840). He also published an excellent edition of Herodotus, of which the second edition appeared in 1861.

Baiae. A city of Campania, on a small bay west of Neapolis, and opposite Puteoli. It was originally a village, but the numerous advantages of its situation soon rendered it much frequented and famous. Its foundation is ascribed in mythology to Baius, one of the companions of Odysseus. The cause of the rapid increase of Baiae lay in the fruitfulness of the surrounding country, in the beauty of its own situation, in the rich supply of shell and other fish which the adjacent waters afforded, and, above all, in the hot mineral springs which flowed from the neighbouring mountains and formed a chief source of attraction to invalids. Baiae was first called Aquae Cumanae. Numerous villas graced the surrounding country, and many were likewise built on artificial moles extending a great distance into the sea. It is now, owing to earthquakes and inundations of the sea, a mere waste compared with what it once was. The modern name is Baia. Many remains of the ancient villas may be seen beneath the water. The classics of the imperial age teem with allu-

sions to the splendour, the luxury, and the frivolities of this famous ancient watering-place.

Baiŭlus (*ἀχθοφόρος*). A porter; any one employed to carry burdens, whether a slave or a freeman (Cic. *Par.* iii. 2). The bearers at funerals were called *vespillones*. See FUNUS.

Baiulus. (Rich.)

Bakers. See PISTOR.

Bala (*Βάλας*). An epithet of the Syrian king, Alexander (q. v.).

Balantion (*βαλάντιον*). A leathern bag slung around the neck, and used to carry the purse. See CRUMENA.

Balătro. A professional jester, buffoon, or parasite. In spite of the difference of quantity, *balatro* is probably connected with *balare* (to bleat like a sheep) and hence, to speak foolishly. It is doubtless also akin to *blatero*, a chatterer (Gell. i. 15). Balatrones were paid for their jests, and the tables of the wealthy were generally open to them for the sake of the amusement they afforded. See SCURRA; PARASITUS.

Balbīnus, DECĬMUS CAELIUS. A Roman who was proclaimed emperor by the Senate with Pupienus, on the death of the Gordians, A.D. 237. He was murdered by the soldiery after a year's reign.

Balbinus.

Balbus, L. CORNELIUS, of Gades. A soldier who served under Pompey against Sertorius in Spain, and received from him the gift of Roman citizenship, and, returning with him to Rome, lived on intimate terms with Caesar as well as with Pompey. In B.C. 56, he was accused of having illegally assumed Roman citizenship; was defended by Cicero, whose speech has come down to us; and was acquitted. In the Civil War, Balbus had the management of Caesar's affairs at Rome. After the death of Caesar he gained the favour of Octavianus, who raised him to the consulship in B.C. 40.

Baleares, also called **Gymnesiae** (*Γυμνήσιοι*) by the Greeks. Two islands in the Mediterranean, off the coast of Spain, distinguished by the epithets Maior and Minor, whence their modern names Majorca and Minorca. Their inhabitants, also called Baleares, were celebrated as slingers. They were subdued B.C. 123, by Q. Metellus, who assumed accordingly the surname Balearicus.

Ball, GAMES OF. See APORRHAXIS; CORYCOS; EPISCYRUS; FOLLIS; HARPASTUM; PILA; TRIGON; URANIA..

Ballētys (*Βαλλητύς*). See ELEUSINIA.

Ballista. See TORMENTUM.

Balneae, BALINEAE, BALNEUM, BALINEUM, THERMAE (*ἀσάμινθος, βαλανεῖον, λοετρόν, λουτρόν*).

GREEK BATHS.—Bathing was a practice familiar to the Greeks of both sexes from the earliest times, both in fresh water and salt. Thus, Nausicaa, daughter of Alcinoüs, king of Phaeacia, goes out with her attendants to wash her clothes; and after the task is done she bathes herself in the river (*Od.* vi. 58, 65). Odysseus, who is conducted to the same spot, strips and takes a bath, while Nausicaa and her servants stand aside. Warm springs were also resorted to for the purpose of bathing. The *Ἡράκλεια λουτρά* shown by Hephaestus or Athené to Heracles are celebrated by the poets. Pindar speaks of the hot baths of the nymphs, and Homer (*Il.* xxii. 149) celebrates one of the streams of the Scamander for its warm temperature. Bathing in rivers or the sea (*ψυχρολουτεῖν*) was always common for the young. Not to know how to read and to swim were proverbial marks of the ignoramus. A plunge in the Eurotas always sufficed for the Lacedaemonians (Schol. on Thuc. ii. 36). There appears to have been a swimming-bath (*κολυμβήθρα*) at Athens in the time of Plato (*Rep.* 453 D).

The artificial warm bath was taken in a vessel called *ἀσάμινθος* by Homer, and *ἔμβασις* by Athenaeus. It was no doubt of wood or marble, as the epithet *εὔξεστος* is applied to it (*Od.* iv. 48), and in the case of Menelaus's Egyptian presents (*Od.* iv. 128) it was of silver. It would appear from the description of the bath administered to Odysseus in the palace of Circé, that this vessel did not contain water itself, but was only used for the bather to sit in while the warm water was poured over him, which was heated in a large caldron or tripod, under which the fire was placed, and when sufficiently warmed was taken out in other vessels and poured over the head and shoulders of the person who sat in the *ἀσάμινθος*. Where cleanliness merely was the object sought, cold bathing was adopted, which was considered as most bracing to the nerves; but after violent bodily exertion or fatigue warm water was made use of, in order to refresh the body and relax the over-tension of the muscles. Hesiod (*Op.* 754) protests against men elaborately cleaning (*φαιδρύνεσθαι*) their bodies with effeminate baths, i. e. those of high temperature, which shows that this luxury had begun in his day; and in Homer's time constant indulgence in the warm bath was considered as a mark of luxury and effeminacy (*Od.* viii. 249). The use of the warm bath was preceded by bathing in cold water (*Il.* x. 576). The later custom of plunging into cold water after the warm bath mentioned by Aristides (vol. i. Orat. 2, *Sacr. Serm.* p. 515), who wrote in the second century of our era, was no doubt borrowed from the Romans.

After bathing both sexes anointed themselves with oil, in order that the skin might not be left harsh and rough, especially after warm water. The use of precious unguents (*μύρα*) was unknown at that early period. In the heroic ages, as well as in later times, refreshments were usually taken after the bath (*Od.* vi. 97).

At Athens the frequent use of the public baths was regarded by strict moralists in the time of Socrates and Demosthenes as a mark of luxury and effeminacy; thus it is a sign of demoralization on the part of a ship's crew. Accordingly Phocion was said to have never bathed in a public bath, and Socrates to have made use of it very seldom. It was, however, only the warm baths to which objection was made, and which in ancient times were not allowed to be built within the city (Athen. i. 18 b); for the Greeks did not at all approve of people being dirty; only cleanli-

ness, they thought, should be attained by the use of cold water.

The baths (*βαλανεῖα*) were either public (*δημόσια, δημοσιεύοντα*) or private (*ἴδια, ἰδιωτικά*). The former were the property of the state, but the latter were built by private individuals. Such private baths are mentioned by Plutarch (*Demetr.* 24). Baths of this kind were probably mostly intended for the exclusive use of the persons to whom they belonged (Xen. *Rep. Ath.* ii. 10.) There appears to have been a small, almost nominal, charge for the use of the public baths. Thus, in the inscription of Andania (i. 107), the price is fixed at two chalki $= \frac{1}{4}$ obol.

We know very little of the baths of the Athenians during the republican period; for the account of Lucian in his *Hippias* relates to baths constructed after the Roman model. On ancient vases on which persons are represented bathing we seldom find anything corresponding to a modern bath in which persons can stand or sit; but there is always a round or oval basin (*λουτήρ* or *λουτήριον*), resting on a stand (*ὑπόστατον*), by the side of which those who are bathing are represented standing undressed and washing themselves, as is seen in the following illustration taken from Sir W. Hamilton's vases.

Public Basin for Men. (From a Greek Vase.)

But besides the *λουτῆρες* and *λουτήρια* there were also vessels for bathing, large enough for persons to sit in, which, as stated above, are called *ἀσάμινθοι* by Homer and *πύελοι* or *μάκτραι* by the later Greeks. The *λουτήρ* thus, as we shall see, corresponded to the Roman *labrum;* the *πύελος* to the *solium* or *alveus.*

In the baths there was also a kind of sudorific or vapour bath called *πυρία* or *πυριατήριον*, which is mentioned as early as the time of Herodotus (iv. 75). Among the chambers of the Greek bathing establishment was the *ἀλειπτήριον*, Lat. *unctorium.* Lucian (*Hipp.* p. 73) speaks of the *ἀποδυτήριον* with its *ἱματιοφυλακοῦντες* (*capsarii*); but as they seem to be unknown to Aristotle, they were probably introduced from Rome. Hence Aristotle tells us that those who stole clothes from the baths were punishable with death. As the baths most frequently adjoined the gymnasia and palaestra, one of the rooms of these latter buildings served the purpose of undressing-room (Xen. *Rep. Ath.* ii. 10). About these rooms the *τριβαλλοί* used to loaf, looking out for an invitation. We hear of wrestling and playing the cottabus, besides a great deal of conversation going on in the baths. To sing there was considered the part of a boor (Theophr. *Char.* 4).

Either the bath or simple anointing of the body generally formed part of the business of dressing for dinner. It was generally taken shortly before the *δεῖπνον*, or principal meal of the day. Epictetus (*Diss.* i. 1, 29) mentions noon as the hour, while voluptuaries bathed repeatedly. It was the practice to take first a warm or vapour, and afterwards a cold bath, though in the time of Homer the cold bath appears to have been taken first and the warm afterwards. The cold water was usually poured on the back or shoulders of the bathers by the *βαλανεύς* or his assistants, who are called *παραχύται.* The vessel from which the water was poured was called *ὑδρία*; there is mention also of the *ἀρύταινα*, which must have been much smaller. Bathing establishments for women existed among the Greeks, whether belonging to the state or maintained by private enterprise. We learn from Varro (*L. L.* ix. 68) that the earliest Greek *balneum* in Rome contained a department for women.

Roulez (*Choix de Vases peints du Musée de Leyde*, pl. xix. 1) gives us a vase painting of a bath in a palaestra, where two shower baths descend on men from spouts shaped like panthers' heads; and Panofka (*Bilder antiken Lebens*, pl. xviii. 9) shows us a bath for women similarly arranged, while an unpublished vase painting in the Louvre represents a *κολυμβήθρα*, or swimming-bath for women.

Shower Baths for Women. (From a Greek Vase.)

The persons who bathed probably brought with them strigils, oil, and towels, or had them carried by a slave. The strigil, which was called by the Greeks *στλεγγίς* or *ξύστρα*, was usually made of iron, but sometimes also of other materials. Pollux says (x. 181), "The cloth which is worn by women round their loins when taking the bath, or by the men who bathe them, is called *ᾥα λουτρίς.*" The Greeks also used different materials for cleansing or washing themselves in the bath, to which the general name of *ῥύμμα* was given, and which were supplied by the *βαλανεύς.* This *ῥύμμα* usually consisted of a lye made of lime or wood-ashes (*κονία*), of nitrum, and of fuller's earth (*γῆ κιμωλία*, Aristoph. *Ran.* 710 and Schol.; Plat. *Rep.* iv. 430 A).

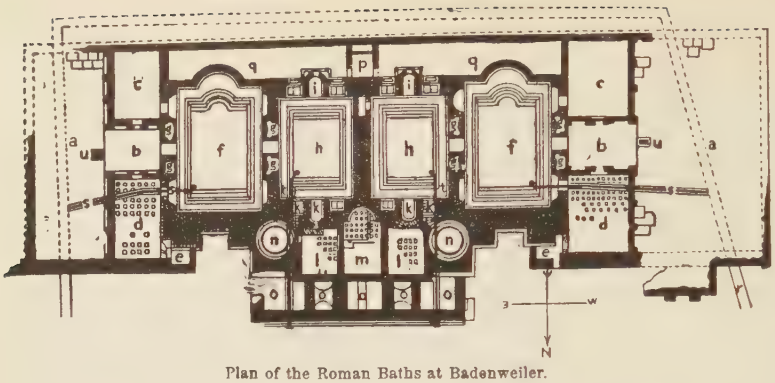
Among the Greeks a person was always bathed at birth, marriage, and after death; whence it is said of the Dardanians, an Illyrian people, that they bathe only thrice in their lives—at birth, marriage, and after death. The water in which the bride was bathed at Athens was taken from the fountain of Callirrhoë, which was called from the time of Pisistratus *Ἐννεάκρουνος.*

The natural warm springs (*θερμὰ* or *Ἡράκλεια λουτρά*) were not only esteemed as sacred to Heracles, but also considered highly medicinal. The hot springs of Aedepsus in Euboea were famed for their healing properties, as also was a cold spring

which flowed for a time (Athen. iii. 73). In later times it became a great resort for pleasure as well as health, especially in the spring.

ROMAN BATHS.—The words *balneae*, *balineae*, *balneum*, *balineum*, *thermae*, are all commonly translated by our general term "bath" or "baths"; but in the writings of the earlier and better authors they are used with discrimination. *Balneum* or *balineum*, which is derived from the Greek βαλανεῖον, signifies, in its primary sense, a bath or bathing-vessel, such as most persons of any consequence among the Romans possessed in their own houses (Cic. *ad Att.* ii. 3), and hence the chamber which contained the bath, which is also the proper translation of the word *balnearium*. The diminutive *balneolum* is adopted by Seneca (*Ep.* 86, § 3) to designate the bath-room of Scipio, in the villa at Liternum, and is expressly used to characterize the modesty of republican manners as compared with the luxury of his own times. But when the baths of private individuals became more sumptuous, and comprised many rooms instead of the one small chamber described by Seneca, the plural *balnea* or *balinea* was adopted, which still, in correct language, had reference only to the baths of private persons. *Balneae* and *balineae*, which according to Varro (*L. L.* viii. 25, ix. 41) have no singular number,* were the public baths. But this accuracy of diction is neglected by many of the subsequent writers; and even in the time of the Republic, *balneum* was used for a public bath, but particularly by the poets, among whom *balnea* is not uncommonly used in the plural number to signify the public baths, since the word *balneae* could not be introduced in an hexameter verse. *Thermae* (θέρμαι, "hot springs") meant properly warm springs, or baths of warm water; but came to be applied to those magnificent edifices which grew up under the Empire, in place of the simple *balneae* of the Republic, and which comprised within their range of buildings all the appurtenances belonging to the Greek gymnasia, as well as a regular establishment appropriated for bathing (Juv. vii. 233). Writers, however, use these terms without distinction.

The Romans, in the earlier periods of their history, used the bath but seldom, and only for health and cleanliness, not as a luxury. Thus we learn from Seneca (*Ep.* 86, § 12) that the ancient Romans washed their legs and arms daily and bathed their whole body once a week. The room set apart for this purpose was called *lavatrina* or *latrina* (q. v.), and was placed near the kitchen, so that warm water might be easily procured.



It is not recorded at what precise period the use of the warm bath was first introduced among the Romans; but we learn from Seneca that Scipio had a warm bath in his villa at Liternum; which, however, was of the simplest kind, consisting of a single chamber, just sufficient for the necessary purposes, and without any pretensions to luxury. It was "small and dark," he says, "after the manner of the ancients." Seneca also describes the public baths of former times as *obscura et gregali tectorio inducta;* and while their arrangements were of the simplest kind, aediles of noble birth did not disdain to look after them personally. These were baths of warm *water;* but the practice of heating an apartment with warm air by a hollow underneath the floor, so as to produce a hot-air bath, is stated by Valerius Maximus (ix. 1, § 1) and by Pliny (*H. N.* ix. § 168) to have been invented by Sergius Orata, who lived in the age of L. Crassus, the orator, before the Marsic War.

In the time of Cicero, though young people used in summer to bathe in the Tiber, yet the use of baths, both public and private, of warm water and hot air, had become general; and we learn from one of his orations that there were already baths (*balneas Senias*) at Rome which were open to the public upon payment of a small sum (*pro Cael.* 25, 61). Besides public baths, others were built by private speculators, who either worked them themselves or leased them out. Sometimes even the State leased out the public baths under certain conditions, touching certain people to be admitted free, hours of opening and closing, height of water, etc. The lessee or worker of a bath (*balneator*) appears to have stood very low in social estimation (Juv. vii. 4).

Jordan has collected a vast number of the names of the baths from the Regionarii, and they appear to be nearly all called after the possessor, though we find one of Mercurius and one of Diana. There were baths, of course, in the country, and they professed to be quite up to city style—e.g. an inscription has *In praediis Aureliae Faustinianae balineus. Lavatur more urbico, et omnis humanitas praestatur* (Marini, *Atti de' Fratelli Arvali*, p. 532, where a similar profession of a *balneator* is to be found, *omnia commoda praestantur*). A sign-board, in Orelli 4326, of the Thermae of M. Crassus, offers salt and fresh water baths. These baths, which were worked by private individuals, appear to have been called *balnea meritoria*. Agrippa added 170 baths to those which existed already in Rome. In the time of Constantine there were no less than 856 in the city, and the Regionarii actually reckon 952 (Becker-Göll, *Gallus*, iii. 140).

In the earlier ages of Roman history a much greater delicacy was observed with respect to bathing, even among the men, than was usual among the Greeks; for, according to Valerius Maximus (ii. 1, § 7), it was deemed indecent for a father to bathe in company with his own son after he had attained the age of puberty, or a son-in-law with his father-in-law. But virtue passed away as wealth increased; and when the thermae came into use not only did the men bathe together in numbers, but even men and women stripped and bathed promiscuously in the same bath, as in certain Austrian cities to-day. It is true, however, that the public establishments generally contained separate baths for both sexes adjoining each other, as is seen to have been the case at the baths of Pompeii. Aulus Gellius (x. 3) relates a story of a consul's wife who took a whim to bathe at Teanum (Teano), a small provincial town of Campania, in the men's baths—probably because, in a small town, the female department, like that at Pompeii, was more confined and less convenient than that assigned to the men; and an order was consequently given to the quaestor, M. Marius, to turn the men out. In the Lex Metalli Vipascensis the women have the use of the bath from daybreak till the seventh hour, the men from the eighth hour till the second hour of the night. If at Rome there were separate establishments for the women, men at any rate appear to have been able to get into

* *Balnea* is, however, used in the singular to designate a private bath in an inscription quoted by Reinesius (*Inscr.* xi. 115).

Plan of the Roman Baths at Badenweiler.

Women's Bath.

EXPLANATION.

a. Fore court, *atrium*.
b. Central hall, *vestibulum*.
c. Undressing-room, *apodyterium*.
d. Anointing-room, *unctorium*.
e. Stoke-hole, *praefurnium*.
f. Cold bath, *frigidarium*.
g. Douche baths.
h. Warm bath, *tepidarium*.
i. Private baths, *solia*.
k. Passages for communication.
l. Hot baths, *caldaria*.
m. Hot-air bath, *laconicum*.
n. Reservoirs for cold and perhaps warm ablution.

Men's Bath.

o. Coal or wood store-rooms.
p. Closets?
q. Attendants' rooms.
r. Underground exit drains.
s. Leaden exit pipe.
t. Exit pipe.
u. Altar of Diana Abnoba.

them, and they were a possible place for assignations (Ov. *A. A.* iii. 639);—a passage which further shows that there were small private chambers with baths in them, such as we find in the Stabian baths at Pompeii. But whether the men and women were allowed to use each other's chambers indiscriminately, or some of the public establishments had only one common set of baths for both, the custom prevailed under the Empire of men and women bathing indiscriminately together (Plin. *H. N.* xxxiii. § 153). This custom was forbidden by Hadrian (Spart. *Hadr.* 18) and by M. Aurelius Antoninus (Capitolin. *Anton.* 23); and Alexander Severus prohibited any baths common to both sexes (*balnea mixta*), from being opened in Rome (Lamprid. *Alex. Sev.* 24). Although the practice was not adopted by women of respectability, yet this legislation was not permanently effective, and even the censures of the Fathers of the Christian Church and the canons of councils did not avail to suppress it. Justinian recognizes it as a ground of divorce, *si forte uxor ita luxuriosa est, ut commune lavacrum cum viris libidinis causa habere audeat.*

When the public baths (*balneae*) were first instituted, they were only for the lower orders, who alone bathed in public; the people of wealth, as well as those who formed the equestrian and senatorian orders, used private baths in their own houses. But as early even as the time of Iulius Caesar we find no less a personage than the mother of Augustus making use of the public establishments (Suet. *Aug.* 94); and in process of time, even the emperors themselves bathed in public with the meanest of the people.

The baths were opened at sunrise and closed at sunset. The many lamps found in the baths at Pompeii were used for lighting the rooms and the dark passages, according to Nissen, *Pomp. Stud.* 135, and do not necessarily imply night-bathing. But in the time of Alexander Severus it would appear that the baths were kept open after nightfall. The allusion in Juvenal (vi. 419) probably refers to private baths.

The price of a bath (*balneaticum*) was a quadrans, the smallest piece of coined money, from the age of Cicero downwards, which was paid to the keeper of the bath (*balneator*). Children below a certain age were admitted free (Juv. ii. 152).

The passage of Juvenal (vi. 447) which has been quoted to show that women paid no fee should be taken to imply that they paid a higher price than men. So by the Lex Metalli Vipascensis, which has been already referred to, the men pay half an *as*, the women an *as*. Faustus Sulla gave the people the use of the baths and oil on the day of his father's funeral, and Augustus on his return from Germany gave them baths and barbers for a day. Agrippa opened the baths gratuitously to both men and women for a year, and afterwards gave the people his Thermae. Such munificence was repeated by emperors and also by private individuals.

The baths were closed when any serious public misfortune happened, just as we should close our theatres; and Suetonius says that the emperor Caligula made it a capital offence to indulge in the luxury of bathing upon any religious holiday. They were originally placed under the superintendence of the aediles, whose business it was to keep them in repair, and to see that they were kept clean and of a proper temperature. In the provinces the same duty seems to have devolved upon the quaestor, as may be inferred from Aulus Gellius (x. 3).

The time usually assigned by the Romans for taking the bath was the eighth hour, or shortly afterwards (Mart. x. 48; xi. 52). Before that time none but invalids were allowed to bathe in public. Vitruvius reckons the hours best adapted for bathing to be from mid-day until about sunset. Spurinna took his bath at the ninth hour in summer and at the eighth in winter; and Martial speaks of taking a bath, when business had been pressing, at the tenth hour, and even later (iii. 36; x. 70).

When the water was ready and the baths prepared, notice was given by the sound of a bell—*aes thermarum* (Mart. xiv. 163). One of these bells, with the inscription *Firmi Balneatoris*, was found in the Thermae Diocletianae in the year 1548, and came into the possession of the learned Fulvius Ursinus (*Append. ad* Ciaccon. *De Triclin.*). A sundial was found in the new baths at Pompeii, and Lucian (*Hipp.* p. 8) places in the baths a sundial and a water-clock, with apparently some mechanism for striking the hours attached.

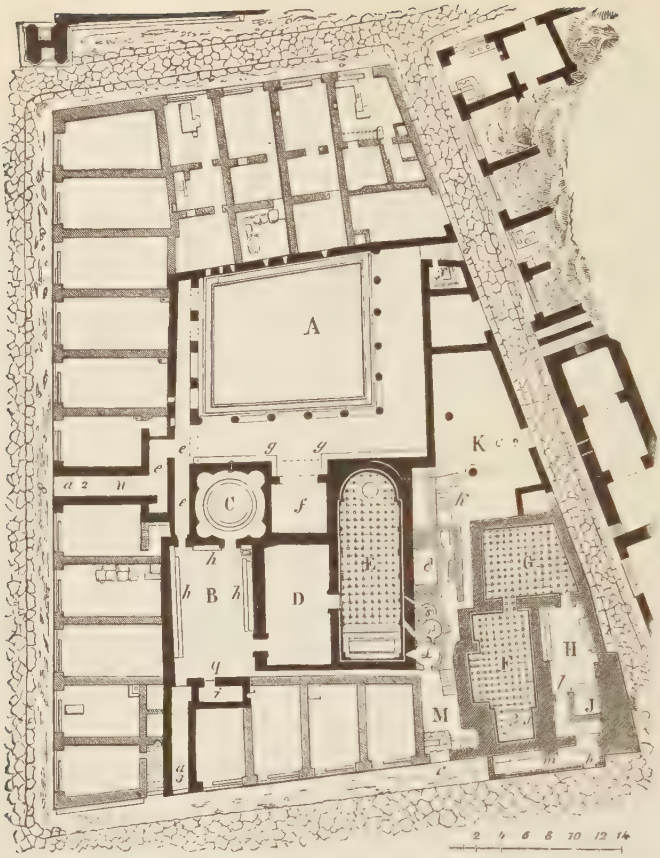
While the bath was used for health merely or cleanliness, a single one was considered sufficient at a time, and that only when requisite. But the luxuries of the Empire knew no such bounds, and the daily bath was sometimes repeated as many as seven and eight times in succession—the number which the emperor Commodus indulged himself

with. Gordian bathed four or five times a day in summer and twice in winter; the emperor Gallienus six or seven times in summer and twice or thrice in winter. Commodus also took his meals in the bath—a custom which was not confined to a dissolute emperor alone.

It was the usual and constant habit of the Romans to take the bath after exercise, and previously to their principal meal (*cena*); but the debauchees of the Empire bathed after eating as well as before, in order to promote digestion, and so to acquire a new appetite for fresh delicacies. Nero is related to have indulged in this practice (Suet. *Nero*, p. 27; cf. Juv. i. 142). This practice of carrying off the effects of gluttony by artificial means of inducing perspiration, which had taken the place of the hard labour and exercise of sterner times, was severely condemned, and sometimes proved fatal. See CENA.

The Romans did not content themselves with a single bath of hot or cold water; but they went through a course of baths in succession, in which the agency of air as well as water was applied. It is difficult to ascertain the precise order in which the course was usually taken, if indeed there was any general practice beyond the whim of the individual. Under medical treatment the succession would, of course, be regulated by the nature of the disease for which a cure was sought, and would vary also according to the different practice of different physicians. It is certain, however, that it was a general custom to close the pores and brace the body after the excessive perspiration of the vapour bath either by anointing, or by pouring cold water over the head, or by plunging at once into the *piscina* or into a river (Auson. *Mosell.* 341). Musa, the physician of Augustus, is said to have introduced this practice (Plin. *H. N.* xxv. § 77; cf. Hor. *Epist.* i. 15, 4), which became quite the fashion, in consequence of the benefit which the emperor derived from it, though Dio Cass. (liii. 30) accuses Musa of having artfully caused the death of Marcellus by an improper application of the same treatment. In other cases it was considered conducive to health to pour warm water over the head before the vapour bath, and cold water immediately after it; and at other times warm, tepid, and cold water baths were taken in succession.

The two physicians Galen and Celsus differ in some respects as to the order in which the baths should be taken—the former recommending first the hot air of the *laconicum* (*ἀέρι θερμῷ*), next the bath of warm water (*ὕδωρ θερμόν*), afterwards the cold, and finally to be well rubbed (Galen. *de Methodo Medendi*, x. 10, pp. 708, 709, ed. Kühn); whilst the latter recommends his patients first to sweat for a short time in the tepid chamber (*tepidarium*), without undressing, then to proceed into the thermal chamber (*calidarium*), and after having gone through a regular course of perspiration there, not to descend into the warm bath (*solium*), but to pour a quantity of warm water over the head, then tepid, and finally cold, afterwards to be scraped with the strigil (*perfricari*), and finally rubbed dry and anointed (Cels. *de Med.* i. 4). Such, in all probability, was the usual habit of the Romans when the bath was resorted to as a daily source of pleasure, and not for any particular medical treatment; the more so as it resembles in many respects the system of bathing still practised among the Orientals, who, as Gell remarks, "succeeded by conquest to the luxuries of the enervated Greeks and Romans."



The principal ancient authorities on baths are: Vitruvius (v. 10); Lucian (*Ἱππίας ἢ βαλανεῖον*, a detailed description of a set of baths erected by an architect named Hippias); Pliny the Younger, in the two letters describing his villas; Statius, *Silv.* i. 5; Martial (vi. 42, and other epigrams); Seneca (*Epist.* 51, 56, 86), and Sidonius Apollinaris (*Epist.* ii. 2).

But it would be almost hopeless to attempt to arrange the information obtained from these writers were it not for the help afforded us by the extensive ruins of ancient baths—such as the Thermae of Titus, Caracalla, and Diocletian; the Thermae of Pompeii excavated in 1854–58; and numerous public and private baths throughout the whole extent of the Roman Empire, the most important of which are referred to in the list of authorities at the end of this article; but above all the public baths (*balneae*) of Pompeii, which were excavated in 1824–25. Before describing the details of the Roman public baths, attention may be called to the simpler baths used in private houses, although to a modern these seem extraordinarily elaborate in their arrangements.

The cut given on the preceding page is a ground-plan of the Roman baths at Badenweiler; and though less elaborate than the baths attached to some Pompeian private houses, it is interesting from its compactness and the arrangement of the women's and men's baths. A full account of them is given by Dr. Heinrich Leibnitz, *Die römischen Bäder bei Badenweiler* (Leipzig, 1860).

The so-called Old Baths, adjoining the Forum at Pompeii, afford an instance of a complete set of public baths so well preserved that in some of the chambers even the ceilings are intact. A ground-plan of these is given on the next page.

The whole building, which comprises a double set of baths, has six different entrances from the street, one of which, *b*, gives admission to the smaller set only, which are supposed to have been appropriated to the women, and five others to the male department, of which two, *c* and *c* 2, communicate directly with the furnaces, and the other three, *a* 3, *a* 2, *a*, with the bathing apartments, of which *a*, the nearest to the Forum, was the principal one; the other two, *a* 3 and *a* 2, being on different sides of the building, served for the convenience of those who lived on the north and east sides of the city. Passing through the principal entrance, *a*, which is removed from the street by a narrow footway surrounding the *insula* (the outer curb of which is marked upon the plan by the thin line drawn round it), and after descending three steps, the bather finds upon his left hand a small chamber, *x*, which contained a water-closet (*latrina*), and proceeds into a covered portico, *g g*, which ran round three sides of an open court—*atrium* (A)—which was 68 ft. long and 53 ft. broad; and these together formed the vestibule of the baths—*vestibulum balnearum* (Cic. *Pro Cael.* 26), in which the servants belonging to the establishment, as well as the attendants of the bathers, waited. There are seats for their accommodation placed underneath the portico (*g, g*). This *atrium* was the exercise ground for the young men, or perhaps served as a promenade for visitors to the baths. Within this court the keeper of the baths (*balneator*), who exacted

Plan of the Old Baths at Pompeii. (Overbeck.)

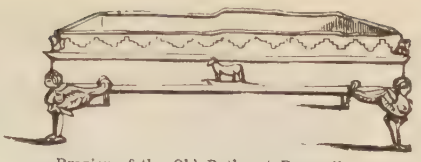
the *quadrans* paid by each visitor, was also stationed; and the box for holding the money was found in it. The room *f*, which runs back from the portico, might have been appropriated to him; but most probably it was an *oecus* or *exedra*, for the convenience of the better classes while awaiting the return of their acquaintances from the interior.

In this court, likewise, as being the most public place, advertisements for the theatre, or other announcements of general interest, were posted up, one of which, announcing a gladiatorial show, still remains. At the two sides of the entrance to it were stone seats (*scholae*). *n* is the corridor which conducts from the entrance *a* 2 into the same vestibule; *o*, a small cell of similar use to the corresponding one in the opposite corridor, *d*; *e*, a passage of communication which leads into the chamber B, the *apodyterium*, a room for undressing; and which is also accessible from the street by the door *a* 3, through the corridor *p*, in which a small niche is observable, which probably served for the station of another *balneator*, who collected the money from those entering from the north street. In this room, which was 38 ft. long and 22 ft. broad, all the visitors must have met before entering the baths. The *apodyterium* probably belonged to the *frigidarium*, which in Pliny's villa it adjoined (Plin. *Epist.* v. 6, § 25); though in the great thermae at Rome the *frigidarium* and the *caldarium* had doubtless each a separate *apodyterium*. In the *apodyterium* the bathers removed their clothing, which was taken in charge by slaves known as *capsarii*, notorious in ancient times for their dishonesty (*Dig.* xlvii. 17).

The *apodyterium* was a spacious chamber, with stone seats along two sides of the wall (*h*, *h*). Holes are still visible on the walls, and probably mark the places where the pegs for the bathers' clothes were set. The chamber was lighted by a glass window, and had six doors. One of these doors led to the entrance *a* 2, one to the entrance *a* 3, one

Restoration of Apodyterium of Old Baths. (Overbeck.)

to the small room *i*, one to the furnaces, one to the *tepidarium* D, while the sixth opened upon the *frigidarium* C, with its cold plunge-bath (λουτρόν, *natatio, natatorium, piscina, baptisterium, puteus*).



The bath in this chamber is of white marble, and is 13 ft. 8 in. in diameter, and about 3 ft. 9 in. deep. It is approached by two marble steps, as shown in the following illustration.

From the *frigidarium* the bather who wished to go through the warm bath and sweating process entered the *tepidarium* D. This *tepidarium*, 33 ft. long by 18 ft. broad, did not contain water either at Pompeii or at the baths of Hippias, but was merely heated with warm air of an agreeable temperature,

Frigidarium of the Old Baths at Pompeii (Overbeck.)

in order to prepare the body for the great heat of the vapour and warm baths, and, upon returning, to obviate the danger of a too-sudden transition to the open air. In the baths at Pompeii this chamber served likewise as an *apodyterium* for those who took the warm bath; for which purpose the fittings-up are evidently adapted, the walls being divided into a number of separate compartments or recesses for receiving the garments when taken off by a series of figures of the kind called Atlantes (q. v.) or Telamones, which project from the walls and support a rich cornice above them. Three bronze benches were also found in the room, which was heated as well by its contiguity to the hypocaust of the adjoining chamber, as by a brazier of bronze (*foculus*), in which the charcoal ashes were still remaining when the excavation was made.

Brazier of the Old Baths at Pompeii.

Sitting and perspiring beside such a brazier was called *ad flammam sudare* (Suet. *Aug.* 82). A representation of it is given in the above illustration. Its whole length was 7 ft., and its breadth 2 ft. 6 in.

The *tepidarium* is generally the most highly ornamented room in baths. It was merely a room to sit in and be anointed in. In the Old Baths at Pompeii the floor is mosaic, the arched ceiling adorned with stucco and painting on a coloured ground, the walls red.

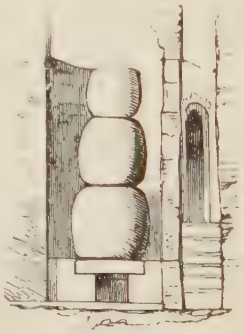
Anointing was performed by slaves called *unctores* and *aliptae* (q. v.). It sometimes took place before going to the hot bath, and sometimes after the cold bath, before putting on the clothes, in order to check the perspiration (Galen. x. 49). In some baths is a special room (*destrictarium* or *unctorium*) for this purpose. For an account of the various kinds of oils and scents used by the wealthy, see the fifteenth book of Athenaeus, the thirteenth book of the *Historia Naturalis* of Pliny, and cf. Suet. *Cal.* 37.

From the *tepidarium* a door opened into E, the *caldarium*, a chamber 53 ft. long and 17½ ft. wide. Its mosaic floor was directly above the furnace or hypocaust. Its walls also were hollow, forming a great flue filled with heated air. At one end was a round basin (*labrum*), and at the other a quadrangular bathing-place (*πύελος, alveus, solium, calida piscina*), approached from the platform (*schola*) by steps. The *alveus* was 16½ ft. long, 5½ ft. wide, and 2 ft. deep. The *labrum* was 7½ ft. in diameter and 8 in. deep, and was raised 3¼ ft. from the ground. It held cold water, for pouring upon the bather's head before he left the room. These basins are of marble in the Old Baths, but we hear of *alvei* of solid silver (Plin. *H. N.* xxxiii. § 152). Because of the great heat of the room, the *caldarium* was but slightly ornamented.

The Old Baths have no *laconicum*, which was a chamber still hotter than the *caldarium*, and used simply as a sweating-room, having no bath. It was said to have been introduced at Rome by Agrippa (Dio Cass. liii. 27), and was also called *sudatorium* and *assa*.

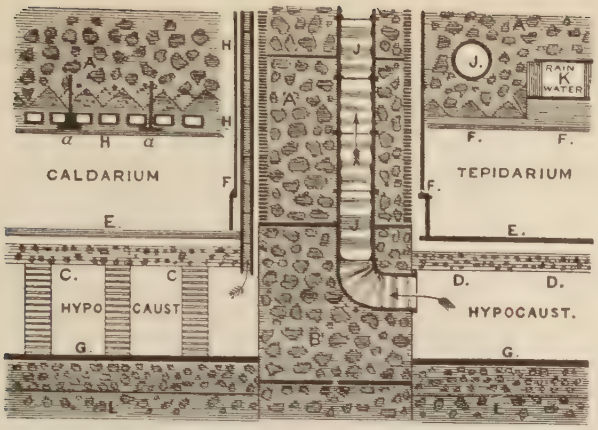
The *suspensurae*, or hanging-floors above the *hypocaustum*, are described in the following passage from Prof. Middleton's *Ancient Rome in 1885* (p. 334), from which the illustration on page 193 is taken:

"Vitruvius's description of the hypocausts, or hollow floors used for heating the hot rooms (*caldaria*), agrees closely with many existing examples. The lower floor was to be laid with 2 ft. tiles (*tegulae bipedales*) over a bed of concrete; on this, all over the area of the room, rows of short pillars (*pilae*) were built to support the upper or 'hanging floor' (*suspensura*). These *pilae* were to be 2 ft. high, made of *tegulae bessales*, or tiles 8 in. square, set, not in mortar, but with clay in the



Tepidarium. (Overbeck.)

joints. In existing examples these clay joints have been baked into brick by the action of the fire" (rather "hot air," for there was not a fire in the *hypocaustum*, but in the *hypocausis*). The passages from the furnace to the hypocaust and the flues in the walls appear to have been called *cuniculi* (Plin. *H. N.* ix. 134).



The *apodyterium* has a passage, *q*, communicating with the mouth of the furnace *r*, called *praefurnium* or *propigneum*; and, passing down that passage, we reach the chamber M, into which the *praefurnium* projects, and which is entered from the street at *e*. It was assigned to the *fornacatores*, or persons in charge of the fires. Of its two staircases, one leads to the roof of the baths, and one to the boilers containing the water. There were three boilers, one of which (*caldarium vas*) held the hot water: a second, the tepid (*tepidarium*); and the third, the cold (*frigidarium*). The warm water was turned into the warm bath by a pipe through the wall, marked on the plan. Underneath the hot chamber was set the circular furnace *d*, of more than 7 ft. in diameter, which heated the water and poured hot air into the hollow cells of the *hypocaustum*. It passed from the furnace under the first and last of the caldrons by two flues, which are marked upon the plan. The boiler containing hot water was placed immediately over the furnace; and, as the water was drawn out from thence, it was supplied from the next, the *tepidarium*, which was raised a little higher and stood a little way off from the furnace. It was already considerably heated from its contiguity to the furnace and the hypocaust below it, so that it supplied the deficiency of the former without materially diminishing its temperature; and the vacuum in this last was again filled up from the farthest removed, which contained the cold water received directly from the square reservoir seen behind them—a principle which has at length been introduced into the modern bathing establish-

Caldarium of the Old Baths. (Overbeck.)

Boiler, *miliarium*. (From Pompeii.)

Method of Heating the Baths in the Thermae of Caracalla. (Middleton.)

AA. Concrete wall faced with brick.
B. Lower part of wall with no brick facing.
CC. Suspensura, or upper floor of hypocaust, supported by pillars.
DD. Another floor with support only at the edges.
EE. Marble flooring.
FF. Marble plinth and wall lining.
GG. Under-floor of hypocaust, paved with large tiles
HH. Horizontal and vertical sections of the flue tiles, which line the walls of the Caldarium.
aa. Iron holdfasts.
JJ. Socket-jointed flue-pipe of tepidarium.
K. Rain-water pipe.
LL. Vaults of crypt, made of pumice stone concrete.

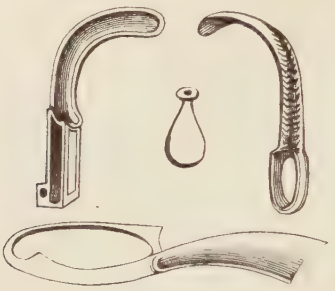
ments. The boilers themselves no longer remain, but the impressions which they have left in the mortar in which they were imbedded are clearly visible, and enable us to ascertain their respective positions and dimensions, the first of which, the *caldarium*, is represented on preceding page. Such coppers or boilers appear to have been called *miliaria*, from similarity of shape to a mile-stone (Pallad. i. 40; v. 8).

Behind the coppers there is another corridor leading into the court or *atrium* (K) appropriated to the servants of the bath, and which has also the convenience of an immediate communication with the street by the door at *c* 2.

We now proceed to the adjoining set of baths, which were assigned to the women. The entrance is by the door *b*, which conducts into a small vestibule, *m*, and thence into the *apodyterium* H, which, like the one in the men's bath, has a seat (*pulvinus, gradus*) on either side built up against the wall. This opens upon a cold bath, J, answering to the *natatio* of the other set, but of much smaller dimensions. There are four steps on the inside to descend into it. Opposite to the door of entrance into the *apodyterium* is another doorway which leads to the *tepidarium* H, which also communicates with the thermal chamber F, on one side of which is a warm bath in a square recess, and at the farther extremity the *labrum*. The floor of this chamber is suspended, and its walls perforated for flues, like the corresponding one in the men's baths. It is to be especially noticed that the *tepidarium* in the women's baths had no brazier, but had a hanging or suspended floor.

After having gone through the regular course of perspiration, the Romans made use of instruments called *strigiles* to scrape off the perspiration, much in the same way as we are accustomed to scrape the sweat off a horse with a piece of iron hoop, after he has run a heat, or comes in from violent exercise. The strigil was also used by the Greeks, who called it στλεγγίς or ξύστρα. These instruments, many of which have been discovered among the ruins of the various baths of antiquity, were made of bone, bronze, iron, and silver; all corresponding in form with the epithet of Martial, "*curvo distringere ferro*" (xiv. 51). The poorer classes were obliged to scrape themselves, but the more wealthy took their slaves to the baths for the purpose—a fact which is elucidated by a curious story related by Spartianus (*Hadr.* 17).

The strigil was by no means a blunt instrument, consequently its edge was softened by the application of oil that was dropped upon it from a small vessel called *guttus*, which had a narrow neck, so as to discharge its contents drop by drop, from whence the name is taken. A representation of a *guttus* is given on the following page. Augustus is related to have suffered from an over-violent use of the strigil (Suet. *Aug.* 80). Invalids and persons of a delicate habit made use of sponges, which Pliny says answered for towels as well as strigils, They were finally dried with towels (*lintea*) and anointed (Juv. iii. 262; Plin. *H. N.* xxxi. § 125 foll.).

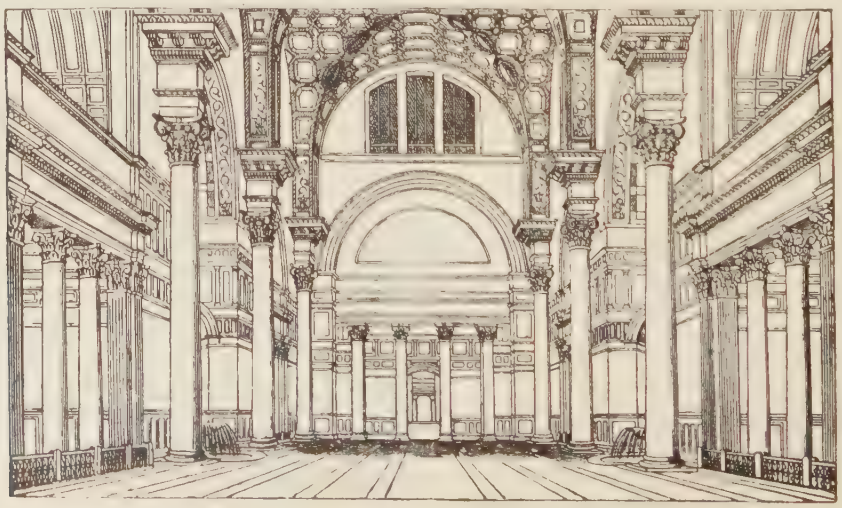


The common people were supplied with these necessaries in the baths—*omnia commoda praestan-*

Women's Bath. (Pompeii.)

tur — as we saw above; but the more wealthy carried their own with them (Pers. v. 126).

After the operation of scraping and rubbing dry, they retired into, or remained in, the *tepidarium*



Strigils with Guttus. (Found in Roman Baths.)

until they thought it prudent to encounter the open air. But it does not appear to have been customary to bathe in the water, when there was any, either of the *tepidarium* or the *frigidarium;* the temperature only of the atmosphere in these two chambers being of consequence to break the sudden change from the extreme of heat to cold.

Notwithstanding the ample account which has been given of the plans and usages respecting baths in general, something yet remains to be said about that particular class known as *thermae*, of which establishments the baths, in fact, constituted the smallest part. The thermae, properly speaking, were a Roman adaptation of the Greek gymnasium, or *palaestra* (see PALAESTRA), as described by Vitruvius; both of which contained a system of baths in conjunction with conveniences for athletic games and youthful sports, *exedrae* in which the rhetoricians declaimed, poets recited, and philosophers lectured, as well as porticoes and vestibules for the idle, and libraries for the learned. They were decorated with the finest objects of art, both in painting and sculpture, covered with precious marbles, and adorned with fountains and shaded walks and plantations, like the groves of the Academy, and served at Rome all the purposes of a modern club. It may be said that they began and ended with the Empire, for it was not until the time of Augustus that these magnificent structures were commenced. M. Agrippa is the first who afforded these luxuries to his countrymen by bequeathing to them the thermae and gardens which he had erected in the Campus Martius. The Pantheon (q.v.), now existing at Rome, served originally as a vestibule to these baths; and, as it was considered too magnificent for the purpose, it is supposed that Agrippa added the portico and consecrated it as a temple, for which use it still serves. It appears from a passage in Sidonius Apollinaris that the whole of these buildings, together with the adjacent Thermae Neronianae, remained entire in the year A.D. 466. Little is now left beyond a few fragments of ruins and the Pantheon. The example set by Agrippa was followed by Nero, and afterwards by Titus, the ruins of whose thermae are still visible, covering a vast extent, partly underground and partly above the Esquiline Hill. Thermae were also erected by Trajan, Caracalla, and Diocletian, of the last two of which ample remains still exist; and even as late as Constantine, besides several which were constructed by private individuals, P. Victor enumerates sixteen.

Previously to the erection of these establishments for the use of the population, it was customary for those who sought the favour of the people to give them a day's bathing free of expense. Thus, according to Dio Cassius, Faustus, the son of Sulla, furnished warm baths and oil gratis to the people for one day; and Augustus, on one occasion, furnished warm baths and barbers to the people for the same period gratuitously, and at another time for a whole year to the women as well as the men. From thence it is fair to infer that the *quadrans* paid for admission into the *balneae* was not exacted at the thermae, which, as being the works of the emperors, would naturally be opened with imperial generosity to all, and without any charge, otherwise the whole city would have thronged to the establishment bequeathed to them by Agrippa; and in confirmation of this opinion it may be remarked that the old establishments, which were probably erected by private enterprise, were termed *meritoriae*. Most, if not all, of the other regulations previously de-

Chief Hall of the Thermae of Caracalla. (Restoration by Reber.)

tailed as relating to the economy of the baths apply equally to the *thermae;* but it is to these establishments especially that the dissolute conduct of the emperors, and other luxurious indulgences of the people in general, detailed in the compositions of the satirists and later writers, must be considered to refer.

The student is cautioned against an illustration found in all the older dictionaries. It is styled a "Representation of a Roman Bath," and is said to be from the Thermae of Titus at Rome. It is, in fact, a drawing made in 1553 by Giovanni Antonio Rasconi, an Italian architect, to illustrate a treatise by Johannes Antonius Siccus Cremensis, and was drawn after the description of the baths in Vitruvius. In that treatise it is styled simply "Figura Antiqui Balinei," but it was put forth by one P. A. Maffei in 1704 as a picture of the "Baths of Titus." Thence it got into many other works, and received, unfortunately, a general acceptance, though containing several important errors. See Marquardt, *Privatleben der Römer*, pp. 270, 271.

Balteus (in the plural, *baltea*). A belt (in Gk. τελαμών), and sometimes a woman's girdle. (1) A shoulder-belt, and oftenest a sword-belt. Among the Greeks, as the sword usually hung by the left hip, its belt was supported by the right shoulder, passing obliquely over the breast, as shown in the cameo here given from the Florentine Museum.

Balteus. (Florentine Museum.)

The Romans, on the other hand, usually wore the *balteus* over the left shoulder, though not always. (See Caes. *B. G.* v. 44.) Shield-belts among the Greeks were worn in the reverse order from the sword-belt, the two crossing over the breast. Belts were generally made of leather, sometimes ornamented with silver and gold. They were often employed also to support the quiver. The belts of the Roman emperors were so magnificent that a special officer (*baltearius*) had charge of them. See CINGULUM; PHARETRA.

Belt of Homeric Warrior.

(2) A belt or collar passing round a horse's neck and breast, partly for protection, and partly for ornament. It was often decorated with embossed work, and sometimes carried bells. See PHALERA; TINTINNABULUM.

(3) The belt on the celestial globe representing the sun's course and bearing the signs of the zodiac (Manilius, i. 679).

(4) The *praecinctio* (διάζωμα) of the theatre. See THEATRUM.

(5) In architecture (Ionic), an ornamental band which encircles the *pulvinus*, or bolster of the capital (Vitruv. iii. 5, 7).

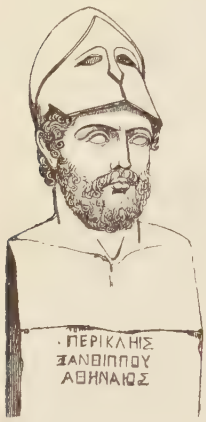
Bandusiae Fons. A fountain in Apulia some six miles from Venusia, and made famous by Horace in his ode (iii. 13) beginning

"O fons Bandusiae, splendidior vitro!"

Banishment. See DEPORTATIO; EXSILIUM; OSTRACISMUS; PHYGÉ; RELEGATIO.

Banks, Bankers, and Banking. See TRAPEZITAE.

Bantia. The modern Banzi; a town in Apulia near Venusia. Here was found the famous bronze tablet known as the TABULA BANTINA (q. v.), containing an important fragment of the Oscan language. See OSCI.



Baptae (Βαπταί). (1) A name given to the priests of Cotytto, the Greek goddess of lewdness, and derived by some from βάπτω, "to tinge" or "dye," from their painting their cheeks and blackening their eyelids. See COTYTTO. (2) A comedy of Eupolis (q. v.) in which he assailed the effeminacy and debauchery of his countrymen.

Baptisterium (βαπτιστήριον). A large basin into which bathers could plunge or even swim about (Plin. *Epist.* ii. 17, 11). It is more commonly called *natatorium* or *piscina*. See BALNEAE.

Baptisterium. (Pompeii.)

Barăthron (βάραθρον). A deep pit at Athens into which criminals and the dead bodies of executed criminals were cast. See Xen. *Hellen*, i. 7, 20; and the article CAEDES.

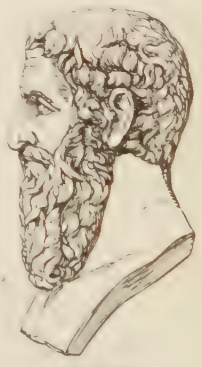
Barba. I. Greek (*πώγων, γένειον, ὑπήνη*).—Of these, *γένειον*, properly "chin," is the earliest word. *Μύσταξ* is the moustache; *πάππος* the hair on the nether lip; *χνόος* or *ἴουλος* the first down. *Ὑπήνη* is sometimes restricted to the hair about the upper and lower lips—that is, to the *μύσταξ* and the *πάππος* combined; *γένειον* to the beard proper, the hair on the chin. There is no special word for the whiskers.

Pericles, showing Greek Beard.

The Greeks regarded the beard as a badge of virility which it was a disgrace to be without; and in the Homeric time it had even a sanctity as among the Jews, so that a common form of entreaty was to touch the beard of the person addressed. It was only shaven as a sign of mourning, though in this case it was instead often left untrimmed. A smooth face was regarded as a sign of effeminacy (Athen. xiii. 565 a). The Spartans punished cowards by shaving off a portion of their beards. From the earliest times, however, the shaving of the upper lip was not uncommon.

In the time of Alexander the Great the custom of smooth shaving was introduced (Chrysippus *ap.* Athen. xiii. 565 a), and spread from the Macedonians, whose kings are represented on coins, etc.,

Coin of Alexander the Great.



with smooth faces, throughout the whole Greek world. Laws were passed against it, without effect, at Rhodes and Byzantium; and even Aristotle, we are told, conformed to the new custom (Diog. Laërt. v. 1), unlike the other philosophers, who retained the beard as a badge of their profession. A "man with a beard" (*πωγωνοτρόφος*) after the Macedonian period implies a philosopher (cf. Pers. iv. 1, *magister barbatus* of Socrates), and we have many allusions to this custom of the later philosophers in such proverbs as "the beard does not make the sage" (*πωγωνοτροφία φιλόσοφον οὐ ποιεῖ*, Plut. *De Is. et Osir.* 3).

II. Roman.—The Romans in early times wore the beard uncut, as we learn from the insult offered by the Gaul to M. Papirius (Liv. v. 41), and from Cicero (*Pro Cael.* 14); and, according to Varro and Pliny, the Roman beards were not shaven till B.C. 300, when P. Ticinius Menas brought over a barber from Sicily; and Pliny adds that the first Roman who was shaved (*rasus*) every day was Scipio Africanus. (Cf. Gell. iii. 4.) His custom, however, was soon followed, and shaving became a regular thing. The lower orders, then as now, were not always able to do the same, and hence the jeers of Martial (vii. 95; xii. 59). In the later times of the Republic there were many *iuvenes* who shaved the beard only partially, and trimmed it, so as to give it an ornamental form; to them the terms *bene barbati* and *barbatuli* are applied. We hear of young men oiling their chins to force a premature growth of beard (Petron. 75, 10).

In a general way, in Rome at this time, a long beard (*barba promissa*) was considered a mark of slovenliness and squalor. The censors L. Veturius and P. Licinius compelled M. Livius, who had been banished, on his restoration to the city to be shaved, and to lay aside his dirty appearance, and then, but not till then, to come into the Senate (Liv. xxvii. 34). The first time of shaving was regarded as the beginning of manhood, and the day on which this took place was celebrated as a festival (Juv. iii. 186). There was no particular time fixed for this to be done. Usually, however, it was when the young Roman assumed the *toga virilis*. Augustus did it in his twenty-fourth year, Caligula in his twentieth. The hair cut off on such occasions was consecrated to some god. Thus Nero put his into a golden box set with pearls, and dedicated it to Iupiter Capitolinus (Suet. *Ner.* 12).

Aureus of Augustus Caesar.

With the emperor Hadrian the beard began to revive. Plutarch says that this emperor wore it to hide some scars on his face. The practice afterwards became common, and till the time of Constantine the Great the emperors appear in busts and coins with beards; but Constantine and his successors to the end of the sixth century, with the exception of Julian, are represented as beardless. The contrast between the custom of the early emperors and those of Hadrian and his successors as to the beard is seen in the accompanying heads. The Romans, unlike the Greeks, let their beards grow in time of mourning; so did Augustus for the death of Iulius Caesar, and the time when he had it shaved off he made a season of festivity (Dio Cass. xlviii. 34). Other occasions of mourning on which the beard was allowed to grow were, appearance as a *reus*, condemnation, or some public calamity. For an account of barbers, see Tonsor.

Pertinax.

Barbări. *Βάρβαροι* was originally the Greek epithet for a people speaking any language but Greek. Its origin is onomatopoetic, since it is an attempt to imitate the confused sounds of a foreign language. It was not until after the Persian Wars that the name began to carry with it associations of hatred and contempt, and to imply vulgarity and want of cultivation. The national feeling of the Greeks had then risen to such intensity that they deemed themselves above all other peoples in gifts and culture, and looked down upon them with a sense of superiority.

The Romans were originally, like other non-Hellenic peoples, included by the Greeks under the name of *barbari*. But after the conquest of Greece, and the transference of Hellenic art and culture to Rome, the Romans took up the same position as the Greeks before them, and designated as barbarians all the nations who differed in language and manners from the Graeco-Roman world.

Barbarĭcus Sinus. A gulf on the eastern coast of Africa below the mouth of the Sinus Arabicus.

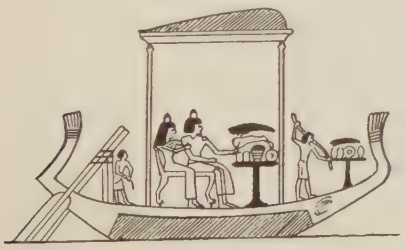
Barbers. See TONSOR.

Barbĭtos (*βάρβιτος*). See LYRA.

Barca (*Βάρκη*). Now Merjeh. The second city of Cyrenaica, in Northern Africa, 100 stadia from the sea. It appears to have been at first a settlement of a Libyan tribe, the Barraci, but about B.C. 560 was colonized by the Greek seceders from Cyrené, and became so powerful as to make the western part of Cyrenaica virtually independent of the mother city. In B.C. 510 it was taken by the Persians, who removed most of its inhabitants to Bactria; and under the Ptolemies its ruin was completed by the erection of its port into a new city, which was named Ptolemaïs.

Barca or Barcas (*Βάρκας*). A Punic word meaning "lightning" or "gleaming," like the Hebrew *barak*, with which it is related. It is found as a sort of *agnomen* applied to the names of distinguished warriors. See HAMILCAR.

Barcĭno (*Βαρκινών*). Now Barcelona. A town of the Laletani in Hispania Tarraconensis, with an excellent harbour.



Bardi. A celebrated poetico-sacerdotal order among the ancient Gauls, who roused their countrymen to martial fury by their strains, and for this purpose were accustomed to follow the camp. From the language of Tacitus (*Germ.* 3), some have supposed that a similar order existed among the ancient Germans. The passage in question, however, involves a doubtful reading. They who adopt *barditus* as the true lection make it signify "a bard's song." The reading frequently adopted, however, is *barritus*, "a war-cry." Probability, nevertheless, is somewhat in favour of the Germans having also had their bards.

Bardocucullus. See CUCULLUS.

Barea. See SORANUS.

Bargusii. A people in the northeast of Spain, between the Pyrenees and the Iberus (Livy, xxi. 19).

Baris (*βâρις*). (1) A boat used on the Nile to transport merchandise, etc., across the river. It

Baris. (Rawlinson.)

is described in Herod. ii. 96. (2) In the Septuagint, the word denotes a tower or palace (Ps. xliv. 9).

Barium. A town of Apulia, on the Adriatic, noted for its fisheries, whence Horace calls it "fishy Barium" (*Sat.* i. 5, 97). It is now Bari.

Barsĭné (*Βαρσίνη*). A daughter of Darius Codomannus, who married Alexander the Great, B.C. 324, and had by him a son named Heracles. She was secretly put to death by Cassander, along with her son, when the latter had reached his fourteenth year (Justin, xv. 2). According, however, to Diodorus Siculus (xx. 28), he was slain by Polysperchon, who had agreed with Cassander that he would commit the deed. Plutarch says that Polysperchon promised to slay him for 100 talents. We have followed Arrian (vii. 1) in making Barsiné the daughter of Darius. According to Plutarch (*Vit. Alex.*) she was the daughter of Artabazus; while another authority makes her father to have been named Pharnabazus. It is therefore said by some that two women of the same name are referred to—one a Greek and one a Persian, and both married to Alexander.

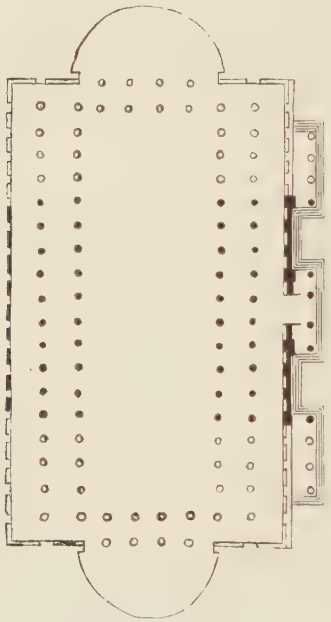
Basanistae (*βασανισταί*). See TORMENTUM.

Basănos (*βάσανος*). See TORMENTUM.

Bascania (*βασκανία*). See FASCINUM.

Bascauda. A word borrowed, like the English *basket*, from the ancient British language (Welsh, *basged*) and mentioned by Martial (xiv. 99) as imported from Britain. The original form of basket appears to have been imitated in silver (Juv. xii. 46).

Basilēia (*βασίλεια*). A festival with games, open to all Greeks, held at Lebadea in Boeotia, in honour of Zeus Basileus. See Diod. xv. 53.



Basĭleus (*βασιλεύς*). See ARCHON; MAGISTER BIBENDI; REX.

Basilia. (1) An island, famous for its amber, in the Northern Ocean. Modern writers have supposed that it is in reality to be identified with the southern extremity of Sweden, and mistaken by the ancients for an island. (2) A city on the Rhenus (Rhine), now Bâle, and in the Middle Ages known as Basula.

Basilĭca (*τὰ βασιλικά*). The Greek code of Roman law, commenced about A.D. 876 by the emperor Basil I., and finished by his son, Leo the Philosopher, who reigned A.D. 886–911. It comprised the Institutes, Pandects, Code, the Novellae, and the imperial Constitutions subsequent to the time of Justinian. It is in sixty books, subdivided into titles. The publication of this authorized body of law in Greek led to the gradual disuse of the original compilations of Justinian in the East; but by its means the Roman law was so firmly established in Eastern Europe and Western Asia as to maintain its hold there among the Greek populations to the present day. See Rudorff, *Röm. Rechtsgeschichte* (Leipzig, 1876), and the article IUSTINIANUS. The best modern edition of the *Basilica* is that of Heimbach, 6 vols. (Leipzig, 1833–70).

Basilĭca (*στοὰ βασιλική*; the pure Latin word being *regia*, sc. *aula*). A state building, used by the Romans as a hall of justice and a public meeting-place. The earliest basilica built at Rome was called the *Basilica Porcia*, after the famous M. Porcius Cato Censorius, who built it in B.C. 184, probably on the model of the *στοὰ βασίλειος* ("royal colonnade") at Athens. It stood in the Forum near the Curia. The later basilicas usually bore the name of the persons who built them. Buildings of the same kind were constantly erected in the

provinces to serve as halls of exchange or courts of justice. The form of the basilica was oblong; the interior was a hall, either without any divisions or divided by rows of pillars, with a main nave, and two, or sometimes four, side-aisles. Galleries for spectators were often added above. If the basilica was used as a hall of justice, a space (usually in the form of a large semicircular niche, and containing a tribunal) was set up at the end of the nave for the accommodation of the court.

Basilica of Trajan.

After the time of Constantine the Great, of whose great basilica, with its nave and two aisles, magnificent ruins still remain, many basilicas were turned into Christian churches, and many churches were built upon the same plan.

Besides the *Basilica Porcia* already mentioned as having been the earliest Roman structure of the kind, there were at Rome fully twenty others erected at different periods, of which the following are most frequently mentioned by ancient authors: (1) *Basilica Sempronia*, constructed by Titus Sempronius, B.C. 171, and supposed to have been between the Vicus Tuscus and the Velabrum. (2) *Basilica Opimia*, which was above the Comitium. (3) *Basilica Pauli Aemilii*, or *Basilica Aemilia*, called also *Regia Pauli* by Statius. Cicero mentions two basilicas of this name, of which one was built, and the other only restored, by Paulus Aemilius. Both these edifices were in the Forum, and one was celebrated for its open peristyle of Phrygian columns, which Plutarch (*Vit. Caes.*) states was erected by L. Aemilius Paulus during his consulship, at an expense of 1500 talents, sent to him by Caesar from Gaul, as a bribe to gain him over from the aristocratical party. (4) *Basilica Pompeii*, called also *regia*, near the theatre of Pompey. (5) *Basilica Iulia*, erected by Iulius Caesar, in the Forum, and opposite to the Basilica Aemilia. It was from the roof of this building that Caligula scattered money among the people for several successive days. (6) *Basilica Flavia*, of the form on which the Christian churches were modelled. (7) *Basilica Ulpia* or *Traiani*, in the Forum of Trajan. (8) *Basilica Constantini*, erected by the emperor Constantine, supposed to be the ruin now remaining on the Via Sacra, near the Temple of Rome and Venus, and commonly called the Temple of Peace. Of all these magnificent edifices nothing now remains beyond the ground plan, and the bases and some portion of the columns and superstructure of several. The basilica at Pompeii is in better preservation; the external walls, ranges of columns, and tribunal of the judges being still tolerably perfect on the ground floor. See the illustration on page 199.

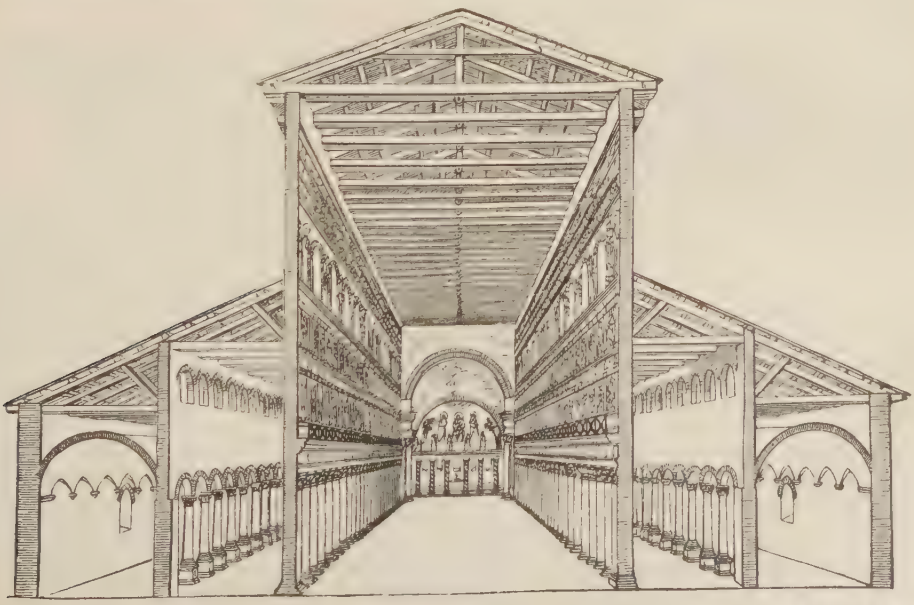
The Forum, or, where there was more than one, the one which was in the most frequented and central part of the city, was always selected for the site of a basilica; and hence it is that the classic writers not infrequently use the terms *forum* and *basilica* synonymously. See FORUM.

The Basilica at Trèves.

Basilīdes (Βασιλείδης). The father of Herodotus (q. v.).

Basilinda (βασιλίνδα). A children's game played by both Greeks and Romans, and practically identical with our game of "follow your leader." See Herod. i. 114; Suet. *Nero*, 35; Horace, *Epist.* i. 1. 59.

Basiliscus (βασιλίσκος). The basilisk, sometimes called *cockatrice*, from the vulgar belief in modern times that it is produced from the egg of a cock. Nicander describes it as having a small body, about three palms long, and of a shining colour. All the ancient authors speak with horror of the poison of the basilisk, which they affirm to be of so deadly a nature as to prove fatal, not only when introduced into a wound, but also when transmitted through another object. Avicenna relates the case of a soldier to whom, having transfixed a basilisk with a spear, its venom proved



Remains of the Basilica at Pompeii. (Overbeck.)

fatal, and also to his horse, whose lip was accidentally wounded by it. Linnaeus refers this creature, as mentioned by the ancients, to the *lacerta iguana*. Calmet supposes the Scriptural basilisk to be the same with the *cobra di capello*, but this is not found in Africa. The serpent which is described under the name of *buskah* answers very well in most respects to the ancient descriptions of the basilisk.

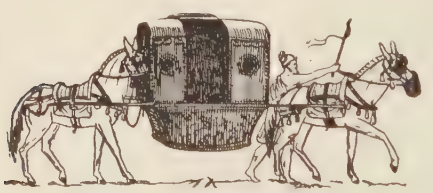
Basilium (*βασίλειον*). A tall head-dress peculiar to the kings of Egypt and to the Egyptian goddess Isis (q. v.). See Plut. *De Is. et Osir.* 19.

Basilius (*Βασίλειος*). (1) A Christian writer, surnamed the Great, of Caesarea in Cappadocia. He was born of a noble family in A.D. 329, was educated in rhetoric at Constantinople and Athens by Libanius and Himerius, and subsequently took up the profession of advocate. But it was not long before he dedicated himself to the service of the Church. He distinguished himself especially by his resistance to Arianism and the measures he adopted for regulating the monastic system. He died, the bishop of his native city, in A.D. 379. He composed a revised liturgy still in use in the East, and known as the "Liturgy of the Holy Basil." Besides his writings on points of doctrine, we have an address by him to young men on the uses of Greek literature, the study of which he earnestly recommended, in opposition to the prej-

Basilica of St. Peter, erected in the time of Constantine.

MARSHALL HIGH SCHOOL
LIBRARY
MINNEAPOLIS

udices of many Christians. He has also left a collection of four hundred letters, which are models in their way. Among them are those addressed to Libanius, his pagan instructor. A standard edition of his works is that of the Abbé Migne in 4 vols. (29–32) of his *Patrologia Graeco-Latina* (Paris, 1866). The Greek Church celebrates the day of his death (January 1st), the Roman Church that of his ordination (June 14th). (2) The name of several of the Byzantine emperors. See BYZANTINUM IMPERIUM.



Bassae. See PHIGALIA.

Bassăra, Bassăris (*βασσάρα, κασσάρα*). Originally a name given to the fox, and probably Egyptian in its origin, since in the hieroglyphs the fox is called *wasar* (Coptic *basor*); and Egyptian priests are found represented as wearing what appear to be fox-skins. (See Lepsius, *Denkmäler*, ii. 112, 128.) In Lydia and Thrace the word is applied to the dress of the Bacchanals (Bassarides), which is described as variegated and reaching to the feet. The Lydian Dionysus is hence styled Bassareus, but there is no genuine Hellenic conception of a fox in connection with Dionysus. See Roscher, *Ausführl. Lexikon der griech. und röm. Mythologie*, s. h. v.

Bassus, AUFIDIUS. A Roman historian of the time of Tiberius, who treated of the expiration of the Republic and the founding of the Empire. Quintilian (x. 1. 103) speaks of his *libri belli Germanici*, which may, however, have been a part of the other work. His narrative was continued by Pliny the Elder, and appears to have been used by Dio Cassius and Suetonius. Quotations from it are to be found in Seneca, *Suasoriae*, vi. 18 and 23. See H. Peter, *Hist. Fragm.* 308.

Bastarnae. A people who first inhabited that part of European Sarmatia which corresponds with a part of Poland and Prussia, and who afterwards established themselves in the south, to the left and right of the Tyras (Liv. xl. 58).

Basterna. A kind of litter or palanquin, used by Roman women, resembling the *lectica* (q. v.). The driver was called *basternarius*. See Ginzrot,

Basterna

Die Wagen der Alten, from which the accompanying illustration is taken.

Batāvi. An old German nation, which inhabited a part of the present Holland, especially the island called Batavorum Insula (modern *Betuwe*), formed by that branch of the Rhine which empties into the sea near Lugdunum Batavorum (Leyden), together with the Vahalis (Waal) and Mosa (Maas). Their territories, however, extended much beyond the Waal. Tacitus commends their bravery. According to him they were originally the same as the Catti (q. v.), a German tribe, which had emigrated from their country on account of domestic troubles. This must have happened before the time of Caesar. When Germanicus was about to invade Germany from the sea he made their island the rendezvous of his fleet. Being subjugated by the Romans, they served them with such courage and fidelity as to obtain the title of friends and brethren. They were exempted from tributes and taxes, and permitted to choose their leaders among themselves. Their cavalry was particularly excellent. During the reign of Vespasian they revolted, under the command of Civilis, from the Romans, and extorted from them favourable terms of peace. Trajan and Hadrian subjugated them again. At the end of the third century the Salian Franks obtained possession of the Insula Batavorum. The capital of the nation was Lugdunum Batavorum, now Leyden (Tac. *Hist.* iv. 12; xix. 32).

Baths and Bathing. See BALNEAE.

Bathȳcles (*Βαθυκλῆς*). A celebrated artist, supposed to have been a native of Magnesia on the Maeander. The period when he flourished has given rise to much discussion. It was probably in the age of Croesus (Pausan. iii. 191).

Bathyllus (*Βάθυλλος*). (1) A young Samian, the favourite of Polycrates (q. v.), and alluded to by Anacreon. (2) An Alexandrian youth, the favourite of Maecenas, and noted for his graceful dancing in the pantomimes (Juv. vi. 63).

Batillum or **Vatillum.** An iron shovel with a short handle used for various purposes, especially as a fire-shovel, chafing-dish, and for burning incense. See Horace, *Sat.* i. 5. 36.

Batillum. (From an original in bronze found at Pompeii.)

Batrachomyomachia (*Βατραχομυομαχία*). The Battle of the Frogs and the Mice. The title of an epic poem, falsely bearing the name of Homer. It was a parody of the *Iliad*, and was probably written by Pigres (q. v.). (See HOMERUS.) It consists of 294 hexameters, and has been edited by Ernesti in his edition of Homer (Leipzig, 1759; reprinted at Glasgow, 1814); Matthiae (Leipzig, 1805); and Mitzschke (Berlin, 1874).

Battering-Ram. See ARIES.

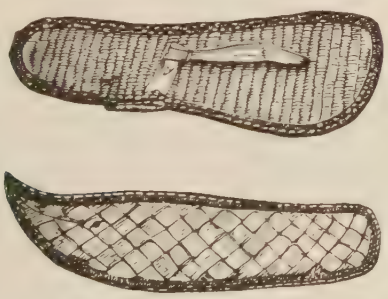
Battiădae (*Βαττίαδαι*). Kings of Cyrené during eight generations. (1) BATTUS I., of Thera, led a colony to Africa at the command of the Delphic oracle, and founded Cyrené about B.C. 631. (2) ARCESILAÜS I., son of the preceding, reigned B.C. 599–583. (3) BATTUS II., surnamed "the Happy," son of the preceding, reigned 583–560 (?) (4) ARCESILAÜS II., son of the preceding, surnamed "the Oppressive," reigned about 560–550. His brothers withdrew from Cyrené, and founded Barca. (5) BATTUS III., or "the Lame," son of the preceding, reigned about 550–530, in which period Demonax, a Mantinean, with the aid of the people, gave a new constitution to the city, whereby the royal power was reduced within very narrow limits. (6) ARCESILAÜS III., son of the preceding, reigned about 530–514. (7) BATTUS IV., of whose life we have no accounts. (8) ARCESILAÜS IV., at whose death, about 450, a popular government was established. See CYRENÉ.

Battiădes (*Βαττιάδης*). A patronymic of Callimachus (q. v.) from his father Battus. The name is also applied to (1) the people of Cyrené, a place founded by Battus, and (2) to the kings of Cyrené. See CYRENÉ.

Battus (*Βάττος*). (1) A Lacedaemonian who, in

B.C. 631, built the town of Cyrené with a colony from the island of Thera. His proper name was Aristoteles, but he received the name of Battus from his having an impediment in his speech (*βαττα-ρίζω* = to stutter), though Herodotus (iv. 155) says that *βάττος* is a derivative from a Libyan dialect, and means "king." He reigned over Cyrené for about thirty years, and was succeeded by his son Arcesilaüs. See BATTIADAE; CYRENÉ. (2) A shepherd of Pylos, who promised Hermes that he would not expose his theft of the flocks of Admetus, which were in charge of Apollo. Having broken his promise, he was turned into a stone (Ovid, *Met.* ii. 702).

Baucălis (*βαύκαλις*). A large wine-cooler, made usually of earthenware. See Athenaeus, xi. 784 c.



Baucĭdes (*βαυκίδης*). A kind of costly shoe of saffron colour worn by women (Poll. vii. 99.)

Baucis (*Βαυκίς*). See PHILEMON.

Bauli. A collection of villas between Misenum and Baiae in Campania.

Bavius. A dull poet who, with Mevius, attacked Vergil, Horace, and other Augustan writers. See Verg. *Ecl.* iii. 90; v. 36; Horace, *Epod.* x. 1; and the article VERGILIUS.

Baxeae or **Baxae.** Sandals made of leaves, twigs, or fibre, and worn by comic actors, while the *cothurnus* was peculiar to the tragic stage (Isidor. *Orig.* xix. 33). Philosophers also wore sandals of this description, at least in later times. Of the two *baxeae* shown in the accompanying illustration, the upper one was worn on the right foot. It has a loop on the right side for fastening the band which went across the instep. This band, together with the ligature connected with it,

Baxeae. (British Museum.)

which was inserted between the great and the second toe, is made of the stem of the papyrus, undivided and unwrought. The lower figure shows a sandal in which the portions of the palm-leaf are interlaced with great neatness and regularity, the sewing and binding being effected by fibres of papyrus. The three holes may be observed for the passage of the band and the ligature already mentioned.

Beards. See BARBA.

Beast Fables. See NOVELS AND ROMANCES.

Bebaioseos Dikē (*βεβαιώσεως δίκη*). An action to compel a vender to make a good title, or to perform the terms of a contract to sell. See Meier, *Att. Process*, p. 574.

Bebrȳces (*Βέβρυκες*). The original inhabitants of Bithynia (q. v.), which was also called Bebrycia, from Bebrycé, a daughter of Danaüs.

Becker, WILHELM ADOLF. A well-known writer on classical subjects, born at Dresden in 1796. Entering the University of Leipzig in 1816, he studied at first theology, and subsequently classical philology. In 1840, he travelled and studied in Italy, returning in 1842 to take the professorship of archæology at Leipzig, where his lectures were very largely attended. His lively imagination, prompted by his minute knowledge of antiquity, led him to write his two famous works, which have so successfully reproduced pictures of the ancient society of Greece and Rome, while giving in detail a vast amount of archæological information. These works are *Gallus* (Leipzig, 1838), a quasi-narrative of life at Rome under Augustus; and *Charikles* (Leipzig, 1840), a story of society in ancient Greece. These two works have been revised, re-edited, and translated by numerous scholars, and have been a storehouse of information to students in all lands. His formal treatise, *De Comicis Romanorum Fabulis* (Leipzig, 1837), is another valuable production, as is also his hand-book of Roman antiquities, carried on after his death by Marquardt. Becker died at Meissen, Sept. 29th, 1846.

Beda (VENERABĬLIS). The most distinguished scholar in the world at the time he lived, born at Durham (England) in or about the year A.D. 672. He remained for thirteen years in the monastery of St. Peter under the care of the abbot. He was ordained priest in his thirtieth year, and devoted his life to such literature as was possible in those days, gaining a knowledge of Greek, Latin, Hebrew, medicine, and astronomy. He was the author of numerous homilies, hymns, epigrams, biographies of saints, works on chronology and grammar, and commentaries on various books of the New Testament. His most valuable production is his *Historia Ecclesiastica Gentis Anglorum* in five books, to which we owe nearly all our information regarding the history of England to A.D. 731, and which King Alfred translated into Anglo-Saxon. A good English version is that of Giles (1843).

Bedriăcum or **Bebriăcum.** A hamlet in Cisalpine Gaul, between Verona and Cremona, where in the same year (A.D. 69) Otho was defeated by the troops of Vitellius, and Vitellius by those of Vespasian (Tac. *Hist.* i. 15). The modern name is Caneto.

Bed-clothing. See BABYLONICUM; LODIX; STRAGULUM.

Beds. See LECTUS.

Beer. See CERVESIA.

Beggars. See MENDICUS.

Bekker, IMMANUEL. A distinguished German philologist, who was born at Berlin in 1785. He took his degree at the University of Halle in 1807, being regarded as the most brilliant pupil of F. A. Wolf (q. v.). In 1811 he became Professor of Classical Philology at Berlin, where he died in 1871. Bekker's life-work lay in the line of manuscript recension, for which a long course of careful study in the libraries of France, Germany, England, and Italy well fitted him, and which he carried on independently of the printed editions. He did much valuable work upon the *Corpus Inscriptionum Graecarum;* and published *Anecdota Graeca*, 3 vols. (Berlin, 1814–21); besides important recensions of the texts of Plato, Aristotle, the Attic orators,

Aristophanes, Thucydides, Theognis, Sextus Empiricus, Livy, and Tacitus.

Belĕsys (Βέλεσυς). A Babylonian priest, who successfully conspired with Arbaces to overthrow Sardanapalus (q. v.), the king of Assyria.

Belgae. See GALLIA.

Belgĭca. See GALLIA.

Belgium. A division of Gallia Belgica. The name is often used of the whole country. See Caes. *B. G.* v. 24.

Belīdes. See BELUS.

Belĭdes. See BELUS.

Belisāna. A deity of the Gauls, identified by the Romans with Minerva.

Belisarius (Slavonic *Beli-Tsar*, "White Prince"). One of the greatest generals of his time, to whom the emperor Justinian chiefly owed the splendour of his reign. Sprung from an obscure family in Thrace, Belisarius first served in the body-guard of the emperor, but soon obtained the chief command of an army of 25,000 men, stationed on the Persian frontiers, and in A.D. 530 gained a complete victory over a Persian army not less than 40,000 strong. The next year, however, he lost a battle against the same enemy, who had forced their way into Syria—the only battle which he lost during his whole career. He was recalled from the army, and soon became, at home, the support of his master. In the year 532, civil commotions, proceeding from the rival factions of the circus, who called themselves the Green (*Prasini*) and the Blue (*Veneti*), and who caused great disorders in Constantinople, brought the life and reign of Justinian in the utmost peril; and Hypatius was already chosen emperor, when Belisarius, with a small body of faithful adherents, restored order. Justinian, with a view of conquering the dominions of Gelimer, king of the Vandals, sent Belisarius, with an army of 15,000 men, to Africa. After two victories, he secured the person and the treasures of the Vandal king. Gelimer was led in triumph through the streets of Constantinople, and Justinian ordered a medal to be struck, with the inscription *Belisarius Gloria Romanorum*, which has descended to our times. By the dissensions existing in the royal family of the Ostrogoths in Italy, Justinian was induced to attempt the reduction of Italy and Rome under his sceptre. Belisarius vanquished Vitiges, king of the Goths, made him prisoner at Ravenna (A.D. 540), and conducted him, together with many other Goths, to Constantinople. The war in Italy against the Goths continued; but Belisarius, not being sufficiently supplied with money and troops by the emperor, demanded his recall (A.D. 548). He afterwards commanded in the war against the Bulgarians, whom he conquered in the year 559. Upon his return to Constantinople he was accused of having taken part in a conspiracy; but Justinian was convinced of his innocence, and is said to have restored to him his property and dignities, of which he had been deprived. Belisarius died A.D. 565. His history has been much coloured by the poets, and particularly by Marmontel, in his politico-philosophical romance. According to his narrative, the emperor caused the eyes of the hero to be struck out, and Belisarius was compelled to beg his bread in the streets of Constantinople. Other writers say that Justinian had him thrown into a prison, which is still shown under the appellation of the Tower of Belisarius. From this tower he is reported to have let down a bag fastened to a rope, and to have addressed the passers by in these oft-quoted words: "Give an obolus to Belisarius (*Date obolum Belisario*), whom virtue exalted, and envy has oppressed." Of this, however, no contemporary writer makes any mention. Tzetzes (q. v.), a writer of the twelfth century, was the first who related this fable. Through too great indulgence towards his wife Antonia, Belisarius was impelled to many acts of injustice, and he evinced a servile submissiveness to the licentious Theodora, the wife of Justinian. See Mahon, *Life of Belisarius* (London, 1829).

Bellerŏphon (Βελλεροφῶν) or **Bellerophontes** (Βελλεροφόντης). Son of Glaucus of Corinth (or, according to another account, of Poseidon), and grandson of Sisyphus. His proper name is said to have been Hipponoüs; the name Bellerophontes implies that he was the slayer of some now unknown monster. In later times his name was wrongly explained as the slayer of a certain Corinthian, Bellerus, on account of which he was supposed to have fled to Proetus at Tiryns or Corinth. The wife of Proetus, Anteia (or Stheneboea), fell in love with the beautiful youth; he was deaf to her entreaties; she slandered him to her husband, who resolved on his destruction. He sent Bellerophon to Lycia, to his father-in-law Iobates, with a tablet in cipher, begging him to put the bearer to death. Iobates first commissioned Bellerophon to destroy the fire-breathing monster Chimaera, a task which he executed with the help of his winged horse Pegasus. (See PEGASUS.) Thereupon, after a fierce battle, he conquered the

Bellerophon, Pegasus, and Chimaera. (Tischbein, Hamilton Vases, vol. i. pl. 1.)

Solymi and the Amazons, on his return slew in ambush all the boldest among the Lycians, and Iobates now recognized his divine origin, kept him with him, and gave him half of his kingdom and his daughter to wife. The children of this marriage were Isander, Hippolochus, the father of Glaucus and Laodamia, and the mother of Sar-

pedon by Zeus. Afterwards Bellerophon was hated by all the gods, and wandered about alone, devouring his heart in sorrow. His son Isander was killed by Ares in battle against the Solymi, while Laodamia was sacrificed to the wrath of Artemis. This is the Homeric version; but, according to Pindar, Bellerophon's high fortune made him so overweening that he wished to mount to heaven on Pegasus. Zeus, however, drove the horse wild with a gadfly, and Bellerophon fell and came to a miserable end. He was honoured as a hero in Corinth, an enclosure being consecrated to him in the cypress grove of Craneion. See Morris, *Bellerophon in Argos*, etc.

Bellōna. (1) The Roman goddess of war, in early Latin called Duellona. An old Italian divinity, probably of Sabine origin. She was supposed to be the wife or sister of Mars, and was identified with the Greek Enyo (Ἐννώ). Her temple, which was situated in the Campus Martius, outside the old Pomerium, was used for meetings of the Senate when it was dealing with the ambassadors of foreign nations, or Roman generals who claimed a triumph on their return from war, for it must be remembered that under such circumstances a general might not enter the city. The pillar of war (Columna Bellica) stood hard by. It was from this, as representing the boundary of the enemy's territory, that the Fetialis threw his lance on declaring war. See Fetiales.

(2) Quite a different goddess is the Bellona whom the Roman government brought from Comana in Cappadocia towards the beginning of the first century B.C., during the Mithridatic War. This Bellona was worshipped in a different locality, and with a service conducted by Cappadocian priests and priestesses. These Bellonarii moved through the city in procession at the festivals of the goddess, in black raiment, and shed their own blood at the sacrifice, wounding themselves for the purpose in the arms and loins with a two-edged axe, and prophesying amid a wild noise of drums and trumpets.

Bellovăci. A people of Gaul inhabiting the site of the modern Beauvais in the Isle de France. See Caes. *B. G.* ii. 4.

Bellows. See Follis.

Bells. See Tintinnabulum.

Belus (Βῆλος). (1) The son of Libya, granddaughter of Io and Poseidon, and father of Aegyptus, Danaüs, Cepheus, and Phineus, to each of whom the patronymic Belides is applied. The daughters of Danaüs are known as Belides. (2) A name given to several kings of the East, whose existence appears extremely doubtful. The most ancient is Belus, king of Assyria, father of Ninus, whose epoch it is impossible to determine. (3) A king of Lydia, father of Ninus (Herod. i. 7). The Belus of Assyria, or the remote East, is thought by some to be the same with the Great Bali of Hindu mythology, as well as the Baal who was the principal male deity of the Phœnician and Canaanitish nations. The Belus of Babylon and Assyria has no identity, however, with the Phœnician Baal, except that both bore the title of Bel-Ba'ab or "lord." See Assyria; Babylonia. (4) A river in Syria where glass-making was invented (Plin. *H. N.* v. 19).

Bema (Βῆμα). The platform from which the orators spoke in the Athenian assembly. See Ecclesia; Pnyx.

The Bema of the Pnyx at Athens.

Benācus Lacus. The modern Lago di Garda in the north of Italy, out of which the Mincius (Mincio) flows.

Bendideia (Βενδίδεια). A Thracian festival in honour of the goddess Bendis (q. v.), who is said to be identical with the Grecian Artemis, and with the Roman Diana. The festival was of a bacchanalian character. From Thrace it was brought to Athens, where it was celebrated in the Piraeus, in the month Thargelion. The temple of Bendis was called Βενδίδειον.

Bendis (Βενδίς). A goddess of the moon among the Thracians. She was invested with power over heaven and earth, and identified by the Greeks with Artemis, Hecaté, and Persephoné. The worship of this goddess was introduced into Attica by Thracian aliens; and was so popular that in Plato's time it became a state ceremonial at Athens. A public festival was instituted called the Bendideia, at which there were torch-races and a solemn procession of Athenians and Thracians at the Piraeus. See Artemis.

Beneficium, Beneficiarius. The word *beneficium* is of frequent occurrence in the Roman law, in the sense of some special privilege or favour granted by the praetor or the emperor to a class of persons on some special ground of equity; but the word was also used in other senses. In the time of Cicero it was usual for a general, or a governor of a province, to report to the treasury (*aerarium*) the names of those under his command who had done good service to the State; those whose names were entered in such report were said *in beneficiis ad aerarium deferri* (Cic. *Pro. Arch.* 5; *Ad Fam.* v. 20; and the note of Manutius). It was required by a Lex Iulia that the names should be given in within thirty days after the accounts of the general or governor. *In beneficiis* in these passages may mean that the persons so reported were considered as persons who had deserved well of the State, and so the word *beneficium* may have reference to the services of the individuals; but as the object for which their services were reported was the benefit of the individuals, it seems that the term had reference to the gratuity in the form of money or presents given for such services. The honours and offices of the Roman State in the republican period were called the *beneficia* of the Roman people.

Beneficium also signified any promotion conferred on or grant made to soldiers, who were thence called *beneficiarii;* this term was a common one, as we see from inscriptions in Gruter (li. 4; cxxx. 5), in some of which the word *beneficiarius* is represented by the two letters B. F. Beneficiarius is also used by Caesar (*De Bell. Civ.* i. 75) to express

the person who had received a beneficium. It does not, however, appear from these passages what the beneficium actually was. It might be any kind of honour, or special exemption from service (Suet. *Tib.* 12).

Grants of land and other things made by the Roman emperors were called *beneficia*, and were entered in a book called Liber Beneficiorum. The secretary or clerk who kept this book was called *a commentariis beneficiorum*, as appears from an inscription in Gruter (clxxviii. 1).

It was the practice of the kings and leaders of the tribes which took possession of the western provinces of the Roman Empire to grant lands to their nobles to be held generally for life on condition of special personal service. Lands so granted were called *beneficia*. From about the end of the ninth century, when *beneficia* became hereditary, they were also called *feoda* or feuds, the two words being used indifferently to denote the same condition of landed property (Guizot, *Histoire de la Civilisation en France*, iii. p. 247). The beneficiarius is he who has a beneficium. Grants made for the purpose of endowing churches were called *beneficia;* hence the word "benefice" came to be applied to an ecclesiastical preferment.

Beneventum. The modern Benevento. A city of Samnium, about ten miles beyond Candium, on the Via Appia. Its name is said to have been originally Maleventum, and to have been changed because of the evil omen contained in it. (See

Beneventum in Samnium.

EUPHEMISM.) The more auspicious name was given it in B.C. 271 (Livy, ix. 27). It remained in the possession of the Romans during the whole of the Second Punic War, and obtained the thanks of the Senate for its firm attachment to the Republic at that critical period (Livy, xxvii. 10). We subsequently hear of its being a second time colonized by the veteran soldiers of Augustus, and also a third time under Nero. Beneventum was situated near the junction of the Sabatus and Calor, now Sabbato and Calore. Its position was a very important one, since here the main roads intersected each other from Latium into southern Italy, and from Samnium into Campania. Under the Lombards, Beneventum became the capital of a powerful dukedom. It abounds in remains of ancient sculpture above any other town in Italy. The most beautiful relic of former days at this place is the Arch of Trajan, which forms one of the entrances into the city. Near Beneventum, Pyrrhus was defeated by Dentatus, B.C. 274.

Benfey, THEODOR. A distinguished philologist, who was born near Göttingen in 1809. He pursued the study of classical philology at the universities of Göttingen, Munich, Frankfort, and Heidelberg, and later won distinction by his *Lexicon of Greek Roots* (Berlin, 1839), and by his edition of the *Sâma Veda* (Leipzig, 1848)—a work which laid the foundation for the scientific study of the Vedas. He also published a Sanskrit grammar, with a chrestomathy and glossary (Leipzig, 1854), a shorter Sanskrit grammar (London, 1868), and a Sanskrit-English dictionary (London, 1866). In his magazine *Orient und Occident* he published, in 1863–64, a translation of the first *mandala* of the *Rig Veda*. To comparative mythology and folk-lore he contributed a translation of the *Panchatantra*, 2 vols. (Leipzig, 1859).

In 1862, Dr. Benfey was made Professor of Sanskrit and Comparative Philology at the University of Göttingen, a chair which he continued to fill until his death in 1881. He left unfinished a Vedic grammar, for which he had collected a large mass of material. His only work in classical literature was his earliest publication—a translation of Terence (Stuttgart, 1837).

No scholar did more than Benfey to enlarge the range of the study of Sanskrit, a work to which he brought the zeal of an enthusiast. As a comparative philologist he was in some respects a follower of Franz Bopp (q. v.), from whom, however, he deviated in deriving all Indo-European words from monosyllabic primitive verbs, a conception which depends upon his theory of the origin of stem suffixes. These he regarded as nearly all derived from a fundamental radical √ANT appearing in the present participle of verbs. In his defence of this singular thesis he is obliged to assume permutations of sound that violate the most elementary laws of the science of phonology. His view is to be found set forth both in his *Lexicon of Greek Roots*, in his Sanskrit grammar, and in numerous essays.

Benignĭtas. See AMBITUS.

Benna. A carriage; a word derived from the Keltic. As a wagon of basket-work is still called *benna* in Italian, *Benne* in South German, and *banne* in Belgium, it is conjectured that the vehicle from the Column of Antoninus shown here is a *benna*.

Benna. (From the Column of Antoninus.)

Bentley, RICHARD, perhaps the greatest among the classical scholars of England, was born at Oulton in Yorkshire, January 27th, 1662. After spending five years at the Wakefield Grammar School, he entered St. John's College, Cambridge, in 1676, taking the Bachelor's degree in 1679. No record has been kept of his career as an undergraduate, though he is known to have given evidence of a strong taste for classical study. In

1682, his college gave him the appointment of head-master to the Spalding Grammar School in Lincolnshire, an office which he shortly resigned to become tutor to the son of Dr. Stillingfleet, afterwards Bishop of Worcester. In 1689, he went to Oxford with his pupil, and gained such reputation by his erudition as to be twice appointed to deliver the Boyle Lectures on the "Evidences of Religion." In 1690 he took orders, and received from Bishop Stillingfleet various preferments, with the office of librarian to the Royal Library at St. James's. In 1700, he became Master of Trinity College, Cambridge, and in 1717, Regius Professor of Divinity. His arrogance, greed, and violence in his relations with his colleagues of the university made his subsequent career one of continual strife and controversy. In 1718, the University Senate voted to deprive him of his degrees; in 1734, his deposition as Master was pronounced; yet his ability and force of character were such that at the time of his death he still retained his offices as well as his degrees. He died July 14th, 1742.

As a philologist, Bentley may be truly said to have established the principles of historical criticism and opened a new era for classical scholarship, so that in Germany to-day his name is held in the highest honour as the greatest of England's philologists. His *Dissertation upon the Epistles of Phalaris* (1699) gave him an immediate reputation all over Europe. These *Epistles* purported to be the production of Phalaris (q. v.), and to date back to the sixth century B.C. This claim Bentley, in a paper published for Wotton, showed to be false, whereupon the Christchurch (Oxford) editor of the *Epistles*, the Hon. Charles Boyle (afterward Earl of Orrery) attacked Bentley in a dissertation which Dyce has characterized as "a tissue of superficial learning, dexterous malice, and happy raillery." To this Bentley, superior alike in scholarship and wit, made his immortal reply, to which no answer was ever given, and which is a marvellously brilliant effort, unique in being at once imposing in its learning and fascinating in its ingenious use of all the arts of controversy. The best edition is Wagner's (1874).

Other important works of Bentley are his *Letter to Mill*, on the chronicler John Malelas (1691); an edition of Horace (1711)—an epoch-making masterpiece, recently edited by Zangemeister (1869); an edition of Terence (1726); and an edition of *Paradise Lost* (1732), carried out on the same plan, and much less happily executed. A very remarkable proposal of Bentley's—remarkable considering the time at which it was put forth—was his plan, published in 1720, of printing an edition of the New Testament in which the received Greek text should be corrected by a careful comparison of the oldest existing Greek MSS., and with the Vulgate. This proposal, which was received with a storm of opposition, was not carried out; but the principles laid down by Bentley have been adopted, and have produced important results in the hands of Lachmann and other textual critics of later times. See Monk, *Life of Bentley*, 2 vols. (1833); and Jebb, *Bentley* (1882); with the article TEXTUAL CRITICISM.

Berecyntia (Βερεκυντία). A surname of Cybelé, from Mount Berecyntus in Phrygia, where she was particularly worshipped. See RHEA.

Berecyntii (Βερεκύντιοι) and **Berecyntae** (Βερεκύνται). A Phrygian tribe, celebrated by the poets in connection with Cybelé, so often styled *Berecyntia mater* (Verg. *Aen.* vi. 785).

Berecyntus (Βερέκυντος). A mountain in Phrygia Major, on the banks of the river Sangarius. It was sacred to Cybelé, who is hence styled *Berecyntia mater*. See RHEA.

Berenīcé (Βερενίκη). A name common to several women of antiquity. It is of Greek origin, and means "victory-bringing" or "bearer of victory," the initial B being written, according to Macedonian usage, for the letter Φ, or, in other words, Βερενίκη being put for Φερενίκη, just as the Macedonians said Βίλιππος for Φίλιππος. The most remarkable of this name were the following: (1) The granddaughter of Cassander, brother of Antipater. She married Philip, a Macedonian, probably one of the officers of Alexander, and became by him the mother of many children, among whom were Magas, king of Cyrené, and Antigoné, whom she married to Pyrrhus, king of Epirus. She followed into Egypt Eurydicé, daughter of Antipater, who returned to that country to rejoin her husband, Ptolemy I. Berenicé inspired this prince with so strong a passion that he put away Eurydicé, although he had children by her, and married the former. He also gave the preference, in the succession to the throne, to her son Ptolemy, notwithstanding the better claims of his offspring by Eurydicé. Berenicé was remarkable for her beauty, and her portrait often appears on the medals of Ptolemy I. along with that of the latter. (2) Daughter of Ptolemy Philadelphus and Arsinoé. She followed her mother into exile, and retired with her to the court of Magas, at Cyrené, who married Arsinoé and adopted Berenicé. This will serve to explain why Polybius and Justin make Berenicé to have been the daughter of Magas, while Callimachus gives Ptolemy Philadelphus and Arsinoé as her parents. After the death of Magas, Arsinoé engaged her daughter in marriage to Demetrius, son of Demetrius Poliorcetes; but, on the young prince's having come from Macedonia to Cyrené, she became attached to him herself. Demetrius, conducting himself insolently, was slain in a conspiracy, at the head of which was Berenicé. The latter thereupon married her brother Ptolemy (Euergetes) III. A short time after the nuptials Ptolemy was obliged to go on an expedition into Syria, and Berenicé made a vow that she would consecrate her beautiful head of hair to Aphrodité if her husband returned safe to Egypt. Upon his return she fulfilled her vow in the temple of Aphrodité Zephyrites. On the following day, however, the hair was not to be found. As both the monarch and his queen were greatly disquieted at the loss, Conon the Samaritan, an eminent astronomer of the day, in order to conciliate the royal favour, declared that the locks of Berenicé had been removed by divine interposition, and translated to the skies in the form of a constellation. Hence the cluster of stars near the tail of the Lion is called *Coma Berenices* (Berenicé's hair). Callimachus wrote a piece on this subject, now lost, but a translation of which into Latin verse by Catullus has reached our time (Catull. *Carm.* lxvi.). Berenicé was put to death B.C. 216, by the order of Ptolemy Philopator, her son. (3) A daughter of Ptolemy Philadelphus, given by him in marriage to Antiochus Theos, king of Syria, in order to cement a peace between the two

countries. After the death of her father Antiochus put her aside, and recalled his former wife Laodicé. This last, having taken off Antiochus by poison, sought to destroy Berenicé also as well as her son. This son was surprised and carried off by an emissary of Laodicé's, and shortly after put to death; and Berenicé, in searching for him, was entrapped and slain, B.C. 246. (4) Called by some authors Cleopatra, was the only legitimate child of Ptolemy Lathyrus, and ascended the throne after the death of her father, B.C. 81. Sulla, who was at that time dictator, compelled her to marry, and share her throne with, her cousin, who took the name of Ptolemy Alexander. She was poisoned by the latter only nineteen days after the marriage. (5) Daughter of Ptolemy Auletes. The people of Alexandria having revolted against this prince in B.C. 58, drove him out, and placed upon the throne his two daughters, Tryphena and Berenicé. The former died soon after, and Berenicé was given in marriage to Seleucus, surnamed Cybiosactes. His personal deformity, however, and vicious character soon rendered him so odious to the queen that she caused him to be strangled. Berenicé then married Archelaüs; but Ptolemy Auletes having been restored by Gabinius, the Roman commander, she was put to death by her own father, B.C. 55. (6) A native of Chios, and one of the wives of Mithridates of Pontus. On the overthrow of this monarch's power by Lucullus, Berenicé, in obedience to an order from her husband, took poison along with his other wives, but this not proving effectual, she was strangled by the eunuch Bacchus, B.C. 71. (7) Daughter of Agrippa I., king of Iudaea, and born A.D. 28. She was at first affianced to Marcus, son of Alexander, but this young man having died, Agrippa gave her in marriage to his brother Herod, king of Chalcis, by whom she became the mother of two sons, Berenicianus and Hyrcanus. Having lost her husband when she was at the age of twenty, she went to live with her brother Agrippa, a circumstance which gave rise to reports injurious to her character. To put an end to these rumours, she made proposals to Polemo, king of Cilicia, and offered to become his wife if he would embrace Judaism. Polemo consented, but she soon left him, and returned, in all probability, to her brother, for she was with the latter when St. Paul was arrested at Jerusalem, A.D. 63. The commerce between the guilty pair became now so public that the rumour even reached Rome, and we find Juvenal alluding to the affair in one of his satires (vi. 155). She followed Agrippa when he went to join Vespasian, whom Nero had charged to reduce the Jews to obedience. A new scene now opened for her; she won the affections of Titus, and, at a subsequent period, when Vespasian was established on the throne, and Titus returned home after terminating the Jewish War, she accompanied him to Rome along with her brother Agrippa. At Rome she lived openly with Titus, and took up her abode in the imperial palace, as we learn from Dio Cassius, who states also that she was then in the flower of her age. Titus, it is said, intended even to acknowledge her as his wife; but he was compelled by the murmurs of his subjects to abandon this idea, and he sent her away from the city soon after his accession to the throne. Such, at least, is the account given by Suetonius (*Tit.* 7), who appears more entitled to belief than Dio Cassius, according to whom Titus sent Berenicé away before his accession to the throne, and refused to receive her again, when she had returned to Rome a short time after the commencement of his reign. There is a great difficulty attending the history of this Berenicé as regards her intimacy with Titus. She must, at least, have been forty-two years of age when she first became acquainted with the Roman prince, and fifty-one years old at the period of the celebrated scene which forms the subject of Racine's tragedy. Many are inclined to believe, therefore, that the Berenicé to whom Titus was attached was the daughter of Mariamné and Archelaüs, and, consequently, the niece of the Berenicé of whom we have been speaking, she would be twenty-five years old when Titus came into Iudaea. The story of Berenicé forms the subject of a play by Racine, *Bérénice.*

Berenīcé. (1) A city of Egypt on the coast of the Sinus Arabicus, from which a road was made across the intervening desert to Coptos on the Nile, by Ptolemy Philadelphus, 258 miles in length. From this harbour the vessels of Egypt took their departure for Arabia Felix and India. It was through the medium of Berenicé also, and the caravan route to Coptos, that the principal trade of the Romans with India was conducted. By this line of communication it is said that a sum not less than what would now be $2,000,000 was remitted by the Roman traders to their correspondents in the East, in payment of merchandise which ultimately sold for a hundred times as much. The ruins of the ancient Berenicé are found at the modern port of Habest. (2) A city of Cyrenaïca, called also Hesperis. In its vicinity the ancients placed the gardens of the Hesperides. It is now Bengazi, a poor and filthy town. Few traces of the ancient city remain above ground, although much might be brought to light by excavation.

Bergk, THEODOR. A distinguished classicist, who was born at Leipzig in 1812. Between the years 1842 and 1869 he held the chair of classical philology in three universities—Marburg, Freiburg, and Halle, retiring in 1869 from ill-health. His greatest completed work is his *Poetae Lyrici Graeci*, 3 vols. (Leipzig, 1843), of which the fourth edition appeared in 1878. After his retirement, he began his *Geschichte der griechischen Litteratur*, of which he finished only the first volume (Berlin, 1872), the second and third being edited by G. Hinrichs (Berlin, 1883–84). He died July 20th, 1881.

Bernays, JAKOB. A distinguished philologist, born of Jewish ancestry at Hamburg in 1824. He studied classical philology at Bonn, and became professor there in 1866. He was a prolific writer, but his *magnum opus* was his edition of Lucretius (1855). Other important publications were his life of Joseph Justus Scaliger (Berlin, 1855), *Lucian und die Cyniker* (1877), and a translation of the first three books of Aristotle's *Politics* (1872). His *Gesammelte Abhandlungen* were edited after his death by Prof. Usener of Bonn (1887). He died May 26th, 1881.

Bernhardy, GOTTFRIED. A well-known German classical scholar, was born near Frankfort in 1800. He pursued his studies at the University of Berlin, and in 1829 became director of the philological seminarium at Halle. His chief philological works are *Syntax der griechischen Sprache* (1829); *Paralipomena Syntaxis Graecae* (1854); and a crit-

ical edition of Suidas, 4 vols. (1834–53). His two works on Greek and Latin literature—*Griechische Literaturgeschichte* (1867–76) and the *Grundriss d. römischen Lit.* (5th ed. 1872)—are valuable contributions to historical literary study. He died May 14th, 1875.

Beroë (Βερόη). (1) An old woman of Epidaurus, nurse to Semelé. Heré assumed her shape when she persuaded Semelé not to receive the visits of Zeus if he did not appear in the majesty of a god (Ovid, *Met.* iii. 278). (2) The wife of Doryclus, whose form was assumed by Iris, at the instigation of Heré, when she advised the Trojan women to burn the fleet of Aeneas in Sicily (Verg. *Aen.* v.).

Beroea (Βέροια). (1) A large city of Macedonia, south of Edessa, and of great antiquity. Reference should be made to the Acts of the Apostles,

Coin of Beroea, in Syria, with the Head of Trajan

xvii. 11. (2) A town of Syria, now Aleppo or Haleb, near Antioch, and enlarged by Seleucus Nicator, who named it Beroea after the town in Macedon. In the Old Testament it is called Chelbon.

Berōsus (Βηρωσός). A Greek writer, born in Bithynia, and a priest of Belus. He lived as early as the time of Alexander the Great, and about B.C. 280 wrote a work, dedicated to King Antiochus Soter, on Babylonian history, in three books (*Babylonica* or *Chaldaica*). The work must have been of great value, as it was founded on ancient priestly chronicles preserved in the Temple of Belus at Babylon. Its importance as an authority for the ancient history of Asia is fully attested by the fragments that remain, in spite of their scanty number and disordered arrangement. They are preserved for us chiefly in the works of Iosephus, Eusebius, and Syncellus, and have been edited by W. Richter (Leipzig, 1825), and by Müller in the second volume of the *Historicorum Graecorum Fragmenta* (of the "Collection Didot"), published at Paris in 1848. The work entitled *Antiquitatum Libri Quinque cum Commentariis Ioannis Annii* (Rome, 1498), published in Latin as a work of Berosus, was in reality written by the Dominican Giovanni Nanni of Viterbo.

Beryllus (βήρυλλος). The beryl; a precious stone of the emerald species, and much used by the Romans in the adornment of their cups. Pliny states that the Indian lapidaries were accustomed to colour rock-crystal in such a way as to counterfeit the beryl. The same writer speaks of six varieties of the beryl, or of what he considered such.

Berytus (Βηρυτός). Called in the Old Test. *Berotha* and *Berothai*. The modern Beirût; an ancient town of Phœnicia, about twenty-four miles south of Byblus, famous in the age of Justinian for the study of law, and styled by that emperor "the mother and nurse of the laws." The civil law was taught there in Greek, as it was at Rome in Latin.

Coin of Berytus.

It had also the name of Colonia Felix Iulia, from Augustus Caesar, who made it a Roman colony, and named it in honour of his daughter (Plin. *H. N.* v. 20). The adjacent plain is renowned as the place where St. George, the patron saint of England, slew the dragon; in memory of which a small chapel was built upon the spot, dedicated at first to that Christian hero, but now changed to a mosque. It was frequently captured and recaptured during the Crusades.

Bes (*be-is* = *binae partes assis*). Two thirds of a unit. See As.

Besa or **Bessa** (βῆσα, βήσσα, βησίον). An Alexandrian vessel used both as a drinking-cup and for holding perfumes, etc. The vessel was named from having upon it the features of the Egyptian god Bes, modelled in the clay. It was in the shape of a flask, broad at the bottom and narrowing towards the top. See Krause, *Angeiologie*, 379, 380, 407, 408.

Bessi (Βέσσοι). A people of Thrace dwelling in a district known as Bessica, between Mount Rhodopé and the northern part of the river Hebrus.

Bessus (Βῆσσος). A satrap of Bactria under Darius III., who, after the defeat of Darius by Alexander the Great at Arbela (B.C. 331), seized him with the intention of carrying him as a prisoner to his own satrapy. Being hotly pursued by the Macedonians, he murdered his royal captive and made his own escape. He was subsequently delivered into the hands of Alexander, and that monarch, according to one account (Justin, xii. 5), gave him up for punishment to the brother of Darius. Plutarch, however, states that Alexander himself punished the offender in the following manner: He caused two straight trees to be bent, and one of his legs to be made fast to each; then suffering the trees to return to their former posture, his body was torn asunder by the violence of the recoil (Plut. *Alex.*). Arrian makes Alexander to have caused his nostrils to be slit, the tips of his ears to be cut off, and the offender, after this, to have been sent to Ecbatana, and put to death in the sight of all the inhabitants of the capital of Media.

Bestiarii (θηριομάχοι). Persons who fought with wild beasts in the games of the Circus. They were either persons who fought for the sake of pay, and who were allowed to bear arms; or criminals, who were usually permitted to have no means of defence against the wild beasts. The *bestiarii* who fought with the beasts for the sake of pay, and of whom there were great numbers in the

Bestiarii. (Bas-relief, Palazzo Orsini, Rome.)

latter days of the Republic and under the Empire, are always spoken of as distinct from the gladiators, who fought with one another. It appears that there were schools in Rome in which persons were trained to fight with wild beasts (*scholae bestiarum* or *bestiariorum*). See GLADIATORES.

Betrothal. See MATRIMONIUM; SPONSALIA.

Betting. See ALEA; PIGNUS; SPONSIO.

Biaiōn Diké (*βιαίων δίκη*). An action brought in any case of brutal violence, and brought under the jurisdiction of the Forty. In practice, it was mainly restricted to (1) the illegal seizure by force of any kind of property, especially of slaves; and (2) the rape, or attempted rape, of a free person.

Biānor (*Βιάνωρ*). A son of the river-god Tiber, and of Manto, daughter of Tiresias. Servius makes him the founder of Mantua, and identical with Ocnus.

Bias (*Βίας*). (1) The son of Amythaon and Idomené, was king of Argos, and brother to the famous soothsayer Melampus (q. v.). (2) One of the Seven Wise Men of Greece. He was son of Teutamus, and was born at Priené, in Ionia, about B.C. 570. Bias was a practical philosopher, studied the laws of his country, and employed his knowledge in the service of his friends, defending them in the courts of justice, settling their disputes. He made a noble use of his wealth. His advice, that the Ionians should fly before the victorious Cyrus to Sardinia, was not followed, and the victory of the army of Cyrus confirmed the correctness of his opinion. The inhabitants of Priené, when besieged by Mazares, resolved to abandon the city with their property. On this occasion Bias replied to one of his fellow-citizens, who expressed astonishment that he made no preparations for his departure, "I carry everything with me." He remained in his native country, where he died at a very advanced age. His countrymen buried him with splendour, and honoured his memory. Some of his apophthegms are still preserved.

Bibăculus, M. FURIUS. A Latin poet, born at Cremona about B.C. 103. He appears to have composed a turgid poem entitled *Aethiopis*, on the legend, very probably, of the Aethiopian Memnon; and also another on the mouths of the Rhine. The latter is thought to have formed part of an epic poem on Caesar's wars in Gaul. Both works are lost, and we have only a couple of fragments remaining. Horace (*Sat.* ii. 5, 40) ridicules a laughable verse of his, in which Iupiter is represented as spitting snow upon the Alps: *Iupiter hibernas cana nive conspuet Alpes.* This line occurred in the beginning of a poem which he had composed on the Gallic War. Quintilian (x. 1, 96) enumerates Bibaculus among the Roman iambic poets, and in another part of his work (viii. 6, 18) gives this same line, citing it as an instance of harsh metaphor. To render his parody more severe, Horace substitutes Furius himself for the monarch of the skies, and, to prevent all mistake, applies to the former a laughable species of designation, drawn directly from his personal appearance, *pingui tentus omaso*, "distended with his fat paunch."

Bibăsis (*βίβασις*). A gymnastic dance practised among the Spartans by both men and women. See SALTATIO.

Bibliopōla (*βιβλιοπώλης*). A bookseller. See LIBER.

Bibliothēca (*βιβλιοθήκη*). A library. (1) GREEK. The large libraries of the Assyrian and Egyptian monarchs were unknown to the Greeks till the time of the Ptolemies. We do indeed hear of a library formed by Pisistratus (Aul. Gell. vii. 17), which Aulus Gellius calls "the first public library"; of another by Polycrates, the tyrant of Samos (Athen. i. 3); and among private collectors we hear of Nicocrates of Cyprus, Euclid the Archon, Euripides (Athen. i. 3), Euthydemus (Xen. *Memor.* iv. 2), and Aristotle (Strabo, xiii. 1). But it was the Macedonian rulers of Alexandria who first created a public library on a large scale. Ptolemy Philadelphus collected books from all parts of Greece and Asia, the larger number of which he deposited in the Museum (q. v.), a building in the Bruchium quarter of Alexandria, and the rest in the Serapeum. Zenodotus was the first librarian, after him Callimachus (who made a catalogue called the *Πίνακες*), then Eratosthenes, then Apollonius, and then Aristophanes. The number of volumes in the two libraries seems to have been between 500,000 and 600,000. Books in foreign languages were brought to Alexandria and translated for the purpose of being placed in the library, and the Septuagint version of the Old Testament is said to have been made in this way. Galen tells us that the autograph original copies of Aeschylus, Sophocles, and Euripides were procured for the library.

This priceless collection suffered considerably in the siege of Alexandria by Iulius Caesar, in the destruction of the Bruchium quarter by Aurelian (A.D. 273), and by the edict of Theodosius for the destruction of the Serapeum (A.D. 389). It is said to have been destroyed by the Arabs in A.D. 640 (Gibbon, ch. 51), but this tradition is now largely discredited.

A rival library to that at Alexandria was started by the kings of Pergamus, but was transported to Egypt by Antony, who made a present of its 200,000 volumes to Cleopatra. By the second or first century B.C. there seem to have been libraries in most Greek towns. (For bibliography, see below.)

(2) ROMAN. The first public library in Rome was that founded by Asinius Pollio (Plin. *H. N.* vii. 30), and was in the Atrium Libertatis on the Aventine. Iulius Caesar had projected a grand Greek and Latin library, and had commissioned Varro to take measures for the establishment of it; but the scheme was prevented by his death (Suet. *Iul.* 44). The library of Pollio was followed by that of Augustus in the Temple of Apollo on the Palatine Hill (Suet. *Aug.* 29), another, the Bibliotheca Octaviana (so called from Augustus's sister Octavia), forming part of the Porticus Octavia. There were also libraries on the Capitol, in the Temple of Peace founded by Vespasian, in the palace of Tiberius, besides the Ulpian Library (so called after its founder, Trajan), which was the most famous (Gell. xi. 17; Dio Cass. lxviii. 16). This library was attached by Diocletian, as an ornament, to his *thermae*.

Private collections of books were made at Rome soon after the Second Punic War, sometimes from the spoils of Grecian or Eastern conquest. Thus Aemilius Paulus brought to Rome the library of Perseus, king of Macedonia; Sulla, that of Apellicon of Teos; Lucullus, the extensive one of the kings of Pontus, to which he gave the public free

access. The zeal of Cicero, Atticus, Varro, and others in increasing their libraries is well known. Serenus Sammonicus possessed a library of 62,000 books. Towards the end of the Republic it became, in fact, the fashion to have a room elegantly furnished as a library, and reserved for that purpose. However ignorant or unstudious a person might be, it was fashionable to appear learned by having a library, though he might never even read the titles of the books. Seneca (*De Tranq. An.* 9) condemns the rage for mere book-collecting, and rallies those who were more pleased with the outside than the inside. Lucian wrote a separate piece to expose this common folly.

We read of provincial libraries at Milan, Comum, Tibur, and Patrae.

A library generally had an eastern aspect (Vitruv. vi. 7). In Herculaneum a library, fully furnished, has been discovered. Round the walls, it had cases containing the books in rolls, and a rectangular case occupied the centre of the room: these cases were numbered. It was a very small room—so small that a person by stretching out his arms could touch both sides of it; yet it contained 1700 rolls. The cases were called either *armaria*, *loculamenta*, *foruli*, or *nidi*. Asinius Pollio had set the fashion in his public library of adorning the room with the portraits and busts of celebrated men, as well as statues of Minerva and the Muses. This example was soon followed in the private libraries of the rich. The *librarii a bibliotheca* or *bibliothecarii*, who had charge of the libraries, were usually slaves or freedmen. See LIBER.

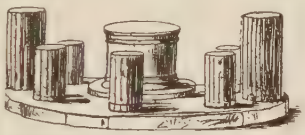
On ancient libraries, see Ritschl, *Die alexandrinischen Bibliotheken;* Birt, *Das antike Buchwesen* (1882); Egger, *Callimaque et l'Origine de la Bibliographie;* Polybius, xii. 27; Lipsius, *De Bibliothecis Syntagma* in Opera, vol. iii.; Becker-Göll, *Gallus*, ii. 418–424; Séraud, *Les Livres dans l'Antiquité*, chap. x.; Taylor, *The Transmission of Ancient Books* (1875); Bernhardy, *Röm. Litter.* p. 65; Castellani, *Delle Biblioteche nell' Antichità* (Bologna, 1884); and the interesting chapter on the subject in Lanciani, *Ancient Rome in the Light of Recent Discoveries* (1888).

Bibracté. The modern Autun; a large town of the Aedui in Gaul, on the Arroux, one of the branches of the Liger (Loire). Its modern name is a corruption of Augustodunum, by which it was known in imperial times.

Bibrax. The modern Bièvre; a town of the Remi in Gallia Belgica, not far from the Aisne.

Bibŭlus, L. CALPURNIUS. A Roman statesman, one of the aristocratic party. He married Porcia, the daughter of Cato. He was Caesar's colleague in the consulship; but finding it impossible to thwart his designs, retired to his own house and took so little part in the conduct of affairs as to give rise to the epigram which Suetonius (*Iul.* 20.) has preserved:

> Non Bibulo quicquam nuper sed Caesare factumst;
> Nam Bibulo fieri consule nil memini.



Biclinium. A couch for two persons, used at meals (Plaut. *Bacch.* iv. 3, 84). The word is a hybrid, half Latin and half Greek. See TRICLINIUM.

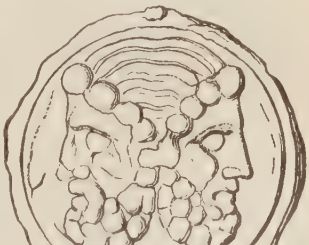
Bicornĭger. An epithet of Bacchus.

Bicos (*βῖκος*). An earthen vessel with handles, used by the Greeks for holding wine, and sometimes for salted meat or fish.

Bidens. (1) See RASTRUM. (2) See BIDENTAL.

Bidental. An erection on a spot where lightning had fallen. The name is derived from the sacrifice of a young sheep (*bidens*) by the *haruspices* at the place. Sometimes, from the resemblance of the structure to the mouth of a well, it was called *puteal*, as in the case of the *puteal Libonis* or *Scribonianum* at the eastern end of the Forum Romanum, and another in the Comitium. (See PUTEAL.) When lightning had struck a spot, it was held necessary *condere fulgur*, either *publice* or *privatim*, according to the nature of the place. If a man had been killed by the lightning, it was not lawful to burn the corpse, but he was buried on the spot (Plin. *H. N.* ii. § 145). Everything which had been scorched or scattered by the lightning was solemnly collected by the pontiff (who was at a later date assisted by the *haruspices*) and piled up with a low muttered prayer. A *bidens* was offered, and a small enclosure, neither paved nor covered, was built around the heap, and was further surrounded by an exterior wall, bearing the legend *fulgur conditum*. Many inscriptions of this kind are still extant, and at Pompeii a bidental has been discovered, of which the outer protection is formed by eight Doric columns (Mazois, *Ruines de Pompéi*, t. iv., pl. ii. iii.). It was not lawful to tread this *locus religiosus*, or even to look into it (Ammian. xxiii. 5).

Remains of a Bidental. (Pompeii.)



From Horace (*A. P.* 471) it appears to have been believed that a person who was guilty of profaning a bidental would be punished by the gods with frenzy.

Bidiaei (*βιδιαῖοι*, *βίδεοι* or *βίδυοι*). Magistrates in Sparta whose business was to inspect the gymnastic exercises. Their house of meeting (*ἀρχεῖον*) was in the market-place (Pausan. iii. 11, § 2). They were either five or six in number, and had a president who is called in inscriptions *πρέσβυς βιδέων* (*C. I. G.* i. 611). See GYMNASIUM.

Bidis (*Βῖδος*). A small town in Sicily, west of Syracuse.

Bier. See FERETRUM; FUNUS.

Bifrons. An epithet of Ianus (q. v.) as being represented with two faces.

Ianus Bifrons. (From a coin.)

Biga or **Bigae.** The Latin name for a chariot and pair. See CURRUS.

Bigamia. See MATRIMONIUM.

Bigāti, sc. *nummi.* Roman coins (denarii), having the device of a two-horsed chariot (*biga*). See DENARIUS.

Bigati Nummi.

Bilbĭlis. The modern Baubola or Bambola, a town

of the Celtiberi in Hispania Tarraconensis, famous as being the native place of the poet Martial, who often refers to it with pleasure and affection. (See Mart. i. 49; x. 103, 104; xii. 18.) It stood on a rocky height in a barren, rugged country through which ran the river Salo. Bilbilis was noted for its manufacture of arms, and near it were the baths named from it Aquae Bilbitanae.

Bilychnis. (Pompeii.)

Bilix. See TELA.

Bilychnis, sc. *lucerna*. A lamp furnished with two nozzles and wicks, so as to give out two separate flames (Pet. *Sat.* xxx. 2).

Bimāter. An epithet applied to Dionysus as having had, in a fashion, two mothers. See DIONYSUS.

Bingium. The modern Bingen; a town of Germania Prima, on the Rhine, west of Moguntiacum (Mayence). See Tac. *Hist.* iv. 70.

Bion (Βίων). (1) A Greek bucolic poet, who flourished in the second half of the second century B.C. He lived mostly in Sicily, where he is said to have died by poison. Besides a number of minor poems from his hand, we have a long descriptive epic called *The Dirge of Adonis*. His style is more remarkable for grace than for power or simplicity. (2) A native of Borysthenes, near the mouth of the Dnieper, who flourished about B.C. 250. Sold as a slave when a boy, he was freed by his master, who was a rhetorician. After studying at Athens, he lived for a considerable period at the court of Antigonus Gonatas in Macedonia. His sharp, incisive sayings were proverbial in antiquity, as in the passage of Horace (*Epist.* ii. 2, 60).

Bipalium. A double mattock. See PALA.

Bipennis. A two-edged axe. See SECURIS.

Birēmis (δίκωπος). See NAVIS.

Birrus or **Burrus** (βίρρος). A cloak or cape furnished with a hood; a heavy, coarse garment for use in bad weather. It was made of wool or beaver, with a long nap. The word is also used as synonymous with LACERNA, CUCULLUS, and SAGUM, all of which see.

Fisherman with Birrus. (From a Pompeian Statue.)

Bisaltes. A tribe dwelling in Macedonia.

Bisanthē (Βισάνθη). A Thracian town on the Propontis, subsequently known as Rhaedestum, whence its modern name Rodosto.

Bisellium. See SELLA.

Bissextum. See CALENDARIUM.

Bistŏnes (Βίστονες). A Thracian people who dwelt between Mount Rhodopé and the Aegean Sea, on Lake Bistonis, near Abdera. From the worship of Dionysus in Thrace, the female Bacchanals were called Bistonides. Pliny mentions one town as belonging to the Bistones, i. e. Tirida.

Bit. See FRENUM.

Bithynia (Βιθυνία). A district of Asia Minor, bounded on the west by Mysia, on the north by the Pontus Euxinus, on the east by Paphlagonia, and on the south by Phrygia Epictetus. It was possessed at an early period by Thracian tribes from the neighbourhood of the Strymon, called Thyni and Bithyni, of whom the former dwelt on the coast, the latter in the interior. The country was subdued by the Lydians, and afterwards became a part of the Persian Empire under Cyrus, and was governed by the satraps of Phrygia. During the decline of the Persian Empire, the northern part of the country became independent, under native princes, who resisted Alexander and his successors, and established a kingdom, which lasted till the death of Nicomedes III. (B.C. 74), who bequeathed it to the Romans. Under Augustus it was made a proconsular province. It was a fertile country, intersected with wooded mountains, the highest of which was the Mysian Olympus, on its southern border.

Coins of Bithynia, with the Heads of Roman Emperors.

The chief towns of Bithynia were Chalcedon, Prusa, Heraclea (Pontica), Nicaea, and Bithynium (Claudiopolis).

Biton (Βίτων) and **Cleŏbis** (Κλέοβις). The sons of Cydippé, a priestess of Heré at Argos. They were celebrated for their affection for their mother, whose chariot they once dragged during a festival to the Temple of Heré, a distance of forty-five stadia. The priestess prayed to the goddess to grant them what was best for mortals, and during the night they both died while asleep in the temple. (Herod. i. 31; Val. Max. v. 4; Cic. *Tusc. Disp.* i. 47).

Bitūmen. A word used by the Roman writers, especially Tacitus and Pliny, to indicate a species of mineral pitch or oil. The corresponding Greek word is ἄσφαλτος, the modern asphalt. It was brought chiefly from the Dead Sea (Asphaltites), and was used in building as a cement. In Syria it was quarried in solid blocks. In Zacynthus (Zante) there was and still is a pitch spring that has been at work for more than two thousand years. See Pliny, *H. N.* viii. 15; xxviii. 10.

Bituricum. The modern Bourges; known also in ancient times as AVARICUM; the chief town of the Bituriges, on the Avara (Evre), a branch of the Cher. The walls of the town are carefully described by Caesar (*B. G.* vii. 23), who besieged it and finally took it by assault in B.C. 52.

Bituriges. A numerous and powerful Keltic people in Gallia Aquitania, having in early times the supremacy over the other Kelts in Gaul. They

were divided into two tribes: (1) Bituriges Cubi, with Avaricum as their capital (Bourges); (2) Bituriges Vivisci or Ubisci—their capital was Burdigala (Bordeaux), on the left bank of the Garumna (Garonne).

Bivium. A road or street which branches into two forks (Plin. *H. N.* vi. 32; Verg. *Aen.* ix. 238); at the point of divergence between two such roads or streets in the town of Pompeii there is always found a fountain, as in the example here given, which represents a *bivium* in that city.

Bivium in Pompeii. (Rich.)

Bivouac. See Castra; Excubiae.

Bizōné (Βιζώνη). A city of Thrace on the Pontus.

Bizya (Βιζύη). A Thracian city on the Euxine Sea, northwest of Byzantium. The poets declare it to have been shunned by swallows because of the fate of Tereus (q. v.). See Ovid, *Met.* vi. 424 foll.

Blabēs Dikē (*βλάβης δίκη*). A general name for an action available in cases where one person had sustained a loss by the conduct of another, no matter whether the injury originated in a fault of omission or commission. The declaration of the plaintiff seems always to have begun with the words *Ἔβλαψέ με*, followed by the name of the defendant.

The proper Athenian court to take cognizance of the action was determined by the subject of litigation. Thus, a *βλάβη* in the market (cf. Aristoph. *Vesp.* 1407) would come before the Agoranomi; dangerous buildings, before the Astyonomi; commercial cases, before the Thesmothetae; and those relating to the law of inheritance, before the Archon Eponymus.

Blacksmiths. See Faber.

Blanket. See Babylonicum; Stragulum.

Blastophoenīces (Βλαστοφοίνικες). A people of Lusitania, of Phœnician origin. See Appian, *De Reb. Hisp.* vi. 56.

Blatta. A name given by Roman writers to an insect belonging to the orthoptera, of which the ancients knew several kinds. From their shunning the light, Vergil calls them *lucifugae*. The American cockroach (*blatta Americana*) is our species. See Purpura.

Blemўes (Βλέμυες). A people of Aethiopia, presumably fabulous, as they are described as having no heads, but the eyes and mouth in their breasts. (See Pliny, *H. N.* v. 8; Amm. Marcell. xiv. 4). The name is also written Blemmyes (Βλέμμυες).

Boadicēa or **Boudicēa.** A queen of the Iceni in Britain, having been shamefully treated by the Romans, who even ravished her two daughters, excited an insurrection of the Britons against their oppressors during the absence of Suetonius Paulinus, the Roman governor, on an expedition to the island of Mona. She took the Roman colonies of Camalodunum, Londinium, and other places, and slew nearly 70,000 Romans and their allies. She was at length defeated with great loss by Suetonius Paulinus, and put an end to her own life, A.D. 61. See Tacitus, *Ann.* xiv. 31; and Tennyson's noble poem, *Boadicea.*

Boats. See Navis.

Bocchus. (1) A king of Mauretania, and father-in-law of Iugurtha (q. v.), with whom at first he made war against the Romans, but whom he afterwards delivered up to Sulla, the quaestor of Marius, B.C. 106. (2) The son of the preceding, who took part in the Civil Wars. He was confirmed in his kingdom by Augustus.

Bodotria or **Boderia Aestuarium.** The Firth of Forth; an estuary on the eastern coast of Scotland. See Tacitus, *Agric.* 23 and 25.

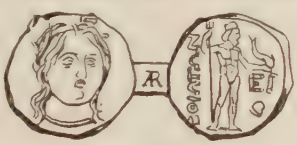
Boebēis (Βοιβηΐς). A lake in Thessaly near Mount Ossa (Herod. vii. 129).

Boeckh, Philipp August. An archæologist, born November 24th, 1785, at Karlsruhe. He entered the University of Halle in 1803, and was influenced by the remarkable prelections of F. A. Wolf (q. v.) to engage in the study of classical philology, of which he became professor at Heidelberg in 1809, leaving that chair to take the professorship of rhetoric and ancient literature at Berlin, where he lectured for some forty years with extraordinary success. His is one of the greatest names in the history of philology as a science, in that he conceived of it as an organically constituted whole; so that his lectures included grammar (formal and historical), exegesis, archæology proper, and the study of ancient literature, history, politics, religion, and society. In short, he aimed at an intellectual reproduction of antiquity on all its sides, as essential to a fruitful study of the classics. This view, which excited much opposition for a time, gave an undeniable impetus to profound and accurate scholarship. His great works are an edition of Pindar in 2 vols. (1811–22); his treatise *Die Staathaushaltung der Athener*, 2 vols. (1817; third ed., by Frankel, 1886)—a monument of subtle analysis, minute research, and vast learning; his *Metrologische Untersuchungen über Gewichte, Münzfusse und Masse des Alterthums* (1838); his *Urkunden über das Seewesen des attischen Staats* (1840); the *Corpus Inscriptionum Graecarum*, of which he began the publication at the cost of the Royal Academy of Berlin, and which has been continued by Franz, Kirchhoff, Curtius, Röhl, and others; editions of the *Antigone* of Sophocles (1843), and of the fragments ascribed to Philolaüs; besides a collection of lectures, essays, etc., with the title *Gesammelte kleine Schriften*, 7 vols. (1858–74). He died in Berlin, August 3d, 1867. See Von Leutsch, *Phil. Anz.* xvi. (1886).

Boëdromia (Βοηδρόμια). A festival celebrated at Athens on the seventh day of the month of Boëdromion, in honour of Apollo Boëdromios (Müller, *Dor.* ii. 8, § 5). The name Boëdromios, by which Apollo was called in Boeotia and other parts of Greece, seems to indicate that by this festival he was honoured as a martial god, who either by his actual presence or by his oracles afforded assistance in the dangers of war. The origin of the festival is, however, traced by different authors to different events in Grecian story. See Plutarch, *Theseus*, 27.

Boëdromion (Βοηδρομιών). The name of the third Attic month, answering to the latter half of September and the beginning of October. See Calendarium.

Boeotarches (Βοιωτάρχης). The Boeotians in ancient times occupied Arné in Thessaly (Thuc. i. 12). Sixty years after the taking of Troy they were expelled by the Thessalians, and settled in the country then called Cadmeis, but afterwards Boeotia. The leader of the Boeotians was King Opheltas. It would seem that their kings ruled the whole country from Thebes. Later on, the country was divided into several States, containing each a principal city, with its allies and dependants. The number and names of these independent States are differently given by different writers on the subject; we know, however, for certain that they formed a confederacy called the Boeotian League, with Thebes at its head, and Freeman is of opinion that the political union grew out of an older Amphictyony. Common sanctuaries were the temple of the Itonian Athené near Coronea, where the Pamboeotia were celebrated, and the Temple of Poseidon in Onchestus. Thucydides (iv. 93) mentions seven independent States: Thebes, Haliartus, Coronea, Copae, Thespiae, Tanagra, and Orchomenus; and we learn from inscriptions that, at one time or other, the following belonged to the same class: Anthedon, Lebadea, Hyettus, Acraephia, Chorsia (or Korsia, Demosth. *F. L.* § 141, etc.), Thisbé, Chaeronea. O. Müller (*Orchom.* p. 403) supposes there were originally fourteen free States. Probably the number differed at different times.



Each of the principal towns of Boeotia seems to have had its δῆμος and βουλή. The βουλή was presided over by an archon, who probably had succeeded to the priestly functions of the old kings, but possessed little, if any, executive authority. The polemarchs, who, in treaties and agreements, are mentioned next to the archon, had some executive authority, but did not command forces—e. g. they could imprison, and they directed the levies of troops. But, besides the archon of each separate State, there was an archon of the confederacy —ἄρχων ἐν κοινῷ Βοιωτῶν—most probably always a Theban. His name was affixed to all alliances and compacts which concerned the whole confederacy, and he was president of what Thucydides calls the four councils, who directed the affairs of the league (ἅπαν τὸ κῦρος ἔχουσι). On important questions they seem to have been united; for the same author speaks of them as ἡ βουλή, and informs us that the determinations of the Boeotarchs required the ratification of this body before they were valid. We may now explain who these Boeotarchs were. They were properly the military heads of the confederacy, chosen by the different States; but we also find them discharging the functions of an executive in various matters. In fact, they are represented by Thucydides as forming an alliance with foreign States; as receiving ambassadors on their return home; as negotiating with envoys from other countries, and acting as the representatives of the whole league, though the βουλή refused to sanction the measures they had resolved on in the particular case to which we are now alluding. Another instance in which the Boeotarchs appear as executive is their interference with Agesilaüs, on his embarking from Aulis for Asia (B.C. 396), when they prevented him offering sacrifice as he wished. Still, the principal duty of the Boeotarchs was of a military nature: thus, they led into the field the troops of their respective States; and when at home they took whatever measures were requisite to forward the military operations of the league or of their own State. For example, we read of one of the Theban Boeotarchs ordering the Thebans to come in arms to the ecclesia for the purpose of being ready to attack Plataea. Each State of the confederacy elected one Boeotarch, the Thebans two, although on one occasion—i. e. after the return of the exiles with Pelopidas (B.C. 379)—we read of there being three at Thebes. The total number from the whole confederacy varied with the number of the independent States. Mention is made of the Boeotarchs by Thucydides, in connection with the battle of Delium (B.C. 424). There is, however, a difference of opinion with respect to his meaning: some understand him to speak of eleven, some of twelve, and others of thirteen Boeotarchs. Dr. Arnold is disposed to adopt the last number; and we think the context is in favour of the opinion that there were then thirteen Boeotarchs, so that the number of free States was twelve. At the time of the battle of Leuctra (B.C. 371), we find seven Boeotarchs mentioned; on another occasion, when Greece was invaded by the Gauls (B.C. 279), we read of four. Livy states that there were twelve, but before the time (B.C. 171) to which his statement refers Plataea had been reunited to the league. Still the number mentioned in any case is no test of the actual number, inasmuch as we are not sure that all the Boeotarchs were sent out by their respective states on every expedition or to every battle.

The Boeotarchs, when engaged in military service, formed a council of war, the decisions of which were determined on by a majority of votes, the president being one of the two Theban Boeotarchs who commanded alternately. Their period of service was a year, beginning about the winter solstice; and whoever continued in office longer than his time was punishable with death both at Thebes and in other cities. Epaminondas and Pelopidas did so on their invasion of Laconia (B.C. 369), but their eminent services saved them; in fact, the judges did not even come to a vote respecting the former (οὐδὲ ἀρχὴν περὶ αὐτοῦ θέσθαι τὴν ψῆφον). At the expiration of the year, a Boeotarch was eligible to office a second time, and Pelopidas was repeatedly chosen. From the case of Epaminondas and Pelopidas, who were brought before Theban judges (δικασταί) for transgression of the law which limited the time of office, we may conclude that each Boeotarch was responsible to his own State alone, and not to the general body of the four councils.

Mention is made by Livy of an election of Boeotarchs. He further informs us that the league (*concilium*) was broken up by the Romans B.C. 171. Still, it must have been partially revived, as we are told of a second breaking-up by the Romans after the destruction of Corinth, B.C. 146. See Freeman, *Hist. of Federal Government* (1893), and Ten Brenjel, *De Foedere Boeotico* (Groningen, 1834).

Boeotia (Βοιωτία). A country of Greece proper, lying to the northwest of Attica, and shut in by the chains of Helicon, Cithaeron, Parnassus, and, towards the sea, Ptoüs; which mountains enclosed a large plain, constituting the chief part of the country. Numerous rivers, of which the Cephissus was the most important, descending from the heights, had probably stagnated for a long time, and formed lakes, of which the Copaïs was the largest. These same rivers appear to have formed

the soil of Boeotia, which is among the most fruitful in Greece. Boeotia was also perhaps the most thickly settled part of Greece, for no other could show an equal number of important cities. This country, as we learn from the concurrent testimony of Strabo, Pausanias, and other ancient writers, was first occupied by several barbarous clans, under the various names of Aeones, Ectenes, Temmices, and Hyantes. To these succeeded, according to the common account, Cadmus and his followers, who, after expelling some of the indigenous tribes above mentioned, and conciliating others, founded a city, which became afterwards so celebrated under the name of Thebes, and to which he gave the name of Cadmea. The descendants of Cadmus were compelled, subsequently, to evacuate Boeotia, after the capture of Thebes by the Epigoni, and to seek refuge in the country of the Illyrian Encheleës (Herod. v. 61). They regained possession, however, of their former territory, but were once more expelled, as we learn from Strabo, by a numerous horde of Thracians and others. On this occasion, having withdrawn into Thessaly, they united themselves with the people of Arné, a district of that province, and for the first time assumed the name of Boeotians. After a lapse of some years, they were compelled to abandon Thessaly, when they once more succeeded in re-establishing themselves in their original abode, to which they now communicated the name of Boeotia. This event, according to Thucydides, occurred about sixty years after the capture of Troy; but, in order to reconcile this account with the statement of Homer, who distinctly names the Boeotians among the Grecian forces assembled at that memorable siege, the historian admits that a Boeotian division (*ἀποδασμός*) had already settled in this province prior to the migration of the great body of the nation (i. 12).

Boeotian Coin.

The government of Boeotia remained under the monarchical form till the death of Xanthus, who fell in single combat with Melanthus the Messenian, when it was determined to adopt a republican constitution. This, though imperfectly known to us, appears to have been a compound of aristocratic and democratic principles, the former being apparent in the appointment of thirteen annual magistrates named Boeotarchs (see BOEOTARCHES), who presided over the military as well as civil departments; the latter in the establishment of four councils, which were possessed, in fact, of the sovereign authority, since all measures of importance were to be submitted to their deliberation. The general assembly of the Boeotian Republic was held in the temple of the Itonian Athené. From the extent and population of their territory the Boeotians might have played the first part in Greece, if they had not been prevented by the bad government of the cities, by the jealousy of Thebes, and the consequent want of union. And yet the example of Epaminondas (q. v.) and Pelopidas (q. v.) afterwards showed that the genius of two men could outweigh all these defects. The Boeotians were regarded by their neighbours, the Athenians, as naturally a stupid race. Much of this, however, was wilful exaggeration, and must be ascribed to the national enmity which seems to have existed from the earliest times between these two nations. Moreover, this country produced, in fact, many illustrious men, such as Hesiod, Pindar, Plutarch, Epaminondas, and Pelopidas. In Boeotia, too, Mount Helicon was sacred to the Muses, to whom also many of the fountains and rivers of the country were consecrated. In Boeotia are several celebrated ancient battle-fields, the former glory of which has been increased by later events; namely, Plataea (now the village Kokla), where Pausanias and Aristides established the liberty of Greece by their victory over Mardonius; Leuctra, where Epaminondas triumphed over the Spartans; Coronea, where the Spartan Agesilaüs defeated the Thebans; and Chaeronea, where Philip founded Macedonian supremacy on the ruins of Grecian freedom. Near Tanagra, the birthplace of Corinna, the best wine was produced; here also cocks were bred, of remarkable size, beauty, and courage, with which the Grecian cities, passionately fond of cock-fighting, were supplied.

The best-known towns of Boeotia were Orchomenus, Tegyra, Haliartus, Coronea, and Chaeronea, near Lake Copaïs; Larymna, Phocae, Aulis, Delium, and Oropus, near the Euripus; Thisbé, Ascra, Thespiae, and Leuctra, near the Gulf of Corinth; Thebae, in the plain between Lake Hylica and Mount Teumessus; Potniae and Therapnae, south of Thebes; and Plataeae, Erethrae, Eleum, Tanagra, and Pherae, in the valley of the Asopus.

Boëthius (better **Boëtius**), ANICIUS MANLIUS TORQUĀTUS SEVERĪNUS. A Roman statesman and scholar, born in Rome about A.D. 475, and one of the distinguished family of the Anicii, who had for some time been Christians. Having been left an orphan in his childhood, he was taken in his tenth year to Athens, where he remained eighteen years, and acquired a stock of knowledge far beyond the average. After his return to Rome, he was held in high esteem among his contemporaries for his learning and eloquence. He attracted the attention of Theodoric, who in A.D. 510 made him consul, and, in spite of his patriotic and independent attitude, gave him a prominent share in the government. The trial of the consul Albinus, however, brought with it the ruin of Boëthius. Albinus was accused of maintaining a secret understanding with the Byzantine court, and Boëthius stood up boldly in his defence, declaring that if Albinus was guilty, so was he, and the whole Senate with him. Thus involved in the same charge, he was sentenced to death by the cowardly assembly whose cause he had represented. He was thrown into prison at Pavia, and executed in the year 525. While in prison he wrote his famous work, *De Consolatione Philosophiae*, in five books, a splendid testimony to his noble mind and to his scholarly attainments. The *editio princeps* was published at Nuremberg in 1473 by A. Coburger. An Anglo-Saxon version made by Alfred the Great exists, of which an edition by Fox appeared in London in 1864. A good edition of the Latin text is that of Peiper (Leipzig, 1871).

Besides writing the treatise *De Consolatione*, Boëthius also translated many works on philosophy, rhetoric, and mathematics from the Greek,

most of which are extant. His translations from Aristotle gave him much influence in the development of scholasticism; and his manuals of geometry, arithmetic, and music were long used in the mediæval schools. He was the last Roman writer of any note to show a good knowledge of the Greek language and literature.

Bogud. See BOCCHUS.

Boiae (κλοιός). A collar of wood or iron put on the necks of slaves or criminals as a punishment. See the pun in Plaut. *Capt.* iv. 2, 109.

Boii. One of the most powerful of the Keltic people, said to have dwelt originally in Gallia Transalpina, but in what part of the country is uncertain. At an early time they migrated in two great swarms, one of which crossed the Alps and settled in the country between the Po and the Apennines; the other crossed the Rhine and settled in the part of Germany called Boihemum (Böhmen, Bohemia) after them, and between the Danube and the Tyrol. The Boii in Italy long carried on a fierce struggle with the Romans, but they were at length subdued by the consul P. Scipio in B.C. 191, and subsequently incorporated in the province of Gallia Cisalpina. The Boii in Germany maintained their power longer, but were at length subdued by the Marcomanni, and expelled from the country.

Bola, Bolae, or Volae. An ancient town of the Aequi, belonging to the Latin League.

Bolbé (Βόλβη). A lake in Macedonia, emptying itself by a short river into the Strymonic Gulf, near Bromiscus and Aulon.

Bolbitĭné (Βολβιτίνη). Now Rosetta; a city of Lower Egypt, near the mouth of a branch of the Nile (the westernmost but one), which was called the Bolbitine mouth (τὸ Βολβίτινον στόμα).

Bolster. See CULCITA; PULVINUS.

Bombycĭnum (from βόμβυξ, "a silk-worm"). One of the names applied to silk, for which see SERICUM.

Bombylius (βομβύλιος). A drinking-vessel with a very narrow mouth, whence it is called σύστομος or στενόστομος. The name is supposed to have been formed in imitation of the noise which water or any liquid makes in passing through a narrow opening.

Bombyx (βόμβυξ). The silk-worm. See SERICUM.

Bomilcar. A Numidian, deep in the confidence of Iugurtha. When Iugurtha was at Rome, in B.C. 109, Bomilcar effected for him the assassination of Massiva. In B.C. 107, he plotted against Iugurtha. See IUGURTHA.

Bomonīkes (βωμονίκης). Among the rigorous exercises to which the Spartan youths were subjected was a scourging before the altar of Artemis Orthia or Orthosia. He who held out longest under the scourging was styled Bomonikes—a great honour. See Plutarch, *Inst. Lac.* 239, 32.

Bomos (βωμός). An altar. See ARA.

Bona. In Roman law, the word *bona* is (1) sometimes used to express the whole of a man's property; and in the phrases *bonorum emptio, cessio, possessio*, the word *bona* has this meaning. It expresses all that concerns a man's proprietary position, whether as owner, possessor, creditor, or debtor. Thus the word *bona* is simply the property as an object; it does not express the nature of the relation between it and the person who has the ownership or enjoyment of it.

(2) In some places the word *bona* is used to signify a man's assets, i. e. his property after the deduction of that which he owes. It is also used for separate portions of a man's property.

The legal expression *in bonis*, as opposed to *dominium* or Quiritary ownership, means that property is held under a praetorian or equitable, and not under a civil or legal, title. The distinction is explained in the following passage of Gaius (ii. 40): "Among foreigners (*peregrini*) there is only one kind of ownership (*dominium*), so that a man is either the owner of a thing or he is not. And this was formerly the case among the Roman people; for a man was either owner *ex iure Quiritium*, or not owner at all. But afterwards the ownership was divided, so that now one man may be the owner of a thing according to strict law (*dominus ex iure Quiritium*), and at the same time another may be entitled to the beneficial ownership of it (*in bonis habere*). For instance, if I do not convey to you a *res mancipi*, either by the form of *mancipatio* or of *in iure cessio*, but simply deliver it to you, you acquire the praetorian title to the thing, but it will remain mine *ex iure Quiritium*, until possession gives you a civil title by usucaption. For when the usucaption is once complete, from that time it begins to be yours absolutely (*pleno iure*); that is, it is yours both *in bonis* and also yours *ex iure Quiritium*, just as if it had been mancipated to you, or transferred to you by *in iure cessio*."

Quiritary ownership originally and properly signified that ownership of a thing which was recognized by the law; it did not express a compound, but a simple notion, which was that of absolute ownership. But when it was once established that one man might have the Quiritary ownership, and another the sole right to the enjoyment of the same thing, the complete notion of Quiritary ownership became a notion compounded of the strict legal notion of ownership and that of the right to enjoy, as united in the same person. And as a man might have both the Quiritary ownership and the right to the enjoyment of a thing, so one might have the Quiritary ownership only, and another might have the enjoyment of it only. This bare ownership was sometimes expressed by the same terms (*ex iure Quiritium*) as that ownership which was complete, but sometimes it was appropriately called *nudum ius Quiritium* (Gaius, iii. 100). The historical origin of this double ownership is unknown. See DOMINIUM; IUS; MANCIPIUM.

Bona Cadūca. Caducum (from *cado*) signifies "that which falls," and in its general legal sense might be anything without an owner, or what the person entitled to neglected to take (Cic. *De Or.* iii. 31; *Phil.* x. 5); but the strict legal sense of *caducum* and *bona caduca* is that stated by Ulpian (*Fragm.* tit. xvii. *de caducis*), which is as follows:

If a thing is left by will to a person, so that he might take it by the *ius civile*, but from some cause does not take it, that thing is called *caducum*, as if it had fallen from him; for instance, if a legacy was left to an unmarried person, or a *Latinus Iunianus*, and the unmarried person did not within a hundred days obey the law (i. e. by marrying),

or if within the same time the *Latinus* did not obtain the *ius Quiritium*, or if a *heres ex parte* or a legatee died or became a *peregrinus* before the opening of the will, the thing was *caducum*.

Caducum, or lapse of a devise, implies that a valid devise has been made, which the devisee is unable or unwilling to take.

Caducum further implies that the will of which the lapsed devise is a part has come into operation. Strictly speaking, a devise which failed in the testator's lifetime was not *caducum;* it was, however, treated like a *caducum*, and so said to be *in causa caduci* (*Cod.* vi. 51, 2).

Either a share of an inheritance or a particular *legatum* might become *caducum*. The law alluded to in the passage of Ulpian cited above is the Lex Iulia et Papia Poppaea. This law, which was passed in the time of Augustus (A.D. 9), had the double object of encouraging marriages and enriching the treasury — *aerarium* (Tac. *Ann.* iii. 25)—and contained with reference to these two objects a great number of provisions. Martial (v. 75) alludes to a person who married in order to comply with the law. For the *dos caduca*, see Dos.

Bona Dea ("The good goddess"). An Italian deity, supposed to preside over the earth and all the blessings which spring from it. She was also the patron goddess of chastity and fruitfulness in women. The names Fauna, Maia, and Ops were originally no more than varying appellations given by the priests to the Bona Dea. She is represented in works of art with a sceptre in her left hand, a wreath of vine leaves on her head, and a jar of wine at her side. Near her image was a consecrated serpent; indeed, a number of tame serpents were kept in her temple, which was situated in Rome on the slope of the Aventine. All kinds of healing plants were preserved in her sanctuary. She was regarded in Rome as an austere virgin goddess, whose temple men were forbidden to enter. She belonged, accordingly, to the circle of deities who were worshipped by the Vestal Virgins. The anniversary of the foundation of her temple was held on the 1st of May, when prayers were offered up to her for the averting of earthquakes. Besides this, a secret festival was held to her on behalf of the public welfare, in the house of the officiating consul or praetor of the city, by matrons and the Vestal Virgins, on the night of May 3–4. The mistress of the house presided. No man was allowed to be present at this celebration, or even to hear the name of the goddess. After offering a sacrifice of sucking pigs, the women performed a dance, accompanied by stringed and wind instruments. Under the Empire the festival degenerated into a mystic performance of extravagant and indecent character (Juv. vi. 313).

Bona Fides. A term frequently used by Roman writers, especially by the jurists, and is opposed in meaning to *mala fides* and *dolus malus*. It implies the absence of all fraud, insincerity, unfair dealing, and bad faith, and is hence a necessary ingredient in all binding contracts. *Bona fide possidere* is said of him who has acquired the possession of a thing under what he believes to be a good title.

In various actions arising out of mutual dealings, such as buying and selling, lending and hiring, partnership, and others, *bona fides* is equivalent to *aequum* and *iustum;* and such actions were sometimes called *bonae fidei actiones*. The formula of the praetor, which was the authority of the iudex, empowered him in such cases to inquire and determine *ex bona fide*, that is, according to the real merits of the case.

Bonam Copiam Iurāre. A phrase expressive of the act of taking an oath to one's solvency (Varro, *L. L.* vii. 105). The expression used by Cicero (*Ad Fam.* ix. 16), *bonam copiam eiurare*, is usually interpreted to mean the taking of an oath by a debtor to the fact of his insolvency. See Bonorum Cessio.

Bona Vacantia. The property left by a person at death not disposed of by will and when there is no legal heir. See Heres.

Bonna. The modern Bonn. A town on the left bank of the Rhine, in Lower Germany, and in the territory of the Ubii; a strong fortress of the Romans, and the regular quarters of a Roman legion. See Germania.

Bononia. (1) See Felsina. (2) See Gesoriacum.

Bonōrum Cessio. As will be seen by reference to the article Bonam Copiam Iurare, the principle of relieving insolvent debtors, who fulfilled certain conditions, from liability to imprisonment was recognized to some extent under the Republic. Iulius Caesar, when consul, B.C. 48, as a temporary measure of relief in time of distress, owing to the Civil War, discharged debtors who made over their property to their creditors from their debts (Caes. *De Bell. Civ.* iii. 1; cf. Poste's *Gaius*, p. 347, 2d ed.).

Cessio bonorum was introduced by a Lex Iulia. This law allowed an insolvent debtor to make a voluntary assignment of his property to his creditors. By making such assignment, the debtor obtained three advantages: (1) He escaped imprisonment. (2) He did not become *infamis*. (3) In respect to property acquired subsequently to the assignment, he had the *beneficium competentiae* when sued by his old creditors—i. e. he could retain sufficient for his bare maintenance. He had not this right against creditors who had become so subsequent to the act of assignment. The property assigned by the debtor was sold by the process of *bonorum emptio* (q. v.), the proceeds being distributed among the creditors. It is to be noticed that the assignment did not operate as a discharge, after-acquired property being liable, subject to the limitation explained above.

Bonōrum Collatio. By the rules of the civil law, emancipated children had no rights to the inheritance of their father, since they had become strangers to his family. (See Emancipatio.) But in course of time the praetor granted to emancipated children the privilege of equal succession with those who remained in the power of the father at the time of his death. This favour was granted to emancipated children only on condition that they should bring into one common stock, to be distributed with their father's estate, whatever property they had at the time of the father's death, and which would have been acquired for the father in case they had still remained in his power. This was called *collatio bonorum*.

Bonōrum Emptio. The technical term in Roman jurisprudence for the seizure of goods. If a

man sentenced to pay a certain sum did not perform his obligation within thirty days, the creditor obtained permission from the praetor to attach his goods. After a renewed respite of thirty days the sale followed by auction to the highest bidder, the intending purchaser bidding for the whole property, with its assets and liabilities. The former proprietor might intervene and promise payment at any time before the fall of the hammer. The property once knocked down to him, the buyer became the absolute owner. A person against whom these proceedings were taken incurred *infamia*. See MANUS INIECTIO.

Bonōrum Possessio. The technical term in Roman law for the succession which the praetor gave to the inheritance of a deceased person. See HERES.

Bonus Eventus. A Roman deity first worshipped by the rustics, and represented as holding in one hand a cup and in the other a spray

Bonus Eventus. (British Museum.)

of wheat or other grain (Varro, *R. R.* i.). He personified the favourable issue of events.

Books and the Book Trade. See BIBLIOTHECA; LIBER.

Boōnae (*βοῶναι*). Persons in Athens who purchased oxen for the public sacrifices and feasts. They are spoken of by Demosthenes in conjunction with the *ἱεροποιοί* and those who presided over the mysteries, and are ranked by Libanius (*Declam.* 8) with the *σιτῶναι*, generals, and ambassadors. They were elected by the Ecclesia. There is often found mention of them on inscriptions as paying into the treasury the money received for the hides of sacrificed animals (*δερματικόν*).

Boōtes. See ARCTOS.

Bopp, FRANZ. The founder of the science of comparative philology, and one of the pioneers of Sanskrit studies in Germany, born at Mayence, September 14th, 1791. His parents having removed to Aschaffenburg, the young Bopp there attended the gymnasium, and afterwards enjoyed the instruction of Windischmann. At the suggestion of Windischmann, he went to Paris in 1812 to continue his studies in Oriental languages, especially in Sanskrit, and after five years in Paris to London, where he remained until 1820. During his sojourn in Paris and London he received from the Bavarian Academy of Sciences an annual stipend of 1000 florins. In 1820 he was anxious to be made Professor of Sanskrit at Würzburg, but the authorities considered it entirely unnecessary to create a chair for that language. In the following year, however, the brothers Von Humboldt, after great exertions in his behalf, had him appointed *professor extraordinarius* for Oriental languages and the science of language at Berlin, where he was made a member of the Academy in 1822, and *professor ordinarius* in 1825—a position in which he was active until stricken with apoplexy in 1864. He died October 23d, 1867.

His principal works in the field of comparative philology are: *Ueber das Conjugationssystem der Sanskrit-Sprache in Vergleichung mit jenem der griechischen, lateinischen, persischen und germanischen Sprache* (Frankfort-on-the-Main, 1816), published in an English translation in 1819; *Vergleichende Grammatik des Sanskrit, Send, Armenischen, Griechischen, Lateinischen, Litauischen, Altslawischen, Gotischen und Deutschen* (Berlin, 1833–52; second edition 1856–61, third edition, posthumously, 1868–71); *Die keltischen Sprachen in ihrem Verhältnisse zum Sanskrit u. s. w.* (Berlin, 1839); *Ueber das Albanesische in seinen verwandtschaftlichen Beziehungen* (Berlin, 1855); *Vergleichendes Accentuationssystem* (Berlin, 1854). His Sanskrit publications include considerable extracts from the *Mahabhârata*, very valuable works on Sanskrit grammar, and the *Glossarium Sanscritum*.

Bopp was not, it is true, the first to remark upon the striking resemblance of Sanskrit to the classical and other European languages. That resemblance had been observed before 1588 by Filippo Sassetti, and subsequently by many others, noticeably by Père Cœurdoux in 1767, and by Sir William Jones in 1786; Jones claimed a common origin for Sanskrit, Persian, Greek, Latin, Gothic, and Keltic—an idea carried out in much greater detail by Friedrich von Schlegel (q. v.) in 1808. It was, however, reserved for Bopp to put this startling doctrine (for such, and even preposterous, it seemed to most classical scholars of that day) upon a scientific basis; and this he did, at the early age of twenty-five. His predecessors had noted chiefly the resemblances between individual words of Sanskrit and those other languages; Bopp turned his gaze upon the grammatical structure of all these tongues, and was convinced of its substantial identity in them all. The results of his investigations are embodied in the *Conjugationssystem*. The same method was thereafter applied successfully to the investigation of other families of speech. Bopp's object was, however, not merely the comparison of languages—this was with him only the means to an end—he sought to explain by this method the genesis of inflectional forms. His views on this point seem to have passed through three stages of development. (1) The first stage is represented by the *Conjugationssystem* of 1816. Friedr. von Schlegel (*Sprache und Weisheit der Indier*, 1808) had divided all languages into two groups, the *inflectional* and the *agglutinative;* inflection he called exclusively an *inner change* of the word, and denied to "suffixes" a derivation from originally independent words. Bopp adopted Schlegel's theory, but expanded it thus: a word may not only modify itself internally, but may absorb the "verbum substantivum," *esse*.

Bopp was clearly still under the influence of a doctrine commonly held at that time, that every sentence is necessarily a reflection of a logical judgment; as the result of this doctrine he declares that in strictness there can exist but one real verb, the verb *to be*. (2) Three years later, in the English edition of the *Conjugationssystem*, Bopp

adopted the principle of *composition* to account for inflectional forms. The doctrine of roots had been advanced in Europe some forty years before, and Bopp, finding it not only substantiated by the structure of Sanskrit, but also expressed in detail by the ancient Hindû grammarians, made it his own task to account for the existing forms of language. A more important deviation from Schlegel's views is Bopp's derivation of the personal endings of the verb from the personal pronouns—an idea probably obtained indirectly from observation of the Semitic languages. "Of real inflections (in the Schlegelian sense) Bopp now recognizes only certain vowel-changes and the reduplication." (3) In his *Comparative Grammar* (1833), Bopp, breaking completely with Schlegel, commits himself to the "agglutinative" theory, according to which all words of Indo-European languages are derived from monosyllabic roots, which are either *verbal* or *pronominal;* the forms of inflection arise entirely from the combination of different roots, of which, in each combination, all but one have assumed a purely subordinate and modifying character. A curious *symbolic* principle is also advanced by him (e. g. the feminine forms are "fuller and rounder"), and a *mechanical* principle of balance, regulating the "weight" of syllables. Bopp speaks often of "physical laws" (which are nowadays called "phonetic laws"), and draws frequent metaphors from the natural sciences. Of great significance for his linguistic views are also his frequent personification of language, and the persistence with which he speaks only of its *decay*, of deterioration from an earlier stage of perfection, and not of its simultaneous *growth*.

Bopp's discoveries resulted less from any strictly scientific method of investigation instituted by him than from his remarkable genius, and it can therefore hardly be said that he founded a school. Though his discoveries needed much supplementing in detail (which they received in very great measure through the learning and genius of Pott); though his inclusion of the Malay-Polynesian languages in the Indo-European group has been entirely rejected by later scholars; and though his *Comparative Grammar* has been superseded by later works; yet the foundations of comparative philology are still in the main as he constructed them; and but for him linguistic students might still be building upon sand, as they built, and could not but build, ere his day.

The most recent and extensive work concerning Bopp is S. Lefmann's *Franz Bopp: sein Leben und seine Wissenschaft* (vol. i., Berlin, 1891), containing in a voluminous appendix Bopp's correspondence, never before published, with Windischmann, De Sacy, and other scholars of note. The best characterization of Bopp's scientific position is, however, still to be found in Delbrück's *Introduction to the Study of Language* (English translation by Miss Channing, Leipzig, 1884), from which the above sketch is largely taken. See also an article by A. Kuhn in *Unsere Zeit*, 1868; and one by Brugmann and Streitberg, forming an Introduction to vol. i. (1891–92) of their new periodical, *Indogermanische Forschungen*. The same volume also contains a notice of Lefmann's book.

Boots and Shoes. See CALCEUS; CALIGA; CREPIDA; SOLEA; SUTOR.

Borbetomăgus. The modern Worms, also called Vangiones, and at a later time Wormatia; a town of the Vangiones on the left bank of the Rhine in Upper Germany.

Boreas (*Βορέας*). In Greek mythology, the North Wind, son of Astraeus and Eos, brother of Zephyrus, Eurus, and Notus. His home was in the Thracian Salmydessus, on the Black Sea, whither he carried Orithyia from the games on the Ilissus, when her father, Erechtheus, king of Athens, had refused her to him in marriage. Their children were Calaïs and Zetes, the so-called Boreades, Cleopatra, the wife of Phineus, and Chioné, the beloved of Poseidon. (See EUMOLPUS.) It was this

Boreas. (Relief from the Tower of the Winds at Athens.)

relationship which was referred to in the oracle given to the Athenians, when the fleet of Xerxes was approaching, that "they should call upon their brother-in-law." Boreas answered their prayer and sacrifice by destroying a part of the enemy's fleet on the promontory of Sepias, whereupon they built him an altar on the banks of the Ilissus.

Boreasmi or **Boreasmus** (*βορεασμοί* or *βορεασμός*). A festival celebrated by the Athenians in honour of Boreas, which, as Herodotus (vii. 189) seems to think, was instituted during the Persian War, when the Athenians, being commanded by an oracle to invoke their *γαμβρὸς ἐπίκουρος*, prayed to Boreas. The fleet of Xerxes was soon afterwards almost entirely destroyed by a north wind, near Cape Sepias, and the grateful Athenians erected to his honour a temple on the banks of the Ilissus. Possibly, however, this merely revived an earlier celebration. A similar festival of Boreas was celebrated annually at Megalopolis, and by the Thurians. See Aelian, *V. H.* xii. 61.

Borsippa (*τὰ Βόρσιππα*). A suburb of Babylon, about eight miles distant from that city, and containing the pile Birs Nimroud, generally regarded as the remains of the Tower of Babel. See BABEL, TOWER OF.

Borysthĕnes (*Βορυσθένης*), afterwards DANAPRIS. The modern Dnieper, a river of European Sarmatia, flowing into the Euxine. Near its mouth, and at its junction with the Hypanis, lay the town of Borysthenes or Borysthenis (Kudak), also called Olbia, Olbiopolis, and Miletopolis, a colony of Miletus, and the most important Greek city on the north of the Euxine.

Bosius. See DUBOIS, SIMÉON.

Bospŏrus (*Βόσπορος*). A name applied to a strait of the sea. There were two straits known in antiquity by this appellation, namely, the Thracian and the Cimmerian Bosporus; the former now known by the name of the Straits or Channel of Constantinople, the latter the Straits of Caffa or

Theodosia, or, according to a later denomination, the Straits of Yenikalé. It connects the Palus Maeotis (Sea of Azov) with the Euxine. Various reasons have been assigned for the name. The best is that which makes the appellation refer to the early passage of agricultural knowledge from East to West (*βοῦς*, an ox, and *πόρος*, a passage). Nymphius tells us, on the authority of Accarion, that the Phrygians, desiring to pass the Thracian strait, built a vessel, on whose prow was the figure of an ox, calling the strait over which it carried them *βοὸς πόρος*, Bosporus, or the ox's passage (cf. Oxford in English). Dionysius of Halicarnassus, Valerius Flaccus and others of the ancient writers refer the name to the history of Io, who, when transformed into a cow (*βοῦς*) by Heré, swam across this strait to avoid her tormentor. Arrian says that the Phrygians were directed by an oracle to follow the route which an ox would point out to them, and that on one being roused by them for this purpose, it swam across the strait. (See Aesch. *Prom. Vinc.* 732; Long. i. 30.) The strait of the Thracian Bosporus properly extended from the Cyanean Rocks to the harbour of Byzantium or Constantinople. It is said to be sixteen miles in length, including the windings of its course, and its ordinary breadth about one and a half miles. In several places, however, it is very narrow; and the ancients relate that a person might hear birds sing on the opposite side, and that two persons might converse across it. Here Darius (q. v.) is said to have crossed on his expedition against the Scythians.

Map of the Propontis and the Thracian Bosporus.

Bostra (*τὰ Βόστρα*; O. T. Bozrah; Busrah). A city of Arabia, in an oasis of the Syrian Desert, south of Damascus.

Bottia (*Βοττία*) or **Bottiaea** (*Βοττιαία*). A district in Macedonia, on the right bank of the river Axius, extending in the time of Thucydides to Pieria on the west. The Bottiaei were a Thracian people, who, being driven out of the country by the Macedonians, settled in that part of the Macedonian Chalcidicé north of Olynthus which was called Botticé.

Botŭlus (*ἀλλᾶς*, *φύσκη*). A sausage; a favourite food of both Greeks and Romans, and sold in the streets and places of public resort by venders known as *botularii* (Mart. i. 42, 9). These sausages, like our own, were usually made of pork, cooked in a frying-pan, and eaten hot (Juv. x. 355; Petron. 31). Sausages were also made of the blood of animals, like the German *Blutwurst* (Tertull. *Apol.* 9). The name *tomaculum* is occasionally used for *botulus*, but rather means sausage-meat.

Bouae (*βοῦαι*). See AGELA.

Boukŏloi (*βούκολοι*). Members of a religious college at Pergamum during the Roman Empire, engaged in celebrating the mysteries of Dionysus *καθηγήμων*. There appear to have been colleges of a similar name throughout Ionia and Pontus. See Foucart, *Les Associations Religieuses chez les Grecs*, pp. 114–116.

Boulé (*Βουλή*). In the Homeric Age, a Boulé, or council of principal men, was probably a well-established and important feature in every Greek state. The Boulé of the Greek army before Troy consists of the kings or principal chieftains (*βασιλῆες*, *γέροντες*), who meet at the call of Agamemnon, commander-in-chief, for free and equal debate on questions of policy.

In historical times, a Boulé is found in very many Greek states, but it is only at Athens that the institution is intimately known to us. Here there were, strictly speaking, two bodies bearing this name—the Senate of the Areopagus (see AREOPAGUS) and the Senate of Five Hundred. It is the latter body which is always meant when the Boulé is spoken of without further designation, and it is this which is here described.

COMPOSITION, ORGANIZATION, ETC.—The membership of the Boulé, which under the Solonian constitution had been 400, 100 from each of the four old tribes, was raised by Clisthenes (B.C. 508–507) to 500, 50 from each of the ten new tribes. When, in 306, the tribes were increased to twelve, the Boulé was increased to 600, but in the time of Hadrian it was reduced to 500 again. The senators (*βουλευταί*) had to be at least thirty years of age. Their term of service was from the beginning to the end of an Attic year. They were selected by lot; the senators of one tribe not being taken indiscriminately from the entire tribe, but so that each deme of the tribe should have a fixed number of members. Possibly the demes nominated candidates by ballot, and the lot was used only to select the necessary number from among these nominees. Every senator, before entering into office, had to undergo an examination (*δοκιμασία*) by the retiring Senate. At the expiration of his term he had to render an account (*εὔθυνα*) of his official career.

In order to facilitate the despatch of business and to secure rotation of authority, the year was divided into ten periods (35 or 36 days each, in ordinary years), called *prytanies* (*πρυτανεῖαι*); and the senators of each tribe in turn assumed the leadership for one prytany, under the name of *prytanes* (*πρυτάνεις*). The prytanes had their headquarters in the *prytaneum* (*πρυτανεῖον*), or *tholos* (*θόλος*), a circular building near the Senate-house (*βουλευτήριον*). Matters of business could here be brought before them, with a view to prompt consideration by Senate and Ecclesia. Every day one of the prytanes was selected by lot as *epistates* (*ἐπιστάτης τῶν πρυτανέων*). He kept the public

seal and the keys of the temples in which were deposited the public treasure and the public archives. In the fifth century this epistates also presided at the meeting of the Boulé held on his day, as well as at the meeting of the Ecclesia, if one was held. Early in the fourth century, perhaps in 378–377, a more complicated method of securing a chairman was introduced. The aforesaid epistates selected by lot nine *proëdri* (*πρόεδροι*), one from each of the non-prytanizing tribes, and out of the proëdri a second *epistates* (*ἐπιστάτης τῶν προέδρων*), to serve as chairman and carry forward, with the assistance of his fellow-proëdri, the legislative business of the day. No one could serve as *ἐπιστάτης τῶν πρυτανέων* or as *ἐπιστάτης τῶν προ-*

Example of "Boustrophedon" Writing. (From Sigeum.)

έδρων for more than one day in the same year. The Boulé had also a secretary (*γραμματεύς*), who kept the records of both Boulé and Ecclesia. A session was held every day, except holidays; there would perhaps be 300 sessions in a year. The usual place of meeting was the *βουλευτήριον*, near the Agora. The pay for attendance was, in Aristotle's time, five obols per day.

FUNCTIONS: (1) *Legislative.* — According to the theory of the Athenian constitution, no subject could be acted upon in the Ecclesia until it had been considered in the Boulé and a bill (*προβούλευμα*) there drawn up. The Boulé, however, was a mere committee of the Ecclesia, not a co-ordinate legislative body. Its concurrence was not necessary to the passage of a measure.

(2) *Administrative.* — These were very numerous and extensive. For example: the Boulé decided on the claims of pauper cripples to receive the dole provided for by law; it determined who should belong to the cavalry (*ἱππεῖς*), and inspected the cavalry horses, condemning the unfit; it superintended the navy and the docks; above all, it had a general oversight of the public finance, presiding over the farming of taxes, the renting of mines, payments to the special financial officials, etc. These and other administrative duties doubtless constituted the bulk of the work of the Boulé.

(3) *Judicial.* — The Boulé, like other magistracies, could punish those who violated its authority. It could also, either of its own motion or on the denunciation (*εἰσαγγελία*) of a private citizen, pass sentence on officials, especially financial officials, for malfeasance in office. In the period of the developed democracy its power, in most cases, seems to have been limited to the imposition of a fine of 500 drachmas. The evidence, however, on this point is confusing. See J. W. Headlam, *Election by Lot at Athens*, chap. ii.

Bouleuseos Graphé (*βουλεύσεως γραφή*). An impeachment for conspiracy. In this case *βουλεύσεως* is the abbreviated form of *ἐπιβουλεύσεως*, and is the name for two very different actions at Attic law. (1) An action for conspiracy against life, and instituted (*a*) by the person attacked, if competent, or by his or her legal patron (*κύριος*); or (*b*) if the plot succeeded, by near kinsmen or the *κύριος*. (2) An action against the person who had wrongfully inscribed another as state debtor. See PSEUDENGRAPHÉS GRAPHÉ.

Bouleuterion (*βουλευτήριον*). See BOULÉ.

Boustrophēdon (*βουστροφηδόν*). The zigzag method of writing—i.e. alternately from right to left, and left to right. See ALPHABET.

Bovillae. An ancient town in Latium at the foot of the Alban Mountains, on the Appian Way, about ten miles from Rome. Near it Clodius was killed by Milo (B.C. 52).

Bows and Arrows. See ARCUS; PHARETRA; SAGITTA.

Brabēum, Brabium, or **Bravium** (*βραβεῖον*). A prize given to the winner at the public games (Prudent. *Περὶ Στεφ.* v. 538). The cry *bravo*, as a sign of applause or approval, used to be derived from this word.

Bracae (*ἀναξυρίδες, θύλακοι*). Trousers; pantaloons. These were common to all the nations that encircled the Greek and Roman population, extending from the Indian to the Atlantic Ocean. Hence Aristagoras, king of Miletus, in his interview with Cleomenes, king of Sparta, described the attire of a large portion of them in these terms: "They carry bows and a short spear, and go to battle in trousers and with hats upon their heads." Hence, also, the phrase *bracati militis arcus*, implying that those who wore trousers were in general armed with the bow. In particular, we are informed of the use of trousers or pantaloons among the following nations: (1) The Medes and Persians (*περὶ τὰ σκέλεα ἀναξυρίδας*). (2) The Parthians and Armenians. (3) The Phrygians. (4) The Sacae. (5) The Sarmatae. (6) The Dacians and Getae. (7) The Teutones. (8) The Franks. (9) The Belgae. (10) The Britons (*veteres bracae Britonis pauperis*). (11) The Gauls (*Gallia Bracata*, now Provence; *sagatos bracatosque; χρῶνται ἀναξυρίσι, ἃς ἐκεῖνοι βράκας προσαγορεύουσι*).

The Gallic term "brakes," which Diodorus Siculus has preserved in the last-cited passage (v. 30), also survives in the Scottish "breeks" and the English "breeches." Corresponding terms are used in all the Northern languages. (See Skeat,

Etymolog. Dict. s. v. "Breeches.") The Cossack and Persian trousers of the present day differ in no material respect from those which were anciently worn in the same countries.

In conformity with the preceding list of testimonies, the monuments of every kind which contain representations of the nations included in it, exhibit them in trousers, thus clearly distinguishing them from Greeks and Romans. An example is seen in the annexed group of Sarmatians, taken from the Column of Trajan.

Sarmatians wearing Bracae. (Column of Trajan.)

The proper bracae of the Eastern and Northern nations were loose (*κεχαλασμέναι, laxae*), and they are therefore very aptly, though ludicrously, described in Euripides as "variegated bags" (*τοὺς θυλάκους τοὺς ποικίλους*). To the Greeks they must have appeared highly ridiculous, although Ovid mentions the adoption of them by the descendants of some of the Greek colonists on the Euxine (*Trist.* v. 11, 34).

Bracae worn by Roman Soldier. (Column of Trajan.)

Trousers were principally woollen; but Agathias states that in Europe they were also made of linen and of leather; probably the Asiatics made them of cotton and of silk. Sometimes they were striped (*virgatae*), ornamented with a woof of various colours.

Roman soldiers fighting in the North were obliged to wear them, owing to the severity of the climate; and by the second century they were worn even at Rome. The emperor Alexander Severus wore white bracae; some of his predecessors, scarlet ones (*coccineae*).

Bracarius, meaning properly a breeches-maker (Lamprid. *Alex. Sever.* 24), came to be used of a tailor in general.

Bracāta Gallia. See GALLIA.

Bracchiālē (*περιβραχιόνιον*). A piece of defensive armour which covered the *bracchium*, or part of the arm between the wrist and the elbow. It is distinctly mentioned by Xenophon (*Cyrop.* vi. 4, 2) as part of the accoutrements worn by the Persians, and is sometimes seen on figures of Roman gladiators, though the Latin name does not occur in this sense, except, perhaps, in Trebell. *Claud.* 14.

Bracciolini, GIAN FRANCESCO POGGIO, one of the most noted names in the history of classical study, was born at Terranova, near Florence, in 1380. He studied Latin under John of Ravenna, and Greek under Manuel Chrysoloras, after which he became a copyist of manuscripts, in which pursuit his dexterity brought him the acquaintance of the chief scholars of Florence, by whose aid he was received into the service of the Roman curia (1403) as a secretary. In this office he showed himself an enthusiastic advocate of classical study, and took a most important part in the revival of learning, caring little or nothing for the exciting political and ecclesiastical movements of the period. Bracciolini (or Poggio, as he is usually called) is best known for his remarkable success in recovering the lost masterpieces of Latin literature by his researches in the libraries of monasteries and convents, where manuscripts of priceless value to the classicist were lying hitherto unknown. In one of his epistles he relates how he discovered at St. Gall, in Switzerland, Quintilian, Verrius Flaccus (in part), and the commentaries of Asconius Pedianus. To him, likewise, we owe manuscripts of Lucretius, Columella, Silius Italicus, Manilius, Vitruvius, Ammianus Marcellinus, Nonius Marcellus, Probus, Flavius Caper, and Eutyches. At Langres he unearthed Cicero's oration *Pro Caecina*, and at Monte Cassino a codex of Frontinus. No considerations of morality stood in Bracciolini's way when the question of securing a valuable manuscript was before him. If a codex could be gained only by fraud, he employed fraud, as when he actually bribed a monk at Hersfeld to abstract manuscripts of Livy and Ammianus from the convent library.

Bracciolini was an extensive traveller, and has left some lively pictures of the contemporary life and customs of different European countries, especially of England and Switzerland, as well as some curious notes on the remains of antique art in Rome. He likewise describes the trial of Jerome of Prague. To pure literature he was a voluminous contributor, writing orations, epistles, treatises on rhetoric, translations from the Greek, moral essays, and fabliaux, all in Latin, as well as a history of Florence, written in imitation of the style of Livy. His *Facetiae* are remarkable alike for their indecency and for their caustic satires on the secular clergy. Of this class, his most famous writings are his violent and often filthy diatribes against Valla and Filelfo, who retorted in kind, and thus established a bad precedent which was followed in the later controversies of the Scaligers (q. v.), Scioppius, Salmasius, and Milton.

Bracciolini, who remained a layman until his death, retired in 1452 to Florence, of which republic he became the chancellor and historian. There he died in 1459, and was buried in the Church of Santa Croce. A statue of him by Donatello commemorates his services to the humanities. His life has been written in English by Shepherd (Liverpool, 1802). See also J. A. Symonds, *The Renaissance in Italy* (1886).

Bracelets. See ARMILLA; CAELATURA.

Brachmānae or **Brachmānes** (*Βραχμᾶνες*). A name used by the ancient geographers, sometimes of a caste of priests in India (the Brahmins), sometimes, apparently, of all the people whose religion

was Brahminism, and sometimes of a particular tribe. See INDIA.

Branchĭdae (Βραγχίδαι), afterwards DIDŸMA. A place on the sea-coast of Ionia, a little south of Miletus, and celebrated for its temple and oracle of Apollo, surnamed Didymeus. This oracle, which the Ionians held in the highest esteem, was said to have been founded by Branchus, son of Apollo by a Milesian woman. The reputed descendants of this Branchus, the Branchidae, were the hereditary ministers of this oracle (Herod. i. 157). The temple, called Didymaeum, which was destroyed by Xerxes, was afterwards rebuilt, and its ruins contain some beautiful specimens of the Ionic order of architecture.

Brasĭdas (Βρασίδας). The most distinguished Spartan in the first part of the Peloponnesian War (q. v.). In B.C. 424, at the head of a small force, having effected a dexterous march through the hostile country of Thessaly, he gained possession of many of the cities in Macedonia that were subject to Athens; his greatest acquisition was Amphipolis. In 422, with only a handful of helots and mercenary troops, he gained a brilliant victory over Cleon, who had been sent with a powerful Athenian force to recover Amphipolis. Brasidas was slain in the battle. He was buried within the city, and the inhabitants honoured him as a hero by yearly sacrifices and by games.

Thucydides praises alike the eloquence and the liberality and wisdom of Brasidas, and Plato compares him to Achilles.

Brasidēa (Βρασίδεια). A festival held annually at Sparta with orations and contests, in memory of Brasidas (q. v.), who, after his death, in B.C. 422, received the honours of a hero. See Pausan. iii. 14.

Brattea (not *bractea:* see Lachmann on Lucret. iv. 727). A finely-beaten-out plate of metal, especially of gold. Thicker plates were called *laminae.* The gold-beater is styled *brattearius* or *bratteator.* These plates were used for adorning statues, furniture, walls and ceilings, and garments which were then called *vestes auratae* or *sigillatae.* Pliny (*H. N.* xxxiii. § 61) says that from an ounce of gold, 750 plates, each four fingers square, could be beaten.

Brauron (Βραυρῶν). A deme of Attica on the eastern bank of the river Erasinus, with a celebrated temple of Artemis, who was in consequence called Brauronia.

Brauronia (τὰ Βραυρώνια). An Attic festival held every fifth year in the little town of Brauron, in honour of Artemis Brauronia. At Brauron, Orestes and Iphigenia (q. v.) on their return from Tauris were supposed to have landed and to have left the statue of the Tauric goddess. The festival was under the superintendence of ten ἱεροποιοί; and the chief solemnity consisted in the circumstance that Attic girls between the ages of five and ten years, dressed in crocus-coloured garments, went in solemn procession to the sanctuary, where they were consecrated to the goddess. During this act, the ἱεροποιοί sacrificed a goat, and the girls performed a propitiatory rite in which they imitated bears. This rite may have simply arisen from the fact that the bear was sacred to Artemis, especially in Arcadia; but a tradition preserved in Suidas relates its origin as follows: In the Attic town of Phanidae a bear was kept, which was so tame that it was allowed to go about quite freely, and received its food from and among men. One day a girl ventured to play with it, and, on treating the animal rather harshly, it turned round and tore her to pieces. Her brothers, enraged at this, went out and killed the bear. The Athenians thereupon were visited by a plague; and when they consulted the oracle, the answer was given that they would rid themselves of the evil which had befallen them if they would compel some of their citizens to make their daughters propitiate Artemis by a rite called ἀρκτεύειν, for the crime committed against the animal sacred to the goddess. The command was more than obeyed; for the Athenians decreed that from thenceforth all women, before they could marry, should have once taken part in this festival, and have been consecrated to the goddess. Hence the girls themselves were called ἄρκτοι, the consecration ἀρκτεία, the act of consecrating ἀρκτεύειν, and to celebrate the festival ἀρκτεύεσθαι.

There was also a quinquennial festival called Brauronia, which was celebrated by men and dissolute women, at Brauron, in honour of Dionysus.

Brennus. The Latinized form of the Keltic title *bran,* "a prince." (1) A general of the Galli Senones, who entered Italy, defeated the Romans at the river Allia, and entered their city without opposition. The Romans fled into the Capitol, and left the whole city in the possession of their enemies. The Gauls climbed the Tarpeian Rock in the night, and the Capitol would have been taken, had not the Romans been awakened by the noise of the sacred geese in the Temple of Iuno and immediately repelled the enemy. (See MANLIUS.) Camillus, who was in banishment, marched to the relief of his country, and totally defeated the Gauls, so that not one remained to carry home the news of their destruction.

The Brennus Shield. (Dodwell.)

The destruction of the Gauls by Camillus is the national account given by the Roman writers, and is replete with error and exaggeration. The domination of the Gauls in Italy was certainly of long continuance, and was not terminated in the dramatic manner of the legend. See CAMILLUS; CELTAE; Kuno, *Vorgeschichte Roms* (1878); and Mommsen, *Hist. of Rome,* vol. i. p. 427 foll.

(2) Another Gallic leader, who made an irruption into Greece at the head of an army of his countrymen consisting of 152,000 foot and 20,000

horse. After ravaging various parts of northern Greece, they marched against Delphi, and endeavoured to plunder the temple. But the army of the invaders, according to the Grecian account, were seized with a panic terror during the night, and being attacked at daybreak by the Delphians and others of the Greeks, retreated in the utmost confusion. Large numbers perished, the Greeks continually hanging on the skirts of the retreating foe; and Brennus, wounded, and dispirited by his overthrow, killed himself in a fit of intoxication, B.C. 278 (Pausan. x. 19).

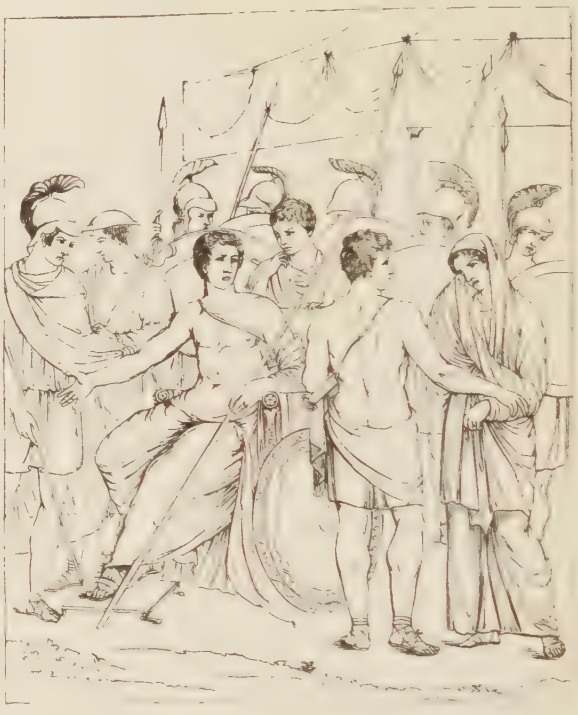
Breviarium. (1) The title of the brief history of Rome by Eutropius (q. v.)—more fully *Breviarium ab Urbe Condita.* It is written in simple style, and was largely read both in the original Latin and in the Greek translation. The best text is that of W. Hartel (Berlin, 1872). (2) A similar work, written at about the same time by Sex. Rufus Festus (q. v.).

Breviarium Alaricianum, or simply **Breviārium.** Alaric the second, king of the Visigoths (A.D. 484–507), who reigned over part of Gaul and Spain, commissioned a body of jurists, no doubt Romans, to make a selection from Roman statute law and from the writings of Roman jurists, which should form a legal code for his Roman subjects. The code was completed in A.D. 506, and submitted to a council of bishops and nobles held at Aduris (Aire) in Gascony, and by them approved. The work was then promulgated by Gojaric, the count of the palace (*comes palatii*), a certified copy forwarded to each *comes*, and the use of any other law prohibited. In some of the MSS. it is called *Lex Theodosii*, and the name *Breviarium Alaricianum* does not appear until the sixteenth century. The Breviarium contains several sources of Roman law otherwise almost entirely unknown, especially Paulus and the first five books of the Codex Theodosianus. There exist besides the MSS. of the Breviarium the MSS. of epitomes made in the Middle Ages. The standard edition is that by Haenel (1849). See also Biedenweg, *Commentarii ad Formulas Visigoth. norissime repertas* (Berlin, 1856).

Briareus (Βριάρεως). See AEGAEON.

Bribery. See AMBITUS; CRIMEN REPETUNDARUM; DECASMUS.

Bricks. See FICTILE; LATER.



Bridges. See PONS.

Brigantes. The most powerful of the British tribes, inhabiting the whole of the north of the island from the Abus (Humber) to the Roman Wall, with the exception of the southeastern corner of Yorkshire, which was inhabited by the Parisii. The Brigantes consequently inhabited the greater part of Yorkshire, and the whole of Lancashire, Durham, Westmoreland, and Cumberland. Their capital was Eboracum, now York. They were conquered by Petilius Cerealis in the reign of Vespasian. There was also a tribe of Brigantes in the south of Ireland, between the rivers Birgus (Barrow) and Dabrona (Blackwater), in the counties of Waterford and Tipperary.

Brigantīnus Lacus. The modern Bodensee, or Lake Constance; also known to the ancients as Venetus and Acronius. The Rhenus (Rhine) flows through it.

Brilessus (Βριλησσός). A range of hills uniting Mount Pentelicus with Anchesmus.

Brisēis (Βρισηΐς). The daughter of Briseus of Lyrnessus, who fell into the hands of Achilles, but was seized by Agamemnon. Hence arose the dire feud between the two heroes. (See ACHILLES; AGAMEMNON; TROJAN WAR.) Her proper name was Hippodamia.

The Rape of Briseis. (Pompeian Painting.)

Britannia (Βρεττανία), called also ALBION. An island in the Atlantic Ocean, and the largest in Europe. The Phœnicians appear to have been early acquainted with it, and to have carried on there a traffic for tin. (See CASSITERIDES.) Commercial jealousy, however, induced them to keep their discoveries a profound secret. The Carthaginians succeeded to the Phœnicians, but were equally mysterious. Avienus (q. v.) in his poem entitled *Ora Maritima*, makes mention of the voyages of a certain Himilco, in this quarter, and professes to draw his information from the long-concealed Punic annals. Little was known of Britain until Caesar's time, who invaded and endeavoured, although ineffectually, to conquer the island. After a long interval, Ostorius, in the reign of Claudius, reduced the southern part of Britannia; and Agricola subsequently, in the reign of Domitian, extended the Roman dominion to the Frith of Forth and the Clyde. The whole force of the Empire, although exerted to the utmost under Septimius Severus, could not, however, reduce to subjection the hardy natives of the highlands. This emperor divided the country into two parts—Britannia Inferior or Southern

Britain, and Britannia Superior or Northern Britain—each under a special prefect. When the Empire was divided under Diocletian, Britain became a diocese of the *praefectura* of Gaul, and was governed by a *vicarius* residing at Eboracum (York). At this time it was marked out into five provinces, as follows: Britannia Prima (England south of the Thames), Britannia Secunda (Wales), Flavia Caesariensis (between the Thames, Severn, Mersey, and Humber), Maxima Caesariensis (all the rest of England up to the Wall of Hadrian), and Valentia (Scotland south of the Wall of Antoninus). Ptolemy enumerates fifty-six towns (*coloniae, municipia*) of Roman Britain, two of which (Eboracum and Verulamium) had the rights of Roman citizenship. Eboracum, Deva (Chester, *castra*), and Isca (Caerleon) were military centres, each being the station for a legion of Roman soldiers, chiefly, however, Gauls, Germans, and Iberians.

To what an extent the Romans succeeded in introducing the refinements of their civilization into Britain may be seen in the great number of their remains that have been found, including roads, houses, baths, painted walls, altars, ornaments, mosaics, sculpture, bronzes, coins, pottery, and various implements. Britain continued a Roman province until A.D. 426, when the troops, having been in a great measure withdrawn to assist Valentinian III. against the Huns, never returned. The Britons had become so enervated under the Roman yoke as to be unable to repel the incursions of the inhabitants of the north. They invoked, therefore, the aid of the Saxons (A.D. 407), by whom they were themselves subjugated and at length obliged to take refuge in the mountains of Wales.

Copper Coin of Antoninus Pius, about A.D. 138, showing figure of Britannia.

The name Britain was unknown to the Romans before the time of Caesar; though Aristotle as early as the fourth century B.C. speaks of the *νῆσοι Βρεταννικαί*. Some deduce the name of the Britons from the Gallic *Britti* (Cymric *brîth*), "painted," in allusion to the custom of a part of the inhabitants of painting their bodies; but Rhys rejects this etymology, without suggesting any that is more plausible. The other name, Albion, is etymologically connected with the Gaelic *alp*, "a high hill," or the Latin *albus*, "white." This was undoubtedly the Keltic name of the whole island.

Britain was famous for its Roman walls, of which traces remain to the present day. The first was built by Agricola, A.D. 79, nearly in the situation of the rampart of Hadrian and wall of Severus mentioned below. In A.D. 81, Agricola built a line of very strong forts from the Frith of Forth to the Frith of Clyde. This, however, was insufficient to check the barbarians after his departure. In A.D. 120, therefore, Hadrian erected a famous wall from Boulness on Solway Frith to a spot a little beyond Newcastle-upon-Tyne. It was sixty-eight English or seventy-four Roman miles long. Twenty years after this, Lollius Urbicus, under the emperor Antoninus, restored the second wall of Agricola, which is commonly called the Vallum Antonini. But the greatest of all was that of Severus, begun A.D. 209, and finished the next year, and which was only a few yards north of Hadrian's wall. It was garrisoned by ten thousand men. See Wright, *The Kelt, the Roman, and the Saxon* (1889); Coote, *The Romans of Britain* (1878); Scarth, *Roman Britain* (1883).

Britannĭcus. The agnomen of the son of the emperor Claudius by Messalina, and born in A.D. 42. Agrippina, the second wife of Claudius, induced the emperor to adopt her own son Nero, and to give him precedence in the succession. On the assumption of imperial power by Nero, Britannicus was put to death by poison (A.D. 55). His story is the subject of a play by Racine.

Britomartis (*Βριτόμαρτις*, "sweet maid"). A Cretan goddess, supposed to dispense happiness, and whose worship extended throughout the islands and along the coasts of the Mediterranean. Like Artemis, with whom she was sometimes identified, she was the patroness of hunters, fishermen, and sailors, and also goddess of birth and of health. Her sphere was Nature in its greatness and its freedom. As goddess of the sea she bore the name of Dictynna, the supposed derivation of which from the Greek *δίκτυον*, "a net," was explained by the following legend. She was the daughter of a huntress much beloved by Zeus and Artemis. Minos loved her, and followed her for nine months over valley and mountain, through forest and swamp, till he nearly overtook her, when she leaped from a high rock into the sea. She was saved by falling into some nets, and Artemis made her a goddess.

Brixellum. The modern Bregella or Brescella; a town on the right bank of the Padus (Po), in Gallia Cisalpina, where the emperor Otho (q. v.) committed suicide in A.D. 69.

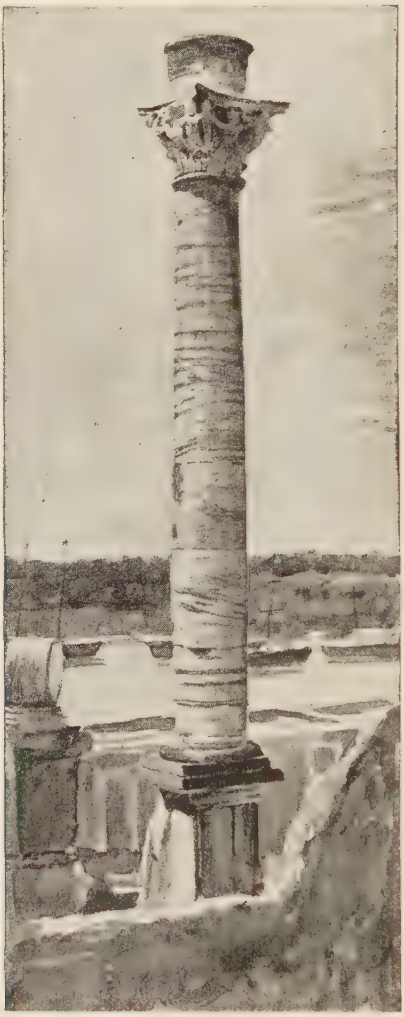
Brixia. The modern Brescia; a town in Gallia Cisalpina. Through it flowed the river Mella.

Brizo (*Βριζώ*). A goddess localized in Delos, to whom women, in particular, paid worship as being the protectress of mariners. They set before her eatables of various kinds (fish being excluded) in little boats. She also presided over an oracle.

Bromius (*Βρόμιος*). From *βρέμω*, "to roar"; an epithet applied to Dionysus as the noisy god of the Bacchic revels.

Brontes (*Βρόντης*). See CYCLOPES.

Bronze. See AES.



Bruchĭum (*Βρυχεῖον*). The Royal or Greek quarter of the city of Alexandria (q. v.) enclosed by its own walls. Here were the finest of the public buildings, and upon it the Ptolemies lavished every form of ornament—obelisks, sphinxes, flowers and gardens, and colonnades. Among the great structures that stood here were the famous Library and Museum with its hundreds of thousands of volumes, its corridors, theatre, menagerie, and lecture-halls; the Palace of the Ptolemies; the Caesarium or Temple of the Caesars; the Mausoleum of the Ptolemies (containing the body of Alexander the Great); and the Arsinoëum, a monument raised by Ptolemy Philadelphus to his sister Arsinoé. The name is also written PYRUCHIUM (*Πυροχεῖον*).

Bructĕri. A German people dwelling on each side of the Amisia (Ems), and as far south as Lup-

pia (Lippe). They joined the Batavi (q. v.) in their revolt against the Romans in A.D. 69.

Brunck, RICHARD FRANÇOIS PHILIPPE. See article in the Appendix.

Brundisium. The modern Brindisi; a celebrated city on the coast of Apulia, in the territory of the Calabri. By the Greeks it was called Βρεντέσιον, a word which, in the Messapian language, signified a stag's head, from the resemblance which its different harbours and creeks bore to antlers.

Roman Pillar at Brundisium.

Herodotus speaks of it as a place generally well known (iv. 99). Brundisium soon became a formidable rival to Tarentum, which had hitherto engrossed all the commerce of this part of Italy. The Romans annexed it in B.C. 245 (Flor. i. 20). From this period the prosperity of this port continued to increase in proportion with the greatness of the Roman Empire. Large fleets were always stationed there for the conveyance of troops into Macedonia, Greece, or Asia; and from the convenience of its harbour, and its facility of access from every other part of Italy, it became a sort of Dover to the Calais of Dyrrhachium. At Brundisium the Appian Way ended.

Bruttiāni. Slaves whose duty it was to wait on Roman magistrates. The name is commonly explained as due to the fact that these slaves were originally taken from among the Bruttians, because this people remained steadfastly faithful to Hannibal (Aul. Gell. x. 3, § 19); but both Strabo (vi. 2, § 4) and Diodorus (xvi. 15) state that the word signifies in the Lucanian dialect "revolted slaves."

Bruttium, Bruttius, and **Bruttiōrum Ager,** more usually called **Bruttii,** after the inhabitants. The southern extremity of Italy, separated from Lucania by a line drawn from the mouth of the Laus to Thurii, and surrounded on the other three sides by the sea. It was the country called in ancient times Oenotria and Italia. The country is mountainous, as the Apennines run through it down to the Sicilian Straits; it contained excellent pasturage for cattle, and the valleys produced good corn, olives, and fruit. The earliest inhabitants of the country were Oenotrians. Subsequently some Lucanians, who had revolted from their countrymen in Lucania, took possession of the country, and were hence called Bruttii or Brettii, which word is said to mean "rebels" in the language of the Lucanians. This people, however, inhabited only the interior of the land; the coast was almost entirely in the possession of the Greek colonies. At the close of the Second Punic War, in which the Bruttii had been the allies of Hannibal, they lost their independence, and were treated by the Romans with great severity. They were declared to be public slaves, and were employed as lictors and servants of the magistrates.

Brutus. (1) L. IUNIUS BRUTUS. A celebrated Roman, the author, according to the Roman legends, of the great revolution which drove Tarquin the Proud from his throne, and which substituted the consular for the regal government. He was the son of Marcus Iunius and of Tarquinia, the second daughter of Tarquin. While yet young in years, he saw his father and brother slain by the order of Tarquin, and having no means of avenging them, and fearing the same fate to himself, he affected a stupid air, in order not to appear at all formidable in the eyes of a suspicious and cruel tyrant. This artifice proved successful, and he so far deceived Tarquin and the other members of the royal family that they gave him, in derision, the surname of Brutus, as indicative of his supposed mental imbecility. At length, when Lucretia had been outraged by Sextus Tarquinius, Brutus, amid the indignation that pervaded all orders, threw off the mask, and snatching the dagger from the bosom of the victim, swore upon it eternal exile to the family of Tarquin. Wearied out with the tyranny of this monarch, and exasperated by the spectacle of the funeral solemnities of Lucretia, the people abolished royalty, and confided the chief authority to the Senate and two magistrates, named at first praetors, but subsequently consuls. Brutus and the husband of Lucretia were first invested with this important office. They signalized their entrance upon its duties by making all the people take a solemn oath never again to have a king of Rome. Efforts, nevertheless, were soon made in favour of the Tarquins: an ambassador sent from Etruria, under the pretext of procuring a restoration of the property of Tarquin and his family, formed a secret plot for the overthrow of the new government; and the sons of Brutus be-

Lucius Iunius Brutus. (Vatican Museum.)

came connected with the conspiracy. A discovery having been made, the sons of the consul and their accomplices were tried, condemned, and executed by the orders of the father, although the people were willing that he should pardon them. From this time, Brutus sought only to die himself, and, some months after, a battle between the Romans and the troops of Tarquin enabled him to gratify his wish. He encountered, in the fight, Aruns, the son of the exiled monarch; and with so much impetuosity did they rush to the attack that both fell dead on the spot, pierced to the heart each by the weapon of the other. The corpse of Brutus was carried to Rome in triumph.

Coin representing the Children of Brutus led to death by Lictors.

The consul Valerius pronounced a funeral eulogy over it, a statue of bronze was raised to the memory of the deceased in the Capitol, and the Roman women wore mourning for an entire year. (2) D. Iunius Brutus, master of the horse A.U.C. 418, and consul A.U.C. 429 (Liv. viii. 12, 29). (3) D. Iunius Brutus, consul A.U.C. 615, obtained a triumph for his successes in Spain. (4) M. Iunius Brutus, father of the Brutus who was concerned in the assassination of Caesar. He embraced the party of Marius, and was overcome by Pompey. After the death of Sulla, and the renewal of hostilities, he was besieged in Mutina by Pompey, who compelled him to surrender after a long resistance, and caused him to be put to death. He was brother-in-law to Cato by his wife Servilia. Brutus was an able lawyer, and wrote on the Civil Wars (Cic. *Brut.* 62; id. *Or.* ii. 32; id. *Pro Cluent.* 51). (5) Marcus Iunius Brutus, son of the preceding, was by the mother's side nephew of M. Cato (Uticensis). He accompanied his uncle to Cyprus, A.U.C. 695, where the latter was sent by Clodius to annex that island to the Roman Empire. It appears, however, that he did not copy the example of Cato's integrity; for, having become the creditor of the citizens of Salamis to a large amount, he employed one Scaptius, a man of infamous character, to enforce the payment of the debt, together with an interest four times exceeding the rate allowed by law (Cic. *Ad Att.* v. 21). When Cicero governed the province of Cilicia, to which Cyprus seems to have been annexed, Brutus wrote to him, and was supported by Atticus in his request, entreating him to give Scaptius a commission as an officer of the Roman government, and to allow him to employ a military force to exact from the Salaminians the usurious interest which he illegally demanded. Cicero was too upright a magistrate to comply with such requests, but they were so agreeable to the practice of the times that he continued to live on intimate terms with the man who could prefer them; and the literary tastes of Brutus were a recommendation which he could not resist; so that he appears soon to have forgotten the affair of Scaptius, and to have spoken and thought of Brutus with great regard. They both, indeed, were of the same party in politics, and Brutus actively exerted himself in the service of Pompey, although his own father had been put to death by the orders of that commander. Being taken prisoner in the battle of Pharsalia, he received his life from the conqueror. Before Caesar set out for Africa to carry on war against Scipio and Iuba, he conferred on Brutus the government of Cisalpine Gaul, and in that province Brutus accordingly remained, and was actually holding an office under Caesar while his uncle Cato was maintaining the contest in Africa and committed suicide rather than fall alive into the hands of the enemy. His character, however, seems to have been greatly improved since his treatment of the Salaminians, for he is said to have governed Cisalpine Gaul with great integrity and humanity. In the year B.C. 45 he returned to Rome, but afterwards set out to meet Caesar on his return from Spain, and, in an interview which he had with him at Nicaea, pleaded the cause of Deiotarus, tetrarch of Galatia, with such warmth and freedom that Caesar was struck by it, and was reminded of what he used frequently to say of Brutus — that what his inclinations might be made a very great difference; but that, whatever they were, they would be nothing lukewarm. It was about this time also that Brutus divorced his first wife, Appia, daughter of Appius Claudius, and married the famous Porcia, his cousin, the daughter of Cato. Soon after, he received another mark of Caesar's favour, in being appointed praetor urbanus, B.C. 44; and he was holding that office when he resolved to become the assassin of the man whose government he had twice acknowledged by consenting to act in a public station under it. He was led into the conspiracy, it is said, by Cassius, who sought at

first by writing, and afterwards by means of his wife Iunia, the sister of Brutus, to obtain his consent to become an accomplice; and Plutarch informs us that when the attack was made on Caesar in the Senate-house, the latter resisted and endeavoured to escape, until he saw the dagger of

Marcus Iunius Brutus.

Brutus pointed against him, when he covered his head with his robe and resigned himself to his fate. See CAESAR.

After the assassination of Caesar, the conspirators endeavoured to stir up the feelings of the people in favour of liberty; but Antony, by reading the will of the dictator, excited against them so violent a storm of odium that they were compelled to flee from the city. Brutus retired to Athens, and used every exertion to raise a party there among the Roman nobility. Obtaining possession, at the same time, of a large sum of the public money, he was enabled to bring to his standard many of the old soldiers of Pompey who were scattered about Thessaly. His forces daily increasing, he soon saw himself surrounded by a considerable army, and Hortensius, the governor of Macedonia, aiding him, Brutus became master in this way of all Greece and Macedonia. He went now to Asia and joined Cassius, whose efforts had been equally successful. In Rome, on the other hand, the triumvirs were all-powerful; the conspirators had been condemned, and the people had taken up arms against them. Brutus and Cassius returned to Europe to oppose the triumvirs, and Octavius and Antony met them on the plains of Philippi. In this memorable conflict Brutus commanded the right wing of the republican army, and defeated the division of the enemy opposed to him, and would in all probability have gained the day if, instead of pursuing the fugitives, he had brought reinforcements to his left wing, commanded by Cassius, which was hard pressed and eventually beaten by Antony. Cassius, upon this, believing everything lost, slew himself in despair. Brutus bitterly deplored his fate, styling him, with tears of the sincerest sorrow, "the last of the Romans." On the following day, induced by the ardour of the soldiers, Brutus again drew up his forces in line of battle, but no action took place, and he then took possession of an advantageous post, where it was difficult for an attack to be made upon him. His true policy was to have remained in this state, without hazarding an engagement, for his opponents were distressed for provisions, and the fleet that was bringing them supplies had been totally defeated by the vessels of Brutus. The condition of things, however, was unknown to the latter, and, after an interval of twenty days, he hazarded a second battle. Where he himself fought in person, he was still successful; but the rest of his force was soon overcome, and the conflict ended in a total defeat of the republican army. Escaping with only a few friends, he passed the night in a cave, and, as he saw his cause irretrievably ruined, ordered Strato, one of his attendants, to kill him. Strato refused for a long time to perform the painful office; but, seeing Brutus resolved, he turned away his face, and held his sword while Brutus fell upon it. He died in the forty-third year of his age, B.C. 42.

A great deal of false glamour has been thrown around the character of Brutus. That he was a stern and consistent patriot throughout the whole of his career, the sketch which we have given of his movements prior to the assassination of Caesar most clearly disproves. Why hold office under one who was trampling upon the liberties of his country? Why require so much solicitation before engaging in the conspiracy? Was he not aware that Caesar was a usurper?—this would show a miserable want of penetration. Or if he preferred security to danger, where was the Roman patriot in this? The truth is that Brutus, notwithstanding all that has been said of him, was but a tardy patriot. His motives towards the close of his career were no doubt pure enough, but he ought to have had nothing to do with Caesar from the moment when that general began to act with treason towards his country. As a student and man of letters, the character of Brutus appears to more advantage than as a patriot. He was remarkable for literary application, usually rising with this view long before day, and it is said that on the evening previous to a battle, while his army was in a state of anxious suspense and alarm, he calmly occupied himself in his tent with writing an abridgment of the history of Polybius. One of the most singular circumstances in the life of Brutus is that of the so-called apparition which, it was said, appeared to him on one occasion in his tent at midnight. "Who art thou?" inquired Brutus. "Thy evil genius," replied the phantom; "we shall meet again at Philippi." And so it happened. The spirit reappeared on the eve of the second battle of Philippi—a story that reminds one of the Bodach Glas in *Waverley*. See Plutarch's life of Brutus.

Brygi (Βρύγοι) or **Bryges** (also BRUGI and BRUGES). A barbarous tribe in northern Macedonia, believed by the ancients to have been the ethnic source of the Phrygians; hence the name is sometimes use for Phryges. See PHRYGIA.

Bubassus (Βυβασσός). An ancient city of Caria, east of Cnidus, and giving its name to the bay, Bubassius Sinus.

Bubastis (Βούβαστις) or **Būbastus** (Βούβαστας). The capital of the Nomos Bubastites in Lower Egypt, which stood on the eastern bank of the Pelusiac branch of the Nile, and was the chief seat of the worship of the goddess Bubastis (Pasht), whom the Greeks identified with Artemis, and who was regarded as the daughter of Ra and bride of Ptah, symbolizing the sexual passion. More than 70,000 persons sometimes took part in her festivals at this place. Here also the cats sacred to Bubas-

tis were buried. The modern name of the city is Tel Bast. Here in 1887 the French explorer, M. Naville, discovered the ruins of the great temple of Bubastis, and further excavations in 1888 showed the city to have been a very important place under the Hyksos. See AEGYPTUS.

Bubo. The horned owl.

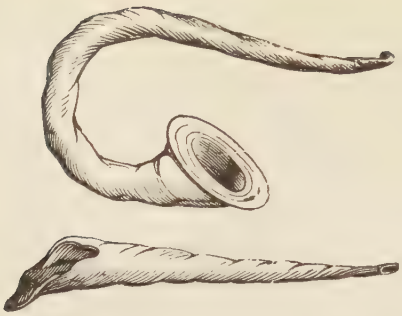
Bucco (from *bucca*, the cheek). The name of a stock character continually introduced into the Atellan plays, and represented as a gabbling fool. Isidorus (*Orig.* x. 30) gives *bucco* = *garrulus*. See ATELLANAE FABULAE.

Buccŭla. See GALEA.

Bucephăla (Βουκέφαλα, also Βουκεφαλεία, Βουκεφαλία). A city on the Hydaspes in northern India, built by Alexander the Great after his battle with Porus, in memory of his favourite horse Bucephalus (q. v.), who died there.

Bucephălus (Βουκέφαλος). A horse belonging to Alexander the Great, so called either because his head resembled that of an ox (βοὸς κεφαλή); or because he had the mark of an ox's head impressed upon his flank; or, according to others, because, like an ox, he had a black mark upon his head, the rest of his body being white. Plutarch states that the horse had been offered for sale to Philip by a Thessalian, but had proved so unmanageable that the monarch refused to purchase, and ordered it to be taken away. Alexander thereupon expressing his regret that they were losing so fine a horse for want of skill and spirit to manage it, Philip agreed to pay the price of the steed if his son would ride it. The prince accepted the offer, and succeeded in the attempt. Bucephalus, after this, would allow no one but Alexander to mount him, and he accompanied the monarch in all his campaigns. In the battle with Porus, he received, according to the same authority, several wounds, of which he died not long after. An ancient writer, however, quoted by Plutarch, states that he died of age and fatigue, being thirty years old. See Arrian, *Anab.* v. 19.

Buchanan, GEORGE. A famous classical scholar, the most distinguished in the annals of Scottish classical philology. He was born of humble parentage at Killearn, in February, 1506. At the age of fourteen, his uncle sent him to the University of Paris, where he acquired a local reputation for his facility in writing Latin verse. In 1522, he returned to Scotland, and, after serving in a military expedition against the English, matriculated at the University of St. Andrews, from which at the end of one year he received the Bachelor's degree (1525). In 1526, he returned to France, w ere he soon took the Master's degree at the Scottish College of Paris, and after two years of great destitution succeeded in winning a professorship at the College of Sainte Barbe. In 1535, he once more visited Scotland, having been made tutor to the son of the Earl of Cassilis. Soon after he undertook the education of an illegitimate son of the king (James V.). Having written two satires against the Franciscan clergy (entitled *Somnium* and *Franciscanus*), he was imprisoned at the instigation of Cardinal Beaton, but escaping fled to France (1539), and was appointed to a professorship in the College of Bordeaux, by André de Gouvéa, its head. At the end of three years, an outbreak of the plague forced him to leave Bordeaux, whence he went to Paris, receiving a professorship in the college of the Cardinal le Moyne. By the influence of De Gouvéa he was called to the newly founded University of Coimbra in Portugal (1547). Here his heretical opinions led to his enforced seclusion in a monastery, where he began his celebrated version of the Psalms in Latin verse. Upon his release he visited England, subsequently returning to France to become tutor to the son of the Maréchal de Brissac (1555). In 1560, he returned to Scotland, which he now made his permanent home. In the struggles between Queen Mary and the Scottish peers, Buchanan bore a prominent part. He had been the classical tutor of the queen, to whom he dedicated his version of the Psalms, but after the death of Darnley, took sides with the faction of the nobles, joining at the same time the Reformed Church. In 1566, the regent, Murray, appointed him Principal of St. Leonard's College in the University of St. Andrews, and soon after Mary's imprisonment in Lochleven, Buchanan was made Moderator of the General Assembly. In 1568, he accompanied Murray to the famous Conference of York. While Lennox was regent, Buchanan assumed charge of the education of the young king, James VI., afterwards James I. of England, who in after-years always spoke of his learned tutor with respect and pride. From 1570 to 1578, Buchanan was Keeper of the Privy Seal, resigning it to devote his time to the preparation of a history of Scotland, which was published a month before his death. This event took place on September 28th, 1582, and was followed by his burial in the Greyfriars' Churchyard, Edinburgh.



As a classicist, Buchanan was best known for his skill in Latin verse, in which he easily ranked first among his contemporaries; and he is generally regarded as the most brilliant of all the British humanists of the sixteenth century. His range of subjects was wide, from versions of the Psalms, theological topics, and political pasquinades, to erotic verses whose indecency may be regarded as purely conventional, though grotesque enough as the production of a professed reformer of religion.

As a man, Buchanan was stern, strong-willed, and domineering, making many enemies, whom he attacked with a violence of invective that belonged to the customs of the age in which he lived. Besides the works mentioned above, he wrote a violent diatribe against the queen, *Detectio Mariae Reginae*, and a bold political tract *De Iure Regni*, in which he states the doctrine that kings exist only by the will of the people and for the people's good.

His writings were edited in the last century by the elder Burmann. See Irving, *Life of George Buchanan* (1817).

Bucĭna (βυκάνη). A kind of horn-trumpet, originally made out of a shell, in which case it is often, especially in poetry, denoted by *concha* (Gk. κόχλος), and was made not only from the *bucinum*, but from many other kinds of spiral shells. It is happily described by Ovid (*Metam.* i. 335).

The *bucina*, as seen in art, agrees closely with his description, and also with the shape of the shell *bucinum*, and, like it, might almost be described, in the language of conchologists, as spiral and gibbous. The two drawings in the annexed illustra-

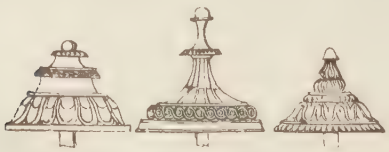
Bucinae. (From ancient frieze and sculpture.)

tion agree with this account. See CORNU; LITUUS; TUBA.

Bucolĭca (*τὰ Βουκολικά*). Ten poems of Vergil, written B.C. 41–39, in imitation and in part translations of Theocritus (q. v.). Many allusions to contemporary history are included. In the MSS. the individual poems are called *Eclogae*, and are today oftenest spoken of as "the Eclogues." A recent translation is that of S. Palmer (London, 1883). (See VERGILIUS.) Bucolica were also written in Greek by Bion and Moschus; and in Latin by Calpurnius Siculus (q. v.), under Nero; by Septimius Serenus (*Opuscula Ruralia*), of uncertain date; by Ausonius (q. v.); and by Boëthius (q. v.), whose *Carmen Bucolicum* has some merit. See Hunger, *De Poesi Romanorum Bucolica* (Halle, 1841); and W. Y. Sellar, *Roman Poets of the Augustan Age* (Oxford, 1883).

Bucolĭcum (*τὸ Βουκολικὸν στόμα*). One of the mouths of the Nile (Herod. vii. 134).

Bufo. The toad.



Bulgă (Keltic). A small leathern bag which was carried on the arm (Non. s. v. p. 78, ed. Mercer), in the same manner as the modern reticule, by travellers, who used it as a money bag (Lucil. *Sat.* vi. p. 20, 1 ed. Gerlach; Varro *ap.* Non. *l. c.*); and by farmers, as a pouch, containing the seed at sowing time (the *πήρα σπερμοφόρος* of the Greek Anthology), to which use the example here given was applied; it is borne by a figure furnished with various implements of husbandry on a beautiful silver *tazza* of the Neapolitan Museum (*Mus. Borb.* xii. 47).

Bulga. (Naples.)

Bulis (*Βοῦλις*). A town of Phocis on the shore of the Sinus Corinthiacus, southeast of Anticyra.

Bulla. A circular plate or boss of metal, so called from its resemblance in form to a bubble floating upon water. Bright studs of this description were used to adorn the sword-belt (*aurea bullis cingula; bullis asper balteus*). Another use of them was in doors the parts of which were fastened together by brass-headed, or even by gold-headed, nails. The magnificent bronze doors of the Pantheon at Rome are enriched with highly ornamented bosses.

Bullae, or Bosses on Doors. (Pantheon, Rome.)

We most frequently read, however, of bullae as ornaments worn by children suspended from the neck, and especially by the sons of the noble and wealthy. Such a one is called *heres bullatus* by Juvenal. His bulla was made of thin plates of gold. Its usual form is shown in the annexed illustration, which represents a fine bulla preserved in the British Museum, and is of the size of the original.

Golden Bulla. (British Museum.)

The bulla was worn by children of both sexes for ornament, as a token of paternal affection and a sign of high birth; and, as it was given to infants, it sometimes served, like other ornaments or playthings (*crepundia*), to recognize a lost child. Probably, also, it contained amulets. See AMULETUM.

Instead of the bulla of gold, boys of inferior rank, including the children of freedmen, wore only a piece of leather (*lorum*).

The use of the bulla, like that of the praetexta (q. v.), was derived from the Etruscans.

On arriving at adolescence, the bulla was laid aside, together with the praetexta, and it was often consecrated, on this occasion, to the Lares, or to some divinity. See FASCINUM.

Bullis (*Βουλλίς*). A town of Illyria, on the coast, south of Apollonia.

Bupălus (*Βούπαλος*). A sculptor and architect born in the island of Chios, and son of Anthermus, or rather Archennus. He encountered the animosity of the poet Hipponax (q. v.), the cause of which is said to have been the refusal of Bupalus to give his daughter in marriage to Hipponax, while others inform us that it was owing to a statue made in derision of the poet by Bupalus. The satire and invective of the bard were so severe that, according to one account, Bupalus hanged himself in despair (Horace, *Epod.* vi. 14). His brother's name was Athenis. In addition to the statue which Bupalus made in derision of Hipponax, other works are mentioned by Pliny as the joint productions of the two brothers. See Callim. *Frag.* 90, ed. Ernesti.

Buphonia (*τὰ Βουφόνια*). A festival held in honour of Zeus at Athens. The legend connected with this festival is a singular one. Among the laws given by Triptolemus to the Athenians, three more especially remarkable were: "Reverence your elders—Honour the gods by offerings of the first fruits—Hurt not the labouring beast," i. e. the beast employed in agriculture. The first who offended against this last command was a person named Thaulon, who, at the feast of *Ζεὺς Πολιεύς*, observing a steer eating the sacred *πόπανον* on the altar, took up an axe and slew the trespasser. The

expiation-feast (*Βουφόνια*), instituted for the purpose of atoning for this involuntary offence, it was found afterwards expedient to continue. The ceremonies observed in it are not a little amusing. First was brought water by women appointed for the office, for the purpose of sharpening the axe and knife with which the slaughter was to be committed. One of these women having handed the axe to the proper functionary, the latter felled the beast and then took to flight. To slay the beast outright was the office of a third person. All present then partook of the flesh. The meal finished, the hide was stuffed, and the beast, apparently restored to life, was put to the plough. Now commenced the steer-trial. A judicial assembly was held in the Prytaneum, to which all were summoned who had been partakers in the above transaction. Each lays the blame upon the other. The water-bearers throw the guilt upon the sharpener of the axe and knife; the sharpener of the knife casts it upon the person delivering it to the feller of the beast; the feller of the beast upon the actual slaughterer, while this last ascribes the whole guilt to the knife itself. The knife, unable to speak, is found guilty and thrown into the sea.

Buprasium (*Βουπράσιον*). An ancient city of Elis mentioned by Homer (*Il.* ii. 615).

Bura (*Βοῦρα*). One of the twelve original cities of Achaea, formerly situated near the sea; but having been destroyed by an earthquake, it was rebuilt by the survivors about forty stadia from the shore, on the river Buraïcus (Herod. i. 145).

Buraïcus (*Βουραϊκός*). An epithet applied to Heracles, from his temple near Bura.

Burdigăla. The modern Bordeaux; the chief town of the Bituriges Vivisci, on the left bank of the Garumna (Garonne). Under the Empire it was a place of great commercial importance. Ausonius (q. v.), who was born there, describes it in his little poem entitled *Ordo Nobilium Urbium*. The only remaining Roman monument in the town is the amphitheatre locally known as the Arènes, or Palais Gallien. It is in a greatly damaged state.

Burdigalensé Itinerarium. See ITINERARIA.

Burgundiōnes or **Burgundii**. A powerful nation of Germany, dwelling originally between the Viadus (Oder) and the Vistula, and of the same race as the Vandals or Goths. They were driven out of their original abodes by the Gepidae, and the greater part of them settled in the country on the Maine. In the fifth century they settled in Gaul, where they founded the powerful kingdom of Burgundy. Their chief towns were Genava (Geneva) and Lugdunum (Lyons). See Dubois, *La Bourgogne*, vol. i. (Paris, 1867).

Burial Rites. See FUNUS.

Buris. The beam of the plough. See ARATRUM.

Burmann. The name of two celebrated Dutch classical scholars. (1) PIETER, known as "the elder," born at Utrecht, June 26th, 1668. He studied at the university of his native town, from which he received a degree in laws in 1688. He spent some time in travel, visiting the great seats of learning in Germany and Switzerland, and on his return practised law. In 1691, he was appointed receiver of taxes, and in 1696, Professor of Eloquence and History in his Alma Mater. To the duties of this chair he soon added those pertaining to the chair of Greek. In 1715, he was called to the University of Leyden to succeed the renowned Perizonius (q. v.) as Professor of Greek, Rhetoric, and History, where he remained until his death, which occurred March 31st, 1741. He was an indefatigable editor, producing commentaries on Phaedrus (1698), Horace (1699), Valerius Flaccus (1701), Petronius (1709), Velleius Paterculus (1719), Quintilian (1720), Ovid (1727), and Lucan (1740). He likewise edited the works of the Scottish scholar, George Buchanan (q. v.), and continued the *magnum opus* of Graevius, *Thesaurus Antiquitatum et Historiarum Italiae*, besides preparing a short manual of Roman Antiquities entitled *Antiquitatum Romanarum Brevis Descriptio* (1711). A number of his poems and orations in Latin were collected and published after his death. As a commentator, Burmann was diffuse, laborious, and pedantic, and his stately quartos are to-day but little consulted; yet they have furnished much material for succeeding editors who possessed the taste and discretion which he unfortunately lacked. As a controversialist, he possessed a most irascible temper, and was involved in many violent disputes with contemporary scholars, notably with Le Clerc and Bentley.

(2) PIETER, known as "the younger," the nephew of the preceding, was born at Amsterdam in 1714, and after studying at Utrecht, filled professorships at Franeker and at the Amsterdam Athenaeum, besides acting as the keeper of the public library at the latter place. His published works comprise editions of Aristophanes, Vergil, Claudian, and Propertius, besides a selection of the Latin Anthology (1759 and 1773). In 1777, he retired on a pension and died in the following year. The Anthology is his only work that is now regarded as important. See L. Müller, *Geschichte der class. Philologie in den Niederlanden* (Leipzig, 1869), and the article ANTHOLOGY.

Busīris (*Βούσιρις*). (1) A reputed king of Egypt, son of Poseidon and Lysianassa, daughter of Epaphus, or (as Plutarch states, from the Samian Agatho) of Poseidon and Anippé, daughter of the Nile. This king, in consequence of an oracle, offered up strangers on the altar of Zeus; for Egypt having been afflicted with a dearth for nine years, a native of Cyprus named Thrasius, a great soothsayer, came thither, and said that it would cease if they sacrificed a stranger every year to Zeus. Busiris sacrificed the prophet himself first of all, and then continued the practice. When Heracles, in the course of his wanderings, came into Egypt, he was seized and dragged to the altar; but he burst his bonds, and slew Busiris, his son Amphidamas, and his herald Chalbes. Historically, there is no such king as Busiris, and the myth is in all probability only a legend of the former sacrifice of human victims to Osiris (q. v.), of which name Busiris is only a corruption. (2) There were several cities named Busiris in ancient Egypt, the most celebrated being placed by Herodotus in the middle of the Delta. It possessed a noble temple of Isis. See Herod. ii. 59.

Bustirăpi. Persons suffering the extreme of poverty; and so called because they satisfied their cravings by snatching from the flames of the funeral pyre the bread and other eatables which the superstition of the living dedicated to the dead. See Catull. lix. 2.

Bustuaria. A prostitute who plied her vocation on the outskirts of the city among the *busta* and burial-places. See Mart. i. xxxv. 8.

Bustuarii. See FUNUS; GLADIATORES.

Bustum. A funeral pyre. See FUNUS.

Butes (Βούτης). (1) A Thracian, the son of Boreas. His brother Lycurgus, whose life he had attempted, banished him, and he settled on the island of Strongylé or Naxos. Finding here no wives for himself and his companions, he carried off some women from Thessaly, while they were celebrating a sacrifice to Dionysus. One of these, Coronis, whom he had forced to be his wife, prayed to Dionysus for vengeance. The god drove him mad, and he threw himself into a well. (2) An Athenian hero, son of the Athenian Pandion and Zeuxippé. A tiller of the soil, and a neat-herd, he was a priest of Athené, the goddess of the stronghold, and of Poseidon Erechtheus, and thus ancestor of the priestly caste of the Butadae and Eteobutadae. He shared an altar in the Erechtheum with Poseidon and Hephaestus. The later story represented him as the son of Teleon and Zeuxippé, and as taking part in the expedition of the Argonauts. (3) A descendant of Amycus, king of the Bebryces. He was one of the Argonauts, and on passing the island of the Sirens leaped overboard in order to swim to it, but was caught up by Aphroditė, who conveyed him to Lilybaeum in Sicily. Here she became by him the mother of Eryx (q.v.). He was renowned as a boxer. (4) An armour-bearer of Anchises, and afterwards of Ascanius. Apollo assumed his form when he descended from heaven to encourage Ascanius in battle. Butes was killed by Turnus. See Verg. *Aen.* ix. 647 foll.

Buthrōtum (Βουθρωτόν). Now Butrinto; a town of Epirus, a flourishing seaport on a small peninsula, opposite Corcyra.

Būto (Βουτώ). (1) An Egyptian divinity, the nurse of Horus and Bubastis, the children of Osiris and Isis, whom she saved from the persecutions of Typhon by concealing them in the floating island of Chemnis. The Greeks identified her with Leto, and represented her as the goddess of night. See HORUS; ISIS; OSIRIS. (2) A city in Lower Egypt, stood near the Sebennytic branch of the Nile, on the lake of Buto. It was celebrated for its oracle of the goddess Buto, in honour of whom a festival was held at the city every year.

Buttmann, PHILIPP KARL. A distinguished classical scholar, who was born in Frankfort in 1764. He studied classical philology under Heyne, and in 1789 was made assistant in the Royal Library at Berlin, subsequently becoming the librarian (1811). From 1800 to 1808 he also held a professorship in the Joachimsthal Gymnasium in Berlin. His best-known works are his Greek grammar (1792), of which the twenty-second edition appeared in 1869; and his *Lexilogus*, 2 vols. (1818–25; 2d ed. 1860). It is a valuable study of the difficult words found in Homer and Hesiod. There is an English translation of it by Fishlake. Buttmann also published *Ausführliche griechische Sprachlehre*, 2 vols. (1819–27); *Demosthenes in Midiam* (1823); *Mythologus*, a collection of essays (1828–29); and continued Spalding's great edition of Quintilian. He also edited *Spener's Journal* from 1796 to 1808. He died June 21st, 1829.

Butўrum (βούτυρον). Butter. The oldest mention of butter, though dubious and obscure, is in the account given of the Scythians by Herodotus (iv. 2). According to him they poured the milk of mares into wooden vessels, caused it to be violently stirred or shaken by their blind slaves, and thus separated the part that arose to the surface, which they considered more valuable and more delicious than that which was collected below it. Herodotus here evidently speaks of the richest part of the milk being separated from the rest by shaking; and that what he alludes to here was actually butter would plainly appear from comparing with what he says the much clearer account of his contemporary Hippocrates. "The Scythians," remarks this latter writer, "pour the milk of their mares into wooden vessels, and shake it violently; this causes it to foam, and the fat part, which is light, rising to the surface, becomes what is called butter (ὃ *βούτυρον καλοῦσι*)." Mention of butter occurs several times, in fact, in the writings of Hippocrates, and he prescribes it externally as a medicine; though he gives it another name, *pikerion* (πικέριον).

It would appear, however, that butter must have been very little known to the Greeks and Romans till the end of the second century. It appears, also, that when they had learned the art of making it, they employed it only as an ointment in their baths, and particularly in medicine. Pliny recommends it, mixed with honey, to be rubbed over children's gums, in order to ease the pain of teething, and also for ulcers in the mouth. The Romans, in general, seem to have used butter for anointing the bodies of their children to render them pliable; and we are told that the ancient Burgundians smeared their hair with it. Except in Dioscorides there is no indication that it was used by the Greeks or Romans in cookery or the preparation of food. No notice is taken of it by Apicius, nor is it mentioned by Galen for any other than medical purposes. This is easily accounted for by the ancients having entirely accustomed themselves to the use of oil; and, in like manner, butter at present is very little employed in Italy, Spain, Portugal, and the southern parts of France. One chief cause of this is the difficulty of preserving it for any length of time in warm countries, and it would seem that among the ancients in the south of Europe it was rather in an oily state and almost liquid.

Buxum (πύξος). The wood of the box-tree, employed largely in making tablets for writing (hence often called *cerata buxa*), for tops (Pers. iii. 51), and for combs (Juv. xiv. 194).

Buxentum. Originally Pyxus (Πυξοῦς); a town on the west coast of Lucania and on the river Buxentius, was founded by Micythus, tyrant of Messana, B.C. 471, and was afterwards a Roman colony.

Byblis (Βυβλίς). The daughter of Miletus and Idothea, who was in love with her brother Caunus, whom she pursued through various lands, till at length, worn out with sorrow, she was changed into a fountain. See Ovid, *Met.* ix. 446 foll.

Byblus (Βύβλος). (1) The modern Jebeïl; a very ancient city on the coast of Phœnicia, between Berytus and Tripolis, a little north of the river Adonis. It was the chief seat of the worship of Adonis. Here are the remains of a Roman theatre, of which the *cavea* or auditorium is nearly

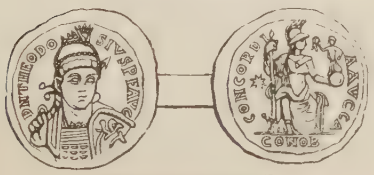
perfect. The name was anciently applied to the whole of Phœnicia. (2) A town of Egypt in the Delta, famous for its *papyrus* (q. v.).

Byrsa (Βύρσα, from the Punic Basra, a fort). The citadel of Carthage. See Carthago.

Byssus (βύσσος). A name derived from the Hebrew *bûtz*, and usually applied to linen, but sometimes to very fine cotton. In it the Egyptian mummies were wrapped. (See Herod. ii. 86; Plut. *Is. et Osir.* 39.) Strabo even applies the word to silk.

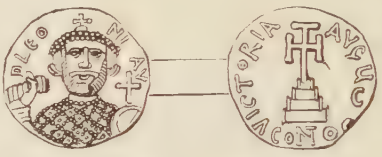
Byzacium (Βυζάκιον). The southern portion of the Roman province of Africa; now the southern part of Tunis. See Africa.

Byzantine Historians. See Byzantinum Imperium, at the end.



Byzantīnum Imperium. The Byzantine or Eastern Roman Empire, comprehending at first, in Asia, the country on this side of the Euphrates, the coasts of the Black Sea, and Asia Minor; in Africa, Egypt; and in Europe, all the countries from the Hellespont to the Adriatic and Danube. This survived the Western Empire 1000 years, and was even increased by the addition of Italy and the coasts of the Mediterranean. It commenced in 395, when Theodosius divided the Roman Empire between his two sons, Arcadius and Honorius. The Eastern Empire fell to the elder, Arcadius, through whose weakness it suffered many misfortunes. During his minority Rufinus was his guardian and minister, between whom and Stilicho, the minister of the Western Empire, a fierce rivalry existed. The Goths laid waste Greece; Eutropius, the successor, and Gainas, the murderer of Rufinus, were ruined by their own crimes. The latter lost his life in a civil war excited by him (A.D. 400). Arcadius and his Empire were now ruled by his proud and covetous wife, Eudoxia, till her death (A.D. 404). The Isaurians and the Huns wasted the provinces of Asia and the country along the Danube. Theodosius the younger succeeded his father (A.D. 408), under the guardianship of his sister Pulcheria. Naturally of an inferior mind, his education had made him entirely imbecile, and unfit for self-command. Pulcheria, who bore the title of Augusta, administered the kingdom ably. Of the Western Empire, which had been ceded to Valentinian, Theodosius retained western Illyria. The Greeks fought with success against the king of the Persians, Varanes. The kingdom of Armenia, thrown into confusion by internal dissensions, and claimed at the same time by the Romans and the Persians, became now an apple of contention between the two nations (A.D. 440). Attila (q. v.) laid waste the dominions of Theodosius, and obliged him to pay tribute. After the death of her brother, Pulcheria was acknowledged empress (A.D. 450), being the first woman who attained this dignity. She gave her hand to the senator Marcian, and raised him to the throne. His wisdom and valour averted the attacks of the Huns from the frontiers, but he did not support the Western Empire in its wars against the Huns and Vandals with sufficient energy. He afforded shelter to a part of the Germans and Sarmatians, who were driven to the Roman frontiers by the incursions of the Huns. Pulcheria died before him, in 453. Leo I. (A.D. 457), a prince praised by contemporary authors, was chosen successor of Marcian. His expeditions against the Vandals (A.D. 467) were unsuccessful. His grandson Leo would have succeeded him, but died a minor shortly after him, having named his father, Zeno, his colleague (A.D. 474). The government of this weak emperor, who was hated by his subjects, was disturbed by rebellions and internal disorders of the Empire. The Goths depopulated their provinces till their king, Theodoric, turned his arms against Italy (A.D. 489). Ariadné, widow of Zeno, raised the minister Anastasius, whom she married, to the throne (A.D. 491). The nation, once excited to discontents and tumults, could not be entirely appeased by the alleviation of their burdens and by wise decrees. The forces of the Empire, being thus weakened, could not offer an effectual resistance to the Persians and the barbarians along the Danube. To prevent their incursions into the peninsula of Constantinople, Anastasius built the Long Wall, as it is called. After the death of Anastasius the soldiers proclaimed Justin emperor (A.D. 518). Notwithstanding his low birth, he maintained possession of the throne. Religious persecutions, which he undertook at the instigation of the clergy, and various crimes into which he was seduced by his nephew Justinian, disgrace his reign. After his early death, in 521, he was succeeded by the same Justinian, to whom, though he deserves not the name of the Great, many virtues of a ruler cannot be denied. He was renowned as a legislator, and his reign was distinguished by the victories of his general Belisarius; but how unable he was to revive the strength of his Empire was proved by its rapid decay after his death. Justin II., his successor (A.D. 565), was an avaricious, cruel, weak prince, governed by his wife. The Lombards tore from him part of Italy (A.D. 568). His war with Persia, for the possession of Armenia, was unsuccessful; the Avari plundered the provinces on the Danube, and the violence of his grief at these misfortunes deprived him of reason. Tiberius, his minister, a man of merit, was declared Caesar, and the general Justinian conducted the war against

Coin of Arcadius



Coin of Honorius

Coin of Theodosius II.

Persia with success. The Greeks now allied themselves, for the first time, with the Turks. Against his successor, Tiberius II. (A.D. 578), the empress Sophia and the general Justinian conspired in vain. From the Avari the emperor purchased peace; from the Persians it was extorted by his general Mauritius or Maurice (A.D. 582). This commander Tiberius declared Caesar in the same year. Mauritius, under other circumstances, would have made an excellent monarch, but for the times he wanted prudence and resolution. He was indebted for the tranquillity of the eastern frontiers to the gratitude of King Chosroës II., whom, in 591, he restored to the throne from which he had been deposed by his subjects. Nevertheless, the war against the Avari was unsuccessful, through the errors of Commentiolus. The army was discontented and irritated, now by untimely severity and parsimony and now by timid indulgence. It finally proclaimed Phocas, one of its officers, emperor. Mauritius was taken in his flight and put to death (A.D. 602). The vices of Phocas and his incapacity for government produced the greatest disorders in the Empire. Heraclius, son of the governor of Africa, took up arms, conquered Constantinople, and caused Phocas to be executed (A.D. 610). He distinguished himself only in the short period of the Persian War. During the first twelve years of his reign the Avari, and other nations of the Danube, plundered the European provinces, and the Persians conquered the coasts of Syria and Egypt. Having finally succeeded in pacifying the Avari, he marched against the Persians (A.D. 622), and defeated them; but during this time the Avari, who had renewed the war, made an unsuccessful attack on Constantinople in 626. Taking advantage of an insurrection of the subjects of Chosroës, he penetrated into the centre of Persia. By the peace concluded with Siroës (A.D. 628) he recovered the lost provinces and the Holy Cross. But the Arabs, who, meanwhile, had become powerful under Mohammed and the califs, conquered Phœnicia, the countries on the Euphrates, Iudaea, Syria, and all Egypt (A.D. 631–641). Among his descendants there was not one able prince. He was succeeded by his son Constantine III., probably in conjunction with his step-brother Heracleonas. The former soon died, and the latter lost his crown and was mutilated. After him, Constans, son of Constantine, obtained the throne (A.D. 642). His sanguinary spirit of persecution and the murder of his brother Theodosius made him odious to the nation. The Arabs, pursuing their conquests, took from him part of Africa, Cyprus, and Rhodes, and defeated him at sea (A.D. 653). Internal disturbances obliged him to make peace. After this he left Constantinople (A.D. 659), and in the following year carried on an unsuccessful war against the Lombards in Italy, in which he lost his life at Syracuse (A.D. 660). Constantine IV., Pogonatus, son of Constans, vanquished his Syracusan competitor Mezizius, and in the beginning of his reign shared the government with his brothers Tiberius and Heraclius. The Arabs inundated all Africa and Sicily, penetrated through Asia Minor into Thrace, and attacked Constantinople for several successive years by sea (A.D. 669). Nevertheless, he made peace with them on favourable terms. But, on the other hand, the Bulgarians obliged him to pay a tribute (A.D. 680). Justinian II., his son and successor, weakened the power of the Maronites, but fought without success against the Bulgarians and Arabs. Leonitius dethroned this cruel prince, had him mutilated, and sent to the Tauric Chersonese (A.D. 695). Leonitius was dethroned by Apsimar, or Tiberius III. (A.D. 698), who was himself dethroned by Trebelius, king of the Bulgarians, who restored Justinian to the throne (A.D. 705); but Philippicus Bardanes rebelled anew against him. With Justinian II. the race of Heraclius was extinguished. The only care of Philippicus was the spreading of Monotheism, while the Arabs wasted Asia Minor and Thrace. In opposition to this prince, who was universally hated, the different armies proclaimed their leaders emperors, among whom Leo III., the Isaurian, obtained the hegemony (A.D. 713–714). Leo repelled the Arabs from Constantinople, which

Gold Coin of Leo III. (British Museum.)

they had attacked for almost two years, and suppressed the rebellion excited by Basilius and the former emperor Anastasius. From 726 the abolition of the worship of images absorbed his attention, and the Italian provinces were allowed to become a prey to the Lombards, while the Arabs plundered the Eastern provinces. After his death (A.D. 741) his son Constantine V. ascended the throne, a courageous, active, and noble prince. He vanquished his rebellious brother-in-law Artabasdus, wrested from the Arabs part of Syria and Armenia, and overcame at last the Bulgarians, against whom he had been long unsuccessful. He died (A.D. 775), and was succeeded by his son Leo IV., who fought successfully against the Arabs; and this latter, by his son Constantine VI., whose imperious mother Irené, his guardian and associate in the government, raised a powerful party by the restoration of the worship of images. He endeavoured in vain to free himself from dependence on her and her favourite Stauratius, and died in 797, after having had his eyes put out.

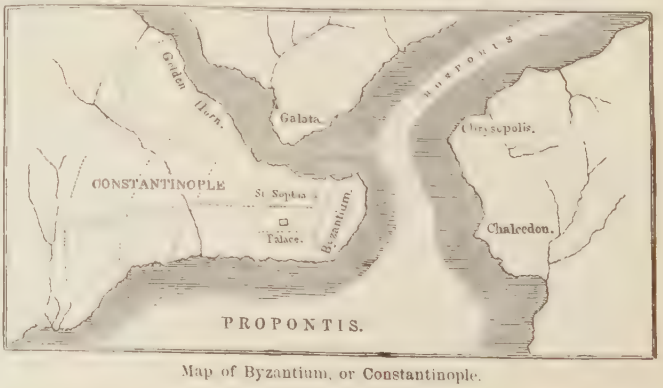
Gold Coin of Irené. (British Museum.)

The war against the Arabs and Bulgarians was long continued; against the former it was unsuccessful. The design of the empress to marry Charlemagne excited the discontent of the patricians, who placed one of their own order, Nicephorus, upon the throne (A.D. 802). Irené died in a monastery. Nicephorus became tributary to the Arabs, and fell in the war against the Bulgarians (A.D. 811). Stauratius, his son, was deprived of the crown by Michael I., and he in turn by Leo V. (A.D. 813). Leo was dethroned and put to

death by Michael II. (A.D. 820). During the reign of the latter the Arabs conquered Sicily, Lower Italy, Crete, and other countries. Michael prohibited the worship of images, as did also his son Theophilus. Theodora, guardian of his son Michael III., put a stop to the dispute about images (A.D. 841). During a cruel persecution of the Manichaeans, the Arabs devastated the Asiatic provinces. The dissolute and extravagant Michael confined his mother in a monastery. The government was administered in his name by Bardas, his uncle, and after the death of Bardas by Basil, who was put to death by Michael (A.D. 867). Basil I., who came to the throne in 867, was

Gold Coin of Basil I. and his son Constantine.
(British Museum.)

not altogether a contemptible monarch. He died A.D. 886. The reign of his learned son, Leo VI., was not very happy. He died A.D. 911. His son, Constantine VII., Porphyrogenitus, a minor when he succeeded his father, was placed under the guardianship of his colleague Alexander, and after Alexander's death, in 912, under that of his mother Zoé. Romanus Lacopenus, his general, obliged him, in 919, to share the throne with him and his children. Constantine subsequently took sole possession of it again, and reigned mildly but weakly. His son Romanus II. succeeded him in 959, and fought successfully against the Arabs. To him succeeded, in 963, his general Nicephorus, who was put to death by his own general, John Zimisces (A.D. 970), who carried on a successful war against the Russians. Basil II., son of Romanus, succeeded this able prince. He vanquished



Basil II. (From a Psalter at Paris.)
(D'Agincourt, tav. 47.)

the Bulgarians and the Arabs. His brother, Constantine IX. (A.D. 1025), was not equal to him. Romanus III. became emperor (A.D. 1028) by a marriage with Zoé, daughter of Constantine. This dissolute but able princess caused her husband to be executed, and successively raised to the throne Michael IV. (A.D. 1034), Michael V. (A.D. 1041), and Constantine X. (A.D. 1042). Russians and Arabs meanwhile devastated the Empire. Her sister Theodora succeeded her on the throne (A.D. 1053). Her successor, Michael VI. (A.D. 1056), was dethroned by Isaac Comnenus in 1057, who became a monk (A.D. 1059). His successor, Constantine XI., Ducas, fought successfully against the Uzes. Eudocia, his wife, guardian of his sons Michael, Andronicus, and Constantine, was intrusted with the administration (A.D. 1067), married Romanus IV., and brought him the crown. He carried on an unsuccessful war against the Turks, who kept him for some time prisoner. Michael VII., son of Constantine, deprived him of the throne (A.D. 1071). Michael was dethroned by Nicephorus III. (A.D. 1078), and the latter by Alexius I., Comnenus (A.D. 1081). Under his reign the crusades commenced. His son, John II., came to the throne in 1118, and fought with great success against the Turks and other barbarians. The reign of his son Manuel I., who succeeded him in 1143, was also not unfortunate. His son, Alexius II., succeeded (A.D. 1180), and was dethroned by his guardian Andronicus, as was the latter by Isaac (A.D. 1185). After a reign disturbed from without and within, Isaac was dethroned by his brother, Alexius III. (A.D. 1195). The crusaders restored him and his son Alexius IV., but the seditious Constantinopolitans proclaimed Alexius V., Ducas Murzuphlus, emperor, who put Alexius IV. to death. At the same time Isaac II. died. During the last reigns, the kings of Sicily had made many conquests on the coasts of the Adriatic. The Latins now forced their way to Constantinople (A.D. 1204), conquered the city, and retained it, together with most of the European territories of the Empire. Baldwin, count of Flanders, was made emperor; Boniface, marquis of Montferrat, obtained Thessalonica as a kingdom, and the Venetians acquired a large extent of territory. In Rhodes, Philadelphia, Corinth, and Epirus, independent sovereigns arose. Theodore Lascaris seized on the Asiatic provinces, bore the title of emperor at Nice, and was, at first, more powerful than Baldwin. A descendant of the Comneni, named Alexius, established a principality at Trebisond, in which his great-grandson John took the title of emperor. Neither Baldwin nor his successors were able to secure the tottering throne. He himself died in captivity among the Bulgarians (1206). To him succeeded Henry, his brother, with Peter, brother-in-law of Henry, and his son Robert (A.D. 1221). With the exception of Constantinople, all the remaining Byzantine territory, including Thessalonica, was conquered by John, emperor of Nice. Baldwin II., brother of Robert, under the guardianship of his colleague, John Brienne, king of Jerusalem, died in 1237. Michael Palaeologus, king of Nice, conquered Constantinople in 1261, and Baldwin died in the West a private person. The sovereigns of Nice, up to this period, were Theodore Lascaris (A.D. 1204); John Ducas Patatzes, a good monarch and successful warrior (A.D. 1222); Theodore II., his

son (A.D. 1259), who was deprived of the crown by Michael Palaeologus (A.D. 1260). In 1261, Michael took Constantinople from the Latins. He laboured to unite himself with the Latin Church, but his son Andronicus renounced the connection. Internal disturbances and foreign wars, particularly with the Turks, threw the exhausted Empire into confusion. Andronicus III., his grandson, obliged him to divide the throne (A.D. 1322), and at length wrested it entirely from him. Andronicus died a monk (A.D. 1328). Andronicus IV., who ascended the throne in the same year, waged war unsuccessfully against the Turks, and died A.D. 1341. His son John was obliged to share the throne with his guardian, John Cantacuzenus, during ten years. The son of the latter, Matthew, was also made emperor, but John Cantacuzenus resigned the crown, and Matthew was compelled to abdicate (A.D. 1355). Under the reign of John, the Turks first obtained a firm footing in Europe, and conquered Gallipolis (A.D. 1357). The family of Palaeologus, from this time, were gradually deprived of their European territories, partly by revolt and partly by the Turks. The Sultan Amurath took Adrianople A.D. 1361. Bajazet conquered almost all the European provinces except Constantinople, and obliged John to pay him tribute. The latter was, some time after, driven out by his own son Manuel (A.D. 1391). Bajazet besieged Constantinople, defeated an army of Western warriors under Sigismund, near Nicopolis, and Manuel was obliged to place John, son of Andronicus, on his throne. Timour's invasion of the Turkish provinces saved Constantinople for this time (A.D. 1402). Manuel then recovered his throne, and regained some of the lost provinces from the contending sons of Bajazet. To him succeeded his son John (A.D. 1425), whom Amurath II. stripped of all his territories except Constantinople, and extorted from him a tribute (A.D. 1444). To the emperor John succeeded his brother Constantine. With the assistance of his general, the Genoese Justinian, he withstood the superior forces of the enemy with fruitless courage, and fell in the defence of Constantinople, by the conquest of which, May 29th, A.D. 1453, Mohammed II. put an end to the Greek or Byzantine Empire.

The events which have just been detailed are recorded by a series of Greek authors, known by the general name of Byzantine historians. Their works relate to the history of the lower Empire, from the fourth century to the conquest of Constantinople by the Turks, and to the Turkish history for some period later. They display in their writings the faults of a degenerate age, but are valuable for the information which they furnish, being the principal source from which we obtain the history of the decay of the Eastern Empire. The most valuable of the number are Zonaras, Nicetas, Nicephorus, and Chalcondylas. These four form a continued history of the Byzantine Empire to the year 1470. Of the remaining authors, who give us histories of detached portions of this same period, the following deserve particular mention, and are given in chronological order: (1) Procopius (q. v.); (2) Agathias; (3) Theophylactus; (4) Nicephorus, patriarch of Constantinople; (5) Johannes Scylitzes; (6) Anna Comnena; (7) Georgius Acropolita; (8) Georgius Pachymeres; (9) Johannes Cantacuzenus; (10) Georgius Codinus; (11) Constantinus Porphyrogenitus; (12) Ducas; (13) Anselmus Bandurius; (14) Petrus Gyllius; (15) Zosimus; (16) Georgius Phranza. Besides editions of individual works or of entire authors, we have the united works of these writers with a Latin translation in what is called the *Corpus Scriptorum Hist. Byzantiae*, 36 vols., by Labbé (Paris, 1654–1711); reprinted at Venice in 1729–33; and a similar collection in 48 vols. begun by Niebuhr, Bekker, Hase, and the Dindorfs (Bonn, 1828 foll.). See Krumbacher, *Geschichte der byzantinischen Litteratur* (Munich, 1891). For an account of the Eastern Empire, see Du Cange, *Hist. de l'Empire de Constantinople sous les Empereurs François* (1659); Gibbon, *Decline and Fall of the Roman Empire;* Hullmann, *Geschichte der byzantischen Handels* (1808); Heyne, *Antiquitates Byzantinae* (1808–11); Lebeau, *Hist. du Bas-Empire* (1824–36); Manast, *Esquisses Byzantines*, 2d ed. (1874); Finlay, *History of Greece*, 7 vols. (1856; 2d ed. 1877); Gasquet, *L'Empire Byzantin* (Paris, 1888); Mahaffy, *The Greek World under Roman Sway* (London, 1890); Bury, *History of the Later Roman Empire* (London, 1890); and Oman, *Story of the Byzantine Empire* (N. Y. 1892).

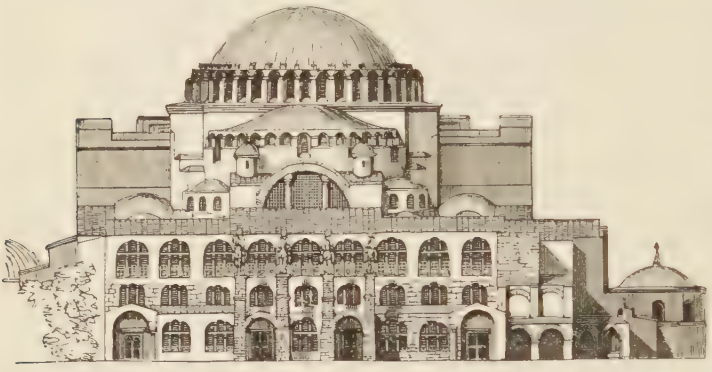
Byzantium (Βυζάντιον). A celebrated city of Thrace, on the shore of the Thracian Bosporus, called at a later period CONSTANTINOPOLIS, and made the capital of the Eastern Empire of the Romans. It was founded by a Dorian colony from Megara, or, rather, by a Megarian colony in conjunction with a Thracian prince. For Byzas, whom the city acknowledged, and celebrated in a festival as its founder, was, according to the legend, a son of Poseidon and Ceroëssa the daughter of Io, and ruled over all the adjacent country. The early commerce of Megara was directed principally to the shores of the Propontis, and this people had founded Chalcedon seventeen years before Byzantium, and Selymbria even prior to Chalcedon (Herod. iv. 144). When, however, their trade was extended still farther to the north, and had reached the shores of the Euxine, the harbour of Chalcedon sank in importance, and a commercial station was required on the opposite side of the strait. This station was Byzantium. The appellation of "blind men" given to the Chalcedonians by the Persian general Megabazus (Herod. iv. 144), for having overlooked the superior site where Byzantium was afterwards founded, does not therefore appear to

Map of Byzantium, or Constantinople.

have been well merited. As long as Chalcedon was the northernmost point reached by the commerce of Megara, its situation was preferable to any offered by the opposite side of the Bosporus, because the current on this latter side runs down from the north more strongly than it does on the side of Chalcedon, and the harbour of this city, therefore, is more accessible to vessels coming from the south. On the other hand, Byzantium was far superior to Chalcedon for the northern trade, since the current that set in strongly from the Euxine carried vessels directly into the harbour of Byzantium, but prevented their approach to Chalcedon in a straight course (Polyb. iv. 43). The harbour of Byzantium was peculiarly favoured by nature, being deep, capacious, and sheltered from every storm. From its shape, and the rich advantages thus connected with it, the harbour of Byzantium obtained the name of Chrysoceras, or "the Golden Horn," which was also applied to the promontory or neck of land that contributed to form it. And yet, notwithstanding all these advantages, Byzantium remained for a long time an inconsiderable town. The declining commerce of Megara, and the character which Byzantium still sustained of being a half-barbarian place, may serve to account for this.

At a subsequent period, the Milesians sent hither a strong colony, and so altered for the better the aspect of things that they are regarded by some ancient writers as the founders of the city itself. When, at a later day, the insurrection of the Asiatic Greeks had been crushed by Darius, and the Persian fleet was reducing to obedience the Greek cities along the Hellespont and the Propontis, the Byzantines, together with a body of Chalcedonians, would not wait for the coming of the Persians, but, leaving their habitations, and fleeing to the Euxine, built the city of Mesembria on the upper coast of Thrace (Herod. vi. 33). The Persians destroyed the empty city, and no Byzantium for some time thereafter existed. This will explain why Scylax, in his *Periplus*, passed by Byzantium in silence, while he mentions all the Grecian settlements in this quarter, and among them even Mesembria itself.

Byzantium reappeared after the overthrow of Xerxes, some of the old inhabitants having probably returned; and here Pausanias, the commander of the Grecian forces, took up his quarters (B.C. 479). He gave the city a code of laws, and a government modelled, in some degree, after the Spartan form, and hence he was regarded by some as the true founder of the city. The Athenians succeeding to the hegemony, Byzantium fell under their control, and received so many important additions from them that Ammianus Marcellinus, in a later age, calls it an Attic colony (xxii. 8). The city, however, was a Doric one, in language, customs, and laws, and remained so even after the Athenians had the control of it. The maintenance of this military post became of great importance to the Greeks during their warfare with the Persians in subsequent years, and this circumstance, together with the advantages of a lucrative and now continually increasing commerce, gave Byzantium a high rank among Grecian cities. After Athens and Sparta had weakened the power of each other by national rivalry, and neither could lay claim to the empire of the sea, Byzantium became an independent city, and turned its whole attention to commerce. Its strong situation enabled it, at a subsequent period, to resist successfully the arms of Philip of Macedon; nor did Alexander, in his eagerness to march into Asia, make any attempt upon the place. It preserved also a neutral character under his successors. The great evil to which the city of Byzantium was exposed came from the inland country, the Thracian tribes continually making incursions into the fertile territory around the place, and carrying off more or less of the products of the fields. The city suffered severely also from the Gauls, being compelled to pay a yearly tribute amounting at least to eighty talents.



After the departure of the Gauls it again became a flourishing place, but its most prosperous period was during the Roman sway. It had thrown itself into the arms of the Romans as early as the war against the younger Philip of Macedon, and enjoyed from that people not only complete protection, but also many valuable commercial privileges. It was allowed, moreover, to lay a toll on all vessels passing through the straits—a thing which had been attempted before without success—and this toll it shared with the Romans. But the day of misfortune at length came. In the contest for the Empire between Severus and Niger, Byzantium declared for the latter, and stood a siege in consequence which continued long after Niger's overthrow and death. After three years of almost incredible exertions the place surrendered to Severus. The few remaining inhabitants whom famine had spared were sold as slaves, the city was razed to the ground, its territory given to Perinthus, and a small village took the place of the great commercial emporium. Repenting soon after of what he had done, Severus rebuilt Byzantium, and adorned it with numerous and splendid buildings, which in a later age still bore his name; but it never recovered its former rank until the days of Constantine. Constantine had no great affection for Rome as a city, nor had the inhabitants any great regard for him. He felt the necessity, moreover, of having the capital of the Empire in some more central quarter, from which the movements of the German tribes on the one hand, and those of the Persians on the other, might be observed. He long sought for such a locality, and believed at one time that he had found it in the neighbourhood of the Sigaean promontory, on the coast of Troas. He had even commenced building here when the superior advantages of Byzantium as a centre of empire attracted his attention, and he finally resolved to make this the capital of the Roman world. For a monarchy possessing the western portion of Asia and the largest part of Europe, together with the whole coast of the Mediterranean Sea, nature herself seemed to have destined Byzantium as a capital.

Coin of Byzantium.

Constantine's plan was carried into rapid execution (A.D. 330). The ancient city had possessed a cir-

cuit of forty stadia, and covered merely two hills, one close to the water, on which the Seraglio at present stands, and another adjoining it, and extending towards the interior to what is now the *Bezestan*, or great market. The new city, called Constantinopolis, or "City of Constantine," was three times as large, and covered four hills, together with part of a fifth, having a circuit of somewhat less than fourteen geographical miles. Every effort was made to embellish this new capital of the Roman world: the most splendid edifices were erected, including an imperial palace, numerous residences for the chief officers of the court, churches, baths, a hippodrome; and inhabitants were procured from every quarter. Its rapid increase called, from time to time, for a corresponding enlargement of the city, until, in the reign of Theodosius II., when the new walls were erected (the previous ones having been thrown down by an earthquake), Constantinople attained to the size which it at present has. Chalcondylas supposes the walls of the city to be 111 stadia in circumference; Gyllius, about 13 Italian miles: but, according to the best modern plans of Constantinople, it is not less than 19,700 yards. The number of gates is twenty-eight—fourteen on the side of the port, seven towards the land, and as many on the Propontis. The city is built on a triangular promontory, and the number of hills which it covers is seven. Besides the name of Constantinopolis (Κωνσταντίνου πόλις), this city had also the more imposing one of New Rome (Νέα Ῥώμη), which, however, gradually fell into disuse. According to some, the peasants in the neighbourhood, while they repair to Constantinople, say in corrupt Greek that they are going *es tam bolin* (i.e. ἐς τὰν πόλιν), "to the city," whence has arisen the Turkish name of the place, Stamboul. Constantinople was taken by the Turks under Mohammed II. on the 29th of May, A.D. 1453. See BYZANTINUM IMPERIUM; CONSTANTINUS.

K, C, X

K, as a symbol.

IN GREEK.—K = *κάτθανε* (on sepulchral inscriptions), Corinth, Crotona (on coins), Καῖσαρ, Κόϊντος, Καλανδῶν, *καί* (e. g. *C. I. G.* 111, 606, 1241, 1318, 2026, 2423). κ′ = 20; ,κ = 20,000.

ϙ = *koppa*, a letter in the primitive Hellenic alphabet, originally placed between π and ρ, and answering to the Latin *q*, both in form and signification. As a numeral, it designates 90. The same letter is very frequently found on the coins of Corinth and her western colonies, particularly Crotona and Syracuse, as a symbol for the city. A koppa was also branded on Corinthian horses, as a kind of guarantee trade-mark, Corinth being famous for its stud. Hence *κοππατίας* (sc. ἵππος) in Arist. *Nub.* 23, 437; Fragm. Anagyrus, 41; or *κοππάφορος* in Lucian, *Adv. Indoctos*, § 5.

ΚΘ = *καταχθονίοις θεοῖς* (*C. I. G.* 1182, 5172 = Karbel, *Epigr.* 418).

ΚΧ = ⁝ *κοινοῖς χρήμασι* (*C. I. G.* 5932).

IN LATIN.—K = Kaeso, Kalendae (very frequent before B.C. 180, thereafter generally displaced by KAL), kalendarium, candidatus, castellum, coniux, cardo, carissimus, casa.

Ж = castra (also K·K).

K·K = calumniae causae.

K·L = caput legis.

K·O = canophori Ostienses.

K·Q = kalendae Quinctiles.

K·S = carus suis.

C, as a symbol.

IN GREEK.—C (half of O) = half an obolus.

IN LATIN.—C = Caesar, Gaius, candidatus, castrum, cedit, centurio, censuerunt, cineres, circiter, circus, citra, civis, clarissimus, classiarius, Claudius, cohors, colonia, comitialis, compos, condemno (hence, *littera tristis* in Cic. *Mil.* 6. 15), coniux, consule, creatus, curavit, curia, etc.

Ↄ = Gaia, centurio, conductor, coronarum.

CC = Caesares (duo), Gai (duo). ↃↃ = Gaiae duae. ↃↃↃ = Gaiae tres.

·C·C = censuerunt cuncti, certa constans (legio), collegium centonariorum, colonia Claudia, coloni coloniae, constans Commoda (agens) curam carceris.

C·C·C· = coire convocari cogi, colonia copia Claudia, cum consilio collocutus, calumniae cavendae causa.

C·A = curam agens, custos armorum, colonia Augusta.

C·A·A·A = colonia Aelia Augusta Aeclanum.

C·A·D·A·I = colonis agrorum dandorum adsignandorum ius.

C·B = colonia Beneventana, coniugi bonae.

C·B·F (or M or M·F or M·P) = coniugi bonae fecit, merenti, merenti fecit, merenti posuit.

C·C·A·A·A = coloni coloniae Augustae Alexandrinae Abellinatium.

C·C·R = curator civium Romanorum.

C·D = compos dat, consulto decurionum.

C·D·D = creatus decreto decurionum.
C·E·B·Q = cineres eius bene quiescant.
C·F = clarissima femina, cl. filius, coniux fecit.
C·F·C = censores faciundum curarunt, coniux faciundum curavit.
C·F·C·C = collegium fabrum centonariorum Comensium.
C·F·F = carissimae filiae fecit.
C·I = colonia Iulia, clarissimus iuvenis.
C·K·F = coniugi karissimae fecit.
C·L = Gai libertus. Ↄ·L = mulieris libertus.
C·M = civitas Mathacorum, collegium mensorum.
C·M·F (P, V) = clarissimae memoriae femina, puer, vir.
C·P = Castor (et) Pollux, castra praetoria (peregrina), censoria potestati, comprobatum pondus, cui praeest.
C·P·F = Claudia pia fidelis (legio).
C·P·M·P = coniugi pientissimae memoriam posuit.
C·P·P = conductor publici portorii.
C·Q·V = cum quo (qua) vixit.
C·R·P = curator rei publicae.
C·S = carissimus sibi (suis), coniugi sanctissimae (suae), cum suis.
C·S·P·N·C = consularis senfascalis provinciae Numidiae Constantinae.
C·S·O = cum suis omnibus.
C·V = civitas Ulpia, clarissimus vir, colonia Viennensis.

C, as the symbol for 100, being the first letter of *centum*, is the youngest numerical symbol in Latin, for this letter originally represented the sound of G, which was introduced into the Roman alphabet at the beginning of the Second Punic War (according to Plut. *Quaest. Rom.* 277 D, by a freedman of Spurius Carvilius Ruga). (See ALPHABET.) The siglum for 100, in use before this time, was probably ⊗ = *θ*, the Etruscan designation for 100.

X (chi) as a symbol.
X = *χιλίαρχος*; X = 600.
ΧΜΓ = Χριστός, Μιχαήλ, Γαβριήλ (*Bull. de Corresp. Hellén.* ii. 30).

Cabalia (*Καβαλία*). A small district of Asia Minor, between Lycia and Pamphylia, with a town of the same name.

Cabeiri (*κάβειροι*). See CABEIRIA.

Cabeiria (*τὰ καβείρια*). The mysterious rites of the Pelasgic gods known as the Cabeiri, celebrated in the islands lying between Euboea and the Hellespont, in Lemnos, Imbros, and especially in Samothrace. This worship was also known on the adjacent coasts of Europe and Asia Minor, at Thebes and Andania in Greece, and, according to Strabo (iv. p. 198), in an island near Britannia. Like the Eleusinia, an almost complete secrecy had been maintained as to the ceremonies and teaching of these mysteries. Yet we know the names of the gods; and, from an examination of the various forms under which we find them, Lenormant has been able to discover what he calls a Cabeiric group. They are four in number, thus differing essentially from the Phœnician Kabirim, who, as their Semitic name shows, are also "great gods," but are eight in number, representing the planets and the universe formed from their union. The names of the Samothracian Cabeiri, as revealed by Mnaseas of Patara and Dionysodorus, two historians of the Alexandrian Age, are Axieros (= Demeter), Axiokersa (= Persephoné), Axiokersos (= Hades), Casmilos (= Hermes). (See the scholiast on Apoll. Rhod. i. 917.) Sometimes the two goddesses blend in one, viz. Earth (Varro, *L. L.* v. 58); sometimes as Aphrodité and Venus; but to most of the Romans they represent Iuno and Minerva (Serv. *ad* Verg. *Aen.* iii. 12). Axiokersos appears further as Zeus, Uranus, Iupiter, Apollo, Dionysus-Liber; and Casmilos as Mercurius or Eros. The group is a primal mother goddess, whose issue are two divinities, a male and a female, from whom again springs a fourth, Casmilos, the orderer of the universe. For a full discussion of the varied evidence on which this grouping is made, the reader is referred to Lenormant in Daremberg and Saglio, i. 757 foll.

Herodotus (ii. 51) is the first historian who mentions them. Though known while Athens was flourishing (Aristoph. *Pax*, 277), it was not till Alexandrian times that they really became famous. During this period Samothrace was a sort of sacred island, as it was under the Roman dominion, for the idea was prevalent that the Penates (Serv. *ad* Verg. *Aen.* ii. 325, iii. 12, viii. 619) were identical with the gods of Samothrace. Legend told how that Dardanus, Eetion, or Iasion, and Harmonia, wife of Cadmus, were children of Electra and Zeus; that Iasion was given the mysteries by Zeus, married Cybelé, and begat Corybas; and after Iasion was received among the gods, Dardanus, Cybelé, and Corybas brought the mysteries to Asia. The legends vary in details, but almost all agree in making Dardanus and Iasion sons of Zeus and Electra, and connecting the Samothracian mysteries with them. It is to be remarked, in passing, that, while legend brought the mysteries from Samothrace to Asia, there can be hardly any doubt that the passage was the other way (cf. Strabo, x. 472); for the whole tenor of the worship is Asiatic. We have many inscriptions of Romans who were initiated (*C. I. L.* iii. 713–721), and we hear besides of other Romans of high position who were initiated, among them probably Cicero (*Nat. Deor.* i. 42, 119). Throughout the Roman period the Cabeiric mysteries were held in high estimation, second only to the Eleusinian, and they were still in existence in the time of Libanius.

From the earliest times, the Pelasgi are said to have sacrificed a tenth of their produce to the Cabeiri in order to be preserved from famine. The chief priest was probably the *ἱεροφάντης* mentioned by Galen (iii. 576, ed. Kühn); and the purifying priest *κόης* or *κοίης*. The *βασιλεύς* of the inscriptions was the highest eponymous magistrate of Samothrace. As in all mysteries, the votary must be purified in body and mind before initiation; and thus we have some evidence of auricular confession. But, as far as we know, there was not any special preparatory intellectual training required. Women and children appear to have been admitted as well as men. Of the religious ceremonies themselves we may say we know nothing. They consisted of *δρώμενα καὶ λεγόμενα*. We hear of dances by the *pii Samothraces*, and the priests who executed these dances were called Saoi (?). The Romans, who traced their Penates to Samothrace, referred their Salii to these Saoi. There were two classes of votaries—the *μύσται* and the *μύσται εὐσεβεῖς*, *mystae pii*—the

latter being apparently those initiated for the first time. In the Samothracian mysteries, *sacra accipere* (*παραλαμβάνειν τὰ μυστήρια*), which is the regular phrase for primary initiation, seems to be applied to the higher grades. But the whole matter is quite obscure and unsettled. See Hirschfeld in Conze, *Untersuchungen auf Samothrake*, pp. 37–39.

The scholiast on Apollonius Rhodius tells us that the initiated wore a purple band (*ταινία*) round their waist (which reminds us of the Brahminical thread); that Agamemnon quelled a mutiny of the Greeks by wearing one; and that Odysseus, who wore a fillet for the band, was miraculously saved in shipwreck. Preservation in times of peril, and especially in perils on the sea, was the chief service that the Cabeiri were supposed to render to those who called on them by name, and none knew their names except the initiated. It was the electric fires of the Cabeiri that, according to the legend, lighted on the heads of the Dioscuri during the Argonautic voyage. Diodorus further says, in the course of an important discussion on the Cabeiri (v. 47–49), that those who were initiated became more pious, more righteous, and in every respect better than they were before. On the basis of this, Lenormant thinks it probable that the doctrine of rewards and punishments in a future life was inculcated, though, with Lobeck, we may well suppose that no more is necessarily implied than the impulse to virtue, which is always united with religious emotion excited by impressive and gracious ceremonies. (Cf. Apoll. Rhod. i. 917.)

The initiations at Samothrace took place at any time from May to September (see inscriptions), in this differing from the Eleusinian and more resembling the Orphic Mysteries. There appears, however, to have been a specially great ceremony at the commencement of August (Plut. *Lucull.* 13).

From the manner in which Cicero speaks of the Samothracian mysteries in the passage already cited, it is probable that he was initiated. He says of their ceremonies, *quibus explicatis ad rationemque revocatis, rerum magis natura cognoscitur quam deorum.* And the Cabeiri themselves do appear to be symbols of the creation of the world. From the primeval mother emanate or differentiate themselves two elements — matter (earth) and force (especially fire, celestial and terrestrial). Indeed, the name Cabeiri appears to mean "the Burners," from *καίειν* (see Welcker, *Die Aeschyl. Trilogie*, pp. 161, 211), and by the action of the former on the latter the ordered world is generated. The etymological identity of the Pelasgian with the Phœnician Cabeiri is doubted by Lenormant; the name of the latter being from a Semitic root, which in Arabic appears as *kebir*, "great." Many hold that all the ceremonies of the Cabeiri, and those of the other mysteries, were pure inventions of the priests, nothing more than mere stories about gods. The reader, with regard to this phase of the subject, is referred to the article MYSTERIA.

For information on the Cabeiric mysteries, see Lobeck, *Aglaoph.* pp. 1202–1295; Schömann, *Griech. Alterth.* ii. 403–407; Preller, *Gr. Mythol.* i. 695–709; Welcker, *Gr. Götterlehre*, i. 328–333, iii. 173–189; and, above all, the article by Lenormant in Daremberg and Saglio, i. 757–774.

Cabillōnum. The modern Châlon-sur-Saône; a town of the Aedui on the Arar (Saône) in Gallia Lugdunensis.

Cabīra (*τὰ Κάβειρα*). A place in Pontus on the borders of Armenia; a frequent residence of Mithridates, who was defeated here by Lucullus, B.C. 71.

Cabīri. See CABEIRIA.

Caca. A sister of Cacus (q. v.), who, according to one version of the fable, became enamoured of Hercules, and showed the hero where her brother had concealed his oxen. For this she was deified. She presided over the excrements of the human body (cf. the verb *cacare*) and had a chapel (*sacellum*) at Rome, with a sacred fire continually burning in it, and virgins to perform her rites (Lactant. i. 20, p. 110, ed. Gall; Serv. *ad* Verg. *Aen.* viii. 190).

Caccăbus, less correctly CACABUS (*κάκκαβος, κακκάβη*). A cooking-pot. The statement of Varro, *L. L.* v. 127, *vas ubi coquebant cibum, ab eo caccabum appellarunt*, may be accepted in proof of the meaning of the word, however absurd as an etymology. The Greek forms *κακκάβη* and *κάκκαβος* both occur in the Comic Fragments, and the former is as old as Aristophanes.

Caccabus. (Pompeii.)

The different processes of boiling and frying are not always clearly distinguished in the ancient kitchen. (See SARTAGO.) It seems certain, however, that the caccabus was used for boiling meat, vegetables, etc.; and that it was placed immediately upon the fire, or upon a trivet (*tripus*) standing over it. It is thus distinguished from the *aenum*, which was suspended over the fire (Serv. *ad* Verg. *Aen.* i. 213); and from the *authepsa* (q. v.), which was probably not used for cooking at all. The material varied. Athenaeus mentions the *κακκάβη* as equivalent to the *χύτρα*—i. e. the earthen cooking-pot—and so usually in Latin (*fictilis*). But *caccabi* were sometimes of metal—*stanneus* (of tin), or *argenteus*. See Colum. *R. R.* xii. 42, 1.

Kakegorias Diké (*κακηγορίας δίκη*). An action for abusive language, brought in the Attic courts, and also known as *κακηγορίου δίκη*. Any person was liable who applied to another certain abusive epithets, such as "murderer" (*ἀνδροφόνος*), "parricide" (*πατραλοίας*), etc. (See APORRHETA.) By a law of Solon, it was equally forbidden to speak evil of the dead. If the person slandered was a public officer, the offender became liable, in addition to the usual penalty of 500 drachmas fine, to *ἀτιμία*, because in the person of the officer the State had also been insulted.

Kakologias Diké (*κακολογίας δίκη*). See KAKEGORIAS DIKÉ.

Kakōsis (*κάκωσις*). In the Attic law, *κάκωσις* signifies one of the following kinds of ill-treatment:

(1) The ill-treatment of parents by their children (*κάκωσις γονέων*), the term *γονεῖς* including also grandparents and great-grandparents. Refusal to supply the parents with means of support or to bury them with proper honours at death, equally with actual abuse or disobedience, formed instances of *κάκωσις*. An illegitimate child, however, was not liable to this action.

(2) Infidelity or ill-treatment of wives by their husbands (*κάκωσις γυναικῶν*), including also the neglect of the law of Solon by which the husband

was bound to visit his wife three times every month, at least, if she were an heiress (Plut. *Sol.* 30). In the comedy of Cratinus, called the *Wine Flask* (Πυτίνη), Comedy was represented as the wife of Cratinus, who brought an action against him because he neglected her and devoted all his attention to the wine-flask (Schol. *ad* Aristoph. *Equit.* 399).

(3) Injury committed against orphans or widows (*κάκωσις τῶν ὀρφανῶν καὶ χηρευουσῶν γυναικῶν*), who were all considered to be under the especial protection of the chief archon.

All cases of *κάκωσις* belonged to the jurisdiction of the chief archon in the case of citizens, or to the polemarch in the case of *metoeci* (Meier, *Att. Process*, p. 269; Perrot, *Essai sur le Droit Public*, p. 264). If a person wronged in any way orphans, heiresses, or widows, the archon could inflict a fine himself; or, if he considered the person deserving of greater punishment, could bring him before the Heliaea. Any private individual could also accuse parties guilty of *κάκωσις* by means of laying an information (*εἰσαγγελία*) before the chief archon, though sometimes the accuser proceeded by means of a regular indictment (*γραφή*), with an *ἀνάκρισις* before the archon. Those who accused persons guilty of *κάκωσις* incurred no danger, as was usually the case if the defendant was acquitted and they did not obtain the fifth part of the votes of the dicasts.

The punishment does not appear to have been fixed for the different cases of *κάκωσις*, but it was generally severe. Those found guilty of *κάκωσις γόνεων* lost their civil rights (*ἀτιμία*), but were allowed to retain their property; if the *κάκωσις* consisted in beating their parents, the hands of the offenders might even be cut off.

Kakotechniōn Dikē (*κακοτεχνιῶν δίκη*). An action in the nature of one for the subornation of perjury, and might be brought against a party to a previous suit whose witnesses had been convicted of perjury in an action *ψευδομαρτυριῶν*. The details relating to this action are not known. See Meier, *Att. Process*, pp. 45, 386.

Cācus. In Italian mythology, a fire-spitting giant, the son of Vulcan, who lived near the place where Rome was afterwards built. When Hercules came into the neighbourhood with the cattle of Geryon, Cacus stole some of them while the hero was sleeping and dragged them backwards into his cave under a spur of the Aventine, so that their footprints gave no clue to the direction in which they had gone. He then closed the entrance to the cave with a rock, which ten pairs of oxen were unable to move. But the lowing of the cattle guided the hero, in his search, to the right track. He tore open the cave, and, after a fearful struggle, slew Cacus with his club (Ovid, *Fast.* i. 543 foll). Upon this he built an altar on the spot to Iupiter, under the title of Pater Inventor, "the discoverer," and sacrificed one of the cattle upon it. The inhabitants paid him every honour for freeing them of the monster; and Evander, who had been instructed by his mother, Carmentis, in the lore of prophecy, saluted him as a god. Hercules is then said to have established his own religious service, and to have instructed two noble families, the Potitii and the Pinarii, in the usages to be observed at the sacrifice (Livy, i. 7). This sacrifice was to be offered on the Ara Maxima, which he himself had built on the cattle-market (*Forum Boarium*) where the cattle had been pastured.

Cadāver. A corpse. See FUNUS.

Cadi (Κάδοι). A city of Phrygia Epictetus on the borders of Lydia.

Cadiscus (*καδίσκος*). A voting-urn. See PSEPHUS.

Cadmēa (Καδμεία). The citadel of Thebes. See THEBAE.

Cadmēis (Καδμηΐς). An ancient name of Boeotia (q. v.), and of Thebes (Hes. *Op.* 161). It is also applied to Semelé (q. v.).

Cadmus (Κάδμος). (1) The son of Agenor, king of Phœnicia, and of Telephassa. His sister Europa being carried off by Zeus, Cadmus, with his brothers Phoenix and Cilix, was sent out with the command to look for her, and not to return without her. In the course of his wanderings he came to Thrace. Here his mother, who had accompanied him so far, breathed her last; and Cadmus applied for counsel to the Delphic oracle. He was advised not to seek his sister any more, but to follow a cow which would meet him, and found a city on the spot where she should lie down. The cow met him in Phocis, and led him into Boeotia. He was intending to sacrifice the cow, and had sent his companions to a neighbouring spring to bring the necessary water, when they were all slain by a serpent, the offspring of Ares and the Erinys Tisiphoné, that guarded the spring. After a severe struggle, Cadmus destroyed the dragon, and at the command of Athené sowed its teeth over the neighbouring ground. A host of armed men sprang up, who immediately fought and slew each other, all except five. The survivors, who were called Spartoi, "sown," helped Cadmus to build the Cadmea, or the stronghold of what was afterwards Thebes, which bore his name. They were the ancestors of the Theban aristocracy; and one of them, Echion, "the serpent's son," became the husband of Cadmus's daughter, Agavé. Cadmus did atonement to Ares for eight years for the slaughter of the dragon. Then Zeus gave him to wife Harmonia, the daughter of Ares and Aphroditė, who bore him a son, Polydorus, and four daughters, Autonoé, Ino, Agavé, and Semelé. (See HARMONIA; SEMELÉ.) Crushed by the terrible doom which weighed upon his home, he afterwards sought retirement among the Enchelii in Illyria, a country which he named after his son Illyrius, who was born there. He resigned the kingdom to Illyrius; and then he and his wife Harmonia were changed into serpents, and carried by Zeus to Elysium.

The ancient tradition was that Cadmus brought sixteen letters from Phœnicia to Greece, to which Palamedes added subsequently four more, *θ*, *ξ*, *φ*, *χ*, and Simonides, at a still later period, four others, *ζ*, *η*, *ψ*, *ω*. The traditional alphabet of Cadmus is supposed to have been the following: A, B, Γ, Δ, E, F, I, K, Λ, M, N, O, Π, P, Σ, T, and the names were, Ἄλφα, Βῆτα, Γάμμα, Δέλτα, Εἶ, Faῦ, Ἰῶτα, Κάππα, Λάμβδα, Mῦ, Nῦ, Oῦ, Πῖ, Ῥῶ, Σίγμα, Ταῦ. The explanation which has just been given to the myth of Cadmus, and its connection with the Pelasgi, have an important bearing on the question relative to the existence of an early Pelasgic alphabet in Greece. See ALPHABET; PELASGI. (2) A native of Miletus, who flourished

about B.C. 520. Pliny (*H. N.* vii. § 56) calls him the most ancient of the *logographi*. In another passage he makes him to have been the first prose-writer, though elsewhere he attributes this to Pherecydes. According to a remark of Isocrates (in his discourse Περὶ Ἀντιδόσεως), Cadmus was the first that bore the title of σοφιστής, by which appellation was then meant an eloquent man. He wrote on the antiquities of his native city. His work was abridged by Bion of Proconnesus. See LOGOGRAPHI.

Caducāriae Leges; **Cadūcum.** See BONA CADUCA.

Caduceus (κηρύκειον). The staff or mace carried by Greek ambassadors and heralds in time of war (Herod. ix. 100; Thuc. i. 53). The name is often given to the staff or wand with which Hermes, or Mercury, is conventionally represented.

Hermes with Caduceus. (From an Ancient Vase.)

The caduceus was originally only an olive-branch with garlands, which were afterwards formed into snakes. About these snakes, later mythologists like Hyginus invented various stories—that Hermes once found two snakes fighting, and divided them with his wand; from which circumstance they were used as an emblem of peace.

From caduceus was formed the word *caduceator*, which signified a person sent to treat of peace. Thus Aulus Gellius tells us that Q. Fabius sent to the Carthaginians a spear and a caduceus as the emblems of war or peace (*hastam et caduceum, signa duo belli aut pacis*). The persons of the *caduceatores* were considered sacred.

It would appear, however, that the Roman ambassadors did not usually carry the caduceus, since Marcian informs us that they carried vervain (*sagmina*), so that no one might injure them, in the same manner as the Greek ambassadors carried the κηρύκεια. The illustration given above is from Millin's *Peintures de Vases Antiques*.

Cadurci. A people of Keltic Gaul, living between the two northern branches of the Garumna (Garonne). Their capital was Divona, afterwards Cadurci, and now Cahors.

Cadurcum. A kind of linen, of which the name is derived from the tribe which produced it, the Cadurci in Guienne. It was much used for bedclothing, but also for garments, bandages, and tents. See Plin. *H. N.* xix. § 13.

Cadus (κάδος). A large earthenware vessel, most frequently used, like the *amphora* (q. v.), for holding wine after it had been drawn from the *dolium* (q. v.); and especially imported wine, as the Chian (Athen. xi. 473b). Other commodities were also stored in *cadi*—e. g. oil, figs, beans, honey, and salt fish. Its shape resembled that of the *amphora* (q. v.), except that its lower end was ovoid. The word sometimes denotes a well-bucket (γαυλός). Aristophanes twice (*Aves*, 1030, 1053) uses the word κάδος of the voting-urn, commonly styled καδίσκος. See CISTA; PSEPHUS.

Cadȳtis (Κάδυτις). A town of Syria, mentioned by Herodotus (ii. 159), supposed by some to be Gath, by others Jerusalem (El Kuds).

Caecias (καικίας). A northeast wind. See Aul. Gell. ii. 22.

Caecilia, GAIA, or **Tanaquil**. See TANAQUIL.

Caecilia Lex. See LEX.

Caecilia Metella. See METELLA.

Caecilius Metellus. See METELLUS.

Caecilius Statius or **Statius Caecilius**. A writer of Latin comedy. He was a Gaul, of the race of the Insubrians, who were settled in Upper Italy, and was brought to Rome, probably about B.C. 194, as a prisoner of war. He was set free by one of the Caecilii, became very intimate with Ennius, and died not long after him, B.C. 166. It was long before he could obtain a footing on the stage; but, this once achieved, he won a considerable reputation, and was numbered among the masters of his craft. The influence of Ennius seems to have been apparent in the comparative care and regularity with which his pieces were constructed. Cicero, however, finds fault with his defective Latinity (Cic. *Ad Att.* vii. 3, 10); and we must therefore infer that, being of foreign extraction, he never succeeded in fully mastering the niceties of colloquial Latin. The titles of some forty of his plays have survived. The contents he mostly borrowed from Menander, and sixteen of his titles are those of plays of Menander. See Teuffel, *Caecilius Statius* (Tübingen, 1858).

Caecīna. The name of a family of the Etruscan city of Volaterrae, probably derived from the river Caecina, which flows by the town. (1) A. CAECINA, whom Cicero defended in a lawsuit, B.C. 69. (2) A. CAECINA, son of the preceding, who published a libellous work against Caesar, and was in consequence sent into exile after the battle of Pharsalia, B.C. 48. (3) A. CAECINA ALIĒNUS, quaestor in Baetica, in Spain, at Nero's death, and one of the foremost in joining the party of Galba. He served first under Galba, and afterwards under Vitellius; but, proving a traitor to the latter, he joined Vespasian, against whom also he conspired, and was slain by order of Titus.

Caecŭbus Ager. A marshy district in Latium, bordering on the Gulf of Amyclae, close to Fundi, celebrated for its wine (Caecubum) in the age of Horace. In the time of Pliny the reputation of this wine was entirely gone. See VINUM.

Caecŭlus. A son of Vulcan, conceived, as some say, by his mother as she was sitting by the fire, a spark having leaped forth into her bosom. After a life spent in plundering and rapine, he built

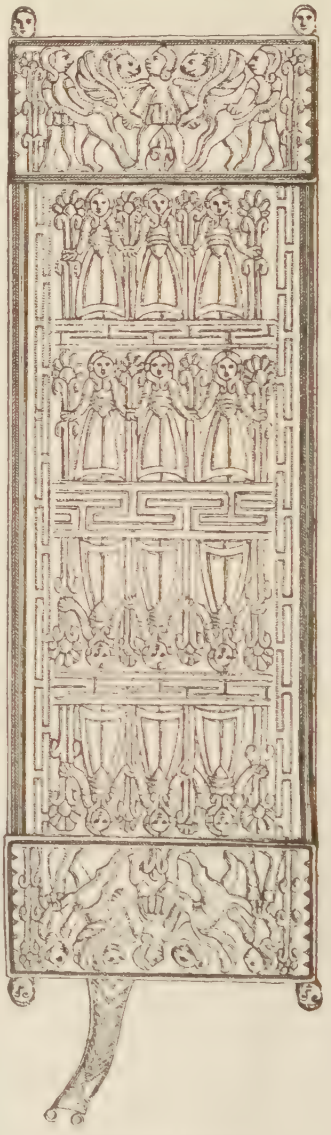
Praenesté; but, being unable to find inhabitants, he implored Vulcan to tell him whether he really was his father. Upon this a flame suddenly shone around a multitude who were assembled to see some spectacle, and they were immediately persuaded to become the subjects of Caeculus. Vergil says that he was found on the hearth, or, as some less correctly explain it, in the very fire itself, and hence was fabled to have been the son of Vulcan (Verg. *Aen.* vii. 680).

Caelatūra (τορευτική). Both the Greek and the Roman name come from the words denoting in the two languages "the graver's tool" (*caelum*, τορεύς); and in its general sense *caelatura* may be taken as meaning the arts employed in the production of ornamental works in metal, both in relief and in intaglio, including repoussé work, chasing, and engraving, but excluding statuary. See STATUARIA ARS.

The chief literary source of our information regarding the toreutic art is Pliny (*H. N.* xxxiii. §§ 154–157); and a complete list of the passages in the ancient writers, referring to this art, has been made by Overbeck in his *Antiken Schriftquellen*, s. v. "Toreutik." It is, however, from the artistic remains of antiquity that its history can best be studied—remains that are magnificently represented in the great museums of Europe.

Gold Diadem from the so-called Treasure of Priam, as actually worn. (Schliemann, *Ilios*, p. 458.)

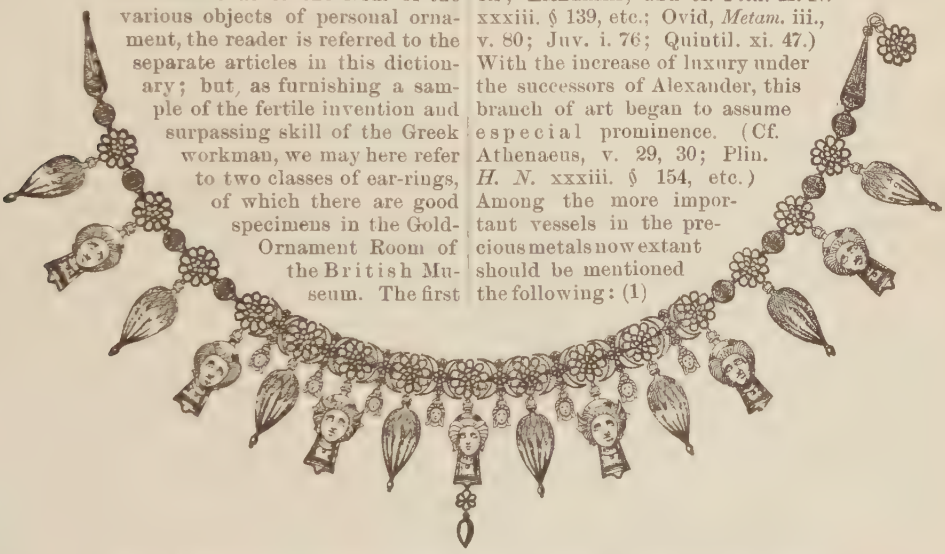
The earliest specimens of ornamental metal-work discovered on Greek soil are those found by Dr. Schliemann at Hissarlik in the Troad, consisting of a large number of objects in gold, such as bracelets, ear-rings, and diadems. Among the specimens, of which a detailed description will be found in Schliemann's *Ilios* (London and N. Y., 1880), may be mentioned the following: bracelets, consisting of a thick gold plate piped with wire and adorned with spiral ornaments of gold wire soldered on the plate; a diadem, composed principally of hexagonal leaves of gold; hair-pins, consisting of a quadrangular plate ornamented with spirals of gold wires soldered on like the bracelets just mentioned; gold disks, of which one represents a flower of star form, in repoussé work. The appellation "Treasure of Priam" given by the discoverer to a large class of these objects is misleading, inasmuch as the art described in the Homeric poems is quite certainly of a more advanced character. The Hissarlik metal-work is, in fact, the product of a half-barbarous people, and its simple and unambitious character may be discerned in the preference for such ornamentation as the spiral (a form which is naturally suggested by the curling of gold wire) and in the infrequent representations of animal forms. An early though more advanced style is represented by the objects discovered by Schliemann at Mycenae, which may be approximately assigned to a date not later than B.C. 1000. The Mycenaean objects are, on the whole, the work of rude local artists, scarcely touched as yet by Oriental influence. The specimens in gold, which are extremely numerous, consist principally of plaques in repoussé work, bowls, diadems, and sepulchral masks rudely imitating the human countenance. Round bosses and other circular patterns, and especially combinations of spirals, are the basis of most of the patterns, but floral forms and imitations of insects and of marine life are also employed. Among the most instructive objects may be mentioned the following: (1) Gold diadems found on the heads of corpses. The diadems are generally piped with copper wire to give them greater solidity. (2) Lozenge-shaped buttons of wood plated with gold, ornamented with intaglio and repoussé work. (3) Perforated ornaments of gold with engravings in intaglio. (4) Gold cylinder adorned with rock crystal; a dragon of gold with scales of rock crystal. (5) Scabbards of



Brooches of Gold—actual size. (Schliemann, *Ilios*, p. 488.)

swords, representing a lion-hunt, winged monsters, fish, and plants. The manes of the lions are of red gold, the bodies of a paler tint in the same metal. A distinction of colour is also observed between the sea and the fish swimming in it, and further variety is obtained by the use of enamel in the background.

The next important epoch in the history of our subject has been denominated the Graeco-Phœnician, an epoch when the rude genius of the Greeks set itself to learn in the comparatively advanced artistic school of the Phœnicians. This is the period of art described, though with some poetic embellishment, in the Homeric poems, in which compositions the higher works of metallic art are spoken of as coming from a foreign and especially a Phœnician source. Thus it is from the king of Cyprus that Agamemnon receives the present of his cuirass (*Il.* xi. 19), and from Egypt that Menelaüs brings back tripods and the basket of Helen (*Od.* iv. 126 foll.). The crater destined by Menelaüs for Telemachus comes to him from the king of the Sidonians (*Od.* iv. 616; *Il.* xxiii. 741), and it is the Sidonians who made the silver crater given by Achilles as a prize at the Funeral Games. Even the elaborate Homeric description of the shield of Achilles may be shown to have had a tangible basis in works of Phœnician art. This Phœnician art, as revealed to us by the archæological discoveries of recent years, was not in itself original, but was formed by a curious blending of the art of the Egyptians and the Assyrians. It may best be studied in the numerous metal bowls that have been found in several localities, especially Cyprus and Italy, which had in early days relations with the Phœnician traders. The epoch generally assigned for the execution of these bowls is the seventh or eighth century B.C., though the manufacture of them according to traditional patterns may have continued to a later period. In the artistic designs of these vessels it is especially important to note the arrangement of the subjects in concentric zones, and the frequent mingling of Assyrian and Egyptian elements. See CYPRUS.



As specimens of early jewelry we may refer to the objects of gold (now in the Louvre and the British Museum) found by Salzmann at Camirus in Rhodes, which may be regarded as products of Phœnician art in the eighth century B.C. As an example of these we may take the pale gold plaques which belonged to a necklace and which are embossed with the alternate designs of a Centaur of primitive type with Egyptian head-dress, seizing a hind, and a winged female figure (the goddess Artemis or Anaïtis) holding a lion and a panther. Another plate is ornamented with a recumbent lion of Assyrian style: the mane is formed by massing together minute granules of gold, while the ears are marked out by lines formed of similar granules. On the same plaque is the head of an eagle, adorned, like the lion, with granulated designs. From the plaque itself are suspended pomegranates, chainlets, and heads of Egyptian style. Of early jewelry found in Greece proper we may notice the gold studs or ear-rings discovered in 1860 at Megara: they are decorated in repoussé, with human heads of Egyptian character, facing. Another interesting specimen of archaic jewelry, stated to have been found at Athens, and belonging probably to the first half of the sixth century B.C., is an ear-ring published in the *Journal of Hellenic Studies* (vol. ii. p. 324), on the oblong pendant of which is represented side by side a pair of female figures, beaten out in relief. The arms of both these figures are straightened closely to their sides, and their dress and attitude, though very archaic, present a resemblance to the Canephori of the Erechtheum.

Armlet found at Caeré.

Our knowledge of the jewelry of the fine period of Greek art is mainly derived from two great sources—the excavations in the tombs of southern Russia and in those of Etruria. Of the Etruscan jewelry, the Louvre, the Vatican, and the British Museum possess numerous and choice examples. The objects from southern Russia, which belong to a great extent to the fourth century B.C., are now in the Museum of the Hermitage, and may be studied in the elaborate *Comptes Rendus de la Commission Archéologique de St.-Pétersbourg*, and in the

Antiquités du Bosphore Cimmérien. The great European jewel-collections contain specimens, unrivalled in workmanship, of all the various objects of personal adornment—necklaces with pendants, ear-rings, bracelets, brooches, etc. The main effect in this jewelry is due to the combination of small figures and flowers in repoussé work, with fine filigree, granulated patterns, and vitreous inlays. Precious stones, such as garnets, are sometimes introduced, but in the best age the jeweller made comparatively little use of them. The ancient jeweller is distinguished by his delicate manipulation of the gold, his mastery of modelling, his extraordinary minuteness of work, and by the technical skill which produced the granulation (i.e. the soldering of extremely minute particles of gold on a leaf of gold) which is especially noticeable in the jewelry of Etruria. This Etruscan jewelry in its earlier period betrays an Oriental influence, but is in its later and finest stage so thoroughly Greek in character as to be a fair exponent of the capabilities of the Greek jewellers. For details as to the form of the various objects of personal ornament, the reader is referred to the separate articles in this dictionary; but, as furnishing a sample of the fertile invention and surpassing skill of the Greek workman, we may here refer to two classes of ear-rings, of which there are good specimens in the Gold-Ornament Room of the British Museum. The first

Etruscan Necklace from Tarentum (B.C. 600). (In the Castellani Collection, British Museum.)

class, which is the simpler and perhaps somewhat the earlier in date, consists of ear-rings formed of twisted wire and terminating at one end in the head of an animal, especially a lion. The second class consists of the specimens attached to the ear by a hook, which is covered by a round disk. The disk itself is generally adorned with some subject suitable for a medallion, such as a full face in relief, and beneath it are suspended one or more small figures. For these pendants Victories are often chosen, and an especial favourite is a tiny figure of Eros holding various objects, such as a scroll or a musical instrument. As exquisite specimens may be noticed a pair (*Comptes Rendus de la Comm. Arch. de St.-Pétersb.*, 1870–71, pl. vi., figs. 11, 12) composed of a rosette, from which hang three chains, the two outermost terminating in pendants: from the middle chain hangs a goose, inlaid about the feathers with granulated work. In the centre of the rosette is a garnet, from which radiate leaves in blue enamel, forming a star pattern.

The beautiful gold necklace shown in the illustration given below forms part of the Castellani Collection in the British Museum. It consists of a circlet of roses bearing alternate pendants of vases and female heads, all exquisitely modelled. The roses are each composed of three rosettes of diminishing sizes superimposed. Of the pendants, the centre head is simply that of a beautiful girl, while the two on each side of it have cows' horns and ears, and represent Io, who was changed by Zeus into a cow.

A very fine specimen of jewelry not intended for wear is the votive gold crown found at Armento, and now at Munich. It is composed of branches of oak intertwined with garlands of flowers, while winged figures are placed amid the foliage.

Another important branch of the toreutic art is constituted by the production of gold and silver vases, elaborately adorned—generally with reliefs in repoussé, or with ornaments separately made and soldered or riveted to the vessel. (See CRUSTA; EMBLEMA; and cf. Plin. *H. N.* xxxiii. § 139, etc.; Ovid, *Metam.* iii., v. 80; Juv. i. 76; Quintil. xi. 47.) With the increase of luxury under the successors of Alexander, this branch of art began to assume especial prominence. (Cf. Athenaeus, v. 29, 30; Plin. *H. N.* xxxiii. § 154, etc.) Among the more important vessels in the precious metals now extant should be mentioned the following: (1) The magnificent silver vase in the Hermitage Museum, which was found in the tomb of a Scythian king at Nicopolis. It has the form of an amphora, and on its upper part are friezes of Scythians and animals, in high-relief; leaves and flowers adorning the body of the vessel. The decoration is partly in repoussé, and partly consists in ornaments, like the lion-masks and the head of a winged horse, separately made and gilded and then soldered on. This vase has been assigned to the fourth century B.C. (2) Silver vase in the Antiquarium of Munich, ornamented externally with a circular frieze, in which are represented Trojan captives, in low relief. (3) The Corsini vase, on which see the memoir by Michaelis, *Das Corsinische Silbergefäss.* (4) Specimens in the Berlin Museum from the silver treasure found near Hildesheim (Hanover) in 1885, some of which go back to the time of Augustus or earlier. They have much executional merit, but present the Roman characteristics of exuberant ornament and exag-

Roman Mixing-bowl. (Found at Hildesheim; now in Berlin Museum.)

gerated relief. (5) Specimens in the Bibliothèque Nationale, Paris, from the treasure discovered at Bernay in France. The vases are of varying merit, and differ in date—one class being ornamented in very prominent repoussé, the other in lower relief with slight and delicate lines. (6) The gold patera of Rennes, into which are inserted gold coins ranging from Hadrian to Geta. The bottom of the vase is adorned with a large medallion executed in repoussé, and bordered by a wreath of laurel leaves in low-relief. (7) Silver vases found at Pompeii, and now in the Museum at Naples. This list may be concluded with a reference to the specimens in the celebrated silver treasure discovered at Rome in 1793, and now in the British Museum. It consists of caskets, vases, trappings, and ornaments of silver, and was probably executed for the most part about the end of the fifth century A.D. The figures and ornaments on most of the objects are generally embossed and chased, and gilding is applied to the salient parts. The figures, as might be expected at so late a period, are coarsely executed and of clumsy proportions.

To the examples of ornamental metal-work which have now been mentioned in this article, and which are principally in gold and silver, must be added certain specimens in bronze which are adorned (1) with engraved designs, (2) with figures in relief. A remarkable specimen of archaic Greek engraving is found on the bronze cuirass discovered in the bed of the Alpheus, and photographed in the *Bulletin de Corr. Hell.* (1883), p. 1, pl. i.–iii. Besides figures of animals, the design shows a group of six human figures. Engraved designs occur most frequently upon the circular metal disks used as mirrors by the ancients, the largest class of which comes from Etruria. Though on some of the Etruscan mirrors the drawings are of a masterly character, the greater number are executed loosely and without much regard to beauty of composition. See SPECULUM.

The covers of the mirrors of box-like form—mostly found in Greece proper—offer favourable specimens of reliefs executed in bronze. Several of them belong to a good period of Greek art; their subjects, as a rule, are borrowed from the cycles of Aphrodité and of Dionysus. Fine examples of Greek repoussé work in bronze are also to be seen in the plaques with figures in relief, which once served to ornament armour or other objects.

Engravings on mirrors of purely Greek work are rare. Among the most beautiful examples may be cited the mirror representing the Genius of the Cock Fights (Musée de Lyon), and the specimen with the hero Corinthus crowned by a woman who personifies the Corinthian colony of Leucas.

Caeles Vibenna. See VIBENNA.

Caelia Lex. See LEX.

Caelibātus. See AES UXORIUM; LEX IULIA ET PAPIA POPPAEA.

Caelius. (1) A young Roman of considerable talents and accomplishments, intrusted to the care of Cicero on his first introduction to the Forum. Having imprudently engaged in an intrigue with Clodia, the well-known sister of Clodius, and having afterwards deserted her, she accused him of an attempt to poison her, and of having borrowed money from her in order to procure the assassination of Dio, the Alexandrian ambassador. He was defended by Cicero in an oration which is still extant. (2) AURELIANUS, a medical writer. (See AURELIANUS.) (3) SABINUS, a writer in the age of Vespasian, who composed a treatise on the edicts of the curule aediles. (4) One of the seven hills on which Rome was built, but now deserted. Romulus surrounded it with a ditch and rampart, and it was enclosed by walls under the succeeding kings. It is supposed to have received its name from Caeles Vibenna. See ROMA.

Caelum (*γλύφανον, τορεύς*). The graver's tool. See CAELATURA.

Caementum (*λατύπη, σκύρος*). Rubble or small undressed stones used with mortar to form the concrete walls of Roman buildings. Vitruvius notes two kinds (ii. 8), the *opus reticulatum*, the more handsome but less durable kind of work; and the primitive *opus incertum*, less sightly but extremely strong, because of the way the stones were massed together.

Concrete was extensively used at Baiae in the Augustan Age, as a foundation for edifices built out into the sea (Tibull. 2, 3, 45; Hor. *Carm.* iii. 1. 33, 24. 3), the Romans having discovered that pozzolana and lime formed an hydraulic cement (Vitruvius, ii. 6, 1).

The most massive relic of Roman times in Great Britain, the great military wall which extended from the mouth of the Tyne to that of the Solway, is a structure of faced concrete, formed by erecting two faces of large stones and filling up

the intervening space with alternate courses of rubble one foot deep, and mortar four inches deep.

Many of the great Roman achievements in building, especially in distant provinces, are to be attributed to this method of construction, which enabled them to raise, with comparatively unskilled hands, and from materials which are accessible in most regions or easily procured, structures which in a short time were united into solid homogeneous masses of great tenacity. See Middleton, *Ancient Rome in 1885*; id. *Remains of Ancient Rome* (1892); and the article DOMUS.

Caené (Καινή) or **Caenepŏlis** (Καινήπολις). (1) A town of Egypt, in the Panopolitan nome, supposed to be the present Ghenné. (2) A town near the promontory of Taenarus; its previous name was Taenarum. See TAENARUS.

Caeneus (Καινεύς). The son of Elatus and Hippia, one of the Lapithae of Gyrton in Thessaly. The story was that he was originally a girl named Caenis, whom her lover Poseidon changed, at her own request, into a man, and at the same time rendered her invulnerable. Caeneus took part in the Argonautic expedition and the Calydonian boar-hunt. At the marriage of Pirithoüs, the Centaurs, finding him invulnerable, crushed him to death with the trunks of trees, and he was afterwards changed into a bird. See PIRITHOÜS.

Caeni (Καινοί). A Thracian people, between the Black Sea and the Panysus.

Caenīna. A town of the Sabines, in Latium, whose king, Acron, is said to have carried on the first war against Rome. After their defeat, most of the inhabitants removed to Rome.

Caenis (Καινίς). See CAENEUS.

Caenys (Καῖνυς). A promontory of Italy north of Rhegium, facing the promontory of Pelorus in Sicily, and forming with it the narrowest part of the Fretum Siculum.

Caepio, CN. SERVILIUS. A Roman consul, B.C. 106, sent into Gallia Narbonensis to oppose the Cimbri, by whom, in 105, he was defeated, together with the consul, CN. MALLIUS or MANLIUS. Eighty thousand soldiers and forty thousand camp-followers are said to have perished. Caepio survived the battle, but ten years afterwards (B.C. 95) he was brought to trial by the tribune C. NORBANUS, on account of his misconduct in this war. He was condemned and cast into prison, where, according to one account, he died; but it was more generally stated that he escaped from prison and lived in exile at Smyrna.

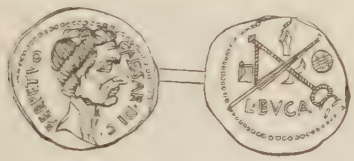
Caeré (always called by the Greek writers Ἀγυλλα). One of the most considerable cities of Etruria, and universally acknowledged to have been founded by the Tyrrhenian Pelasgi (Dion. Hal. i. 20; iii. 60). It was situated near the coast, to the west of Veii. Ancient writers seem puzzled to account for the change of name which this city is allowed to have undergone, the Romans never calling it anything but Caeré, except Vergil (*Aen.* viii. 478). Strabo relates that the Tyrrheni, on arriving before this city, were hailed by the Pelasgi from the walls with the word Χαῖρε, according to the Greek mode of salutation; and that, when they had made themselves masters of the place, they changed its name to that form of greeting. Other variations of this story may be seen in Servius (*ad Aen.* viii. 597). According to one of them, given on the authority of Hyginus, the Romans, and not the Lydians, changed its name from Agylla to Caeré. All these explanations, however, are unsatisfactory. It has been supposed that Caeré might be the original name, or perhaps that which the Siculi, the ancient possessors, gave to the place before the Pelasgic invasion. According to Müller (*Die Etrusker*, vol. i. p. 87), the two names for the place point to two different stems or races of inhabitants. This same writer makes the genuine Etrurian name to have been Cisra.

The earliest record to be found of the history of Agylla is in Herodotus (i. 167). That writer informs us that the Phocaeans, having been driven from their native city on the shores of Ionia by the arms of Cyrus, formed establishments in Corsica, of which the Tyrrhenians and Carthaginians, jealous of their nautical skill and enterprising spirit, sought to dispossess them. A severe action accordingly took place in the Sea of Sardinia, between the Phocaeans and the combined fleet of the latter powers, in which the former gained the day; but it was such a victory as left them little room for exultation, they having lost several of their ships, and the rest being nearly all disabled. The Agylleans, who appear to have constituted the principal force of the Tyrrhenians, on their return home landed their prisoners and stoned them to death; for which act of cruelty they were soon visited by a strange calamity. It was observed that all the living creatures which approached the spot where the Phocaeans had been murdered were immediately seized with convulsive distortions and paralytic affections of the limbs. On consulting the oracle at Delphi, to learn how they might expiate their offence, the Agylleans were commanded to celebrate the obsequies of the dead and to hold games in their honour; which order, the historian informs us, was punctually attended to up to his time. We learn also from Strabo that the Agylleans always abstained from piracy, to which the other Tyrrhenian cities were much addicted. According to Dionysius, the Romans were first engaged in hostilities with Caeré under the reign of Tarquin the Elder, and subsequently under Servius Tullius, by whom a treaty was concluded between the two States (iii. 28). Long after, when Rome had been taken by the Gauls, the inhabitants of Caeré rendered the former city an important service by receiving their priests and Vestals, and defeating the Gauls on their return through the Sabine territory; on which occasion they recovered the gold with which Rome is said to have purchased its liberation. This is a curious fact, and not mentioned by any historian; but it agrees very well with the account which Polybius gives us of the retreat of the Gauls (i. 6). In return for this assistance, the Romans requited the Caerites by declaring them the public guests of Rome, and admitting them, though not in full, to the rights enjoyed by her citizens. They were made citizens, but without the right of voting; whence the phrases, *in Caeritum tabulas referre aliquem*, "to deprive one of his right of voting," and *Caerite cera digni*, "worthless persons," in reference to citizens of Rome, since what would be an honour to the people of Caeré would be a punishment to a native Roman citizen. See Hor. *Epist.* i. 6, 62, with the commentators.

Caerītum Tabŭlae. See CAERÉ

Caesar. A title of the Roman emperors, and originally a family name of the gens Iulia. It was assumed by Octavianus as the adopted son of the great dictator, C. Iulius Caesar, and was by him handed down to his adopted son Tiberius. It continued to be used by Caligula, Claudius, and Nero, as members either by adoption or female descent of Caesar's family; but though the family became extinct with Nero, succeeding emperors still retained the name as part of their titles, and it was the practice to prefix it to their own names, as, for instance, *Imperator Caesar Domitianus Augustus*. When Hadrian adopted Aelius Verus, he allowed the latter to take the title of Caesar (Spart. *Ael. Ver.* 1); and from this time, though the title of *Augustus* continued to be confined to the reigning emperor, that of *Caesar* was also granted the second person in the State and the heir-presumptive to the throne. See AUGUSTUS.

The name *Caesar* was variously derived by the ancients, some assigning it directly to *caedo*, to denote that the first bearer of the name was cut from his mother's uterus by the "Caesarian" operation (Plin. *H. N.* vii. 9, 7); and others explaining it from *caesaries*, because the first Caesar was born with a full head of hair (Fest. p. 44 Müll.). Doederlein (*Synon.* iii. 17) assigns it to *caesius*, as applied to the colour of the skin, or perhaps of the eyes.



Caesar, GAIUS IULIUS, or, as the name is written in English, JULIUS CAESAR, was born on the 12th of July, in B.C. 102 or 100. The latter date rests upon the statement of several ancient authorities, but Mommsen has shown that the earlier date is more probably correct. The Caesar family was of patrician stock. It belonged to the proud gens of the Iulii, who traced their ancestry back to the very beginning of Roman history. In the century between B.C. 160 and 60, several Caesars held public offices, at least four being honoured with the consulship.

Of the youth and education of Iulius Caesar little is known excepting that he was under the instruction of the distinguished teacher of grammar and rhetoric, M. Antonius Gnipho, who for a time taught in his home. Though allied by descent with the aristocracy, he was brought into relation with the popular party through the marriage of his aunt Iulia with the great leader Marius. In B.C. 83, he himself married Cornelia, the daughter of Marius's most ardent supporter, Cinna. This vexed Sulla, who, regaining the ascendency at Rome the following year, ordered Caesar to divorce her. Unlike Pompey and Piso, who put away their wives at Sulla's bidding, Caesar boldly refused. Sulla confiscated his property, and revoked the priesthood of Iupiter, which had been conferred upon him through the influence of Marius. As his life was now in danger, he went into hiding, hotly pursued from place to place by Sulla's emissaries. After a time his friends, aided by the Vestal Virgins, succeeded in securing pardon for him from Sulla, who is said to have granted it with the remark that Caesar would some time be the ruin of the aristocracy, for in him there was many a Marius. Soon afterwards, desirous of gaining the military experience considered necessary for a young Roman of rank, he joined the staff of M. Minucius Thermus, who was besieging Mytilené. Here he saved the life of a fellow-soldier, displaying so great bravery that he was honoured with a civic crown. After Mytilené fell he entered the service of P. Servilius in Cilicia; but immediately on hearing of the death of Sulla, in 78, he returned to Rome.

The following year Caesar introduced himself to public notice by bringing a charge of provincial extortion against Gnaeus Dolabella, who had been proconsul of Macedonia. Though unsuccessful, in 76 he was invited to accuse Gaius Antonius of similar misconduct in Greece. Antonius also was acquitted, but the young prosecutor gained great popularity and a considerable reputation for oratory by his pleas. He now started for Rhodes, to pursue the study of oratory under Molo. Near Miletus he was captured by pirates, and was detained on the island of Pharmacusa until he could get together a ransom of fifty talents (over $55,000). Having been set at liberty, he procured ships, captured the pirates, took them to Pergamus, and crucified them, thus carrying out a threat which he had jestingly pronounced when with them. He spent a short time at Rhodes, and then passed over to Asia, where he rendered gallant service against an army of Mithridates. In the winter of 74–73, he returned to Rome, having been chosen to fill a vacancy in the college of *pontifices*. He now threw himself into political life with an energy that yielded to no opposition and a reckless liberality that hesitated at no expenditure. He was affable to every one, and no applicant for aid went away empty-handed. He soon exhausted his inheritance, and became deeply involved in debt; but his popularity was unbounded. Having taken a stand in opposition to the Sullan constitution and the aristocracy, he received the offices in the gift of the people in regular succession. In 67, he was quaestor, serving under Antistius Vetus in Further Spain. In 65, he was curule aedile, with M. Bibulus as colleague. Extravagant expenditures upon games and buildings raised his popularity to the highest pitch. He increased the power and influence of the popular party in many ways, but by no single act did he kindle the enthusiasm of the populace more than by privately restoring the trophies of Marius, which had been destroyed by Sulla, and replacing them by night on the Capitol. Marius's veterans crowded around them with tears and shouting. The Senate, notwithstanding the formal denunciation of Marius as a public enemy, was obliged to yield to the popular feeling and leave them in the place of honour.

Caesar was charged with complicity in both the Catilinarian conspiracies, but evidence is wanting. In 62, he was praetor, carrying himself with great firmness and discretion amid scenes of violence. The following year he governed the province of Further Spain with distinction, both as a civil administrator and as a general. He subdued several tribes and captured the city of Brigantium, in the extreme northwestern part. At the expiration of his year of office he came back to Rome with ample means to satisfy his creditors. In 60, he was chosen consul for 59, the aristocracy making every effort to secure the election of Bibulus as his colleague to offset his influence. About this time he brought about a reconciliation between Pompey and Marcus Crassus, entering with them into the coalition known as the First Triumvirate. These ties were strengthened further by the marriage of his daughter Julia to Pompey. During his consulship he was influential in promoting the interests of Pompey and Crassus; at the same time

he kept his standing with the people, and was especially serviceable to the important body of *equites*. Instead of the usual proconsular command for one year, he easily obtained the governorship of Cisalpine Gaul, Illyricum, and Transalpine Gaul, of which only the southeastern portion had been subdued, for five years, together with the control of four legions. During the next nine years (58–50), Caesar was engaged in the conquest of Transalpine Gaul. Summers were devoted to military operations; but when possible he spent a part of the winter in Cisalpine Gaul, in close communication with his friends at Rome. In 56, he again reconciled Pompey and Crassus, who met with him at Luca; in 55, his command was continued for five years longer. The conquest of Gaul was no easy matter, both from the advancement of its civilization and the character of the country (see GALLIA); but Caesar accomplished it, in a series of campaigns which, for variety and skill of tactics as well as unremitting energy of movement, are unsurpassed in the annals of warfare. He twice bridged the Rhine and invaded Germany; twice also he crossed over to Britain, reducing the tribes along the southeast coast to nominal subjection. By the year 50, Gaul was completely conquered, and well on the way towards complete organization as a Roman province.

Coin of Iulius Caesar as Dictator.

The death of Iulia, Pompey's wife and Caesar's daughter, in 54, and that of Crassus a year later in the East, broke the common bond between the two great military leaders and put an end to the compact of the triumvirate. Pompey, viewing with jealousy and alarm the victorious career of his younger rival, entered into an alliance with the aristocratic party, and endeavoured to check the increasing power of Caesar by means of senatorial enactments. In his interest the Senate, early in B.C. 50, passed a decree that each of the commanders should give up a legion for the Parthian War. As Pompey had lent one of his to Caesar in 53, this was now demanded back. Although the intent of the whole matter was clearly to weaken Caesar, he gave up Pompey's legion and one of his own as directed; but the troops, instead of being despatched to the East, were placed in camp at Capua. It became clearer every day that Caesar's friends were powerless to obtain for him the recognition and privileges to which he was justly entitled; that the senatorial party and Pompey would scruple at nothing to gain the advantage over him. While his commission prevented him from entering Italy, and no dispensation from it was granted, Pompey was permitted to administer an important command in Spain through lieutenants, and at the same time remained at Rome. The climax was reached early in January, B.C. 49, when the Senate, amid great uproar, decreed that Caesar should disband his army by a certain date, under penalty of being considered a public enemy if he failed to do so; and that the magistrates should take measures to provide for the security of the State. The tribunes M. Antonius and Q. Cassius, who had in vain interposed their veto, were obliged to flee, and took refuge with Caesar, calling upon him to defend the inviolable sanctity of their office. War was now inevitable.

With the vigour and despatch characteristic of his previous military operations, Caesar at once crossed the river Rubicon, the southern boundary of his province. Within three months he was master of the whole of Italy, Pompey and the more zealous adherents of the aristocratic party having fled to Greece. He now set out for Spain, and soon dispersed the forces of Pompey there, meanwhile gaining possession of Sicily and Sardinia also, through his lieutenants Curio and Valerius. In Africa and Illyricum his officers were less successful; but on his way back from Spain he forced the surrender of Massilia, which in his absence had withstood a siege at the hands of Trebonius and Decimus Brutus. By this time Pompey had gathered a large army in Greece, and had also a powerful fleet at his service. Nothing daunted, Caesar crossed the Adriatic in January, 48, and with a far inferior force tried to blockade his opponent at Dyrrachium. Being unsuccessful, and also reduced to straits for supplies, he withdrew into Thessaly. Pompey followed, over-confident. The decisive battle was fought on the plain of Pharsalus, in Thessaly, August 9th, B.C. 48. Pompey had 47,000 infantry and 7000 cavalry, Caesar barely 22,000 infantry and 1000 cavalry. But superior generalship and discipline, and the courage of despair, won the day against greater numbers. Pompey fled to Egypt, where he was immediately murdered. When the news of the victory reached Rome, Caesar was appointed dictator for a year, and other offices also were conferred upon him, so that, under the forms of the old constitution, he possessed absolute authority.

Coin of Iulius Caesar.

Having followed Pompey to Egypt, Caesar was there for a time in great danger on account of the disturbance known as the Alexandrine War, which arose from a dispute regarding the succession. He placed Cleopatra on the throne, and in the spring of 47 proceeded to Pontus, where he defeated Pharnaces, a son of Mithridates, near Zela, announcing the victory at Rome in the famous despatch, *Veni, vidi, vici*, "I came, I saw, I conquered." Early in 46, he crossed over to Africa, crushing the remnants of the senatorial forces there at the battle of Thapsus, April 6. Returning to Rome, where his supremacy was no longer disputed, he treated his former opponents with unlooked-for clemency, and inaugurated several salutary reforms, among which not the least important was the rearrangement of the calendar. The sons of Pompey gathered an army in Spain, which he defeated at the battle of Munda, March 17th, B.C. 45. During the ensuing months, Caesar's powers as a civil administrator had full scope. His projects, few of which were destined to be realized, were characterized by statesmanship of a high order, which has come to be the more admired the better it has been un-

derstood. But he was not beyond the reach of malice and envy. A conspiracy was formed against him; the leaders of it were Marcus Brutus and Cassius. The conspirators were actuated by different motives—some, no doubt, by personal jealousy and hatred; others by a patriotic desire to restore the old republican constitution; a few, perhaps, by ambitious designs upon the spoils of State. On the 15th of March, B.C. 44, as Caesar was entering the hall connected with Pompey's theatre to attend a meeting of the Senate, he was set upon, and fell pierced by twenty-three wounds.

Caesar holds a unique place in the history not merely of Rome, but of the world. In his time the government of Rome had been found wholly inadequate to meet the administrative demands of a great empire. More and more the military became

Iulius Caesar. (Statue in the Palazzo dei Conservatori, Rome.)

paramount to the civil power in the State, and the old-time balance of political parties gave place to violent strifes between successful generals. The perpetuation of the Roman government demanded centralization of authority. Cherishing the ambition to become the great political leader of his generation, Caesar became supreme, not by usurpation, but by the natural exercise of extraordinary executive abilities under political conditions which admitted of no alternative between anarchy and absolutism. He appears to have had a truer insight into the needs of his country than any of his contemporaries. His genius was not, as often represented, merely destructive, but was constructive as well. After his death, Rome had no peace or prosperity till political authority was again concentrated in the hands of Augustus. But this many-sided man was great not merely as a statesman. As a general he is ranked in the same class with Alexander, Hannibal, and Napoleon; as an orator he was reckoned in his day second only to Cicero; and as a writer he has long since received a place among the world's greatest masters. Tall, with fair complexion and expressive black eyes, sensitive in regard to his appearance and neat to the verge of effeminacy, gracious in address and Epicurean in both tastes and beliefs, in external characteristics he might have passed for a man of the world, at home in the gay society of a luxurious capital. But in ambition, in energy, in the ability to form plans and to bring things to pass, he belied all appearances, and has probably made a deeper impression upon humanity than any other man that has ever lived.

With the exception of a few fragments, Caesar's speeches have perished. A like fate has befallen his poems, most of which were composed in early life, and his treatise on grammar, in two books. Among other writings that were published was a tract written in opposition to Cicero's panegyric on Cato, in two books (see ANTICATONES); a treatise on astronomy, and a collection of witticisms. Only his invaluable "Memoirs" are extant—"On the Gallic War" (*De Bello Gallico*), in seven books, and "On the Civil War" (*De Bello Civili*), in three books, the former published probably in B.C. 51. These works are written in a simple, concise, straightforward style, remarkably free from military technicalities of the sort to trouble the reader. They were no doubt designed to justify the author in the eyes of his countrymen, but their credibility on the whole is not thereby seriously impaired. An eighth book was added to the *Gallic War* by Aulus Hirtius; and unknown authors extended the *Civil War* by narratives concerning the Alexandrine, African, and Spanish wars.

BIBLIOGRAPHY.—The chief sources for the life of Caesar are his own writings and the works of Cicero (particularly the *Letters*), Sallust's *Catiline*, the biographies by Plutarch and Suetonius, and the treatises on Roman history by Velleius Paterculus, Appian, and Dio Cassius. The ancient authorities are examined with much painstaking by Drumann, in his *Geschichte Roms* (vol. iii.); worthy of mention, also, is the extended treatment of Caesar in Mommsen's *History of Rome* (vol. iv. of the English translation), in Duruy's *History of Rome* (vol. iii.), and in Merivale's *History of the Romans under the Empire* (vols. i., ii.). Special works are: Napoleon III., *Histoire de Jules César* (2 vols., with valuable atlas, Paris, 1865; English translation, New York, 1865); Delorme, *Cäsar und seine Zeitgenossen* (deutsch, bearbeitet von Doehler, Leipzig, 1873); Froude, *Caesar: a Sketch* (New York, 1884); and Fowler, *Julius Caesar and the Organization of the Roman Empire* (New York, 1892). For the history of Caesar's campaigns: Rüstow, *Heerwesen und Kriegführung Cäsars* (Nordhausen,

1862); F. de Saulcy, *Les Campagnes de Jules-César dans les Gaules* (Paris, 1865); A. von Göler, *Caesars gallischer Krieg und Theile seines Bürgerkrieges* (2d ed., Freiburg and Tübingen, 1880, reprinted 1884); Stoffel, *Histoire de Jules César: Guerre civile* (2 vols., with atlas of twenty-four plates, Paris, 1887); Judson, *Caesar's Army* (Boston, 1888); and Fröhlich, *Das Kriegswesen Cäsars* (Zürich, 1891). Useful, also, in this connection are: Rüstow, *Atlas zu Caesars gallischem Kriege* (Stuttgart, 1868); A. von Kampen, *XV. ad Caesaris de Bello Gallico Commentarios Tabulae* (Gotha, 1879); Jal, *La Flotte de César* (Paris, 1862); and especially Desjardins, *Géographie historique et administratrive de la Gaule romaine* (4 vols., Paris, 1876–93). For Caesar's writings, see Fallue, *Analyse raisonnée des Commentaires de Jules César* (Paris, 1862); and Trollope, *The Commentaries of Caesar* (Philadelphia, 1880). For the extant portraits of him, see Bernoulli, *Römische Ikonographie* (vol. i., pp. 145–181).

The MSS. upon which the text of Caesar's Commentaries is based fall into two classes, known as α and β. The α group seems to be more faithful to the original form, but contains only the Gallic War; the best representatives are: a MS. of the ninth or tenth century at Amsterdam (A), three of the tenth century (B, C at Paris, R in the Vatican), and one of the eleventh century (M, also at Paris). The MSS. of the β class include also the Civil War with the continuations, the best being a Paris MS. of the eleventh or twelfth century (T), a Vatican MS. of the twelfth century (V), and one of the thirteenth century, at Vienna. Critical editions of Caesar's works are by Nipperdey (Leipzig, 1847) and Dübner (2 vols., Paris, 1867); convenient text-editions by Nipperdey (4th reprint, 1884); Dinter (3 parts, Leipzig, 1864–76; 2d ed. of *Gallic War*, 1884), and Hoffmann (2d ed., Vienna, 1888); critical editions of the *Gallic War* by Frigell (Upsala, 1861), Holder (with useful index, Freiburg, 1882), and Kübler (vol. i., Leipzig, 1893). Among the numerous annotated editions are those by Kraner (Berlin; *de Bel. Gal.*, 15te verbesserte Aufl., von W. Dittenberger, 1890; *de Bel. Civ.*, 10te umgearbeitete Aufl. von Fr. Hofmann, 1890), Doberenz (Leipzig, umgearbeitet von B. Dinter, *de Bel. Gal.*, 9te Aufl. 1890–92; *de Bel. Civ.*, 5te Aufl., 1884), Rheinhard (Stuttgart; *de Bel. Gal.*, 7te Aufl., herausg. von S. Herzog, 1892), Moberly (Oxford; *Gallic War*, 2d ed., 1878; *Civil War*, 1880), and Peskett (Cambridge; *Gallic War*, 5 vols., 1878–82; *Civil War*, Book I. 1890), Allen and Greenough (Boston; *Gallic War*, 1887), and Kelsey (Boston; *Gallic War*, 7th ed., 1894). Of the several lexicons to Caesar, Meusel's *Lexicon Caesarianum* (Berlin, 1887–93) and the *Lexicon Caesarianum* by Menge and Preuss (Leipzig, 1890) are the best. A brief bibliography of the more recent literature dealing with Caesar's works is given in Teuffel's *History of Roman Literature*, §§ 195, 196 (Eng. tr. by Warr, 1892).

Site and Ruins of Caesarea in Samaria.

Caesaraugusta or **Caesarēa Augusta**. The modern Saragossa; a town of Hispania Tarraconensis, named from its founder, Augustus Caesar. It was the birthplace of the poet Prudentius.

Caesarēa (Καισάρεια). (1) The principal city of Samaria, situated on the coast, and anciently called Turris Stratonis, "Strato's tower." Who this Strato was is not clearly ascertained. The first inhabitants were Syrians and Greeks (Joseph. *Ant. Iud.* xx. 6). It was subsequently made a magnificent city and port by Herod, who called it Caesarea, in

honour of Augustus; and it now began to receive Jews among its inhabitants. Frequent contentions hence arose, in consequence of the diversity of faiths that prevailed within its walls. Here the Roman governor resided, and a Roman garrison was continually kept. Vespasian, after the Jewish War, settled a Roman colony in it, with the additional title of Colonia Prima Flavia. In later times it became the capital of Palaestina Prima. This city is frequently mentioned in the New Testament. Here King Agrippa was smitten, for neglecting to give God the praise when the people loaded him with flattery. Here Cornelius the centurion was baptized; and also Philip, the deacon, with his four daughters; and here Agabus the prophet foretold to Paul that he would be bound at Jerusalem (Acts, viii. 10). The modern name of the place is Kaisarieh. It was the birthplace of Eusebius. (2) The capital of Mauritania Caesariensis, and a place of some note in the time of the Roman emperors. It was originally called Iol, but was beautified at a subsequent period by Iuba, who made it his residence, and changed its name to Caesarea, in honour of Augustus. (3) CAESAREA AD ARGAEUM, the capital of Cappadocia, called by this name in the reign of Tiberius, previously Mazaca. It was situate at the foot of Mount Argaeus, as its name indicates, and was a place of great antiquity, its foundation having even been ascribed by some writers to Mesech, the son of Japhet (Ioseph. *Ant. Iud.* i. 6). The modern name is Kaisarieh. (4) CAESARĒA PHILIPPI, a town on the northern confines of Palestine, in the district of Trachonitis, at the foot of Mount Paneus, and near the springs of the Jordan. It was also called Leshem, Laish, Dan, and Paneas. The name Paneas is supposed to have been given it by the Phœnicians. The appellation of Dan was given to it by the tribe of that name, because the portion assigned to them was "too little for them," and they therefore "went up to fight against Leshem (or Laish, Judg. xviii. 29), and took it," calling it "Dan, after the name of Dan, their father" (Josh. xix. 47). Eusebius and Jerome distinguish Dan from Paneas as if they were different places, though near each other; but most writers consider them as one place, and even Jerome himself, on Ezek. xlviii., says that Dan or Leshem was afterwards called Paneas. Philip, the tetrarch, rebuilt it, or at least embellished and enlarged it, and named it Caesarea, in honour of the emperor Tiberius; and afterwards Agrippa, in compliment to Nero, called it Neronias. (5) CAESARĒA INSŬLA, now the island of Jersey.

Caesarion (*Καισάριον*). The son of Cleopatra, said to be hers by Iulius Caesar. Plutarch calls him the son of Caesar, but Dio Cassius and Suetonius doubt the assertion. He was put to death by Augustus Caesar. See Dio Cass. xlvii. 31; Suet. *Iul.* 52; *Aug.* 17.

Caesăris Arae. Mentioned by Ptolemy as near the Tanaïs, in what is now the country of the Don Cossacks. They are supposed to have been erected in honour of one of the Roman emperors by some neighbouring prince; perhaps by Polemo, in the reign of Tiberius. See Tac. *Ann.* xii. 15.

Caesarodūnum. The modern Tours; chief town of the Turones or Turoni, and subsequently called Turoni, on the Liger (Loire), in Gallia Lugdunensis.

Caesaromăgus. (1) The modern Beauvais; the capital of the Bellovaci in Gaul. (2) A city of the Trinobantes in Britain, answering, as is thought, to what is now Chelmsford.

Caesars, THE TWELVE. A collective name given to the first twelve rulers of imperial Rome: Iulius (B.C. 48–44); Augustus (B.C. 30–A.D. 14); Tiberius (14–37); Caligula (37–41); Claudius (41–54); Nero (54–69); Galba (69); Otho (69); Vitellius (69–70); Vespasian (70–79); Titus (79–81); Domitian (81–96). Their biographies were written by Suetonius in his *Vitae Duodecim Caesarum*, of which the standard text is that of Roth (Leipzig, 1858).

Caesius Bassus. A Latin poet, a friend of Persius the satirist, whose book he edited. He is said to have perished during the eruption of Vesuvius in A.D. 79. He had a high reputation in his day as a lyric poet, and is said to have composed a didactic poem on metre. There is a considerable fragment in prose on the same subject which bears the name of Caesius Bassus, but this is perhaps from a prose version of the poetical treatise, which we know to have been largely used by later writers, especially Iuba and Terentianus Maurus.

Caesonia, MILONIA. See CALIGULA.

Caestus (from *caedo*, and not to be confounded with *cestus*, from Greek *κεστός*). The thongs or bands of leather which were tied round the hands of boxers, in order to render their blows more powerful. These bands of leather were also frequently tied round the arm as high as the elbow, as is shown in the following statue of a boxer, the original of which is in the Louvre at Paris.

Statue of a Boxer with the Caestus. (From the Louvre.)

The caestus was used by boxers from the earliest times. The ordinary boxing-gloves were called in Greek *ἱμάντες* or *ἱμάντες πυκτικοί*. When Epeius and Euryalus in the *Iliad* (xxiii. 684) prepare themselves for boxing, they put on their hands thongs made of ox-hide. (Cf. Theocr. xxii. 81; Apoll. Rhod. ii. 53.) But it should be recollected that the caestus in heroic times appears to have consisted merely of thongs of leather, and differed materially from the frightful weapons loaded with lead and iron which were used in later times. The different kinds of caestus were called by the Greeks in later times *μειλίχαι*, *σπεῖραι βόειαι*, *σφαῖραι*, and *μύρμηκες*—of which the *μειλίχαι* gave the softest blows, and the *μύρμηκες* the most severe. The *μειλίχαι*, which were the most ancient, are described by Pausanias (viii. 40, § 3) as made of raw ox-hide cut into thin pieces, and joined in an ancient manner; they were tied under the hollow or palm of the hand, leaving the fingers uncovered. The athletae in the palaestrae at Olympia used the *μειλίχαι* only in practising for the public games.

The caestus used in later times in the public games was, as has been already remarked, a most formidable weapon. It was frequently covered with knots and nails, and loaded with lead and iron; whence Vergil, in speaking of it, says,

Ingentia septem,
Terga boum plumbo insuto ferroque rigebant.

Statius also speaks of *nigrantia plumbo tegmina*. Such weapons, in the hands of a trained boxer, must have frequently occasioned death. The μύρμηκες were, in fact, sometimes called γυιοτόροι, or "limb-breakers." Lucilius speaks of a boxer whose head had been so battered by the μύρμηκες as to resemble a sieve. See ATHLETAE; PUGIL.

Figures with the caestus frequently occur in ancient monuments. They appear to have been of various forms, as appears by the following specimens, taken from ancient monuments, of which drawings are given by Fabretti.

Caestus (Fabretti.)

Caïcus (Καΐκός). A river of Mysia, rising in Mount Temnus and flowing past Pergamus into the Cumaean Gulf.

Caiēta. The modern Gaeta; a town in Latium on the borders of Campania, situated on a promontory of the same name, and on a bay of the sea called, after it, Sinus Caietanus. It possessed an excellent harbour, and was said to have derived its name from Caieta, the nurse of Aeneas.

Caius, Caia. See GAIUS, GAIA.

Cake. See PLACENTA; SCRIBLITA.

Calăber, QUINTUS, called SMYRNAEUS (Κόϊντος Σμυρναῖος). The author of a poem in fourteen books, intended as a continuation of the *Iliad* of Homer. He lived in the fourth century A.D. The poem was edited by Tychsen (Strasburg, 1807).

Calabria. The peninsula in the southeast of Italy extending from Tarentum to the Promontorium Iapygium, and forming part of Apulia (q. v.).

Calactē (Καλάκτα). Originally the name of part of the coast, and afterwards a town on the northern coast, of Sicily, founded by Ducetius.

Calagurris. The modern Calahorra; a town of the Vascones in Hispania Tarraconensis, near the Iberus (Ebro). It was the birthplace of Quintilian. The Calagurritani are said to have eaten their wives and children in the extremity of their hunger, rather than yield to Pompey in B.C. 71. See Val. Max. vii. 6.

Calăïs (Κάλαϊς) and **Zetes** (Ζήτης). The Boreadae, or sons of Boreas and Orithyia. They were both winged heroes, and took part in the Argonautic expedition. Coming in the course of the enterprise to Salmydessus, they set free Phineus (q. v.), the husband of their sister Cleopatra, from the Harpies, chasing them through the air on their wings. According to one story, they perished on this occasion; according to another, they were slain afterwards by Heracles on the island of Tenos, on their return from the funeral games of Pelias. (See ACASTUS.) This was in retribution for the counsel which they had given to the Argonauts on the coast of Mysia, to leave Heracles behind. Their graves and monuments were shown in Tenos. One of the pillars was said to move when the north wind blew. See ARGONAUTAE.

Calămis (Κάλαμις). A Greek artist, who flourished at Athens about B.C. 470. He worked in marble and metal, as well as gold and ivory, and was master of sculpture in all its branches, from the chiselling of small silver vessels to the execution of colossal statues in bronze. His Apollo, at Apollonia in Pontus, was 120 feet high. This statue was carried away to Rome by Lucullus and set up on the Capitol. We hear of statues of the gods and heroic women from his hand, as well as of men on horseback and four-horsed chariots. His horses are said to have been unsurpassed. His female figures, if we may believe the ancient critics, were characterized by antique harshness and severity, but relieved by a touch of grace and delicacy.

Calamistrum and **Calamister**. A curling-iron, so called from its resemblance to a reed (*calamus*), and used among the Romans as early as the time of Plautus (*Curc.* iv. 4, 21). It was sometimes employed by men, though such were considered effeminate. Figuratively, the word denotes an excess of literary ornament (Suet. *Iul.* 56).

Calămus (also HARUNDO; in Greek κάλαμος). A reed. Reeds were extensively used by the ancients for thatching; for making mats and other kinds of plaited work; and in the following uses:

(1) In music, to form the pandean pipes (σῦριγξ), which consisted of reeds of different lengths fastened by wax, as shown in the accompanying cut, taken from a terra-cotta relief in the British Museum. See SYRINX.

Calamus, Pan's Pipe. (From terra-cotta relief.)

(2) A light flute formed of a single reed.

(3) The shaft of an arrow.

(4) A reed pen (*calamus scriptorius*), sharpened like the modern quill pen with a knife, and cleft at the point. The best reeds for pen-making came from Egypt and Cnidus. These reed pens are still known in the East, and the Arabs use the word *kalam* to denote them. They were carried in a sort of writing-case called *theca calamaria* (καλαμίς). (Cf. Suet. *Claud.* 35.) See WRITING AND WRITING MATERIALS.

(5) A fishing-rod.

(6) The fowler's limed rod, which was sometimes composed of separate joints, so that it could be lengthened to suit the fowler's convenience. It was then called *harundo crescens* or *texta*, as well as *calamus* (Petron. *Sat.* 109).

(7) A light Egyptian boat made of reeds (*canna*, Juv. v. 89).

(8) A horizontal rod passed through the warp in weaving (*harundo*, Ovid, *Met.* vi. 55). See TELA.

Calantĭca; also **Calautica** (κρήδεμνον). A feminine head-dress of uncertain form, but thought by Rich to signify a sort of covering for the head with lappets hanging down to the shoulders on both sides, and when drawn together concealing the face. The word is sometimes used in the sense of *mitra* (q. v.).

Calānus (Κάλανος). A celebrated Indian philosopher, one of the gymnosophists. He followed Alexander from India, and, becoming ill when they had reached Persia, he desired to have his funeral pile erected. Having offered up his prayers, poured libations upon himself, and cut off part of his hair

and thrown it into the fire, he ascended the pile, and did not move at the approach of the flames. Plutarch says that, in taking leave of the Macedonians, he desired them to spend the day in merriment and drinking with their king, "for I shall see him," said he, "in a little while at Babylon." Alexander died in Babylon three months after this. Calanus was in his eighty-third year when he burned himself on the funeral pile. See Cic. *De Div.* i. 23; Arrian, *Anab.* vii. 2, 4; Plut. *Vit. Alex.*; Aelian, *V. H.* ii. 41, 5, 6; Val. Max. i. 8.

Calăthus (*κάλυθος*, *τάλαθος*). A Greek word though found in Roman authors, the pure Latin word being *qualus* or *qualum*. The name *calathus* is applied to the following objects:

(1) A woman's work-basket, especially one that contained the materials for spinning. It was generally made of osiers or reeds, but sometimes of silver; and was narrow at the bottom and broad at the top, as in the annexed illustration taken from a painted vase (Millin).

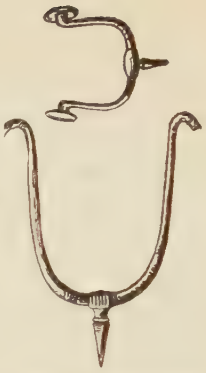
Slave presenting her Mistress with a Calathus.

(2) A similar basket used for carrying fruits, flowers, grain, etc.

(3) A vessel shaped like a wicker *calathus* and used for holding milk; also a wine-cup of like shape (Verg. *Georg.* iii. 402).

(4) As a religious emblem, the *calathus* was carried in honour of Demeter and of Tellus as denoting abundance; and is found in connection with Athenê, the goddess of the art of weaving. Priestesses are also represented as wearing the calathus on their heads, and in imperial times the god Serapis (q. v.) is thus depicted.

Calatia. The modern Caiazzo; a town in Samnium, on the Appia Via, between Capua and Beneventum.



Calatīnus, A. Atilius. Consul B.C. 258, and dictator in 249, when he carried on the war in Sicily. He was the first dictator to command an army outside of Italy.

Calātor (from *calo*, to call; Gk. *καλήτωρ*, from *καλέω*). Originally a slave employed as a crier; later, the *nomenclator* (q. v.) who accompanied a candidate for political office on his canvass, and prompted him (Hor. *Epist.* i. 6, 50). (See Ambitus.) The word is also applied to certain attendants on the members of the higher orders of priesthood.

Calaurēa (*Καλαύρεια*). The modern Poro; a small island in the Saronic Gulf off the coast of Argolis and opposite Troezen, possessing a celebrated Temple of Poseidon, which was regarded as an inviolable asylum. Hither Demosthenes fled to escape Antipater, and here he took poison, B.C. 322. His tomb was one of the sights of the island.

Calcar (*μύωψ*, *ἐγκεντρίς*). A spur, an implement not mentioned in Homer, who speaks only of the use of a goad (*κέντρον*). In Greek, it is in fact often doubtful whether the writer is referring to the spur or the goad. In works of art spurs are seldom represented, but bronze spurs have been found at Dodona.

The early adoption of this contrivance by the Romans appears from the mention of it in Plautus and Lucretius. It is afterwards often alluded to by Cicero, Ovid, Vergil, and subsequent Roman authors. On the other hand, we do not find that the Greeks used spurs, and this may account for the fact that they are seldom, if ever, seen on antique statues.

Calcaria, Bronze Spurs. (British Museum.)

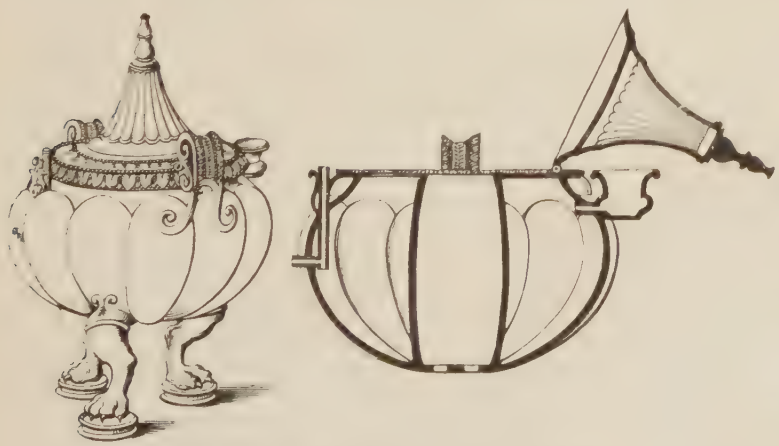
The spurs of a cock are also called *calcaria*.

Calceus (*ὑπόδημα κοῖλον*). A shoe, part of the regular Roman dress, and usually worn in public. Each order, and every *gens*, had its particular kind of *calceus*. The patricians wore a *mulleus* or *calceus patricius*. This was a shoe of red leather with a high sole, like that of the *cothurnus*. The leather passed round the back of the heel, where it was furnished with small hooks, to which the straps were fastened. It was originally a part of the royal dress, and was afterwards worn by generals on the occasion of a triumph. In later times, with the rest of the triumphal costume, it became a part of the dress of the consuls. In the second rank came the *calceus senatorius*, or shoe worn by senators. This was black, and tied round the leg by four straps. In the case of patricians it was ornamented by a crescent-shaped clasp (*luna*). The *calceus* of the equites, and of ordinary citizens, was also black. The latter was called *pero*; it rose as high as the ankle, and was fastened with a simple tie.

Ordinary Calceus. (From a Marble in the British Museum.)

Calchas (*Κάλχας*). A celebrated soothsayer, son of Thestor. He had received from Apollo the knowledge of future events; and the Greeks, accordingly, on their departure for the Trojan War, nominated him their high-priest and prophet. Among the interpretations of events imputed to him, it is said that he predicted that Troy could not be taken without the aid of Achilles; and that, having observed a serpent, during a solemn sacrifice, glide from under an altar, ascend a tree, and devour nine young birds with their mother, and afterwards become itself changed into stone, he inferred that the siege of Troy would last ten years. He also foretold that the Grecian fleet, which was at that same time detained by contrary winds in the harbour of Aulis, would not be able to sail until Agamemnon should have sacrificed his own daughter Iphigenia. Calchas likewise advised Agamemnon, during the pestilence by which Apollo desolated the Grecian camp, to restore Chryseïs to her father, as the only means of

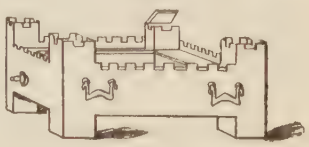
appeasing the god. (See TROJAN WAR.) He was consulted, indeed, on every affair of importance, and appears to have often determined, with Agamemnon and Odysseus, the import of the oracles which he expounded. His death is said to have happened as follows. After the taking of Troy, he accompanied Amphilochus, son of Amphiaraüs, to Colophon in Ionia. It had been predicted that he should not die until he found a prophet more skilful than himself: this he experienced in the person of Mopsus. He was unable to tell how many figs were on the branches of a certain fig-tree; and when Mopsus mentioned the exact number Calchas retired to the wood of Claros, sacred to Apollo, where he expired of grief and mortification. Calchas had the patronymic, Thestorides.



Calculator (λογιστής). In general, a keeper of accounts, but sometimes a teacher of arithmetic — an office of much repute among teachers. The name is derived from the *calculi* used in reckoning, for which see ABACUS; LOGISTICA.

Calculator. (Saglio.)

Calculi. See ABACUS; DUODECIM SCRIPTA; LATRUNCULORUM LUDUS; NUMERI.



Calda or **Calida** (sc. *aqua*). A hot drink of the Greeks and Romans, mentioned as early as Plato, who calls it θερμόν. It was probably nothing more than hot water, flavoured with spices and herbs; and though wine was often drunk with it, there is no good reason for considering *calda* a sort of punch or negus in which wine was already mixed. Hot water is occasionally mentioned as a drink (cf. Athenaeus, ii. 45 d; Lucian, *Asin.* p. 575; Mart. viii. 67), and the most that can be inferred from the passages usually cited is that wine was separately served while the guest had the choice of hot or cold water to mix with it, according to his taste. Shops or taverns called *thermopolia* served the same drink, and we read of decrees of the emperors closing them on the occasion of a death in the imperial family. (See CAUPONA.) The water was heated for this purpose in an *aënum* or *caccabus* (q. v.), and kept hot in the *authepsa* (q. v.), a vessel resembling our tea-urns.

Bronze Vessels for serving the Calda. (Pompeii.)

Caldarium. (1) The hot chamber of Roman baths. (See BALNEAE.) (2) The boiler (χαλκεῖον) used in heating the water for the baths. (3) A portable cooking-stove. In this sense the word *caldarium* occurs only in late authors, though the thing itself is well known through numerous specimens found at Pompeii, and now in the Naples Museum. The classical term for it is probably *focus*. In Seneca's time, Roman epicurism brought these stoves into the dining-room (*cenatio*), that the dishes might be served to perfection.

The *caldarium* here figured has been described by Rich. The sides, which are hollow, contained water; and a small cock projects from one of them (seen in the engraving), by which it was drawn off. The four towers at the angles are provided with movable lids; the centre received the lighted charcoal, and cooking vessels might be placed on it or suspended over it. Another contrivance (see AUTHEPSA) seems to combine the two purposes of supplying hot water and keeping dishes hot. It has the cylinder with a place in the centre for a charcoal fire, which is the characteristic of an *authepsa;* and it is also furnished with a shallow, oblong tray, into which the hot water from the cylinder was drawn by a cock, and on which dishes may have been placed.

Caldarium. (*Museo Borbonico*, xii. pl. 46.)

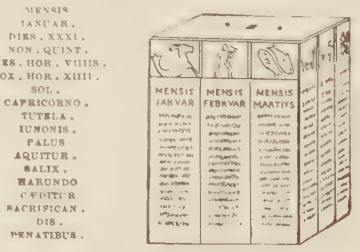
These *caldaria* might be shaped like a mile-stone (as in a specimen figured *Mus. Borbon.* iv. pl. 59, also by Saglio) or in more eccentric designs (*dracones et miliaria et complures formas*, Sen. *Nat. Quaest.* iii. 24, § 2). The same passage describes boiler-tubes, not unlike those of the modern steam-engine. These contrivances show great skill in the economy of fuel and the conveniences of life.

Calé. The modern Oporto; a port-town of the Callaeci in Hispania Tarraconensis, at the mouth of the Durius. From Porto Cale the modern name of the country, Portugal, is supposed to have come.

Caledonia. A country in the north of Britain, now called Scotland. The ancient Caledonia comprehended all those countries which lay to the north of the Forth and the Clyde. It was never

completely subdued by the Romans, though Agricola penetrated to the Tay, and Severus into the very heart of the country. The name is probably the Latinized form of the native name, Calido, and first appears in Lucan (vi. 68). The root is found in the Welsh *celydd*, "a woody retreat." The Romans also called it Britannia Barbara.

See Tac. *Agric.* 11, 25, 26, 27; Ammian. Marcell. xxvii. 8; Plin. *H. N.* iv. 16; Ptolemy, ii. 3; Wilson, *Prehistoric Annals of Scotland;* Rhys, *Celtic Britain* (2d ed. 1884); and the article BRITANNIA.



Calendarium (more properly KALENDARIUM). Originally the account-book in which debts were entered. As these debts fell due on the Kalends, the name got its first signification from that fact; coming later to mean a register of the days, weeks, and months. The Greek terms are *ἡμερολόγιον* and *ἐφημερίς*.

(1) GREEK. The Greek year consisted of twelve months—some "full," i.e. of 30 days each; the others, "hollow" or incomplete, of 29 days each. This made up a lunar year of 354 days, 11 days short of the solar year. To maintain some correspondence between the lunar and the solar years, and to provide at least for the festivals of the seasons always occurring at the right time of year, the Athenians early resorted to the method of intercalation. A space of time was taken which included as many days as would exactly make up eight solar years, and could easily be distributed among the same number of lunar years. This space of time was called a "great year." Then in every third, sixth, and eighth year, a month of 29 or 30 days was inserted, so that the years in question consisted each of 383 or 384 days. This system was introduced at Athens by Solon. The period of eight years was sometimes called *ἐνναετηρίς*, or a period of nine years, because it began again with every ninth year; sometimes *ὀκταετηρίς*, or space of eight years. For this the astronomers, of whom Meton (q. v.) in the Periclean Age may be taken as a representative, substituted a more accurate system, which was afterwards adopted in Athens and other cities as a correction of the old calendar. This was the *ἐννεακαιδεκαετηρίς* of nineteen years. The alternate "full" and "hollow" months were divided into three decades, consisting of 10 or 9 days each, as the case might be. The days of the last decade were counted from more to less to correspond with the waning of the moon. Thus the 21st of the month was called the 10th of the waning moon, the 22d the 9th, the 23d the 8th, and so on. The reckoning of the year, with the order and names of the months, differed more or less in different States, the only common point being the names of the months, which were almost without exception taken from the chief festivals celebrated in them. The Athenians and the other Ionian peoples began their year with the first new moon after the summer solstice, the Dorians with the autumnal equinox, the Boeotians and other Aeolians with the winter solstice. The table given below shows the succession of the Attic months, the number of days they contained, and the corresponding months of our year.

1.	Hecatombaeon (Ἑκατομβαιών)	contained	30	days, and corresponds nearly to our	July.
2.	Metageitnion (Μεταγειτνιών)	"	29	" " "	August.
3.	Boedromion (Βοηδρομιών)	"	30	" " "	September.
4.	Pyanepsion (Πυανεψιών)	"	29	" " "	October.
5.	Maimacterion (Μαιμακτηριών)	"	30	" " "	November.
6.	Poseideon (Ποσειδεών)	"	29	" " "	December.
7.	Gamelion (Γαμηλιών)	"	30	" " "	January.
8.	Anthesterion (Ἀνθεστηριών)	"	29	" " "	February.
9.	Elaphebolion (Ἐλαφηβολιών)	"	30	" " "	March.
10.	Munychion (Μουνυχιών)	"	29	" " "	April.
11.	Thargelion (Θαργηλιών)	"	30	" " "	May.
12.	Scirophorion (Σκιροφοριών)	"	29	" " "	June.

At the time when the Julian Calendar was adopted by the Athenians, probably about the time of the emperor Hadrian, the lunar year appears to have been changed into the solar year; and it has further been conjectured that the beginning of the year was transferred from the summer solstice to the autumnal equinox. The intercalary month was a second Poseideon inserted in the middle of the year. The official system of numbering the years differed also very much in the various States. The years received their names from the magistrates, sometimes secular, sometimes spiritual. (See EPONYMUS.) Historical chronology was first computed according to Olympiads, or periods of four years, beginning B.C. 776, by the historian Timaeus in the third century B.C.

(2) ROMAN. The Roman year was supposed to have consisted, under Romulus, of 10 months—four "full" ones of 31 days (March, May, July, and October) and six "hollow" of 30 days (April, June, August, September, November, December). But, as a space of 304 days makes up neither a solar nor a lunar year, it is difficult to understand the so-called "year of Romulus." King Numa was popularly supposed to have introduced the year of 12 months by adding January and February at the end; for the Roman year, it must be remembered, began originally with March. By this system every month except February had an odd number of days: March 31, April 29, May 31, June 29, Quintilis 31, Sextilis 29, September 29, October 31, November 29, December 29, January 29, February 28. Numa is also credited with the attempt to square this lunar year of 355 days with the solar year of 365; but how he did it is not certainly known. The Decemviri in B.C. 450 probably introduced the system of adjustment afterwards in use. According to this, a cycle of four years was taken, in the second year of which an intercalary month (*mensis mercedonius*) of 23 days was inserted between the 24th and 25th of February, and in the fourth year a month of 22 days between the 23d and 24th of Febru-

Roman Calendar, with Copy of Inscription for January. (Pompeii.)

ary. Thus the period of four years amounted to 1465 days. But this gave the year an average of 366¼ days, or one day too many, so that a special rectification was necessary from time to time. This was probably carried out by the omission of an intercalary month. It was the business of the *pontifices* to keep the calendar in order by regular intercalation; but, partly from carelessness, partly from political motives, they made insertions and omissions so incorrectly as to bring the calendar into complete confusion, and destroy the correspondence between the months and the seasons. The mischief was finally remedied by Iulius Caesar, with the assistance of the mathematician Sosigenes. To bring the calendar into correspondence with the seasons, the year B.C. 46 was lengthened so as to consist of 15 months, or 415 days, and the calendar known as the Julian was introduced on the 1st of January, B.C. 45. This calendar is founded simply on the solar year, which is well known to be a discovery of the Egyptians. Caesar fixed this year at 365¼ days, which is correct within a few minutes. After this, the ordinary year consisted of 365 days, divided into 12 months, with the names still in use. Every fourth year had 366 days, a day being inserted at the end of February. The Julian Calendar maintained its ground till 1582, when Pope Gregory XIII. corrected the trifling error which still attached to it. The old names of the months were retained with two exceptions—that of Quintilis, which, in honour of Iulius Caesar, was called Iulius, and that of Sextilis, which in B.C. 8 was called Augustus, in honour of the emperor. The old divisions of the lunar month were also retained for convenience of dating. These were (*a*) the Kalendae, marking the first appearance of the new moon; (*b*) the Nonae, marking the first quarter; (*c*) the Idus, marking the full moon. Kalendae means properly the day of summoning, from *calare*, to summon. The pontifex was bound to observe the first phase, and to make his announcement to the Rex Sacrorum, who then summoned the people to the Capitol, in front of the Curia Calabra, so called from *calare*. Here he offered sacrifice, and announced that the first quarter would begin on the fifth or seventh day (inclusive) as the case might be. This day was called Nonae, as (according to Roman calculation) the ninth day before the full moon, and fell in March, May, July, and October on the 7th, in the other months on the 5th. The appearance of the full moon was called Idus (probably connected with the Etruscan word *iduare*, "to divide"), because it divided the month in the middle. The days of the month were counted backwards, in the first half of the month from the Nones and Ides, in the last half from the Kalends of the following month. The Romans also had a week called *internundinum*, or the interval between two *nundinae*. It consisted of eight days, and, like our weeks, could be divided between two months or two years. See FASTI.

After the establishment of the Republic the Romans named their years after the consuls, a custom which was maintained down to the reign of Justinian (A.D. 541). After the time of Augustus it became the practice in literature to date events from the foundation of Rome, which took place, according to Varro, in B.C. 753; according to Cato, in 751.

THE DAY.—The Greeks reckoned the civil day from sunset to sunset, the Romans (like ourselves) from midnight to midnight. The natural day was reckoned by both as lasting from sunrise to sunset. The divisions of the day were for a long time made on no common principle. It was for military purposes that the Romans first devised such a principle, dividing the night during service into four equal watches (*vigiliae*). Corresponding to this we find another division (probably calculated immediately for the courts of justice) into *mane* (sunrise to 9 or 10), forenoon (*ad meridiem*), afternoon (*de meridie*) until 3 or 4, and evening (*suprema*) from thence till sunset. After the introduction of sundials and waterclocks, the day and night were divided each into twelve hours; but the division was founded on the varying length of the day, so that each hour of the day was longer, and conversely each hour of the night shorter, in summer than in winter.

It should be observed that several of the Eastern nations, for the purpose of preventing confusion in their calculations with other nations, dropped the names of their months, and merely counted the months, as the first, second, third, etc., month. For extended information see Corsini, *Fast. Att.*, which, however, is very imperfect; Ideler, *Handbuch der mathem. u. technischen Chronol.* (Berlin, 1826); Clinton, *Fast. Hellen.* vol. ii. Append. xix.; and more especially K. F. Hermann, *Ueber griechische Monatskunde* (Göttingen, 1844); Th. Bergk, *Beiträge zur griechischen Monatskunde* (Giessen, 1845); A. Boeckh, *Ueber die vierjährigen Sonnenkreise der Alten* (Berlin, 1863); Mommsen, *Chronologie* (Leipzig, 1883); Ideler's work, *Lehrbuch der Chronologie*, 2 vols. (Berlin, 1826); Mommsen, *Die römische Chronologie* (Berlin, 1858); and Matzat, *Röm. Chronologie*, 2 vols. (Berlin, 1883). For further information connected with the ancient measurement of time see the articles ASTRONOMIA; DIES; HOROLOGIUM; LUSTRUM; NUNDINAE; SAECULUM; VIGILIAE.

Calēnus, Q. FUFIUS. A tribune of the plebs, B.C. 61, when he succeeded in saving P. Clodius (q. v.) from condemnation for his violation of the mysteries of the Bona Dea. In 59, he was praetor, and from this time appears as an active partisan of Caesar, in whose service he remained until Caesar's death (44). After this event Calenus joined M. Antonius, and subsequently had the command of Antony's legions in the north of Italy. He died in 41.

Cales. The modern Calvi; the chief town of the Caleni, an Ausonian people in Campania, on the Via Latina, said to have been founded by

Coin of Cales.

Calaïs, son of Boreas, and therefore called Threïcia by the poets. It was celebrated for its excellent wine. See VINUM.

Calētes or **Caleti**. A people in Belgic Gaul near the mouth of the Sequana (Seine).

Calgăcus. See article in Appendix.

Calidarium. See CALDARIUM.

Caliendrum. A tall female head-dress, but whether a wig of false hair or an arrangement of draperies, it is not easy to determine. The Cruquian scholiast on the *locus classicus* of Horace (*Sat.* i. 8, 48) gives both explanations, without attempting to decide between them (*peplum capitis aut crinis suppositicius seu capillamentum aut galericulus capitisve ornamentum*). But *galericulus* may mean a wig (Suet. *Oth.* 12, with Casaubon's note); and the humour of the passage is decidedly in favour of this rendering: one of the two old women drops her false teeth in her flight, and the other her false hair.

Calĭga. A strong and heavy shoe, or rather sandal, worn by the Roman soldiers. Although the use of this species of *calceamentum* extended to the centurions, it was not worn by the superior officers. Hence the common soldiers, including centurions, were distinguished by the name of *caligati* (Suet. *Aug.* 25). Service in the ranks was also designated after this article of attire. Thus Marius was said to have risen to the consulship *a caliga*, i. e. from the ranks. The emperor Caligula (q. v.) received that cognomen when a boy, in consequence of wearing the *caliga*, which his father, Germanicus, put upon his son in order to please the soldiers (Tac. *Ann.* i. 41). The triumphal monuments of Rome show most distinctly the difference between the *caliga* of the common soldier and the *calceus* worn by men of higher rank. (See CALCEUS). The *caliga* exhibits a number of straps, through which the foot is partially seen; while the *calceus* (q. v.) is an ordinary closed shoe. The sole of the *caliga* was thickly studded with hobnails.

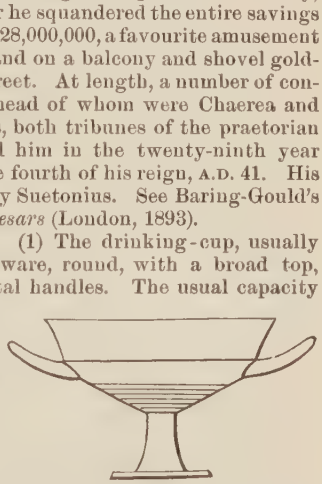
Caliga. (Arch of Trajan.)

The *caliga speculatoria* (Suet. *Calig.* 52), made for the use of couriers, was probably much lighter than the ordinary shoe worn by the soldiers. See SPECULATOR.

Caligŭla, GAIUS CAESAR AUGUSTUS GERMANĬCUS, son of Germanicus and Agrippina, was born A.D. 12, in the camp, probably in Germany, and was brought up among the legions (Suet. *Calig.* 8). Here he received from the soldiers the surname of Caligula, from his being arrayed, when quite young, like a common soldier, and wearing a pair of *caligae*, a kind of shoe or covering for the feet used chiefly by the common soldiers. This was done in order to secure towards him the goodwill of the troops. Caligula himself, however, disliked the appellation in after-days, and preferred that of Gaius Caesar, which is also his historical name. Upon his father's death he returned from Syria, and lived with his mother till her exile, when he removed to the residence of Livia Augusta, his great-grandmother, whose funeral oration he delivered in public, while he still wore the *praetexta*. He afterwards remained in the family of his grandmother, Antonia, until his twentieth year, when, being invited to Capreae by the emperor, he assumed the dress proper to manhood, but without the customary ceremonies.

In the court of his grandfather, his naturally mean and vicious temper appeared in a servile compliance with the caprices of those in power, in a wanton love of cruelty towards the unfortunate, and in the most abandoned and unprincipled debauchery; so that Tiberius observed that he was

Caligula. (Bronze bust in Paris.)



breeding a second Phaëthon for the destruction of the world. Tiberius had, by his testament, appointed his two grandsons, Gaius Caesar and Tiberius Gemellus, the latter the son of Drusus, joint heirs of the Empire. The first act of Caligula, however, was to assemble the Senate for the purpose of declaring the invalidity of the will; and this being readily effected, and Tiberius Gemellus being declared too young to rule, Gaius Caesar Caligula was immediately proclaimed emperor. This appointment was received with the most unbounded joy both at Rome and in the provinces, and the conduct of the new prince seemed at first to promise one of the most auspicious of reigns. But this was all dissimulation on his part—a dissimulation which he had learned under his wily predecessor—for Caligula esteemed it prudent to assume the appearance of moderation, liberality, and justice, till he should be firmly seated on the throne, and freed from all apprehension lest the claims of the young Tiberius might be revived on any offence having been taken by the Senate. He interred, in the most honourable manner, the remains of his mother and of his brother Nero, set free all state prisoners, recalled the banished, and forbade all prosecutions for treason. He conferred on the magistrates free and independent power. Although the will of Tiberius had been declared, by the Senate, to be null and void, he fulfilled every article of it, with the exception only of that above mentioned. When he was chosen consul, he took his uncle Claudius as his colleague. Thus he distinguished the first eight months of his reign by many actions dictated perhaps by hypocrisy, but which

appeared magnanimous and noble to the eyes of the world, when he fell, on a sudden, dangerously ill, in consequence, as has been imagined, of a love-potion given him by his mistress, Milonia Caesonia (whom he afterwards married), with a view to securing his inconstant affections. On recovering from this malady, whether weary by this time of the restraints of hypocrisy, or actually deranged in his intellect by the inflammatory effects of the potion which he had taken (Juv. vi. 614), the emperor threw off all appearance of virtue and moderation, as well as all prudential considerations, and acted on every occasion with the mischievous violence of unbridled passions and wanton power; so that the tyranny of Tiberius was forgotten in the enormities of Caligula. The most exquisite tortures served him for enjoyments. During his meals he caused criminals, and even innocent persons, to be stretched on the rack and beheaded; the most respectable citizens were daily executed. In the madness of his arrogance he even considered himself a god, and caused the honours to be paid to him which were paid to Apollo, to Mars, and even to Iupiter. He built a temple to his own divinity. At one time he wished that the whole Roman people had but one head, that he might be able to cut it off at a single blow. He frequently repeated the words of Attius, *Oderint dum metuant.* One of his greatest follies was the building of a bridge of vessels between Baiae and Puteoli, in imitation of that of Xerxes over the Hellespont. He himself consecrated this grand structure with great splendour; and, after he had passed the night following in a revel with his friends, in order to do something extraordinary before his departure he caused a crowd of persons, without distinction of age, rank, or character, to be seized and thrown into the sea. On his return he entered Rome in triumph, because, as he said, he had conquered nature herself. After this he made preparations for an expedition against the Germans; passed, with more than 200,000 men, over the Rhine; but returned after he had travelled a few miles, and that without having seen an enemy. Such was his terror that when he came to the river, and found the bridge obstructed by the crowd upon it, he caused himself to be passed over the heads of the soldiers. He then went to Gaul, which he plundered with unexampled rapacity. Not content with the considerable booty thus obtained, he sold all the property of his sisters Agrippina and Livilla, whom he banished. He also sold the furniture of the old court, the clothes of Augustus, Agrippina, etc. Before he left Gaul he declared his intention of going to Britain. He collected his army on the coast, embarked in a magnificent galley, but returned when he had hardly left the land, drew up his forces, ordered the signal of battle to be sounded, and commanded the soldiers to fill their helmets with shells, while he cried out, "This booty, ravished from the sea, is fit for my palace and the Capitol." When he returned to Rome he was desirous of a triumph on account of his achievements, but contented himself with an ovation. Discontented with the Senate, he resolved to destroy the greater part of the members and the most distinguished men of Rome, as was proved by two books which were found after his death, wherein the names of the proscribed were noted down, and of which one was entitled *Gladius* (Sword), and the other *Pugillus* (Dagger). He became reconciled to the Senate, however, when he found it worthy of him. He supported public brothels and gaming-houses in the palace, and received himself the entrance-money of the visitors. His horse, named Incitatus, was his favourite. This horse he made one of his priests, and, by way of insult to the Republic, declared it also consul. It was kept in an ivory stable and fed from a golden manger, and when it was invited to feast at the emperor's table gilded oats were served up in a golden basin of exquisite workmanship. He had even the intention of destroying the poems of Homer, and was on the point of removing the works and images of Vergil and Livy from all libraries—those of the former because, as he said, he was destitute of genius and learning; those of the latter because he was not to be depended upon as an historian. Caligula's morals were, from his youth upward, abominably corrupt, but after he had married and repudiated several wives, Caesonia retained a permanent hold on his affections. His extravagance equalled his cruelty, for in a single year he squandered the entire savings of Tiberius, some $28,000,000, a favourite amusement of his being to stand on a balcony and shovel gold-pieces into the street. At length, a number of conspirators, at the head of whom were Chaerea and Cornelius Sabinus, both tribunes of the praetorian cohorts, murdered him in the twenty-ninth year of his age, and the fourth of his reign, A.D. 41. His life was written by Suetonius. See Baring-Gould's *Tragedy of the Caesars* (London, 1893).

Coin of Caligula, with his head and that of Augustus (the latter crowned).

Calix (*κύλιξ*). (1) The drinking-cup, usually made of earthenware, round, with a broad top, feet, and horizontal handles. The usual capacity was three *cotylae*, or 1.3 pints. The *cantharus* (q. v.) differed from the *calix* in being larger and having vertical handles. Besides earthenware, other materials are mentioned as used in the making of *calices*—e. g. wood, brass, silver, terebinth (*τέρμινθος*), and possibly glass (Photius, s. h. v.). Certain places are mentioned by Athenaeus as noted for their manufacture of drinking-cups, among them Argos, Chios, Lacedaemon, Rhodes, and Teos; and Martial speaks of Surrentum and Saguntum.

Early Calix. (Birch.)

Latest Calix. (Birch.)

In Juvenal (v. 48) we read of *calices* called after a shoemaker of Beneventum, which had four nozzles. This was Vatinius (Mart. xiv. 96), who was afterwards a buffoon in the court of Nero (Tac

Ann. xv. 34), and the cups were called *Vatinii* (Mart. x. 3, 4). See Birch, *Ancient Pottery* (1873).

(2) A tube regulating the supply of water, and attached to the end of each pipe where it entered the castellum of an aqueduct; it was probably of lead in the time of Vitruvius, such only being mentioned by him; but was made of bronze (*aëneus*) when Frontinus wrote, in order to check the roguery of the *aquarii*, who were able to increase or diminish the flow of water from the reservoir by compressing or extending the lead. As a further security, the *calix* was stamped with the owner's name as well as the capacity. There are two specimens of such *calices* in the Roman museums—one in the Vatican, another in the Museo Kircheriano. Pipes which had no *calix* were termed *solutae*.

Callaĭci or **Callaeci**. A people of Spain, in the northwestern part of the country. They inhabited what was once Galicia (see Eutrop. iv. 19).

Callātis (Κάλλατις). A town of Moesia, on the Black Sea, originally a colony of Miletus, and afterwards of Heraclea.

Callé. See CALÉ.

Callias (Καλλίας) and **Hipponīcus** (Ἱππόνικος). A noble Athenian family, celebrated for their wealth. They enjoyed the hereditary dignity of torch-bearer at the Eleusinian Mysteries, and claimed descent from Triptolemus. The first member of this family of any note was the Callias who fought at the battle of Marathon, B.C. 490, and was afterwards ambassador from Athens to Artaxerxes, and, according to some accounts, negotiated a peace with Persia, B.C. 449, on terms most humiliating to the latter. On his return to Athens he was accused of having taken bribes, and was condemned to a fine of fifty talents. His son, Hipponicus, was killed at the battle of Delium in B.C. 424. It was his divorced wife, and not his widow, whom Pericles married. His daughter Hipparetē was married to Alcibiades. Callias, son of this Hipponicus by the lady who married Pericles, dissipated all his ancestral wealth on sophists, flatterers, and women. The scene of Xenophon's *Banquet*, and also that of Plato's *Protagoras*, is laid at his house.

Callicolōné (Καλλικολώνη). A hill in the district of Troas, deriving its name (*καλὴ κολώνη*) from the pleasing regularity of its form, and the groves by which it seems for ages to have been adorned. It is mentioned by Homer in the *Iliad* (xx. 53, 151).

Callicrătes (Καλλικράτης). (1) An Athenian, who caused Dion (q. v.) to be assassinated. (2) An officer intrusted with the care of the treasures of Susa by Alexander. (3) An architect, who, in conjunction with Ictinus, built the Parthenon at Athens, and who undertook also to complete the Long Walls termed *σκέλη* (Plut. *Pericl.* c. 13). He appears to have flourished about B.C. 440. (4) A sculptor, distinguished principally by the minuteness of his performances. He is mentioned as a Lacedaemonian, and is associated with Myrmecides by Aelian (*V. H.* i. 17). In connection with this artist he is said to have made some chariots which could be covered with the wings of a fly, and to have inscribed on a grain of the plant *sesamum* some verses of Homer (Plin. vii. 21). Galen, therefore, well applies to him the epithet *ματαιότεχνος*. Athenaeus, however, relates that he engraved only large vases. The age in which he lived is uncertain.

Callicratĭdas (Καλλικρατίδας). A Spartan, who succeeded Lysander in the command of the fleet. He took Methymna, and routed the Athenian fleet under Conon. He was defeated and killed near the Arginusae, in a naval battle, B.C. 406. He was one of the last who preserved the true Spartan character, which had become greatly altered for the worse, during the Peloponnesian War, by the habit which the Lacedaemonians had contracted of fighting beyond the limits of their country.

Callidrŏmus (Καλλίδρομος). According to Livy (xxxvi. 15), the highest summit of Mount Oeta. It was occupied by Cato with a body of troops in the battle fought at the pass of Thermopylae between the Romans, under Acilius Glabrio, and the army of Antiochus; and, owing to this manœuvre, the latter was entirely routed.

Callimăchus (Καλλίμαχος). (1) A Greek artist, who flourished in the second half of the fifth century B.C. He was the inventor of the Corinthian order of pillar; and the art of boring marble is also attributed to him, though perhaps he did no more than bring it to perfection. The ancient critics represent him as unwearied in polishing and perfecting his work; indeed, they allege that his productions lost something through their excessive refinement and purity. One of his celebrated works was the golden chandelier in the Erechtheum at Athens.

(2) A Greek scholar and poet, the chief representative of the Alexandrian School. He was the son of Battus, and thus sprung from the noble family of the Battiadae. He at first gave his lectures in a suburb of Alexandria; but was afterwards summoned by Ptolemy Philadelphus to the Museum there, and in about B.C. 260 was made curator of the library. He held this office till his death, which took place about B.C. 240. He did a great service to literature by sifting and cataloguing the numerous books collected at Alexandria. The results of his labours were published in his great work, called Πίνακες, or "Tablets." This contained 120 books, and was a catalogue, arranged in chronological order, of the works contained in the library, with observations on their genuineness, an indication of the first and last word in each book, and a note of its bulk. This work laid the foundation of a critical study of Greek literature. Eight hundred works, partly in prose and partly in verse, were attributed altogether to Callimachus; but it is to be observed that he avoided, on principle, the composition of long poems, so as to be able to give more thought to the artistic elaboration of details. The essence of Callimachus's verse is art and learning, not poetic genius in the real sense. Indeed, some of his compositions had a directly learned object—the Αἴτια, or "Causes," for instance. This was a collection of elegiac poems in four books, treating, with great erudition, of the foundation of cities, the origin of religious ceremonies, and the like.

Through his writings, as well as through his oral instruction, Callimachus exercised an immense influence, not only on the course of learning, but on the poetical tendencies of the Alexandrian School (q. v.). Among his pupils were the most celebrated savants of the time, Eratosthenes, Aris-

tophanes of Byzantium, Apollonius of Rhodes, and others. Of his writings only a very few have survived in a complete state. These are: six hymns, five of which are in epic and one in elegiac form, and sixty-four epigrams. The hymns, both in their language and their matter, attest the learned taste of their author. His elegy, entitled the *Coma Berenices*, or "Lock of Berenice," is imitated by Catullus in one of his remaining pieces. Ovid, in the twentieth of his *Heroides*, as well as in his *Ibis*, took poems of Callimachus for his models. Indeed, the Romans generally set a very high value on his elegies, and liked to imitate them. Of his other works in prose and poetry—among the latter may be mentioned a very popular epic called *Hecaté* — only fragments have survived. A good edition of the remains is that of Schneider, 2 vols. (1870–73); and of the Hymns and Epigrams those of Meineke (1861) and Wilamowitz (1882). See Couat, *La Poésie Alexandrine* (Paris, 1882).

Callīnus (Καλλῖνος). The creator of the Greek political elegy. He was a native of Ephesus, and flourished probably about B.C. 700, at the time when the kings of Lydia were harassing the Greek colonies of Asia Minor by constant wars. One elegy from his hand has survived, in which, in a simple and manly tone, he endeavours to arouse the degenerate youth of his fatherland.

Calliŏpé (Καλλιόπη). One of the Muses, daughter of Zeus and Mnemosyné. She presided over epic poetry and eloquence, and was represented holding a close-rolled parchment and sometimes a trumpet. She derived her name from her beautiful voice (*ἀπὸ τῆς καλῆς ὀπός*). Calliopé bore to Oeagrus a son named Linus, who was killed by his pupil Heracles (Apollod. i. 3, 2). She had also by the same sire the celebrated Orpheus. Others, however, made Apollo the sire of Linus and Orpheus. Hesiod (*Frag.* 97) says that Urania was the mother of Linus.

Calliopé, the Muse of Epic Poetry (Statue in the Vatican.)

Callipatīra (Καλλιπατείρα). The daughter of Diagoras, and wife of Callianax, an athlete. According to the common account, she went with her son, after the death of her husband, to the Olympic Games, having disguised herself in the attire of a teacher of gymnastics. When her son was declared victor, she discovered her sex in the joy of the moment, and was immediately arrested, as women were not allowed to appear on such occasions. The punishment to which she was liable was to be cast down from a precipitous and rocky height, but she was pardoned in consequence of the peculiar circumstances of her case. A law, however, was immediately passed, ordaining that the teachers of gymnastic exercises should appear naked at the games (Pausan. v. 6, 5).

Callĭphon (Καλλιφῶν). A painter, a native of Samos, who decorated with pictures the Temple of Artemis at Ephesus. The subjects of his pieces were taken from the *Iliad* (Pausan. v. 19).

Callipŏlis (Καλλίπολις). (1) A town on the east coast of Sicily not far from Aetna. (2) The modern Gallipoli, a town in the Thracian Chersonesus opposite Lampsacus. (3) A town in Aetolia.

Callirrhŏé (Καλλιρρόη) (1) afterwards called Enneacrunus (*Ἐννεάκρουνος*), or the "Nine Springs," because its water was distributed by nine pipes, was the most celebrated well in Athens, situated in the southeastern part of the city, and still retains its ancient name. (2) See ALCMAEON.

Callis. A narrow cow-path in the mountains (Isid. *Orig.* xv. 16, 20).

Callisté (Καλλίστη). An island of the Aegean; called also Thera (q. v.).

Callistēia (*καλλιστεῖα*). Beauty shows; festivals celebrated in different parts of Greece. See Athenaeus, xiii. 609.

Callisthĕnes (Καλλισθένης). A Greek historian, born at Olynthus about B.C. 360. He was a relation of Aristotle, from whom he received instruction at the same time as Alexander the Great. He accompanied Alexander on his Asiatic campaign, and offended him by refusing to pay him servile homage after the Persian fashion, and by other daring exhibitions of independence. The consequence was that the king threw his friend into prison on the pretext that he was concerned in a conspiracy against his life. Callisthenes died in captivity in B.C. 328, in consequence, probably, of maltreatment. Of his historical writings, particularly those dealing with the exploits of Alexander, only fragments remain; but he was always ranked among the most famous historians. Indeed, his reputation as the companion of Alexander and the historian of his achievements maintained itself so well that he was made responsible in literature for the romantic narrative of Alexander's life which grew up in the following centuries. This was translated into Latin towards the end of the third century A.D by Iulius Valerius (q. v.), and became the main authority for the mediæval adaptations of the myth of Alexander. See the work of Westermann, *De Callisthene* (Leipzig, 1838–42).

Callisto (Καλλιστώ) (called also HELICÉ). The daughter of Lycaon, king of Arcadia, and an attendant of Artemis. Zeus saw her, and, assuming the form of Artemis, accompanied the maiden to the chase and overcame her virtue. She long concealed her shame; but at length, as she was one day bathing with her divine mistress, the discovery was made, and Artemis, in her anger, turned her into a bear. While in this form she brought forth her son Arcas, who lived with her in the woods, until the herdsmen caught both her and him and brought them to Lycaon. (See ARCAS.) Some time afterwards she went into the temenus, or sacred enclosure of the Lycaean Zeus, which it was unlawful to enter. A number of Arcadians, among whom was her own son, followed to kill her, but Zeus snatched her out of their hands, and placed her as a constellation in the sky (Apollod. iii. 8; Hygin. *Fab.* 177). It was also fabled that at the request of Heré, Tethys forbade the constellation of the Bear to descend into her waves. This legend is related with great variety in the circumstances. According to one of these versions, Arcas,

having been separated from his mother and reared among men, met her one day in the woods, and was on the point of slaying her, when Zeus transferred the mother and son to the skies.

Callistratia (Καλλιστρατία). A town in Paphlagonia on the coast of the Euxine.

Callistrătus (Καλλίστρατος). A Greek rhetorician, who probably flourished in the third century A.D. He was the author of descriptions of fourteen statues of celebrated artists—Scopas, for instance, Praxiteles, and Lysippus, written after the manner of Philostratus. His style is dry and affected, and he gives the reader no real insight into the qualities of the masterpieces which he attempts to describe.

Callium (Κάλλιον), called Callipŏlis by Livy. A town in Aetolia in the valley of the Spercheus.

Callynteria (καλλυντήρια). See Plynteria.

Calo. A common slave; often the slave of a soldier. The word is a contraction of *caclo*, akin to *cacula*. (See Fest. p. 146.) Even under the Republic the number of slaves following a Roman army was large; under the Empire it sometimes exceeded the number of the soldiers. Each legion was followed by its own *calones;* and to prevent confusion, in case of an attack, they were organized and subjected to military discipline. See Lixa; Servus.

Calor. A river in Samnium, flowing past Beneventum and falling into the Vulturnus.

Calpé (Κάλπη, Κάλπις). A lofty mountain in the most southern parts of Spain, opposite to Mount Abyla on the African coast. These two mountains were called the Pillars of Hercules. Calpé is now called Gibraltar, from the Arabic Gebel Tarik—i. e. "mountain of Tarik," Tarik being the Moorish general who first led the Moors into Spain, A.D. 710.

Calpis (κάλπις). An urn oftenest used for carrying water, but sometimes for holding unguents, wine, or as a cinerary urn. See Hydria.

Greek Women with Calpis.

Calpurnia. Daughter of L. Calpurnius Piso, consul B.C. 58, and last wife of Iulius Caesar, to whom she was married in B.C. 59. She survived her husband. See Caesar, Gaius Iulius.

Calpurnia Gens. A plebeian gens which claimed to be descended from Calpus, a son of Numa. It was divided into the families of Bestia, Bibulus, and Piso.

Calpurnia Lex. See Lex.

Calpurnius. (1) A writer of mimes, not to be confounded with the pastoral poet of the same name. (2) A Christian in the time of Hadrian and Antoninus Pius, from whom we have fifty-one *Declamationes* remaining. (3) Titus Calpurnius (called Sicŭlus), a Latin poet, a native of Sicily, lived during the first century of our era, under the emperor Nero. In the earliest editions of his works, and in all but one of the MSS., eleven eclogues pass under his name. Ugoletus, however, at a later period, guided by this single MS., showed that four of the eleven were the work of Nemesianus. The *Eclogues* of Calpurnius are not without merit, though greatly inferior in elegance and simplicity to Vergil's. They are dedicated to Nemesianus, his protector and patron, for he himself was very poor. In the time of Charlemagne these pieces were placed in the hands of young scholars. Besides these poems, which were written in imitation of Vergil's *Bucolica*, there exists a poetical panegyric, *De Laude Pisonis*, which is now generally attributed to Calpurnius. Editions of this are those of Held (Breslau, 1831), and Weber (Marburg, 1859); of the *Eclogues*, those by Glaeser (Göttingen, 1842); with Nemesianus by Schenkl (Prague, 1885); and with commentary, introduction, and appendix by Keene (London, 1887). A good translation of the *Eclogues* into English verse is that by E. J. L. Scott (London, 1891). See Einsiedeln Poems.

Calthŭla. A yellow garment. See Crocota.

Calumnia (in old Latin, *Kalumnia*). The Latin word for slander. It was technically applied to false accusations. The person falsely accused, if acquitted, had the right of accusing the prosecutor in his turn on the charge of *calumnia* before the same jury. In civil cases the penalty was a pecuniary fine; in criminal cases the *calumniator* lost his right to appear again as a prosecutor, and in early times was branded on the forehead with a K (Cic. *Pro Rosc. Am.* 20, 57).

Calvīnus, Cn. Domitius. Tribune of the plebs, B.C. 59, when he supported Bibulus against Caesar, praetor in B.C. 56, and consul in B.C. 53, through the influence of Pompey. He took an active part in the Civil War as one of Caesar's generals.

Calvus, Gaius Licinius. A Roman, equally distinguished as an orator and a poet. In the former capacity he is mentioned with praise by Cicero (*Brut.* 81; *Ep. ad Fam.* vii. 24; xv. 51). He was also the friend of Catullus, and three odes (14, 50, 96) of that author's are addressed to him, in which he is commemorated as a most delightful companion, from whose society he could scarcely refrain. The fragments of his epigrams which remain do not enable us to judge for ourselves of his poetical merits. He is classed by Ovid among the licentious writers. He lived B.C. 82–47. See Teuffel, *Hist. of Rom. Lit.* § 213, 5–7.

Calycadnus (Καλύκαδνος). A considerable river of Cilicia Tracheia, navigable as far as Seleucia.

Calydnae (Κάλυδναι νῆσοι). (1) Two small islands off the coast of Troas. (2) A group of islands off the coast of Caria, belonging to the Sporades. The largest of them was called Calydna, and afterwards Calymna.

Calȳdon (Καλυδών). A city of Aetolia, below the river Evenus, and between that stream and the sea. It was famed in Grecian story on account of the boar-hunt in its neighbourhood (see Meleager), the theme of poetry from Homer to Statius. We are told by mythologists that Oeneus, the father of Meleager and Tydeus, reigned at

Calydon, while his brother Agrius settled in Pleuron. Frequent wars, however, arose between them on the subject of contiguous lands. Some time after the Peloponnesian War, we find Calydon in the possession of the Achaeans. It is probable that the Calydonians themselves invited over the Achaeans, to defend them against the Acarnanians (Pausan. iii. 10). Their city was, in consequence, occupied by an Achaean garrison, until Epaminondas, after the battle of Leuctra, compelled them to evacuate the place. It was still a town of importance during the Social War, and as late as the time of Caesar. Augustus accomplished its downfall by removing the inhabitants to Nicopolis.

Calymna (Κάλυμνα). See CALYDNAE.

Calypso (Καλυψώ). A daughter of Atlas, according to Homer (*Od.* ii. 52). Hesiod, however, makes her an ocean-nymph (*Theog.* 359), and Apollodorus a Nereid (i. 2). Like Circé, she was a goddess of human appearance, and dwelt in solitary state with her attendant nymphs on an island named Ogygia, in the midst of the ocean. Her isle presented such a scene of sylvan beauty as charmed even Hermes, one of the dwellers of Olympus (*Od.* v. 72). Calypso received and kindly entertained Odysseus, when, in the course of his wanderings, that hero was thrown upon her domains after his shipwreck. She detained him there for seven years, designing to make him immortal and to keep him with her forever; but Hermes arriving with a command from Zeus, she was obliged to consent to his departure. She gave the hero tools to build a raft or light vessel, supplied him with provisions, and reluctantly took a final leave of him. As regards her island, Homer seems to have conceived Ogygia to lie in the northwestern parts of the Western Sea, far remote from all other isles and coasts; and he thus brought his hero into all parts of that sea, and informed his auditors of all its wonders. Odysseus had two sons by Calypso, named Nausithoüs and Nausinoüs.

Calypso. (From a painted Vase.)

Calyptra (*καλύπτρα*). A veil worn by young women in Greece as well as in Italy, used to conceal the face from strangers. See Hom. *Od.* v. 232; Eurip. *Iph. T.* 372.

Camalodūnum. The modern Colchester; the capital of the Trinobantes in Britain, and the first Roman colony in the island. It was founded by the emperor Claudius, A.D. 43.

Camăra (*καμάρα*) or **Caměra**. Any arched or vaulted covering, and anything with such a covering. It is chiefly used in the following senses:

(1) Of an arched roof which might be (*a*) an open trellis-work with creeping-plants, etc., trained over it; or (*b*) an arched or vaulted ceiling formed by semicircular bands or beams of wood, often gilded or fitted with plates of glass; or (*c*) a barrel-vault of solid stone-work, as that of the Tullianum prison at Rome. See CARCER.

(2) Small boats used in early times by the people who inhabited the shores of the Euxine and the Bosporus, and so called from their broad, arched deck, described by Tacitus (*Hist.* iii. 4).

Camarīna (Καμαρῖνα). A town on the southern coast of Sicily, at the mouth of the Hipparis, founded by Syracuse, B.C. 599. It was several times destroyed by Syracuse; and in the First Punic War was taken by the Romans, and most of the inhabitants sold as slaves.

Near the walls on the north was the Palus Camarina, which was a marshy pool formed by the stagnation of the Hipparis near its mouth. Its miasmatic vapours made the city unhealthy, for which reason the inhabitants were anxious to drain it, but were counselled by the Delphic Oracle not to do it (Μὴ κίνει Καμάριναν· ἀκίνητος γὰρ ἀμείνων). In spite of this advice, the marsh was drained, and in consequence the city was laid open to attack on that side, and was captured. The story is doubtless apocryphal, but the words of the oracle passed into a proverb among the Greeks. See Verg. *Aen.* iii. 700, 701 and Serv. *ad loc.*

Cambūnii Montes. The mountains which separate Macedonia and Thessaly. They were a continuation of the Ceraunian Mountains, terminating in Mount Olympus on the east.

Cambyses (Καμβύσης). (1) An early monarch of the line of the Achaemenides, the successor of Teïspes, who was himself the successor of Achaemenes. He must not be confounded with Cambyses the son of Cyrus, who was, in fact, the second of the name in the line of Persian kings (Herod. vii. 11). (2) A Persian of good family, to whom Astyages, king of Media, gave his daughter Mandané in marriage. The issue of this union was Cyrus the Great (Herod. i. 46, 107). (3) The son and successor of Cyrus the Great, ascended the throne of Persia B.C. 530. Soon after the commencement of his reign, he undertook the conquest of Egypt, being incited to the step, according to the Persian account as given in Herodotus (iii. 1), by the conduct of Amasis, the king of that country. Cambyses, it seems, had demanded in marriage the daughter of Amasis; but the latter, knowing that the Persian monarch intended to make her, not his wife, but his concubine, endeavoured to deceive him by sending in her stead the daughter of his predecessor Apries. The historian gives another account; but it is more than probable that both are untrue, and that ambitious feelings alone on the part of Cambyses prompted him to the enterprise. Amasis died before Cambyses marched against Egypt, and his son Psammenitus succeeded to the throne. A bloody battle was fought near the Pelusiac mouth of the Nile, and the Egyptians were put to flight, after which Cambyses made himself master of the whole country, and received tokens of submission also from the Cyrenaeans and the people of Barca. The kingdom of Egypt was thus conquered by him in six months. See AEGYPTUS.

Cambyses now formed new projects. He wished to send a squadron and subjugate Carthage, to conquer Aethiopia, and to make himself master of the famous temple of Zeus Ammon. The first of these expeditions, however, did not take

place, because the Phœnicians, who composed his naval force, would not attack one of their own colonies. The army that was sent against the Ammonians perished in the desert, and the troops at whose head he himself had set out against the Aethiopians were compelled by hunger to retreat. How far he advanced into Aethiopia can not be ascertained from anything that Herodotus says. Diodorus Siculus, however (i. 33), makes Cambyses to have penetrated as far as the spot where Meroë stood, which city, according to this same writer, he founded. (See MEROË.) After his return from Aethiopia, the Persian king gave himself up to the greatest acts of outrage and cruelty. On entering Memphis he found the inhabitants engaged in celebrating the festival of the reappearance of Apis, and, imagining that these rejoicings were made on account of his ill success, he caused the sacred bull to be brought before him, stabbed him with his dagger, of which wound the animal afterwards died. He also ordered the priests to be scourged.

Cambyses is said to have been subject to epilepsy from his earliest years; and the habit of drinking, in which he now indulged to excess, rendered him at times completely furious. No relation was held sacred by him when intoxicated. Having dreamed that his brother Smerdis was seated on the royal throne, he sent one of his principal confidants to Persia, with orders to put him to death, a mandate which was actually accomplished. His sister and wife Atossa, who lamented the death of Smerdis, he kicked so severely as to bring on an abortion. These and many other actions, alike indicative of almost complete insanity, aroused against him the feelings of his subjects. A member of the order called the Magi availed himself of this discontent, and, aided by the strong resemblance which he bore to the murdered Smerdis, as well as by the exertions of a brother who was also a Magian, seized upon the throne of Persia, and sent heralds in every direction, commanding all to obey, for the time to come, Smerdis, son of Cyrus, and not Cambyses. The news of this usurpation reached Cambyses at a place in Syria called Ecbatana, where he was at that time with his army. Resolving to return with all speed to Susa, the monarch was in the act of mounting his horse, when his sword fell from its sheath and inflicted a mortal wound in his thigh. An oracle, it is said, had been given him from Butus that he would end his life at Ecbatana, but he had always thought that the Median Ecbatana was meant by it. He died of his wound soon after, B.C. 522, leaving no children. Ctesias gives a different account. He makes Cambyses to have died at Babylon of a wound he had given himself on the femoral muscle, while shaving smooth a piece of wood with a small knife. According to Herodotus (iii. 66), Cambyses reigned seven years and five months. See PERSIA.

Camēnae. Prophetic nymphs, belonging to the religion of ancient Italy, although later traditions represent their worship as introduced into Italy from Arcadia, and some accounts identify them with the Muses. The most important of these goddesses was Carmenta or Carmentis, who had a temple at the foot of the Capitoline Hill, and altars near the Porta Carmentalis. The traditions which assigned a Greek origin to her worship state that her original name was Nicostraté, and that she was the mother of Evander, with whom she came to Italy. On the etymology of the word Camena, which is usually regarded as = *Casmena*, from the root of *carmen*, "the songstress" (Mommsen), see Nettleship, *Essays in Latin Literature*, pp. 47–50 (Oxford, 1885).

Camerarius, JOACHIM (Ger. KAMMERMEISTER), born at Bamberg, April 12th, 1500, was next to Melanchthon among the scholars who contributed to reviving the study of classical antiquities in Germany. His family, originally LIEBHARD, established itself towards the middle of the fifteenth century in Franconia, and assumed the name of Camerarius from the hereditary office of chamberlain to the Prince-Bishop of Bamberg. Joachim was first led to the study of the classics by George Helt, at the University of Leipzig. In 1518, he went to Erfurt and began to teach Greek, and in 1521 joined Melanchthon at Wittenberg. He published a translation of the First Olynthiac of Demosthenes in 1524, and, after worsting Erasmus at Bâle, was appointed in 1526 Professor of Greek at Nuremberg, and was sent in 1530 as delegate to Augsburg, where he took a large part in the preparation of the Confession. In 1535 he was called to Tübingen, where he founded the classical course, and after six years undertook with great success the reorganization of the University of Leipzig, where he remained for the rest of his life. He died in 1574. Camerarius was renowned not only as a great teacher, but especially as an industrious editor. He was among the first to revise texts with scientific care, and left nearly 150 works on varied subjects. Besides a number of biographies and books connected with the Reformation, his chief work is his *Commentarii Linguae Graecae et Latinae* (Bâle, 1551). He also edited the orations of Demosthenes, Sophocles (1556), Quintilian (1534), Cicero, 4 vols. (1540), Herodotus, Thucydides, Plautus (1552), Theocritus, the *Ethics* of Aristotle, Theophrastus, and wrote a numismatical work, *Historia Rei Nummariae*. See Bursian, *Geschichte der Class. Philologie* (Munich, 1883), pp. 185–190; and W. Pökel, *Philolog. Schriftstellerlexicon* (Leipzig, 1882).

Cameria. An ancient town of Latium, conquered by Tarquinius Priscus.

Camerīnum or **Camarīnum,** more anciently CAMERS. The modern Camerino; a town in Umbria on the borders of Picenum, and subsequently a Roman colony.

Camerīnus. A Roman poet, contemporary with Ovid, who wrote a poem on the capture of Troy by Hercules (Ovid, *Epist. ex Pont.* iv. 16, 18).

Camīcus (Καμικός). An ancient town of the Sicani on the southern coast of Sicily, and on a river of the same name, occupying the site of the citadel of Agrigentum.

Camilla. A queen of the Volsci, and daughter of Metabus and Casmilla. Her father, who reigned at Privernum, having by his tyranny rendered himself odious to his subjects, was by them expelled from his dominions, and forced to take refuge from their fury in the lonely woods. Here he bred up the infant Camilla, the sole companion of his flight; and, having dedicated her to the service of Diana, he instructed her in the use of the bow and arrow, and accustomed her to the practice of martial and sylvan exercises. She was so

remarkable for her swiftness that she is described by the poets as flying over the corn without bending the stalks, and skimming over the surface of the water without wetting her feet. Attended by a train of warriors, she led the Volscians to battle against Aeneas. Many brave chiefs fell by her hand; but she was at length herself killed by a soldier of the name of Aruns, who, from a place of concealment, aimed a javelin at her. Diana, however, who had foreseen this fatal event, had commissioned Opis, one of her nymphs, to avenge the death of Camilla, and Aruns was slain in his flight from the combat by the arrows of the goddess (Verg. *Aen.* vii. 803 foll.; xi. 532 foll.).

Camilli, Camillae. Boys and girls employed in the sacrifices of the Flamen Dialis, the Flaminica Dialis, and in general in religious rites and ceremonies. They were required to be perfect in form and sound in health, free-born, and with both their parents alive; or, in other words, according to the expression of the Romans, *pueri seu puellae ingenui, felicissimi, patrimi matrimique.* The origin of these words gave rise to various opinions among the ancients. Dionysius supposed them to correspond to the κάδμιλοι among the Curetes and Corybantes; others connected them with Cadmilus or Casmilus, one of the Samothracian Cabeiri; but we know nothing certain on the matter. (See CABEIRIA.) Respecting the employment of the Camilli at Roman marriages, see MATRIMONIUM.

Camillus, M. FURIUS. A celebrated Roman, called the second Romulus, from his services to his country. After filling various important stations, and, among other achievements, taking the city of Veii, which had for the space of ten years resisted the Roman arms, he encountered at last the displeasure of his countrymen, and was accused of having embezzled some of the plunder of this place. Being well aware how the matter would terminate, Camillus went into voluntary exile, although his friends offered to pay the sum demanded of him. During this period of separation from his country, Rome, with the exception of the Capitol, was taken by the Gauls under Brennus (q. v.). Camillus, though an exile, was invited by the fugitive Romans at Veii to take command of them, but refused to act until the wishes of the Romans besieged in the Capitol were known. These unanimously revoked the sentence of banishment, and elected him dictator. The noble-minded Roman forgot their previous ingratitude, and marched to the relief of his country; which he delivered, after it had been for some time in the possession of the enemy. The Roman account says that Camillus, at the head of an army of forty thousand men, hastened to Rome, where he found the garrison of the Capitol on the point of purchasing peace from the invaders. "With iron, and not with gold," exclaimed Camillus, "Rome buys her freedom." An attack was instantly made upon the Gauls, a victory obtained, and the foe left their camp by night. On the morrow Camillus overtook them, and they met with a total overthrow. His triumphal entry into Rome was made amid the acclamations of thousands, who greeted him with the name of Romulus, Father of his Country, and Second Founder of the City. After performing another equally important service, in prevailing upon his countrymen to rebuild their city and not return to Veii, and after gaining victories over the Aequi, Volsci, Etrurians, and Latins, he died in the eighty-ninth year of his age, having been five times dictator, once censor, three times interrex, twice military tribune, and having obtained four triumphs (Plut. *Camill.*; Liv. v. 46 foll.; Flor. i. 13; Verg. *Aen.* vi. 825). We have touched on merely a few of the events connected with the history of Camillus, in consequence of the strong suspicion which attaches itself to the greater part of the narrative. In no instance, perhaps, have the family memorials of the Roman aristocracy more completely usurped the place of true history than in the case of Camillus. The part relative to the overthrow of the Gauls appears to be pure fiction. See Mommsen, *Hist. of Rome*, bk. ii. ch. 4.

Camīnus (κάμινος). A chimney. See DOMUS.

Camīrus (Κάμειρος). A Dorian town on the western coast of the island of Rhodes, and the principal town in the island before the foundation of Rhodes. Here Pisander was born.

Camisia. A linen shirt worn next to the skin, is first mentioned in the fourth century by St. Jerome (*Ep.* 64, n. 11), from whom we learn that the word was used in the popular language, and that in his time the camisia was worn by soldiers. It is also mentioned by Isidorus, and by Paulus (Fest. s. v. *supparus*, p. 311, M.), who gives it as the equivalent of the older word *subucula.* From the word *camisia* comes the French *chemise.*

Camp. See CASTRA; EXERCITUS.

Campăgus. A kind of boot worn by the Roman emperors and military officers under the later Empire (Trebell. Poll. *Gallien.* 16, with the note of Salmasius).

Campagus. (From Marble Statue of an Emperor found at Carthage.) (British Museum.)

Campana. A bell. See TINTINNABULUM.

Campāna Lex. See LEX.

Campania. A district of Italy, the name of which is probably derived from *campus*, "a plain." It was separated from Latium by the river Liris, and from Lucania at a later time by the river Silarus, though in the time of Augustus it did not extend farther south than the promontory of Minerva. In still earlier times, the "Ager Campanus" included only the country around Capua. Campania is a volcanic country, to which circumstance it mainly owed the extraordinary fertility for which it was celebrated in antiquity above all other lands. The fertility of the soil, allowing in parts three crops in a year, the beauty of the scenery, and the softness of the climate, the heat of which was tempered by the delicious breezes of the sea, procured for Campania the epithet Felix, a name which it justly deserved. It was the favourite retreat in summer of the Roman nobles, whose villas studded a considerable part of its coast, especially in the neighbourhood of Baiae (q. v.). The earliest inhabitants of the country were the Ausones and the Osci or Opici. These were subsequently conquered by the Etruscans, who became the masters of almost all the country. In the time of the Romans we find three distinct peoples, besides the Greek population of Cumae: (1) The CAMPĀNI, properly so called, a

mixed race, consisting of Etruscans and the original inhabitants of the country, dwelling along the coast from Sinuessa to Paestum. They were the ruling race at Capua. (2) The SIDICĪNI, an Ausonian people, in the northwest of the country on the borders of Samnium. (3) The PICENTĪNI, in the southeastern part of the country.

Campaspé (Καμπάσπη). A mistress of Alexander the Great, immortalized by Apelles, to whom she sat as the model for his Aphrodité Anadyomené. See APELLES.

Campestré (sc. *subligar*). A kind of girdle or apron, which the Roman youths wore round their loins when they exercised naked in the Campus Martius. The campestré was sometimes worn in warm weather, in place of the tunic, under the toga (Hor. *Epist.* i. 11. 18).

Campidoctōres. Persons who, like the modern drill-sergeant, taught Roman soldiers their exercises. In the times of the Republic this duty was discharged by a centurion, or a veteran soldier of merit and distinction. See Plin. *Paneg.* 13.

Campi Raudii. A plain in the north of Italy, near Vercellae, where Marius and Catulus defeated the Cimbri in B.C. 101.

Campus Martius. The term *campus* (κάμπος) belongs to the language of Sicily, in which it signified a hippodrome or race-course; but among the Romans it was used to denote an open plain, covered with herbage, and set apart for the purpose of exercise or amusement. Eight of these plains are enumerated by P. Victor as appertaining to the city of Rome, among which the most celebrated was the Campus Martius, so called because it was consecrated to the god Mars. Some difference exists between Livy and Dionysius Halicarnassus respecting the period at which this consecration took place. The former states that upon the expulsion of the Tarquins the people took possession of their property (*ager Tarquiniorum*), situated between the city and the Tiber, and assigned it to the god of war, by whose name it was subsequently distinguished; whereas the latter says that the Ager Tarquiniorum had been usurped from that divinity, to whom it belonged of old, and appropriated by the Tarquins, so that it was only restored to its original service upon their expulsion, a statement which gains confirmation from a law of Numa, quoted by Festus, *secunda spolia in Martis aram in campo solitaurilia utra voluerit caedito.*

From the greater extent and importance of this plain beyond all the others, it was often spoken of as "the plain," κατ' ἐξοχήν, without any epithet to distinguish it; and, therefore, whenever the word is so used, it is the Campus Martius which is to be understood as always referred to.

The general designation, Campus Martius, comprised two plains, which, though generally spoken of collectively, are sometimes distinguished. The former of these was the so-called Ager Tarquiniorum, to which Juvenal refers, *inde Superbi Totum regis agrum;* the other was given to the Roman people by the vestal virgin Gaia Taratia or Suffetia, and is sometimes called Campus Tiberinus, and sometimes Campus Minor.

It is difficult to determine the precise limits of the Campus Martius, but in general terms it may be described as situated between the Via Lata and Via Flaminia on the north, the Via Recta on the south; as bounded by the Tiber on the west, and the Pantheon and gardens of Agrippa towards the east; and the Campus Minor, or Tiberinus, occupied the lower portion of the circuit towards the Via Recta, from the Pons Aelius to the Pons Ianiculensis. See PONS.

That the Campus Martius was originally without the city is apparent—first, from the passages of Livy and Dionysius above referred to; secondly, from the custom of holding the Comitia Centuriata there, which could not be held within the Pomoerium; hence the word *campus* is put for the comitia, which also explains the expression of Cicero, *fors domina campi*, and of Lucan, *venalis campus*, which means "the corrupt voters"; thirdly, because the generals who demanded a triumph, not being allowed to enter the city, remained with their armies in the Campus Martius; and, finally, because it was not lawful to bury within the city, whereas the monuments of the illustrious dead were among the most striking ornaments with which it was embellished. (See SEPULCRUM.) But it was included in the city by Aurelian when he enlarged the walls.

The principal edifices which adorned this famous plain are described by Strabo. It was covered with perpetual verdure, and was a favourite resort for air, exercise, or recreation when the labours of the day were over. Its ample area was crowded by the young, who there initiated themselves in all warlike and athletic exercises, and in the games usual to the palaestra; for which purpose the contiguous Tiber rendered it peculiarly appropriate in early times, before public baths were established. Hence *campus* is used as "a field" for any exercise, mental or bodily. Wooden horses were also kept in the Campus Martius—under porticos in winter, and in the open plain during summer—in order to give expertness in mounting and dismounting; a necessary practice when stirrups were not in use (Veget. i. 23). Horse-races (*equiria*) also took place here, except when the Campus was overflowed. The Campus Martius is the most densely populated portion of modern Rome. See ROMA.

Campus Scelerātus. A place within the walls of Rome, near the Porta Collina, where Vestal Virgins who had lost their chastity were buried alive (Liv. viii. 15). It was unlawful to bury the dead within the city, or to slay a vestal; but both these restrictions were evaded by a living entombment. See Festus, s. v. *probrum;* Suet. *Domit.* 8; Plin. *Epist.* iv. 11; Mayor on Juv. iv. 10; and the article VESTALES.

Camus. See CAPISTRUM.

Canăbus (κάναβος or κάνναβος). A wooden stock or framework used by potters and sculptors round which the clay was laid (Poll. vii. 164). In small statues (*sigilla*) and vessels it was of the simplest description, and mostly of the form of a cross, *crux* or *stipes* (Tertull. *Apol.* 12; *ad Nat.* i. 12). It is applied to very lean persons (Strattis *ap.* Pollux, x. 189; *Anth. P.* xi. 107), as we should say "a skeleton." It is the same word as the Latin *cannaba*, "a booth," both signifying a construction like a scaffold or framework. The word seems to have been also used for the outline figure which sculptors and painters used as a model (Suidas, s. h. v.).

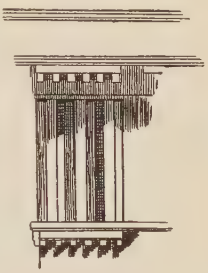
Canăcé (Κανάκη). The daughter of Aeolus and Enareté, and mistress of Poseidon, by whom she

had several children. She entertained an unnatural passion for her brother Macareus, and was punished by her father with death, or, according to another version, committed suicide with Macareus. See Apollod. i. 7, 3; Hyg. *Fab.* 238, 242; Ovid, *Heroid.* xi.

Canăchus (Κάναχος). A statuary of Sicyon, who studied his art under Polycletus (q. v.) at the beginning of the fifth century B.C. His chief work was a colossal Apollo in the Branchidae Sanctuary at Miletus, known to us by a bronze statuette in

Apollo of Canachus. (British Museum.)

the British Museum. He also made the chryselephantine Aphrodité kept in Sicyon. His brother, Aristocles, was almost equally celebrated in the same department of art.



Canalicŭlus. Properly a small channel or canal, and also used in the following special senses: to denote (1) the channel or barrel of a catapult (Vitruv. x. 15); (2) a splint (Cels. viii. 2); (3) the grooves carved on the face of a triglyph between the three uprights (*femina*, μηροί), while those at each end where the outside *femina* sank to the level of the metope were called *semicanaliculi.* See Canalis; Columna.

Canālis (σωλήν). A channel or canal, is used, like its English derivatives, to signify a watercourse, whether open or closed, and next any other passage which resembles a watercourse.

The method of constructing conduits is described by Vitruvius (viii. 7), who distinguishes the canalis, which is lined with masonry (*structilis*), from the leaden *fistula* and the earthenware *tubulus.* A ruder kind of conduit was made of timber or earthenware to carry water from a spring or stream to cattle in a meadow. Again, *canalis* denotes a feeding-trough, which was in the case of domestic birds placed inside their house, and fed from the outside by pipes (Varro, *R. R.* iii. 7, 8; 11, 12).

Similarly *canalis* denotes the channel of a sewer, as, for instance, that in the Forum, which is at one spot exposed to view, and was a favourite station for loungers (Plaut. *Curc.* iv. 1, 15).

Canalis is also a trench or vein in a gold-mine (Plin. *H. N.* xxxiii. § 68); the barrel or channel for missiles (σῦριγξ) in a catapult (Vitruv. x. 13, 7); a reed-pipe (Calp. *Ecl.* iv. 76); in the medical writers, a splint (Cels. viii. 10, 65) or a canal of the human body (id. iv. 1, 38); and finally, in architecture, the "channel" or flat surface running between the *abacus* and the *echinus* inside the volute, as in the accompanying cut from one of the triglyphs of the temple of Segesta in Sicily. See Columna.

Canalis in Architecture.

Canaria (Καναρία). The largest of the cluster of islands called by the ancients Beatae and Fortunatae Insulae (q. v.), and now the Canary Islands. Pliny says that this island derived its name from the number of very large-sized dogs (*canes*) which it contained.

Canăthron (*κάναρθον* or *κάνναθρον*). A Laconian car made of wood, with an arched plaited covering (hence the derivation probably from *κάννα*, "a reed"), in which the Spartan ladies used to go to Amyclae for the celebration of the Hyacinthia. We may compare the Roman *pilentum* (q. v.). (See Polycrates in Athenaeus, xv. 4, 139 f.) The nature of its adornments was at times fantastic. Eustath. on *Il.* xxiv. 190 is in error in stating that *κάνναθρον* and *πείρινς* are the same. The latter is a basket put into the chariot, and used for holding the necessaries for a journey, and also for a seat (Buchholz, *Hom. Real.* ii. 1, 228).

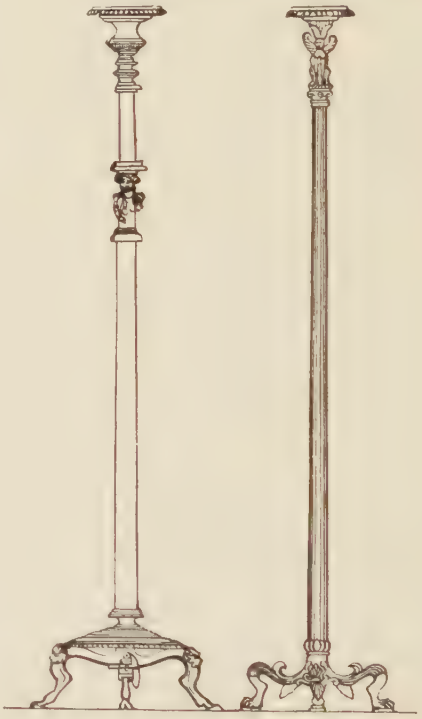
Cancellarius. See Cancelli.

Cancelli (*κιγκλίδες*, *δρύφακτοι*). A screen or lattice of open work, placed before a window, a doorway, the tribunal of a judge, or any other place. At Athens, in the Senate-house and law-courts *δρύφακτοι* were the inner partition, and *κιγκλίδες* the gates opening into it. Balconies projecting from the fronts of houses were also *δρύφακτοι* (*maeniana*). The material was originally wood, as the name *δρύφακτος* shows (L. and S. s. v.); and such were also the cancelli put up at Rome for temporary purposes, as when funeral games were given in the Forum (*cancelli fori*, Cic. *pro Sest.* 58, § 124; cf. Ov. *Am.* iii. 2, 64). But they might also be in metal, as in the cancelli before the Temple of Vesta, rebuilt by Severus,

conjecturally restored by Lanciani from existing remains, or in marble. In the Basilica Iulia, low marble screens or cancelli shut in the otherwise open arches on the ground floor; and a great number of fragments of these screens are now scattered about the Forum.

Hence was derived the word *cancellarius*, which originally signified a porter who stood at the latticed or grated door of the emperor's palace. The cancellarius also signified a legal scribe or secretary who sat within the cancelli, or latticework, by which the crowd was kept off from the tribunals of the judges (Cassiod. *Var.* xi. 6). The chief scribe or secretary was called cancellarius *κατ' ἐξοχήν*, and was eventually invested with judicial power at Constantinople. From this word has come the modern "chancellor."

Candăcé (Κανδάκη). A name given to the queen-mothers in Meroë in Aethiopia. Some women of this name appear in history, but they seem to have been merely queen-regents, governing during the minority of their sons. Some ancient authors, however, state that it was customary for the Aethiopians to be governed by queens called each by the name of Candacé. Suidas speaks of a Candacé who was made prisoner by Alexander the Great, but this appears to be a mere fable. A Candacé, blind of one eye, made an irruption into Egypt during the reign of Augustus, B.C. 22. She took and pillaged several cities, but Petronius, the prefect of Egypt, pursued her and penetrated into her dominions, which he pillaged in turn, until she restored the booty which she had carried off from Egypt, and sued for peace (Dio Cass. lxiv. 5; Plin. *H. N.* vi. 29). Mention is also made in the sacred writings of a queen of Aethiopia named Candacé (Acts, viii. 27).



Candaules (Κανδαύλης). A monarch of Lydia, the last of the Heraclidae, dethroned by Gyges at the instigation of his own queen, whom he had insulted by showing her when naked to Gyges. (Consult Herod. i. 7 foll.) His true name appears to have been Myrsilus, and the appellation of Candaules to have been assumed by him as a title of honour, this latter being, in the Lydian language, equivalent to Heracles—i. e. the Sun.

Candavia (Καυδαούϊα), CANDAVII MONTES. The mountains separating Illyricum from Macedonia, across which the Via Egnatia ran.

Candēla. A candle, made either of wax (*cerea*) or tallow (*sebacea*), was used universally by the Romans before the invention of oil lamps (*lucernae*) (Varr. *L. L.* v. § 119). They had for a wick the pith of a kind of rush called *scirpus* (Plin. *H. N.* xvi. § 178). In Livy (xl. 29) *fasces candelis involuti* appear to be packets wrapped up in a kind of waxed cloth. In later times candelae were only used by the poorer classes; the houses of the more wealthy were always lighted by *lucernae* (Juv. iii. 287). See Becker-Göll, *Gallus*, ii. 390.

Candelābrum (λυχνεῖον, λυχνίον, λύχνιον, λυχνία). Originally a candlestick, but afterwards used to support lamps (λυχνοῦχος), in which signification the word most commonly occurs. The candelabra of this kind were usually made to stand upon the ground, and were of a considerable height. The most common sorts were made of wood (Cic. *ad Q. Fratr.* iii. 7); but those which have been found in Herculaneum and Pompeii are mostly of bronze. Sometimes they were made of the more precious metals, and even of jewels, as was the one which Antiochus intended to dedicate to Iupiter Capitolinus (Cic. *Verr.* iv. 28). In the temples of the gods and in palaces there were frequently large candelabra made of marble and fastened to the ground.

There is a great resemblance in the general plan and appearance of most of the candelabra which have been found. They usually consist of three parts: (1) the foot (*βάσις*); (2) the shaft or stem (*καυλός*); (3) the plinth or tray (*δισκός*), large enough for a lamp to stand on, or with a socket to receive a wax candle. The foot usually consists of three lions' or griffins' feet, ornamented with leaves; and the shaft, which is either plain or fluted, generally ends in a kind of capital on which the tray rests for supporting the lamp. Sometimes we find a figure between the capital and the tray, as is seen in the candelabrum on the right hand in the annexed illustration, which represents

Pompeian Candelabra. (Naples.)

candelabra found in Pompeii, and now in the Museo Nazionale at Naples. The one on the left hand is also a representation of a candelabrum found in the same city, and is made with a sliding shaft, by which the light might be raised or lowered at pleasure.

The best candelabra were made at Aegina and Tarentum (Plin. *H. N.* xxxiv. 6).

There are also candelabra of various other forms, though those which have been given above are by far the most common. They sometimes consist of a figure supporting a lamp, or of a figure by the side of which the shaft is placed with two branches, each of which terminates in a flat disk, upon which a lamp was placed. A candelabrum of the

Pompeian Candelabrum. (Naples.)

latter kind is given in the preceding illustration. The stem is formed of a liliaceous plant; and at the base is a mass of bronze, on which a Silenus is seated, engaged in trying to pour wine from a skin which he holds in his left hand, into a cup in his right.

There was another kind of candelabrum, entirely different from those which have been described, which did not stand upon the ground, but was placed upon the table. These candelabra usually consist of pillars, from the capitals of which several lamps hang down, or of trees, from whose branches lamps also are suspended. The preceding illustration represents a very elegant candelabrum of this kind, found in Pompeii.

Pompeian Candelabrum. (Naples.)

The original, including the stand, is three feet high. The pillar is not placed in the centre, but at one end of the plinth, which is the case in almost every candelabrum of this description yet found. The plinth is inlaid in imitation of a vine, the leaves of which are of silver, the stem and fruit of bright bronze. On one side is an altar with wood and fire upon it, and on the other a Bacchus riding upon a tiger.

Candidātus. See AMBITUS.

Candles. See CANDELA; FAX.

Candys (*κάνδυς*). A gown worn by the Medes and Persians over their trousers and other garments (Xen. *Anab.* i. 5, § 8). It had wide sleeves, and was made of woollen cloth, which was either purple or of some other splendid colour. In the Persepolitan sculptures, nearly all the principal personages are clothed in it.

Candys. (Persepolitan Sculpture.)

Canephoria (*κανηφορία*). The office of a *canephorus* (q. v.).

Canephŏrus (*κανηφόρος*). A basket-bearer. The *κάνειον* or *κανοῦν*, derived from *κάννα*, "a reed," was in the Homeric times a basket used for holding bread (*Il.* ix. 217) or other edibles for meals, or the sacred *οὐλαί* for sacrifice (*Od.* iii. 441). Some few golden utensils were used in state sacrifices, though the usual *κανᾶ πομπικά* were no doubt *χαλκᾶ* (Michaelis, *Parthenon*, p. 259). One of silver is referred to in the *C. I. G.* 2855, 19, and one of earthenware in Dion. H. ii. 23 (Grimm). At Athens the *κανοῦν* was used in religious service only. A particular part of the ceremony seems to have been called *κανοῦν* or *κανᾶ*, when the basket was carried round the altar (Eur. *H. F.* 926), laid down, and the *οὐλαί* taken therefrom. *Κάναστρον* signifies a bowl and also a dish made of cork or earthenware (Hom. *Epig.* xiv. 3). The Roman *canistrum* was used for just the same purposes as the Homeric *κανοῦν*—viz., for holding bread, necessaries for sacrifice, and remains of a feast (Hor. *Sat.* ii. 6, 105). Its epithets signify "flat" — e. g. *patulis*, *lata*, etc.

They were, then, flat baskets used, among other purposes, for carrying the requisites for religious ceremonies. At the Panathenaea they were carried by adult maidens of high birth, who were genuine native Athenians; but when a private individual sacrificed, his daughter or some maiden of his family acted as his *canephorus*.

Canephori. (British Museum.)

An antefixa in the British Museum (see illustration) represents two canephori approaching a candelabrum. Each of them elevates one arm to support the basket, while she slightly raises her tunic with the other.

Canes and Walking-sticks. See BACULUM.

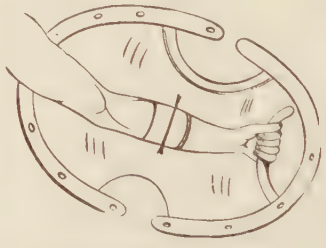
Caniculāres Dies. Certain days in the summer, preceding and ensuing the heliacal rising of Canicula, or the dog-star, in the morning. The ancients believed that this star, rising with the sun, and joining his influence to the fire of that luminary, was the cause of the extraordinary heat which usually prevailed in that season; and accordingly they gave the name of *dog-days* to about six or eight weeks of the hottest part of summer. This idea originated with the Egyptians, and was borrowed from them by the Greeks. The Romans sacrificed a brown dog every year to Canicula, at its rising, to appease its rage. See SIRIUS.

Canidia. A Neapolitan courtesan, whose real name was perhaps Gratidia, beloved by Horace; but when she deserted him he revenged himself by holding her up to contempt as an old sorceress (*Epod.* v.; *Sat.* i. 8), though his famous palinode (*Carm.* i. 16), beginning *O matre pulchra filia pulchrior* is thought by some to have been intended as an apology to her.

Canis (*κύων*). (1) The dog; an animal domesticated among the ancients, and used for hunting, for guarding houses, and also kept as a pet. In Egypt it was even held in reverence, and at Cynopolis received divine honours in the person of the dog-headed (or jackal-headed) god Anubis (q. v.). Artemis was said to have given Procris a dog that was always sure of its prey, and from this dog tradition derived the mighty Molossian hounds and those of Sparta. The mastiff (*canis Anglicus*) was imported into Rome from Britain, and was carefully bred for the wild-beast fights (*venationes*) in the amphitheatre. Lap-dogs (*catuli*) were reared in Melita (Malta). House-dogs took the place of the modern domestic cat, a creature unknown to the Greeks and Romans. See FAELIS. (2) See SIRIUS.

Canistrum (*κάναστρον*). See CANEPHORUS.

Canna (*κάννα*). A cane or reed. See CALAMUS.



Cannae. A small village of Apulia, situated about five miles from Canusium, towards the sea, and at no great distance from the Aufidus. It was celebrated for the defeat of the Romans by Hannibal. Polybius tells us that, as a town, it was destroyed the year before the battle was fought, which took place on May 21st, B.C. 216. The citadel, however, was preserved, and the circumstance of its occupation by Hannibal seems to have been regarded by the Romans of sufficient importance to cause them considerable uneasiness and annoyance. It commanded, indeed, all the adjacent country, and was their principal southern depot of stores and provisions. The Greek writers, especially Polybius, generally use the name in the singular, Κάννα.

The decisive victory at Cannae was owing to three combined causes: the excellent arrangements of Hannibal, the superiority of the Numidian horse, and the skilful manœuvre of Hasdrubal in opposing only the light-armed cavalry against that of the Romans, while he employed the heavy horse, divided into small parties, in repeated attacks on different parts of the Roman rear. The Roman army contained 80,000 infantry and 6000 cavalry, the Carthaginians 40,000 infantry and 10,000 cavalry. Hannibal drew up his forces in the form of a convex crescent, having his centre thrown forward before the wings. He commanded the centre in person, and here he had purposely stationed his worst troops; the best were posted at the extremities of each wing, which would enable them to act with decisive advantage as bodies of reserve, they being, in fact, the rear of the other forces. Hasdrubal commanded the left wing, Hanno the right. On the Roman side, want of union between the two consuls, and want of spirit among the men, afforded a sure omen of the fortune of the day. Aemilius commanded the right, Varro the left wing; the proconsuls, Regulus and Servius, who had been consuls the preceding year, had command of the centre. What Hannibal foresaw took place. The charge of the Romans, and their immense superiority in numbers, at length broke his centre, which, giving way inward, his army now assumed the shape of a concave crescent. The Romans, in the ardour of pursuit, were carried so far as to be completely surrounded. Both flanks were assailed by the veterans of Hannibal, who were armed in the Roman manner; at the same time the cavalry of the Carthaginians attacked their rear, and the broken centre, rallying, attacked them in front. The consequence was that they were nearly all cut to pieces. The two proconsuls, together with Aemilius the consul, were slain. Varro escaped with seventy horse to Venusia. The Romans lost on the field of battle 70,000 men; and 10,000 who had not been present in the fight were made prisoners. The Carthaginian loss amounted to 5500 infantry and 200 cavalry. Such is the account of Polybius, whose statement of the fight is much clearer and more satisfactory than that of Livy. Hannibal has been censured for not marching immediately to Rome after the battle, in which city all was consternation. But an explanation of his conduct may be found under the article HANNIBAL. See also the account in Col. Dodge's valuable military study, *Hannibal* (N. Y. 1891).

Canoe. See CYMBA.

Canon (*κανών*). A word probably derived from *κάννα*, "a reed," and properly meaning a straight rod. Its special applications are as follows:

(1) In the Homeric shield, the *κανόνες* are the bars to which the shoulder-belt (*τελαμών*) was attached; or two parallel bars used as handles, through one of which the warrior placed his arm while he grasped the other. See the accompanying illustration.

Canones on Homeric Shield.

(2) In weaving, a straight round rod to which the alternate threads of the warp were attached by means of strings having loops at each end, one loop fastening the string to the *κανών*, the other fastening it to the warp. This arrangement of strings and loops was called *μίτος* by the Greeks and *licia* by the Romans.

(3) A carpenter's rule, much like our own. See REGULA.

(4) The beam of a balance, more often called *ζυγόν* (*Anth. Pal.* xi. 334).

(5) Horizontal curtain-poles of silver-gilt (Chares *ap.* Athen. 538 d).

(6) In a figurative sense, κανών came to be used for whatever served as a rule, model, or norm. Thus, of grammatical rules (Auson. *Epigr.* 136), of the laws of style (Cic. *Ad Fam.* xvi. 17, 1), of logical tests of truth (Diog. Laërt. x. 27), and of the rules of sculpture (Galen. iv. 354–355 Kühn).

(7) In the fiscal affairs of the later Empire, *canon* was used of the regular payments of tribute, especially of corn sent to the capital (*Cod. Th.* xiv. 15, 3).

Canon Alexandrīnus. The so-called Alexandrian Canon, arranged by Aristophanes of Byzantium (q. v.) and his disciple Aristarchus (q. v.). The daily increasing multitude of books of every kind had become so great that there was no expression, however faulty, for which precedent might not be found; and as there were far more bad than good writers, the authority and weight of numbers were likely to prevail, and the language, consequently, to grow more and more corrupt. It was thought necessary, therefore, to draw a line between those classic writers to whose authority an appeal in matter of language might be made and the common herd of inferior authors. In the most cultivated modern tongues it seems to have been found expedient to erect some such barrier against the inroads of corruption; and to this preservative caution we are indebted for the vocabulary of the Academicians della Crusca, and the list of authors therein cited as affording *testi di lingua*. To this, also, we owe the great dictionaries of the Academies of France and Spain of their respective languages. But as for the example first set in this matter by the Alexandrian critics, its effects upon their own literature have been of a doubtful nature. In so far as the Canon has contributed to preserve to us some of the best authors included in it, we can not but rejoice. On the other hand, there is reason to believe that the comparative neglect into which those not received into it were sure to fall has been the occasion of the loss of a vast number of writers who would have been, if not for their language, yet for their matter, very precious; and who, perhaps, in many cases, were not easily to be distinguished, even on the score of style, from those that were preferred. The details of the Canon are as follows: (1) Epic Poets. Homer, Hesiod, Pisander, Panyasis, Antimachus. (2) Iambic Poets. Archilochus, Simonides, Hipponax. (3) Lyric Poets. Alcman, Alcaeus, Sappho, Stesichorus, Pindar, Bacchylides, Ibycus, Anacreon, Simonides. (4) Elegiac Poets. Callinus, Mimnermus, Philetas, Callimachus. (5) Tragic Poets. *First Class:* Aeschylus, Sophocles, Euripides, Ion, Achaeus, Agathon. *Second Class*, or *Tragic Pleiades:* Alexander the Aetolian, Philiscus of Corcyra, Sositheus, Homer the younger, Aeantides, Sosiphanes or Sosicles, Lycophron. (6) Comic Poets. *Old Comedy:* Epicharmus, Cratinus, Eupolis, Aristophanes, Pherecrates, Plato. *Middle Comedy:* Antiphanes, Alexis. *New Comedy:* Menander, Philippides, Diphilus, Philemon, Apollodorus. (7) Historians. Herodotus, Thucydides, Xenophon, Theopompus, Ephorus, Philistus, Anaximenes, Callisthenes. (8) Orators. The ten Attic orators: Antiphon, Andocides, Lysias, Isocrates, Isaeus, Aeschines, Lycurgus, Demosthenes, Hyperides, Dinarchus. (9) Philosophers. Plato, Xenophon, Aeschines, Aristotle, Theophrastus. (10) The Poetic Pleiades. Seven poets of the same epoch with one another: Apollonius the Rhodian, Aratus, Philiscus, Homer the younger, Lycophron, Nicander, Theocritus. See Couat, *La Poésie Alexandrine* (Paris, 1882); Susemihl, *Geschichte d. griech. Litteratur in der Alexand. Zeit*, 2 vols. (1892); and the article Alexandrian School.

Canopĭcum (or **Canobĭcum**) **Ostĭum.** The westernmost mouth of the Nile, twelve miles from Alexandria. See Nilus.

Canōpus (Κάνωπος) or **Canōbus.** An important city on the coast of Lower Egypt, twelve geographical miles east of Alexandria. It was near the westernmost mouth of the Nile, which was hence called the Canopic mouth. It was celebrated for a great temple of Serapis, for its commerce, its luxury, and its debauchery. Here was prepared the dye known as henna, which the women of the East have always used to stain their finger-tips (Herod. ii. 113). Before the founding of Alexandria (q. v.) it was a most important place, but after B.C. 300, its greatness declined.

Cantăbri. A fierce and warlike people in the north of Spain, bounded on the east by the Astures, and on the west by the Autrigones. They were subdued by Augustus after a struggle of several years (B.C. 25–19).

Cantăbrum. A standard used in the time of the Roman Empire. Its form is unknown. See Tertull. *Apol.* 16.

Canthărus (κάνθαρος). (1) A kind of boat, of which little is known. See Aristoph. *Pax*, 143. (2) A drinking-cup, furnished with handles (*cantharus ansa*). It is said by some writers to have derived its name from one Cantharus, who first made cups of this form; according to others, from the resemblance to an inverted beetle (κάνθαρος). The cantharus was the cup sacred to Dionysus, who is frequently represented on ancient vases holding it in his hand, as in the following illustration, which is taken from a painting on an ancient vase, given by Millin (*Peintures Antiques*, pl. 53).

Dionysus with Cantharus. (From a Vase.)

Cantĭcum. A technical term of the Roman stage. In the narrower sense it denoted a melo-

dy or air composed in changing rhythms, the text to which was sung behind the stage to the accompaniment of a flute, while the actor expressed the meaning by pantomime. In Cicero's time, however, the *cantica* were sometimes performed by the actors. In a wider sense the word might mean any part in a play which was not simply recited, but sung or performed in melodrama with musical accompaniments. See DRAMA.

Cantium. A district of Britain, nearly the same as the modern Kent, but including Londinium (q. v.). The name is derived from the Keltic *kant*, an angle or curve.

Canulēia Lex. See LEX.

Canulēius, GAIUS. A Roman tribune of the people, who in B.C. 445 made a law permitting the marriage of patricians with plebeians, and also requiring that one of the two consuls should be chosen annually from among the plebeians. See Livy, iv. 3, etc.

Canusium (Κανύσιον). The modern Canosa. An important town in Apulia, on the Aufidus, founded, according to tradition, by Diomedes. It was, at all events, a Greek colony, and both Greek and Oscan were spoken there in the time of Horace. It was celebrated for its mules and its woollen manufactures, but had only a deficient supply of water. Many beautiful Greek vases have been discovered here, as well as coins and other remains. Livy states that the fugitives of the Roman army after the defeat at Cannae (q. v.) were generously received here, and treated with much kindness by Busa, a wealthy lady of the city. See Livy, xxii. 52.

Cap. See GALERUS; PILLEUS.

Capăneus (Καπανεύς). Son of Hipponoüs, and one of the seven heroes who marched against Thebes. He was struck by Zeus with lightning as he was scaling the walls of Thebes, because he had dared to defy the god. While his body was burning, his wife Evadné leaped into the flames and destroyed herself. See SEVEN AGAINST THEBES.

Capella. See CAPRA.

Capella. (1) MARTIĀNUS MINEUS FELIX. A poet, born, according to Cassiodorus, at Madaura in Africa; he calls himself, however, at the end of his work, "the foster-child of the city of Elissa"; whether it be that he was born at Carthage, or else received his education there, which latter is the more probable opinion of the two. The MSS., however, give him the title of "the Carthaginian." In process of time he attained to proconsular dignity, but whether he was a Christian or not is a matter of uncertainty. About the middle of the fifth century of our era he wrote at Rome a work bearing the appellation of *Satira* or *Satyricon*, divided into nine books. It is a species of encyclopædia, half prose and half verse, modelled after the Varronian satire. The first two books form a detached and separate work, entitled *De Nuptiis Philologiae et Mercurii*, and treating of the apotheosis of Philology and her marriage with Mercury. We find in it, among other things, a description of heaven, which shows that the mystic notions of the Platonists of that day approximated in a very singular manner to the truths of Christianity. In the seven following books Capella treats of the seven sciences which formed at that time the circle of human study—namely, grammar, logic, rhetoric, geometry, astrology (astronomy), arithmetic, and music, which comprehends poetry. (See LIBERALES ARTES.) This work, written in an exaggerated and pedantic style, was introduced into the schools in the Middle Ages; hence it was frequently copied, and the text has become extremely corrupt. The prosody shows that accent had begun to destroy the distinction of quantity, for we find, e. g., *lŏquax, flăgitaret, Canŏpus*, etc. On the text, see Dick, *De Martiano Capella Emendando* (Berne, 1885). The best edition of Capella is that of Eyssenhardt (Leipzig, 1866); the *editio princeps* was that of Bodianus (Vincent. 1499). The distinguished jurist, Grotius, edited the work when only fourteen years of age. (2) An elegiac poet, mentioned with commendation by Ovid (*Pont.* xvi. 36). We have no remains of his productions.

Capēna. (1) A gate of Rome, now the gate of St. Sebastian, in the southeast part of modern Rome. (2) A city of Etruria, southeast of Mount Soracté.

Caper, FLAVIUS. A Roman grammarian who flourished under Trajan. Of him we have two small treatises on orthography and doubtful words. Text in Keil's *Grammatici Latini*, vol. vii.

Capĕtus Silvius. See SILVIUS.

Caphāreus (Καφήρευς). The modern Capo d' Oro; a rocky and dangerous promontory on the southeast coast of Euboea, where the Greek fleet is said to have been wrecked on its return from Troy (Eurip. *Troad.* 90).

Capis (also called CAPĒDO, CAPŪLA, and CAPEDUNCŬLA). A small earthen vessel or pitcher used in sacrifices. It had handles and is sometimes spoken of as a pitcher (*urceolus*), and sometimes as a cup (*poculum*). It is joined with the *lituus* among the sacred implements of the augurs, and both are often represented together on coins and medals.

Capistrum (φορβειά, κημός, φιμός). A word derived from *capio*, and denoting first of all a halter for animals, and apparently made of leather. It was used in holding the head of a quadruped which required any healing operation, in retaining animals at the stall, and in fastening them to the yoke. In representations of Bacchanalian processions, the tigers or panthers are attached to the yoke by capistra made of vine-branches.

Tigers with Capistra. (Vatican.)

In ploughing fields which were planted with vines or other trees, the halter had a small basket attached to it, enclosing the mouth, so as to prevent the ox from cropping the tender shoots (*fiscel-*

lis capistrari). Also, when goatherds wished to obtain milk for making cheese, they fastened a muzzle or capistrum, armed with iron points, about the mouth of the kid, to prevent it from sucking.

Capistrum. (From an Etruscan Vase.)

Bands of similar materials were used to tie vines to the poles (*pali*) or transverse rails (*iuga*) of a trellis.

The term φορβειά was also applied to a contrivance used by pipers (αὐληταί) and trumpeters to compress their mouths and cheeks, and thus to aid them in blowing. This was said to be the invention of Marsyas.

Capĭta aut Navia (NAVIM). "Heads or tails"; the name of a game derived from the fact that the early *as* had on one side a double-faced Ianus, and

Early As, showing Head and Prow of Ship.

on the other the prow of a ship. See AS. (Macrob. *Sat.* i. 7, 22; Fest. s. v. *navia*, p. 169 M.).

Capĭtal. A kerchief of woollen or linen cloth worn round the head by Roman women in early times, and, after it had gone out of general use, retained as part of the costume of certain priestesses (Varr. *L. L.* v. 180). Among these were the Vestals; a coin engraved by Saglio shows a kerchiefed female head and the letters V. V. —i. e. *Virgo Vestalis;* but not the Flaminica (Rich), whose coiffure was undoubtedly the *tutulus* (q. v.).

Capitālis. See CAPUT.

Capital Letters. See ALPHABET; MAIUSCULA.

Capĭte Censi. See CAPUT.

Capĭtis Deminutio. See DEMINUTIO CAPITIS.

Capitium. A portion of a woman's dress, said by Varro to be so called because it covers (*capit*) the breast (Varr. *L. L.* v. 131). The word itself might lead us to suppose that it was originally, like *capital*, a covering for the head; but there is express testimony that it was worn over the tunic, covering the breast and not the head.

Capĭto, ATĒIUS. See ATEIUS CAPITO.

Capĭto, C. FONTĒIUS. A friend of M. Antonius (q. v.), who accompanied Maecenas to Brundisium, B.C. 37, when the latter was sent to effect a reconciliation between Octavianus and Antony.

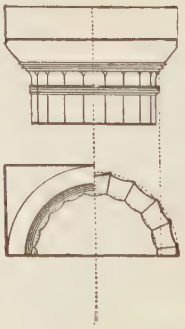
Capitoline Venus. See VENUS.

Capitoline Wolf. See ROMULUS.

Capitolīni Ludi. See LUDI.

Capitolīnus. (1) A surname of Iupiter, from his temple on the Mons Capitolinus. (2) A surname of M. Manlius (q. v.), who, for his ambition in aspiring to sovereign power, was thrown down from the Tarpeian Rock, which he had so nobly defended (Flor. i. 13 and 26). (3) MONS, one of the seven hills on which Rome was built, containing the citadel and fortress of the Capitol. (See CAPITOLIUM.) Three ascents led to its summit from below. (*a*) By the 100 steps of the Tarpeian Rock, which was probably on the steepest side, where it overhangs the Tiber. (*b*) The CLIVUS CAPITOLINUS, which began from the Arch of Tiberius and the Temple of Saturn, near the modern Hospital of the Consolazione, and led to the citadel by a winding path. (*c*) The CLIVUS ASŸLI, which, being less steep than the other two, was, on that account, the road by which the triumphant generals were borne in their cars to the Capitol. This ascent began at the Arch of Septimius Severus, and from thence, winding to the left, passed near the ruined pillars of the Temple of Concord, and from thence led to the Intermontium. The Capitoline Hill is said to have been previously called Saturnius, from the ancient city of Saturnia, of which it was the citadel. Afterwards it was known by the name of Mons Tarpeius, and finally it obtained the appellation first mentioned, from the circumstance of a human head (*caput*) being discovered on its summit, in making the foundations of the Temple of Iupiter. It was considered as forming two summits, which, though considerably depressed, are yet sufficiently apparent. That which looked to the south and the Tiber was the Tarpeian Rock or citadel; the other, which was properly the Capitol, faced the north and the Quirinal. The space which was left between these two elevations was known by the name of Intermontium. See ROMA.

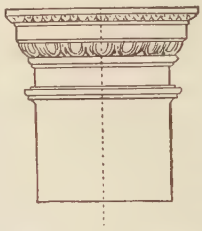
Capitolīnus. (1) PETILIUS. A governor of the Capitol. (Compare the commentators on Horace, *Sat.* i. 4, 94.) It is also related that he was accused of having stolen, during his office, a golden crown, consecrated to Iupiter, and that, having pleaded his cause in person, he was acquitted by the judges, in order to gratify Augustus, with whom he was on friendly terms. (2) IULIUS, one of those later Roman historians whose works form what has been termed the Augustan History (Augusta Historia). He lived during the reigns of Diocletian and Constantine the Great, and we have from him the lives of Antoninus Pius, Marcus Aurelius, Verus, Pertinax, Albinus, Macrinus, the two Maximins, the three Gordians, Maximus, and Balbinus. He wrote other lives also which have not reached us. The greater part of his biographies are dedicated to Diocletian and Constantine. His works show carelessness and want of proper arrangement. See AUGUSTAE HISTORIAE SCRIPTORES.



Capitolium. A celebrated temple and citadel at Rome, on the Tarpeian Rock. The foundations were laid by Tarquinius Priscus, A.U.C. 139, B.C. 615. Its walls were raised by his successor Servius Tullius, and Tarquinius Superbus finished it,

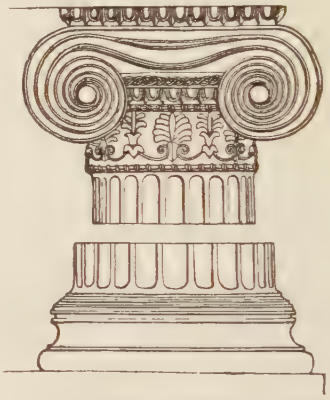
A.U.C. 231, B.C. 533. It was not, however, consecrated until the third year after the expulsion of the kings. This ceremony was performed by the consul Horatius. It covered eight acres, was 200 feet broad, and about 215 long. It consisted of three parts, a nave sacred to Iupiter, and two wings or aisles, the right sacred to Minerva, and the left to Iuno. The ascent to it from the Forum was by a hundred steps. The magnificence and richness of this temple are almost incredible. All the consuls successively made donations to the Capitol, and Augustus bestowed upon it at one time 2000 pounds weight of gold. The gilding of the whole arch of the Temple of Iupiter, which was undertaken after the destruction of Carthage, cost, according to Plutarch, 21,000 talents, or $24,780,000. The gates of the temple were of brass, covered with large plates of gold. The interior was all of marble, and was adorned with vessels and shields of solid silver, with gilded chariots, etc. The Capitol was burned in the time of Sulla, A.U.C. 670, B.C. 83, through the negligence of those who kept it, and Sulla rebuilt it, but died before the dedication, which was performed by Q. Catulus in B.C. 69. It was again destroyed in the troubles under Vitellius, on the 19th of December, A.D. 69; and Vespasian, who endeavoured to repair it, saw it again in ruins at his death. Domitian raised it for the last time, and made it more grand and magnificent than had any of his predecessors, and spent 12,000 talents in gilding it. See ROMA.

Capitolium. (From a medal.)



Capĭtŭlum (*ἐπίκρανον, κιονόκρανον*). The capital of a column, which, in the infancy of building as an art, was nothing more than a simple abacus, or square tablet of wood, placed on the top of a wooden trunk, the original column, to form a broad bed for the architrave to rest upon. From this simple beginning, it became eventually the principal ornament of a column, and a prominent feature by which the different architectural orders are distinguished; being, like them, and strictly speaking, divided into three kinds, the Doric, Ionic, and Corinthian capitals, which, with the Roman alterations, make five varieties in use among the ancients; for the Tuscan is only a species of Doric; and the Composite is formed by a union of the Ionic and Corinthian, having the foliage of the latter surmounted by the volutes of the former — a bastard capital introduced in the Imperial Age, when the genius for invention was succeeded by a love for novelty and splendour, and first employed in the triumphal arches at Rome, where a specimen is still to be seen on the Arch of Titus. (See COLUMNA.)

Doric Order. (Phigalea: Manch, pl. 11.)

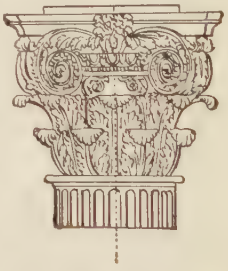


(1) CAPITULUM DORĬCUM. (*a*) *Greek.* The Greek Doric capital, which is the simplest of all, being divided into no more than three principal parts: the large square abacus at the top, retaining in this order its primitive character to the last; the echinus, or quarter round, immediately below it; and the annuli, or anulets, just above the neck of the shaft.

(*b*) *Roman.* The Doric of the Romans is more complicated and varied in its parts. Instead of the simple abacus, they substituted a moulded cymatium and fillet; in place of the echinus, a novolo, often broken by carving, as in the example; instead of the anulets, either an astragal (*astragalus*), or a bead and fillet. The example is from a Roman temple near Albano.

Doric Order. (Albano: Manch, pl. 19.)

(2) CAPITULUM IONĬCUM. (*a*) *Greek.* The Greek Ionic capital consists of two leading features: the abacus, which is smaller and lower than in the Doric, but still square in its plan, though moulded on the exterior faces; and the volutes (*voluta*), or spiral mouldings on each side of the front, which are



Greek Ionic Capital. (Erechtheum, Athens: Fergusson.)

frequently connected by a pendent hem or fold, as in the example, and hang down much lower than the sculptural echinus between them.

(*b*) *Roman.* The Roman Ionic does not differ very materially, nor in its essential parts, from the Greek specimens, excepting that it is often elaborately covered with carving; the volutes are in general smaller, and the tasteful hem which hangs down between them in the preceding engraving is never introduced; but that is not to be considered as a uniform characteristic of the Greek order; it does not occur in any existing edifices.

The annexed specimen of the Roman Composite is taken from the Arch of Titus.

Roman Composite. (Arch of Titus.)

(3) CAPITULUM CORINTHIUM. The Corinthian capital is the richest of all the pure orders, and the specimens now remaining of it in Greece and Italy do not materially differ in any characteristic point. It consists of an abacus, not square, like that of the Doric and Ionic capitals, but hollowed on the sides, and having the angles cut off, and a rosette (*flos*) or other similar ornament in the middle. Under the aba-

cus are small volutes (*helices*, Vitruv. iv. 1, 12), bending downwards like stalks, two of which meet under each angle of the abacus, and two in the centre of each face of the capital, where they sometimes touch, and sometimes are interwoven with each other. The whole is surrounded by two circular rows of leaves (*folia*), each leaf of the upper row growing between and behind those of the lower one, in such a manner that a leaf of the upper row falls in the centre of each of the four faces of the capital. In the best examples these leaves are carved to imitate the acanthus or the olive-tree. See ARCHITECTURA.

Corinthian Capital. (From the Temple of Vesta at Tivoli.)

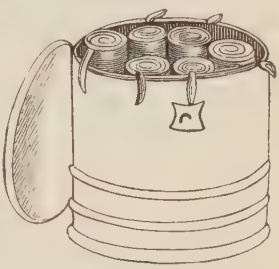
Cappadŏcia (Καππαδοκία). A district of Asia Minor, to which different boundaries were assigned at different times. Under the Persian Empire it included the whole country inhabited by a people of Syrian origin, who were called (from their complexion) White Syrians (Leucosyri), and also Cappadoces. Their country embraced the whole northeast part of Asia Minor, east of the river Halys and north of Mount Taurus, which was afterwards divided into Pontus and Cappadocia proper. (See PONTUS.) When this division took place is uncertain; but we find that under the Persian Empire the whole country was governed by a line of hereditary satraps, who eventually became independent kings. At a later period Cappadocia proper was governed by a line of independent monarchs. In A.D. 17, Archelaüs, the last king, died at Rome, and Tiberius made Cappadocia a Roman province. Cappadocia was a rough and mountainous region. Its fine pastures supported an abundance of good horses and mules.

Capra or **Capella** (Αἴξ). The brightest star in the constellation of the Auriga, or Charioteer, and said to have been originally the nymph or goat who nursed the infant Zeus in Crete. See AMALTHEA; ZEUS.

Capraria. (1) A small island off the coast of Etruria, inhabited only by wild goats, whence its name. (2) See AEGATES.

Capreae. The modern Capri; a small island, nine miles in circumference, off Campania, at the southern entrance of the Gulf of Puteoli. The scenery is beautiful, and the climate soft and genial. Here the emperor Tiberius (q. v.) lived the last ten years of his reign, indulging in secret debauchery, and accessible only to his favourites.

Capricornus. The Goat, a sign of the zodiac, between the Archer and the Waterman, and said to have fought with Iupiter against the Titans.



Caprĭpes. "Goat-footed." An adjective applied to Pan, to Faunus, and to the Satyrs, all of whom are represented in works of art as having goat's feet.

Caprōnae. Locks of hair falling over the forehead. The modern "bang" or "fringe" (Apul. *Flor.* i. 3. 3).

Caprotīna. See PHILOTIS.

Capsa (Κάψα). A strong and ancient city in the southwest of Byzacena, in Northern Africa, in a fertile oasis surrounded by a sandy desert, abounding in serpents. In the war with Iugurtha it was destroyed by Marius; but was afterwards rebuilt, and erected into a colony.

Capsa (dim. CAPSŬLA, CAPSELLA) or **Scrinium.** A box for holding books and papers among the Romans, usually made of beech-wood and of a cylindrical form. There is no doubt respecting their form, since they are often placed by the side of statues dressed in the toga. The accompanying illustration, which represents an open capsa with six rolls of books in it, is from a painting at Pompeii.

Capsa. (Pompeii.)

There does not appear to have been any difference between the capsa and the scrinium, except that the latter word was usually applied to those boxes which held a considerable number of rolls (Martial, i. 2. 4). Boxes used for preserving other things besides books were also called capsae, while in the scrinia nothing appears to have been kept but books, letters, and other writings.

The slaves who had the charge of these book-chests were called *capsarii*, and also *custodes scriniorum;* and the slaves who carried, in a capsa behind their young masters, the books, etc., of the sons of respectable Romans, when they went to school, were also called *capsarii*. We accordingly find them mentioned together with the *paedagogi*.

When the capsa contained books of importance, it was sealed or kept under lock and key; whence Horace says to his work, *Odisti claves et grata sigilla pudico* (*Epist.* i. 20, 3).

Capsarii. (1) A name applied to two classes of Roman slaves: (*a*) Those who took care of the clothes of persons bathing at the public bath-houses. (See BALNEAE.) (*b*) Those who had charge of the *capsae* in which books or letters were kept. (See CAPSA.) (2) Soldiers who guarded the chests containing the military papers and registers. (See *Dig.* l. 6, 7.)

Captīvi. "The Captives"; one of the most popular of the plays of Plautus, and styled rather extravagantly by Lessing "the best piece that has ever come upon the stage." It is unusually restrained in language and action (*fabula stataria*), and in the prologue Plautus takes credit for its freedom from indecency. It has no female characters and no love-intrigue. Good separate editions are those of Sonnenschein (London, 1880), Brix (Leipzig, 1884), and Hallidie (London, 1891).

Capua (Καπύη). A rich and flourishing city, the capital of Campania until ruined by the Romans. Its original name was Vulturnum, which was

changed by the Tyrrheni, after they became masters of the place, to Capua. This latter name was mythically derived from that of their leader Capys, who, according to Festus, received this appellation from his feet being deformed and turned inward. The name is not of Latin, but probably of Oscan origin. The Latins, however, pretended, notwithstanding, to ascribe the foundation of the city to Romulus, who named it, as they stated, after one of his ancestors. Capua was the chief city of the southern Tyrrheni, and even after it fell under the Roman dominion continued to be a powerful and flourishing place. Capua deeply offended the Romans by opening its gates to Hannibal after the victory of Cannae (q. v.), though the luxury and debauchery of the place did much to impair the energy of his troops who wintered there. The vengeance inflicted by Rome upon the Capuans was, however, of a most fearful nature, when, five years after, the city again fell under its dominion. Most of the senators and principal inhabitants were put to death, the greater part of the remaining citizens were sold into slavery, and by a decree of the Senate the Capuani ceased to exist as a people. The city and territory, however, did not become thereupon deserted. A few inhabitants were allowed to remain in the former, and the latter was in a great measure sold by the

Ruins at Capua.

Romans to the neighbouring communities. Iulius Caesar sent a powerful colony to Capua, and under the emperors it again flourished. But it suffered greatly from the barbarians in a later age; so much so, in fact, that the bishop Landulfus and the Lombard, Count Lando, transferred the inhabitants to Casilinum, on the Vulturnus, and this is the site of modern Capua.

Capŭlus (κώπη, λαβή). (1) The hilt of a sword, which was frequently much ornamented. (See GLADIUS.) The handles of knives were also elaborately carved; and of the beautiful workmanship sometimes bestowed on them, a judgment may be formed from the three specimens here introduced.

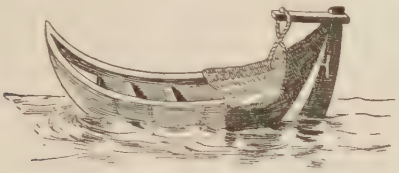
Capuli. (Montfaucon.)

(2) The handle of a plough (Ovid, *Pont.* i. 8, 57), of which the usual name was *stiva*. See ARATRUM.

(3) A bier or coffin. See FUNUS.

Caput. A word which from the sense of "head," literal or metaphorical (including under the latter the meaning of "source," "beginning"), comes to signify: (1) A single person or thing as distinct from an aggregate (*Inst.* iii. 16, 6; *Dig.* 6, 1, 1, 3). Hence perhaps its use to express a "chapter" of a law (*Dig.* 9, 2, 2, pr.) and a territorial unit for the purpose of land taxation under the later Empire (*Cod.* 10, 2). (2) A human being (Caes. *B. G.* iv. 15), e. g. as a subject of the poll-tax (*Dig.* 50, 4, 18, 8); and in this sense even slaves may be included, as in the phrase *noxalis actio caput sequitur* (*Inst.* iv. 8, 5). But there is a tendency to restrict the term to citizens of some substance; thus the lowest century of Servius Tullius comprised the *proletarii* and *capite censi*; of whom the latter, having little or no property, were barely rated as so many *head* of citizens (Gell. xvi. 10; Cic. *de Rep.* ii. 22). (3) A human being regarded as capable of legal rights (= *persona*). (4) That capacity or those legal rights themselves.

Caput. The principal of a debt. See FENUS.



Caput Extōrum. The convex upper part of the liver of a victim, from which the haruspices chiefly drew their prognostications regarding coming events. Any disease or deficiency in this organ was regarded as of unfavorable import. It was divided into two parts—one called *familiaris*, from which the fate of friends was foretold; the other, *hostilis*, from which they predicted the fate of enemies. See Pliny, *H. N.* xi. §§ 189, 190;

Livy, viii. 9; Cic. *de Div.* ii. 12, 13, § 28 foll.; and the articles AUGUR; DIVINATIO; HARUSPEX.

Capys (Κάπυς). (1) Son of Assaracus, and father of Anchises. (2) A companion of Aeneas, from whom Capua was said to have derived its name.

Capys Silvius. See SILVIUS.

Carăbus (*κάραβος, καράβιον*). A coracle or boat made of wicker-work, and covered with rawhides. Caesar (*B. C.* i. 54) describes the carabus as used by him in Spain from having been seen by him in Britain. The subjoined illustration is taken from Valturius.

Carabus. (Valturius.)

Caracalla. A Gaulish outer garment resembling the Roman *lacerna* (q. v.), and first introduced at Rome by the emperor Aurelius Antoninus Bassianus, who compelled all plebeians who came to court to wear it, and hence received the name Caracalla, by which he is best known in history (Aurel. Vict. *Epit.* 21). In its longer form it came in later times to be worn by the clergy under the name of cassock (*sottana, soutane*). Like the *lacerna*, it was furnished with a cowl or hood (*cucullus*).

Caracalla, AURELIUS ANTONĪNUS BASSIĀNUS. The eldest son of Septimius Severus. His name Caracalla was derived from a species of Gallic cassock which he introduced at Rome; and that of Bassianus from his maternal grandfather. Caracalla was born at Lugdunum (Lyons), A.D. 188, and was appointed by his father to be his colleague in the government at the age of thirteen years; yet he is said, even at this early age, to have attempted his father's life. Severus died A.D. 211, and was succeeded by his two sons, Caracalla and Geta. These two brothers bore towards each other, even from infancy, the most inveterate hatred. After a campaign against the Caledonians, they concluded a disgraceful peace and then wished to divide the Empire between them; but their design was opposed by their mother, Iulia, and by the principal men of the State; so that Caracalla now resolved to get rid of his brother, by causing him to be assassinated. After many unsuccessful attempts, he pretended to desire a reconciliation, and requested his mother to procure him an interview with his brother in her own apartment. Geta appeared, and was stabbed in his mother's arms, A.D. 212, by several centurions, who had received orders to this effect. The praetorian guards were prevailed upon, by rich donations, to proclaim Caracalla sole emperor, and to declare Geta an enemy to the State; and the Senate confirmed the nomination of the soldiers. After this, the whole life of Caracalla was only one series of cruelties and acts of extravagant folly. All who had been in any way connected with Geta were put to death, not even their children being spared. The historian Dio Cassius makes the whole number of victims to have amounted to 20,000 (Dio Cass. lxxvii. 4). Among those who fell in this horrible butchery was the celebrated lawyer Papinianus. And yet, after this, by a singular act of contradiction, he not only put to death many of those who had been concerned in the murder of his brother, but even demanded of the Senate that he should be enrolled among the gods. His pattern was Sulla, whose tomb he restored and adorned. Like this dictator, he enriched his soldiers with the most extravagant largesses which extortion enabled him to furnish. The augmentation of pay received by them is said to have amounted to 280 millions of sesterces a year. As cruel as Caligula and Nero, but weaker than either, he regarded the Senate and people with equal hatred and contempt. From motives of avarice, he gave all the freemen of the Empire the right of citizenship, and was the first who received Egyptians into the Senate. Of all his follies, however, the greatest was his admiration of Alexander of Macedon. From his infancy he made this monarch his model, and copied him in everything which it was easy to imitate. He had even a Macedonian phalanx of sixteen thousand men, all born in Macedonia, and commanded by officers bearing the same names with those who had served under Alexander. Convinced, moreover, that Aristotle had participated in the conspiracy against the son of Philip, he caused the works of the philosopher to be burned. With equally foolish enthusiasm for Achilles, he made him the object of his deepest veneration. He went to Ilium to visit the grave of Homer's hero, and poisoned his favourite freedman, named Festus, to imitate Achilles in his grief for Patroclus. His conduct in his campaigns in Gaul, where he committed all sorts of cruelties, was still more degrading. He crossed over the Rhine into the countries of the Catti and Alemanni. The Catti defeated him, and permitted him to repass the river only on condition of paying them a large sum of money. He next marched through the land of the Alemanni as an ally, and built several fortifications. He then called together the young men of the tribe, as if he intended to take them into his service, and caused his own troops to surround them and cut them in pieces. For this barbarous exploit he assumed the surname of Alemannicus. In Dacia he gained some advantages over the Goths. He signed a treaty of peace at Antioch with Artabanus, the Parthian king, who submitted to all his demands. He invited Abdares, the king of Edessa, an ally of the Romans, to Antioch, loaded him with chains, and took possession of his estates. He exercised the same treachery towards Vologeses, king of Armenia; but the Armenians flew to arms and repulsed the Romans. After this, Caracalla went to Alexandria, to punish the people of that city for ridiculing him. While preparations were making for a great massacre, he offered hecatombs to Serapis, and visited the

Caracalla. (Vatican.)

Caricature of Caracalla as an Apple-seller. (Avignon.)

tomb of Alexander, on which he left his imperial ornaments by way of offering. He afterwards devoted the inhabitants for several days and nights to plunder and butchery, and seated himself, in order to have a view of the bloody spectacle, on the top of the Temple of Serapis, where he consecrated the dagger which he had drawn, some years before, against his own brother. His desire to triumph over the Parthians induced him to violate the peace, under the pretence that Artabanus had refused him his daughter in marriage. He found the country undefended, ravaged it, marched through Media, and approached the capital. The Parthians, who had retired beyond the Tigris to the mountains, were preparing to attack the Romans the following year with all their forces. Caracalla returned without delay to Mesopotamia, without having even seen the Parthians. When the Senate received from him information of the submission of the East, they decreed him a triumph and the surname Parthicus. Being informed of the warlike preparations of the Parthians, he prepared to renew the contest; but Macrinus, the praetorian prefect, whom he had offended, assassinated him at Edessa, A.D. 217, on his way to the Temple of Lunus. His reign had lasted more than six years. It is remarkable that this prince, although he did so much to degrade the throne of the Caesars, yet raised at Rome some of the most splendid structures that graced the capital. Magnificent thermae bore his name (see BALNEAE), and among other monuments of lavish expenditure was a triumphal arch, on which were represented the victories and achievements of his father, Severus, and of which an illustration is given on page 118. Notwithstanding his crimes, Caracalla was deified after death by a decree of the Senate.

Caractăcus. A king of the Silures in Britain, a people occupying what is now southern Wales. After withstanding, for the space of seven years (A.D. 43–50) the Roman arms, he was defeated in a pitched battle by Ostorius Scapula, and his forces put to the rout. Taking refuge, upon this, with Cartismandua, queen of the Brigantes, he was betrayed by her into the hands of the Romans, and led to Rome. Great importance was attached to his capture. Claudius, who was emperor at the time, augmented the territories of Cartismandua, and triumphal honours were decreed to Ostorius. This exploit was compared to the capture of Syphax by Scipio, and that of Perseus by Aemilius Paulus. The manly and independent bearing, however, of the British prince, when brought into the presence of the Roman emperor, excited so much admiration that his fetters were removed, and freedom was granted him, together with his wife and children, who had shared his captivity. There is no evidence that Caractacus ever returned to Britain, and he is believed to have been in Rome at the time of his death (Tac. *Ann.* xii. 33 foll.).

Tradition says that the Claudia mentioned by St. Paul (2 Tim. iv. 21) was his daughter and introduced Christianity into Britain, but there is no historical evidence to support this legend. Caractacus is believed to have died in A.D. 54.

Carălis or **Carăles**. The modern Cagliari; the chief town of Sardinia, with an excellent harbour.

Carambis (Κάραμβις). A promontory, with a city of the same name, on the coast of Paphlagonia.

Carānus (Κάρανος or Κάρηνος). A descendant of Heracles, and said to have settled at Edessa, in Macedonia, with an Argive colony, about B.C. 750, and to have become the founder of the dynasty of Macedonian kings.

Carausius. A native of Gaul, born among the Menapii. His naval abilities attracted the notice of Maximian, who gave him the command of a squadron against the pirates. He proved, however, unfaithful to his trust, and too much bent upon enriching himself. Maximian thereupon gave orders to put him to death; but Carausius, apprised of this in season, retired with his fleet to Britain. Here he succeeded in gaining over, or else intimidating, the only Roman legion that remained in the island, and finally proclaimed himself emperor. He forced the emperors Maximian and Diocletian to acknowledge his authority, which he maintained for the space of seven years (286–293). He was assassinated by Allectus.

Carbăsus (*κάρπασος*). Cotton; an Eastern product, originally called tree-wool (*ἔρια ἀπὸ ξύλου*), like the German *Baumwolle*. See Herod. iii. 106; and ib. 47. It was brought by the Phœnicians into Spain. The Greeks gained their first real knowledge of it at the time of the Indian expedition of Alexander the Great, after which its use became general. The finest cotton came from Egypt, where the priests wore cotton garments; and from Arabia. Caecilius Statius mentions cotton at Rome as early as B.C. 180, and later it was used not only for articles of clothing, but for tent-curtains, awnings, sails, etc. (See Plin. *H. N.* xii. § 39; xix. § 10; Cic. *Verr.* v. 12, § 30; Verg. *Aen.* iii. 357; Lucret. vi. 109.) There were manufactories of cotton goods in Malta, whence cotton clothing was called *vestis Melitensis* at Rome (Cic. *Verr.* ii. 72, § 176 *et al.*). Raw cotton was used for stuffing

pillows in the East, and the Macedonians filled their saddles with it (Strabo, 693). Pliny speaks of cotton under the name *gossypium* (xii. § 39). The word *carbasus* is Indian, the Sanskrit form being *karpâsa*. On the use of cotton by the ancients, see Marquardt, *Privatleben*, pp. 470–474.

Carbatĭna (*καρβατίνη*). (1) A sort of rude shoe, made of untanned ox-hide, placed under the foot, and tied with several thongs in such a way as to cover the whole foot and part of the leg (Lucian, *Alex.* p. 246; Xen. *Anab.* iv. 5, 14). (2) A skin-covered structure used by besiegers. See TESTUDO.

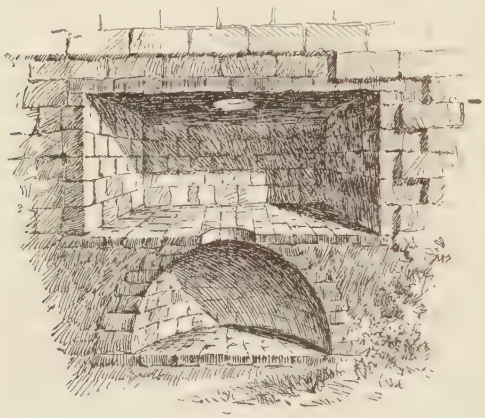
Carbo. The name of a family of the gens Papiria. (1) C. PAPIRIUS CARBO, a distinguished orator, and a man of great talents but no principle. He was one of the three commissioners or triumvirs for carrying into effect the agrarian law of Tib. Gracchus. His tribuneship of the plebs, B.C. 131, was characterized by the most vehement opposition to the aristocracy; but after the death of C. Gracchus (121), he suddenly deserted the popular party, and in his consulship (120) undertook the defence of Opimius, who had murdered C. Gracchus. In 119, Carbo was accused by L. Licinius Crassus; and, as he foresaw his condemnation, he put an end to his own life. (2) CN. PAPIRIUS CARBO, one of the leaders of the Marian party. He was thrice consul—namely, in B.C. 85, 84, and 82. In 82, he carried on war against Sulla; but was at length obliged to fly to Sicily, where he was put to death by Pompey at Lilybaeum.

Carcăso. The modern Carcassonne; a town of the Tectosages, in Gallia Narbonensis.

Carcer (*δεσμωτήριον*). A prison.

(1) GREEK. Imprisonment was seldom used among the Greeks as a legal punishment for offences. Among the Athenians, with whom we are chiefly concerned, it was practically unknown in the sense of confinement for a definite period after conviction. They had neither the appliances in the shape of walls and bars, nor were they willing to incur the expense; and they preferred either banishment or the death penalty. Capital punishment was inflicted without hesitation for comparatively trifling offences, but by more humane methods than those of modern Europe until quite recent times.

Imprisonment before trial, on the other hand, was common enough, though bail was freely accepted in cases other than capital; the terror of exile was in general thought sufficient to keep a man to his bail (*ἐγγύη*). The farmers of the taxes and lessees of other revenues (*τελῶναι, μισθούμενοι*), as well as their sureties (*οἱ ἐγγυώμενοι*), were liable to imprisonment if the duties were not paid by a specified time; and in cases where default was to be feared, they might even be imprisoned at the discretion of the Senate or law-courts. This was the great safeguard to insure regularity of payment. Again, persons who had been mulcted in penalties might be confined till they paid them, not only in criminal cases, but in some civil actions instituted for damages as well. Certain of the *ἄτιμοι* also, if they exercised the rights of citizenship, were subject to the same consequences (Demosth. *c. Timocr.* p. 732, § 103). We read, moreover, of *δεσμός* as a public stigma put upon disgraceful offences, such as theft; but this was a *προστίμημα* or additional penalty, the infliction of which was at the option of the court; and the *δεσμός* itself was not so much an imprisonment as a public exposure in the *ποδοκάκκη* or stocks, for five days and nights—called also *ἐν ξύλῳ δεδέσθαι* (Demosth. *loc. cit.*, p. 700, § 2; pp. 732–733, §§ 103, 105; p. 736, §114). One more description of imprisonment remains to be noticed, that in the interval between condemnation and execution. In this last case, owing to the insecurity of the building, the prisoner was chained, and was under the special custody of the Eleven, who were also responsible for the execution itself. See HENDEKA.



There are several passages from which we might infer the existence at Athens of imprisonment as a punishment by itself—e. g. Plato, *Apol.* 37 C; *Laws*, ix. 864 E, 880 B, and especially x. 908. But such vague allusions prove nothing against the persistent silence of the historians and orators. "Of imprisonment as a punishment by itself," Schömann argues, "we have no certain example"; and this remark in his text is supported by a good note (*Antiq.* i. 489, Eng. trans.). The opposite and less probable opinion has, however, been maintained by K. F. Hermann (*Staatsalterth.* § 139) and Caillemer (*ap.* Daremberg and Saglio).

The prison at Athens is frequently mentioned in the orators, both by its usual name, *δεσμωτήριον*, and the euphemistic equivalent *οἴκημα*. But the plural *δεσμωτήρια* does not seem to occur in any Attic writer, though there are passages where, if a plurality of prisons existed at Athens, we should almost certainly find them mentioned. This argument seems almost decisive in favour of the opinion of J. H. Lipsius (*Att. Process*, p. 73 n.), that there was only one. The authority of Hesychius and the *Etymologicum Magnum* is insufficient to prove, in the face of probability, that there was an Athenian prison called *Θησεῖον*; and there is no proof that the other names for prisons recorded by the grammarians are to be referred to Athens. Among these local names was *ἀναγκαῖον* or *ἀνάκαιον* in Boeotia, *κέραμος* in Cyprus, *κῶς* at Corinth; and among the Ionians *γοργύρη*, as at Samos (Herod. iii. 145); *βάλαικες* or *βαλαίκακες, βλέορον, ἴψον, σιρός*, all mentioned by Hesychius. The appearance of the Latin *carcer* in the Sicilian Greek *κάρκαρον*, and conversely of the Greek *λατομίαι* in the Latin *lautumiae*, is noticed by Mommsen as a proof of the early intercourse between the Romans and Sicily (*R. H.* i. 167, Eng. trans.). Some of the above names may be slang or nicknames, such as are often applied to prisons in our own day: thus *γοργύρα* is explained to mean "a sewer"; *ἴψον* may be connected with *ἶπος*, "a mouse-trap." The gate through which criminals were led to execution was called *χαρώνειον* or *θύρα χαρώνειος* (Poll. viii. 102), a grim joke which can hardly have arisen at Athens, where executions were private.

The Attic expression for imprisonment was *δεῖν*, a word which by no means implies the use of chains or fetters. The phrase in the oath of the *βουλευταί*, or senators, *οὐδὲ δήσω Ἀθηναίων οὐδένα*, is explained by Demosthenes (*c. Timocr.* p. 746, § 147) as a security against arbitrary imprisonment by the executive government without trial. It was, in fact, the habeas corpus of the Athenian constitution. But he is careful to add (§ 151) that no such words occur in the oath of the Heliastae or dicasts; the law-courts had absolute power

over men's lives, liberties, and fortunes. We have also the phrase *ἄδεσμος φυλακή* (as in Thuc. iii. 34), like the *libera custodia* of the Romans, signifying that a person was under strict surveillance and guard, though not confined within the walls of a prison.

(2) Roman. The oldest prison at Rome, traditionally the only one in early times (Juv. iii. 312), was called simply Carcer; and is still to be seen on the eastern slope of the Capitoline Hill, to the right of the ascent from the Forum. The name Mamertinus, usually applied to the Carcer, is mediæval and not classical. The Tullianum consists of a larger oblong upper and a smaller underground circular dungeon; the latter is that called the Tullianum, a name which has often been incorrectly explained. As the original erection of the

Section of the Tullianum at Rome.

Carcer was attributed to Ancus Marcius (Livy, i. 33), it was conjectured by the etymologists that the name Tullianum must have been derived from Servius Tullius, "evidently a double mistake, as the lower chamber would certainly not have been added after the upper one" (Middleton, *Anc. Rome*, p. 80). It is now agreed that it is from the *tullii*, or springs for whose waters it formed a reservoir; that it was built in the first instance simply to protect the water supply of the Capitol; and was only in later times used as a part of the prison when a captive, as in the well-known instance of Iugurtha, was doomed to be killed by cold and starvation (Festus and P. Diac. s. v. *tullii*, pp. 352–353, Müller; Plut. *Mar.* 12; Burn, *Rome and the Campagna*, p. 81). The name therefore originally meant "well-house." Thus Livy speaks of the infamous Pleminius as *deiectus in Tullianum* (xxix. 22), which in another passage is expressed by the words *in inferiorem demissus carcerem necatusque* (xxxiv. 44). It was here, too, that Lentulus and the other accomplices of Catiline were strangled by order of the *triumviri capitales;* and Sallust describes it as sunk twelve feet in the earth, strongly walled, and with a roof vaulted with stone arches (*Cat.* 55). In reality, as modern investigations have shown, the construction is so old that it points to a time when the arch was not used in Roman architecture, standing next among existing remains to the prehistoric walls on the Palatine; the roof being of stone slabs, each overlapping the one beneath it, an approximation to the true arch found also in the well-known treasury of Mycenae and other primitive buildings. The upper chamber is also of very early date, but later than the Tullianum; and it is not in its primitive condition. A projecting string-course on the outside records a restoration in the reign of Tiberius by the *consules suffecti* for the year A.D. 22. Another name for this part of the prison was Robur, in old Latin Robus. The Robur is spoken of as a place of execution in several passages (Livy, xxxviii. 59; Tac. *Ann.* iv. 29), and is spoken of by Middleton as "the scene of countless butcheries and slow torture such as the Romans delighted in." During each triumph, in his course up to the Capitol, the victorious general paused for a while near the Tullianum till word was brought him that some of his principal captives had been put to death in its gloomy vault. The Scalae Gemoniae (called by Pliny Gradus Gemitorii, "stair of sighs") led from the Forum to the door of the upper prison, and here the dead bodies of Sabinus, of Vitellius, of Sejanus, and many other noted persons were exposed. (Cf. Tac. *Hist.* iii. 74, 85; Suet. *Tib.* 61; *Vitell.* 17; and the touching story in Pliny, *H. N.* viii. 145, of the faithful dog who there watched his master's body night and day and brought it food.)

The name Robur was given to the Tullianum from the oaken beams (*robora*) that lined it in early times. Plutarch (*Marius*, 12) calls the lower dungeon *τὸ βάραθρον*. A tradition of the Roman Church makes St. Peter and St. Paul to have been imprisoned here in the time of Nero, and declares the spring which still exists to have sprung up miraculously for the baptism of the jailers by St. Peter. The building has therefore been named S. Pietro in Carcere. See Middleton, *Remains of Ancient Rome*, i. pp. 151 foll., where a plan and section are given (London, 1892); and Mommsen, *Hist. of Rome*, i. 308 (American ed. 1888).

Sallust, in the passage already cited, gives an impressive picture of the lower vault in which Iugurtha and also Vercingetorix perished. "There is," he says, "in the prison a chamber named the Tullianum, about twelve feet below the surface of the earth. It is surrounded by walls, and covered by a vaulted roof of stone; but its appearance is repulsive and fearful, because of the neglect, the darkness, and the stench." Access to the lower dungeon was originally possible only through the hole in the ceiling. The exact proportions of the vault are 19 feet in length, 10 feet in width, and 6½ feet in height.

The name Mamertinus, often applied to this prison, was bestowed upon it in the early part of the Middle Ages from a statue of Mars (Mamers) which stood near it on the Clivus Argentarius. From the same statue is derived the modern name of the street, Via del Marforio.

This prison was obviously too small to contain any number of prisoners, and probably from the first was appropriated to those condemned to death. The earliest mention of another prison is in the days of the Decemvirate, B.C. 450. Appius Claudius is said to have built one for political purposes, to overawe the champions of plebeian liberties (Livy, iii. 57). It was into this prison that he was himself thrown, and committed suicide while awaiting his trial. At a later period we find an additional prison called Lautumiae, or stone-quar-

ries, in the immediate neighbourhood of the original Carcer. It is not likely that there were ever any quarries on this spot, which was to the northwest of the Forum; but it may have been named after the Syracusan λατομίαι mentioned above, which were thus used. Varro (*L. L.* v. 151, Müll.) identified the Lautumiae with the Tullianum, and has been followed by some of the moderns; but they are distinguished by the best writers on Roman topography (Becker, *Röm. Alterth.* i. 262–268; Burn, p. 80).

With the growth of the city other prisons became necessary; but the words of Roman historians generally refer to these alone. Close to the Carcer, and between it and the Temple of Concord, were the Scalae Gemoniae (q. v.), where the bodies of criminals were exposed after execution.

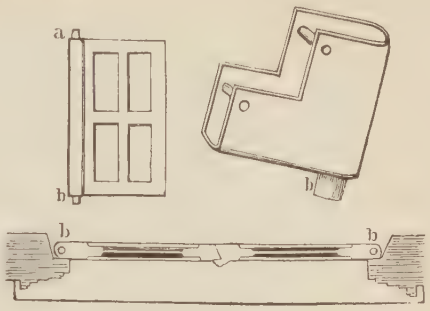
Carcĕres. A row of small vaulted chambers, forming the starting-point of the races in the circus. See CIRCUS.

Carchēdon (Καρχηδών). The Greek name of Carthage. See CARTHAGO.

Carchesium (καρχήσιον). (1) A kind of cup, rather long, narrower in the middle than at either extremity, and with handles (ὦτα) stretching from the top to the bottom. Asclepiades (in Ath. 488 foll.)

Carchesium.

mentions *carchesia* among those vessels which have feet. It was a peculiarly Greek cup (Macrob. *Sat.* v. 21 *init.*), and generally of a splendid nature. (2) The same term designated the tops of a ship—i. e. the structure surmounting the mast immediately above the yards (*antennae*). See NAVIS.



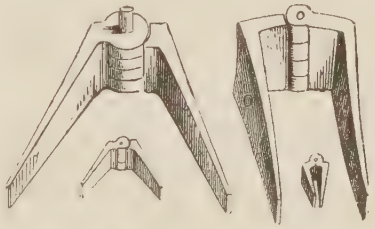
Cardamўlé (Καρδαμύλη). A town in Messenia; now Scardamoula.

Cardea. A Roman divinity, presiding over the hinges (*cardines*) of doors—that is, over family life (Tertull. *adv. Gnost.* 10).

Cardia (Καρδία). A town on the Thracian Chersonese, on the Gulf of Melas, the birthplace of Eumenes (q. v.). It was destroyed by Lysimachus, who built the town of Lysimachia in its immediate neighbourhood.

Cardo (*θαιρός, στροφεύς, στρόφιγξ, γίγγλυμος*). A hinge, a pivot.

The first figure in the annexed illustration is designed to show the general form of a door, as we find it with a pivot at the top and bottom (*a b*) in ancient remains of stone, marble, wood, and bronze. The second figure represents a bronze hinge in the Egyptian collection of the British Museum; its pivot (*b*) is exactly cylindrical. Under these is drawn the threshold of a temple, or other large edifice, with the plan of the folding-doors. The pivots move in holes fitted to receive them (*b b*), each of which is in an angle behind the antepagmentum. When Hector forces the gate of the Grecian camp, he does it by breaking both the



Door and Hinge.

hinges (*ἀμφοτέρους θαιρούς*)—i. e., as explained by the scholiasts, the pivots (*στρόφιγγας*) at the top and bottom. See CATARACTA.

According to the ancient lexicons, *cardo* denoted not only the pivot, but sometimes the socket (*foramen*) in which it turned. *Postis* appears to have meant the upright pillar (*a b*) in the frame of the door. The whole of this "post," including the pivots, appears to be called *στροφεύς* and *cardo* by Theophrastus and Pliny, who say that it was best made of elm, because elm does not warp, and because the whole door will preserve its proper form, if this part remains unaltered.

The Greeks and Romans also used hinges exactly like those now in common use. Four Roman hinges of bronze, preserved in the British Museum, are shown in the following illustration.

Cardines. (British Museum.)

The proper Greek name for this kind of hinge was *γίγγλυμος*: whence Aristotle applies it to the joint of a bivalve shell; and the anatomists call those joints of the human body *ginglymoid* which allow motion only in one plane, such as the elbow-joint.

The form of the door above delineated makes it manifest why the principal line laid down in surveying land was called *cardo* (see AGRIMENSORES); and it further explains the application of the same term to the North Pole, the supposed pivot on which the heavens revolved (Ovid, *Epist. ex Pont.* ii. 10, 45). The lower extremity of the universe was conceived to turn upon another pivot, corresponding to that at the bottom of the door; and the conception of these two principal points in geography and astronomy led to the application of the same term to the east and west also. Hence our "four points of the compass" are called by ancient writers *quatuor cardines orbis terrarum;* and the four principal winds, N., S., E., and W., are the *cardinales venti* (Serv. *ad* Verg. *Aen.* i. 85).

Cardūchi (Καρδοῦχοι). A powerful and warlike people, probably the Kurds of modern times, who dwelt in the mountains which divided Assyria from Armenia. See Xen. *Anab.* iii. 5, 15.

Caria (Καρία). A district of Asia Minor, in its southwestern corner. It is intersected by low mountain chains, running out far into the sea in long promontories, forming gulfs along the coast and inland valleys that were fertile and well-watered. The chief products of the country were corn, wine, oil, and figs. The coast was inhabited chiefly by Greek colonists. The inhabitants of the rest of the country were Carians, a people nearly allied to the Lydians and Mysians. The Greeks considered the people mean and stupid, even for slaves. The country was governed by a race of native princes, who fixed their abode at Halicarnassus. These princes were subject-allies of Lydia and Persia, and some of them rose to great distinction in war and peace. (See Artemisia; Mausolus.) Under the Romans, Caria formed a part of the province of Asia. As the Carians were often used as mercenaries, the proverb arose ἐν Καρὶ κινδυνεύειν, equivalent to the familiar Latin *experimentum facere in corpore vili*. Cf. the scholiast on Plato, *Laches*, 187 B; and Polyb. x. 32, 11.

The country was said to have got its name from Car (Κάρ), the brother of Mysus and Lydus (Herod. i. 171).

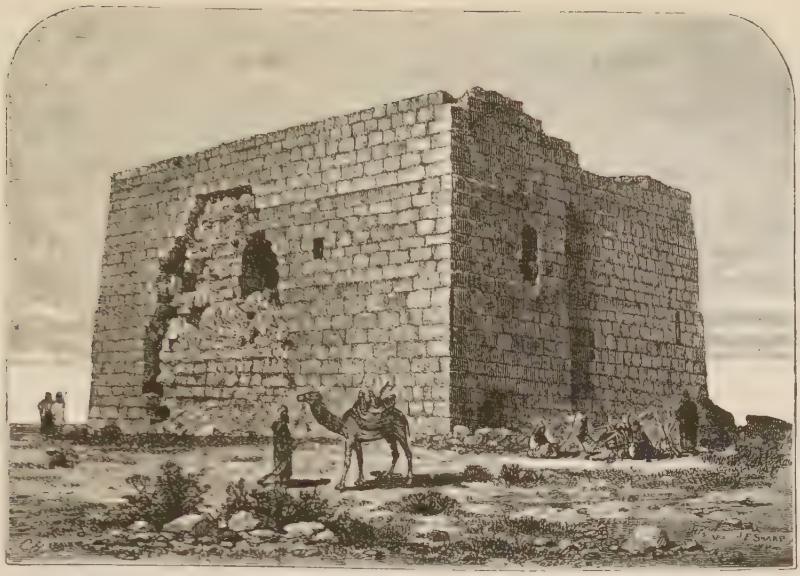
Caricature. See Graffiti.

Carīna. The keel of a ship. See Navis.

Carīnae. A street of Rome where Cicero, Pompey, and others of the principal Romans lived. From the epithet *lautae*, which Vergil applies to the Carinae, we may infer that the houses which stood in this quarter of ancient Rome were distinguished by an air of superior elegance and grandeur (*Aen.* viii. 361 foll.). The name Carinae is probably derived from the street's position in a hollow between the Coelian, Esquiline, and Palatine hills.

Carīnus, M. Aurelius. The eldest son of the emperor Carus, who gave him the title of Caesar and the rank of Augustus, together with the government of Italy, Illyricum, Africa, and the West, when he himself was setting out, with his second son Numerianus, to make war against the Persians. Carus, knowing the evil qualities of Carinus, gave him this charge with great reluctance; but he had no alternative, as Numerianus, though superior in every respect to his elder brother, was too young to hold so important a command. As soon as Carinus entered Gaul, which his father had particularly charged him to defend against the barbarians, who menaced an irruption, he gave himself up to the most degrading excesses, discharged the most competent men from public employment, and substituted the vile companions of his debaucheries. On hearing of the death of his father, he indulged in new excesses and new crimes. Still, however, his courage and his victories merit praise. He defeated the barbarians who had begun to attack the Empire, among others the Sarmatae, and he afterwards overthrew Sabinus Iulianus, who had assumed the purple in Venetia. He then marched against Diocletian, who had proclaimed himself emperor after the death of Numerian. The two armies met in Moesia, and several engagements took place, in which success seemed balanced. At last a decisive battle was fought near Margum, and Carinus was on the point of gaining a complete victory, when he was slain by a tribune of his own army, who had received an outrage at his hands. This event took place A.D. 285, so that the reign of Carinus, computing it from his father's death, was a little more than one year. His life was written by Vopiscus.

Carinus.



Caristia or **Charistia.** A Roman family celebration held on February 22 (viii. Kal. Mart.) following the Dies Parentales (February 13–21) and the Feralia (February 21), which days were sacred to the dead. The feast was a thanksgiving for the survivors. None but relatives were invited, and on this occasion quarrels and misunderstandings were ended; whence some derive the word Caristia from χαρίζομαι, but the better-approved spelling is against this view, and Ovid regards the word as connected with *carus* (Ovid, *Fast.* ii. 617).

Carmania (Καρμανία). A province of the ancient Persian Empire, bounded on the west by Persia proper, on the north by Parthia, on the east by Gedrosia, and on the south by the Indian Ocean. See Persia.

Carmēlus (Κάρμηλος). A range of mountains in Palestine, commencing on the northern border of Samaria, and running through the southwestern part of Galilee, till it terminates in the promontory of the same name (Cape Carmel).

Carmen. (1) De Figūris. An anonymous didactic poem on rhetorical figures discovered in a MS. at Paris, and published by Quicherat, and later by Schneidewin (Göttingen, 1841). It consists of 185 or 186 hexameters, and treats of the figures of speech in such a way that each figure has three lines of the text. The peculiarities of its diction lead one to place its date during the later Empire. See Teuffel, *Hist. Roman Lit.*, Eng. trans., 451, 1. (2) De Ponderibus et Mensūris. A poem found in some of the MSS. of Priscian, but undoubtedly earlier than his time, and probably of the fourth or fifth century A.D. It has 208 hexameters, the best edition of which is that of F. Hultsch in his *Script. Metrolog. Rom.* (1866). (3) De Morĭbus. See Cato, Dionysius. (4) De Philomēla. See Philomela.

Carmen Saeculāre. An ode written by Horace at the request of the emperor Augustus, to be sung at the celebration of the Ludi Saeculares, B.C. 17. (See Ludi.) It is composed in nineteen stanzas (seventy-six lines), in the Sapphic and Adonic

Remains of a Castellum at Carmel.

metre, which were divided between two choruses, one composed of boys and the other of girls, who sang now responsively and now in chorus. The arrangement of the stanzas between the two bands has been a subject of dispute among various editors; but all are agreed upon this much: that the first two stanzas were sung by the joint chorus, the second by the girls, the third by the boys, the ninth half by boys and half by girls, while the last stanza was again sung by the united bands.

Like most verses written to order, the *Carmen Saeculare* has little poetical merit, though rhetorically excellent. See HORATIUS.

Carmenta or **Carmentis**. An ancient Italian goddess of prophecy who protected women in childbirth. In Rome she had a priest attached to her, the *flamen Carmentalis*, and a shrine near the gate, under the Capitol, named after her Porta Carmentalis. On this spot the Roman matrons celebrated in her honour the festival of the Carmentalia, the flamen and pontifex assisting. Two Carmentae, called Porrima or Antevorta, and Postvorta, were worshipped as her sisters and attendants. These names were sometimes explained with reference to childbirth, sometimes as indicating the power of the goddess of fate to look into the past and future. In the legend of the foundation of Roma, Carmenta appears as the prophetic mother, or wife, of the Arcadian stranger Evander (q. v.). See CAMENAE.

Carmentalia. An old Roman festival held on the 11th and 15th of January in honour of Carmenta or Carmentis. See CARMENTA.

Carmentālis Porta. One of the gates of Rome in the neighbourhood of the Capitol. It was afterwards called Scelerata, because the Fabii passed through it in going to the fatal expedition where they perished (Verg. *Aen.* viii. 333).

Carmĭna Saliaria. The ritual songs (*axamenta*) of the Salii (q. v.), who sang them during the processions of Mars and Quirinus. These, by the middle of the first century B.C., had become unintelligible even to the priests themselves (Quint. i. 6, 40), and were consequently written down and henceforward repeated merely as a formula. L. Aelius Stilo wrote a commentary on them (Varro, *L. L.* vii. 2; Fest. 141, 146, 210, 239, Müll.). Only two or three connected bits of these hymns have come down to us, and these in a very corrupt state in the pages of the grammarians. (Cf. Terent. Maurus, p. 2261, Putsch.) They will be found collected and explained by Bergk (*Opusc.* i. 477) and Corssen (*Origines Poësis Rom.*, Berlin, 1846). See also Wordsworth, *Fragments and Specimens of Early Latin* (Oxford, 1874), and Allen, *Remnants of Early Latin*, p. 74 (Boston, 1884).

Carna. A Roman divinity, whose name is probably connected with *caro*, "flesh," for she was regarded as the protector of the physical well-being of man. Her festival was celebrated on June 1, and was believed to have been instituted by Brutus in the first year of the Republic. Ovid confounds this goddess with Cardea (q. v.). See Macrob. *Sat.* i. 12.

Carnac (KARNAK). See THEBAE (2).

Carnac. A village in France, twenty miles southeast of Lorient, remarkable for the number of its Gallo-Roman remains, found in a group of mounds known as "Caesar's Camp." These remains comprise pottery, glassware, coins, iron objects, bronzes, and statuary. See Miln, *Excavations at Carnac*, 2 vols. (1877–81).

Carnarium. (1) A larder. (2) A bar or beam furnished with meat-hooks or pegs for hanging hams, bacon, etc. (Plaut. *Capt.* iv. 4, 6). (3) A ditch or fosse into which the bodies of the poorest classes of the people were thrown. See the curious account of one on the Esquiline Hill, in Lanciani, *Ancient Rome in the Light of Recent Discoveries*, pp. 64–67.

Carnēa (*τὰ Κάρνεια*). A festival celebrated in honour of Apollo Carneus ("the protector of flocks") as early as the time of the immigration of the Dorians. In keeping up the celebration, the Dorians characteristically gave it a warlike

colour, by transforming their original pastoral deity into the god of their fighting army. The Carnea lasted nine days, from the 7th to the 15th of the month Carneus (August-September). The proceedings symbolized the life of soldiers in camp. In every three *phratriae* or *obae* nine places were set apart, on which tents or booths were put up. In these tents nine men had their meals in common. All ordinary proceedings were carried on at the word of command, given out by a herald. One part of the festival recalled its originally rural character. This was a race, in which one of the runners, supposed to symbolize the blessings of harvest, started in advance, uttering prayers for the city. The others, called "vintage-runners," pursued him, and if they overtook him the occurrence was taken as a good omen; if they failed, as a bad one. After the twenty-sixth Olympiad (B.C. 676) a musical contest was added, at which the most celebrated artists in all Greece were accustomed to compete. The first artist who sang at this contest was Terpander (q. v.).

Carneădes (Καρνεάδης). A philosopher of Cyrené in Africa, founder of a sect called the Third or New Academy. The Athenians sent him with Diogenes the Stoic, and Critolaüs the Peripatetic, as ambassador to Rome, B.C. 155. Carneades excelled in the vehement and rapid, Critolaüs in the correct and elegant, and Diogenes in the simple and modest, kind of eloquence. Carneades, in particular, attracted the attention of his new auditory by the subtlety of his reasoning and the fluency of his language. Before Galba and Cato the Censor, he harangued with great variety of thought and copiousness of diction in praise of justice. The next day, to establish his doctrine of the uncertainty of human knowledge, he undertook to refute all his former arguments. Many were captivated by his eloquence; but Cato, apprehensive lest the Roman youth should lose their military character in the pursuit of Grecian learning, persuaded the Senate to send back these philosophers, without delay, to their own schools.

Carneades obtained such high reputation at home that other philosophers, when they had dismissed their scholars, frequently came to hear him. It was the doctrine of the New Academy that the senses, the understanding, and the imagination frequently deceive us, and therefore can not be infallible judges of truth; but that, from the impression which we perceive to be produced on the mind by means of the senses, we infer appearances of truth or probabilities. He maintained that these do not always correspond to the real nature of things, and that there is no infallible method of determining when they are true or false, and consequently that they afford no certain criterion of truth. Nevertheless, with respect to the conduct of life, Carneades held that probable appearances are a sufficient guide, because it is unreasonable that some degree of credit should not be allowed to those witnesses who commonly give a true report. He maintained that all the knowledge the human mind is capable of attaining is not science, but opinion. He died in B.C. 129. See NEW ACADEMY.

Carnēus. See CARNEA.

Carni. A Keltic people, dwelling north of the Veneti, in the Alpes Carnicae. See ALPES.

Carnuntum. An ancient Keltic town in Upper Pannonia, on the Danube, east of Vindobona (Vienna), and subsequently a Roman municipium or a colony.

Carnūtes. A powerful people in the centre of Gaul, between the Liger and the Sequana; their capital was Genabum (Orléans).

Carpătes (also called ALPES BASTARNĪCAE). The modern Carpathian Mountains; the mountains separating Dacia from Sarmatia.

Carpăthus (Κάρπαθος). The modern Scarpanto; an island between Crete and Rhodes, in the sea named after it. Its chief town was Posidium.

Carpenters. See FABER.

Carpentum. A cart; also a rectangular two-wheeled carriage, enclosed, and with an arched or sloping cover overhead.

The carpentum was used to convey the Roman matrons in the public festal processions; and, as this was a high distinction, the privilege of riding in a carpentum on such occasions was allowed to particular women by special grant of the Senate. This was done on behalf of Agrippina, who availed herself of the privilege so far as even to enter the Capitol in her carpentum (Tac. *Ann.* xii. 42). A medal was struck (see illustration) to commemorate this decree of the Senate in her favour. When Claudius celebrated his triumph at Rome, he was followed by his empress, Messalina, in her carpentum (Suet. *Claud.* 17).

Carpentum. (Medal of Caligula.)

This carriage contained seats for two, and sometimes for three persons, besides the coachman (Liv. i. 34). It was commonly drawn by a pair of mules (*carpentum mulare*), but more rarely by oxen or horses, and sometimes by four horses like a *quadriga*. For grand occasions it was very richly adorned. Agrippina's carriage, as above represented, shows painting or carving on the panels, and the head is supported by Caryatides (q. v.) at the four corners. The convenience and stateliness of the carpentum were also assumed by magistrates, and by men of luxurious habits, or those who had a passion for driving. When Caligula instituted games and other solemnities in honour of his deceased mother, Agrippina, her carpentum went in the procession (Suet. *Calig.* 15).

Carpenta, or covered carts, were much used by the Britons, and by the Gauls, the Cimbri, the Allobroges, and other Northern nations (Flor. i. 18 *et al.*). These, together with the carts of the more common form, including baggage-wagons, appear to have been comprehended under the term *carri* or *carra*, which is the Keltic name with a Latin termination. The Gauls and Helvetii took a great multitude of them on their military expeditions; and, when they were encamped, arranged them in close order, so as to form extensive lines of circumvallation (Caes. *B. G.* i. 24, 26).

The agricultural writers use *carpentum* to denote either a common cart or a cart-load—e. g. *xxiv stercoris carpenta* (Pallad. x. 1).

Carpessus. See CARTEA.

Carpetāni. A powerful people in Hispania Tarraconensis, with a fertile territory on the rivers Anas and Tagus. Their capital was Toletum (Toledo).

Carpi or **Carpiāni.** A German people dwelling between the Carpathian Mountains and the Danube.

Carpia. See CARTEA.

Carpophŏra (Καρποφόρα). See DEMETER.

Carpou Dikē (καρποῦ δίκη). A civil action at Athens under the jurisdiction of the thesmothetae, instituted against a farmer for default in payment of rent (Meier, *Att. Proc.* p. 531). It was also adopted to enforce a judicial award when the unsuccessful litigant refused to surrender the land to his opponent, and might be used to determine the right to land, as the judgment would determine whether the plaintiff could claim rent of the defendant.

Carrae or **Carrhae** (Κάρραι). The Haran or Charran of the Scriptures; a city of Osrhoëné in Mesopotamia, where Crassus met his death after his defeat by the Parthians, B.C. 53. See CRASSUS.

Carrāgo. A kind of fortification, consisting of a great number of wagons placed round an army. It was employed by barbarous nations, as, for instance, the Scythians, Gauls, and Goths. See Veget. iii. 10.

Carriages. See BASTERNA; CARPENTUM; CARRUCA; CISIUM; CURRUS; ESSEDUM; REDA.

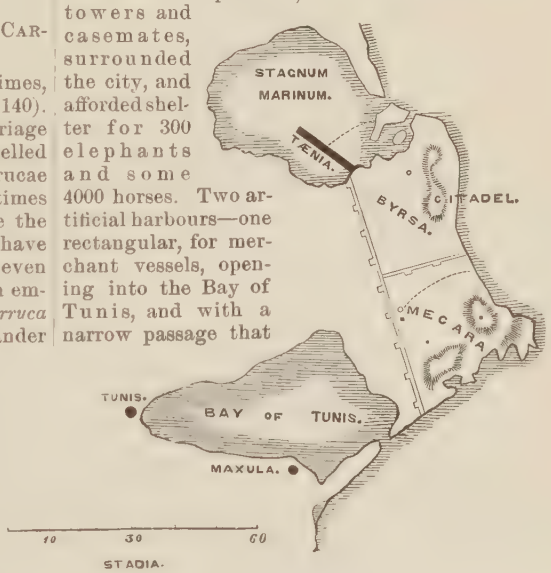
Carrūca. A carriage used in imperial times, and first mentioned by Pliny (*H. N.* xxxiii. § 140). Like the *reda* (q. v.), it was a travelling-carriage on four wheels. Nero is said to have travelled with 500 (Lamprid. *Heliog.* 31) or even 1000 carrucae (Suet. *Ner.* 30). These carriages were sometimes used in Rome by persons of distinction, like the carpentum (q. v.), in which case they appear to have been covered with plates of bronze, silver, and even gold, which were sometimes ornamented with embossed work. Martial speaks of an *aurea carruca* which cost the value of a farm; and Alexander Severus allowed senators at Rome to use carrucae and redae plated with silver (Lamprid. *Alex. Sev.* 43). These are the *carrucae argentatae*, the use of which within Rome spread in the course of the third century from the high officials to private persons. We have no representations of carriages in ancient works of art which can be safely said to be carrucae; but there are several illustrations of carriages ornamented with plates of metal. Carrucae were also used for carrying women, and were then, as well perhaps as in other cases, drawn by mules; whence Ulpian (*Dig.* 21. tit. 1, s. 38, § 8) speaks of *mulae carrucariae*.

Carrus. A two-wheeled cart like that shown in the annexed illustration. It was used in the Roman armies chiefly for the transportation of baggage and stores, and drawn by bullocks. See Caes. *B. G.* i. 3; Liv. x. 28.

Carrus. (Column of Trajan.)

Carseŏli. The modern Carsoli; a town of the Aequi, in Latium, colonized by the Romans.

Cart. See CARRUS; PLAUSTRUM.



Cartēa (also called CARTHAEA, CARPIA, CARPESSUS). More anciently Tartessus; a celebrated town and harbour in the south of Spain, at the head of the gulf of which Mount Calpé forms one side, founded by the Phœnicians, and colonized B.C. 170 by 4000 Roman soldiers.

Carthaea (Καρθαία). A town on the south side of the island of Ceos.

Carthāgo. A rich and powerful city on the northern coast of Africa, the capital of one of the greatest empires of antiquity. The Roman name Carthago and the Greek Καρχηδών are both corruptions of the native Punic Kirjath-Hadeshath, or "New Town," so called to distinguish it from Tyre, or possibly from the earlier settlement at Utica (q. v.)

Carthage was situated on the peninsula forming the northeast corner of modern Tunis, but topographers differ in their views of the exact locality. One school holds that the city occupied the north of the peninsula, while the other school places its site upon the southern portion. The most generally accepted view is the latter.

An important feature of the city was the hill with its citadel (Byrsa), surrounded by walls, and approached by a series of sixty steps. On the land side a triple wall, on which were mounted towers and casemates, surrounded the city, and afforded shelter for 300 elephants and some 4000 horses. Two artificial harbours—one rectangular, for merchant vessels, opening into the Bay of Tunis, and with a narrow passage that could be closed by chains, and a second circular harbour for ships of war—gave Carthage access to the sea. The second harbour (*Kothon*) contained in its centre an island with the official residence of the naval commander-in-chief. Although these harbours are now much diminished in size, their situation is still readily identified. Between the lagoon and the sea a strip of land, called by Roman writers the Taenia, is also plainly to be recognized to-day. Beyond the walls of the city was the beautiful suburb of Magalia or Megara (now Mara), and still farther a great necropolis of sepulchres strongly built and carefully preserved.

Plan of Tyrian Carthage.

The people of Carthage were members of the

great Semitic race, and belonged to the Phœnician branch, since Carthage was settled (probably about the middle of the ninth century B.C.) either by a colony directly sent from the Phœnician city of Tyre, or from the Tyrian offshoot, Utica. They were closely akin to the Canaanites who held Palestine before the Jewish invasion, and their language resembled the Hebrew. Because of their generally known Phœnician origin, the Romans called them Poeni or Punici, from *Φοίνικες*, signifying "the Red Men," or perhaps referring to the palms (*φοίνικες*), the symbol of the Syrian coast. The name *Sarranus*, given to Phœnician wares, serves also to connect the Poeni with their original Syrian home (Sil. Ital. ix. 319).

Carthage was the youngest of the Phœnician colonies in the northern territory of Africa, the earlier ones being Utica, Tunis, and Hadrumetum, in the district of Zeugitana, Hippo, and Leptis. Over all these, which were once independent of her, Carthage finally attained at once commercial and political supremacy. The history of this gradual rise to power is unknown, for no historical notices earlier than the sixth century B.C. are now available; and at that period Carthage was already the centre and the capital of a mighty empire, extending from the borders of Cyrené to the Straits of Gibraltar, and holding as provinces the Balearic Islands, Malta, Sardinia, and some settlements on the coast of Spain and Gaul. An immense revenue flowed into the coffers of the State from the rich grain lands of Emporia and Byzacium southeast of the city, and commerce extending over the known world brought wealth to the citizens. South of the African coast, the power of Carthage extended as far as Lake Tritonis (q. v.), which was connected by a canal with the Lesser Syrtis. Besides the Carthaginians of pure Phœnician descent, the aristocracy of the Empire, three other classes of subjects are mentioned. These are: (*a*) the Libyo-Phœnicians, a mixed race, the offspring of intermarriages between the Libyans and the original Phœnician settlers; (*b*) the Libyans, an entirely different race from the Phœnicians, and to some extent ignorant even of the Punic language; and (*c*) the Nomads, who lived on the borders of the Empire towards the south, and professed an allegiance of a doubtful sort to the government of Carthage. The Libyo-Phœnicians formed the agricultural class, tilling the fields in Zeugitana; but were regarded with a certain suspicious dislike by the Carthaginians of pure blood, much as the Mexican gentry of unmixed Spanish lineage regard their fellow-countrymen of mixed descent. The Libyans, who were the original owners of the soil, and had been dispossessed by the Phœnician colonists, formed the bulk of the Carthaginian army; but the harsh treatment which they received, and perhaps the remembrance of their former ownership of the land, made them discontented, and, at times, mutinous. The Nomads furnished Carthage with a fierce and warlike irregular cavalry; yet their loyalty was always uncertain, and, in fact, it was by their aid that Rome finally subdued the Carthaginian people.

The commercial and maritime enterprise of the people of Carthage was remarkable in antiquity. They were great navigators and explorers. One of their admirals, Hanno (q. v.), as early as the sixth century B.C., sailed through the Straits of Gibraltar out into the Atlantic, passed down the western coast of Africa, entered the Senegal (Chretes?), and having reached a bay supposed to be on the southern borders of Sierra Leone, returned only when compelled to do so by the difficulty of provisioning his ship. A Greek MS. in the library of Heidelberg University professes to be the translation of the account which Hanno placed among the archives kept in the great Temple of Molech at Carthage. (See AFRICA.) A little later, a second Carthaginian, one Himilco, is believed to have visited the northern coasts of Europe.

Coin of Carthage, with Winged Horse.

RELIGION.—The religion of the Carthaginians, like that of the other Canaanitish peoples, was a form of fire-worship. As with all Semites, the rites and practice of religion formed a part of the daily life, and profoundly influenced the development of their civilization. Their chief god, Molech, represented the destructive influence of the sun, and in his temples human victims were immolated with fire. These victims were usually prisoners taken in war, but not always, for when Agathocles besieged the city, we are told that 200 noble children belonging to native families were offered up to secure the favour of the god. The moon-goddess Tanith or Tanist (Tanis) appears to have been identical with Ashtaroth, Melkart with Heracles, and a sea-god whom the Greeks identified with Poseidon was probably the same as the Philistine deity, Dagon. Rites in honour of deified heroes were celebrated, while animals—e. g. the lion, bull, serpent, etc.—and such of the Greek divinities as the Carthaginians had heard of in Sicily also received special worship. There is no evidence that the priests formed a separate caste, confined to certain families. On the contrary, sacrifices appear to have been offered by the magistrates and military leaders. The inscriptions and bas-reliefs thus far discovered and studied afford no confirmation of the charges made by the Greek and Roman writers, that the Carthaginians were guilty of obscene and unnatural practices in the conduct of their worship; and it is probable that the statements of the Christian Fathers refer to Roman and not to Phœnician Carthage. The morality of the Carthaginians, in fact, appears to have been originally of even an ascetic character, as befitted an industrious and largely agricultural people (Aristot. *Oecon.* i. 5). The Phœnician theory of cosmogony was given by a native author, Sanchoniathon, born either at Tyre or Berytus in the tenth century B.C., who wrote in Phœnician a history in nine books, containing an account of the theology and antiquities of Phœnicia, and of the neighbouring states. This work was translated into Greek under Hadrian by Philo of Byblus, and of it some fragments have been preserved in the history of Eusebius of Caesarea. An interesting summary of the substance of these fragments is given in Davis's *Carthage*, pp. 199–205 (N. Y. 1861).

Government.—The form of government at Carthage, which Aristotle praises for its stability and for its success in securing the general happiness and prosperity of the people, was aristocratic in its constitution (Aristot. *Polit.* ii. 8). The principal magistrates (*suffetes*, Heb. *sophetim*) have been compared to both the Roman consuls and the Spartan kings. Their number, however, is not definitely known, nor the extent of their term of office. They were eligible for re-election. A Senate, elected by popular vote, participated in the government with the *suffetes*, and was filled largely from the ranks of the wealthy. There appears to have been a sort of referendum to the people when the *suffetes* and the Senate disagreed upon any course of action. There existed also, side by side with the regular governmental organization, a power which, like that of the Spartan ephors, gradually gained the real control of the State. This was the highest aristocracy, which elected bodies of commissions (pentarchies) so constituted that the outgoing members preserved their power for another year, and thus impressed upon the institution a consistent and symmetrical policy. These pentarchies elected a council of 104 members, who at last usurped the authority of the State; though Hannibal succeeded in checking their power, and in restoring to the people some real share in the government.

History.—The history of Carthage falls naturally into four periods: (1) from the foundation of the city to the beginning of the wars with Syracuse, B.C. 410; (2) to the beginning of the war with Rome, B.C. 265; (3) to the destruction of the city by the Romans, B.C. 146; (4) from the restoration of the city to its final destruction by the Arabs, A.D. 698.

The foreign conquests of Carthage were undertaken with the object of securing her commerce. Justin tells us of a king, Malchus (the Latin form of the royal title), who, after successes in Africa and Sicily, was defeated in Sardinia, and turned his arms against his country. He must have lived between B.C. 600 and 550. A more historical personage is his successor Mago (between B.C. 550 and 500), said to be the founder of the military power of the Carthaginians. His sons were Hasdrubal and Hamilcar, his grandsons Hannibal, Hasdrubal, and Sappho, sons of Hasdrubal, and Himilco, Hanno, and Gisco, sons of Hamilcar. By the energy of this family the Carthaginian Empire was established over Sardinia, which was not lost till after the First Punic War, over the Balearic Islands and part of Sicily, and over portions of Liguria and Gaul. There are, however, few events of which the chronology is certain. The first is the sea-fight between the Etruscans and Carthaginians on the one hand and the Phocæans of Aleria in Corsica on the other, which occurred in B.C. 536. The Phocæans, driven from Asia Minor by Harpagus in 564, had settled at Aleria or Alalia in Corsica, but engaged in piracy, which demanded the interference of the commercial naval powers. The Phocæans won the battle, but with such loss that they abandoned Corsica, and settled at Velia in Italy. Polybius has preserved three treaties between Carthage and Rome, the first of which belongs to the year B.C. 509, the second probably to the period between B.C. 480 and 410. Their object is to restrict Roman commerce in Punic waters, and it is noticeable that the second treaty prescribes stricter limits than the first, and testifies to a considerable superiority of Carthage over Rome. To the period of about B.C. 500 belong the expeditions of Hanno and Himilco—the one to found colonies on the west coast of Africa, which was probably explored as far as the mouths of the Senegal and Gambia, the other to obtain a knowledge of the Atlantic, which resulted in the discovery of Britain. But the most important event of the first period was the battle of Himera, fought between Hamilcar and Gelo of Syracuse, about the year B.C. 480. Terillus, tyrant of Himera, on the north coast of Sicily, driven out by Thero of Agrigentum, implored and obtained help from the Carthaginians. Thero was assisted by Gelo of Syracuse. An account of this battle is given by Herodotus. The forces of Hamilcar consisted of 3000 ships and 300,000 men — Phœnicians, Libyans, Iberians, Ligurians, Helysci (perhaps Volscians), Sardinians, and Corsicans. He was defeated with great loss.

Carthaginian Warrior. (Cabinet de France.)

For seventy years the Carthaginians made no further effort for the subjugation of Sicily. This battle is one of the most important in ancient history. The expedition in which it terminated was undertaken in conjunction with that of the Persians against the Greeks of Attica. The nearly simultaneous defeats at Himera and Salamis decided the question whether Semitic or Aryan nations should hold the empire of the West. The only other events of any importance in this period of which we have an account are the more complete subjugation of the African dependencies by the family of Mago, and the settlement of the disputed boundary between Carthage and Cyrené.

The second period of 140 years (B.C. 410–269) is occupied with the attempts of Carthage to reduce Sicily to the condition of a subject province. At this time her settlements were confined to the

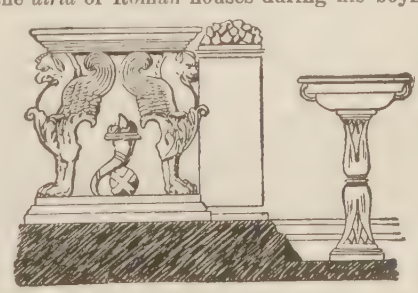
western corner of the island, while on the eastern coast Syracuse undertook the defence of Grecian nationality, and waged the battle of Aryans against Semites, until both combatants fell before the supremacy of Rome. The repulse of the Athenians from Syracuse, and the same rivalry between Egesta and Selinus which had invited Athenian interference in the affairs of the island, induced the Carthaginians to renew an enterprise which had been interrupted for seventy years. Hannibal, son of Giso, stormed Selinus, and avenged at Himera the death of his grandfather. Overtures of peace were rejected, and preparations made for a more vigorous attack. In 406, Hannibal and Himilco destroyed the great city of Agrigentum, overthrew the mighty columns of her temples, and covered a flourishing site with a mass of ruins. Hannibal died before Agrigentum; Himilco proceeded to attack Gela. Syracuse was now governed by Dionysius, who from an obscure position had raised himself to the rank of despot. In 405, a treaty made by Carthage secured to her the possession of her conquests, and to Dionysius a firmer position on the throne. But he no sooner felt himself secure than he hastened to drive the enemy from the island. War broke out in 398, all Sicily fell before the Punic arms, and Dionysius, driven by Himilco to take refuge within the walls of Syracuse, was there besieged. Pestilence came to his assistance, and the Carthaginians were defeated; 150,000 Punic corpses lay unburied on Grecian soil; and Himilco, unable to bear the contempt of his fellow-citizens, starved himself to death. The Libyans rose in rebellion, and Carthage was threatened by an army of 200,000 men. The attempt of Mago, between 396 and 392, to procure a more favourable result had little effect. Ten years afterwards he led another expedition. The defeat of Cabala nearly lost the possession of the whole of Sicily, but the brilliant victory of Corsica restored the balance, and the Halycus was accepted as the boundary between the two peoples. Fourteen years of peace ensued. In 368, the misfortunes of Carthage encouraged Dionysius to a new but unsuccessful effort to complete the purpose of his life, but his death put an end to a renewal of the attempt, and his son and successor made peace with the Carthaginians. The weak government of Dionysius II. was favourable to the extension of Carthaginian Empire in Sicily; but they found an antagonist of different mettle in the Corinthian Timoleon, who, after liberating Syracuse from its tyrants, made war against Carthage for six years (B.C. 345–340). The defeat of the Crimissus (B.C. 340) was most crushing. The Holy Legion, composed of 2500 men of the best families of Carthage, was destroyed, and the host of mercenaries cut to pieces. Peace restrained the Carthaginians within their old boundary of the Halycus; the Greek cities were declared free; and Carthage promised never again to support a despot in Syracuse. The next thirty years contain little of note except traces of friendly intercourse between Carthage and Rome, and a record of assistance given to the Tyrians when besieged by Alexander the Great. She, however, sent ambassadors to Babylon to congratulate the conqueror on his return from Asia. Agathocles (q. v.) was the first to discover that the secular enemies of his countrymen were vulnerable in Africa. After becoming despot of Syracuse, and establishing his authority over the great towns in Sicily, he found that he had to reckon with the Carthaginians. Unsuccessful in the island, he transferred his forces to the mainland in 310, reduced Carthage to the last extremities, and would probably have obtained more signal success had not the revolt of Agrigentum called him home. Peace made in 306 continued till the death of Agathocles in 289. His loss encouraged the extension of Punic dominion, and at last obliged the Syracusans to call in the assistance of Pyrrhus, the chivalrous king of Epirus. He left Italy in 277, and in a short time drove the Carthaginians from the west and besieged them in the distant fortress of Lilybaeum. But his allies were untrue to him. Carthage and Rome were leagued against him. He left Sicily in 276, and his departure from Italy in the following year left the Carthaginians to stand in sharp antagonism to the Latin branch of the Aryan stock.

The third period of Carthaginian history extends from B.C. 264 to 146—from the outbreak of the first war with Rome to the final annihilation of the city by the conquerors. This is not the place for a detailed account of the Punic wars, which occupy a large space in every Roman history. We must content ourselves with a hasty summary. The first war, which lasted from B.C. 264 to 241, was a contest for the possession of Sicily. The Carthaginians in undertaking it felt secure of their mastery over the sea. Their ambassadors told the Romans that they could not even wash their hands in the sea without permission of the Carthaginians. Montesquieu considers it one of the chief causes of the rise of Roman greatness that they were careful to borrow from their enemies whatever was calculated to improve their own efficiency. The Romans not only built a fleet, but developed a novelty of tactics which precisely secured the object which they had in view. They were encouraged to further exertion by the victories of B.C. 260 and B.C. 256, and were schooled to caution by the defeat of the following year. The war was practically ended by the brilliant success of Catulus in B.C. 242, and Sicily was lost to the Carthaginians. The next three years and a half (241–237) were occupied by a civil war, which shows us on what insecure foundations the power of Carthage was based. The large army of mercenaries which had been employed against Rome was incautiously admitted into the city. Under pretence of demanding pay they rose against their employers, and were joined by the Libyans and Numidians, who cultivated the surrounding lands in unwilling subjection. The insurrection was quelled with difficulty, but a similar revolution in Sardinia was more successful—700 Carthaginians were barbarously murdered, and the possession of the island passed to the Romans. All we know of the twenty years which elapsed before the beginning of the second war with Rome is confined to the successes of Hamilcar and his family in Spain. In B.C. 218, Hannibal, who had sworn as a boy eternal enmity to the Romans, began the enterprise to which he devoted his life. His object was not so much to conquer Italian soil or Italian cities as to break up the confederacy upon which the greatness of Rome depended, and to undo the fabric of its empire stone by stone. He sought, therefore, on the one hand to rouse Greeks and Orientals to a joint attack upon the

common foe, and on the other to sow dissension among the Latin, Sabellian, and Oscan tribes, and to urge them to reduce Rome to that position of comparative inferiority which she had occupied many centuries before. Both these plans failed. Hannibal was badly supported from home; he found that to combine in unity the shifting policy of the East was to weave a rope of sand; and he discovered, above all, that Roman supremacy was established on a basis of complete security. Far different, in fact, was her position, seated among kindred peoples bound to her by affinities of blood and language as well as interest, governed by the wise policy of a patriotic Senate, and restrained by the overpowering force of devoted legions, from that of the city of merchants, torn by factions, surrounded by alien and even hostile tribes, defended by mercenaries, and swayed by interest and passion. The defeat of Hasdrubal at the Metaurus in B.C. 207 crushed the last hope of the invader; Spain was recovered by the genius of Scipio; and in B.C. 203, Hannibal, not unwillingly, obeyed the order to embark from Italy to retard the ruin of his country which it was too late to save. The battle of Zama, in 202, put an end to the war in the following year. It was due to the magnanimity of Scipio and Hannibal that peace was concluded on such terms that, while Rome had no longer to fear Carthage as a rival, she was content to recognize her existence as a commercial community.

For the next six years, Hannibal governed the city which he had not been able to preserve. He reformed the constitution in a democratical sense, and paid with surprising facility the enormous indemnity demanded by Rome. He was engaged in planning a combination against Rome with Antiochus of Syria when he was driven from power, and forced to take refuge in the East, where shortly afterwards he fell a victim to Roman hatred.

The interval between B.C. 183 and 150 contains little besides the history of internal dissensions—struggles between the Roman party, the democratical party, and the party of Masinissa, which tore the city in sunder by their quarrels. The so-called Third Punic War (B.C. 149–146) is one of the saddest events in all history, and the greatest blot upon the reputation of the Romans. Jealousy of their old antagonists had been shown by constant acts of injustice, and at last the sight of the prosperity and riches of the city impressed upon the narrow mind of Cato the conviction that Carthage must be blotted out. A pretext for war was wantonly invented. The anxieties of the Carthaginians to secure peace at any sacrifice was made the instrument of their destruction. When they saw that their ruin was resolved upon, and that compromise was hopeless, they defended themselves with an energy which would have saved them at an earlier period. The sentence of the Roman Senate was ruthlessly carried out. The city burned for seventeen days, and concealed its very site under a heap of ashes. The plough was passed over it, and the ground was cursed forever. In the words of Mommsen, "where the industrious Phœnicians bustled and trafficked for five hundred years, Roman slaves henceforth pastured the herds of their distant masters."



The history of Roman Carthage, which constitutes the fourth period, can be given in a few words. In B.C. 122, Gaius Gracchus led 6000 colonists to Africa, and founded the city of Iunonia. The colony did not prosper. In B.C. 29, a second colony (Colonia Carthago) was sent out by Augustus in fulfilment of a design of Iulius Caesar. This became so prosperous that Herodian declares it to have disputed with Alexandria the second place in the Empire. In the middle of the fifth century, it became, under Genseric, the capital of the Vandal kingdom (439), and in A.D. 533 it was stormed by Belisarius. In A.D. 698, it was entirely destroyed by the general of the calif Abd-ul-Melek.

For centuries after this final destruction, the site of Carthage was a quarry for both the Africans and for the merchants of Europe. Genoese vessels, trading with Tunis in the Middle Ages, seldom returned without a cargo of Carthaginian marble. The cathedral of Pisa is even said to have been built out of the ruins of Carthage. Recent times, also, have aided in the work of devastation, since the marble blocks of the ancient walls have been within the last few years in part destroyed by the operations of the Tunisian railway. The aqueduct, over fifty miles in length, is the only remnant of the greatness of the city's past that still preserves a real impressiveness.

BIBLIOGRAPHY.—The reader is referred to the following works: Mer, *Mémoire sur le Périple d'Hannon* (Paris, 1888); Böttger, *Geschichte der Carthagen* (Berlin, 1827); Davis, *Carthage and her Remains* (N. Y. 1861); Hennebert, *Histoire d'Annibal* (Paris, 1870–78); Bosworth Smith, *Carthage and the Carthaginians* (London, 1879); Perrot and Chipiez, *History of Art in Phœnicia and her Dependencies* (Eng. trans. by Armstrong, 1885); Church, *Carthage, or the Empire of Africa* (London, 1886); and the sketch in Mommsen, *Hist. of Rome*, vol. ii. The famous novel of Gustave Flaubert, *Salammbô*, gives a vivid picture of ancient Carthage, and is both learned and brilliant. See also the articles DIDO; HANNIBAL; PUNIC WARS; and for a notice of the Carthaginian language, PHŒNICIA.

Carthāgo Nova (*Καρχηδών, ἡ Νέα*). The modern Carthagena; an important town on the east coast of Hispania Tarraconensis, founded by the Carthaginians under Hasdrubal, B.C. 243, and subsequently conquered and colonized by the Romans. It is situated on a promontory running out into the sea, and possesses one of the finest harbours in the world. At the entrance was a small island known as Scombraria, famous for the fish-sauce made from the *scombri* or mackerel caught here. See GARUM.

Cartibŭlum. A particular kind of table described by Varro (*L. L.* v. 125) as frequently seen in the *atria* of Roman houses during his boyhood

Cartibulum. (From Pompeii.)

(about B.C. 100). Both the name and the thing were apparently becoming obsolete in his time. It was an oblong slab of marble supported on a single bracket or console (*una columella*); it stood near the impluvium, and bronze vessels were placed upon it. Such a table has been discovered in more than one house at Pompeii, with a fountain behind it shaped like a cippus or square pillar, and flowing into the impluvium.

Carus, M. AURELIUS. A Roman emperor, who succeeded Probus. He was first appointed, by the latter, prætorian prefect, and after his death was chosen by the army to be his successor, A.D. 282. Carus created his two sons, Carinus and Numerianus, Caesars, as soon as he was elevated to the Empire, and, some time after, gave them each the title of Augustus. On the news of the death of Probus, the barbarians put themselves in motion, and Carus, sending his son Carinus into Gaul, departed with Numerianus for Illyricum, in order to oppose the Sarmatae, who threatened Thrace and Italy. He slew 16,000, and made 20,000 prisoners. Proceeding after this against the Persians, he made himself master of Mesopotamia, and of the cities of Seleucia and Ctesiphon, and took in consequence the surnames of Persicus and Parthicus. He died, however, in the midst of his successes, A.D. 283. (See APER.) His whole reign was one of not more than sixteen or seventeen months. Carus was deified after his death. According to Vopiscus, by whom his life was written, he held a middle rank between good and bad princes.

Carventum. A town of the Volsci, to which the Carventana Arx mentioned by Livy (iv. 53, 9) belonged, between Signia and the sources of the Trerus.

Carvilius Maxĭmus. (1) SPURIUS, twice consul, B.C. 293 and 273, both times with L. Papirius Cursor. In their first consulship they gained brilliant victories over the Samnites, and in their second they brought the Samnite War to a close. (2) SPURIUS, son of the preceding, twice consul, B.C. 234 and 228, is said to have been the first person at Rome who divorced his wife. See Valerius Maximus, ii. 1, 4; Aul. Gell. iv. 3; xvii. 21.

Caryae (Καρύαι). A town in Laconia near the borders of Arcadia, originally belonged to the territory of Tegea in Arcadia. Female figures in architecture that support burdens are said to have been called CARYATĬDES in token of the abject slavery to which the women of Caryae were reduced by the Greeks, as a punishment for joining the Persians at the invasion of Greece (Vitruv. i. 1, 5).

Caryatid. (From the Erechtheum, Athens.)

Caryanda (Καρύανδα). A city of Caria, on a little island, once probably united with the mainland. It was the birthplace of the geographer Scylax.

Caryatĭdes (καρυάτιδες). See CARYAE.

Carystus (Κάρυστος). A town on the southern coast of Euboea, founded by Dryopes, celebrated for its marble quarries and for the mineral known as *asbestos* (q. v.).

Casa. (1) A cottage. See DOMUS. (2) A bower or rustic arbour.

Casa Romŭli. The thatched cottage of Romulus on the Capitoline Hill at Rome, for which see the article DOMUS, p. 536.

Casaubon, ISAAC. A great classical scholar of the sixteenth century, born at Geneva, February 15th, 1559. When only twenty-four years of age, he was appointed professor of Greek at Geneva, from which town he was called in 1596 to a like chair at Montpellier. In 1598, he became royal librarian at Paris; but on the death of Henry IV. this position became insecure by reason of his Protestantism, and in 1610 he removed to England, where he was received with great favour by James I., who made him prebendary of Canterbury and Westminster. Casaubon was bitterly attacked by many as having sold his conscience for preferment, and thus becoming the hired advocate of James. In 1614, he wrote his *Exercitationes contra Baronium*, in criticism of the *Annales Ecclesiastici* of Cardinal Baronius.

Casaubon was a scholar of great application, retentiveness, and candour; indefatigable in research, and with an excellent faculty of illustration. He had by unwearied labour acquired a vast fund of information, and his diffuse and exhaustive commentaries show how richly stored a mind he possessed. He represents the non-Ciceronian school of sixteenth-century Latinity to which Scaliger and Lipsius also belonged, these three being known as the "Triumvirate" by their contemporaries. The works of Casaubon comprise the treatises *De Satirica Graeca Poësi et Romanorum Satira* (1605); *De Libertate Ecclesiastica* (1607); the *Exercitationes* already mentioned; and annotated editions of Strabo (1587); Dionysius Hal. (1588); Aristotle (1590); Pliny's Letters (1591); Theophrastus (1592); Diogenes Laërtius (1593); Suetonius (1595); Theocritus (1596); Athenaeus (1598–1600); the Hist. Augusta (1603); Persius (1605); Polybius (1609); and the *edit. prin.* of Polyaenus. Of these the most ambitious work is the commentary upon Athenaeus, in the preparation of which he spent ten years. Perhaps the most valuable is the Persius, which Scaliger enthusiastically styled "divine." Casaubon died in London, July 1st, 1614. His life has been written by Mark Pattison (Oxford, 1875), of which a second edition, edited by Prof. Nettleship, appeared in 1892.

Casca, P. SERVILIUS. A tribune of the plebs, B.C. 44, and one of Caesar's assassins.

Casci. See ABORIGINES.

Caseus (τυρός). Cheese, made by the Greeks and Romans of the milk of cows, sheep, and goats, and eaten either like cream cheese fresh, or dried and hardened. It was pressed into ornamental forms by moulds of boxwood. See Varro, *R. R.* ii. 11; Colum. vii. 8, 7; and especially Pliny, *H. N.* xi. § 97.

Casilīnum. A town in Campania on the Vulturnus, and on the same site as the modern Capua, celebrated for its heroic defence against Hannibal, B.C. 216.

Casĭna. A comedy of Plautus, which has come down to us in the form of an abridgment. It is based upon the Κληρούμενοι of Diphilus, with the addition of obscene and vulgar passages to suit the Roman taste. A good separate edition is that of Geppert (Berlin, 1866), and that of Schöll (Leipzig, 1890).

Casīnum. The modern S. Germano; a town in Latium on the river Casinus. Its citadel occupied the same site as the celebrated convent Monte Cassino.

Casiōtis. The district containing Casius (q. v.).

Casius. (1) The modern Ras Kasaroun; a mountain on the coast of Egypt, east of Pelusium, with a temple of Iupiter on its summit. Here also was the grave of Pompey. (2) Jebel Okrah; a mountain on the coast of Syria, south of Antioch and the Orontes.

Casmēna (Κασμένη) or **Casmēnae** (Κασμέναι). A town in Sicily, founded by Syracuse about B.C. 643.

Casperia or **Casperŭla.** A town of the Sabines on the river Himella.

Caspiae Portae or **Pylae** (Κάσπιαι Πύλαι). The Caspian Gates; a name given to several passes through the mountains round the Caspian. The principal of these was near the ancient Rhagae or Arsacia. Being a noted and central point, distances were reckoned from it (Polyb. v. 44, 5).

Caspii (Κάσπιοι). The name of certain Scythian tribes around the Caspian Sea.

Caspii Montes (τὸ Κάσπιον ὄρος). The modern Elburz Mountains; a name applied generally to the whole range of mountains which surround the Caspian Sea on the south and southwest, at the distance of from fifteen to thirty miles from its shore, and more especially to that part of this range south of the Caspian, in which was the pass called Caspiae Pylae (q. v.).

Caspīri (Κάσπειροι) or **Caspiraei** (Κασπιραῖοι). A people of India, whose exact position is doubtful; they are generally placed in Cashmere and Nepaul.

Caspium Mare (τὸ Κάσπιον πέλαγος). The modern Caspian Sea, also called HYRCANIUM, ALBĀNUM, and SCYTHĪCUM—names all derived from the people who lived on its shores; a great salt-water lake in Asia. Probably at some remote period the Caspian was united both with the Sea of Aral and with the Arctic Ocean. Both lakes have their surface considerably below that of the Euxine or Black Sea, the Caspian nearly 350 feet, and the Aral about 200 feet, and both are still sinking by evaporation. The whole of the neighbouring country indicates that this process has been going on for centuries past. Besides a number of smaller streams, two great rivers flow into the Caspian: the Rha (Volga) on the north, and the united Cyrus and Araxes (Kour) on the west; but it loses more by evaporation than it receives from these rivers.

Cassander (Κάσσανδρος). The son of Alexander's general, Antipater. His father, on his death-bed (B.C. 319), appointed Polysperchon regent, and conferred upon Cassander only the secondary dignity of chiliarch. Being dissatisfied with this arrangement, Cassander strengthened himself in various ways that he might carry on war with Polysperchon. First, he formed an alliance with Ptolemy and Antigonus, and next defeated Olympias and put her to death. Afterwards he joined Seleucus, Ptolemy, and Lysimachus in their war against Antigonus. This war was, on the whole, unfavourable to Cassander. In 306, Cassander took the title of king, when it was assumed by Antigonus, Lysimachus, and Ptolemy. But it was not until the year 301 that the decisive battle of Ipsus secured Cassander the possession of Macedonia and Greece. Cassander died of dropsy in 297, and was succeeded by his son Philip.

Cassandra (Κασσάνδρα). The daughter of Priam and Hecuba. She was beloved by Apollo, and promised to listen to his addresses, provided he would grant her the knowledge of futurity. This knowledge she obtained, but she was regardless of her promise; and Apollo, in revenge, determined that no credit should ever be attached to her predictions. Hence her warnings respecting the downfall of Troy, and the subsequent misfortunes of the

Cassandra.

race, were disregarded by her countrymen. When Troy was taken, she fled for shelter to the Temple of Athenê, but was exposed there to the brutality of Aiax, the son of Oïleus. In the division of the spoils she fell to the share of Agamemnon, and was assassinated with him on his return to Mycenae. (See AGAMEMNON.) Cassandra was called Priameïs from her father; and Alexandra, as the sister of Alexander or Paris.

Cassandrēa (Κασσάνδρεια). See POTIDAEA.

Cassia Lex. See LEX.

Cassiāni. See IURISPRUDENTIA.

Cassiodōrus or **Cassiodorius,** FL. MAGNUS AURELIUS. A distinguished statesman, and one of the few men of learning at the downfall of the Western Empire, was born about A.D. 480, and died about A.D. 575. He enjoyed the confidence of Theodoric the Great and his successors, and conducted for a long series of years the government of the Ostrogothic kingdom. Several of his works, besides fragments of his orations, are still extant: (1) a history of the world from Adam to A.D. 519 (*Chronica*), rather meagre in substance; (2) a history of the Goths (*Historia Gothica*) to 526, of which we have only the version of Iordanis (*De Origine Actibusque Getarum*), an abridgment; (3) a collection of official documents (*Variarum Libri*

xii.); (4) a number of theological and semi-theological works, among which are the *Institutiones Divinarum et Saecularium Litterarum*, a verbose commentary on the Psalms; besides a treatise *De Anima;* and (5) grammatical works, of which only one, *De Orthographia*, deserves mention. Late in life, Cassiodorus entered the Benedictine Order, and in 540 retired to a monastery in Calabria which he had himself founded (A.D. 529). His teaching led the monks of that order to prize ancient literature, so that the Benedictines afterwards performed a priceless service to classical scholarship in preserving MSS. of authors who would in all probability have otherwise been lost to us. On this point, see the work of Olleris, *Cassiodore, Conservateur des Livres de l'Antiquité Latine* (Paris, 1841).

The *editio princeps* of all the extant works of Cassiodorus is that of Fornerius (Paris, 1579), reprinted in Migne's *Patrologia*. There is a good English translation of a part of the *Variarum*, by Hodgkin, *The Letters of Cassiodorus* (London, 1886), with an Introduction. See IORDANIS.

Cassiopēa (Κασσιέπεια) or **Cassiŏpé** (Κασσιόπη). The wife of Cepheus, in Aethiopia, and mother of Andromeda, whose beauty she extolled above that of the Nereids. (See ANDROMEDA.) She was afterwards placed among the stars.

Cassis. A helmet. See GALEA.

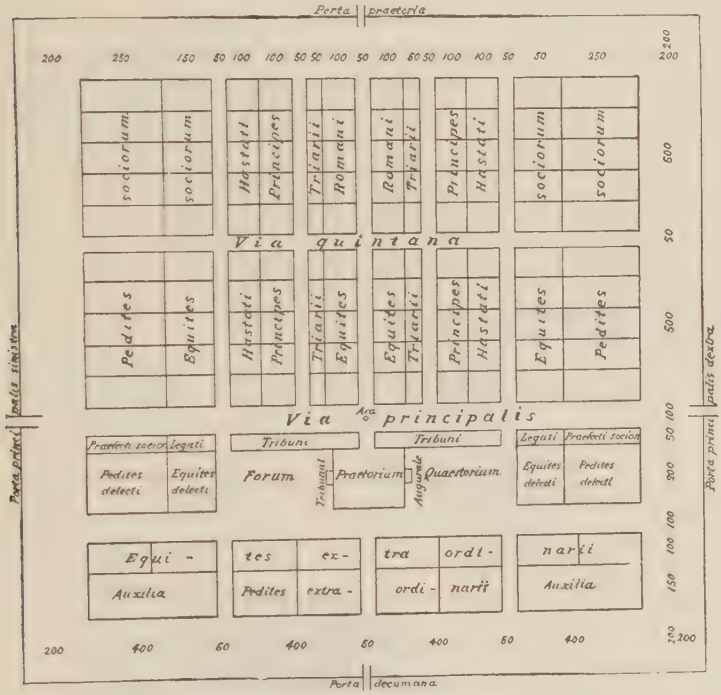
Cassiterĭdes (Κασσιτερίδες). Islands in the Western Ocean, where tin was found, supposed to be the Scilly Islands of the moderns, together with a part of Cornwall. The term Cassiterides is derived from the Greek *κασσίτερος*, "tin." The tin was obtained by the islanders from the mainland, and afterwards sold to strangers. Solinus (ch. 22) mentions these islands under the name of Silurum Insulae, and Sulpicius Severus (ii. 51), under that of Sylina Insula.

Cassius. (1) SPURIUS CASSIUS VISCELLĪNUS. A Roman distinguished for having carried through the first agrarian law at Rome, by which he gained the enmity of his fellow-patricians, who accused him of seeking regal power and put him to death. He held the consulship in B.C. 502, 493, and 486. From his time, the Cassii are plebeians, having probably abandoned the patriciate. See AGRARIAE LEGES. (2) GAIUS CASSIUS LONGĪNUS, one of the conspirators against Iulius Caesar. Even when a boy he is said to have been remarkable for his pride and the violence of his temper, if we may believe the anecdotes recorded of him by Plutarch (*Brut.* 9) and Valerius Maximus (iii. 1). He accompanied Crassus into Parthia as his quaestor, and distinguished himself, after the death of his general, by conducting the wreck of the Roman army back to Syria in safety. At the beginning of the Civil War he was one of the tribunes of the people. We find him after this commanding the Syrian squadron in Pompey's fleet, and infesting the coasts of Sicily. A short time before the battle of Pharsalia he had burned the entire fleet of the enemy, amounting to thirty-five ships, in the harbour of Messana. The news of Pompey's defeat, however, deterred him from pursuing his advantages; and, resigning the contest, he submitted to Caesar in Asia Minor, when the latter was returning from Egypt into Italy. Cicero, however, asserts that at this very time Cassius had intended to assassinate the man whose clemency he was willing to solicit, had not an accident prevented the accomplishment of his purpose (*Philipp.* ii. 11). He was not only spared by Caesar, but was appointed by him one of his lieutenants, a favour bestowed by magistrates upon their friends, in order to invest them with a public character, and thus enable them to reside or to travel in the provinces with greater comfort and dignity. Even during the last campaign of Caesar in Spain, Cassius wrote to Cicero, saying that he was anxious that Caesar should be victorious, for that he preferred an old and merciful master to a new and cruel one (Cic. *Ep. ad Fam.* xv. 19). He also, together with Brutus, was appointed one of the praetors for the year 709, at a moment in which he was entirely discontented with Caesar's government; and he is said to have been the person by whose intrigues the first elements of the conspiracy were formed. Cassius had married Iunia, the sister of Brutus, and it was partly through her means that he made his approaches, when seeking to gain over her brother and induce him to join in the plot. After the assassination of Caesar, Cassius, together with Brutus, raised an army, and was met by Octavius and Antony at Philippi. The wing which Cassius commanded being defeated, he imagined that all was lost, and killed himself, B.C. 42. Brutus gave him an honourable burial, and called him, with tears, the last of the Romans. (3) PARMENSIS, so called from his having been born at Parma in Italy, was a Latin poet of considerable talent. He sided with Brutus and Cassius in the Civil War, and obtained the office of military tribune. After the defeat of the republican forces he retired to Athens, and was put to death by Q. Varius, who had been sent for that purpose by Octavianus. He must not be confounded with Cassius the Etrurian, who appears to have been a very rapid and poor writer. (4) HEMĪNA, an early annalist of Rome, who flourished about B.C. 145. (5) A Roman lawyer, who reduced to a scientific system the legal principles set forth by Ateius Capito. His school is called Cassiani. (6) A Roman orator, distinguished for his eloquence, and fond, at the same time, of indulging in satirical composition. He was exiled by Augustus to the island of Seriphus, where he ended his days in wretchedness. His full name was TITUS CASSIUS SEVERUS. (7) CASSIUS LONGĪNUS. See LONGINUS. (8) CASSIUS FELIX. A Greek physician, who lived in the reign of Tiberius and wrote a treatise with the title Ἰατρικαὶ Ἀπορίαι καὶ Προβλήματα Φυσικά. It is printed in Ideler's *Physici et Medici Graeci Minores* (Berlin, 1841). (9) DION. See DION.

Cassivelaunus. A British chief, ruled over the country north of the Tamesis (Thames), and was intrusted by the Britons with the supreme command on Caesar's second invasion of Britain, B.C. 54. He was defeated by Caesar, and was obliged to sue for peace. Cf. Caes. *B. G.* v. 11, 18.

Castalia (Κασταλία). A celebrated fountain on Mount Parnassus, in which the Pythia was accustomed to bathe; sacred to Apollo and the Muses, who were hence called Castalides.

Castellāni Cista. See CISTA CASTELLANIANA.



Castellum. The diminutive of *castrum*, and denoting (1) a small fortress, or (2) a small town containing a garrison (Curt. v. 3).

Castellum Aquae. A reservoir. See AQUAE DUCTUS.

Casthanaea (Καστθαναία). A town of Thessaly, on the coast of Magnesia, northwest of the promontory Sepias. It is noticed by Herodotus in his account of the terrible storm experienced by the fleet of Xerxes off this coast (vii. 183).

Castor (Κάστωρ). Brother of Pollux. See DIOSCURI.

Castra. (1) A Roman camp, fortified with a rampart and a ditch, outside of which a Roman army never spent a single night. It was marked out on a place selected for the purpose, generally upon the spur of a hill. The same plan was always observed, and the quarters were indicated by coloured flags and lances, so that the divisions of the army, as they came in, could find their places at once. In the middle of the second century B.C., according to the account of Polybius (vi. 27), the plan of a camp for a consular army of two legions, with the proper contingent of Italian allies and its auxiliary troops, was as follows (see plan): The

Plan of a Roman Camp. (After Polybius.)

camp was square, its front being on the side farthest from the enemy. It had two main streets through it. (*a*) The *via principalis*, 100 feet wide, which divided it into a front part amounting to about two-thirds of the whole, and a back part turned towards the enemy. This road ended at two gates: the *porta principalis dextra* and the *porta principalis sinistra*. (*b*) The *via praetoria*, which cut the *via principalis* at right angles, and divided the whole length of the camp into two parts. This road was 50 feet in width, and ended in two gates: the *porta decumana* in front and the *porta praetoria* on the side opening towards the enemy. In the front part were encamped the two legions, with their allied contingents. They lay in three double rows of tents on each side of the *via praetoria*, which made a right angle with the *via principalis*. Its whole length was divided by streets 50 feet in width, while across it, from one lateral rampart to the other, ran the *via quintana*. The front side of the rows of tents was turned towards the intervening streets. Starting from the *via praetoria*, the first two lines of tents on each side contained the cavalry and infantry of one legion each, while the third row, lying nearest to the rampart, contained the cavalry and infantry of the allied contingents. In the hinder part of the camp, directly upon the *via principalis*, and on both sides of the *via praetoria*, were the tents of the twelve military tribunes, opposite the four ranks of the legions. On both sides were the tents of the *praefecti* of the allied contingents, placed in the same way opposite those of the troops under their command. Then followed the headquarters, or *praetorium*, a space 200 feet square, intersected by the *via praetoria*. In this was the general's tent (*tabernaculum*); in front was the altar on which the general sacrificed, on the left the *augurale* for taking the auspices, and on the right the *tribunal*. This was a bank of earth covered with turf, on which the general took his stand when addressing the troops (see ADLOCUTIO) or administering justice. On the right of the *praetorium* was the *quaestorium*, containing the quarters of the paymasters and the train of artillery. On the left was the *forum*, a meeting-place for the soldiers. Between these spaces and the lateral ramparts were the tents of the select troops who composed the body-guard of the general. Those of the cavalry had their front turned inwards, while those of the infantry were turned towards the wall. The tents of the picked allied troops occupied the hinder part of the camp, which was bounded by a cross-road 100 feet in breadth. The tents of the cavalry looked inwards, those of the infantry towards the rampart. The auxiliary troops were posted at the two angles of this space. The rampart was divided from the tents by an open space 200 feet in width. This was specially intended to facilitate the march of the troops at their entrance and exit.

The construction of the fortifications always began before the general's tent was pitched. The legionaries constructed the rampart and ditch in front and rear, while the allies did the same on either side. The stakes required for the formation of an *abattis* on the outer side of the wall were carried by the soldiers themselves on the march. The whole work was carried on under arms. The watches (*excubiae* and *vigiliae*) were kept with great strictness both by day and night. The *vigiliae*, or night-watches, were relieved four

times, the trumpet sounding on each occasion. The posts of each night-watch were inspected by four Roman *equites*. The password for the night was given by the general. Each gate was guarded by outposts of infantry and cavalry, the light-armed troops (*velites*) being also distributed as sentries along the ramparts. When the camp was to break up, three signals were given; at the first, the tents were taken down and packed up; at the second, they were put upon beasts of burden and in wagons; and at the third, the army began its march.

After the time of Polybius the Roman military system underwent many changes, which involved alterations in the arrangements of the camp, but we have no trustworthy information on this subject in detail until the beginning of the second century A.D. The treatise of Hyginus (q. v.) on castrametation gives the following statements as to the practice of his time. The ordinary form of a camp was that of a rectangle, the length of which was about a third part greater than the breadth. In former times the legions were posted inside the camp; but now, being regarded as the most trustworthy troops, they were encamped along the whole line of ramparts, the width of which was now limited to 60 feet. They were separated from the interior of the camp by a road 30 feet wide (*via sagularis*), running parallel to the line of ramparts. The interior was now divided, not into two, but into three main sections. The midmost of these lay between the *via principalis*, which was 60, and the *via quintana*, which was 40 feet wide. It was occupied by the *praetorium* and the troops of the guard, and was called the wing of the *praetorium* (*latera praetorii*). The auxiliary troops were stationed in what was now the front part, or *praetentura*, between the *via principalis* and the *porta praetoria*, and the rear, or *retentura*, between the *via quintana* and the *porta decumana*. The *via praetoria*, which was also 60 feet wide, led only from the *praetorium* and the *forum* in front of it to the *porta praetoria*, as at this time the *quaestorium* was situated between the *porta decumana* and the *praetorium*. The general superintendence of the arrangements was, during the imperial period, in the hands of the *praefectus castrorum*. See PRAEFECTUS.

All the important literature on the subject of camps will be found in the work of Marquardt and Mommsen, v. 390–408.

(2) CASTRA PRAETORIĀNA. The permanent encampment on the outskirts of Rome where the Praetorian Guard was stationed (Suet. *Claud.* 21).

(3) CASTRA NAVALIA. A line of fortifications drawn up around a fleet to protect it from attack, when it was drawn up on the shore (Caes. *B. G.* v. 22). The term CASTRA NAUTĪCA is also used.

Castrenses. The *ministri* of the Roman emperor, whose residence in the early days of the Empire was often called *castra* or *praetorium*, in reference to his position as *imperator*. The whole of his servants formed the *familia castrensis*.

Castrum. See CASTELLUM.

Castrum. (1) INUI, a town of the Rutuli, on the coast of Latium, confounded by some writers with No. 2. (2) NOVUM (Torre di Chiaruccia), a town in Etruria, and a Roman colony on the coast. (3) NOVUM (Giulia Nova), a town in Picenum, probably at the mouth of the small river Batinum (Saliuello).

Castŭla. A woman's petticoat. See TUNICA.

Castŭlo (Καστὰλών). The modern Cazlona; a town of the Oretani in Hispania Tarraconensis, on the Baetis, and under the Romans an important place. In the mountains in the neighbourhood were silver and lead mines. The wife of Hannibal was a native of Castulo (Livy, xxiv. 41).

Cat. See FAELIS.

Catabathmus (Καταβαθμός) **Magnus** (i. e. great descent). A mountain and seaport at the inner curve of a deep bay on the north coast of Africa, considered to be the boundary between Egypt and Cyrenaïca.

Catacumbae (the name, not older than the third century A.D., is formed from κατὰ + κύμβη, "a hollow place"). A name given to subterranean burial-places, of which the most famous exist in Egypt, Rome, Naples, Syracuse, and Malta. The so-called Catacombs of Paris, as places of interment, are modern, dating from the close of the last century only.

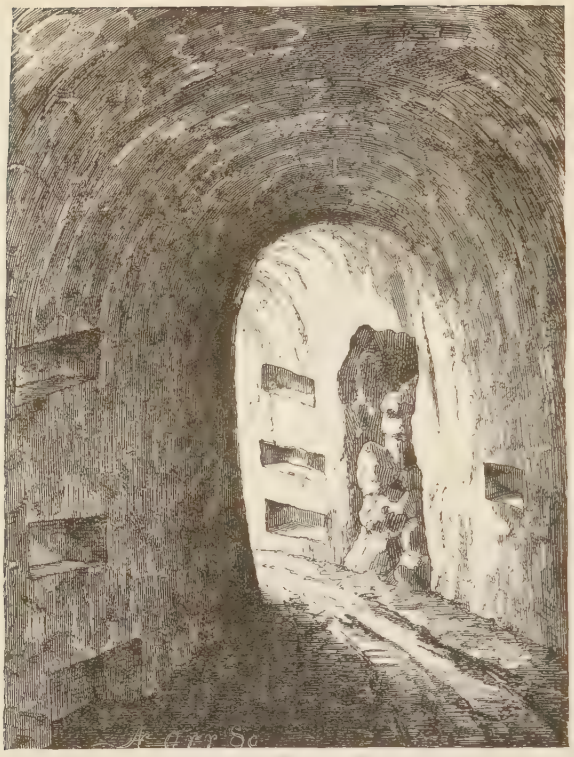
The Catacombs of Egypt are vast in extent and extremely numerous, running through the range of mountains in the vicinity of Thebes. (See THEBAE.) Among them are especially to be noted the caverns in which the bodies of the Theban kings were originally interred. These were forty-seven in number, and, like the more elaborate of the other tombs, were covered with hieroglyphics and ornamented with pictures, mostly in fresco. The oldest of them now existing are not less than 4000 years of age, and have long since been plundered for the sake of the ornaments and other valuables contained in them. A most interesting collection of these frescoes can be found in the drawings and coloured plates of Wilkinson's *Manners and Customs of the Ancient Egyptians* (London, 1847).

The Roman Catacombs were originally quarries, of which some are of very great antiquity, antedating the traditional date of the founding of the city. These were subsequently extended so that at last all the seven hills of Rome were pierced by them. They are low dark corridors or vaulted halls excavated in the soft volcanic tufa and *puzzolana*, in the lateral walls of which apertures were made for the reception of corpses. In all there are some forty Catacombs, each forming a network of galleries, usually intersecting one another at right

Roman Catacombs. Gallery with Loculi. (From Northcote's *Roma Sotterranea*.)

angles, but occasionally radiating from a common centre. The passages are of an average height of eight feet and of an average width of from three to five feet. The apertures (*loculi*) used as graves run in tiers at the sides, and were covered in by marble slabs or tiles bearing either religious emblems or mortuary inscriptions. The whole length of the Roman Catacombs is from 500 to 550 miles, and they are estimated to have contained fully 6,000,000 bodies.

It must be remembered that while the Greeks and Romans finally adopted cremation as a means for disposing of their dead (see FUNUS), the Egyptians and Jews, and latterly the Christians, regarded interment as more in accordance with their views on the subject of a future life. Hence the Roman Christians used and greatly extended the subterranean excavations now called Catacombs, and only afterwards employed them for purposes of concealment during the various persecutions that harassed the Church at intervals from the time of Nero to that of Diocletian (A.D. 303). A popular error makes the Catacombs to have been originally the secret, anxiously concealed places of refuge of the primitive Christians; but they were rather, as Professor Springer says, "their legally recognized, publicly accessible places of burial. Reared in the midst of the customs of heathen Rome, the Christian community perceived no reason to depart from the artistic principles of antiquity. In the embellishment of the Catacombs they adhered to the decorative forms handed down by their ancestors; and in design, choice of colour, grouping of figures, and treatment of subject, they were entirely guided by the customary rules."



Ground Plan of Roman Catacombs.

The monotonous passages of the Catacombs are occasionally broken by the introduction of larger chambers used as *cubicula* or family burial-places. There are also chambers set apart for worship, but these are not earlier than the fourth century. The Christian excavations were made by a regular society of *fossores*. In most cases, the bodies to be interred were wrapped in cloth, and after the consecrated bread had been placed upon the breast, various other ornaments and memorials were added. Earthen lamps were frequently set by the slabs which closed the niches.

The decoration of the Catacombs is interesting as throwing light upon the development of early Christian art. Many of the paintings are frescoes of the first and second century, and in their subjects are chiefly symbolical of the hopes of Christianity, the Resurrection being a favourite theme. The Good Shepherd, the Miracles, Daniel in the den of lions, and the Hebrews in the fiery furnace, also occur with frequency. The fish, too, by a kind of acrostic, is likewise an important symbol, on which see ACROSTICHA. A great number of inscriptions, many of them of much interest, occur. There are no representations of scenes of martyrdom earlier than the fifth century.

The most important of the Catacombs and the only one that has been even yet quite thoroughly explored is that of St. Callistus on the Via Appia. The one farthest distant (six miles) is that of St. Alexander.

Interments in the Catacombs were discontinued in the fifth century, but the caverns were still visited as containing the tombs of the martyrs. As early as A.D. 370, Pope Damasus caused apertures for lighting to be made, and had the most important tombs furnished with inscriptions. In the year 537, during the siege of Rome by the Goths, the tombs were pillaged, and again by the Lombards in 755, for the sake of the ornaments of gold and silver contained in them. From the time of Pope Paschalis I. (817–824), the Catacombs gradually fell into oblivion, until under Pope Paul III. (in 1535) investigation of them was once more begun. The enthusiastic and learned priest, Father Bosio, spent thirty years in exploring the passages, and in making drawings of the most interesting objects, such as lamps, vases, and monuments, contained in them. His great work, *Roma Sotterranea*, was published (in Italian) in 1632, three years after his death, edited by Father Severani. It was translated into Latin by Father Aringhi, and is still the most important source of information on the subject. In 1720, appeared Boldetti's valuable folio, which was followed by the noble contribution of Seroux d'Agincourt, *Histoire de l'Art par les Monuments*, one of the most learned of all the works relating to the Catacombs. Other valuable books for the student are those of Perret, *Les Catacombes*

Interior of Corridor, Catacombs of St. Callistus.

de Rome (Paris, 1853); Northcote, *Roman Catacombs* (London, 1859); Dyer, *The City of Rome: its Vicissitudes and Monuments* (new ed. 1883); Roller, *Les Catacombes de Rome*, 2 vols. (Paris, 1881); De Rossi, *Roma Sotterranea* (Rome, 1864–77); and Boissier, *Promenades Archéologiques* (3d ed. Paris, 1887). Popular works are Hare's *Walks in Rome* (11th ed. London, 1883); Lagrèze, *Pompéi, les Catacombes, et l'Alhambra* (Paris, 1872); Rio, *Poetry of Christian Art* (Eng. trans. London, 1854); Forbes, *Rambles in Rome* (London, 1882); Farrar, *The Early Days of Christianity* (London, 1882); and Lanciani, *Rome Pagan and Christian* (Boston, 1893). The inscriptions to the number of some 10,000 are given by De Rossi in his *Inscriptiones Christianae* (1857–61).

Catadūpa (τὰ Κατάδουπα and οἱ Κατάδουποι). A name given to the cataracts of the Nile, and also to the parts of Aethiopia in their neighbourhood (Herod. ii. 17). The Latin word is used as a neuter plural. See NILUS.

Catagogia (καταγώγια). See ANAGOGIA.

Catagrăpha (καταγραφή). See PICTURA.

Catalauni. See CATELAUNI.

Catalepton (κατὰ λεπτόν). A collection of fourteen poems in elegiac and iambic verse on various subjects, and ascribed to Vergil, to whose age, at least, they certainly belong. They are often, but less correctly, called CATALECTA. See VERGILIUS.

Catalogue of Ships. A name popularly given to the second half of the second book of the *Iliad* (484–877), in which the poet enumerates the leaders and forces of the Greek host assembled against Troy.

Catalŏgus (κατάλογος). The list of those persons at Athens who were liable to military service. See ASTRATEIAS GRAPHÉ.

Catalysĕōs tou Demou Graphé (καταλύσεως τοῦ δήμου γραφή). An action brought against persons who altered, or tried to alter, the democratic form of government at Athens, and connected with the προδοσίας γραφή. See PRODOSIAS GRAPHÉ.

Catamītus. See GANYMEDES.

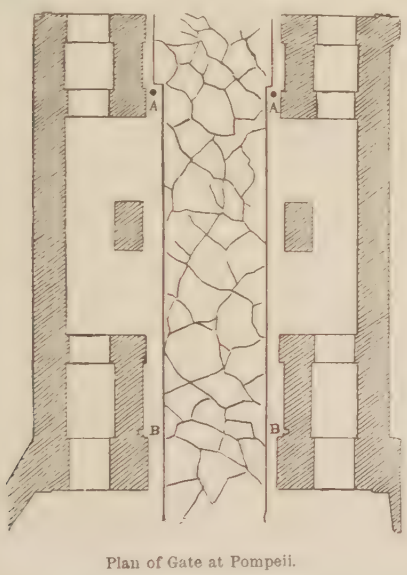
Catăna (Κατάνη). A city of Sicily, on the eastern coast, at the base of Aetna, and a short distance below the river Acis and the Cyclopum Scopuli. It was founded by a colony from Chalcis in Euboea, in B.C. 730, five years after the settlement of Syracuse. Catana, like all the other colonies of Grecian origin, soon became independent of any foreign control, and, in consequence of the fertility of the surrounding country, attained to a considerable degree of prosperity. It does not appear, however, to have been at any time a populous city; and hence Hiero of Syracuse was enabled without difficulty to transfer the inhabitants to Leontini. A new colony of Peloponnesians and Syracusans was established here by him, and the place called Aetna, from its proximity to the mountain.

After the death of Hiero, the new colonists were driven out by the Siculi, and the old inhabitants from Leontini then came, and, recovering possession of the place, changed its name again to Catana. We find Catana after this possessed for a short time by the Athenians, and subsequently falling into the hands of Dionysius of Syracuse. This tyrant, according to Diodorus Siculus (xiv. 15), sold the inhabitants as slaves, and gave the city to his mercenary troops, the Campani, to dwell in. It is probable, however, that he only sold those who were taken with arms in their hands, and that many of the old population remained, since Dionysius afterwards persuaded these same Campani to migrate to the city of Aetna. Catana fell into the power of the Romans during the First Punic War. The modern name is Catania, and the distance from it to the summit of Aetna is given as thirty miles.

Cataonia (Καταονία). A fertile district in the southeastern part of Cappadocia, to which it was first added under the Romans, with Melitené, which lies east of it. It had no important towns.

Cataphracti (κατάφρακτοι). (1) Mail-clad cavalry, found chiefly among the armies of the Eastern nations. They are first heard of in the army of the elder Cyrus, and later in the armies of Antiochus Epiphanes. From the time of Antoninus Pius they were common in the armies of Rome. The armour

Sarmatian Cataphract. (Column of Trajan.)



appears to have been a sort of scale-armour (φολιδωτός). (See Amm. Marcell. xvi. 10, 8; Tac. *Hist.* i. 79.) The word is probably Persian. See CRUPPELLARII. (2) The word *cataphractus* is sometimes applied to a ship with decks. See APHRACTUS; NAVIS.

Catapīrātes (καταπειρατηρίη). A sounding-lead, consisting of a piece of lead fastened to a cord. The lead was greased, so that specimens of the kind of bottom might better attach themselves to it. See Lucilius, iii. 32 (p. 16 ed. Müll.).

Catapulta. See TORMENTUM.

Cataracta (καταρράκτης or βολίς). (1) A portcullis; so called because it fell with great force and a loud noise.

According to Vegetius, it was an additional defence, suspended by iron rings and ropes before the gates of a city, in such a manner that when the enemy had come up to the gates the portcullis might be let down so as to shut them in, and to enable the besieged to assail them from above. In the accompanying plan of the principal entrance to

Plan of Gate at Pompeii.

Pompeii, there are two sideways for foot-passengers, and a road between them, fourteen feet wide, for carriages. The gates were placed at A A, turning on pivots (see CARDO), as is proved by the holes in the pavement, which still remain. This end of the road was nearest to the town; in the opposite direction, the road led into the country. The portcullis was at B B, and was made to slide in grooves cut in the walls. The sideways, secured with smaller gates, were roofed in, whereas the portion of the main road between the gates (A A) and the portcullis (B B) was open to the sky. When, therefore, an attack was made, the assailants were either excluded by the portcullis, or, if they forced their way into the barbican, and attempted to break down the gates, the citizens, surrounding and attacking them from above, had the greatest possible facilities for impeding and destroying them. Vegetius speaks of the *cataracta* as an *ancient* contrivance; and it appears to have been employed by the Jews at Jerusalem as early as the time of David. (See Jer. xxix.)

(2) A boarding bridge like the *corvus* of Duilius, so called because it descended like a portcullis. See CORVUS.

(3) A sluice, or perhaps a weir with sluices or hatches in it, for regulating the height of water in a running stream. See Plin. *Epist.* x. 69.

Catarrhactes (Καταρράκτης). (1) A river of Pamphylia, which descends from the mountains of Taurus in a great, broken waterfall (whence its name). (2) The term is also applied, first by Strabo, to the cataracts of the Nile, which are distinguished as Catarrhactes Maior and Catarrhactes Minor. See NILUS.

Catascŏpes Graphé (κατασκοπῆς γραφή). An action allowed by Attic law to be brought against spies, who if caught were put to the torture in order to extort from them information, and then executed. Only foreigners were liable to this action. Citizens guilty of the crime were accused of προδοσία. See PRODOSIAS GRAPHÉ.

Catascopium. A small vessel (*navis speculatoria*) used for reconnoitering (Aul. Gell. x. 25).

Catasta. A raised platform upon which slaves were exposed for sale, so that the intending purchasers might more readily examine their points (Tibull. ii. 3, 60; Pers. vi. 77). The platform was sometimes made to revolve, as appears from Statius (*Silv.* ii. 1, 72). When the platform was used in private sales it was called *catasta arcana* (Mart. ix. 60. 5). See SERVUS.

Cateia. A missile used in war by the Germans, Gauls, and some of the Italians, and ascribed by some writers to the Persians. It was supposed to resemble the *aclis*, which was a sort of dart studded with points, and about a foot and a half long. (See Aul. Gell. x. 25; Isid. *Orig.* xviii. 7; Serv. *ad Aen.* vii. 730.) The *cateia* was also known as *teutona*, from the name of the people.

Catelauni. The modern Châlons-sur-Marne; a town in Gaul, near which Attila (q. v.) was defeated by Aëtius and Theodoric, A.D. 451.

Catella. See CATENA.

Catēna, dim. CATELLA (ἅλυσις, dim. ἁλύσιον, ἁλυσίδιον). A chain.

Thucydides informs us that the Plataeans made use of "long iron chains" to suspend the beams which they let fall upon the battering-rams of their assailants. (See ARIES.) Under the Romans, prisoners were chained in the following manner: The soldier who was appointed to guard a particular captive had the chain fastened to the wrist of his left hand, the right remaining at liberty. The prisoner, on the contrary, had the chain fastened to the wrist of his right hand. Hence *dextras insertare catenis* means to submit to captivity: *leviorem in sinistra catenam*. The prisoner and the soldier who had the care of him (*custos*) were said to be *tied* to one another. Sometimes, for greater security, the prisoner was chained to two soldiers, one on each side of him. If he was found guiltless, they broke or cut asunder his chains. Instead of the common materials, iron or bronze, Antony, having got into his power Artavasdes, king of the Armenians, paid him the pretended compliment of having him bound with chains of gold (Vell. Paterc. ii. 82).

Chains which were of superior value, either on account of the material or the workmanship, are commonly called *catellae* (ἁλύσια), the diminutive

expressing their fineness and delicacy as well as their minuteness. The specimens of ancient chains which we have in bronze lamps, in scales (see LIBRA), and in ornaments for the person, especially necklaces (see MONILÉ), show a great variety of elegant and ingenious patterns. Besides a plain circle or oval, the separate link is often shaped like the figure 8, or is a bar with a circle at each end, or assumes other forms, some of which are here shown. The links are also found so closely entwined that the chain resembles plaited wire or thread, like the gold chains now manufactured at Venice. This is represented in the lower figure of the illustration.

Catenae—Chain-links. (British Museum.)

These valuable chains were sometimes given as rewards to the soldiers; but they were commonly worn by ladies, either on the neck or around the waist; and were used to suspend pearls, or jewels set in gold, keys, lockets, and other trinkets.

Catenarius, sc. CANIS. A watch-dog chained up in the vestibulum of a Roman house, usually with the notice CAVE CANEM (Petron. 19, 72).

Dog in Mosaic. (Pompeii.)

Catervarii. See GLADIATORES.

Cathaea. A country of Asia, the precise situation of which is doubtful. Mannert places it northeast of the Malli, in the vicinity of the Hydraotes. The chief town was Sangala. Diodorus Siculus calls the people Catheri.

Cathaei (*Καθαῖοι*). A great and warlike people of India intra Gangem, upon whom Alexander made war; though modern Orientalists regard them as a warlike caste (*Kshatriyas*) rather than a separate tribe.

Catharmi. See LUSTRATIO.

Cathĕdra (*καθέδρα*). A seat. The word was more particularly applied to a seat with a back but no arms, whereas the *sella*, however splendid in its material or dignified in its associations, had neither. The back was usually curved or hollow, and low enough for the arm to rest upon it with ease, as in the preceding illustration, taken from Sir William Hamilton's work on Greek vases. On the cathedra is seated a bride, who is being fanned by a female slave with a fan made of peacock's feathers; under her feet is a footstool.

Cathedra. (From a Greek Vase.)

There was also the *cathedra longa*, or easy-chair; and, more luxurious still, the *cathedra supina*, resembling the modern steamer-chair. Then, as now, they were often made of wicker-work (*salices*).

The cathedra was more used by women than by men (hence *femineae*, Mart. iii. 63). It was a mark of effeminacy when a man was seen stretched out on a reclining-chair. To sit on cathedrae at table was, however, less luxurious than the ordinary reclining posture, and was considered proper for boys. (See CENA.) The seat was not stuffed, but a cushion was commonly placed upon it; and a cover might also be thrown over the back.

Professorial Chair. (Visconti.)

Another sort of cathedra was a sedan-chair, in which women were accustomed to be carried about, instead of in a lectica. The *nuda cathedra* of Juvenal (i. 65), in which the successful forger is carried *supinus*, is probably an uncurtained lectica; it is insolence rather than effeminacy which here provokes the rage of the satirist. See LECTICA.

Cathĕter (*καθετήρ*). A surgical instrument for drawing off water from the bladder. The pure Latin name is *fistula aenea*. See CHIRURGIA.

Catilīna, LUCIUS SERGIUS. A Roman of patrician rank, and the last of the gens Sergia. Of his father and grandfather little is known: the former would seem to have been in indigent circumstances, from the language of Quintus Cicero (*De Petitione Consulatus*, 2), who speaks of Catiline as having been born amidst the poverty of his father (*in patris egestate*). The great-grandfather, M. Sergius Silus or Silo, distinguished himself greatly in the Second Punic War, and was present at the battles of Ticinus, Trebia, Trasimenus, and Cannae. Pliny speaks of his exploits in a very animated strain.

The cruelty of Catiline's disposition, his undaunted resolution, and the depravity of his morals fitted him for acting a distinguished part in the turbulent and bloody scenes of the period in which he lived. He embraced the interest of Sulla, in whose army he held the office of quaestor. Many citizens of noble birth are said by Quintus Cicero to have fallen by his hand; and, according to Plutarch, he had assassinated his own brother during the Civil War; and now, to screen himself from prosecution, persuaded Sulla to put him down among the proscribed as a person still alive. He murdered too, with his own hands, his sister's husband, a Roman knight of peaceable character. One of the worst actions, however, of which he was guilty would seem to have been the killing of M. Marius Gratidianus, a near relative of the celebrated Marius. Sulla had put the name of this individual on the list of the proscribed, whereupon Catiline entered the dwelling of the unfortunate

man, exhausted upon his person all the refinements of cruelty and insult, and, having at last put an end to his existence, carried his bloody head in triumph through the streets of Rome, and brought it to Sulla as he sat on his tribunal in the Forum. When this was done, the murderer washed his hands in the lustral water at the door of Apollo's temple, which stood in the immediate vicinity (Sen. *De Ira*, iii. 18).

Catiline was peculiarly dangerous and formidable, as his power of dissimulation enabled him to throw a veil over his vices. Equally well qualified to deceive the good, to intimidate the weak, and to inspire with his own boldness his depraved associates, he evaded two accusations brought against him by Clodius for criminal intercourse with a Vestal, and for monstrous extortions of which he had been guilty while proconsul in Africa (A.U.C. 687). He was charged also with having murdered his first wife and his son. A numerous group having been formed of young men of high birth and daring character, who saw no other means of extricating themselves from their enormous debts than by obtaining the highest offices of the State, Catiline was placed at their head. This eminence he owed chiefly to his connection with the old soldiers of Sulla, by means of whom he kept in awe the towns near Rome, and even Rome itself. At the same time, he numbered among his adherents not only the worst and lowest of the riotous populace, but also many of the patricians and men of consular rank. Everything favoured his audacious scheme. Pompey was pursuing the victories which Lucullus had prepared for him; and the latter was but a feeble supporter of the nobles in the Senate, who wished him, but in vain, to put himself at their head. Crassus, who had delivered Italy from the gladiators, was now striving with great eagerness after power and riches, and, instead of opposing, countenanced the growing influence of Catiline, as a means of his own aggrandizement. Caesar, who was labouring to revive the party of Marius, spared Catiline, and, perhaps, even encouraged him. Only two Romans remained determined to uphold their falling country: Cato and Cicero—the latter of whom alone possessed the qualifications necessary for the task. The conspirators were now planning the elevation of Catiline and one of his accomplices to the consulship. When this was effected, they hoped to obtain possession of the public treasures and the property of the citizens, under various pretexts, and especially by means of proscription. It is not probable, however, that Catiline had promised them the liberty of burning and plundering Rome. Cicero had the courage to stand as candidate for the consulship, in spite of the impending danger, of the extent of which he was perfectly aware. Neither insults nor threats, nor even riots and attempts to assassinate him, deterred him from his purpose; and, being supported by the richest citizens, he gained his election, B.C. 65. All that the party of Catiline could accomplish was the election of Gaius Antonius, one of their accomplices, as colleague of Cicero. This failure, however, did not deprive Catiline of the hope of gaining the consulship the following year. For this purpose he redoubled the measures of terror by means of which he had laid the foundation of his power. Meanwhile he had lost some of the most important members of his conspiracy. Antony had been prevailed upon, or compelled by Cicero, to remain neutral. Caesar and Crassus had resolved to do the same. Piso had been killed in Spain. Italy, however, was destitute of troops. The veterans of Sulla only waited the signal to take up arms. This signal was now given by Catiline. The centurion Manlius appeared among them, and formed a camp in Etruria. Cicero was on the watch, and a fortunate accident disclosed to him the counsels of the conspirators. One of them, Curius, was on intimate terms with a woman of doubtful reputation, Fulvia by name, and had acquainted her with their plans. Through this woman, Cicero learned that two knights had undertaken to assassinate him at his house. On the day which they had fixed for the execution of their plan they found his doors barred and guarded. Still Cicero delayed to make public the circumstances of a conspiracy the progress and resources of which he wished first to ascertain. He contented himself with warning his fellow-citizens, in general terms, of the impending danger. But when the insurrection of Manlius was made known, he procured the passage of the celebrated decree, "that the consuls should take care that the Republic received no detriment." By a decree of this kind, the consuls, or other magistrates named therein, were, in accordance with the custom of the State, armed with the supreme civil and military authority. It was exceedingly difficult to seize the person of one who had soldiers at his command, both in and out of Rome; still more difficult would it be to prove his guilt before those who were his accomplices with him, or, at least, were willing to make use of his plans to serve their own interests. Cicero had to choose between two evils—a revolution within the city, or a civil war; and he preferred the latter. Catiline had the boldness to take his seat in the Senate, known as he was to be the enemy of the Roman State. Cicero then rose and delivered that bold oration against him which was the means of saving Rome by driving Catiline from the city. The conspirators who remained—Lentulus, Cethegus, and other infamous senators—engaged to head the insurrection in Rome as soon as Catiline appeared at the gates. According to Cicero and Sallust, it was the intention of the conspirators to set the city on fire, and massacre the inhabitants. At any rate, these consequences might have easily followed from the circumstances of the case, without any previous resolution. Lentulus, Cethegus, and the other conspirators, in the meanwhile, were carrying on their criminal plots. They applied to the ambassadors of the Allobroges to transfer the war to the frontiers of Italy itself. These, however, revealed the plot, and their disclosures led to others still more important. The correspondence of the conspirators with their leader was intercepted. The Senate had now a notorious crime to punish. As the circumstances of the case did not allow a minute observance of form in the proceedings against the conspirators, the laws relating thereto were disregarded, as had been done in former instances of less pressing danger. Caesar spoke against immediate execution, but Cicero and Cato prevailed. Five of the conspirators were put to death. Gaius Antonius was then appointed to march against Catiline, but, on the eve of battle, under pretence of being disabled by the gout, he gave the command to his lieutenant Petreius. The battle was fought at Pistoria in

Etruria, and ended in the complete overthrow of the insurgents. Catiline, on finding that all was lost, resolved to die sword in hand, and his followers imitated his example (B.C. 62).

The history of Catiline's conspiracy has been written by Sallust in the extremely able monograph known as the *Bellum Catilinae*. See also the lives of Caesar and Cicero by Plutarch; Mommsen, *History of Rome*, iv. 203–209, 212–223; and the four orations of Cicero known as the *Orationes Catilinariae*, much read in schools. The story forms the subject of a tedious English play by Ben Jonson, entitled *Catiline's Conspiracy*, produced in 1611; and of a now-forgotten drama by Stephen Gosson. It is the basis of the historical novel by Herbert, *The Roman Traitor*.

Catillus or **Catīlus**. See TIBUR.

Catillus. See CATINUS.

Catīnus or **Catīnum**, dim. CATILLUS or CATILLUM. A dish or platter on which viands were served up. Other names for similar table utensils will here be noticed; but it must be admitted that the differences of shape, materials, or use are not always clearly indicated. Even the distinction, so essential to our notions, between dishes and plates does not seem to have been observed (Hor. *Sat.* i. 3, 92); there is, in fact, no Greek or Latin word for "a plate" in the modern sense. Varro describes the catinus as deep enough to hold the gravy of meat or vegetables (*L. L.* v. 120). They were mostly of earthenware, and were kept in various sizes; to have the catinus too small for its contents showed a want of style (Hor. *Ep.* ii. 4, 77). The historic turbot of Domitian required a dish made on purpose (Juv. iv. 131 foll.); Vitellius had gone a step beyond this, and built a special furnace in which to bake a gigantic *patina* (Plin. *H. N.* xxxv. § 163). The PATINA (dim. *patella*) was also commonly of earthenware; it was bowl-shaped, and occurs frequently in Horace in the sense of a dish; but it was likewise used for cooking, and then had a cover (Plaut. *Pseud.* iii. 2, 51). The actor Aesopus had a patina worth 100,000 sesterces; the material is not described. PAROPSIS (*παροψίς*) was in Greek applied either to the dish or its contents, as is proved by Athenaeus, with abundant quotations from the comic poets—though Atticists tried to restrict the word to the latter sense; in Roman writers it is always the former: originally a square or oblong side-dish for delicacies, it came to mean any dish. There was also an APSIS or *absis* (q. v.), either round or semicircular, like modern salad-plates; and GABATAE, said to have been of a deep shape. The LANX varied in form, but seems to have been always of metal; huge silver lances were among the most costly objects of Roman extravagance. We also find a paropsis in silver (*Dig.* xxxiv. 2, l. 19, § 9). The Greek *πίναξ*, a board and so a wooden trencher, might be of other materials—e. g. silver; but silver dishes were thought vulgar by the Greeks, at least in early times (Athen. vi. 430 a).

The *catillus* was a saucer for pickles or other condiments (Hor. *Sat.* ii. 4, 75).

Cato. A surname of the Porcian family, derived from the Sabine *catus*, cognate with *acutus*. (1) M. PORCIUS CATO, surnamed CENSORIUS, in allusion to the severity with which he discharged the office of a censor, and hence commonly styled, at the present day, "Cato the Censor." Other surnames were, PRISCUS, "the old," and MAIOR, "the elder," both alluding to his having preceded, in order of time, the younger Cato, who committed suicide at Utica. Cato the Censor was born in B.C. 234 at Tusculum, of plebeian parents. His family were in very moderate circumstances, and little, if anything, was known of it, until he himself made the name a conspicuous one. His father left him a small farm in the Sabine territory, and here the first years of his youth were spent. The state of public affairs, however, soon compelled him to take up arms for the defence of his country. The Second Punic War had broken out, and Hannibal had invaded Italy. Cato, therefore, served his first campaign, at the age of seventeen, under Fabius Maximus, when he besieged the city of Capua. Five years after this he fought under the same commander at the siege of Tarentum, and, after the capture of this place, became acquainted with the Pythagorean Nearchus, who initiated him into the principles of that system of philosophy, with which, in practice, he had already become familiar. The war being ended, Cato returned to his farm. Near this there stood a cottage belonging to Manius Curius Dentatus, who had repeatedly triumphed over the Sabines and Samnites, and had at length driven Pyrrhus from Italy. Cato was accustomed frequently to walk over to the humble abode of this renowned commander, where he was struck with admiration at the frugality of its owner, and the skilful management of the farm which was attached to it. Hence it became his great object to emulate his illustrious neighbour, and adopt him as his model. Having made an estimate of his house, lands, slaves, and expenses, he applied himself to husbandry with new ardour, and retrenched all superfluity. In the morning he went to the small towns in the vicinity to plead and defend the causes of those who applied to him for assistance. Thence he returned to his fields, where, with a plain cloak over his shoulders in winter, and almost naked in summer, he laboured with his servants till they had concluded their tasks, after which he sat down along with them at table, eating the same bread and drinking the same wine. Valerius Flaccus, a noble and powerful Roman, who occupied an estate in the neighbourhood of Cato's residence, persuaded the young Cato to remove to Rome, and promised to assist him by his influence and patronage. Cato came, accordingly, to the capital, with an obscure name, and with no other resources than his own talents and the aid of the generous Flaccus; but by the purity of his morals, the austere energy of his character, his knowledge of the laws, his fluency of elocution, and the great ability that marked his early forensic career, he soon won for himself a distinguished name. It was in the camp, however, rather than at the bar, that he strove to raise himself to eminence. At the age of thirty he went as military tribune to Sicily. The next year he was chosen quaestor, and was attached to the army which Scipio Africanus was to carry into Africa, at which period there commenced between him and that commander a rivalry and hatred which lasted until death. Cato, who had returned to Rome, accused Scipio of extravagance; and though he failed in supporting his charge, yet his zeal for the public good gained him great influence over the minds of the people. Five years subsequent to this, after having been already aedile, he was chosen praetor,

and the province of Sardinia fell to him by lot. His integrity and justice, while discharging this office, brought him into direct and most favourable contrast with those who had preceded him. Here, too, it was that he became acquainted with the poet Ennius, who was then serving among the Calabrian levies attached to the army. From Ennius he acquired the Greek language, and, on his departure from the island, he took the bard along with him to Rome. He was finally elected consul, B.C. 193, and his colleague in office was Valerius Flaccus, his early friend. While consul he strenuously but fruitlessly opposed the abolition of the famous Oppian Law (see OPPIA LEX), and soon after this set out for Spain, which had attempted to shake off the Roman yoke. With newly raised troops, which he soon converted into an excellent army, he quickly reduced that province to submission, and obtained the honours of a triumph at Rome. Hardly had Cato descended from the triumphal chariot, when, laying aside the consular robe and assuming the garb of the lieutenant, he accompanied, as such, the Roman commander Sempronius into Thrace. He afterwards placed himself under the orders of Manius Acilius, the consul, to fight against Antiochus, and carry the war into Thessaly. By a bold march he seized upon Callidromus, one of the rockiest summits of Thermopylae, and thus decided the issue of the conflict. For this signal service, the consul, in the excess of his enthusiasm, embraced him in the presence of the whole army, and exclaimed that it was neither in his power, nor in that of the Roman people, to award him a recompense commensurate with his deserts (B.C. 191).

Seven years later he obtained the office of censor, notwithstanding the powerful opposition of a large part of the nobility, who dreaded to have so severe an inspector of public morals at a time when luxury, the result of their Asiatic conquests, had driven out many of the earlier virtues of the Roman people. He fulfilled this trust with inflexible rigour. Some of his acts, it is true, would seem to have proceeded from that pugnacious bitterness which must be contracted by a man engaged in constant strife and inflictions: thus, for example, he took away his horse from Lucius Scipio, and expelled Manilius from the Senate for kissing his wife in the presence of his children. Still, however, most of his proceedings when censor indicate a man who aimed, by every method, at keeping up the true spirit of earlier days. Hence, though his measures, while holding this office, caused him some obloquy and opposition, they met in the end with the highest applause; and when he resigned the censorship the people erected a statue to him in the Temple of Health, with an honourable inscription testifying his faithful discharge of the duties of his office. Cato's attachment to the old Roman morals was still more plainly seen in his opposition to Carneades (q. v.) and his colleagues, when he persuaded the Senate to send back these philosophers, without delay, to their own schools, through fear lest the Roman youth should lose their martial character in the pursuit of Grecian learning. The whole political career of Cato was one continued warfare. He was constantly accusing others, or made the subject of accusation himself. Livy, although full of admiration for his character, still does not seek to deny that Cato was suspected of having excited the accusation brought against Scipio Africanus, which compelled that illustrious man to leave the capital. He was also the means of the condemnation of Scipio Asiaticus, who would have been dragged to prison had not Tiberius Gracchus generously interfered. As for Cato himself, he was fifty times accused and as often acquitted. He was eighty-five years of age when he saw himself compelled to answer the last accusation brought against him, and the exordium of his speech on that occasion was marked by a peculiar and touching simplicity: "It is a hard thing, Romans, to give an account of one's conduct before the men of an age different from that in which one has himself lived."

The last act of Cato's public life was his embassy to Carthage, to settle the dispute between the Carthaginians and King Masinissa. This voyage of his is rendered famous in history, since to it has been attributed the destruction of Carthage. In fact, struck by the rapid recovery of this city from the loss it had sustained, Cato ever after ended every speech of his with the well-known words, *Praeterea censeo Carthaginem esse delendam* ("I am also of opinion that Carthage ought to be destroyed"). See CARTHAGO.

Cato died a year after his return from this embassy, in the eighty-fifth year of his age. Although frugal of the public revenues, he does not appear to have been indifferent to riches, nor to have neglected the ordinary means of acquiring them; and, if Plutarch speaks truly, some of the modes to which he had recourse for increasing his resources were anything but reputable. Towards the end of his life he was fond of indulging in a glass of wine, and of inviting daily some of his neighbours to sup with him at his villa; and the conversation on these occasions turned, not as one might have supposed, chiefly on rural affairs, but on the praises of great and excellent men among the Romans. He was twice married, and had a son by each of his wives. His conduct as husband and father was equally exemplary. In fact, Cato may be taken as a specimen of the Sabino-Samnite character, narrow, bigoted, and obstinate, yet inspired with a strong sense of duty and unimpeachable integrity.

Among the literary labours of Cato, the first that deserves mention is the treatise *De Re Rustica*, more properly styled *De Agri Cultura*, which appears to have come down to us in a mutilated state, since Pliny and other writers allude to subjects as treated of by Cato, and to opinions as delivered by him in this book, which are nowhere to be found in any part of the work now extant. In its present state, it is merely the loose, disconnected journal of a plain farmer, expressed with rude, sometimes with almost oracular, brevity; and it wants all those elegant topics of embellishment and illustration which the subject might have so naturally suggested. It consists solely of the dryest rules of agriculture, and some recipes for making various kinds of cakes and wine. Servius says it is addressed to the author's son, but there is no dedication now extant. It is divided into chapters, but the author, apparently, had never taken the trouble of reducing his precepts to any sort of method, or of following any general plan. The hundred and sixty-two chapters, of which this work consists, seem so many rules committed to writing, as the daily labours

LIBRARY

of the field suggested. He gives directions about the vineyard, then goes to his corn-fields, and returns again to the vineyard. His treatise, therefore, was evidently not intended as a regular and well-composed book, but merely as a journal of incidental observations. That this was its utmost pretension is further evinced by the brevity of the precepts, and the deficiency of all illustrations or embellishment. Of the style, he of course would be little careful, as his memoranda were intended for the use only of his family and his slaves. It is therefore always simple, and sometimes rude, but it is not ill-adapted to the subject, and suits our notions of the severe manners of its author and the character of the ancient Romans.

Besides this book on agriculture, Cato left behind him various works, which have almost entirely perished. He left a hundred and fifty orations (Cic. *Brutus*, 17), which were extant in the time of Cicero, though almost entirely neglected, and a book on military discipline (Veget. i. 8). Both Cicero and Livy have expressed themselves very fully on the subject of Cato's orations. The former admits that his "language is antiquated, and some of his phrases harsh and inelegant. But only change that," he continues, "which it was not in his power to change—add number and cadence—give an easier turn to his sentences, and regulate the structure and connection of his words, and you will find no one who can claim preference over Cato." Livy principally speaks of the facility, asperity, and freedom of his style.

Of the book on military discipline, a good deal has been incorporated into the work of Vegetius; and Cicero's orations may console us for the want of those of Cato. But the loss of the seven books *De Originibus*, which he commenced in his vigorous old age, and finished just before his death, must ever be deeply deplored by the historian and the antiquary. Cato is said to have begun an inquiry into the history, antiquities, and language of the Roman people, with a view to counteract the influence of the Greek taste introduced by the Scipios. The first book of the valuable work *De Originibus*, as we are informed by Cornelius Nepos, in his short life of Cato, contained the exploits of the kings of Rome. Cato was the first author who attempted to fix the era of the foundation of Rome, which he calculated in his *Origines*, and determined to have been in the first year of the 7th Olympiad, which is also the estimate followed by Dionysius of Halicarnassus. The second and third books treated of the origin of the different states of Italy, whence the whole work has received the name of *Origines*. The fourth and fifth books comprehended the history of the First and Second Punic Wars; and in the two remaining books the author discussed the other wars of the Romans till the time of Servius Galba, who overthrew the Lusitanians. The whole work exhibited great industry and learning, and, had it descended to us, would unquestionably have thrown much light upon the early periods of Roman history and the antiquities of the different states of Italy. Dionysius of Halicarnassus, himself a sedulous inquirer into antiquities, bears ample testimony to the research and accuracy of that part which treats of the origin of the ancient Italian cities. Cato was the first of his countrymen who wrote on the subject of medicine. This was done in a work entitled *Commentarius quo Medetur Filio, Servis, Familiaribus.* In this book of domestic medicine, duck, pigeons, and hare were the food he chiefly recommended to the sick. His remedies were principally extracted from herbs; and colewort or cabbage was his favourite cure (Plin. *H. N.* xx. § 9). The recipes, indeed, contained in his work on agriculture show that his medical knowledge did not exceed that which usually exists among a semi-barbarous race, and only extended to the most ordinary simples which nature affords. Aulus Gellius (vi. 10) mentions Cato's *Libri Quaestionum Epistolicarum*, and Cicero his *Apophthegmata* (*De Officiis*, i. 29)—the first example, probably, of that class of works which, under the appellation of *Ana*, were once so fashionable and prevalent in France.

On the life of Cato, see Plutarch and Cornelius Nepos; Cortese, *De M. Porc. Catonis Vita, Operibus, et Lingua* (Turin, 1883); and Weise, *Quaestionum Catonian. Capita V.* (Göttingen, 1887). The fragments of Cato's writings (except the work on agriculture) are collected by Jordan (Leipzig, 1860). The best text of the *Res Rustica* is that of Keil (Leipzig, 1884). See, on the language, the work of Cortese, *Grammatica Catoniana* (Turin, 1883).

(2) MARCUS, son of Cato the Censor by his first wife. He distinguished himself greatly in the battle of Pydna, against Perses, king of Macedonia, and received high eulogiums from Aemilius Paulus, the Roman commander on that occasion, whose daughter Tertia he afterwards married. He died while filling the office of praetor (Plut. *Cat. Mai.* 20, 24). (3) SALONIUS, or, as Plutarch calls him, SALONINUS (Σαλωνῖνος), son of Cato the Censor by his second wife. This second wife was the daughter of one Salonius, who had been Cato's secretary, and was, at the time of the marriage, a member of his retinue. Salonius, like his half-brother Marcus, died when praetor. He left, however, a son named Marcus, who attained to the consulship, and who was the father of Cato the younger, commonly called Uticensis (Plut. *Cat. Mai.* 27). (4) VALERIUS, a celebrated grammarian and poet in the time of Sulla. He was deprived of all his patrimony during the excesses of the Civil War, and then directed his attention to literary pursuits. To him has been ascribed the poem of 186 hexameters, entitled *Dirae in Battarum*, an imprecation against the person who had caused the loss of his estate, and a lament for his love, Lydia. Text by Putsche (Jena, 1828) and Ribbeck (Kiel, 1867). See the treatise on Cato by Naekius (Bonn, 1847), and Haupt's edition of Vergil, p. 576 (Leipzig, 1873); Suetonius mentions other works that have not come down to us—the *Diana* and the *Indignatio*—besides treatises on grammar and rhetoric. (5) MARCUS, called also MINOR, and UTICENSIS, from his death at Utica, was great-grandson to the censor of the same name, and was born B.C. 93. A short time after his birth he lost both his parents, and was brought up in the house of Livius Drusus, his uncle on the mother's side. Even in early life Cato displayed a maturity of judgment and an inflexible firmness of character far above his years; and Sarpedon, his instructor, being accustomed to take him frequently to the residence of Sulla, who had been his father's friend, the young Cato, then but fourteen years of age, struck with horror at the bloody scenes that were passing around him, asked his pre-

ceptor for a sword, that he might slay the tyrant. His affectionate disposition was clearly displayed in his strong attachment to Caepio, his brother by the mother's side, as may be seen by a reference to the pages of Plutarch. Being appointed to the priesthood of Apollo, he changed his residence, and took his share of his father's estate; but, though the fortune which he thus received was a considerable one, his manner of living was simpler and more frugal than ever. He formed a connection with Antipater of Tyre, the Stoic philosopher, made himself well acquainted with the tenets of that school, and ever after remained true to its principles, pushing them even to austerity. His first appearance in public was against the tribunes of the people, who wished to remove a column of the Porcian Basilica which incommoded their benches. This basilica had been erected by his great-grandfather, the censor, and the young Cato displayed on the occasion that powerful and commanding eloquence which afterwards rendered him so formidable to all his

Porcia and Cato Uticensis. (Vatican.)

opponents. His first campaign was in the war against Spartacus (q. v.), as a simple volunteer, his half-brother Caepio being a military tribune in the same army; and he distinguished himself so highly that Gellius, the praetor, wished to award him a prize of honour, which Cato, however, declined. He was then sent as military tribune to Macedonia. There he learned that Caepio was lying dangerously ill at Aenus in Thrace, and instantly embarked for that place in a small passage-boat, notwithstanding the roughness of the sea and the great peril which attended the attempt, but only arrived at Aenus just after Caepio had breathed his last. Stoicism was here of no avail, and the young Roman bitterly lamented the companion of his early years. According to Plutarch, there were some who condemned him for acting in a way so contradictory to his philosophical principles; but a more unfeeling charge was the one brought against him by Caesar, in his attack entitled *Anticatones* (q. v.). It was there stated that, after all the lavish expenditure in which Cato had indulged in performing the funeral obsequies of Caepio, and after having declined repayment from the daughter of the latter, he nevertheless passed Caepio's ashes through a sieve in search of the gold which might have melted down with them.

When the term of his service in Macedonia had expired, he travelled into Asia, and brought back with him the Stoic Athenodorus to Rome. He was next made quaestor, and discharged with so much impartiality the duties of this difficult office, and displayed so much integrity in its various details that, on the last day of his quaestorship, he was escorted to his house by the whole assembly of the people. So high, indeed, was the opinion entertained by his countrymen of the purity of his moral character that when, at the Floralia given by the aedile Messius, Cato happened to be a spectator, the people, out of respect for him, hesitated about ordering the prostitutes to strip themselves naked, according to long-established custom, nor would they allow this to be done until he had departed from the theatre (Val. Max. ii. 10, 8). When the conspiracy of Catiline was discovered, Cato supported by every means in his power the acts of Cicero, and was the first that gave him publicly the honourable title of Pater Patriae. Opposing after this the ambitious movements of the first triumvirate, they managed to have him removed to a distance, by sending him out as governor of the island of Cyprus. Having executed this trust with ability and success, and having deposited in the treasury nearly seven thousand talents of silver, he again took part in public affairs at Rome, and again continued his opposition to the triumvirate. When, however, the rupture took place between Pompey and Caesar, he sided with the former, and was left behind by him at Dyrrhachium to guard the military chest and magazine, while he pushed on after Caesar, who had been forced to retire from the siege of that city. Cato, therefore, was not present at the battle of Pharsalia. On receiving the news of this event, he sailed to Corcyra with the troops under his orders, and offered the command to Cicero, who declined it. He then proceeded to Africa, where he hoped to meet with Pompey; but on reaching Cyrené he heard of his death, and was also informed that Pompey's father-in-law, Scipio, had gone to Iuba, king of Mauritania, where Varus had collected a considerable force. Cato immediately resolved to join them, and, in order to effect this, was compelled to make a long and painful march across a desert region, in which his troops suffered severely from hunger, thirst, and every hardship, but which privations his own example enabled them manfully to endure. After seven days of suffering his force reached Utica, where a junction between the two armies took place. The soldiers wished to have him for their general, but he yielded to what he conceived to be the superior claims of Scipio, who held the office of proconsul; and this fault on his part, of which he soon after had reason to repent, accelerated the ruin of the cause in which he had embarked. Scipio having wished, for Iuba's gratification, to put all the inhabitants of Utica to the sword, Cato strenuously opposed this cruel plan, and accepted the command of this important city, while Scipio and Labienus marched against Caesar. Cato had advised them to protract the war; but they hazarded an engagement at Thapsus, in which they were entirely defeated, and Africa submitted to the victor. After vainly endeavouring to prevail upon the fragments of the conquered army, as they came successively to Utica, to unite in defending that city against the conqueror, Cato furnished them with all the ships in

the harbour to convey them wherever they wished to go. When the evening of that day came, he retired to his own apartments, and employed himself for some time in reading the *Phaedo* of Plato, a dialogue that turns upon the immortality of the soul. He endeavoured at the same time to lull the suspicions of his friends by seeming to take a lively interest in the fate of those who were escaping by sea from Utica, and by sending several times to the seaside to learn the state of the wind and weather. But towards morning, when all was quiet, he stabbed himself. He fell from his bed with the blow, and the noise of his fall brought his son and servants into the room, by whose assistance he was raised from the ground, and an attempt was made to bind up the wound. Their efforts to save him were in vain, for Cato had no sooner recovered his self-possession than he tore open the wound again in so effectual a manner that he instantly expired. He died at the age of forty-eight. When Caesar heard of his fate, he is said to have exclaimed, "I grudge thee thy death, Cato, since thou hast grudged me the saving of thy life." Such was the end of a man whom a better philosophy, by teaching him to struggle with his predominant faults instead of encouraging them, would have rendered truly amiable and admirable. He possessed the greatest integrity and firmness; and, from the beginning of his political career, was never swayed by fear or interest to desert that which he considered the cause of liberty and justice. During the Civil War he had the rare merit of uniting to the sincerest ardour in the cause of his party a steady regard for justice and humanity; he would not countenance cruelty or rapine because practised by his associates or coloured with a pretence of public advantages. But philosophical pride overshadowed the last scenes of his life, and led him to indulge his selfish feelings by suicide, rather than live for the happiness of his family and friends, and mitigate, as far as lay in his power, the distressed condition of his country. His character, however, was so pure, and, since Pompey's death, so superior to that of all the leaders engaged with him in the same cause, that his opponents could not refuse him their respect. (6) M. Porcius, son of the preceding, was spared by Caesar, but led a somewhat immoral life, until he effaced the stains upon his character by a glorious death at Philippi (Plut. *Cat. Min.* 73). (7) Dionysius Cato. A name erroneously given to the author of a collection of moral maxims in four books, much used as a school-book in the Middle Ages, and translated into English before 1479 by Benedict Burgh, whose version was printed by Caxton. Each maxim consists of two hexameters, the whole number of maxims being 164. The style is fairly good, and shows the poem to date from about the third century A.D. The collection is preceded by fifty-six short proverbs in prose with a separate preface, by a different author, probably of later date. The hexameters are generally spoken of as *Disticha Catonis* (*Catonis Disticha de Moribus ad Filium*), and in a Paris MS. as *Liber Catonis Philosophi*, but the name Cato is probably used merely to designate the maxims as shrewd and wise. The addition of the name Dionysius is doubtless due to a confusion arising from the fact that one of the earlier MSS. of the *Disticha* contained also a translation of the *Periegesis* of Dionysius. A good text is that of Hauthal (Berlin, 1869).

Catreus. See Creteus.

Catti or **Chatti.** One of the most important nations of Germany, bounded by the Visurgis (Weser) on the east, the Agri Decumates on the south, and the Rhine on the west, in the modern Hesse and the adjacent countries. They were a branch of the Hermiones, and are first mentioned by Caesar under the erroneous name of Suevi. They were never completely subjugated by the Romans; and their power was greatly augmented on the decline of the Cherusci. Their capital was Mattium (Maden).

Catullus, Gaius Valerius. A celebrated Roman poet, born in the territory of Verona, about B.C. 84. His praenomen, Gaius, is not given in any good MSS., which only mention his cognomen; but Gaius is accepted on the authority of Apuleius (*Apol.* 10). In consequence of an invitation from Manlius Torquatus, one of the noblest patricians of the State, he proceeded in early youth to Rome, where he appears to have kept but indifferent company, at least in point of moral character. He impaired his fortune so much by his extravagance that he complains he had no one

> Fractum qui veteris pedem grabati,
> In collo sibi collocare possit.

This, however, must have been written partly in jest, as his finances were always sufficient to allow him to keep up a delightful villa on the peninsula of Sirmio and an expensive residence at Tibur. With a view of improving his pecuniary circumstances, he adopted the usual Roman mode of re-establishing a diminished fortune, and accompanied Gaius Memmius, the celebrated friend of Lucretius, to Bithynia, where he was appointed praetor to that province. His situation, however, was but little ameliorated by this expedition, and, in the course of it, he lost a beloved brother who was along with him, and whose death he lamented in verse never surpassed in delicacy or pathos. He came back to Rome with a shattered constitution and a lacerated heart. From the period of his return to Italy to his decease, his time appears to have been chiefly occupied with the prosecution of amours in the capital or in the solitudes of Sirmio. He died B.C. 54.

The distracted and unhappy state of his country, and his disgust at the treatment which he had received from Memmius, were perhaps sufficient excuse for shunning political employments; but, when we consider his taste and genius, we cannot help regretting that he was merely an idler and a debauchee. He loved Clodia (supposed to have been the sister of the tribune Clodius), a beautiful but shameless woman, whom he has celebrated under the name of Lesbia. Among his friends he ranked not only most men of pleasure and fashion in Rome, but many of her eminent literary and political characters, such as Cornelius Nepos, Cicero, and Asinius Pollio. His enemies seem to have been as numerous as his loves or friendships, and competitions in poetry or rivalship in gallantry appear always to have been a sufficient cause for his dislike; and where an antipathy was once conceived, he was unable to put any restraint on the expression of his hostile feelings. His poems are chiefly employed in the indulgence and commemoration of these various passions. They have been

divided into lyric, elegiac, and epigrammatic, an arrangement convenient from its generality, but to which all can not, with strictness, be reduced. He seems to have been the earliest lyric poet of Latium, notwithstanding the claim of Horace to the same honour. Much of his poetry appears to have been lost: the pieces that remain to us (116 in all) exhibit, in singular contrast, the sensual grossness which is imbibed from depraved habits and loose imaginations, together with exquisite touches of sentiment and taste, and the polish of intellectual cultivation. Those who turn with disgust from the coarse impurities that sully his pages may be inclined to wonder that praises of his delicacy should ever have been coupled with the name of Catullus. But to many of his effusions, distinguished both by fancy and feeling, this praise is justly due. Many of his amatory trifles are quite unrivalled in the elegance of their playfulness; and no author has excelled him in the purity and neatness of his style, the delightful ease and simplicity of his manner, and in graceful turns of thought and felicity of diction. Some of his pieces, which breathe the higher enthusiasm of the art, and are coloured with a singular picturesqueness of imagery, increase our regret at the manifest mutilation of his works. Among these, the most remarkable is, perhaps, the *Attis*, a poem in the galliambic metre, and unlike the work of any other Latin author in the strangeness of its subject and its weird imaginative power. No one of his poetical predecessors was more versed in Greek literature than Catullus, and his extensive knowledge of its beauties procured for him the appellation of *Doctus*.

Catullus translated many of the shorter and more delicate pieces of the Greeks, an attempt which hitherto had been thought impossible, though the broad humour of their comedies, the vehement pathos of their tragedies, and the romantic interest of the *Odyssey*, had stood the transformation. His stay in Bithynia, though little advantageous to his fortune, rendered him better acquainted than he might otherwise have been with the productions of Greece; and he was therefore, in a great degree, indebted to this expedition for those felicitous turns of expression, that grace, simplicity, and purity which are the characteristics of his poems, and of which hitherto Greece alone had afforded models. Indeed, in all his verses, whether elegiac or heroic, we perceive his imitation of the Greeks; and it must be admitted that he has drawn from them his choicest stores. His Hellenisms are frequent; his images, similes, metaphors, and addresses to himself are all Greek; and even in the versification of his odes we see visible traces of their origin. Nevertheless, he was the inventor of a new species of Latin poetry; and as he was the first who used such variety of measures, and perhaps invented some that were new, he was amply entitled to call the poetical volume which he presented to Cornelius Nepos *lepidus novus libellus*. The expressions, too, and idioms of the Greek language, which he has so carefully selected, are woven with such art into the texture of his composition, and so aptly paint the impassioned ideas of his muse, that they have all the fresh and untarnished hues of originality.

All the MSS. of Catullus are of recent date, and all are derived from a single codex (Codex Veronensis) of which Rather, bishop of Verona (A.D. 965) made some use, and which in the fourteenth century was again copied, as also a third time, and then finally lost. The earliest and best MS., copied directly from the Codex Veronensis, is one in Paris (Germanensis), nearly related to which is the Codex Oxoniensis, probably copied about the year 1400 (Bährens). In all, there are some seventy MSS. of Catullus, on which see R. Ellis's prolegomena.

Old editions of Catullus are those of Avancius (Aldus, Venice, 1502); of Muretus, with a commentary (Venice, 1554); of Scaliger (Paris, 1577); of Voss (London, 1684); and of Döring (Leipzig, 1788–92). Great editions are those of Lachmann (Berlin, 1829); of Schwabe (Berlin, 1886); of Bährens (Leipzig, 1885); and especially of Robinson Ellis, commentary (Oxford, 1876, 2d ed. 1889) and text (Oxford, 1866). Translations are: (French) by Rostaud (Paris, 1880–82); (English) by Martin (1863), Cranstoun (1867), and Ellis (1871); and (German) by Riese (1884). Criticism of Catullus may be found in Ribbeck, *Catullus: eine literar-historische Skizze* (Kiel, 1863); Couat, *Étude sur Catulle* (Paris, 1875); Nettleship, *Essays in Latin Literature* (London, 1885); Vaccaro, *Catullo e la Poesia* (Palermo, 1885); Seitz, *De Catulli Carminibus in Tres Partes Distribuendis* (Rastatt, 1887). See also Munro, *Criticisms and Elucidations of Catullus* (1878); and Sellar, *Roman Poets of the Republic* (2d ed. 1881).

Catŭlus. (1) Q. Lutatius. A Roman naval commander, famous for his victory over the fleet of the Carthaginians, consisting of 400 sail, off the Aegates Insulae: forty of the Carthaginian vessels were sunk, seventy taken, and the remainder dispersed. This celebrated victory put an end to the First Punic War. (2) Quintus. A celebrated Roman, the colleague of Marius in the consulship, and one who jointly triumphed with him over the Cimbri. He was condemned to death by Marius, during the tyrannical sway of the latter, and suffocated himself in a newly plastered room by the steam caused by a large fire (Vell. Paterc. ii. 22).

Caturĭges. A Ligurian people in Gallia Narbonensis, near the Cottian Alps.

Caucasiae Pylae (Καυκάσιαι Πύλαι). See Caucasus.

Caucăsus, Caucasii Montes (Καύκασος, τὰ Καυκάσια ὄρη). The modern Caucasus; a great chain of mountains in Asia, extending from the east shore of the Pontus Euxinus (Black Sea) to the west shore of the Caspian. There are two chief passes over the chain, both of which were known to the ancients: one, near Derbent, was called Albaniae, and sometimes Caspiae Pylae; the other, nearly in the centre of the range, was called Caucasiae Pylae (Pass of Dariel). That the Greeks had some vague knowledge of the Caucasus in very early times is proved by the myths respecting Prometheus and the Argonauts, from which it seems that the Caucasus was regarded as at the extremity of the earth, on the border of the river Oceanus. When the soldiers of Alexander advanced to that great range of mountains which formed the northern boundary of Ariana, the Paropamisus, they applied to it the name of Caucasus; afterwards, for the sake of distinction, it was called Caucasus Indicus. See Paropamisus.

Cauci. See Chauci.

Caucōnes (Καύκωνες). The name of peoples both in Greece and Asia, who had disappeared at

later times. The Caucones in Asia Minor are mentioned by Homer as allies of the Trojans, and are placed in Bithynia and Paphlagonia by the geographers.

Caudex. See CODEX.

Caudium. A town in Samnium on the road from Capua to Beneventum. In the neighbourhood were the celebrated Furculae Caudinae, or Caudine Forks, narrow passes in the mountains, where a Roman army surrendered to the Samnites, and was sent under the yoke, B.C. 321. It is now called the valley of Arpaia.

Caulĭcŭli. In architecture, the eight smaller leaves or stalks in the Corinthian capital, springing out of the four principal ones by which the eight volutes of the capital are sustained. See CAPITULUM; COLUMNA.

Caulon or **Caulonia**. A town in Bruttium, northeast of Locri, originally called Aulon.

Caunus. See BYBLIS.

Caunus (Καῦνος). One of the chief cities of Caria, on its southern coast, in a very fertile but unhealthy situation. It was founded by the Cretans. Its dried figs (*Cauneae ficus*) were highly celebrated. The painter Protogenes was born here.

Caupo (*κάπηλος*, *ξενοδόκος*). An innkeeper who lodged travellers in his house, and was answerable for the safe custody of their property while they remained there (*Dig.* iv. 9, 1 pr.). See CAUPONA.

Caupōna. (1) An inn, where travellers obtained food and lodging; in which sense it answered to the Greek words *πανδοκεῖον*, *καταγώγιον*, and *κατάλυσις*. (2) A shop, where wine and ready-dressed meat were sold; in Greek, *καπηλεῖον*. The person who kept a *caupona* was called *caupo* or *copo;* a hostess is *copa*, rarely *caupona*.

I. GREEK INNS.—In the earliest ages of Greece, as in the East at all times and in newly settled colonies, there was no provision for the entertainment of travellers, and the duty of hospitality was universally acknowledged. (See HOSPITIUM.) The growth of traffic rendered inns necessary, and in later times they appear to have been very numerous. The great number of festivals which were celebrated in the different towns of Greece, besides the four great national games, to which persons flocked from all parts of the Hellenic world, must have required a considerable number of inns to accommodate strangers, not only in the places where the festivals were celebrated, but also on the roads leading to those places.

The accommodation provided was, however, far from luxurious, and the character both of the houses and of their landlords was very indifferent. Inns were regarded as little better than brothels: *πανδοκεῦσαι καὶ πορνοβοσκῆσαι* are joined together (Theophr. *Char.* 6); *καπηλεῖα καὶ πορνεῖα* (Poll. ix. 34). The orgies of Demetrius Poliorcetes in the Acropolis suggest to a comic poet that "he took it for an inn":

> ὁ τὴν ἀκρόπολιν πανδοκεῖον ὑπολαβὼν
> καὶ τὰς ἑταίρας εἰσαγαγὼν τῇ παρθένῳ

(Philippid. *fr.* 25 M. *ap.* Plut. *Demetr.* 26). Moreover, besides the charges of fraud and adulteration to which they were liable in common with other *κάπηλοι* or retail dealers, the hosts were often accused of more serious crimes. Two stories told by Cicero, but taken from Greek life, both turn on murders committed by innkeepers for the sake of gain (*De Inv.* ii. 4, § 14; *De Div.* i. 27, § 57). The higher classes used these *πανδοκεῖα* as little as possible; yet, in default of other accommodation, the public ambassadors of Athens were sometimes constrained to lodge and even to transact diplomatic business in them (Aesch. *De F. L.* § 97; Dem. *De F. L.* p. 390, § 158=175).

The word *καπηλεῖον* signified, as has been already remarked, a place where wine and ready-dressed provisions were sold. *Κάπηλος* signifies, in general, a retail trader who sold goods in small quantities. The term, however, is more particularly applied to a person who sold ready-dressed provisions, and especially wine on draught (Schol. Aristoph. *Plut.* p. 1156; Plat. *Gorg.* p. 518 B). When a retail dealer in other commodities is spoken of, the name of his trade is usually prefixed. These *καπηλεῖα* were not resorted to as clubs (*λέσχαι*, *ἑταιρεῖαι*), or for purposes of good-fellowship, but merely for sottish drinking; and hence were extremely disreputable. Isocrates tells us that in the "good old times" (i. e. the democracy of Solon and Cleisthenes) no respectable slave would have ventured to eat or drink in a *καπηλεῖον*: whereas in his own time young men of the greatest respectability, driven by an absurd prejudice from the schools of philosophy and rhetoric, spent their whole time in these and similar establishments, in drinking, gambling, and debauchery (Isocr. *Areop.* § 49; *Antid.* § 287). We are therefore not surprised to read of the low estimation in which innkeepers were held.

II. ROMAN INNS.—A Roman wayside inn for the reception of travellers was called not only *caupona*, but also *taberna*, *deversorium*, and *taberna deversoria* (the last in Plaut. *Men.* ii. 3, 81; Varr. *R. R.* i. 2, 23). Along all the great roads of Italy there were inns, as we see from the description which Horace gives of his journey from Rome to Brundusium (*Sat.* i. 5). They were built as a speculation by neighbouring proprietors, and either let to a landlord or managed by slaves. They usually included a *stabulum* for horses and mules; hence, in the Digest, *caupones* and *stabularii* are more than once mentioned together. Where the traffic was greatest, there might be several in the same place. To take the Appian Way alone, we find the station Tres Tabernae (Cic. *Ad Att.* ii. 12, 13), Forum Appii *differtum cauponibus* (Hor. l. c. 4), Tabernae Caediciae near Sinuessa (Fest. *Epit.* p. 45 M), *Caudi cauponas* (Hor. l. c. 51). From Plautus downward, these hostelries occur repeatedly in Latin literature. Ambassadors were usually received at the public expense in decent lodgings; but the Rhodian embassy of B.C. 167 was driven to a *sordidum deversorium* (Liv. xlv. 22). Cicero mentions a *copo de via Latina* suborned as a false witness (*Pro Cluent.* 59, § 163), and the discreditable tippling of Antonius in a *cauponula* a few miles from Rome on the Via Flaminia (*Phil.* ii. 31, § 77). Cynthia drove past a *taberna* on her way to Lanuvium, and the remarks of the tavern-brawlers disgusted her poet-lover (Propert. v. 8, 19). The sprightly Vergilian *Copa* (q. v.) shows us, in a very modern fashion, the competition between rival establishments and the advertiser's art in full operation. The accommodation at these places was generally of a poor kind, but extremely cheap. In Polybius's time in Cisalpine Gaul there were no items in the bill; the inclusive charge (inquired beforehand, it should be added)

rarely exceeded half an *as* (Polyb. ii. 15). For the early imperial period we have the record of the well-known relief at Aesernia, representing a hostess reckoning with a parting guest. The dialogue between the two is given at length, and the charges are: bread and a pint of wine, 1 *as;* meat (*pulmentarium*), 2 *asses;* mule's provender, 2 *asses;* and another less decent item, for which we refer the curious to the inscription itself. (This relief is figured in the *Bullettino Napolitano*, vi. 1, and thence in Daremberg and Saglio; the inscription is in Mommsen, *Inscr. Regn. Neap.* 5078 = Orelli-Henzen, 7306).

At Rome there must have been many inns to accommodate strangers, but they are hardly ever spoken of. We, however, find frequent mention of houses where wine and ready-dressed provisions were sold, and which appear to have been numerous in all parts of the city. The houses where people were allowed to eat and drink were called, almost indiscriminately, *cauponae*, *popinae*, *thermopolia*, and *tabernae vinariae*. The specialty of the *thermopolia* is noticed under CALDA. These places were principally frequented by slaves and the lower classes, and are qualified by such epithets as *nigra*, *fumosa*, *immunda*, *uncta* (probably "greasy," though it has also been taken in a good sense). Among other discomforts, they were only furnished with stools to sit upon, instead of couches. This circumstance is illustrated by a painting found at Pompeii in a wine-shop, representing a drinking-scene in which there are four persons sitting on stools

A Wine-shop. (From a Painting at Pompeii.)

around a tripod table. The dress of two of the figures is remarkable for the hoods, which resemble those of the capotes worn by Italian sailors and fishermen at the present day. They use cups made of horn instead of glasses, and from their whole appearance evidently belong to the lower orders. Above them are different sorts of eatables hung upon a row of pegs.

From the moral point of view the Roman inns, whether lodging-houses or mere drink-shops, were no better than the Greek. Hence we find *salax taberna*, *fornix* joined with *uncta popina*, and the legal aspect in *Dig.* xxiii. 2, 43, § 9. Nor are other records wanting. Behind the wine-shop at Pompeii, where the painting described above was found, is the celebrated brothel, the contents of which are now carefully preserved in the Naples Museum. The Aesernian inscription already mentioned tells the same tale. Wine or eating shops used for immoral purposes were called *ganeae*, and are often classed with the *lustra*. Naturally, therefore, persons who kept houses of public entertainment of any kind were held in low estimation. The common opinion as to their honesty is expressed by the epithets *perfidus* and *malignus*, which Horace gives to them (I. *Sat.* i. 29; v. 4).

Under the emperors many attempts were made to regulate the *popinae*, but apparently with little success. Tiberius forbade all cooked provisions to be sold in these shops (Suet. *Tib.* 34); and Claudius commanded them to be shut up altogether. They appear, however, to have been soon opened again, if they were ever closed; for Nero restricted them to the sale of cooked vegetables, and prohibited meat (Suet. *Ner.* 16); and an edict to the same effect was also published by Vespasian. See Zell, *Die Wirthshäuser der Alten*, in his *Ferienschriften* (Freiburg, 1826); Becker-Göll, *Gallus*, iii. 27–45.

Caura. A town of Hispania Baetica.

Caurus or **Corus.** The Argestes of the Greeks; the northwest wind; and in Italy a stormy wind.

Causa Liberālis. See ASSERTOR.

Causia (*καυσία*). A felt hat with a broad brim, forming a part of the national costume of the Macedonians and neighbouring peoples. The name is derived from its keeping off the heat (*καῦσις*). A purple *causia* was worn by the Macedonian kings as part of the royal costume. See DIADEMA.

Hermes wearing the Causia. (From a Fictile Vase.)

Cauter (*καυτήρ*, *καυτήριον*). (1) A branding-iron or cautery, used either by surgeons or for branding cattle and slaves (Pallad. i. 43, 3). (2) An instrument employed in encaustic painting. See PICTURA.

Cautio, Cavēre. These words are of frequent occurrence in the Roman writers and jurists, and have a great variety of significations, according to the matter to which they refer. Their general meaning is that of security given by one person to another, or security which one person obtains by the advice or assistance of another. The general term (*cautio*) is distributed into its species according to the particular kind of the security, which may be by *satisdatio*, by a *fideiussio*, and in various other ways. The general sense of the word *cautio* is accordingly modified by its adjuncts, as *cautio fideiussoria*, *pigneraticia*, or *hypothecaria*, and so on. *Cautio* is used to express both the security which a *magistratus* or a *iudex* may require one party to give to another, which applies to cases where there is a matter in dispute of which a court has already cognizance; and also the security which is a matter of contract between parties not in litigation. The words *cautio* and *cavere* are more particularly used in the latter sense.

If a thing is made a security from one person to another, the *cautio* becomes a matter of *pignus* or of *hypotheca;* if the *cautio* is the engagement of a surety on behalf of a principal, it is a *cautio fideiussoria*.

The *cautio* was most frequently a writing, which expressed the object of the parties to it; accordingly, the word *cautio* came to signify both the instrument (*chirographum* or *instrumentum*) and the object which it was the purpose of the instrument to secure. The phrase *cavere aliquid alicui* expressed the fact of one person giving security to another as to some particular thing or act.

Cautiones which were a branch of *stipulationes* were such contracts as would be ground of actions.

In many cases a *heres* could not safely pay legacies, unless the legatee gave security (*cautio*) to refund in case the will under which he claimed should turn out to be bad. The *cautio Muciana* was the engagement by which the *heres* bound himself to fulfil the conditions of his testator's will, or to give up the inheritance. The *heres* was also, in some cases, bound to give security for the payment of legacies, or the legatee was entitled to the *bonorum possessio*. *Tutores* and *curatores* were required to give security (*satisdare*) for the due administration of the property intrusted to them, unless the *tutor* was appointed by testament, or unless the *curator* was a *curator legitimus*. A *procurator* who sued in the name of an absent party might be required to give security that the absent party would consent to be concluded by the act of his *procurator;* this security was a species of *satisdatio*, included under the genus *cautio*. In the case of *damnum infectum*, the owner of the land or property threatened with the mischief might call for security on the person threatening the mischief.

If a vendor sold a thing, it was usual for him to declare that he had a good title to it, and that if any person recovered it from the purchaser by a better title, he would make it good to the purchaser; and in some cases the *cautio* was for double the value of the thing. This was, in fact, a warranty.

The word *cautio* was also applied to the release which a debtor obtained from his creditor on satisfying his demand; in this sense *cautio* is equivalent to a modern receipt; it is the debtor's security against the same demand being made a second time. Thus *cavere ab aliquo* signifies to obtain this kind of security. A person to whom the *usus fructus* of a thing was given might be required to give security that he would enjoy and use it properly, and not waste it.

Cavere is also applied to express the professional advice and assistance of a lawyer to his client for his conduct in any legal matter.

The word *cavere* and its derivatives are also used to express the provisions of a law by which anything is forbidden or ordered, as in the phrase *Cautum est lege*, etc. It is also used to express the words in a will by which a testator declares his wish that certain things should be done after his death. The preparation of the instruments of *cautio* was, of course, the business of a lawyer.

It is unnecessary to particularize further the species of *cautio*, as they belong to their several heads in the law.

Cavaedium. See DOMUS.

Cavalry. See EQUES; EXERCITUS.

Cavea. (1) The auditorium of a theatre. See THEATRUM. (2) A coop in which the sacred chickens were kept and carried to the place where the auguries were to be taken, by observing the manner in which they fed (Cic. *N. D.* ii. 3). See AUGUR.

Cavea with Sacred Chickens. (Rich.)

Cavēre. See CAUTIO.

Caÿster or **Caÿstrus** (Κάϋστρος). A celebrated river of Lydia and Ionia, flowing between the ranges of Tmolus and Messogis into the Aegaean, a little northwest of Ephesus. To this day it abounds in swans, as it did in Homer's time. The valley of the Caÿstrus is called by Homer "the Asian meadow," and is probably the district to which the name Asia was first applied.

Cea. See CEOS.

Ceădas (Κεάδας) or **Caeădas** (Καιάδας). A deep cavern or chasm, like the βάραθρον at Athens, into which the Spartans were accustomed to thrust persons condemned to death (Thuc. i. 134).

Cebenna or **Gebenna.** The modern Cevennes; a range of mountains in the south of Gaul, extending north as far as Lugdunum, and separating the Arverni from the Helvii.

Cebes (Κέβης). A Greek philosopher, and disciple of Socrates, and also one of the interlocutors whom Plato introduces in his dialogue entitled *Phaedo*. He was born at Thebes, and composed three dialogues, called *Hebdomé* (Ἑβδόμη), *Phrynichus* (Φρύνιχος), and *Pinax*, or the Picture (Πίναξ). The last is the only one which has come down to us. It is commonly cited by its Latin title *Cebetis Tabula* (i. e. *picta*), and is a moral sketch or picture of human life, written in a pleasing and simple style. Some critics have raised doubts as to the authenticity of this little work. It contains, indeed, a very pure vein of morality, but is not composed, as they think, in the true spirit of the Socratic school; and they are inclined, therefore, to regard it as the work of some Stoic who wished to show that happiness consisted in the practice of virtue. But it is expressly attributed to Cebes by Lucian (*De Mercede Conduct.* 42), and after him by Tertullian (*De Praescript. adv. Haeret.* 39), Diogenes Laërtius (ii. 125), Chalcidius, and Suidas. Wolff was the first among the moderns who ventured to call in question this testimony of the ancients. No work of antiquity has met with a wider circulation. In the Middle Ages it was extremely popular, and it has been translated into almost all the modern languages, including even the Arabic—this version, in fact (of the ninth century A.D.), being our only source for the close of the dialogue. The best editions of Cebes are that of Schweighäuser (Strassburg, 1806); that of Thieme (Berlin, 1810), with German notes of great merit; of Jerram (Oxford, 1877); and of Parsons (Boston, 1887).

Cebrēnis (Κεβρηνίς). Daughter of Cebren, a river god in the Troad, from whom the town of Cebrené, the river Cebren, and the surrounding district, Cebrenia, took their names.

Cecropia. See ATHENAE; ATTICA; CECROPS.

Cecrops (Κέκροψ). A hero of the Pelasgic race, said to have been the first king of Attica. He was married to Agraulos, daughter of Actaeus, by whom he had a son, Erysichthon, who succeeded him as king of Athens, and three daughters, Agraulos, Hersé, and Pandrosos. In his reign Poseidon and Athené contended for the possession of Attica, but Cecrops decided in favour of the goddess. Cecrops is said to have founded Athens—the citadel of which was called Cecropia, after him—to have divided Attica into twelve communities, and to have introduced the first elements of civilized life. (See ATHENAE.) He instituted marriage, abolished bloody sacrifices, and taught his subjects how to

worship the gods. The later Greek writers describe Cecrops as a native of Saïs in Egypt, who led a colony of Egyptians into Attica, and thus introduced from Egypt the arts of civilized life; but this account is rejected by some of the ancients themselves, and by the ablest modern critics.

Cedit Dies. See LEGATUM.

Cedrēnus, GEORGIUS. A Byzantine writer who wrote an historical work beginning with the creation of the world and continuing to the year A.D. 1057. Of his personality nothing is known. The history has been edited by Bekker (Bonn, 1839).

Celaenae (Κελαιναί). A great city in southern Phrygia, situated at the sources of the rivers Maeander and Marsyas. In the midst of it was a citadel, built by Xerxes, on a precipitous rock, at the foot of which the Marsyas took its rise; and near the river's source was a grotto celebrated by tradition as the scene of the flaying of Marsyas (q. v.) by Apollo. The Maeander took its rise in the very palace, and flowed through the park and the city, below which it received the Marsyas.

Celaeno (Κελαινώ). One of the Harpies. See HARPYIAE.

Celenděris (Κελένδερις). A city on the coast of Cilicia Trachea, to the northeast of the Anemurian promontory. It was founded by the Phœnicians, and afterwards received a Samian colony.

Celer. (1) The joint architect with Severus of the famous Golden House (*Domus Aurea*) of Nero. See PALATIUM. (2) See EGNATII.

Celĕres. According to Livy (i. 15, 8), a bodyguard of 300 chosen by Romulus to attend him in peace and war. Livy leaves it uncertain whether they were cavalry or infantry. According to some accounts (cf. Dionys. ii. 13, 16, 29) they were infantry; while according to others (id. ii. 64) they included both, or were only cavalry. The last view is that which has been usually taken.

Celes (κέλης). (1) A horse for riding as distinguished from a draught or carriage horse. (2) A race-horse (Plin. *H. N.* xxxiv. § 10). (3) The same as CELOX (q. v.).

Celētrum. A town in Macedonia on a peninsula of the Lacus Castoris. It is probably to be identified with the later Diocletianopolis.

Celeus (Κελεός). King of Eleusis, husband of Metanira, and father of Demophon and Triptolemus. He received Demeter with hospitality at Eleusis, when she was wandering in search of her daughter. The goddess, in return, wished to make his son Demophon immortal, and placed him in the fire in order to destroy his mortal parts; but Metanira screamed aloud at the sight, and Demophon was destroyed by the flames. Demeter then bestowed great favours upon Triptolemus. (See TRIPTOLEMUS.) Celeus is described as the first priest, and his daughters as the first priestesses, of Demeter at Eleusis. See the Homeric hymn to Demeter, 146 foll.

Cella. (1) In its primary sense, *cella* means a store-room, of which the following were the principal descriptions: *cella penaria* or *penuaria*, where all kinds of provisions (*penus*) were stored, especially those of which a stock was laid in for a long time; *cella promptuaria*, *promptuarium*, or *promum*, the larder, where meat and other things required for immediate consumption were kept; *cella olearia*, the magazine of an olive-yard in which the oil was stored, and which, according to the treatises on farming, ought to be lighted from the south, that the oil might not be chilled in winter; while the *cella vinaria* should have a northern aspect, to avoid excessive heat and great changes of temperature. The *cella vinaria* described in the ancient authors is the store-room of a vineyard, in which the new wine was kept in *dolia* or *cupae*, while older wine was put into *amphorae* and matured in the *apotheca*. The *cella vinaria* was partly underground (Becker-Göll, *Gallus*, iii. 51, 422). The *cella vinaria* of a wine-merchant was discovered in 1789 under the walls of Rome. It was raised a little above the level of the ground, and divided into three compartments, the first ornamented with arabesques and a mosaic pavement, the second unpaved and containing a row of very large *dolia* two-thirds imbedded in sand, while the third was a narrow gallery, six feet high and eighteen feet long, with various earthenware vessels, also partially sunk in the sand and ranged in double rows against each wall. (See DOLIUM.) The slave to whom the charge of these stores was intrusted was called *cellarius*, *a rationibus cellae*, *promus*, *promus condus*, or *procurator peni*; under him was the *subpromus*. (2) Any number of small rooms clustered together. Thus the word was applied to the dormitories of slaves (Hor. *Sat.* i. 8. 8), to the bedrooms of an inn, and to the

Slave Cellae. (Rich.)

vaults of a brothel (Petron. 8, 4). A brothel is also called *cella inscripta*, because the price of each inmate was inscribed on the door (Mart. xi. 45, 1). The porter's lodge or janitor's office is called *cella ostiarii* (Petron. 29) or *cella ianitoris* (Suet. *Vitell.* 16). (3) In the baths the *cella caldaria*, *tepidaria*, and *frigidaria* are respectively those which contained the hot, tepid, and cold baths. See BALNEAE. (4) The interior of a temple was also called *cella*. See TEMPLUM.

Cellar. See APOTHECA; CELLA; DOMUS.

Cellarius. See CELLA.

Celox (κέλης, κελήτιον), from κέλλω, *cello*, "to urge on." A swift boat. This peculiar build of boat is said to have been invented by the Rhodians (Plin. *H. N.* vii. § 208). It was much used by pirates, but was more especially employed as attendant on the fleet, either for bringing news or negotiating with the enemy. Further, each State appears to have had such boats for various official purposes, just as we hear of δημοσίαι ἄκατοι at Athens (cf. Plaut. *Capt.* iv. 2. 93). Built for swiftness, they were necessarily narrow, and Appian calls one ὀξύ. They had no decks, and only one bench of oars (Polyb. v. 62, 3).

Celsus. (1) AULUS CORNELIUS. A celebrated physician. His native city is unknown; some writers contending for Rome, others for Verona. The time in which he lived has also been made a

subject of controversy, but the most probable opinion is that he lived in the first half of the first century A.D., and wrote under Tiberius and Claudius. Celsus composed a large work, on the plan, in some measure, of an encyclopædia, in which he treated of philosophy, jurisprudence, warfare, agriculture, and medicine. It was entitled *De Artibus*. Unhappily, however, only the eight books (from the sixth to the fourteenth) which treat of medicine have come down to us.

Roman literature, otherwise so barren of good medical authorities, can boast of possessing in Celsus one who, for elegance, terseness, learning, good sense, and practical information, stands unrivalled. His preface contains an admirable exposition of the principles of the different schools which had risen up in medicine before his time; and in the remaining part of the first book there are many pertinent remarks on the best method of preserving the health. In the second, which treats of the general symptoms and phenomena of diseases in general, he has drawn freely from Hippocrates. The last part of this book is devoted to the subject of diet and regimen; and here his views will, with a few exceptions, be admitted by the unprejudiced to be wonderfully correct. In the third book he has treated of fevers; and here his distinctions, remarks upon critical days, and treatment will be found to be particularly deserving of attention. The other parts of his work it is unnecessary to go over minutely; but one may point out, as particularly valuable, his divisions and treatment of ulcers. It is remarkable that no ancient writer has treated of the diseases of the sexual organs with the same precision that he has done. The different shades of cutaneous diseases he has marked with a surprising degree of precision. But of the whole work the most interesting part, perhaps, is the seventh book, which treats of the operations of surgery according to the views of the Alexandrian School. His account of those performed upon the eye may be instanced as particularly excellent. The operation of lithotomy, as described by him, though not exactly the same as that now generally practised, has had, even in modern times, its admirers. Celsus has the merit of being the first author who makes mention of the application of the ligature to arteries for stopping hemorrhage. The best MSS. of Celsus are in the Vatican, the Laurentian Library, and in Paris — the oldest being of the tenth century. They all have a common origin. The best editions are those of Targa (Padua, 1769, and Verona, 1810); Milligan (Edinb. 1831); Ritter and Albers (Cologne, 1835); Renzi (Naples, 1851); and Daremberg (Leipzig, 1859). Milligan's edition has a good index, and that of Renzi a good lexicon. See Kissel, *Celsus, eine hist. Monog.* (Giessen, 1844), and on the Latinity, Brolen, *De Elocutione Celsi* (Upsala, 1872); also the articles CHIRURGIA and MEDICINA. (2) A Platonic, or perhaps Epicurean, philosopher who lived about A.D. 180. His name is famous as that of one of the bitterest enemies of Christianity. From a motive of curiosity, or, perhaps, in order to be better able to combat the new religion, Celsus caused himself to be initiated into the mysteries of Christianity, and to be received into that secret society which St. Clement of Rome is supposed to have founded. It appears, however, that the sincerity of the neophyte was distrusted, and that he was refused admittance into the higher ceremonies. The discontent to which this gave rise in the breast of Celsus inflamed his resentment against the Christians, and he wrote a work against them, entitled Ἀληθὴς Λόγος, "A true discourse," in which he employed all the resources of his intellect and eloquence to paint Christianity as a ridiculous and contemptible system, and its followers as a sect dangerous to the well-being of the State. There is no falsehood to which he has not recourse in order to represent in an untrue light the Christian scheme of morals, to parody and falsify the text of the Old and New Testaments, and to calumniate the character of Jesus Christ and his disciples. He styles Christianity a doctrine tending to pervert and corrupt the human race, and exhorts the government to extirpate the sect if it wishes to save the Empire. The discourse itself is lost; but Origen, who refuted it, in a work divided into eight books, has given us so complete an extract from it that by the aid of this we can follow all the principal reasoning of the author. Celsus wrote also a work against magicians and sorcerers (Κατὰ Μάγων), which is cited by Origen and Lucian. The latter, who was his friend, addressed to him his memoir on Alexander, the false prophet, in which he extols the wisdom of Celsus, his love for truth, and his amiable manners. See Keim, *Celsus' wahres Wort* (1873); Aubé, *La Polémique Païenne* (1878); and Pélagaud, *Étude sur Celse* (1878). (3) ALBINOVĀNUS, a friend of Horace, warned against plagiarism (*Epist.* i. 3, 15) and pleasantly ridiculed (*Epist.* i. 8) for his foibles.

Celtae (Κελταί). The ancients had no comprehensive name to denote generically the collective Keltic peoples. The Continental Kelts were called *Galli* or *Celtae* by the Romans, and Γαλάται or Κελταί by the Greeks, all these names being applied only to the Kelts of the Continent, with whom, in the popular view, the people of Britain had no ethnic relation. Caesar understood the racial identity of the Britanni with the Galli, Celtae, and Belgae, but the general usage of the words as stated above embodied the prevailing belief.

According to Prof. Rhys, it would appear probable that the west of Europe had in early times experienced two Keltic invasions, since the two distinct names in Greek and Latin are not used as synonymous, but as denoting two different ethnic divisions. Thus in the ecclesiastical writer Sulpicius Severus (fourth century A.D.), *Celticé* is differentiated from *Gallicé* (Migne, *Patrolog. Lat.* vol. xx. col. 201, *Dial.* i. 26); and Caesar, three centuries before, wrote that *one* of the three peoples of Gaul was called *Celtae* in its own tongue.

The two waves of migration may roughly be represented geographically as follows: (1) the Kelts of Gaul, Spain, the Isle of Man, Ireland, and Scotland; and (2) the Kelts dwelling near the Rhine, the Alps, and in England and Wales. Schleicher, in the *Rheinisches Museum* for 1859, expounded his theory of a Kelto-Italic period, according to which the people who afterwards separated into Greeks, Italians, and Kelts are regarded as having left the early home of the race together, the Greeks branching off first into Hellas. Then followed the Italo-Keltic period, during which the Italo-Kelts developed those linguistic forms which the Keltic and the Latin alone possess in common — e. g. the future in *-bo*, the passive formation in *-r*, the dative ending *-bus*,

and the formative suffixes in *-tio* and *-tric*. See Peile, *Introduction to Greek and Latin Etymology*, pp. 21–27 (2d ed. 1872); and H. Ebel, *Keltische Studien*.

Historically, the Keltic and Latin races come into contact not earlier than the fifth century B.C., when the Gauls crossed the Alps and began first to press against the Etruscan communities in the north of Italy. Their leader, Bellovesus the Biturigan, directed the Insubrian migration into the valley of the Padus (Po), where the oldest Keltic settlement was established, to develop later into the important city of Mediolanum (Milan). A second invasion followed, and founded the towns of Brixia (Brescia) and Verona. Thenceforward, tribe after tribe poured into Italy, dislodging the Etruscans, and at last (B.C. 396) coming in contact with the Umbrians, and in 388 facing the Romans in successful battle. This was the year in which Brennus with 70,000 Gauls crossed the Tiber, won the bloody victory of the Allia (q. v.) on July 18, and three days later marched through the open gates of Rome. (On the date, see Mommsen, *Hist. of Rome*, i. 428, Amer. ed. 1888.) They often returned to Latium, but were less successful in following years. The Romans, who had at first despised them, now strained every nerve to avenge the defeat of the Allia. Camillus (q. v.) routed them at Alba (B.C. 367); Servilius Ahala repulsed them in front of the Porta Collina (B.C. 360); and the dictator Gaius Sulpicius Peticus won a decisive victory over them in 358. Yet in the year 350 they had again returned, and encamped for an entire winter on the Alban Mount, joining with the Greek pirates for plunder, till Lucius Furius Camillus, son of the great general, dislodged them. The increasing power of the Romans, and perhaps, as Mommsen suggests, changes beyond the Alps, put an end to the migrations from Gaul; and the Kelts began to settle down into a less predatory condition between the Alps and the Apennines as far south as the Abruzzi, the chief tribes being the Insubres, Boii, Lingones, and Senones, the territory of the last-named being on the coast of the Adriatic, from Ariminum to Ancona, the so-called Ager Gallicus. Here the Kelts, uniting with the Ligurians and Etrurians, gradually took on the character of a settled community, until at last they, with the rest of Italy, became subject to the all-embracing power of Rome.

Of the Kelts who first swept over Italy and destroyed Rome, the historians give a picturesque account. Brave, open, impetuous, they were swayed by every passing impression; "they devoted themselves chiefly to two things—fighting and *esprit*" (*rem militarem et argute loqui*, Cato, *Orig.* ii. frag. 2, ed. Jordan). Despising agriculture as disgraceful and unfit for freemen, they followed the profession of arms like soldiers of fortune. The Romans before the battle of the Allia had despised them as barbarians, and on the occasion of that memorable conflict had sent against them only an ill-organized and over-confident army. The legionaries were appalled when the onset of these fierce warriors smote the Roman phalanx. Stripped naked for battle, sword in hand, utterly heedless of death, the Keltic hosts of Brennus fell upon their enemies with an ardour and impetuosity that swept away an army in an instant. Yet, with all their bravery and brilliancy, the Kelts never made any lasting political impression upon the countries that they overran. They lacked the political, constructive instinct which the Latins and the Germans, too, possessed. They destroyed, but did not create, and in a few centuries had everywhere succumbed to the steadier valour and more enduring power of the Romans.

Celtibēri. A powerful people in Spain, consisting of Kelts, who crossed the Pyrenees at an early period, and became mingled with the Iberians, the original inhabitants of the country. They dwelt chiefly in the central part of Spain. Their country, called Celtiberia, was mountainous and unproductive. They were a brave and warlike people, and proved formidable enemies to the Romans. They submitted to Scipio Africanus in the Second Punic War, but the oppression of the Roman governors led them to rebel, and for many years they successfully defied the power of Rome. They were reduced to submission on the capture of Numantia by Scipio Africanus the Younger (B.C. 134), but they again took up arms under Sertorius, and it was not till his death (B.C. 72) that they began to adopt the Roman customs and language.

Celtĭci. (1) A people of Lusitania, whose territory lay below the mouth of the Tagus, and between that river and the Turdetani. They were of Keltic origin, as their name imports. Their chief town was Pax Iulia, now Beja. (2) A people in Gallaecia.

Cemeteries. See CATACUMBAE; SEPULCRUM.

Cena, less correctly COENA (*δεῖπνον*). The principal meal of the Greeks and Romans, corresponding to our dinner rather than supper. As the meals are not always clearly distinguished, it will be convenient to give a brief account of all of them under the present head.

I. GREEK. The materials for an account of the Greek meals, during the classical period of Athens and Sparta, are almost confined to incidental allusions of Plato and the comic writers. Several ancient authors, termed *δειπνολόγοι*, are mentioned by Athenaeus; but, unfortunately, their writings only survive in the fragments quoted by him. His great work, the *Deipnosophistae*, is an inexhaustible treasury of this kind of knowledge, though very ill-arranged. See ATHENAEUS.

The poems of Homer contain a real picture of early manners, in every way worthy of the anti-

quarian's attention. As they stand apart from all other writings, it will be convenient to exhibit in one view the state of things which they describe. It is not to be expected, however, that the Homeric meals should at all agree with the customs of a later period. Athenaeus (i. 8), who has entered fully into the subject, remarks on the simplicity of the Homeric banquets, in which kings and private men all partake of the same food. It was common enough for royal personages to prepare their own meals, and Odysseus (*Od.* xv. 322) declares himself no mean proficient in the culinary art.

Three names of meals occur in the *Iliad* and *Odyssey*—ἄριστον, δεῖπνον, δόρπον or δόρπος. The word ἄριστον uniformly means the early as δόρπον does the late meal; but δεῖπνον, though generally meaning the mid-day meal, is sometimes used where we should expect ἄριστον (*Od.* xv. 397) or even δόρπον (*Od.* xvii. 170). We should be careful, however, how we argue from the unsettled habits of a camp to the regular customs of ordinary life.

In the Homeric Age it was usual to sit at table; and this custom, we are told, was kept up in historical times by the Cretans. Each guest had generally his own table, and an equal share of food was placed before each (hence δαὶς ἔϊση), except when a specially distinguished guest was honoured by getting a larger portion (*Il.* vii. 321). What strikes us as peculiar in the Homeric dinners is their religious character. They partake more or less of the nature of a sacrifice, beginning with an offering of part of the meat to the gods, and both beginning and ending with a libation of wine; while the terms for slaughtering animals for a meal (ἱερεύειν, θύειν) and for the slaughtered animals (ἱερήϊα) are borrowed from the language of religious ceremony. The description of the dinner given by Eumaeus to Odysseus (*Od.* xiv. 420) gives a good picture of a dinner in the Homeric Age in humble society; and that given by Achilles to Odysseus (*Il.* ix. 219 foll.) may be taken as typical of the banquets of the great in the same period.

Beef, mutton, swine's and goat's flesh were the ordinary meats, generally eaten roasted, though sometimes boiled (*Il.* xxi. 363). Fish and fowls were almost unknown (Eustath. *ad* Hom. *Od.* xii. 330). Many sorts of wine are mentioned, notably the Maronean and the Pramnian. Nestor had wine eleven years old (*Od.* iii. 391). A small quantity was poured into each guest's cup to make a libation with (ἐπαρξάμενοι δεπάεσσιν), before the wine was regularly served out for drinking. The guests drank to each other (*Od.* iii. 40), and a second libation to the gods closed the repast (*Od.* iii. 332).

The Greeks of a later age usually partook of three meals, called ἀκράτισμα, ἄριστον, and δεῖπνον. The last, which corresponds to the δόρπον of the Homeric poems, was the evening meal or dinner; the ἄριστον was luncheon; and the ἀκράτισμα, which answers to the ἄριστον of Homer, was the early meal or breakfast.

The ἀκράτισμα was taken immediately after rising in the morning (Aristoph. *Aves*, 1286). It usually consisted of bread dipped in unmixed wine (ἄκρατος), whence it derived its name (Athen. i. 11).

Next followed the ἄριστον or luncheon. The time at which it was taken is uncertain, though we may conclude from many circumstances that it was about the middle of the day, and that the meal answered to the Roman *prandium*. The market time, at which provisions seem to have been bought for the ἄριστον, was from nine o'clock till noon. In Aristophanes (*Vesp.* 605–612) Philocleon describes the pleasure of returning home after attending the courts, and partaking of a good ἄριστον. It was usually a simple meal, but of course varied according to the habits of individuals (Xen. *Oecon.* xi. 18).

The principal meal, however, was the δεῖπνον. It was usually taken rather late in the day, frequently not before sunset (Lysias, *de Caed. Eratosth.* § 22).

The Athenians were a social people, and were very fond of dining in company. Entertainments were usually given, both in the Heroic Age and later times, when sacrifices were offered to the gods, either on public or private occasions; and also on the anniversary of the birthdays of members of the family, or of illustrious persons, whether living or dead. Plutarch (*Symp.* viii. 1, § 1) speaks of an entertainment being given on the anniversary of the birthdays of both Socrates and Plato.

Dining clubs were very common, the members of which contributed each a certain sum of money, called συμβολή, or brought their own provisions with them. When the first plan was adopted, they were said ἀπὸ συμβολῶν δειπνεῖν, and one individual was generally intrusted with the money to procure the provisions and make all the necessary preparations (Terence, *Eunuch.* iii. 4). When the second plan was adopted, they were said ἀπὸ σπυρίδος δειπνεῖν, because the provisions were brought in baskets. This kind of entertainment is spoken of by Xenophon (*Mem.* iii. 14, § 1). In Homer the word ἔρανος corresponds with the later ἀπὸ συμβολῶν δεῖπνον, while εἰλαπίνη denotes a public entertainment on a festival or some such occasion (Athen. viii. 362 e).

The most usual kind of entertainments, however, were those in which a person invited his friends to his own house. It was expected that they should come dressed with more than ordinary care, and also have bathed shortly before; hence, when Socrates was going to an entertainment at Agathon's, we are told that he both washed and put on his shoes—things which he seldom did (Plato, *Symp.* 174 A). As soon as the guests arrived at the house of their host, their shoes or sandals were taken off by the slaves, and their feet washed (ὑπολύειν and ἀπονίζειν). In ancient works of art we frequently see a slave or other person represented in the act of taking off the shoes of the guests, of which an example is given on the next page from a terra-cotta in the British Museum. After their feet had been washed, the guests reclined on the κλῖναι or couches.

Sitting at meals was, as has already been remarked, the practice of the Heroic Age, but in the classical period was confined to Crete. Women, however, when admitted to banquets on extraordinary occasions, such as a marriage (for they were generally excluded from table when guests were invited), took the sitting posture (Lucian, *Conv.* 13), and so did children (Xen. *Symp.* i. 8). A very common representation on funeral monuments is the family meal, with the husband reclining, and the wife and children sitting at his side. Where women are represented as reclining at a meal, they are meant for *hetaerae*.

It was usual for only two persons to recline on

each couch. In ancient works of art we usually see the guests represented in this way, but sometimes there is a larger number on one long κλίνη. The guests reclined with their left arms on striped pillows (ὑπαγκώνια), and having their right arms free. (Cf. Aristoph. *Vesp.* 1210.)

Slave taking off the Shoes of a Guest. (British Museum.)

After the guests had placed themselves on the κλῖναι, the slaves brought in water to wash their hands; and then the dinner was served up, the expression for which was τὰς τραπέζας εἰσφέρειν (Aristoph. *Vesp.* 1216). By τὰς τραπέζας εἰσφέρειν we are to understand not merely the dishes, but the tables themselves (Philoxen. *ap.* Athen. iv. 146 f). It appears that a table, with provisions upon it, was placed before each κλίνη: and thus we find in all ancient works of art which represent banquets or symposia, a small table or tripod placed before the κλίνη: and when there are more than two persons on the κλίνη, several such tables. These tables were evidently small enough to be moved with ease.

In eating, the Greeks had no knives or forks, but made use of their fingers only, except in eating soups or other liquids, which they partook of by means of a spoon (μύστρον), or a piece of bread scooped out in the shape of a spoon (μυστίλη) (Suidas, s. v. μυστίλη). After eating, they wiped their fingers on pieces of bread, called ἀπομαγδαλιαί, which were then thrown to the dogs (Aristoph. *Eq.* 415). Napkins (χειρόμακτρα) were not used till the Roman period.

It appears that the arrangement of the dinner was intrusted to certain slaves. The one who had the chief management of it was called τραπεζοποιός or τραπεζοκόμος (Athen. iv. 170 e; Pollux, iii. 41; vi. 13). The Greek word for a *menu* was γραμματίδιον (Athen. ii. 49 d).

It would exceed the limits of this work to give an account of the different dishes which were introduced at a Greek dinner, though their number is far below those which were usually partaken of at a Roman entertainment. The most common food among the Greeks was the μάζα, a kind of soft cake, which was prepared in different ways, as appears by the various names which were given to it (Pollux, vi. 76). The φυστὴ μάζα, of which Philocleon partakes on returning home from the courts (Aristoph. *Vesp.* 610), is said by the Scholiast to have been made of barley and wine. The μάζα continued to the latest times to be the common food of the lower classes. Wheaten or barley bread was the second most usual species of food; it was sometimes made at home, but more usually bought at the market. The vegetables ordinarily eaten were mallows (μαλάχη), lettuces (θρίδαξ), cabbages (ῥάφανοι), beans (κύαμοι), lentils (φακαί), etc. Pork was the favourite animal food, as was the case among the Romans. Sausages also were very commonly eaten. It is a curious fact, which Plato (*Rep.* iii. 13, 404) has remarked, that we never read in Homer of the heroes partaking of fish. In later times, however, fish was one of the favourite foods of the Greeks, insomuch so that the name of ὄψον was applied to it κατ' ἐξοχήν. A minute account of the fishes which the Greeks were accustomed to eat is given at the end of the seventh book of Athenaeus, arranged in alphabetical order.

The ordinary meal for the family was cooked by the mistress of the house, or by the female slaves under her direction; but for special occasions professional cooks (μάγειροι) were hired, of whom there appear to have been a great number (Diog. Laërt. ii. 72). They are frequently mentioned in the fragments of the comic poets, and those who were acquainted with all the refinements of their art were in great demand in other parts of Greece besides their own country. The Sicilian cooks, however, had the greatest reputation, and a Sicilian book on cookery by one Mithaecus is mentioned in the *Gorgias* of Plato (p. 518 B); but the most celebrated work on the subject was the Γαστρολογία of Archestratus (Athen. iii. 104 b).

A dinner given by an opulent Athenian usually consisted of two courses, called respectively πρῶται τράπεζαι and δεύτεραι τράπεζαι. Pollux (vi. 83), indeed, speaks of three courses, which was the number at a Roman dinner; and in the same way we find other writers under the Roman Empire speaking of three courses at Greek dinners; but before the Roman conquest of Greece and the introduction of Roman customs, we read of only two courses. The first course embraced the whole of what we consider the dinner—namely, fish, poultry, meat, etc. (ἐδέσματα); the second, which corresponded to our dessert and the Roman *bellaria*, consisted of different kinds of fruit, sweetmeats, confections, etc. (τρωγάλια). The Roman first course of salads, vegetables, etc., was unknown to the Greeks in the time of their independence.

When the first course was finished, the tables were taken away (αἴρειν, ἐκφέρειν, βαστάζειν τὰς τραπέζας), and water was given to the guests for the purpose of washing their hands. Crowns made of garlands of flowers were also then given to them, as well as various kinds of perfumes. Wine was not drunk till the first course was finished; but as soon as the guests had washed their hands, unmixed wine was produced in a large goblet, called μετάνιπτρον or μετανιπτρίς, of which each drank a little, after pouring out a small quantity as a libation. This libation was said to be made to the "good spirit" (ἀγαθοῦ δαίμονος), and was usually accompanied with the singing of the pæan and the playing of flutes. After this libation mixed wine was brought in, and with their first cup the guests drank to Ζεὺς Σωτήρ (Xen. *Symp.* ii. 1). With the σπονδαί the δεῖπνον closed; and at the introduction of the dessert (δεύτεραι τράπεζαι) the πότος, συμπόσιον, or κῶμος commenced, of which an account is given in the article SYMPOSIUM.

II. Roman. The Roman meals were *ientaculum* (*ἀκράτισμα*), *prandium* (*ἄριστον*), *merenda*, and *cena* (*δεῖπνον*).

Ientaculum, also called *silatum* (Fest. p. 346) because the wine used was sometimes perfumed with *seselis* or *silis*, was a slight morning meal taken at different times by early and late risers. Thus we find it taken by schoolboys at cock-crow (Mart. xiv. 233); but generally the Romans used to eat it about the third hour, certainly not later than the fourth (Mart. viii. 67, 9). The schoolboys had a kind of pancake (*adipata*); but usually the meal consisted of bread seasoned with salt or with honey, or dipped in wine, or of dates and olives. Alexander Severus used to have milk, eggs, and *mulsum* (Lamprid. *Alex. Sev.* 30). Bread and cheese (Apul. *Met.* i. 18), and even meat, appear to have been sometimes taken (Mart. xiii. 31); but to make the *ientaculum* a heavy meal was not in accordance with Roman manners.

As with our own fathers noon was the time for the principal meal of the day—viz., dinner—so with the primitive Romans this was the time for *cena* (Fest. 54; cf. p. 338, Müll.). It was only in later times that *prandium* became customary (Isid. *Orig.* xx. 2, 14). We may fairly translate this word "luncheon." When city life pushed the dinner-hour later and later, a mid-day meal became essential. It was taken about the sixth hour (*Anth. Pal.* x. 43, and scholiast), not so early as the fifth nor so late as the seventh. But if one took no *ientaculum*, he must needs take the *prandium* earlier, and this is the reason why we find Ausonius eating his *prandium* a little after the fourth hour (*Ephemeris* in *Corp. Poet. Lat.*, ed. Weber, p. 1217). *Prandium* seems to have been properly the name of the soldier's morning meal (Isid. *Orig.* xx. 2, 11). For the ordinary citizen, the meal varied from a piece of bread eaten in the hand (Sen. *Ep.* 83, 6) to an elaborate entertainment, with hot and cold fish, fowl, and meat, with vegetables and fruit. (Cf. Mayor on Plin. *Ep.* iii. 5, 11.) The meats were rather savoury dishes than solids—e. g. they were kernels of pork (*glandulae, glandia*, "sweetbreads"?). Often, as at our luncheons, the meat of the previous day's dinner was served cold or warmed up (Plaut. *Pers.* i. 3. 25). Wine (Tac. *Ann.* xiv. 2), hot wine and water (Mart. viii. 67, 7), and *mulsum* (Cic. *Cluent.* 60, 166) were drunk at it. This latter passage refers to a large wedding breakfast which is called *prandium*.

Merenda was in ancient times an afternoon meal, given to workmen, also called *antecenium* (Nonius, p. 59). If *prandium* was not taken at mid-day, *merenda* was a late *prandium* taken in the afternoon (Calp. *Ecl.* v. 60).

The principal meal of the day was *cena*, "dinner." The eighth hour in summer and the ninth in winter was sometimes the time for the bath (Plin. *Ep.* iii. 1, 8), and after that came dinner; but probably the bath was usually a little earlier. The ninth was considered the normal dinner-hour (Cic. *Fam.* ix. 26), though business must have often deferred it till after the tenth, and even later (Mart. iii. 36, 5). These were homely repasts; for the more fashionable banquets were, the earlier they began (Palmer on Hor. *Sat.* ii. 8, 3). Banquets which began earlier than the ninth hour were called *tempestiva convivia*, or *de die cenare* (Catull. 47, 5). The *cena* always lasted for what would seem to us a very long time. Even Pliny the Elder, who was so miserly of his time, used to spend three hours at his dinner (Plin. *Ep.* iii. 5, 13), while old Cato used to remain conversing over this meal until late at night (Cic. *Sen.* 14, 46). The business of the day was done, and the time for enjoyment had arrived; there was, accordingly, no necessity to break into the meal till bedtime, which was much earlier than with us, as the Romans got up at daybreak. Symposia, of course, lasted till midnight, and even morning. The ancient Romans, like the ancient Greeks, used to sit at dinner (Isid. *Orig.* xx. 11, 9), and Columella (xi. 1, 19) thinks the *vilicus* should not recline except on holidays; and Cato the Younger, in sign of mourning, always sat at meals after the battle of Pharsalia (Plut. *Cat. Min.* 56).

Symposium. (Millin.)

However, in the times with which we are best acquainted, the Romans dined in the *atrium* (Serv. on *Aen.* i. 730), in the circle of the family—the men reclining; the wife sitting on the *lectus* (Val. Max. ii. 1, 21); the children beside the couches (Suet. *Claud.* 32), or on a lower couch (Suet. *Aug.* 64), and with a separate and more frugal table (Tac. *Ann.* xiii. 16); the subordinate persons (Plaut. *Capt.* iii. 1, 11) and slaves on benches (*subsellia*). It was customary for the wife and children to dine with the men, except, apparently, in times of mourning (Suet. *Calig.* 24), though, of course, there were gentlemen's dinner-parties (Hor. *Sat.* ii. 8).

On the other hand, we find cases of women reclining where there was conceived to be nothing bold or indelicate in their posture. Thus, in the following illustration, taken from Montfaucon (*Ant. Exp. Suppl.* iii. 66), which seems intended to represent a scene of perfect matrimonial felicity, the husband and wife recline on a sofa of rich materials. A three-legged table is spread with viands before them, and their two sons are in front of the sofa, one of them sitting, in the manner above described, on a low stool, and playing with the dog. Several women and a boy are performing a piece of music for the entertainment of the married pair.

A Family Feast. (Montfaucon.)

The very wealthy Romans built separate dining-rooms, and to the article TRICLINIUM and those on LECTUS and PULVINUS the reader is referred for the arrangement of the couches and of the guests at table. For the tables, see MENSA.

During the later Republic and the Empire the number of guests at a private dinner-party was usually nine, and sometimes less (Gell. xiii. 11, 2), but to have more was considered unseemly (Cic. *Pis.* 27, 67). Generally uninvited guests (*umbrae*) were brought by one of the invited guests to make up the nine (*Epist.* i. 5. 28); or perhaps a client was asked, in order not to leave a place empty (Juv. v. 17). The guests used to dress for dinner—the dinner dress (*vestis cenatoria*) being generally a light, highly ornamented coloured tunic (*prasina synthesis*, Mart. x. 29. 4). It cannot be supposed that the changing of one's *synthesis* during dinner was other than vulgar ostentation (Mart. v. 79, 2), but it was sometimes required by religious ceremonials. Dress-sandals (*soleae*) were generally worn in the house of the host, but were taken off (*demere soleas*) before reclining for the meal. They were taken charge of by the guest's own slave whom he brought with him, for each guest had his own footman (*servus a pedibus*) to wait on him at table (Plaut. *Truc.* ii. 4, 16; Petron. 58 and 62). If the guest did not come in a litter, but walked, he often wore boots (*calcei*, Plin. *Ep.* ix. 47, 3). The regular expression for rising from table was *soleas poscere* (Hor. *Sat.* ii. 8. 77).

The places were pointed out to the guests by the *nomenclator* (Athen. ii. 47 e); and when they had taken up their reclining position (*accumbere, discumbere*) at table, water was brought round and poured over the hands of each guest (Plaut. *Pers.* v. 1. 17), and the hands wiped in a towel or napkin (*mantela, mappa*) provided by the host, though sometimes brought by the guest, in order to carry away the presents that the host frequently gave. (See APOPHORETA.) Later *mantele* was used for a table-cloth (Isid. *Orig.* xix. 26. 6). It was not till towards the end of the first century A.D. that table-cloths began to be used. Martial appears to be the first to allude to them (ix. 59, 7). Sometimes, apparently, grace was said (Quintil. *Declam.* 301, p. 583, ed. Burmann), and then the first of the three parts of the meal was proceeded with.

This was called *promulsis* or *gustatio, gustus;* also *frigida mensa.* The cold dishes of this part of the meal used in early times to occupy a place at the conclusion (Plut. *Quaest. Conviv.* viii. 9, 28). It consisted rarely of substantial meats, mostly of *hors d'œuvres* which whetted the appetite, and also served the purpose of the modern dinner-pill—e. g. shell-fish (Hor. *Sat.* ii. 4. 28), vegetables with savoury sauces (Mart. iii. 50, 4), olives (Hor. *Sat.* ii. 2, 46), mushrooms (Juv. v. 147), and also eggs; from which came the expression *ab ovo ad mala* (Hor. *Sat.* i. 3, 6), to signify from the beginning to the end of the meal. See further for the edibles which constituted the *gustus*, Apicius, 4, 5; Plin. *Ep.* i. 15; Macrob. *Sat.* l. c.; Celsus, ii. 29; Mart. x. 48, 7–12; v. 78, 3–5. The drink was *mulsum*, "mead"—a mixture of wine and honey; for plain wine was thought too strong (Hor. *Sat.* ii. 4, 26). Hence the term *promulsis*—i. e. the *mulsum* taken before the chief portion of the meal.

After this, followed the *cena* proper, which in early times, and even later in simple families, was the whole dinner (Mart. x. 48. 3). It is from Lucullus that Athenaeus dates the beginning of extravagance in dining. When this part of the meal consisted of several courses (*fercula, missus*)—we hear of six, Augustus never had more (Suet. *Aug.* 74), and seven (Juv. i. 94), but the usual number was three (Mart. xi. 31)—the separate courses were called *prima, altera, tertia cena*, and appear to have followed in a regular order (Lucian, *De Merc. Cond.* 15). Each course was brought in on a tray (*repositorium*, Petron. 33), which was generally of wood, but sometimes of silver; and the arrangement of the viands on each dish and of the dishes on these trays was a branch of art (Juv. vii. 184), the artist being called *structor*. Indeed, the arranging of the whole dinner was so important a function that it required a special major-domo called *tricliniarcha* (Henzen, Index, p. 189), with his special *servi tricliniarii* (Henzen, 6367). It was probably only at the imperial court that there were tasters (*praegustatores*). Between the *promulsis* and the *cena*, as well as after each course of the *cena*, the *repositorium* was carried away and brought back with the following course, the table having been previously wiped down (Hor. *Sat.* ii. 8. 11), and the bits that had fallen having been gathered up by the *analecta* (Mart. vii. 20. 17). Occasionally the carver (*carptor, diribitor, scissor*), whose function the *structor* sometimes fulfilled (Mart. x. 48. 15), carved the meat (Petron. 36 and 40) at the open side of the table, and it was carried round by slaves (Petron. 33 and 40). Carving, too, was a branch of art and had its learned professors (Juv. xi. 137; cf. v. 120). Sometimes the course was put on the table and the guests themselves took what they desired, and in the way they did so it was easy to see what guests had the manners of good society (Lucian, *De Merc. Cond.* 15). There appear to have been *menus* (γραμματίδια, Athen. ii. 49 d). Between each course the guests washed their hands (Lamprid. *Heliog.* 25), for it must be remembered that the Romans used to eat with their fingers (Mart. v. 78, 6), except in the case of soup, eggs, and shell-fish, for which a *coclear* (q. v.) and a *ligula* (q. v.) were used.

The viands served up at luxurious dinner-parties are far too numerous to be described. Elaborate descriptions will be found in Hor. *Sat.* ii. 8; Macrob. *Saturn.* ii. 9, 12; Petron. 33 foll.; also in Becker-Göll, *Gallus*, chap. 8. They contained, as Philo says, "all the products of land and sea, rivers and air." Copious accounts of the different kinds of foods and drinks are given in *Gallus*, iii. 331–367, 412–442; Marquardt, *Privatleben*, 398–448; Daremberg and Saglio, s. v. *Cicaria.* To admit of the gluttony required to consume such dinners, vomiting was resorted to, rules for which were

laid down by physicians (Cels. i. 3, 29, ed. Krause; Galen, vi. 391)—an indirect proof of the prevalence of over-eating among the wealthy. But such extravagance must have been confined to the upper classes, and can give us no idea of ordinary family meals. The bill of fare of a plain dinner is to be found in Martial (x. 48, 13 foll.). The main course consisted of kid, cutlets (*ofellae*), beans, early sprouts (*prototomi*), chicken, and cold ham. While eating, wine was usually drunk (Petron. 34), but in small quantities, for it was thought to blunt the taste (Hor. *Sat.* ii. 8, 38).

After the *cena* proper was taken away, and the tables were removed, the offerings to the gods (the *mola salsa*, etc.) were thrown into the hearth; and when a slave announced that the gods were propitious, silence for a short time was observed in respect for the gods (Serv. on *Aen.* i. 734). The gods were the Lares, and if they were not in the dining-room, they used to be carried in and placed on the table (Petron. 60), or a special table with a salt-cellar and some meat was placed before their shrine (Arnob. *adv. Gentes*, ii. 67).

Thereafter followed the dessert, *mensae secundae* (Hor. *Sat.* ii. 2, 122), also called *bellaria* (Gell. xiii. 11, 7), just as "second course" and "sweets" (in England) signify the same part of the meal. Other names were *impomenta*, *ἐπιδειπνίς*. It consisted of all sorts of pastry (see Becker-Göll, *Gallus*, iii. 363–367), fresh and dried fruits, apples, grapes, etc. The *mensae secundae* formed the transition to the *commissatio* (q. v.).

At distinguished dinner-parties the company was amused in various ways. These amusements were called *acroamata*. (See Reid on Cic. *Arch.* 9, 20.) Respectable and cultivated hosts used to afford readings by their *anagnostae* (Mayor on Juv. xi. 180), often of their own works, and we can well believe that this became an insufferable nuisance. It was no doubt a mark of culture to ask for some charming poetry (Pers. i. 30). The practice of reading during meals is still kept up in Roman Catholic colleges. Music, too, used to be introduced, sometimes choral and orchestral performances (*symphonia*, Cic. *Verr.* iii. 44, 105; and Wilkins on Hor. *Ars Poet.* 374). There used to be actors also (Plin. *Ep.* i. 15. 2), and story-tellers (*aretalogi*, Suet. *Aug.* 74). At "fast" entertainments there were introduced girls to play, sing, and dance (Liv. xxxix. 6; Hor. *Sat.* i. 2, 1; Mayor on Juv. xi. 162), gymnasts (*petauristae*), fools (*mariones*), "amusing vagabonds" (*scurrae*), etc. Formal speech-making was unknown. These amusements were produced during the *cena* and continued on into the *commissatio*, if such followed.

On Roman meals, see especially Marquardt, *Privatleben der Römer*, 257–260, 289–321; Becker-Göll, *Gallus*, iii. 311–370; Daremberg and Saglio, s. v. *Coena*, in which works all the literature on the subject is collected.

Cenacŭlum. See DOMUS.

Cenaeum (*Κηναῖον ἄκρον*). The northwestern promontory of Euboea, opposite Thermopylae, with a temple of Zeus Cenaeus.

Cenatoria Vestis. See CENA; SYNTHESIS.

Cenchreae (*Κεγχρέαι*). The eastern harbour of Corinth on the Saronic Gulf, important for its trade and commerce with the East.

Cenchrēis (*Κεγχρηΐς*). A small island off the Spiraeum Promontorium of Argolis.

Cenchrĭus (*Κέγχριος*). A river of Ionia near Ephesus and Mount Solmissus, where the Curetes, according to some, concealed and protected Leto after her delivery, when she was pursued by the power of Heré.

Cenomāni. A powerful Gallic people who crossed the Alps at an early period, and settled in the northwestern part of Italy, in the country of Brixia, Verona, and Mantua, and extended north as far as the confines of Rhaetia.

Cenotaphium (*κενοτάφιον, κενὸς τάφος*). A cenotaph—i. e. an empty, or honorary, tomb, erected sometimes as a memorial to a person buried elsewhere; oftener to one whose body could not be found for burial at all. See Verg. *Aen.* iii. 304; Xen. *Anab.* vi. 4, § 9; and the article FUNUS.

Censītor. A provincial census-taker. See CENSOR.

Censor (*τιμητής*). One of the officials whose duty it was (after B.C. 444) to take the place of the consuls in superintending the quinquennial census. The office was one of the higher magistracies, and could only be held once by the same person. It was at first confined to the patricians; but in B.C. 351 was thrown open to the plebeians, and after 339 one of the censors was obliged by law to be a plebeian. On the occasion of a census, the censors were elected soon after the accession to office of the new consuls, who presided over the assembly. They were usually chosen from the number of *consulares*, or persons who had been consuls. Accordingly the censorship was regarded, if not as the highest office of State, at least as the highest step in the ladder of promotion. The newly elected censors entered immediately, after due summons, upon their office. Its duration was fixed in B.C. 433 to eighteen months, but it could be extended for certain purposes. For the object of carrying out their proper duties—the census and the solemn purification (*lustrum*) that concluded it—they had the power of summoning the people to the Campus Martius, where, after B.C. 434, they had an official residence in the Villa Publica. The tribunes had no right of veto as against their proceedings in taking the census; indeed, so far as this part of their duties was concerned, they were irresponsible, being bound only in conscience by the oath which they took on entering upon and laying down their office. Having no executive powers, they had no lictors, but only messengers (*viatores*) and heralds (*praecones*). Their insignia were the *sella curulis* and a purple toga. The collegiate character of the office was so pronounced that, if one censor died the other abdicated. From the simple act of taking the census and putting up the new list of citizens, their functions were in course of time extended, so as to include a number of very important duties. Among these must be mentioned in particular a general superintendence of conduct (*regimen morum*). In virtue of this they had the power of setting a stigma upon any citizen, regardless of his position, for any conceivable offence for which there was no legal punishment. Such offences were neglect of one's property, celibacy, dissolution of marriage, bad training or bad treatment of children, undue severity to slaves and clients, irregular life, abuse of power in office, impiety, perjury, and the like. The offender might be punished with degradation—that is, the censors could expel a man from the Senate or the *ordo eques-*

ter; or they could transfer him from a country tribe into one of the less respectable city tribes, and thus curtail his right of voting; or, again, they could expel him from the tribes altogether, and thus completely deprive him of the right of voting. This last penalty might be accompanied by a fine in the shape of additional taxation. The censors had also the power of issuing edicts against practices which threatened the simplicity of ancient Roman manners—for instance, against luxury. These edicts had not the force of law, but their transgression might be punished by the next censors. The effect of the censorial stigma and punishment lasted until the next census. The consent of both censors was required to ratify it, and it directly affected men only, not women. The censors exercised a special superintendence over the *equites* and the Senate. They had the *lectio Senatus*, or power of ejecting unworthy members and of passing over new candidates for the senatorial rank—as, for instance, those who had held curule offices. The *equites* had to pass singly, each leading his horse, before the censors in the Forum, after the completion of the general census. (See TRAVECTIO.) An honourable dismissal was then given to the superannuated or the infirm; if an *eques* was now found, or had previously been found, unworthy of his order (as for neglecting to care for his horse), he was expelled from it. The vacant places were filled up from the number of such individuals as appeared from the general census to be suitable. (See EQUITES.) There were certain other duties attached to the censorship, for the due performance of which they were responsible to the people, and subject to the authority of the Senate and the veto of the tribunes. (1) The letting of the public domain lands and taxes to the highest bidder. (2) The acceptance of tenders from the lowest bidder for works to be paid for by the State. In both these cases the period was limited to five years. (3) Superintendence of the construction and maintenance of public buildings and grounds, temples, bridges, sewers, aqueducts, streets, monuments, and the like.

After B.C. 167, Roman citizens were freed from all taxation; and after the time of Marius, the liability to military service was made general. The censorship was now a superfluous office, for its original object, the census, was hardly necessary. Sulla disliked the censors for their power of meddling in matters of private conduct, and accordingly, in his constitution of B.C. 81, the office was, if not formally abolished, practically superseded. It was restored in B.C. 70, in the consulship of Pompey and Crassus, and continued to exist for a long time, until under the Empire it disappeared as a separate office. The emperor kept in his own hands the right of taking the census. He took over also the other functions of the censor, especially the supervision of morals, a proceeding in which he had Caesar's example to support him. The care of public buildings, however, he committed to a special body.

Censorīnus. (1) One of the ephemeral Roman emperors who appeared in so great numbers under the reign of Gallienus, and are known in later Roman history as "the Thirty Tyrants" (q.v.). Censorinus had been distinguished in camps and in the Senate: he had been twice consul, twice praetorian prefect, three times prefect of Rome, and four times proconsul. After having passed through this honourable career, he retired to the country, being now advanced in years, and lame from a wound he had received in the war against the Persians during the reign of Valerian. It was under these circumstances that he was proclaimed emperor at Bologna, A.D. 270, in spite, as it would appear, of his own wishes; and by a species of pleasantry he was nicknamed Claudius, in allusion to his lameness (*claudus*, "lame"). The strict discipline, however, which he wished to introduce gave offence, and he was slain by the very soldiers who had raised him to the throne. (2) A grammarian and philosopher, who flourished under Maximus and Gordianus, about A.D. 238. He wrote a small work entitled *De Die Natali*, which was so called because composed on occasion of the birthday of his wealthy friend Q. Cerellius (A.D. 238), and largely taken from the *Pratum* of Suetonius. It treats of the time of birth; of the influence of one's genius, as well as that of the stars, upon the birth-period of an individual; and embraces many other topics of a chronological, mathematical, and cosmographical character. The style of Censorinus is good, though not free from the blemishes natural to his time. We have also a fragment, *De Metris*, ascribed to the same writer. He composed also a work on accents, and another on geometry, but these last two have not reached us. The principal MSS. are the Codex Coloniensis (formerly Darmstadtiensis) of the seventh century, and one in the Vatican of the tenth century. The first critical edition of Censorinus was that of Jahn (Berlin, 1845). A later one is that of Hultsch (Leipzig, 1867). (3) C. MARCIUS. A Roman distinguished as having been the only one to be twice chosen censor (in B.C. 294 and again in 265).

Censuāles. Those who made the censor's lists.

Census (*τίμημα*). A register of persons and property, constituting a claim to the rights of citizenship at Athens and at Rome.

I. At ATHENS. The census at Athens seems to date from the constitution of Solon. This legislator made four classes (*τιμήματα, τέλη*). (*a*) *Pentacosiomedimni*, or those who received 500 measures, dry or liquid, from their lands. (*b*) *Knights* (*ἵππεις*), who had an income of 300 measures. (*c*) *Zeugitae* (*ζευγῖται*), whose income was 150 measures. (*d*) *Thetes* (*θῆτες*), or *capite censi*. The word *τίμημα*, as used in the orators, means the valuation of the property—i. e. not the capital itself, but the taxable capital. Now, if the valuation of the income was that given in the distribution of the classes just mentioned, it is not difficult to get at the valuation of the capital implied. Solon reckoned the dry measure, or *medimnus*, at a drachma. But it is probable that the income was reckoned at a twelfth part of the value of the land, on the same principle which originated the *unciarium foenus*, or $8\frac{1}{3}$ per cent., at Rome; and if so, the landed property of a *pentacosiomedimnus* was reckoned at a talent, or $12 \times 500 = 6000$ drachmas; that of a *knight* at $12 \times 300 = 3600$ drachmas; and that of a *zeugites* at $12 \times 150 = 1800$ drachmas. In the first class, the whole estate was considered as taxable capital; but in the second, only $\frac{5}{6}$, or 3000 drachmas; and in the third, $\frac{5}{9}$, or 1000 drachmas; to which Pollux alludes when he says, in his clumsy way, that the first class expended one talent on the public account; the second, 30 minas; the third, 10 minas; and the *thetes*, nothing.

In order to settle in what class a man should

be entered on the register (*ἀπογραφή*), he returned a valuation of his property, subject, perhaps, to the check of a counter-valuation (*ὑποτίμησις*). The valuation was made very frequently; in some states, every year; in others, every two or four years. The censors, who kept the register at Athens, were probably at first the *naucrari;* but afterwards the demarchs performed the office of censor. Although this institution of Solon's seems particularly calculated for the imposition of the property tax (*εἰσφορά*), Thucydides (i. 141), speaking of the year B.C. 428, says that it was then that the Athenians first raised a property tax of 200 talents. It seems, however, that the amount of the tax constituted its singularity; for certainly property-taxes were common not only in Athens, but in the rest of Greece, before the Peloponnesian War, and Antipho expressly says that he contributed to *many* of them. In the archonship of Nausinicus (Olym. 100, 3; B.C. 378) a new valuation of property took place, and classes (*συμμορίαι*) were introduced expressly for the property taxes. The nature of these classes, our knowledge of which principally depends on a note of Ulpian, is involved in considerable obscurity. Thus much, however, may be stated, that they consisted of 1200 individuals—120 from each of the ten tribes—who, by way of a sort of liturgy, advanced the money for others liable to the tax, and got it from them by the ordinary legal processes. In a similar manner classes were subsequently formed for the discharge of another and more serious liturgy, the trierarchy; and the *strategi*, who nominated the trierarchs, had also to form the *symmoriae* for the property taxes. (See LITURGIA.) What we have here said of the census at Athens renders it unnecessary to speak of the similar registrations in other states of Greece. When the constitution essentially depended on this distribution according to property, it was called a timocracy, or aristocracy of property (*τιμοκρατία, ἀπὸ τιμημάτων πολιτεία*).

(2) At ROME. After the establishment of the constitution of Servius Tullius, the number of Roman citizens was ascertained every five years (though not always with perfect regularity), to determine their legal liability to the payment of taxes and to military service. This process was called *census*. The census was originally taken by the kings; after the expulsion of the kings, by the consuls; and after B.C. 444, by special officers called *censores*. (See CENSOR.) The censors took the auspices on the night preceding the census; on the next day, their herald summoned the people to the Campus Martius, where they had an official residence in the Villa Publica. Each tribe appeared successively before them, and its citizens were summoned individually according to the existing register. Each had to state on oath his age, his own name, those of his father, his wife, his children, his abode, and the amount of his property. The facts were embodied in lists by the censors' assistants. The census of the provinces was sent in by the provincial governors. There was a special commission for numbering the armies outside the Italian frontier. The censors, in putting up the new lists, took into consideration not only a man's property, but his moral conduct. (See CENSOR.) The census was concluded with the solemn ceremony of reviewing the newly constituted army (*lustrum*). (See LUSTRUM.) The republican census continued to exist under the early Empire, but the last *lustrum* was held by Vespasian and Titus in A.D. 74. The provincial census, introduced by Augustus and maintained during the whole imperial period, had nothing to do with the Roman census, being only a means of ascertaining the taxable capacities of the provinces.

Centauri (Κένταυροι). A Thessalian race fabled to have been half men, half horses. The Centaurs and Lapithae are two mythical tribes, which are always mentioned together. The former are spoken of twice in the *Iliad* under the appellation of "wild-creatures" (Φῆρες), and once under their proper name. We also find the name Κένταυροι in the *Odyssey*. They seem to have been a rude mountain-tribe, dwelling on and about Mount Pelion. It is very doubtful whether Homer and Hesiod conceived them to be of a mingled form, as they were subsequently represented. In the fight of the Centaurs and Lapithae depicted on the shield of Heracles, the latter appear in panoply fighting with spears, while the former wield pine clubs. Pindar is the earliest

Centaur. (Rome, Capitoline Museum.)

poet extant who expressly describes them as semiferine. According to him (*Pyth.* ii. 78 foll.), the offspring of Ixion (q. v.) and the cloud, was a son named Centaurus, who, when grown up, wandered about the foot of Mount Pelion, where he united with the Magnesian mares, who brought forth the Centaurs—a race partaking of the form of both parents, their lower parts resembling their dams, and their upper parts their sire. The common account makes the Centaurs to have been the immediate offspring of Ixion and the cloud. By his wife Dia, Ixion had a son named Pirithoüs, who married Hippodamia, daughter of Adrastus, king of Argos. The chiefs of his own tribe, the Lapithae, were all invited to the wedding, as were also the Centaurs,

who dwelt in the neighbourhood of Pelion. Theseus, Nestor, and other strangers were likewise present. At the feast, Eurytion, one of the Centaurs, becoming intoxicated with the wine, attempted to offer violence to the bride; the other Centaurs followed his example, and a dreadful conflict arose, in which several of them were slain. The Centaurs were finally driven from Pelion, and obliged to retire to other regions.

Centaur and Eros. (Louvre.)

According to the earliest version of this legend, Eurytion, the Centaur, being invited to the mansion of Pirithoüs, became intoxicated, and behaved so ill to the women that the heroes rose, and, dragging him to the door, cut off his ears and nose, which was the occasion of the "strife between the Centaurs and men" (*Od.* xxi. 295 foll.). When Heracles was on his way to hunt the Erymanthian boar, he was entertained by the Centaur Pholus; and this gave rise to a conflict between him and the other Centaurs, which terminated in the total discomfiture of the latter.

The most celebrated of the Centaurs was Chiron, the son of Cronus by the nymph Philyra. See CHIRON.

Centesĭma, sc. *pars*. Literally, "a hundredth part." A tax of one per cent. levied on all goods exposed for public sale throughout the Roman Empire. This tax was introduced after the civil wars, and the income resulting from it went to the military treasury (*aerarium militare*). It was also known as *vectigal rerum venalium* or *centesima rerum venalium*. See Tac. *Ann.* i. 78; Suet. *Calig.* 16; *Dig.* 1. 16, 7.

Centesĭmae Usūrae. See FENUS.

Cento (*κέντρων*). Properly, a patchwork garment. In its secondary meaning the word was applied to a poem composed of verses or parts of verses by well-known poets, put together at pleasure so as to make a new meaning. Homer and Vergil were chiefly used for the purpose. The Christians were fond of making religious poems in this way, hoping thus to give a nobler colouring to the pagan poetry. For instance, we have an Homeric cento (*Homero-Centones*) of 2343 verses on the life of Christ, ascribed to Athenaïs, who, under the title of Eudocia, was consort of the emperor Theodosius II. Another instance is a poem known as the *Christus Patiens*, or "the suffering Christ," consisting of 2610 verses from Euripides. Instances of Vergilian centos are the sacred history of Proba Faltonia (towards the end of the fourth century A.D.), and a tragedy entitled *Medea* by Hosidius Geta. See Delapierre, *Tableau de la Littérature du Centon* (Paris, 1875).

Centonarii. Makers of patchwork (*cento*) for clothes, and of the heavy cloths hung upon earthworks and other fortifications to protect them from fire or to break the force of missiles.

Centrītes (*Κεντρίτης*). A small river of Armenia, which it divided from the land of the Carduchi, north of Assyria.

Centum Cellae. The modern Civita Vecchia; a seaport town in Etruria, which first became a place of importance under Trajan, who built a villa here and constructed an excellent harbour.

Centumvĭri. Judges belonging to a court which was one of the two permanent courts of plebeian judges, instituted, probably, by Servius Tullius, and continuing until the fall of the Western Empire. The other collegium was that of the *decemviri* (q. v.). The actual number of centumviri varied at different periods. Festus (s. v. *centumviralia iudicia*) says that they were nominated by the praetor, three being taken from each of the thirty tribes. The ninety thus obtained would, with the presiding decemviri, make up the exact sum which the name denotes. When the number of tribes was increased in B.C. 241 to 35, there were 105 centumviri; but the old name was retained, according to Festus, for convenience, and under the Empire the number had risen to 180 (Plin. *Ep.* vi. 33). At this time it is improbable that they were any longer selected from the tribes, between whose number and their own there was no relation. From a passage of Dio Cassius, one might conjecture that they were taken by lot from the *decuriae iudicum* instituted by Augustus; and from Ovid (*Trist.* ii. 96), that no one could escape the duty if drawn. It would seem that under the Republic the court had no jurisdiction unless the whole number of members sat together, for it was only in the aggregate that they represented the people; but later (probably under Augustus) it was divided into four divisions or sub-courts, which sat and judged apart and independently of each other for the quicker despatch of business (Quint. *Inst.* xiii. 5, 6), though some causes were heard by two divisions sitting together (ib. v. 2, 1), and others even by the whole united body (ib. vi. 33), which then (Plin. *Ep.* v. 21), as under the Republic, was presided over by a praetor. The old custom was for the court to sit in the open Forum, but in Quintilian's time (xii. 5, 6) the four divisions sat on raised seats (*tribunalia*) in the Basilica Iulia.

The procedure before the centumviri was always that of the *legis actio* called *sacramentum*. Even when the *legis actiones* in the aggregate were swept away by the Lex Aebutia, about B.C. 240 (Voigt), the old process was expressly retained by that statute for *centumviralia iudicia* (Gaius, iv. 31; Gell. xvi. 10).

It seems to be the better opinion that the jurisdiction of the centumviri was limited to civil causes. The civil suits which fell under their cognizance especially were those known as real actions (Cic. *de Orat.* i. 38, 173), while the decemviri were

more particularly concerned with questions of status (*libertas, civitas, familia:* Cic. *Pro Caec.* 33, 97; *Pro Domo,* 29, 78). The real actions comprise all suits claiming property or *iura in re aliena*, such as a right of way, a usufruct, etc., and those relating to inheritances; the scope of the centumviral jurisdiction is denoted by the planting of the *hasta* (the symbol of Quiritary ownership) in the ground where the court was sitting (Suet. *Octav.* 36), and by the use of the *festuca* in the sacramental procedure. See Schneider, *De Centumviralis Iudicii apud Romanos Origine;* Tigerström, *De Iudicibus apud Romanos.*

Centuncŭlus. A parti-coloured dress similar to that of the modern harlequin, worn by the actors of Roman pantomime. See CENTO; MIMUS; PANTOMIMUS.

Centuria. See COMITIA; EXERCITUS.

Centuriāta Comitia. See COMITIA.

Centurio (*ἑκατοντάρχης*). See EXERCITUS.

Centurĭpae (Κεντόυριπαι). An ancient town of the Siculi, in Sicily, at the foot of Mount Aetna, and not far from the river Symaethus. Under the Romans it was one of the most flourishing cities on the island.

Centussis. A sum of 100 *asses.* See AS.

Ceos (Κέως) or **Cea.** An island in the Aegean Sea, now Zea: one of the Cyclades (q. v.), between the Attic promontory Sunium and the island Cythnus, celebrated for its fertile soil and its genial climate. Its chief town was Iulis, the birthplace of Simonides, whence we read of the *Ceae munera neniae* (Hor. *Carm.* ii. 1. 38).

Cephălé (Κεφαλή). An Attic deme on the right bank of the Erasinus. It belonged to the tribe Acamantis.

Cephalĭon (Κεφαλίων). A Greek writer, whose native country is unknown. Cephalion is said to have lived during the reign of Hadrian, and to have been exiled to Sicily for some offence given to the emperor. He wrote an abridgment of universal history (Σύντομος Ἱστορικός) from Ninus to the death of Alexander. It was in the Ionic dialect, like the work of Herodotus, and, like this also, was divided into nine books, each named after one of the Muses. He composed also rhetorical declamations. His works are lost.

Cephallenia (Κεφαλληνία). The modern Cefalonia; called by Homer Samé (Σάμη) or Samos (Σάμος); the largest island in the Ionian Sea, separated from Ithaca by a narrow channel. It is very mountainous. Its chief towns were Samé, Palé, Cranii, and Proni. It never obtained political importance. It is now one of the seven Ionian islands ceded by Great Britain to Greece in 1864.

Cephaloedium (Κεφαλοίδιον). A town on the northern coast of Sicily in the territory of Himera.

Cephălon (Κεφάλων). A native of Gergitha in Troas, not to be confounded with Cephalion. Cephalon wrote an historical work entitled *Trojan Events* (Τρωϊκά). He appears to have been anterior to Alexander the Great, and is considered by Dionysius of Halicarnassus worthy of reliance as an historical writer. His work is lost.

Cephălus (Κέφαλος). (1) The son of Deïon, and a grandson of Aeolus, married to Procris, the eldest daughter of Erechtheus. They dwelt at Thoricos in Attica, and lived happily together till curiosity to try the fidelity of his wife entered the mind of Cephalus. Feigning a journey of eight years, he disguised himself and came to Procris with a splendid jewel, which he offered to her on dishonourable terms. After much hesitation she yielded, when her husband discovered himself and reproached her with her conduct. She fled from him in shame, but they were soon after reconciled. Cephalus went constantly to the chase; and Procris growing suspicious, as she had failed herself, fancied that he was attracted by the charms of some other fair one. She questioned the slave who used to accompany him; and he told her that his master used frequently to ascend the summit of a hill and cry out, "Come, Nephelé, come!" Procris went to the designated hill and concealed herself in a thicket; and on her husband's crying, "Come, Nephelé, come!" (which was nothing more than an invocation for some cloud, *νεφέλη*, to interpose itself between him and the scorching beams of the sun), she rushed forward towards her husband, who, in his astonishment, threw his dart and unwittingly killed her. (See Hyg. 189; cf. Ovid, *Met.* vii. 661 foll.) This legend is told with great variations. Cephalus, for his involuntary crime, was banished. He went to Thebes, which was at that time ravaged by a fox which nothing could overtake, and he joined Amphitryon in the chase of it. His dog Laelaps ran it down; but, just as he was catching it, Zeus turned them both to stone. Cephalus then aided Amphitryon against the Teleboans, and on their conquest he settled in the island named from him Cephallenia. (2) An Athenian orator, who flourished towards the end of the Peloponnesian War, and was one of those who contributed most to overthrow the rule of the Thirty Tyrants (q. v.). Although he lived during a very stormy period, and although no one ever proposed or caused to be passed more laws than he did, yet he never had any accusation brought against him—a remarkable fact in the history of Athens. We must not confound him with Cephalus, the father of Lysias, who came from Syracuse and settled at Athens. Suidas makes Cephalus to have been the first orator that made use of an exordium and peroration. (3) The father of Lysias the orator. He was a native of Syracuse, but settled at Athens as a resident sojourner, or one of the *μέτοικοι.*

Cephēis (Κηφηΐς). A name given to Andromeda as daughter of Cepheus (Ovid, *A. A.* i. 193).

Cephēnes (Κηφῆνες). (1) An ancient name of the Persians (Hdt. vii. 61). (See PERSIA.) (2) A name of the Aethiopians, from Cepheus, one of their kings.

Cepheus (Κηφεύς). (1) King of Aethiopia, son of Belus, husband of Cassiopea, and father of Andromeda (q. v.). He was placed among the stars after his death. (2) Son of Aleus, one of the Argonauts. He was king of Tegea in Arcadia, and perished with most of his sons in an expedition against Heracles.

Cephīsia (Κηφισία). A deme of Attica, at the foot of Mount Brilessus, and near the source of the Cephissus. It was the favourite residence of Herodes Atticus, who had a beautiful villa here.

Cephisodŏtus (Κηφισόδοτος). A statuary of Athens, who flourished about B.C. 372. Two works of his are spoken of by the ancients—a Hermes nourishing Dionysus when an infant, and one of a public speaker in the act of delivering an oration.

There was another sculptor of the same name, usually called "the Younger," the son of Praxiteles, who flourished at Athens in B.C. 300.

Cephisŏphon (Κηφισοφῶν). A friend of Euripides, who is said to have both aided in the composition of his dramas and to have appeared as an actor in them on the stage.

Cephīsus (Κηφισός) and **Cephissus** (Κηφισσός). (1) A celebrated river of Greece, that rises at the foot of Parnassus, close to Lilaea, and, after traversing the plains of Phocis and part of the Boeotian territory, empties into the Copaic Lake in the latter country. (See Copaïs.) Hesiod compares it to a serpent, from the many sinuosities of its course. The modern name is Mauro Potamo. According to the poets, the son of the river-god Cephissus introduced the worship of the Graces into Boeotia, and hence the peculiar attachment which they were said to have for the waters of this stream. (See Gratiae.) (2) A river of Attica, generally distinguished by the name of Atticus, to prevent its being confounded with the Cephissus which flowed near Eleusis. (3) A river running near Eleusis. (4) A river of Argolis, flowing into the Inachus. (5) A river in the island of Salamis.

Cepotaphium (κηποτάφιον). A tomb placed in a garden (κῆπος). See Sepulcrum.

Cer (Κήρ). See Keres.

Cera (κηρός). Wax. By metonymy the word is also used of the pages of a tablet, for which see Tabulae; Testamentum; Writing and Writing Materials. For its employment by athletes, see Athletae; Ceroma. For its use in painting, see Pictura.

Ceramīcus (Κεραμεικός). (1) Now Keramo; a bay of Caria, north of the peninsula of Doris, receiving its name from the city of Ceramus in its vicinity. (2) One of the most considerable and important parts of the city of Athens. Its name was derived from the hero Ceramus (Pausan. i. 3), or perhaps from some potteries which were formerly situated there (Herod. v. 88). It included probably the Agora, the Stoa Basileios, and the Poekilé, as well as various other temples and public buildings. Antiquaries are not decided as to the general extent and direction of this part of the ancient city, since scarcely any trace remains of its monuments and edifices; but we may certainly conclude, from their researches and observations, that it lay entirely on the south side of the Acropolis. See Athenae.

Cerămus (Κέραμος). A Dorian seaport town on the north side of the Cnidian Chersonesus, on the coast of Caria, from which the Ceramic Gulf took its name.

Cerăsus (Κερασοῦς). A flourishing colony of Sinopé on the coast of Pontus, at the mouth of a river of the same name; chiefly celebrated as the place from which Europe obtained both the cherry and its name (*cerasum*). Lucullus is said to have brought back plants of the cherry-tree (κέρασος) with him to Rome (Isid. *Orig.* xvii. 7, 16); but this refers probably only to some particular sorts, as the Romans seem to have had the tree much earlier. Cerasus fell into decay after the foundation of Pharnacia.

Ceraunii Montes (τὰ Κεραύνια ὄρη). The modern Khimara; a range of mountains extending from the frontier of Illyricum along the coast of Epirus, derived their name from the frequent thunder-storms which occurred among them (κεραυνός). These mountains made the coast of Epirus dangerous to ships. They were also called Acroceraunia, though this name was properly applied to the promontory separating the Adriatic and Ionian seas. The inhabitants of these mountains were called Ceraunii.

Cerbĕrus (Κέρβερος). The famous dog of Hades, the fruit of Echidna's union with Typhon. He was stationed at the entrance of hell, as a watchful keeper, to prevent the living from entering the infernal regions, and the dead from escaping from their confinement. Orpheus lulled him to sleep with his lyre; and Heracles dragged him from hell in the performance of his twelfth and last labour. (See Heracles.) The poets differ in their descriptions of this fabled animal. Hesiod assigns him fifty heads, calling him κύων πεντηκοντακάρηνος. Sophocles (*Trach.* 1114) styles him Ἄιδου τρίκρανον σκύλακα, "the three-headed dog of Pluto," and in this last account the Latin poets generally coincide, describing him also as having serpents coiled about his neck. Horace, however, calls him *belua centiceps* (*Od.* ii. 13, 14), either by poetic amplification, or else in accordance with some Greek authority. Champollion traces a curious analogy between the Egyptian and the Grecian mythology as regards the dog of Hades.

Cerberus. (From a Bronze Statue.)

Cercasōrum (Κερκάσωρος πόλις). A city of Lower Egypt, on the west bank of the Nile, at the point where the river divided into its three principal branches.

Cercīna (Κερκίνα) and **Cercinītis** (Κερκινῖτις). Two low islands off the north coast of Africa, in the mouth of the Lesser Syrtis, united by a bridge, and possessing a fine harbour.

Cercĭtae (Κερκέται). A people of Asiatic Sarmatia, probably to be identified with the Circassians. They dwelt on the eastern coast of the Palus Maeotis, or Sea of Azov.

Cercōpes (Κέρκωπες). Droll and thievish gnomes who robbed Heracles in his sleep. Some place them at Thermopylae; others at Oechalia in Euboea, or in Lydia. (See Herod. vii. 216, and the article Melampygus.) A poem entitled Κέρκωπες was ascribed to Homer. (Cf. Müller, *Dorier*, ii. 12, § 10.)

Cercops (Κέρκωψ). (1) One of the oldest of the Orphic poets, the author of an epic on the descent of Orpheus into Hades. (See Orphic Poets.) (2) A Milesian poet, the rival of Hesiod. He is said to have written an epic called *Aegimius*, which is, by some, ascribed to Hesiod himself. See Hesiodus.

Cercūrus (*κέρκουρος*, *κερκοῦρος*). A light, swift, open vessel, first mentioned by Herodotus (vii. 97) as being used at the time of the Persian wars. It was propelled by oars, and was used both in commerce and in war (Liv. xxxiii. 19). Its invention was variously ascribed to the Corcyraeans and to the Cypriotes. See NAVIS.

Cercȳon (Κερκυών). Son of Poseidon or of Hephaestus. A cruel tyrant at Eleusis, who put to death his daughter Alopé and killed all strangers whom he overcame in wrestling. He was, in the end, conquered and slain by Theseus (q. v.).

Kerkȳra (Κέρκυρα). See CORCYRA.

Cerdo (*κέρδων*). A name given to the lowest class of workmen and derived from *κέρδος*, "gain." It is sometimes used with the addition of the name of the trade—e. g. *sutor cerdo*, "a cobbler"; *cerdo faber*, "a smith." The name is also generically used in a contemptuous sense like the English "snob," "cad," etc. See Juvenal, iv. 153, with Mayor's note.

Cerealia. See CERES.

Ceres (from the √ KR of *creare*). An old Italian goddess of agriculture. The Ceres who was worshipped at Rome is, however, the same as the Greek Demeter. Her cult was introduced under the Italian name at the same time as that of Dionysus and Persephoné, who in the same way

Ceres. (Pompeian Wall-painting.)

received the Italian names of Liber and Libera. (See Cic. *N. D.* ii. 24, 2.) It was in B.C. 496, on the occasion of a drought, that the Sibylline Books ordered the introduction of the worship of the three deities. This worship was so decidedly Greek that the temple dedicated on a spur of the Aventine in B.C. 490, over the entrance to the Circus, was built in Greek style and by Greek artists; and the service of the goddess, founded on the Greek myth of Demeter and Persephoné, was performed in the Greek tongue by Italian women of Greek extraction. The worshippers of the goddess were almost exclusively plebeian. Her temple was placed under the care of the plebeian aediles, who, as overseers of the corn market, had their official residence in or near it. The fines which they imposed went to the shrine of Ceres, as did the property of persons who had offended against them or against the tribunes of the plebs. Just as the patricians entertained each other with mutual hospitalities at the Megalesian Games (April 4–10), so did the plebeians at the Cerealia, or games introduced at the founding of the Temple of Ceres. Those held in later times were given by the aediles from the 12th to the 19th of April, and another festival to Ceres, held in August, was established before the Second Punic War. This was celebrated by women in honour of the reunion of Ceres and Proserpina. After fasting for nine days, the women, clothed in white, and adorned with crowns of ripe ears of corn, offered to the goddess the first-fruits of the harvest. After B.C. 191, a fast (*ieiunium Cereris*) was introduced by command of the Sibylline Books. This was originally observed every four years, but in later times was kept annually on the 4th of October. The native Italian worship of Ceres was probably maintained in its purest form in the country. Here the countrymen offered Ceres a sow (*porca praecidanea*) before the beginning of the harvest, and dedicated to her the first cuttings of the corn (*praemetium*). See DEMETER.

Kēres (Κῆρες). The personified necessity of death, described by Homer as formidable, dark, and hateful beings, because they carry off men to the joyless house of Hades. According to Hesiod, they are the daughters of Night (Nyx), and sisters of the Moerae (q. v.) and punish men for their crimes.

Cereus. A wax candle with a rush wick. See CANDELA.

Cerevisia. Ale or beer. See CERVESIA.

Cerilli. A town in Bruttium on the coast, a little south of the mouth of the Laüs.

Cerinthus (Κήρινθος). A town on the east coast of Euboea, on the river Budorus.

Cerné (Κέρνη). An island without the Pillars of Hercules, on the African coast, mentioned by Hanno (q. v.) in his *Periplus*, but not identified with any known to-day. Here he established a colony, and it was always the depot of the Carthaginians on the Atlantic coast of Africa. Hanno says that it was the same distance from the Columns of Hercules that Carthage was.

Cernĕre Hereditātem. See HERES; TESTAMENTUM.

Cernuus. See SALTATIO.

Cerōma (*κήρωμα*). A composition of wax, with different references: (1) A plaster, with wax as the principal ingredient (Hippocr. 397, 48); or, like *κερίον*, an ulcer exuding wax-like matter (Plin. Val. i. 25 fin.). (2) A mixture of oil, wax, and earth, with which athletes under the Roman Empire rubbed themselves before wrestling (Mart. iv. 19, vii. 32; Plin. *H. N.* xxxv. § 168; Plut. ii.

638 D). To keep the hair free from this compound, a cap was worn. (See Juv. iii. 68, with Mayor's note.) (3) The place where the *ceroma* was most used; hence, the wrestling-ring (Sen. *Brev. Vit.* xii. 3).

Cerretāni. An Iberian people in Hispania Tarraconensis, inhabited the modern Cerdagne in the Pyrenees; they were celebrated for their hams.

Cersus (Κέρσος). Now the Merkes; a river of Cilicia emptying into the Gulf of Issus on the east.

Certamĭna. See ATHLETAE.

Certi, Incerti Actio. A name which has been given by some writers to those actions in which a determinate or indeterminate sum, as the case may be, is mentioned in the formula (*condemnatio certae pecuniae vel incertae*). See ACTIO.

Certonium (Κερτόνιον). A town in Mysia, mentioned only by Xenophon (*Anab.* vii. 8. 8).

Cerūchi (κεροῦχοι). The ropes which supported the yard of a ship, passing from it to the top of the mast. In some ancient monuments we see four, as in the following illustration, taken from

Vessel with Ceruchi. (From a Vatican MS. of Vergil.)

one of the pictures in the MS. of Vergil, which was given by Fulvius Ursinus to the Vatican Library.

Cerussa (ψιμύθιον). White-lead, or *plumbi subcarbonas*. The ancient ceruse was prepared by exposing lead to the vapours of vinegar, and the whole method is minutely described by Theophrastus (*De Lapid.* 101). Similar processes are described by Dioscorides and Vitruvius. Cerussa was in common use among women as a face enamel. See Plaut. *Most.* i. 3. 101.

Cervesia, Cervisia, or **Cerevisia** (ζῦθος). Ale or beer; a beverage scarcely ever drunk by the ancient Greeks and Romans, although it was very generally used by the surrounding nations, whose soil and climate were less favourable to the growth of vines (*in Gallia aliisque provinciis*, Plin. *H. N.* xxii. § 164; Tac. *Germ.* 23).

Herodotus's statement that the Egyptians drank "barley-wine" is supported by the inscriptions, in which it is called *hak*, *hank*, or *henk*, and by Strab. xvii. 1, 14, and Diod. i. 34, who describes it as a beverage almost as fragrant as wine, and calls it ζῦθος; while Columella (x. 114) tells us that the *radix Assyria* and lupine entered into its composition, the former doubtless to give it fragrance, the latter to serve the same purpose as the modern hop. But the methods of its preparation varied (Strab. ii. 5). A similar drink was made by the Ethiopians from millet and barley (ib. xvii. 2, 2).

The beer or barley-wine of Crete was known as κόρμα or κοῦρμι. A similar beverage passed under the name of βρῦτον in the north of Greece and Asia Minor, being made of barley by the Phrygians and Paeonians, of barley or of roots by the Thracians, while the Paeonians also made παραβίας or παραβίη from millet and fleabane (κόνυζα). Of the barley drink called πῖνον, Aristotle tells us that those inebriated by it fall on the back and on no other part of the body (Athen. x. 447). We are told by Xenophon that the Armenians, instead of drinking their ale or beer out of cups, placed it before them in a large bowl. This being full to the brim with the grains as well as the fermented liquor, the guests, when they pledged one another, drank together out of the same bowl by stooping down to it, although, when this token of friendship was not intended, they adopted the more refined method of sucking up the fluid through tubes of cane (Xen. *Anab.* v. 5, 26). Ζῦθος was the drink of Lusitania (Strab. iii. 3, 7); in Spain it was known as *caelia* or *cerea*, while *cervesia* was the name used in Gaul, where other drinks of the sort were common (Plin. l. c.). Thus Posidonius, in Athenaeus, says that while the richer classes in Gaul import wine from Italy and the district of Marseilles, the poor drink a beer made from wheat, with or without the addition of honey, which is called κόρμα. This Gallic use of beer is illustrated by a curious circular bottle found in Gaul and preserved in the Musée Carnavalet at Paris: it bears the legend, "Ospita reple lagona cervesa" (*Revue Archéologique*, 1868, xviii. 226).

The beverage of the Germans was made from barley or wheat (Tac. *Germ.* 23). The beer of Illyria and Pannonia was called *sabaia* or *sabaium* (Hieron. *Isai.* v. 19); and at the court of Attila in Pannonia a beverage called μέδος (mead?), or one of barley called κάμον, was used. The Greeks and Romans regarded this barbarian drink with contempt, as is seen by an epigram of the emperor Julian (*Anth. Pal.* ix. 365). See Bickerdyke, *Curiosities of Ale and Beer* (1886); and Mew and Astion, *The Drinks of the World* (1892).

Cervi, so called from their resemblance to the horns of a stag. Branches of trees interlaced with their points projecting, used in war, as palisading or *chevaux-de-frise*, in front of or upon earthworks or fortifications (Caes. *B. G.* vii. 72; Liv. xliv. 11, 4), and sometimes, where there were no fortifications, stuck simply into the level ground (Sil. Ital. x. 413, 414).

Cervīcal (προσκεφάλαιον, ποτίκρανον). A pillow or cushion, to support the head or shoulder, on a bed or dining-couch (Mart. xiv. 146; Suet. *Ner.* 6). The word is also used, like its Greek equivalents, in a less special sense to denote any cushion (Juv. vi. 353; Petron. 32, 1). See PULVINUS.

Bed with Cervical. (Pompeii.)

Kerycēum (Κηρύκειον). See CADUCEUS; PRAECO.

Keryx (κήρυξ). A herald. See CADUCEUS; FETIALIS; PRAECO.

Cessio Bonōrum. See BONORUM CESSIO.

Cessio in Iure. See IN IURE CESSIO.

Cesticillus. A porter's knot, or pad for carrying burdens, known to us only through the gloss

in Festus (s. v.). The Greek word is τύλη, or σπεῖρα, from its being twisted into a circular shape. See ARCULUM.

Cestius Pons. See PONS.

Cestrīné (Κεστρίνη). A district of Epirus, separated from Thesprotia by the river Thyamis. It was said to have taken its name from Cestrinus, the son of Helenus, having previously borne the appellation of Cammania.

Kestrosphendŏné (κεστροσφενδόνη). See FUNDA.

Cestrum (κέστρον). See PICTURA.

Cestus. See CAESTUS.

Cestus (κεστός). In Homer, an adjective applied to the girdle (ἱμάς) of Aphrodité, on which were embroidered all manner of enticements to love. It means "perforated" — i. e. with holes made by the needle—"embroidered," *acu pictus*—and is formed from the same base (viz. *kas* = *ferire*) as κεάζω, or κεντέω for κενστός. It is to be considered the same as the στρόφιον, ταινία, μίτρα, στηθοδεσμός, *fascia pectoralis*, *mammillare*, which is found on statues of Aphrodité worn next the skin (Mart. xiv. 206). (See Baumeister, *Denkmäler*, etc., p. 366, fig. 393.) It was accordingly made of some soft substance. In Mart. xiv. 66, *pellis* is probably what we should call kid. Its object was to support and sometimes to compress too full bosoms, like the modern corset, but it was not used, like the latter, to pinch in the figure. The Greeks and Romans were strangers to this injurious practice (Baumeister, l. c.), and, accordingly, every girl did not wear one. Winckelmann and Saglio consider that, owing to its splendour, the κεστός of Aphrodité was a belt worn outside the dress.

Cetēi (Κήτειοι). A people of Mysia, the old inhabitants of the country about Pergamus, and upon the Cetius, mentioned by Homer.

Cethēgus. (1) A Roman consul, in B.C. 332. He was obliged to lay down his office on account of some informality in his election. (2) M. CORNELIUS, a distinguished Roman orator. Being sent as praetor to Sicily, he quelled a sedition of the soldiers in that island. He was called to the censorship before he had been consul, a thing not in accordance with Roman usage, and obtained this latter office six years subsequently, B.C. 204. He carried on the war against the Carthaginians in Etruria, and defeated Mago, who was coming with support for Hannibal. In allusion to his persuasive eloquence, Ennius twice calls him *Suadae medulla*. Horace (*Epist.* ii. 2. 116; *A. P.* 50) cites him as an authority on the use of words. (3) C. CORNELIUS, proconsul in Spain in B.C. 200, defeated a numerous army of the Sedetani. Being elected consul B.C. 197, he gained a great victory over the Insubres, and on his return to Rome obtained the honours of a triumph. The people having afterwards chosen him censor, he assigned distinct places to the senators at the public games. (4) C. CORNELIUS, a Roman rendered powerful by his influence with Marius. He himself was wholly governed by a woman named Praecia, who obtained for Lucullus the government of Cilicia. (5) C. CORNELIUS, a Roman of the most corrupt and abandoned character, and one of the accomplices of Catiline. He was strangled in prison by order of the Senate. See CATILINA.

Cetīus (Κήτειος). A small river of Mysia, falling into the Caïcus close to Pergamus.

Ceto (Κητώ). A daughter of Pontus and Gaea, who married Phorcys, by whom she had the three Gorgons, the Graeae, Echidna, and the serpent that watched the golden apples in the Garden of the Hesperides.

Cetra or **Caetra** (καιτρέα, καίτρα). A small round shield made of ox-hide, and forming a part of the defensive armour of the Osci. (See ARMA.)

Soldiers with Cetrae. (From a MS. of Prudentius.)

It was also worn by the Spaniards and Mauretanians, and by the natives of Britain (Tac. *Agric.* 36).

It does not appear that the Romans ever wore the cetra. Livy compares it to the *pelta* of the Greeks and Macedonians, which was also a small light shield.

Cetus (κῆτος). Any large fish; sometimes the whale, but often the tunny-fish.

Ceÿx (Κήυξ). The husband of Halcyoné, and with her changed into a bird. See HALCYONÉ.

Chabōras. The same as the Aborrhas (q. v.).

Chabrias (Χαβρίας). A celebrated Athenian general. In B.C. 378, he was one of the commanders of the forces sent to the aid of Thebes against Agesilaüs, when he adopted for the first time that manœuvre for which he became so celebrated—ordering his men to await the attack with their spears pointed against the enemy and their shields resting on one knee. A statue was afterwards erected at Athens to Chabrias in this posture. In 376, he defeated the Lacedaemonians off Naxos, and in 361 commanded the ships of the Egyptian monarch Tachos, then in rebellion against Persia. At the siege of Chios (B.C. 357) he fell a victim to his excessive valour, refusing to abandon his ship after it was disabled.

Chaerĕa, C. CASSIUS. Tribune of the praetorian cohorts; formed the conspiracy by which the emperor Caligula (q. v.) was slain, A.D. 41. Chaerea was put to death by Claudius upon his accession.

Chaerēmon (Χαιρήμων). A Greek tragedian, who flourished at Athens about B.C. 380. His style was smooth and picturesque, but his plays were artificial, and better adapted for reading than for performance. A few fragments of them remain, which show some imaginative power (Arist. *Poet.* i. 9). Ed. by Bartsch (Mainz, 1843).

Chaeronēa (Χαιρώνεια). A town in Boeotia, on the Cephissus, near the frontier of Phocis, memorable for the defeat of the Athenians and the Boeotians by Philip of Macedon, which crushed the

liberties of Greece, B.C. 338, and for Sulla's victory over the army of Mithridates, B.C. 86. Chaeronea was the birthplace of Plutarch. Several remains of the ancient city are to be seen at Capraena, more particularly a theatre excavated in the rock, an aqueduct, and the marble lion (broken in pieces) which adorned the sepulchre of the Boeotians who fell at the battle of Chaeronea.

Chairs. See CATHEDRA; SELLA.

Chalaeum (Χάλαιον). A port town of the Locri Ozolae on the Crissaean Gulf, on the frontiers of Phocis.

Chalastra (Χαλάστρα). A town in Mygdonia in Macedonia, at the mouth of the river Axius.

Chalcé (Χάλκη) or **Chalcia** (Χαλκία). An island of the Carpathian Sea, near Rhodes.

Chalcēdon (Χαλκηδών). A Greek city of Bithynia, on the coast of the Propontis, at the entrance of the Bosporus, nearly opposite to Byzantium, was founded by a colony from Megara in B.C. 685. After a long period of independence, it became subject to the kings of Bithynia, and most of its inhabitants were transferred to the new city of Nicomedia (B.C. 140). Under the Romans it regained much of its former importance. Here was held the fourth Ecumenical Council of the Church, in A.D. 451.

Chalcidĭcé (Χαλκιδίκη). (1) A district of Macedonia, between the Sinus Thermaicus and Strymonicus. The lower part of it formed three peninsulas—Phlegra or Pallené, Sithonia, and Athos. The small town of Chalcis gave name to this district. (2) Another in Syria, adjacent to the town of Chalcis.

Chalcidĭcum. An annex or addition to a basilica (q. v.), of a nature made clear by the so-called *fullonica* at Pompeii which bears this name in an inscription upon its front. This shows that the chalcidicum was an entrance-hall to a public building, designed for the shelter of persons waiting to be admitted, or who might transact their business under it; it was wholly or partially roofed, and might take the form either of a deep porch, or in some cases of a cloistered court. Such a vestibule is found in many Christian basilicas; the former type occurs in St. John Lateran and Sta. Maria Maggiore at Rome, the latter in St. Ambrogio at Milan. The foundations show that a chalcidicum of this kind once existed in front of the vast basilica of Constantine at Rome.

Chalcidius. A Platonic philosopher of the sixth century A.D., who translated the *Timaeus* of Plato into Latin with an elaborate commentary.

Chalcioecia (χαλκιοίκια). An annual feast, celebrated with sacrifices at Sparta, in honour of Athené surnamed Chalcioecus (q. v.), or Goddess of the Brazen House (Pausan. iii. 17, 3).

Chalcioecus (Χαλκίοικος). An epithet applied to Athené at Sparta, from her having a brazen temple (χαλκοῦς οἶκος). See Thuc. i. 34; Pausan. iii. 17, 3.

Chalcis (Χαλκίς). (1) The modern Egripo or Negroponte; the principal town of Euboea, situated on the narrowest part of the Euripus, and united with the mainland by a bridge. It was a very ancient town, originally inhabited by Abantes or Curetes, and colonized by Attic Ionians. Its flourishing condition at an early period is attested by the numerous colonies which it planted in various parts of the Mediterranean. It founded so many cities in the peninsula in Macedonia, between the Strymonic and Thermaic gulfs, that the whole peninsula was called Chalcidicé. In Italy it founded Cumae, and in Sicily, Naxos. Chalcis was usually subject to Athens during the greatness of the latter city. The orator Isaeus and the poet Lycophron were born at Chalcis, and Aristotle died there. (2) A town in Aetolia, at the mouth of the Evenus, situated at the foot of the mountain Chalcis, and hence also called Hypochalcis. (3) A city of Syria, in a fruitful plain, near the termination of the river Chalus; the chief city of the district of Chalcidicé, which lay to the east of the Orontes.

Chalcus (χαλκοῦς or χαλκίον). Under AES some account has been given of the use of bronze or copper for money, which began in most parts of the Greek world about B.C. 400. At Athens, the chalcus, or "copper" *par excellence*, is said by Pollux (ix. 65) to have been equivalent to the eighth of an obol; in some other places it was the sixth of an obol, and contained seven lepta.

Copper coins (χαλκία) were first issued at Athens in the archonship of Callias, B.C. 406. In the *Ecclesiazusae* (816) Aristophanes speaks of the demonetization of certain copper coins, and the reversion to a silver currency. It seems likely that the coins referred to in both these passages are the pieces still extant with the head of Athené on one side, and an owl with two bodies and one head on the other, which resemble the silver diobols of Athens. Coins of late period struck in Syria bear the inscription χαλκοῦς, which declares their value. Δίχαλκα and other multiples of the chalcus were also struck at Chios and other places. When, however, bronze coins do not bear inscriptions stating their value, the latter cannot with certainty be fixed. See NUMISMATICS.

Chaldaea (Χαλδαία). In the narrower sense, a province of Babylonia, about the lower course of the Euphrates, the border of the Arabian Desert, and the head of the Persian Gulf. It was intersected by numerous canals, and was extremely fertile. In a wider sense, the term is applied to the whole of Babylonia, and even to the Babylonian Empire, on account of the supremacy which the Chaldaeans acquired at Babylon. (See BABYLON.) Xenophon mentions Chaldaeans in the mountains north of Mesopotamia. Their original seat was most probably in the mountains of Armenia and Kurdistan, whence they descended into the plains of Mesopotamia and Babylonia. Respecting the Chaldaeans as the ruling class in the Babylonian monarchy, see BABYLONIA.

Chalk. See CRETA.

Chalkeia (τὰ χαλκεῖα). A very ancient festival celebrated at Athens, which at different times seems to have had a different character, for at first it was solemnized in honour of Athené, surnamed Ergané, and by the whole people of Athens, whence it was called Ἀθήναια or Πάνδημος. At a later period, however, it was celebrated only by artisans, especially smiths, and in honour of Hephaestus, whence its name was changed into χαλκεῖα. It was held on the thirtieth day of the month of Pyanepsion. Menander composed a comedy called Χαλκεῖα, a fragment of which is preserved in Athenaeus.

Chalus (Χάλος). A river of north Syria.

Chalȳbes (Χάλυβες). A people of Pontus, in Asia Minor, who inhabited the whole coast from the Iasonium Promontorium to the vicinity of the river Thermodon, together with a portion of the inner country. They were celebrated in antiquity for the great iron mines and forges which existed in their country. See METALLUM.

Chalȳbon (Χαλυβών; O. T., Helbon). A considerable city of northern Syria, probably the same as Beroea (q. v.).

Chalybs. A river of Hispania Tarraconensis, in the country of the Celtiberi, and one of the tributaries of the Iberus. Its waters were famed for hardening steel, so that the name χάλυψ was given to it from this circumstance. The modern name is the Queiles.

Chamāvi. A people in Germany, who first appear in the neighbourhood of the Rhine, but afterwards migrated east, defeated the Bructeri, and settled between the Weser and the Harz.

Chaŏnes (Χάονες). A Pelasgian people, one of the three peoples which inhabited Epirus, were at an earlier period in possession of the whole of the country, but subsequently dwelt along the coast from the river Thyamis to the Acroceraunian promontory, which district was therefore called Chaonia. By the poets, Chaonius is used as equivalent to Epiroticus (Ἠπειρωτικός).

Chaos (Χάος). According to Hesiod, the yawning, unfathomable abyss which was the first of all existing things. From Chaos arose Gaea (Earth), Tartarus (Hell), and Eros (Love). Chaos bore Erebus and Night; from their union sprang Aether and Hemera (Sky and Day). The conception of Chaos as the confused mass out of which, in the beginning, the separate forms of things arose is erroneous, and belongs to a later period.

Charadra (Χαράδρα). A town in Phocis, on the river Charadrus, situated on an eminence not far from Lilaea.

Charax (χάραξ, "a palisaded camp"). The name of several cities, which took their origin from military stations. The most remarkable of them stood at the mouth of the Tigris. See ALEXANDRIA (4).

Chares (Χάρης). (1) An Athenian general, who succeeded to the command after the condemnation and death of Leosthenes. He was sent by the Athenians against Alexander, tyrant of Pherae, but, instead of coming to action with the foe, he harassed the Athenian allies to such a degree by his extortions and oppression that the Social War was the result (B.C. 358). Some time after, he was sent to aid Byzantium against Philip of Macedon, but he only incurred the contempt of his foe, and excited the discontent of the allies, so that the Athenians finally recalled him, and put Phocion in his place. This, however, did not prevent them from choosing him for their general at the battle of Chaeronaea, where his ignorance and incapacity mainly contributed to the loss of the day. He was one of those whom Alexander ordered to be delivered up to him after the destruction of Thebes; but he succeeded in mollifying the conqueror, and was permitted to live at Athens.

(2) OF MITYLENÉ. A Greek historian, chamberlain of Alexander the Great. He was the author of a comprehensive work, containing at least ten books, upon the life—chiefly the domestic life—of this monarch. This history had the reputation of being trustworthy and interesting. Only a few fragments of it remain, ed. by Geier (Leipzig, 1844).

(3) OF LINDOS IN RHODES. A Greek artist, a pupil of Lysippus. In B.C. 280 he produced the largest statue known in antiquity—the colossal image of the Sun, 120 feet high, placed at the entrance of the harbour of Rhodes, and generally known as the Colossus of Rhodes. This was destroyed by an earthquake as early as B.C. 224. The thumbs were thicker than the average span of a man's hand, the fingers larger than many ordinary statues. See COLOSSUS; SEVEN WONDERS OF THE WORLD.

Charĭcles (Χαρικλῆς). (1) One of the Thirty Tyrants set over Athens by the Lacedaemonians, and possessing great influence among his colleagues (Xen. *Mem.* i. 2. 31). (2) A celebrated physician in the train of Tiberius. Towards the end of that emperor's life, Charicles, on taking leave of him, as if about to journey abroad, managed, in grasping the hand of Tiberius, to feel his pulse, and became instantly convinced that the latter had not more than two days to live, a secret which he divulged to Macro (Tac. *Ann.* vi. 50).

Charĭclo (Χαρικλώ). (1) A nymph, daughter of Apollo and wife of the centaur Chiron (q. v.). (2) A nymph, the mother of Tiresias (q. v.).

Charĭla (ἡ χαρίλα). One of the three festivals celebrated at Delphi every ninth year as a thanksgiving for having been delivered at one time from a famine.

Charilāus or **Charillus** (Χαρίλαος or Χάριλλος). A king of Sparta, son of Polydectes, who is said to have received his name from the general joy (χάρις) excited by the justice of his uncle Lycurgus, when he placed him, yet a new-born infant, on the royal seat, and bade the Spartans acknowledge him for their king.

Charīnus (Χαρῖνος). A comic dancer at Sparta; a stock character in the Doric comedy, like the Spanish Gracioso. See Müller, *Dorier*, iv. 7, § 3.

Charis (Χάρις). A name applied by Homer (*Il.* xviii. 382) to the wife of Hephaestus. In the *Odyssey*, on the other hand (viii. 267), Aphrodité is named as his spouse. It amounts to the same thing in the figurative explanation of the myth, since Grace and Beauty were both regarded as the characteristics of Hephaestus's labours. See CHARITES.

Charisĭa (Χαρίσια). A festival in honour of the Graces (Charites), with dances which continued all night. A cake was given to those who remained awake during the whole time.

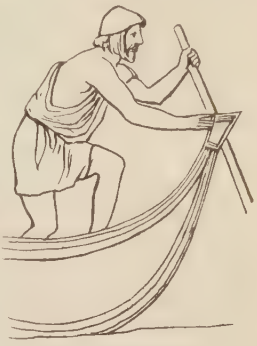
Charisius, FLAVIUS SOSIPĂTER. A writer on Latin grammar, who flourished towards the end of the fourth century A.D. His *Ars Grammatica*, a work in five books, imperfectly preserved, is a compilation, made, without much intelligence, from the works of older scholars. Its value is derived from the numerous quotations it preserves from the older Latin literature. Our text is derived chiefly from the Codex Neopolitanus of the seventh or eighth century. The best critical text is that of H. Keil (in his *Grammatici Latini*), vol. i. (Leipzig, 1857).

Charistia. See CARISTIA.

Charĭtes (Χάριτες) or **Gratiae** (Graces). Goddesses of grace, and of everything which lends charm and beauty to nature and human life. According to Hesiod, they are the offspring of Zeus and the daughter of Oceanus and Eurynomé. Their names are Euphrosyné (Joy), Thalia (Bloom),

and Aglaïa (Brilliance). Aglaïa is the youngest, and the wife of Hephaestus; for the inspiration of the Graces was deemed as necessary to the plastic arts as to music, poetry, science, eloquence, beauty, and enjoyment of life. Accordingly, the Graces are intimate with the Muses, with whom they live together on Olympus. They are associated, too, with Apollo, Athené, Hermes, and Peitho, but especially with Eros, Aphrodité, and Dionysus. Bright and blithe-hearted, they were also called the daughters of the Sun and of Aeglé (Gleam). They were worshipped in conjunction with Aphrodité and Dionysus at Orchomenus in Boeotia, where their shrine was accounted the oldest in the place, and where their most ancient images were found in the shape of stones said to have fallen from heaven. It was here that the feast of the Charitesia was held in their honour, with musical contests. At Sparta, as at Athens, two Charites only were worshipped, Cleta, or Sound, and Phaënna, or Light; at Athens their names were Auxo (Increase) and Hegemoné (Queen). It was by these goddesses, and by Agraulos daughter of Cecrops, that the Athenian youths, on receiving their spear and shield, swore faith to their country. The Charites were represented in the form of beautiful maidens, the three being generally linked hand in hand. In the older representations they are clothed; in the later, they are loosely clad or entirely undraped.

Charĭton (Χαρίτων). An erotic prose-writer of Aphrodisias in Caria, whose date is uncertain, but probably not earlier than the fifth century A.D. He was the author of a romance entitled *The Love Adventures of Chaereas and Callirrhoé* (*τὰ περὶ Χαιρέαν καὶ Καλλιρροὴν ἐρωτικὰ διηγήματα*), in seven books. Only one MS. of this is known to exist. A Latin version with notes was published by Reiske, 3 vols. (Amsterdam, 1750); a commentary by Beck (Leipzig, 1783); and a beautiful edition of the text in 1812 at Venice. A good French translation is that of Larcher in the *Bibliothèque des Romans Grecs* (Paris, 1797). It was rendered into English by Becket (London, 1764).



Charmandé (Χαρμάνδη). A great city of Mesopotamia, on the Euphrates.

Charmĭdes (Χαρμίδης). A son of Glaucon, cousin of Critias, and maternal uncle to Plato. He gives his name to one of the Platonic dialogues, in which he is represented as a youth at the opening of the Peloponnesian War.

Charmion (Χάρμιον). One of Cleopatra's female attendants, who killed herself after the example of her mistress.

Charmis (Χάρμις). A physician of Marseilles, in Nero's age, who revived the use of cold baths in Rome in cases of sickness, after the practice had been discontinued since the time of Antonius Musa (q. v.). He was very successful in his professional labours, and amassed great riches (Plin. *H. N.* xxix. 1).

Charon (Χάρων). (1) A deity of the lower world, son of Erebus and Nyx, who conducted the souls of the dead in a boat over the river Acheron to the infernal regions. The sum exacted for this service, from each of the shades ferried over by him, was never less than an obolus, nor could it exceed three. A piece of money, therefore, was generally placed by the ancients under the tongue of the deceased, in order to meet this necessary demand. Such as had not been honoured with a funeral were not permitted to enter Charon's boat without previously wandering on the shore for one hundred years. If any living person presented himself to cross the river of the dead, he could not be admitted into the bark before he showed Charon a golden bough, obtained from the Cumaean sibyl; and the ferryman was on one occasion imprisoned for an entire year because he had, though against his own will, conveyed Heracles across the stream without first receiving from him this necessary passport. The poets have represented Charon as a robust old man, of a severe though animated countenance, with eyes glowing like flame, a white and bushy head, vestments of a dingy colour, stained with the mire of the stream, and with a pole for the direction of his bark, which last is of a dark rusty hue.

Charon. (Stackelberg.)

The earliest mention of Charon in Grecian poetry seems to be in the ancient poem of the Minyas, quoted by Pausanias (x. 28). The fable itself is considered by some to be of Egyptian origin, and in support of this opinion they refer to the account of Diodorus Siculus relative to the statements made by the Egyptian priests. The latter asserted, it seems, that Orpheus and Homer had both learned wisdom on the banks of the Nile; and that the Erebus of Greece, and all its parts, personages, and usages, were but transcripts of the mode of burial in Egypt; and here the corpse was, on payment of an obolus, conveyed by a ferryman (named Charon in the language of Egypt) over the Acherusian Lake after it had received its sentence from the judges appointed for that purpose. (2) One of the earlier Greek historical writers, a native of Lampsacus, supposed to have flourished between the seventy-fifth and seventy-eighth Olympiads, about B.C. 464. Charon continued the researches of Hecataeus into Eastern ethnography. He wrote (as was the custom of the historians of his day) separate works upon Persia, Libya, Aethiopia, etc. He also subjoined the history of his own time, and he preceded Herodotus in narrating the events of the Persian War, although Herodotus nowhere mentions him. From

Charon, Hermes or Mercury, and Soul. (From a Roman lamp.)

the fragments of his writings which remain, it is manifest that his relation to Herodotus was that of a dry chronicler to an historian, under whose hands everything acquires life and character. Charon wrote, besides, a chronicle of his own country, as several of the early historians did, who were thence called "Horographers" (ὧροι, corresponding to the Latin *annales*, ought not to be confounded with ὅροι, *termini*, *limites*). The fragments of Charon have been collected by Kreuzer, in his *Historicorum Graecorum Antiquissimorum Fragmenta*, p. 89 foll.; and by Müller, *Frag. Histor. Graec.* (Paris, 1841).

Charondas (Χαρώνδας). A celebrated legislator, born at Catana in Sicily, where he flourished about B.C. 650. We have very few details of his life. Aristotle merely informs us that he was of the bourgeois class of citizens, and that he framed laws for the people of Catana, as well as for other communities which, like them, were descended from Chalcis in Euboea. Aelian adds (*V. H.* iii. 17) that he was subsequently driven into exile from Catana, and took refuge in Rhegium, where he succeeded in introducing his laws. Some authors inform us that he compiled his laws for the Thurians; but he lived, in fact, a long time before the foundation of Thurium, since his laws were abrogated in part by Anaxilaüs, tyrant of Rhegium, who died B.C. 476. The laws of Charondas were, like those of many of the ancient legislators, in verse, and formed part of the instruction of the young. Their fame reached even to Athens, where they were sung or chanted at repasts. The preamble of these laws, as preserved to us by Stobaeus, is thought, so far, at least, as regards the form of expression, not to be genuine; and Heyne supposes it to have been taken from some Pythagorean treatise on the laws of Charondas.

The manner of this legislator's death is deserving of mention. He had made a law that no man should be allowed to come armed into the assembly of the people. The penalty for infringement was death. He became the victim of his own law; for, having returned from pursuing some robbers, he entered the city, and presented himself before the assembly of the people without reflecting that he carried a sword by his side. Some one thereupon remarked to him, "You are violating your own law." His reply was, "On the contrary, by Zeus, I will establish it"; and he slew himself on the spot.

Charta (χάρτη). Paper. See LIBER; PAPYRUS; WRITING AND WRITING MATERIALS.

Charybdis (Χάρυβδις). See SCYLLA.

Chasuāri, Chasuarii, or **Chattuarii.** A people of Germany, allies or dependants of the Cherusci. They dwelt north of the Chatti; and in later times they appear between the Rhine and the Mosa (Maas), as a part of the Franks.

Chatti. See CATTI.

Chauci or **Cauci.** A people in the northwestern part of Germany, between the Amisia (Ems) and the Albis (Elbe). They were never subdued by the Romans.

Cheironomia (χειρονομία). (1) The movement of the hands during dancing. (See SALTATIO.) (2) The gesticulation employed in pantomime. (See PANTOMIMUS.) (3) Sparring, for which the regular word is σκιαμαχία. See PUGILATUS.

Cheirotonia (χειροτονία). In the Athenian assemblies two modes of voting were practised—the one by ballot (see PSEPHUS), the other by a show of hands (χειροτονεῖν). The latter was the usual mode of conducting business. Secret voting, in general, was only used when the personal interests of individuals were concerned; as when the question was the condemnation or acquittal of a person put upon his trial, the remission of a punishment or of a pecuniary fine payable to the State, the conferring of citizenship on strangers, or finally the banishment of a citizen by ostracism. Open voting was employed on questions of public policy, such as war or peace, in voting upon laws, and in some special kinds of trials on matters which concerned the people, as upon προβολαί and εἰσαγγελία. In the elections of magistrates (ἀρχαιρεσίαι), some were chosen by lot (ἀρχὴ κληρωτή); others, and these of course the more important—e. g. the στρατηγοί—by show of hands (ἀρχὴ αἱρετὴ or χειροτονητή). The undoubted distinction between ψηφίζεσθαι and χειροτονεῖν is not always observed: we find the word ψηφίζεσθαι used where the voting was really by show of hands (Demos. *Olynth.* i. § 2).

The χειροτονία was taken first on the affirmative, then on the negative, side of the question at issue: the number of hands was counted each time by the herald; and the president, upon the herald's report, declared whether the ayes or noes had the majority.

It is important to understand clearly the compounds of this word. A vote condemning an accused person is καταχειροτονία: one acquitting him, ἀποχειροτονία: ἐπιχειροτονεῖν is to confirm by a majority of votes: ἐπιχειροτονία τῶν νόμων was a revision of the laws, which took place at the beginning of the Attic year in the month of Hecatombaeon: ἐπιχειροτονία τῶν ἀρχῶν was a vote taken in the first assembly of each prytany on the conduct of the magistrates. In these cases, those who voted for the confirmation of the law, or the continuance in office of the magistrate, were said ἐπιχειροτονεῖν, those on the other side ἀποχειροτονεῖν: διαχειροτονία is a vote for one of two alternatives; ἀντιχειροτονεῖν to vote against a proposition; προχειροτονία is the show of hands on the previous question—i. e. whether the people desired further discussion or not. The compounds of ψηφίζεσθαι have similar meanings (Schömann, *Assemblies*, pp. 120, 125, 231, 251, 330).

Chelé (χηλή). A word formed from the base χα- "to gape," and used in various ways—of the cracks in a horse's hoof, for the hoof itself, and for many things that are hooked or forked—e. g. the claws of a crab, the talons of a bird, of a medical instrument (Hipp. 471, 54), of the notch of the arrow, of the two "fingers" of the "hand" (*manucla*) which in the *catapŭlta* (q. v.) grasped the back-drawn string, of a curved breakwater, and (in astronomy) of that part of the heavens next Virgo, embraced by the arms of the Scorpion (Verg. *Georg.* i. 33).

Chelidonia (χελιδόνια). In the island of Rhodes, when the swallows returned (i. e. in the month Boëdromion), boys, called χελιδονισταί, went from house to house asking gifts, professedly for the swallows, and singing a song that has been preserved in Athenaeus (viii. 360). The practice (χελιδόνια) was said to have been introduced by Cleobulus of Lindus at a time when the town was in great distress.

Chelidoniae Insŭlae (Χελιδόνιαι Νῆσοι, "Swallow Islands"). A group of five small islands, surrounded by dangerous shallows, off the promontory called Hiera or Chelidonia, on the south coast of Lycia.

Chelonātas (Χελωνάτας). A promontory, now Cape Tornese, in Elis, opposite Zacynthus; the most westerly point of the Peloponnesus.

Chelōné (Χελώνη). A nymph who was the only one of the deities that did not attend the nuptials of Zeus and Heré, and who even made the celebration a subject of ridicule. Hermes thereupon precipitated her into a river, on the banks of which her mansion was situated, and transformed her into a tortoise, under which shape she was doomed to perpetual silence, and to the necessity of always carrying her dwelling about with her. The Greek for a tortoise is *χελώνη*, and hence the fable arose.

Chelys (*χέλυς*). See LYRA.

Chemé (*χήμη*). (1) A cockle-shell. (2) A measure of capacity, which appears to have varied from 0.04 pint to 0.016 pint. The symbol for it is X. See F. Hultsch, *Metrologici Scriptores*, s. v. *χήμη*.

Chemmis (Χέμμις; later PANOPŌLIS, Πανόπολις). A great city of the Thebaïs, or Upper Egypt, on the east bank of the Nile, celebrated for its manufacture of linen, its stone quarries, and its temples of Pan and Perseus.

Chenisci. (From Paintings found at Herculaneum.)

Cheniscus (*χηνίσκος*). An ornament resembling the head and neck of a goose (*χήν*), placed sometimes on the prow and sometimes on the stern of a ship. See NAVIS.

Cheops (Χέοψ). The Greek form of the Egyptian Khufu, a king of Memphis in Egypt, of the Fourth Dynasty (cir. B.C. 3000), and famous as the builder of the largest of the pyramids by the forced labour of the people. He was succeeded by his brother Chephren (Khafra), who built the next largest pyramid. See Herod. ii. 124; and the article AEGYPTUS.

Chephren (Χεφρήν). A king of Egypt, the brother and successor of Cheops (q. v.), whose example of tyranny he followed, reigned fifty-six years, and built the second pyramid. The Egyptians so execrated the memory of the two brothers that they called the pyramids not by their names, but by the name of a poor shepherd, Philition, who lived near by. See PYRAMIS.

Chernĭbon or **Cheironiptron** (*χέρνιβον*, *χειρόνιπτρον*). A basin for holding the lustral water at a sacrifice, or, in general, for washing the hands. The water, whether sacrificial or not, was called *χέρνιψ*. The bowl was sometimes of silver and sometimes of gold. The shape was round, and both shallow and deep ones have been found. The pure Latin name is *malluvium*.

Chernips (*χέρνιψ*). See CHERNIBON.

Chersĭphron or **Ctesĭphon**. See EPHESUS.

Chersonēsus (Χερσόνησος; Attic, Χερρόνησος). A Greek geographical term, equivalent in meaning to the Latin *peninsula*. The earlier form is *Cherronesus*, the word being derived from *χέρρος* (later from *χέρσος*), "a continent" or "mainland," and *νῆσος*, "an island."

The most noted Chersonesi in ancient times were the following: (1) CHERSONESUS AUREA, or Golden Chersonesus, a peninsula of Farther India, corresponding, according to D'Anville, Rennell, Mannert, and others, to the modern Malacca. The positive knowledge of the ancient geographers can hardly be said to have extended much beyond this, their account of the regions farther to the east being principally derived from the natives of India. The name given to this region by the ancients has reference to the popular belief of its abounding in gold; and here, too, some inquirers into early geography have placed the Ophir of Solomon, an opinion maintained also by Iosephus. (2) CHERSONESUS CIMBRĬCA, a peninsula in the northern part of Germany, answering to the modern Jutland and Schleswig-Holstein. (3) CHERSONESUS TAURĬCA, a peninsula between the Pontus Euxinus and the Palus Maeotis, answering to the modern Crimea. The name was derived from the Tauri, a barbarous race who inhabited it. It was sometimes called Chersonesus Scythica and Chersonesus Magna. (4) CHERSONESUS THRACĬCA, often called simply "the Chersonesus," and the most important of all. It was a peninsula of Thrace, between the Sinus Melas and the Hellespont. The fertility of its soil, and its proximity to the coast of Asia Minor, early attracted an influx of Grecian settlers, and its shores soon became crowded with flourishing and populous cities. From this quarter the Athenians drew their chief supply of grain.

Cherusci. A people of Germany, between the Weser and the Elbe, southeast of the Chauci. Under the conduct of Arminius (q. v.) they defeated and slew three Roman legions commanded by Varus, A.D. 10, in the Saltus Teutobergiensis. They were afterwards defeated by Germanicus, and never recovered their former eminence.

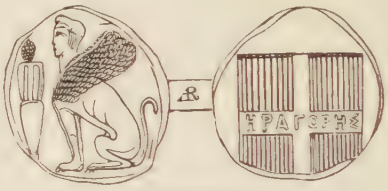
Chiliarchus (*χιλίαρχος*). The commander of a thousand men. See EXERCITUS.

Chilo (Χείλων, Χίλων). A Spartan, ranked, on account of his wisdom and experience, among the Seven Sages of Greece. He directed his attention to public affairs, and became one of the *ephori*, B.C. 556 (Diog. Laërt. i. 68). Many of his maxims are quoted by the ancient writers, which justify the high reputation connected with his name. He died of joy at an advanced age, while embracing one of his sons who had gained a prize at the Olympic Games. Chilo appears to have travelled much abroad, and it is probable that he visited Sardis, the capital of Croesus, a monarch who had sought an alliance with Sparta (Herod. i. 69). It was at the court of the Lydian monarch, in all probability, that he saw Aesop, since Diogenes Laërtius speaks of a question put by the philosopher to the fabulist (Diog. Laërt. i. 68 foll.).

Chimaera (Χίμαιρα). A fire-breathing monster of Lycia, destroyed by Bellerophon (q. v.). According to Homer the Chimaera was of divine origin. In front it was a lion, behind it was a serpent, and in the middle a goat, and was brought up by King Amisodarus as a plague for men. Hesiod calls her the daughter of Typhon and Echidna, and by Orthos the mother of the Sphinx and the Nemean lion. He describes her as large, swift-footed, strong, with the heads of a lion, a goat, and a serpent. In numerous works of art, as in statues,

Bellerophon and the Chimaera. (From a Terra-cotta in the British Museum.)

and the coins of Corinth, Sicyon, and other cities, the Chimaera is generally represented as a lion, with a goat's head in the middle of its back, and tail ending in a snake's head. The bronze Chimaera of Arretium, now in Florence, is a very celebrated work of art. Even in antiquity the Chimaera was regarded as a symbol of the volcanic character of the Lycian soil.

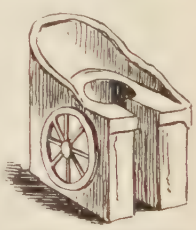


Chimerium (Χειμέριον). A promontory on the coast of Epirus, opposite the island of Paxos.

Chion (Χίων). A native of Heraclea Pontica, and disciple of Plato. Animated by political zeal, he left Athens, where he had resided for the space of five years, attending the instructions of Plato, and returned home with the determination of freeing his native city from the yoke of tyranny. Clearchus, who ruled at Heraclea, was not, it is true, a good prince; but, in slaying him, Chion was the cause of this city's falling under a worse tyrant, Satyrus, the brother of Clearchus. Chion himself fell a victim to the latter's elevation to power (B.C. 353). We have seventeen letters said to have been written by Chion. They are principally addressed to his father, Matris; but their authenticity has been called in question, and the real author is supposed to have been a Platonist of the fourth century. The style is clear, simple, and animated. Edition by Orelli (Leipzig, 1816).

Chiŏné (Χιόνη). (1) Daughter of Boreas and Orithyia, mother of Eumolpus by Poseidon. (See EUMOLPUS.) (2) Daughter of Daedalion, mother of Philammon by Apollo, and of Autolycus by Hermes. She was slain by Artemis for venturing to compare her own beauty with that of the goddess.

Chionĭdes (Χιονίδης). Said to have been the earliest writer of the old Athenian comedy. (Cf. Aristot. *Poet.* iii. 5.) His representations date from B.C. 487. The names of three of his comedies are recorded, Ἥρωες, Περσαὶ ἢ Ἀσσυριοί, and Πτωχοί. To judge from these titles, we should conclude that his comedies had a political reference, and were full of personal satire; and from an allusion in Vitruvius (*Praef. in lib. vi.*) we may infer that they were gnomic, like those of Epicharmus. Ed. in Meineke, *Com. Frag.* vol. i.



Chios (Χίος). The modern Scio. One of the largest and most famous islands of the Aegean, lay opposite to the peninsula of Clazomenae, on the coast of Ionia. It was colonized by the Ionians at the time of their great migration, and remained an independent and powerful maritime state till the defeat of the Ionian Greeks by the Persians, B.C. 494, after which the Chians were subjected to the Persians. The battle of Mycalé, 479, freed Chios from the Persian yoke, and it became a member of the Athenian League, in which it was for a long time the closest and most favoured ally of Athens; but an unsuccessful attempt to revolt, in 412, led to its conquest and devastation. Chios was celebrated for its wine and marble. Of all the States which aspired to the honour of being the birthplace of Homer, Chios was generally considered by the ancients to have the best claim; and it numbered among its natives the historian Theopompus, the poet Theocritus, and other eminent men. Its chief

Coin of Chios.

city, Chios (Khio), stood on the eastern side of the island.

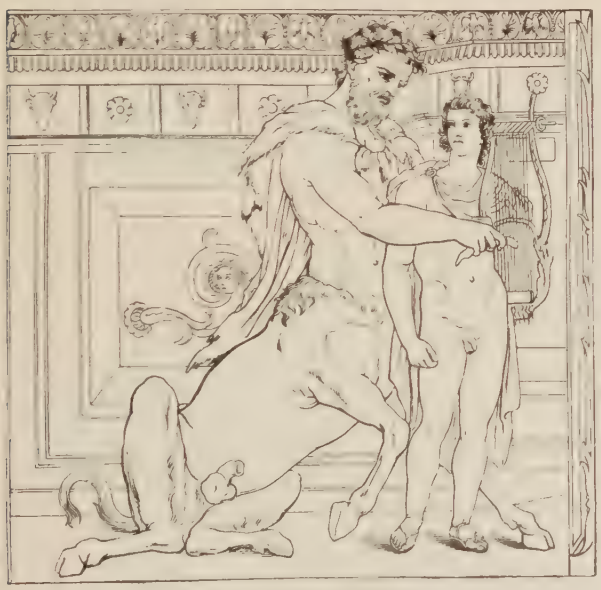
Chiramaxium (χειράμαξα, χειραμάξιον). A sort of perambulator, or wheeled chair, drawn by hand. (See Petronius, 28.) In the accompanying illustration of a marble, the wheels are evidently ornamental.

Chiramaxium. (British Museum.)

Chiridōta. See TUNICA.

Chirisŏphus (Χειρίσοφος). A Lacedaemonian; was sent by the Spartans to aid Cyrus in his expedition against his brother Artaxerxes, B.C. 401. After the battle of Cunaxa, and the subsequent arrest of the Greek generals, Chirisophus was appointed one of the new generals, and, in conjunction with Xenophon (q. v.), had the chief conduct of the retreat. See ANABASIS; XENOPHON.

Chirogrăphum (χειρόγραφον). A word which meant first, as its derivation implies, a handwriting or autograph. In this, its simple sense, χείρ in Greek and *manus* in Latin are often substituted for it.



Like similar words in all languages, it acquired several technical senses. From its first meaning was easily derived that of a signature to a will or other instrument, especially a note of hand given by a debtor to his creditor. In this latter case it did not constitute the legal obligation (for the debt might be proved in some other way); it was only a proof of the obligation.

According to Asconius (*in Verr.* iii. 36), *chirographum*, in the sense of a promissory note, was distinguished from *syngrapha;* the former was always given for money actually lent, the latter might be a mere sham agreement to pay a debt which had never been actually incurred. The *chirographum* was kept by the creditor, and had only the debtor's signature; the *syngrapha*, on the contrary, was signed and kept by both parties. See CAUTIO; FALSUM.

In the Latin of the Middle Ages, *chirographum* was used to signify tribute collected under the sign-manual of a person in authority, similar to the briefs and benevolences of former times in Great Britain. It was also used, till comparatively recent times, in the English law for an indenture. Duplicates of deeds were written on one piece of parchment, with the word *chirographum* between them, which was cut in two in a straight or wavy line, and the parts given to the care of the persons concerned. By the canonists, as Blackstone remarks, the word *syngrapha* or *syngraphus* was employed in the same way, and hence gave its name to these kinds of writing.

Chirography. See PALAEOGRAPHY.

Chiron (Χείρων).) The most celebrated of the Centaurs, and son of Cronos and the nymph Philyra. Dreading the jealousy of his wife, Rhea, the god is said to have transformed Philyra into a mare, and himself into a steed; and the offspring of this union was Chiron, half man and half horse. This legend first appeared in the poem of the *Gigantomachia*, and it is also noticed by Pindar (*Pyth.* iii. 1, foll.). Probably the praise of Chiron

Chiron. (Pompeian Painting.)

by Homer (*Il.* xi. 832), for his love of justice, led to the view of him as the offspring of the god who ruled over the golden race of men. To Chiron was intrusted the rearing and educating of Iason and his son Medeus, Heracles, Aesculapius, and Achilles. Besides his knowledge of the musical art, which he imparted to his heroic pupils, he was also skilled in surgery, which he taught to the last two of this number. In the contest between Heracles and the Centaurs, Chiron was accidentally wounded in the knee by one of the arrows of the hero. Grieved at this unhappy event, Heracles ran up, drew out the arrow, and applied to the wound a remedy given by Chiron himself. But in vain; the venom of the hydra was not to be overcome. Chiron retired to his cave longing to die, but unable on account of his immortality, till, on his expressing his willingness to die for Prometheus, he was released by death from his misery. According to another account, he was, on his prayer to Zeus for relief, raised to the sky and made the constellation of Sagittarius. Chiron was the husband of Naïs or Chariclo, and their daughter Eudeïs was the mother of Peleus (Apollod. xiii. 12). In art, Chiron is represented as of a noble and intellectual cast of countenance; while the other Centaurs exhibit brutal and sensual traits. See Böttiger, *Vasengemälde*, iii. p. 144, etc., and the article CENTAURI.

Chironomia (χειρονομία). The movement of the hands, which was an important part of Greek and Roman dancing, had the name of χειρονομία. Herodotus, in the story of Hippoclides standing on his head before the guests of Clisthenes, uses the curious expression τοῖσι σκέλεσι ἐχειρόνομησε (vi. 129). It was likewise a feature of any pantomimic performance. The word is also used in the sense of σκιαμαχία, or sparring (Pausan. vi. 10, § 3). See PANTOMIMUS; PUGILATUS; SALTATIO.

Chironŏmos (χειρονόμος). Generally, any person who employs the art of gesticulation to express his meaning without the aid of language; thence, also, a pantomimic actor on the stage (Juv. vi. 63); and one who performs any duty with regular, studied, or theatrical movements; whence the same term is applied by the satirists to the slave who carved up the dishes at great entertainments with a pompous flourish of his knife (Juv. v. 121; cf. Petron. xxxvi.).

Chiropĕdé (χειροπέδη). A handcuff (Diod. xx. 13). See MANICAE; PEDICAE.

Chiropodists. See TOILET.

Chirotonia (χειροτονία). See CHEIROTONIA; PSEPHUS.

Chirurgia (χειρουργία). Surgery; a word meaning literally "handiwork." The practice of surgery was at first considered by the ancients to be merely a part of a physician's duty; but, as in later times the two branches of the profession were to a great extent separated, it will perhaps be more convenient to treat of it under a separate head. Without touching upon the disputed question, which is the more ancient branch of the profession, or even trying to give such a definition of the word *chirurgia* as would be likely to satisfy both the physicians and the surgeons of the present day, it will be sufficient to determine the sense in which the word was used by the ancients; and then to give an account of this division of the science and art of medicine as practised among the Greeks and Romans, re-

ferring to the article MEDICINA for further particulars.

The word *chirurgia* is derived from χείρ, "the hand," and ἔργον, "a work," and is explained by Celsus (*De Med.* lib. vii. Praefat.) to mean that part of medicine *quae manu curat*, "which treats ailments by means of the hand"; in Diogenes Laërtius (iii. 85) it is said to cure διὰ τοῦ τέμνειν καὶ καίειν, "by cutting and burning." Omitting the fabulous and mythological personages, Apollo, Aesculapius, Chiron, etc., the only certain traditions respecting the state of surgery before the establishment of the republics of Greece, and even until the time of the Peloponnesian War, are to be found in the *Iliad* and *Odyssey*. There it appears that surgery was almost entirely confined to the treatment of wounds, and the imaginary power of enchantment was joined with the use of topical applications (*Il.* iii. 218). The Greeks received surgery, together with the other branches of medicine, from the Egyptians; and from some observations made by the archæologists who accompanied the French expedition to Egypt in 1798, and by subsequent investigators, it appears that there are documents fully proving that in very remote times this extraordinary people had reached a degree of proficiency of which few of the moderns have any conception. Upon the ceilings and walls of the temples at Karnac, Luxor, etc., bas-reliefs are seen, representing limbs that have been cut off with instruments very similar to those which are employed for amputations at the present day. The same instruments are again observed in the hieroglyphics, and vestiges of other surgical operations may be traced, which afford convincing proofs of the skill of the ancient Egyptians in this branch of medical science.

The earliest remaining surgical writings are those in the Hippocratic Collection, where there are ten treatises on this subject, of which, however, only one is considered undoubtedly genuine. Hippocrates (B.C. 460–357 ?) far surpassed all his predecessors in the boldness and success of his operations; and though the scanty knowledge of anatomy possessed in those times prevented his attaining any very great perfection, still one should rather admire his genius, which enabled him to do so much, than blame him because, with his imperfect information, he could not accomplish more. (See HIPPOCRATES.) The scientific skill in reducing fractures and luxations displayed in his works *De Fracturis*, *De Articulis*, excites the admiration of Haller (*Biblioth. Chirurg.*); and he was most probably the inventor of the *ambe*, an old surgical machine for dislocations of the shoulder, which, though now fallen into disuse, enjoyed for a long time a great reputation. In his work *De Capitis Vulneribus* he gives minute directions about the time and mode of using the trephine, and warns the operator against the probability of his being deceived by the sutures of the cranium, as he confesses happened to himself (*De Morb. Vulgar.* lib. v. tom. iii. p. 561, ed. Kühn). Amputation, in the modern sense of the word, is not described in the Hippocratic Collection; though mention is made of the removal of a limb at the joint, after the flesh has been completely destroyed by gangrene. The author of the "Oath" commonly attributed to Hippocrates binds his pupils not to perform the operation of lithotomy, but to leave it to persons specially accustomed to it (ἐργάτῃσι ἀνδράσι πρήξιος τῆσδε); from which it would appear as if certain persons confined themselves to particular operations.

The names of several persons are preserved who practised surgery as well as medicine in the times immediately succeeding those of Hippocrates; but, with the exception of some fragments, inserted in the writings of Galen, Oribasius, Aëtius, etc., all their writings have perished. Archagathus deserves to be mentioned, as he is said to have been the first foreign surgeon who settled at Rome, B.C. 219 (Plin. *H. N.* xxix. § 12). He was at first very well received, the *ius Quiritium* was conferred upon him, a shop was bought for him at the public expense, and he received the honourable title of Vulnerarius; which, however, on account of his frequent use of the knife and cautery, was soon changed by the Romans, who were unused to such a mode of practice, into that of Carnifex. Asclepiades, who lived at the beginning of the first century B.C., is said to have been the first person who proposed the operation of tracheotomy (Cael. Aurel. *De Morb. Acut.* i. 14, § 111; iii. 4, § 39). Ammonius of Alexandria, surnamed Λιθοτόμος, who is supposed to have lived rather later, is celebrated in the annals of surgery for having been the first to propose and to perform the operation of lithotrity, or breaking a calculus in the bladder when found to be too large for safe extraction. Celsus has minutely described his mode of operating (*De Med.* vii. 26, § 3, p. 436), which in some respects resembles that of Civiale and Heurteloup in the early part of the present century, and proves that, however much credit they may deserve for perfecting the operation and bringing it out of oblivion into public notice, the praise of having originally thought of it belongs to the ancients. "A hook or crotchet," says Celsus, "is fixed upon the stone in such a way as easily to hold it firm, even when shaken, so that it may not revolve backward; then an iron instrument is used, of moderate thickness, thin at the front end, but blunt, which, when applied to the stone and struck at the other end, cleaves it: great care must be taken that the instrument does not come into contact with the bladder itself, and that nothing fall upon it by the breaking of the stone." The next surgical writer after Hippocrates, whose works are still extant, is Celsus, who lived at the beginning of the first century A.D., and who has devoted the four last books of his work *De Medicina*, and especially the seventh and eighth, entirely to surgical matter. It plainly appears from reading Celsus that since the time of Hippocrates surgery had made very great progress, and had, indeed, reached a high degree of perfection. We find in him the earliest mention of the use of the ligature for the arrest of hemorrhage from wounded blood-vessels (v. 26, § 21, p. 262); and the Celsian mode of amputation was continued down to comparatively modern times (vii. 33, p. 451). He is the first author who gives directions for the operation of lithotomy (*De Med.* vii. 26, § 2, p. 432), and the method described by him (called the *apparatus minor*, or *Celsus's method*) continued to be practised till the commencement of the sixteenth century. It was performed at Paris, Bordeaux, and other places in France, upon patients of all ages, even as late as the latter part of the seventeenth century; and a modern author (Allan *On Lithotomy*, p. 12) recommends it always to be preferred for

boys under fourteen. He describes (vii. 25, § 3, p. 428) the operation of *infibulatio*, which was so commonly performed by the ancients upon singers, etc., and is often alluded to in classical authors. (See Juv. vi. 73, 379; Seneca, in Lactant. *Divin. Instit.* i. 16; Mart. *Epigr.* vii. 82, 1, ix. 28, 12, xiv. 215, 1; Tertull. *De Corona Mil.* 11.) He also describes (vii. 25, § 1, p. 427) the operation of circumcision alluded to by St. Paul (1 Cor. vii. 18). Paulus Aegineta (*De Re Med.* vi. 53) transcribes from Antyllus a second method of performing the same operation.

The following description by Celsus of the necessary qualifications of a surgeon deserves to be quoted: "A surgeon," says he (lib. vii. Praefat.), "ought to be young, or, at any rate, not very old; his hand should be firm and steady, and never shake; he should be able to use his left hand as readily as his right; his eyesight should be clear, and his mind not easily startled; he should be so far subject to pity as to make him desirous of the recovery of his patient, but not so far as to suffer himself to be moved by his cries; he should neither hurry the operation more than the case requires, nor cut less than is necessary, but do everything just as if the other's screams made no impression upon him."

Omitting Scribonius Largus, Moschion, and Soranus, the next author of importance is Caelius Aurelianus, who is supposed to have lived about the beginning of the second century A.D., and in whose works there is much surgical matter, but nothing that can be called original. He rejected as absurd the operation of tracheotomy (*De Morb. Chron.* iii. 4, § 39). He mentions a case of ascites that was cured by tapping (ib. iii. 8, § 128), and also a person who recovered after being shot through the lungs by an arrow (ib. ii. 12, § 144).

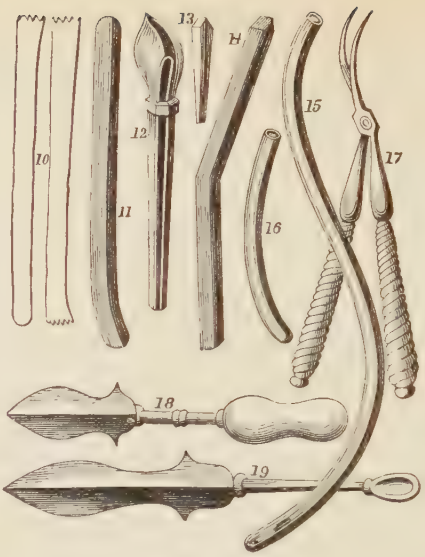
Galen, the most voluminous and at the same time the most valuable medical writer of antiquity, is less celebrated as a surgeon than as an anatomist and physician. He appears to have practised surgery at Pergamus, but upon his removal to Rome (A.D. 165) he entirely confined himself to medicine (*De Meth. Med.* vi. *in fine*, tom. x. p. 455). His writings prove, however, that he did not entirely abandon surgery. His Commentaries on the treatise of Hippocrates *De Officina Medici*, and his treatise *De Fasciis*, show that he was well versed even in the minor details of the art. He appears also to have been a skilful operator, though no great surgical inventions are attributed to him.

Antyllus, who lived some time between Galen and Oribasius, is the earliest writer whose directions for performing tracheotomy are still extant, though the operation (as stated above) was proposed by Asclepiades about three hundred years before. Only a few fragments of the writings of Antyllus remain, and among them the following passage is preserved by Paulus Aegineta (*De Re Med.* vi. 33): "When we proceed to perform this operation, we must cut through some part of the windpipe, below the larynx, about the third or fourth ring; for to divide the whole would be dangerous. This place is commodious, because it is not covered with any flesh, and because it has no vessels situated near the divided part. Therefore, bending the head of the patient backward, so that the windpipe may come more forward to the view, we make a transverse section between two of the rings, so that in this case not the cartilage, but the membrane which unites the cartilages together, is divided. If the operator be a little timid, he may first stretch the skin with a hook and divide it; then, proceeding to the windpipe, and separating the vessels, if any are in the way, he may make the incision."

This operation appears to have been very seldom, if ever, performed by the ancients upon a human being. Avenzoar tried it upon a goat, and found it might be done without much danger or difficulty; but he says he should not like to be the first person to try it upon a man.

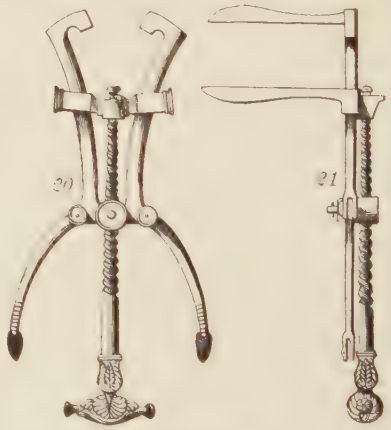
Oribasius, physician to the emperor Julian (A.D. 361), professes to be merely a compiler; and though there is in his great work, entitled Συναγωγαὶ Ἰατρικαί (*Collecta Medicinalia*), much surgical matter, there is nothing original. The same may be said of Aëtius and Alexander Trallianus, both of whom lived towards the end of the sixth century A.D. Paulus Aegineta has given up the fifth and sixth books of his work *De Re Medica* entirely to surgery, and has inserted much useful matter, derived in a great measure from his own observation and experience. Albucasis translated into Arabic great part of these two books as the basis of his work on surgery. Paulus was particularly celebrated for his skill in midwifery and female diseases, and was called on that account, by the Arabians, *Al-Kawábelí*, "the Accoucheur" (Abulfaraj, *Hist. Dynast.* p. 181, ed. Pococke). He probably lived towards the end of the seventh century A.D., and is the last of the ancient Greek and Latin medical writers whose surgical works remain. The names of several others are recorded, but they are not of sufficient eminence to require any notice here. For further information on the subject both of medicine and surgery, see MEDICINA; and for the legal qualifications, social rank, etc., both of physicians and surgeons, among the ancient Greeks and Romans, see MEDICUS.

The surgical instruments from which the accompanying engravings (Nos. 1 to 19) are made were found by a physician of St. Petersburg (Dr. Savenko) in 1819, at Pompeii, in the Via Consularis (Strada Consulare), in a house which is supposed to have belonged to a surgeon. They are now preserved in the museum at Portici. The engravings, with an account of them by Dr. Savenko, were originally published in the *Revue Médicale* for 1821, vol. iii. p. 427, etc. They were afterwards inserted in Froriep's *Notizen aus dem Gebiete der Natur- und Heilkunde* for 1822, vol. ii. n. 26, p. 57, etc. The accompanying figures are copied from the German work, in which some of them appear to be badly drawn. Their authenticity was at first doubted by Kühn (*De Instrumentis Chirurg. Veteribus Cognitis, et nuper Effossis*, Leipzig, 1823), who thought they were the same that had been described by Bayardi in his *Catal. Antiq. Monument. Herculani Effos.* (Nap. 1754, fol., n. 236–294). When, however, his dissertation was afterwards republished (*Opusc. Academ. Med. et Philol.*, Leipzig, 1827, ii. 309), he acknowledged himself to be completely satisfied on this point, and has given in the tract referred to a learned and ingenious description of the instruments and their supposed uses, from which the following account is chiefly abridged. It will, however, be seen at once that the form of most of them is so simple, and their uses so obvious, that very little explanation is necessary. Altogether



they give a very high idea of both the science and the practice of surgery among the Romans.

1, 2. Two probes (*specillum*, *μήλη*) made of iron; the larger six inches long, the smaller four and a half. 3. A cautery (*καυτήριον*) made of iron, rather more than four inches long. 4, 5. Two lancets (*scalpellum*, *σμίλη*) made of copper; the former two inches and a half long, the other three inches. It seems doubtful whether they were used for blood-letting or for opening abscesses, etc. 6. A knife, apparently made of copper, the blade of which is two inches and a half long, and in the broadest part one inch in breadth; the back is straight and thick, and the edge much curved; the handle is so short that Savenko thinks it must have been broken. It is uncertain for what particular purpose it was used: Kühn conjectures that (if it be a surgical instrument at all) it may have been made with such a curved edge and such a straight thick back in order that it might be struck with a hammer, and so amputate fingers, toes, etc. 7. Another knife, apparently



Surgical Instruments.

made of copper, the blade of which is of a triangular shape, two inches long, and in the broadest part eight lines in breadth; the back is straight and one line broad, and this breadth continues all the way to the point, which, therefore, is not sharp, but guarded by a sort of button. Kühn thinks it may have been used for enlarging wounds, etc., for which it would be particularly fitted by its blunt point and broad back. 8. A needle, about three inches long, made of iron. 9. An elevator (or instrument for raising depressed portions of the skull), made of iron, five inches long, and very much resembling those made use of at the present day. 10–14. Different kinds of forceps (*volsellae*). No. 10 has the two sides separated from each other, and is five inches long. No. 11 is also five inches long. No. 12 is three inches and a half long. The sides are narrow at the point of union, and become broader by degrees towards the other end, where, when closed, they would form a kind of arch. It should be noticed that it is furnished with a movable ring, exactly like the tenaculum forceps employed at the present day. No. 13 was used for pulling out hairs by the roots (*τριχολαβίς*). No. 14 is six inches long, and is bent in the middle. It was probably used for extracting foreign bodies that had stuck in the œsophagus, or gullet, or in the bottom of a wound. 15. A male catheter (*aenea fistula*), nine inches in length.

Surgical Instruments.

The shape is remarkable from its having the double curve like the letter S, which is the form that was re-invented in the last century by the celebrated French surgeon J. L. Petit. 16. Probably a female catheter, four inches in length. Celsus describes both male and female catheters (*De Med.* vii. 26, § 1, p. 429). 17. Supposed by Froriep to be an instrument for extracting teeth (*ὀδοντάγρα*, Pollux, iv. § 181); but Kühn, with much more probability, conjectures it to be an instrument used in amputating part of an enlarged uvula, and quotes Celsus (*De Med.* vii. 12, § 3, p. 404), who says that "no method of operating is more convenient than to

Surgical Instruments.

take hold of the uvula with the forceps, and then to cut off below it as much as is necessary." 18, 19. Probably two spatulae. Nos. 20–23 are perhaps the most interesting of all, as showing the means employed by the Romans in the exploration of some of the internal cavities of the body, for the discovery and treatment of disease. They are taken from Bened. Vulpi, *Illustraz. di tutti gli Strumenti Chirurgici*, etc. (Naples, 1847), Mem. 4, p. 39, etc., where there is a detailed and learned description of them. Nos. 20, 21 are two views of the same kind of instrument—viz., a dilator va-

ginae (*διόπτρα*, Paul. Aegin. vi. 73). No. 22 is a dilator ani (*ἑδροδιαστολεύς*, id. vi. 78); and No. 23, nippers for compressing veins or extracting splintered bones.

See Pliny, *Historia Naturalis*, bks. xx.–xxxii.; Rénouard, *Hist. of Medicine* (Eng. trans. Philadelphia, 1867); Ritter von Rittershain, *Die Heilkünstler des alten Roms* (Berlin, 1875); Coxe, *The Writings of Hippocrates and Galen Epitomized* (Phil. 1846); Watson, *The Medical Profession in Ancient Times* (N. Y. 1856); Dunglison, *Hist. of Medicine* (Phil. 1872); Daremberg, *Hist. des Sciences Médicales* (Paris, 1870–73); Garratt, *Myths in Medicine* (N. Y. 1884); and Müller, *Handbuch*, v. pp. 108 foll.

Surgical Instruments.

Chiton (*χιτών*). See Exomis; Tunica.

Chitonia (*Χιτώνια*). A feast celebrated in the Attic village of Chitoné in honour of Artemis Chitonia, so called as wearing the loose tunic, or *χιτών*, of the huntress. A similar feast was held at Syracuse. See Athenaeus, xiv. p. 629.

Chlamys (*χλαμύς*). A short mantle forming a part of the outer raiment of the Greeks, and of the Romans in imperial times. Its material was usually woollen; and it differed from the *ἱμάτιον*, the usual *amictus* of the male sex, in these respects: that it was much smaller; also finer, thinner, more variegated in colour, and more susceptible of ornament. It moreover differed in being oblong instead of square, its length being generally about twice its breadth (Plut. *Alex.* 26).

The chlamys came originally from Macedonia and Thessaly, and was the dress of hunters, of travellers, especially on horseback, and of soldiers. It seems to have been part of the usual dress of a Spartan (Aristoph. *Lys.* 988) and was worn at Athens by the *ephebi* from about seventeen to twenty years of age (Philemon, p. 367, ed. Meineke).

The chlamys as worn by youths, by soldiers, and by hunters differed in colour and fineness, according to its purpose, and the age and rank of the wearer. The hunter commonly went out in a mantle of a dull, inconspicuous colour, as best adapted to escape the notice of wild animals (Poll. v. 18). The more ornamental mantles, being designed for women, were tastefully decorated with a border (*limbus*, Verg. *Aen.* iv. 137); and those worn by Phœnicians, Trojans, Phrygians, and other Asiatics were also embroidered, or interwoven with gold (Verg. *Aen.* iii. 483–484, xi. 775; Ovid, *Met.* v. 51). Actors had their chlamys ornamented with gold (Poll. iv. 116).

The usual mode of wearing the mantle was to pass one of its shorter sides round the neck, and to fasten it by means of a brooch (*πόρπη*, *fibula*), either over the breast, in which case it hung down the back, reaching to the calves of the legs; or over the right shoulder, so as to cover the left arm, as in the well-known example of the Belvedere Apollo. In other instances, it was made to depend gracefully from the left shoulder, of which the bronze Apollo in the British Museum (see right-hand figure) presents an example; or it was thrown lightly behind the back, and passed over either one arm or shoulder, or over both (as in left-hand figure); or, lastly, it was laid upon the throat, carried behind the neck, and crossed so as to hang

Chlamys. (The figure on the left from a painting on a vase; that on the right from the British Museum.)

down the back, and sometimes its extremities were again brought forward over the arms or shoulders. In short, the remains of ancient art of every description show in how high a degree the mantle contributed, by its endless diversity of arrangement, to the display of the human form in its greatest beauty. The aptitude of the mantle to be turned in every possible form around the body made it useful even for defence. The hunter used to wrap his chlamys about his left arm when pursuing wild animals, and preparing to fight with them (Poll. v. 18; Xen. *Cyneg.* vi. 17). Alcibiades died fighting with his mantle rolled round his left hand instead of a shield. The annexed illustration exhibits a figure of Poseidon armed with the trident in his right hand, and having a chlamys to protect the left. It is taken from a medal which was struck in commemoration of a naval victory obtained by Demetrius Poliorcetes, and was evidently designed to express his sense of Poseidon's succour in the conflict. When Artemis goes to the chase, as she does not require her mantle for pur-

Chlamys. (Poseidon from a medal, and Artemis from a statue in the Vatican.)

poses of defence, she draws it from behind over her shoulders, and twists it round her waist, so that the belt of her quiver passes across it, as shown in the statues of this goddess in the Vatican.

It appears from the bas-reliefs on marble vases that dancers took hold of one another by the chlamys, as the modern Greeks still do by their scarfs or handkerchiefs, instead of taking one another's hands.

Among the Romans the chlamys came more into use under the emperors. Caligula wore one enriched with gold (Suet. *Calig.* 19); and Alexander Severus, when in the country, one dyed with scarlet (Lamprid. *Al. Sev.* 40).

Chloé (Χλόη). "The blooming." An epithet of Demeter (q. v.).

Chloeia or **Chloia** (Χλόεια or Χλοιά). A festival celebrated at Athens in honour of Demeter Chloé, or simply Chloé, whose temple stood near the Acropolis (Hesych. s. v. Χλοιά). It was solemnized in spring, on the sixth of Thargelion, when the blossoms began to appear (hence the names Χλόη and Χλόεια), with the sacrifice of a goat and much mirth and rejoicing.

Chloris (Χλωρίς). (1) Daughter of the Theban Amphion and Niobé (q. v.). She and her brother Amyclas were the only children of Niobé not killed by Apollo and Artemis. She is often confounded with the following. (2) Daughter of Amphion of Orchomenos, wife of Neleus, king of Pylos, and mother of Nestor. (3) Wife of Zephyrus, and goddess of flowers, identical with the Roman Flora (q. v.).

Chlorus. See CONSTANTIUS.

Choaspes (Χωάσπης). (1) Now the Kerah or Kara-Su; a river of Susiana, falling into the Tigris. Its water was so pure that the Persian kings used to carry it with them in silver vessels when on foreign expeditions. (2) Now the Attock; a river in the Paropamisus, in India, falling into the Cophes (Cabul).

Chobus (Χῶβος). A river of Colchis falling into the Euxine, north of the mouth of the Phasis.

Choenix (χοῖνιξ). A Greek measure of capacity, the size of which is differently given; it was probably of different sizes in the several States. Pollux, Suidas, Cleopatra, and the fragments of Galen make it equal to three *cotylae* (=1.4866 pint English); another fragment of Galen and other authorities make it equal to four *cotylae* (=1.9821 pint English); Rhemnius Fannius and another fragment of Galen make it eight *cotylae* (=3.9641 pints English). The symbol for χοῖνιξ is $\overset{\cdot}{\chi}$ or $\overset{\circ}{\chi}$.

Choëphŏri (Χοηφόροι). "The Libation-bearers." The title of a play of Aeschylus (q. v.), the second in the Orestean trilogy, and named from the fact that the chorus is composed of captive Trojan women who are charged with the duty of bringing the libations to the tomb of Agamemnon. The subject of the play is the murder of Clytemnestra and Aegisthus by Orestes.

Choerĭlus (Χοιρίλος and Χοίριλλος). (1) An Athenian dramatist, one of the oldest Attic tragedians, who appeared as a writer as early as B.C. 520. He was a rival of Pratinas, Phrynichus, and Aeschylus. His favourite line seems to have been the satyric drama, in which he was long a popular writer.

(2) A Greek epic poet, born in Samos about B.C. 470, a friend of Herodotus and afterwards of the Spartan Lysander. He lived first at Athens and afterwards at the court of King Archelaüs of Macedonia, where he was treated with great consideration, and died about B.C. 400. He was the first epic poet who, feeling that the old mythology was exhausted, ventured to treat an historical subject of immediate interest, the Persian wars, in an epic entitled *Perseïs*. According to one account, the poem was read in the schools with Homer. The few fragments that remain show that it did not lack talent and merit; but little regard was paid to it by posterity. Ed. by Näke (Leipzig, 1817).

(3) Of Iasos in Caria. This Choerilus was also an epic poet, who accompanied Alexander the Great. Alexander promised him a gold-piece for every good verse he wrote in celebration of his achievements, but declared that he would rather be the Thersites of Homer than the Achilles of Choerilus. Cf. Hor. *A. P.* 357.

Choes (χόες). See DIONYSIA.

Chonia (Χωνία). The name in early times of a district in the south of Italy, inhabited by the Chones, an Oenotrian people. Chonia appears to have included the southeast of Lucania and the whole of the east of Bruttium as far as the promontory of Zephyrium.

Choragic Monument of Lysicrātes. See CHOREGUS.

Chorasmii (Χωράσμιοι). A people of Sogdiana, who inhabited the banks and islands of the lower course of the Oxus. They were a branch of the Sacae or Massagetae.

Choraules (χοραύλης). See CHORUS; TIBICEN.

Choregia (χορηγία). See CHOREGUS.

Chorēgus (χορηγός); in Latin, **Chorāgus.** The person who supplied a properly trained chorus.

(1) GREEK. The maintenance of a *choregia* (χορηγία) was one of the regularly recurring state burdens (ἐγκύκλιοι λειτουργίαι) at Athens. Originally the chorus consisted of all the inhabitants in the State. With the improvement of the arts of music and dancing, the distinction of spectators and performers arose; it became more a matter of art to sing and dance in the chorus; paid performers were employed; and at last the duties of this branch of worship devolved upon one person, selected by the State to be their representative, who defrayed all the expenses which were incurred on the different occasions. This person was the choregus. It was the duty of the managers of a tribe (ἐπιμεληταὶ φυλῆς) to which a *choregia* had come round, to provide a person to perform the duties of it; and the person appointed by them had to meet the expenses of the chorus in all plays, tragic or comic (τραγῳδοῖς, κωμῳδοῖς) and satirical; and of the lyric choruses of men and boys, the *pyrrhichistae*, cyclian dancers, and flute-players (χορηγεῖν ἀνδράσι, or ἀνδρικοῖς χοροῖς, παιδικοῖς χοροῖς, πυρριχισταῖς, κυκλίῳ χορῷ, αὐληταῖς ἀνδράσιν), etc. He had first to collect his chorus, and then to procure a teacher (χοροδιδάσκαλος), whom he paid for instructing the *choreutae*. The choregi drew lots for the first choice of teachers; for as their credit depended upon the success of their chorus in the dramatic or lyric contests, it was of great importance to them whose assistance they secured. When the chorus was composed of boys,

the choregus was occasionally allowed to press children for it, in case their parents were refractory. The chorus were generally maintained, during the period of their instruction, at the expense of the choregus, and he had also to provide such meat and drink as would contribute to strengthen the voice of the singers. The expenses of the different choruses are given by Lysias as follows: Chorus of men, 20 minae; with the tripod, 50 minae; pyrrhic chorus, 8 minae; pyrrhic chorus of boys, 7 minae; tragic chorus, 30 minae; comic, 16 minae; cyclian chorus, 300 minae. According to Demosthenes, the chorus of flute-players cost a great deal more than the tragic chorus. The choregus who exhibited the best musical or theatrical entertainment received as a prize a tripod, which he had the expense of consecrating, and sometimes he had also to build the monument on which it was placed. There was a whole street at Athens formed by the line of these tripod-temples, and called "The Street of the Tripods." A well-preserved specimen is the Choragic Monument of one Lysicrates, shown in the illustration. The laws of Solon prescribed forty as the proper age for the choregus, but this law was not long in force. See CHORUS.

Choragic Monument of Lysicrates.

(2) ROMAN. The choragus among the Romans (Plaut. *Trin.* iv. 2, 16) was a lender of costumes and properties, and to him the aediles used to give a contract for supplying the necessary accessories for a play. In Plautus (*Curc.* iv. 1), the choragus delivers a sort of parabasis. Under the Empire the *procurator summi choragii*, appointed probably by Domitian, was a regular imperial minister, with a great many subordinates, and had charge of the whole supply of decoration, machinery, and costume necessary for the performance of the various shows as well in the amphitheatre as in the theatre. A subdivision of this office was the *ratio ornamentorum*, which had special reference to the "make-up" of the actors. Under Gordian we find the name had vanished. Apuleius (*Apol.* i. 13) had spoken of the *choragium thymelicum;* but the functionary called *logista thymelae* now took the place of the *procurator summi choragii*. In the fourth century, at Rome the *praefectus urbi*, in the East the *praefectus praetorio*, and in Africa the *proconsul* looked after the games. In the fifth century, at Rome, Milan, and Carthage, we find this done by *tribuni voluptatum*.

Chorizontes (*χωρίζοντες*). "Separators." A name given to such of the ancient scholars and critics as held the belief that the *Iliad* and *Odyssey* of Homer were written by different authors. The names of only two of these critics—Xenon and Hellanicus—have come down to us. See HOMERUS.

Chorobătes (*χωροβάτης*). An instrument for determining the slope of an aqueduct and the levels of the country through which it was to pass. From the description given of it by Vitruvius, it appears to have differed but very slightly from a common carpenter's level, which consists of a straight rule supporting a perpendicular piece, against which hangs a plumb-line. The *chorobates* had two perpendiculars and plumb-lines, one at each end, instead of a single one in the middle (Vitruv. viii. 5, 1).

Chorus (*χορός*). The word *χορός* in GREEK meant a number of persons who performed songs and dances at religious festivals. When the drama at Athens was developed from the dithyrambic choruses, the chorus was retained as the chief element in the Dionysiac festival. With the old dramatists the choral songs and dances much preponderated over the action proper. As the form of the drama developed, the sphere of the chorus was gradually limited, so that it took the comparatively subordinate position which it occupies in the extant tragedies and comedies. The function of the chorus represented by its leader was to act as an ideal public, more or less connected with the *dramatis personae*. It might consist of old men and women or of maidens. It took an interest in the occurrences of the drama, watched the action with quiet sympathy, and sometimes interfered—if not to act, at least to advise, comfort, exhort, or give warning. At the critical points of the action, it performed long lyrical pieces with suitable action of dance and gesture. In the better times of the drama these songs stood in close connection with the action; but even in Euripides this connection is sometimes loose, and with the later tragedians, after the time of Agathon, the choral performance sank to a mere *intermezzo*. The style of the chorus was distinguished from that of the dialogue partly by its complex lyrical form, partly by its language, in which it adopted a mixture of Attic and Doric forms. The proper place of the chorus was on the orchestra, on different parts of which, after a solemn march, it remained until the end of the piece, drawn up, while standing, in a square. During the action it seldom left the orchestra to reappear, and it was quite exceptional for it to appear on the stage. As the performance went on, the chorus would change its place on the orchestra; as the piece required, it would divide into semi-choruses and perform a variety of artistic movements and dances. The name *ἐμμέλεια* was given to the tragic dance, which, though not lacking in animation, had a solemn and measured character. The comedy had its burlesque and often indecent performance called *κόρδαξ*; the satyric drama its *Σίκιννις*, representing the wanton movements of satyrs. The songs of the choruses, too, had their special names. The first ode performed by the entire body was called *πάροδος*; the pieces intervening between the parts of the play, *στάσιμα*; the songs of mourning, in which the chorus took part with the actors, *κομμοί*. The

number of the members (*χορευταί*) was, in tragedies, originally twelve, and after Sophocles fifteen. This was probably the number allowed in the satyric drama; the chorus in the Old Comedy numbered twenty-four.

The business of getting the members of the chorus together, paying them, maintaining them during the time of practice, and generally equipping them for performance, was regarded as a *λειτουργία*, or public service, and devolved on a wealthy private citizen called a *χορηγός*, to whom it was a matter of considerable trouble and expense. We know from individual instances that the cost of a tragic chorus might run up to thirty minae (about $540), of a comic chorus to sixteen minae (about $265). If victorious, the *choregus* received a crown and a finely wrought tripod. This he either dedicated, with an inscription, to some deity as a memorial of his triumph, or set up on a marble structure built for the purpose in the form of a temple, in a street named the Street of Tripods, from the number of these monuments which were erected there. One of these memorials, put up by a certain Lysicrates in B.C. 335, still remains. (See CHOREGUS.) After the Peloponnesian War, the prosperity of Athens declined so much that it was often difficult to find a sufficient number of *choregi* to supply the festivals. The State, therefore, had to take the business upon itself. But many choruses came to an end altogether. This was the case with the comic chorus in the later years of Aristophanes; and the poets of the Middle and New Comedy accordingly dropped the chorus. This explains the fact that there is no proper chorus in the Roman comedy, which is an imitation of the New Comedy of the Greeks. In their tragedies, however, imitated from Greek originals, the Romans retained the chorus, which, as the Roman theatre had no orchestra, was placed on the stage, and as a rule performed between the acts, but sometimes during the performance as well. See DRAMA; THEATRUM.

The ROMAN chorus, in fact, belonged especially to the *crepidatae*—i. e. the tragedies modelled on and derived from the Greek ones; but it also appears in the national tragedy of the Romans, the *praetextatae*. Even though Diomedes declares that the Roman comedy had no chorus, yet this is only true generally, for there is an undoubted chorus of fishermen in the *Rudens* of Plautus. It was probably the whole company of actors (*caterva*, *grex*), not a chorus, which said the "Plaudite" with which comedies end. There appear to have been choruses in the *pantomimus* and in the *pyrrhica* of the Empire. There was no fixed number of *choreutae*. As that part of the theatre which was the Greek orchestra was given up to the spectators at Rome, the chorus had to occupy the stage (Vitruv. v. 6, 2). The Roman chorus took more part in the action of the drama than did the Greek chorus (Hor. *Ars Poet.* 193). It was led by a *magister chori*, who had his place in the middle of the chorus, and so was called *mesochorus* (Plin. *Epist.* ii. 14, 6). The musical accompaniment was played by a *choraules* on a double flute. Between the acts the chorus (probably in tragedy) and the tibicen (in comedy) used to sing or play (Donatus, *Arg. ad Andriam*); and Horace (*Ars Poet.* 194) especially urges that the subject of the songs should be pertinent to the action of the drama. The chorus was composed of men who were professionals (*artifices*), and who were for the most part slaves. As the chorus of the Romans sometimes represented women, they must have worn masks. They were probably dressed after the manner of the Greeks, and the dresses appear to have been very splendid, as was the whole production of plays at the end of the Republic and during imperial times —e. g. purple chlamydes were wanted for a chorus of soldiers, as is told in a well-known story of Lucullus (Hor. *Epist.* i. 6, 40).

The literature on the subject of the chorus is very extensive. The most important works are: B. Arnold, art. "Chor" in Baumeister's *Denkmäler des klassischen Alterthums*, pp. 383–391; Sommerbrodt, *Scaenica*; Muff, *Die chorische Technik des Sophokles*; R. Arnoldt, *Die chorische Technik des Euripides*; F. Castets in Daremberg and Saglio, art. "Chorus"; A. Müller, *Die griechischen Bühnenalterthümer*. In the two last works full reference is made to the numerous works on the subject. See also O. Ribbeck, *Die römische Tragödie im Zeitalter der Republik*, 607, 631 foll.; and the articles COMOEDIA; DITHYRAMBUS; DRAMA; THEATRUM; TRAGOEDIA.

Chronium Mare. A name applied by the ancients to the Frozen Ocean. The Cimbri, according to Pliny (iv. 13), called it Morimarusa—i. e. "the dead sea."

Chronogram. A device of the Romans of the later Empire, by which in an inscription the letters that form the numerals to denote its date were written larger than the rest. See Hilton, *Chronograms* (1882).

Chronologia (*χρονολογία*). See CALENDARIUM.

Chrysa (*Χρύσα*). A city on the coast of the Troad, near Thebes, with a temple of Apollo Smintheus; celebrated by Homer.

Chrysanthĭus (*Χρυσάνθιος*). An eclectic philosopher of Sardis; made high-priest of Lydia by the emperor Julian, and supposed to possess a power of conversing with the gods and of predicting future events.

Chrysāor (*Χρυσάωρ*). Son of Poseidon and Medusa, brother of Pegasus, and father of the three-headed giant Geryon and Echidna by the ocean-nymph Callirrhoë.

Chrysaŏreus (*Χρυσαορεύς*, "Of the Golden-Sword"). A surname of Zeus, from his temple at Stratonicé in Caria. There was a political union of certain Carian States, which held its meetings here, under the name of Chrysaorium. These States had votes in proportion to the number of towns they possessed.

Chrysēis (*Χρυσηΐς*). Daughter of Chryses, priest of Apollo at Chrysé, and taken prisoner by Achilles at the capture of Lyrnessus or the Hypoplacian Thebes. In the distribution of the booty she was given to Agamemnon. Her father Chryses came to the camp of the Greeks to solicit her ransom, but was repulsed by Agamemnon with harsh words. Thereupon Apollo sent a plague into the camp of the Greeks, and Agamemnon was obliged to restore her to her father to appease the anger of the god. Her proper name was Astynomé. See ACHILLES; TROJAN WAR.

Chryselephantīna (sc. *ἀγάλματα*). This term, though resting on no better authority than that of the Scholiast on Aristophanes (*Eq.* 1169), is now customarily used to denote those gold and ivory

statues which were the highest attainments of Greek plastic art.

The use of these costly materials seems to have been originally a development of the early art of wood-carving. The first artists who produced chryselephantine statues were pupils of Dipoenus and Scyllis, the Cretan "Daedalids." Though we hear of no such works by these masters themselves, they used ivory in conjunction with ebony (Pausan. ii. 22, 5); by gilding the wood, a quite common proceeding, the transition would be made. The appropriateness of the two materials would then suggest the restriction of the ivory to nude parts, of gold to drapery, etc., a core of wood still underlying the whole. Such, probably, were the works of Doryclidas, Theocles, Doutas, and other artists of the earlier portion of the sixth century B.C. We do not hear of many chryselephantine works of importance during the late archaic or transitional period. The construction of colossal figures, such as the Olympian Zeus and the Athené Parthenos of Phidias, or the Argive Heré of Polycletus, can have had little in common with mere wood-carving. For these, of course, a most elaborate internal framework was necessary. See COLOSSUS.

Chrysendĕta (*χρυσένδετα*). Metal dishes (*lances*) used by the Romans for serving up food at table. Martial mentions them several times (ii. 43; ii. 53; vi. 94; xi. 30; xiv. 97) as in use by the wealthy, and specially notices mullet as being served upon them. The derivation of the word and the epithet *flava* applied to them by Martial render it probable that these dishes were made of silver, and were adorned (probably on the rim) with ornaments in relief, wrought in gold and attached by means of soldering or riveting.

Chryses (Χρύσης). See CHRYSEIS.

Chrysippus (Χρύσιππος). (1) A son of Pelops, carried off by Laius (Apollod. iii. 5, 6). This circumstance became a theme with many ancient writers, and hence the story assumed different shapes, according to the fancy of those who handled it. The death of Chrysippus was also related in different ways. According to the common account, he was slain by Atreus, at the instigation of his step-mother, Hippodamia. (Consult Heyne *ad loc.*). (2) A Stoic philosopher of Soli in Cilicia Campestris. He fixed his residence at Athens, and became a disciple of Cleanthes, the successor of Zeno. He was equally distinguished for natural abilities and industry, seldom suffering a day to elapse without writing 500 lines. He wrote several hundred volumes, of which three hundred were on logical subjects, but in all he borrowed largely from others. He maintained, with the Stoics in general, that the world was God, or a universal effusion of his spirit, and that the superior part of this spirit, which consisted in mind and reason, was the common nature of things, containing the whole and every part. Sometimes he speaks of God as the power of fate and the necessary chain of events; sometimes he calls him fire; and sometimes he deifies the fluid parts of nature, as water and air; and again, the earth, sun, moon, and stars, and the universe in which these are comprehended, and even those men who have obtained immortality. He was very fond of the figure *sorites* in arguing, which is hence called by Persius "the heap of Chrysippus." His discourses abounded more in curious subtleties and nice distinctions than in solid arguments. In disputation, in which he spent the greatest part of his life, he discovered a degree of promptitude and confidence which approached towards audacity. He often said to his preceptor, "Give me doctrines, and I will find arguments to support them." It was a singular proof of his haughty spirit that when a certain person asked him what preceptor he would advise him to choose for his son, he said, "Me; for if I thought any philosopher excelled me, I would myself become his pupil." With so much contempt did he look down upon the distinctions of rank that he would never, as other philosophers did, pay his court to princes or great men, by dedicating to them any of his writings. The vehemence and arrogance with which he supported his tenets created him many adversaries, particularly in the Academic and Epicurean sects. Even his friends of the Stoic School complained that, in the warmth of dispute, while he was attempting to load his adversary with the reproach of obscurity and absurdity, his own ingenuity often failed him, and he adopted such unusual and illogical modes of reasoning as gave his opponents great advantages over him. It was also a common practice with Chrysippus, at different times, to take the opposite sides of the same question, and thus furnish his antagonists with weapons which might easily be turned, as occasion offered, against himself. Carneades, who was one of his most able and skilful adversaries, frequently availed himself of this circumstance, and refuted Chrysippus by convicting him of inconsistency. Of his writings (he is said to have published 700 works in all) nothing remains, except a few extracts which are preserved in the works of Cicero, Plutarch, Seneca, and Aulus Gellius. These fragments were collected and edited by Petersen in 1827. He died in the 143d Olympiad, B.C. 208, at the age of eighty-three. A statue was erected to his memory by Ptolemy. See the account in Zeller's *Stoics, Epicureans, and Sceptics* (Eng. trans. London, 1870).

Chrysoaspĭdes. See ARGYRASPIDES.

Chrysocĕras. "The Golden Horn"; originally the promontory upon which the city of Constantinople (Byzantium) was built. See BYZANTIUM.

Chrysogŏnus, L. CORNELIUS. A favourite freedman of Sulla, and a man of profligate character. He was the false accuser of Sex. Roscius, whom Cicero defended, B.C. 80.

Chrysolōras, MANUEL. A Greek scholar who is commonly regarded as having been the first to reintroduce Greek literature into Italy, in the fourteenth century. A native of Constantinople, he was sent by the Greek emperor John Palaeologus to Italy and England, in order to seek aid against the Turks. This mission, which was about the year 1390–91, made Chrysoloras known to many influential Italians; so that when, in 1397, he made his home in Florence as a teacher of Greek, he was received with much consideration. Poggio Bracciolini, Leonardo Bruno, Filelfo, Guarino Guarini, and many other scholars whose names are associated with the Renaissance, were pupils of Chrysoloras, who later engaged in the public service under the popes Gregory XII. and John XXIII. By order of the latter, he attended the Council of Constance, where he died, April 15th, 1415. Two of his works have been printed: the *Ἐρωτήματα*, for some time the only Greek grammar used in Western Europe; and *Epistolae III. de Comparatione Veteris et Novae*

Romae. A number of others, however, still exist in MS. His son, IOHANNES CHRYSOLORAS, was also noted as a teacher of Greek.

Chrysopŏlis (Χρυσόπολις). Now Scutari; a fortified place on the Bosporus, opposite to Byzantium, at the spot where the Bosporus was generally crossed. It was originally the port of Chalcedon.

Chrysostŏmus (Χρυσόστομος) (St. John). An eminent Father of the Church, born of a noble family at Antioch, A.D. 347. His father's name was Secundus, and the surname of Chrysostom, or "golden mouth," obtained by the son, was given to him on account of his eloquence. He was bred to the bar, but quitted it for an ascetic life: first, with a monk on a mountain near Antioch, and then in a cave by himself. He remained in this retirement six years, when he returned to Antioch, and, being ordained, became so celebrated for his talents as a preacher that, on the death of Nectarius, patriarch of Constantinople, he was chosen to supply his place. On obtaining this preferment, which he very unwillingly accepted, he acted with great vigour and austerity in the reform of abuses, and exhibited all the mistaken notions of the day in regard to celibacy and the monastic life. He also persecuted the pagans and heretics with great zeal, and sought to extend his episcopal power with such unremitting ardour that he involved himself in a quarrel with Theophilus, bishop of Alexandria, who enjoyed the patronage of the empress Eudoxia; which quarrel ended in his formal deposition by a synod held at Chalcedon, A.D. 403. He was, however, so popular in Constantinople that a formidable insurrection ensued, and the empress herself interfered for his return. Towards the end of the same year, owing to his zeal relative to a statue of Eudoxia, placed near the great church, and causing a disturbance of public worship, all his troubles were renewed. If true, that in one of his sermons the empress was compared by him to Herodias, who asked the head of John in a charger, the anger of Eudoxia was not altogether unjustifiable. The consequence of her resentment was the assembling of another synod, and in A.D. 404 the patriarch was again deposed and sent into exile. The place of his banishment was Cucusus, a lonely town among the ridges of Mount Taurus, on the confines of Cappadocia and Cilicia. He sustained himself with much fortitude; but having, by means of his great influence and many adherents, procured the intercession of the Western emperor, Honorius, with his brother Arcadius, he was ordered to be removed still farther from the capital, and died on the journey at Comana in Pontus, A.D. 407, at the age of sixty. Opinion was much divided in regard to his merits for some time after his death, but at length his partisans prevailed, and thirty years from his decease he was removed from his place of interment as a saint, and his remains were met in procession by the emperor Theodosius II., on their removal from the place of his original interment to Constantinople. The Roman Church celebrates St. Chrysostom on the 27th of January; the Greek Church, on the 13th of November.

Chrysostom was a voluminous writer, but more eloquent than either learned or acute. Although falling short of Attic purity, his style is free, copious, and unaffected, and his diction often glowing and elevated. The numerous treatises or sermons by which he chiefly gained his reputation are very curious for the information they contain on the customs and manners of the times, as elicited by his declamation against prevailing vices and follies. The first entire Greek edition of the works of Chrysostom was that of Sir Henry Saville, at Eton, in 8 vols. folio (1613); but that of Montfaucon, Paris, with annotations and his life, 11 vols. folio (1718–38, reprinted by the Abbé Migne, Paris, 1863), is by far the most complete. Some of the homilies will be found translated in the Oxford *Library of the Fathers.* The reader is referred, also, to the work of Neander, translated by Stapleton (1838), and to Newman's *Historical Sketches* (1873); Stephens, *St. Chrysostom: His Life and Times* (1872); Thierry, *Chrysostom et l'Impératrice Eudoxie* (2d ed. 1874); and Busk, *Life and Times of St. Chrysostom* (1885).

Chrysothĕmis (Χρυσόθεμις). (1) A daughter of Agamemnon and Clytaemnestra. (2) A Cretan, who first obtained the poetical prize at the Pythian games.

Chrysus (*χρυσοῦς*). See AURUM.

Chthonia (Χθονία). (1) Daughter of Erechtheus of Athens, who was sacrificed by her father to gain the victory over the men of Eleusis. (See ERECHTHEUS.) (2) An epithet of Demeter (q. v.).

Chthonia (*χθόνια*). A festival celebrated at Hermioné in honour of Demeter, surnamed Chthonia. A description of it is given by Pausanias (ii. 35, § 4, etc.), and it is also mentioned by Aelian.

Chthonian Gods (*θεοὶ χθόνιοι*, from *χθών*, "the earth"). The deities who rule under the earth, or who are connected with the lower world, as Hades, Pluto, Persephoné, Demeter, Dionysus, Hecaté, and Hermes.

Chytra (*χύτρα*). An earthen vessel for common use, especially for cooking. It was ordinarily left unpainted, and hence all unprofitable labour was described by the proverb *χύτραν ποικίλλειν*, "to paint a chytra." A very remarkable use of these vessels of earthenware among the Greeks was to put infants into them to be exposed (Aristoph. *Ran.* 1188). Hence the exposure of children was called *ἐγχυτρίζειν*, and the miserable women who practised it, *ἐγχυτριστρίαι*.

Chytri (Χύτροι, "Feast of Pots"). The third day of the Anthesteria. See DIONYSIA.

Chytrŏpus (*χυτρόπους*). A stand, on which was often placed the *χύτρα* to be heated. See CHYTRA. The name is also given to a *χύτρα* with legs.

Chytropus. (Panofka.)

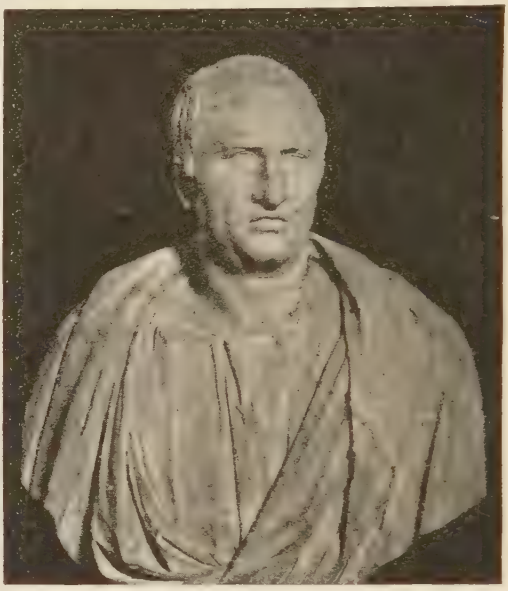
Cibălae. A town of Lower Pannonia, situated on the Savus, about fifty miles from Sirmium, and about one hundred from the confluence of the Savus and the Danube. It was famous for the defeat of Licinius by Constantine, A.D. 314, and was also the birthplace of Gratian.

Ciborium (*κιβώριον*). Properly the shell of the Egyptian bean-plant (*colocasia*), the bean itself being called *κύαμος*. These shells, and indeed the leaves, too, were made into drinking-cups, and were, no doubt, of the same shape as the original shell—broad at the top and becoming narrow towards the bottom. They were smooth and large

(Hor. *Od.* ii. 7, 22), and often were wrought in a costly manner (Athen. xi. 477 e). No certain specimen of one can be given. In ecclesiastical Latin, *ciborium* means the vessel used to hold the Host, or consecrated wafer, during mass.

Cibōtus (Κιβωτός). See APAMEA.

Cibўra (Κίβυρα). (1) MAGNA; a great city of Phrygia Magna, on the borders of Caria, said to have been founded by the Lydians, but afterwards peopled by the Pisidians. Under its native princes, the city ruled over a large district called Cibyratis. In B.C. 83, it was added to the Roman Empire. It was celebrated for its manufactures, especially of iron. (2) PARVA; a city of Pamphylia, on the borders of Cilicia.



Cicāda (τέττιξ). A species of insect, frequently mentioned by the classical writers. It is originally a caterpillar, then a chrysalis, and is converted into a fly late in the spring. Its song is much louder and shriller than that of the grasshopper. The ancient writers, and especially the poets, praise the sweetness of their song; and Plutarch says they were sacred to the Muses. According to Aelian, only the male cicada sings, and that in the hottest weather. This is confirmed by the discoveries of modern naturalists. The cicada is extremely common in the south of Italy. It is found also in the United States, being called in some parts "the harvest-fly," and in others, very erroneously, "the locust."

Cicĕro. (1) MARCUS TULLIUS. The greatest of the Roman orators. He was born at Arpinum, the native place of Marius, B.C. 106, the same year which gave birth to Pompey the Great. His family was ancient, and of equestrian rank, but had never taken part in public affairs at Rome, though both his father and grandfather were persons of consideration in the part of Italy in which they resided. His father, being a man of cultivated mind, determined to educate his two sons, Marcus and Quintus, on an enlarged and liberal plan, and to fit them for the prospect of those public employments which his own weak state of health incapacitated him from seeking. Marcus, the elder of the two, soon displayed indications of a superior mind, and we are told that his school-fellows carried home such accounts of his extraordinary parts that their parents often visited the school for the sake of seeing a boy who gave so much promise of future eminence. One of his earliest masters was the poet Archias, whom he defended afterwards in his consular year; and under his instruction he attained such proficiency as to compose a poem, though yet a boy, on the fable of Glaucus, which had formed the subject of one of the tragedies of Aeschylus. Soon after he assumed the *toga virilis*, he was placed under the care of Scaevola, the celebrated lawyer, whom he introduces so beautifully in several of his philosophical dialogues; and in no long time he gained a thorough knowledge of the laws and political institutions of his country. This was about the period of the Social War; and, according to the Roman custom, which made it a necessary part of education to learn military science by actual service, Cicero took the opportunity of serving a campaign under the consul Pompeius Strabo, father of Pompey the Great. Returning to pursuits more congenial to his natural tastes, he commenced the study of philosophy under Philo the Academic. But his chief attention was reserved for oratory, to which he applied himself with the assistance of Molo, the ablest rhetorician of the day; while Diodotus the Stoic exercised him in the argumentative subtleties for which the disciples of Zeno were so celebrated. At the same time he declaimed daily in Greek and Latin with certain young noblemen, who were competitors in the same race for honours with himself.

Cicero was the first Roman who found his way to the highest dignities of the State with no other recommendation than his powers of eloquence and his merits as a civil magistrate. The first case of importance which he undertook was the defence of Roscius Amerinus, in which he distinguished himself by his courageous defence of his client, who had been accused of parricide by Chrysogonus, a favourite of Sulla's. This obliging him, however, according to Plutarch, to leave Rome from prudential motives, the power of Sulla being at that time paramount, he employed his time in travelling for two years under pretence of his health, which he tells us was as yet unequal to the exertion of pleading. At Athens he met with T. Pomponius Atticus, whom he had formerly known at school, and there renewed with him a friendship which lasted through life, in spite of the change of interests and estrangement of affection so commonly attendant on turbulent times. Here, too, he attended the lectures of Antiochus, who, under the name of an Academic, taught the dogmatic doctrines of Plato and the Stoics. Though Cicero at first evinced considerable dislike for his philosophical views, he seems afterwards to have adopted the sentiments of the Old Academy, which they much resembled, and not until late in life to have relapsed into the sceptical tenets of his earlier instructor Philo. See PHILOSOPHIA.

After visiting the principal philosophers and rhetoricians of Asia, he returned at the age of thirty to Rome, so strengthened and improved both in bodily and mental powers that he soon eclipsed in speaking all his competitors for public favour. Such brilliant gifts speedily gained him the suffrage of the people; and being sent to Sicily as quaestor, at a time when the metropolis itself was visited with a scarcity of corn, he acquitted himself in that delicate situation with so much success as to supply the clamorous wants of the Romans without oppressing the province from which the provisions were raised. Returning thence with greater honours than had ever before been decreed to a Roman governor, he gained for himself still further the esteem of the Sicilians by undertaking his celebrated prosecution of Verres (q. v.) for his misgovernment of Sicily. Verres, though defended by the influence of the Metelli and the eloquence of Hortensius (q. v.), was driven in despair into voluntary exile. Five years after his quaestorship Cicero was elected aedile. Though possessed of only a moderate fortune, he nevertheless, with the good sense and taste which mark his character, was enabled, while holding this expensive office, to preserve in his domestic arrangements the dignity of a literary and public man, without any of the ostentation of magnificence which often distinguished the candidate for popular applause. After the customary interval of two years, he was returned at the head of the list as praetor, and now made his first appearance on the Rostra in support of the Manilian law. (See LEX MANILIA.) About the same time, also, he defended Cluentius. At the expiration of his

praetorship, he refused to accept a foreign province, the usual reward of that magistracy; but, having the consulship in view, and relying on his interest with Caesar and Pompey, he allowed nothing to divert him from that career of glory for which he now believed himself to be destined. Having succeeded at length in attaining to the high office of which he was in quest, he signalized his consulship by crushing the conspiracy of Lucius Catiline; and the Romans hailed him, on the discovery and overthrow of this nefarious plot, as the Father and Deliverer of his country. His consulate was succeeded by the return of Pompey from the East, and the establishment of the First Triumvirate; which, disappointing his hopes of political greatness, induced him to resume his forensic and literary occupations. From these he was called away, after an interval of four years, by the threatening measures of P. Clodius (q. v.), who at length succeeded in driving him into exile. This event, which, considering the circumstances connected with it, was one of the most glorious of his life, filled him with the utmost distress and despondency. Its history is as follows: Clodius, Cicero's bitter enemy, had caused a law to be renewed, declaring every one guilty of treason who ordered the execution of a Roman citizen before the people had condemned him. The blow was aimed against Cicero, on account of the punishment he had caused to be inflicted, by the authority of the Senate, upon the accomplices of Catiline. The illustrious exconsul put on mourning, and appeared in public, accompanied by the equites and many young patricians, demanding the protection of the people. Clodius, however, at the head of his armed adherents, insulted them repeatedly, and ventured even to besiege the Senate-house. Cicero, upon this, went into voluntary exile. His conduct, however, in this reverse of fortune, showed anything but the firmness of a man of fortitude. He wandered about Greece, bewailing his miserable condition, refusing the consolations which his friends attempted to administer, and shunning the public honours with which the Greek cities were eager to load him. He ultimately took refuge in Thessalonica with Plancus. Clodius, in the meantime, procured new decrees, in consequence of which Cicero's country-seats were torn down, and a temple of Libertas built on the site of his house at Rome. His wife and children were also exposed to ill-usage from his embittered persecutors. A favourable change, however, soon took place in the minds of his countrymen. The insolence of Clodius became insupportable to all. Pompey encouraged Cicero's friends to get him recalled to Rome, and the Senate also declared that it would not attend to any business until the decree which ordered his banishment was revoked. Through the zeal of the consul Lentulus, and at the proposition of several tribunes, the decree of recall passed the assembly of the people in the following year, in spite of a bloody tumult, in which Cicero's brother Quintus was dangerously wounded; and the orator returning to his native country after an absence of ten months, was received with every mark of honour. The Senate met him at the city gates, and his entry resembled a triumphal procession. The attacks of Clodius, though they could now do little harm, were immediately renewed, until Cicero was freed from the insults of this turbulent demagogue by the hand of Milo, whom he afterwards, in a public trial for the deed, unsuccessfully defended. (See Milo.) Five years after his return from exile he received the government of Cilicia, in consequence of Pompey's law, which obliged those senators of consular or praetorian rank, who had never held any foreign command, to divide the vacant provinces among them. Cicero conducted a war, while

Cicero. (Capitoline Museum.)

in this office, with good success against the plundering tribes of the mountain districts of Cilicia, and was greeted by his soldiers with the title of Imperator. He resigned his command, and returned to Italy about the close of the year 50, intending to prefer his claim to a triumph; but the troubles which were just then commencing between Caesar and Pompey prevented him from obtaining one. His return home was followed by earnest endeavours to reconcile Pompey with Caesar, and by very spirited behaviour when Caesar required his presence in the Senate. But this independent temper was only transient; and at no period of his public life did he display such miserable vacillation as at the opening of the Civil War. His conduct, in this respect, had been faulty enough before, for he then vacillated between the several members of the First Triumvirate, defending Vatinius in order to please Caesar, and his bitter political enemy Gabinius to ingratiate himself with Pompey. Now, however, we find him first accepting a commission from the Republic; then courting Caesar; next, on Pompey's sailing for Greece, resolving to follow him thither; presently determining to stand neutral; then bent on retiring to the Pompeians in Sicily; and when finally he had joined their camp in Greece, exhibiting such timidity and discontent as to draw from Pompey the bitter remark, *Cupio ad hostes Cicero transeat, ut nos timeat* (Macrob. *Sat.* ii. 3).

After the battle of Pharsalia (B.C. 48) and the flight of Pompey, he refused to take the command of some troops then under the orders of Cato, but returned to Italy, which was governed by Antony, the representative of Caesar. His return was attended with several unpleasant circumstances, until the

conqueror wrote to him, and soon after received him in the most friendly spirit. Cicero now devoted himself entirely to literature and philosophy. The state of his private affairs, however, involved him in great embarrassment. A large sum, which he had advanced to Pompey, had impoverished him, and he was forced to stand indebted to Atticus for present assistance. These difficulties led him to a step which it has been customary to regard with great severity—the divorce of his wife Terentia, though he was then in his sixty-second year, and his marriage with his rich ward Publilia, who was of an age disproportionate to his own. Yet, in reviewing this proceeding, we must not adopt the modern standard of propriety, forgetful of the character of an age which reconciled actions even of moral turpitude with a reputation for honour and virtue. Terentia was a woman of a most imperious and violent temper, and had, besides, in no slight degree contributed to his present embarrassment by her extravagance in the management of his private affairs. By her he had had two children—a son born the year before his consulship, and a daughter, whose loss he was now fated to experience. To Tullia he was tenderly attached, not only from the excellence of her disposition, but from her love of polite literature; and her death now took from him, as he so pathetically laments to Sulpicius, the only comfort which the course of public events had left him. His distress was increased by the unfeeling conduct of Publilia, whom he soon divorced for testifying joy at the death of her step-daughter. It was on this occasion that he wrote the treatise *De Consolatione*, with a view to mitigate the anguish of his sufferings. His friends were assiduous in their attentions; and Caesar, who had treated him with the utmost kindness on his return from Egypt, signified the respect he bore his character by sending a letter of condolence from Spain, where the remains of the Pompeian party still engaged him. But no attentions, however considerate, could soften Cicero's vexation at seeing the country he had formerly saved by his exertions now subjected to the dominion of a single master. His speeches, indeed, for Marcellus and Ligarius exhibit traces of inconsistency; but for the most part he retired from public business, and gave himself up to the composition of those works which, while they mitigated his political sorrows, have secured his literary fame.

The assassination of Caesar, which took place in the following year (B.C. 44), once more brought him on the stage of public affairs. He hoped to regain great political influence; but Antony took Caesar's place, and all that was left Cicero to do was to compose those vigorous orations against him which are known by the name of Philippics, and are equally distinguished for eloquence and patriotism. His enmity towards Antony induced him to favour the young Octavianus, although the pretended moderation of the latter by no means deceived him. With him originated all the energetic resolutions of the Senate in favour of the war which the consuls and the young Caesar were conducting against Antony in the name of the Republic; and for a time the prospect seemed to brighten. At last, however, Octavianus having possessed himself of the consulship, and having formed the alliance with Antony and Lepidus known as the Second Triumvirate, Cicero became convinced that liberty was at an end. At Tusculum, whither he had retired with his brother and his nephew, he learned that Octavianus had basely deserted him, and that his name, at Antony's demand, had been added to the list of the proscribed. He repaired, in a state of indecision, to the sea-coast and embarked. Contrary winds, however, drove him back to the shore. At the request of his slaves he embarked a second time, but soon returned again to await his fate at his country-seat near Formiae. "I will die," said he, "in that country which I have so often saved." Here, then, he was disposed to remain and to meet his death; but his slaves, who were warmly attached to him, could not bear to see him thus sacrificed; and when the party of soldiers sent to murder him was advancing towards the villa, they almost used force to make him enter his litter, and to allow them to carry him once more on board of the vessel, which was still lying at Caieta. But, as they were bearing the litter towards the sea, they were overtaken in the walks of his own grounds by the soldiers who were in search of him, and who were headed by one Herennius, a centurion, and by C. Popilius Laenas. Popilius was a native of Picenum, and had, on a former occasion, been successfully defended by Cicero, when brought to trial for some offence before the courts at Rome. As the assistance of advocates was given gratuitously, the connection between them and their clients was esteemed very differently from what it is among us; and it was therefore an instance of peculiar atrocity that Popilius offered his services to Antony to murder his patron, from no other motive than the hope of gaining his favour by showing such readiness to destroy his greatest enemy. The slaves of Cicero, undismayed at the appearance of the soldiers, prepared to defend their master; but he refused to allow any blood to be shed on his account, and commanded them to set down the litter and await the issue in silence. He was obeyed; and when the soldiers came up he stretched out his head with perfect calmness, and submitted his neck to the sword of Popilius. He died in his sixty-third year, B.C. 43. When the murder was accomplished the soldiers cut off his two hands also, as the instruments with which he had written his Philippic orations; and the head and hands were carried to Rome, and exposed together at the Rostra. Men crowded to see the mournful sight, and testified by their tears the compassion and affection which his unworthy death, and his pure and amiable character, had so justly deserved.

On the whole, antiquity may be challenged to produce an individual so upright and so amiable as Cicero. None interest us more in their lives; none excite more painful emotions in their deaths. Others may be found of loftier and more heroic character, who awe and subdue the mind by the grandeur of their views or the intensity of their exertions; but Cicero wins our affections by the integrity of his public conduct, the purity of his private life, the generosity, placability, and kindness of his heart, the playfulness of his temper, and the warmth of his domestic attachments. In this respect his letters are invaluable. Here we see the man without disguise or affectation, especially in his letters to Atticus, to whom he unbosomed every thought, and talked with the same frankness as to himself. It must, however, be confessed that the publication of this same correspondence has laid open the defects of his politi-

cal character. Everything seemed to point out Cicero as the fittest person of the day to be a mediator between contending factions. And yet, after the eventful period of his consulship, we see him resigning the high station in the Republic which he himself might have filled, to the younger Cato, who, with only half his abilities, little foresight, and no address, possessed that first requisite for a statesman, firmness. Cicero, on the contrary, was irresolute, timid, and inconsistent. He talked, indeed, largely of preserving a middle course, but he was continually vacillating from one to the other extreme; always too confident or too dejected; incorrigibly vain of success, yet meanly panegyrizing the government of a usurper. His foresight, sagacity, practical good sense, and singular tact in directing men's measures, were lost for want of that strength of mind which points them steadily to one object. He was never decided, and never took an important step without afterwards repenting of it. Nor can we account for the firmness and resolution of his consulate, unless we discriminate between the ease of resisting a party and that of balancing contending interests.

We may now consider Cicero as a public speaker and writer. The ORATIONS that he is known to have composed amount in all to 107, of which seventy-seven, either entire or in part, have been preserved. All those pronounced by him during the five years intervening between his election to the quaestorship and the aedileship have perished, except that for M. Tullius, the *exordium* and *narratio* of which were brought to light by the discoveries of Mai in the Ambrosian Library at Milan. From the same quarter have been obtained many other proofs of the eloquence of Cicero, among the most important of which are a large fragment of the oration for Scaurus, and detached portions of that delivered against Clodius for his profanation of the mysteries of the Bona Dea. Of all the lost orations, the two most regretted are that in defence of Cornelius, and the speech delivered by him in the Temple of Bellona in quelling the disturbance excited by the law of Otho. (See ROSCIA LEX.) This last is said to have been one of the most signal victories of eloquence over the turbulence of human passions, while to the former Cicero himself frequently alludes as among the most finished of his compositions. The oration for Marcellus is maintained by many to be a spurious performance. It would seem, however, after weighing all the arguments adduced by modern critics, that a part is actually genuine, but that much has been subsequently interpolated by some rhetorician or declaimer.

Of the RHETORICAL WORKS of Cicero, the most admired and finished is the dialogue *De Oratore*, of which Cicero himself highly approved, and which his friends were accustomed to regard as one of the finest of his productions. In the *Oratoriae Partitiones*, the subject is the art of arranging and distributing the parts of an oration so as to adapt them in the best manner to their proper end—that of moving and persuading an audience. In the dialogue on famous orators, entitled *Brutus*, he gives a short description of all who had ever flourished in Greece or Rome, with any considerable reputation for eloquence, down to his own time. It was intended as a fourth and supplemental book to the treatise *De Oratore*. The *Orator*, addressed to Brutus, and written at his solicitation, was intended to complete the two works just mentioned. It enlarges on the favourite topic of Cicero, which had already been partially discussed in the treatise *De Oratore*—the character of the perfect orator; and seeks to confirm his favourite proposition—that perfection in oratory requires an extensive acquaintance with every art. It is on the merits of this work in particular that Cicero, in a letter to a friend, asserts his perfect willingness that his reputation should be staked. The *Topica* is a compendium of the *Topica* of Aristotle. The treatise *De Optimo Genere Oratorum* was originally intended as a preface to a translation of the celebrated orations of Demosthenes and Aeschines *De Corona*. The work *De Inventione* was a youthful performance; and that addressed to Herennius, according to the best authorities, never proceeded from his pen. In all Cicero's rhetorical works, except, perhaps, the *Orator*, he professes to have digested the principles of the Aristotelian and Isocratic schools into one finished system, selecting what was best in each, and, as occasion might offer, adding remarks and precepts of his own. The subject is considered in three distinct lights, with reference to (1) the case, (2) the speaker, and (3) the speech. The case, as respects its nature, is definite or indefinite; with reference to the hearer, it is judicial, deliberative, or descriptive; as regards the opponent, the division is fourfold—according as the fact, its nature, its quality, or its propriety is called in question. The art of the speaker is directed to five points: the sources of persuasion (whether ethical, pathetic, or argumentative), arrangement, diction, memory, delivery. And the speech itself consists of six parts: introduction (or exordium), statement of the case, division of the subject, proof, refutation, and conclusion or peroration. Cicero's laudatory orations are among his happiest efforts. Nothing can exceed the taste and beauty of those for the Manilian law, for Marcellus, for Ligarius, for Archias, and the Ninth Philippic, which is principally in praise of Servius Sulpicius. But it is in judicial eloquence, particularly on subjects of a lively cast, as in his speeches for Caelius and Muraena and against Caecilius, that his talents are displayed to the best advantage. To both kinds his urbane and pleasant cast of mind imparts inexpressible grace and delicacy; historical allusions, philosophical sentiments, descriptions full of life and nature, and polite raillery, succeed each other in the most agreeable manner, without appearance of artifice or effort. Of this nature are his pictures of the confusion of the Catilinarian conspirators on detection (*In Cat.* iii. 3); of the death of Metellus (*Pro Cael.* 10); of Sulpicius undertaking the embassy to Antony (*Philipp.* ix. 3); the character he draws of Catiline (*Pro Cael.* 6); and his fine sketch of old Appius frowning on his degenerate descendant Clodia (ib. 6). But, by the formation of a style which adapts itself with singular felicity to every class of subjects, whether lofty or familiar, philosophical or forensic, Cicero answers more exactly to his own definition of a perfect orator (*Orat.* 29) than by his plausibility, pathos, and vivacity. Among many excellences possessed by Cicero's oratorical diction, the greatest is its suitability to the genius of the Latin language; though the diffuseness thence necessarily resulting has exposed it, both in his own days and since his time,

to the criticisms of those who have affected to condemn its Asiatic character, in comparison with the simplicity of Attic writers and the strength of Demosthenes. Greek, however, is celebrated for copiousness in its vocabulary and perspicuity in its phrases, and its consequent facility of expressing the most novel or abstruse ideas with precision and elegance. Hence the Attic style of eloquence was plain and simple, because simplicity and plainness were not incompatible with clearness, energy, and harmony. But it was a singular want of judgment, an ignorance of the very principles of composition, which induced Brutus, Calvus, Sallust, and others, to imitate this terse and severe beauty in their own defective language, and even to pronounce the opposite kind of diction deficient in taste and purity. In Greek, indeed, the words fall, as it were, naturally into a distinct and harmonious order; and, from the exuberant richness of the materials, less is left to the ingenuity of the artist. But the Latin language is comparatively weak, scanty, and unmusical, and requires considerable skill and management to render it expressive and graceful. Simplicity in Latin is scarcely separable from baldness; and justly as Terence is celebrated for chaste and unadorned diction, yet even he, compared with Attic writers, is flat and heavy. Again, the perfection of strength is clearness united to brevity; and to this combination Latin is usually unequal. From the vagueness and uncertainty of meaning which characterize its separate words, to be perspicuous it must be full. What Livy and, much more Tacitus, have gained in energy, they have lost in perspicuity and elegance. Latin, in short, is not a philosophical language; not a language in which a deep thinker is likely to express himself with purity or neatness. Now Cicero rather made a language than a style, yet not so much by the invention as by the combination of words. Some terms, indeed, his philosophical subjects compelled him to coin, and these are often admirable—e. g. *qualitas, quantitas*=ποιότης, ποσότης; but his great art lies in the application of existing materials, in converting the very disadvantages of the language into beauties, in enriching it with circumlocutions and metaphors, in pruning it of harsh and uncouth expressions, and in systematizing the structure of a sentence. This is that *copia dicendi* which gained Cicero the high testimony of Caesar to his inventive powers, and which makes him the greatest master of composition the world has ever seen.

We come next to Cicero's PHILOSOPHICAL WRITINGS, after a brief enumeration of which we shall offer a few remarks on the character of his philosophy itself. The treatise *De Legibus* has reached us in an imperfect state, only three books remaining, and these disfigured by numerous chasms that cannot be supplied. It traces the philosophic principles of jurisprudence to their remotest sources, sets forth a body of laws conformable to Cicero's idea of a well-regulated State, and is supposed to have treated in the books that are lost of the executive power of magistrates and the rights of Roman citizens. The treatise *De Finibus Bonorum et Malorum* is written after the manner of Aristotle, and discusses the chief good and the chief evil (*summum bonum et summum malum*); in it Cicero explains the several opinions entertained on this subject by the philosophers of antiquity. The *Academicae Quaestiones* relates to the Academic philosophy, whose tenets Cicero himself had embraced. It is an account and defence of the doctrines of the Academy. In the *Tusculanae Disputationes*, five books are devoted to as many different questions of philosophy, bearing the most strongly on the practice of life, and involving topics the most essential to human happiness. The *Paradoxa* contains a defence of six paradoxes of the Stoics. The work *De Natura Deorum*, in three books, embraces a full examination of the various theories of heathen antiquity on the nature of the gods, to which the treatise *De Divinatione* may be regarded as a supplement. The essay *De Officiis*, on moral duties, has, not unaptly, been styled the heathen Whole Duty of Man; nor have the dialogues *De Senectute* and *De Amicitia* been incorrectly regarded as among the most highly finished and pleasing performances of which any language can boast. We have to lament the loss of the treatises *De Consolatione*, *De Gloria*, and the one entitled *Hortensius*, in which last Cicero undertook the defence of learning and philosophy, and left to his illustrious competitor the task of arraigning them. It was this book which first led St. Augustine to the study of Christian philosophy and the doctrines of Christianity. The treatise *De Republica* has been in part rescued from the destroying hand of time by the labours of Mai. Except the works *De Inventione* and *De Oratore*, this was the earliest of Cicero's literary productions. It was given to the world in B.C. 53, just before its author set out for his proconsular government in Cilicia. He was then in his fifty-third year. The object and spirit of the work were highly patriotic. He wished to bring the constitution back to its first principles by an impression expositive of its theory; to inflame his contemporaries with the love of virtue by pourtraying the character of their ancestors in its primeval purity and beauty; and while he was raising a monument to all future ages of what Rome had been, to inculcate upon his own times what it ought still to be. We know it to have been his original purpose to make it a very voluminous work; for he expressly tells his brother that it was to be extended to nine books. Ernesti thinks that they were all given to the world, although Cicero, in a letter to Atticus, on which that learned and suggestive scholar makes this very remark, speaks of them as his *six* pledges or sureties for his good behaviour.

Cicero, as a philosopher, belongs, upon the whole, to the New Academy. It has been disputed whether he was really attached to this system, or had merely resorted to it as being the best adapted for furnishing him with oratorical arguments suited to all occasions. At first its adoption was subsidiary to his other plans. But, towards the conclusion of his life, when he no longer maintained the place he was wont to hold in the Senate or the Forum, and when philosophy formed the occupation "with which," to quote his own words, "life was just tolerable, and without which it would have been intolerable," he doubtless became convinced that the principles of the New Academy, illustrated as they had been by Carneades (q. v.) and Philo, formed the soundest system which had descended to mankind from the schools of Athens. The attachment, however, of Cicero to the Academic philosophy was free from the exclusive spirit of sectarianism, and hence it did not

prevent his extracting from other systems what he found in them conformable to virtue and reason. His ethical principles, in particular, appear eclectic, having been in a great measure formed from the opinions of the Stoics. Of most of the Greek sects he speaks with respect and esteem. For the Epicureans alone he seems, notwithstanding his friendship for Atticus, to have entertained a decided aversion and contempt. The general purpose of Cicero's philosophical works was rather to give a history of the ancient philosophy, than dogmatically to inculcate opinions of his own. It was his great aim to explain to his fellow-citizens, in their own language, whatever the sages of Greece had taught on the most important subjects, in order to enlarge their minds and reform their morals.

In theoretical investigation, in the development of abstract ideas, and in the analysis of qualities and perceptions, Cicero can not be regarded as in any degree an inventor or a profound original thinker, and can not be ranked with Plato and Aristotle. His peculiar merit as a philosophical writer lay in his luminous and popular exposition of the leading principles and disputes of the ancient schools, and no works transmitted from antiquity present so concise and comprehensive a view of the opinions of the Greek philosophers. The most obvious peculiarity of Cicero's philosophical writings is their form of dialogue. The idea was borrowed from Plato and Xenophon; but the nature of Cicero's dialogue is as different from that of the two Athenians as was his object in writing. With them, the Socratic mode of argument could hardly be displayed in any other shape; whereas Cicero's aim was to excite interest, and he availed himself of this mode of composition for the life and variety, the ease, perspicuity, and vigour which it gave to his discussions. The majesty and splendour of his introductions, the eloquence with which both sides of a question are successively displayed, the clearness and terseness of his statements on abstract points, his exquisite allusions to the scene or time of the supposed conversation, his digressions in praise of philosophy, and, lastly, the melody and richness of his style, unite to throw a charm around these productions which has been felt in every age.

Cicero's EPISTULAE, nearly one thousand (864) in all, are comprised in thirty-six books, sixteen of which are addressed to Atticus, three to his brother Quintus, one to Brutus, and sixteen to his different friends; and they form a history of his life from his fortieth year. Among those addressed to his friends (*Ad Familiares*) some occur written to him by Brutus, Metellus, Plancus, Caelius, and others. For the preservation of this most valuable department of Cicero's writings we are indebted to Tiro, the author's freedman, though we possess at the present day only a part of those originally published. The most interesting by far are the letters to Atticus, for they not only throw great light on the history of the times, but also give us a full insight into the private character of Cicero himself, who was accustomed at all times to unbosom his thoughts most freely to this friend of his. The authenticity of the correspondence with Brutus has been disputed by modern scholars, but the general opinion is favourable to the genuineness of all but two (xvi. and xvii.).

His POETICAL and HISTORICAL WORKS have suffered a hard fate. The latter class, consisting of his commentary on his consulship and his history of his own times, are altogether lost. Of the former, which comprised the heroic poems *Alcyone*, *Marius*, and on his own consulate, translations of parts of Homer, Aeschylus, Sophocles, and Aratus, epigrams, etc., but little remains except some fragments of the *Phaenomena* and *Diosemeia* of Aratus. It may, however, be questioned whether literature has suffered much by this loss. We should refrain from speaking contemptuously of the poetic powers of one who possessed so much fancy, so much taste, and so fine an ear; but his poems were principally composed in his youth; and afterwards, when his powers were more mature, his occupations did not allow even his active mind the time necessary for polishing a language then still more rugged in verse than it was in prose. Hence we find that his own contemporaries criticised unfavourably his attempts in verse, a fact to which he himself bears witness; and such specimens as remain show the ante-classical fondness for alliterative jingle; as, for instance, the famous line which he quotes in his *De Officiis* (i. 77):

"Cedant arma togae, concedat laurea laudi,"

and the absurdly egotistical hexameter sneered at by Juvenal in his Tenth Satire:

"O fortunatam natam me consule Romam!"

His contemporary history, on the other hand, can hardly have conveyed more explicit, and certainly would have contained less faithful, information than his private correspondence; while, with all the penetration he assuredly possessed, it may be doubted if his diffuse and graceful style of thought and composition was adapted for the depth of reflection and condensation of meaning which are the chief excellences of historical composition.
